of 1926 at Baku decided in favour of a mixed orthography — a combination of the phonetic with the etymological —, for the establishment of which steps have now been taken with the help of the reformed Arabic alphabet and the new Turkish Latin alphabet.

The modern non-Muslim Turkish minorities, Çuwas, Yakut, Turks of the Altai and Yenisei were, until quite recently, to be classed among the illiterate peoples, although the Yakuts preserve the tradition that they possessed an alphabet in older times and although among the Turks of the Altai the Mongol alphabet as adapted to the Turkish language is still used, although to a very limited degree. All these peoples received from the Russians in the xviiith and xixth centuries, the Russian alphabet, slightly adapted to their particular requirements. In 1917 the Yakuts replaced the Russian alphabet by a Latin one based on the international phonetic alphabet and prepared by a Yakut student, M. Novgorodov. The Tannu-Tuwa (Ouriangkhai or Soyots) who are much under the influence of Mongol culture are at the moment trying to develop a national literary language and to choose themselves an alphabet.

The Greek alphabet used for the Turkish language from the ninth century in the Turk Balghar kingdom on the Danube was quite recently in use among the turkicised Greeks of Anatolia and Stambul. The turkicised Armenians have adapted the Armenian alphabet to the Turkish language. There are Adharbaidjani manuscripts written in the Georgian alphabet. The Karaites who speak Turkish have from early times used the Hebrew alphabet.

4. Turkish Borrowings from neighbouring Languages and vice versa.

In the pre-Muhammadan monuments of the Turkish languages we find words borrowed from Chinese, Soghdian, Sanskrit and the northern Semitic languages. Foreign influences may even be observed in the syntax of these monuments, especially in passages which are translations from other languages. In the modern dialects of Siberia and Mongolia, especially in Yakut, there are a number of Mongol elements which have come in by direct borrowing as well as through intermixture of races. It is by the latter means that the palaeo-Asiatic linguistic elements and other elements not yet elucidated have entered these dialects. The name of the river Yenisei, *Ärm*, known from the time of the Orkhon inscriptions, comes from the Kot language where it means "river" as in the modern dialect of the Soyot Turks. Finnish elements are found in the Turkish dialects of the Volga region. At the time of the foundation of the Mongol empire of Činghiš-Khān [q. v.], a certain number of borrowed Mongol words found their way into the majority of the Turkish languages. It was in this way that the old Turkish word *yular* "halter", preserved by the Yakuts, Soyots and the Turks of Anatolia as well in the women's language of the Altai Turks, was gradually ousted in the xiiith century by the Mongol *nefta*, which is now used in all the other Turkish languages including Çuwas. The Turkish dialects of the Özbeks, Turkomans, Adharbaidjians and of the Turkish tribes of Persia show considerable Iranian influence as a result of the intermingling of races and cultures. As a result of the complicated intermixture of the Turks with other races of Asia Minor and the Balkan Peninsula and of the cultural borrowings, we find in the language of the Turks of Anatolia and the Balkans, Greek, Slav — especially Serb —, Armenian, Kurd, Italian, French and other elements in addition to Arabic and Persian. The intermixture of the Turks with the natives of the Northern and Southern Caucasus has introduced into their dialects elements from the phonetics and the vocabulary of the Caucasian languages. The Turks who entered Syria and Egypt have been very strongly influenced by Arabic, as have the Kumyks of Daghestān, among whom, unlike other Muslim Turks, the names of the days of the week are Arabic and not Persian. In the other parts of the Turkish world, the adoption of Islām brought more Persian than Arabic elements. The Arabic and Persian loanwords in the Turkish literary languages are sometimes over 50%, but they also found their way into the popular dialects of Turkish tribes but little influenced by Islām, like the Kazaks and the Kirghiz (*ten* = body, *šan* = soul).

A certain number of Arabic and Persian words have also found their way among the non-Muslim Turks, not only among the Çuwas, but also among the Turks of the Altai and Yenisei and even through the intermediary of Russian among the Yakuts (*amgar* = *onbār*). The influence of Russian makes itself especially felt in the Turkish dialects of the Volga region and among them in Mishar in particular, but there are Russian loanwords in all the Turkish languages of the U. S. S. R.

The Turkish languages in their turn have from early times influenced the neighbouring languages, beginning with Chinese. There are Turkish words in the Mongol languages, in several Finnish languages (especially *Ceremiss* and *Magyar*), in the Iranian languages, in modern Arabic, in Armenian, Georgian, Kurdish, Greek, Albanian, Rumanian, in the Slav languages of the Balkan Peninsula and of Eastern and Western Europe. History records fewer cases of the loss of their language by a Turkish people (the *Belghars* in the Balkans, the *Kumans* in Hungary, the *Tatars* in Lithuania, the *Dungans* in China and the *Turks* in India) than of cases of the turkicisation of other peoples: in Siberia, in Central Asia, in the Caucasus, in Asia Minor, in the Balkans and in Eastern Europe (the *Mishars*). We find turkicised gipsies in Turkey, Transcaucasia in the Crimea and in Turkestan.

III. ČAGHATAI LITERATURE.

Under the influence of the brilliant development of Turkish literature in the Čaghatai kingdom [cf. ČAGHATAI-KHĀN] under the rule of the Timūrids, this eastern Turkish literary language has been given the name "Čaghatai" in the east itself, as well as in European literature. In an anonymous Turkish work (probably written in India, Brit. Mus., Or. 1912; Rieu, *Cat. Turk. MSS.*, p. 268), all Turkish dialects are divided into two languages, Čaghatai and Turkoman, Ibn Muḥannā (Turk. ed., p. 73; Melloranskii, *Arab filolog*, p. xx.) uses the word "Turkistanish" in the same sense. The language of the Turks is said to have come from Turkistan just as Arabic came from the Hīdžāz. The "language of the Turks of our (presumably Persian) lands" is also contrasted to Turkistanish as well as to Turkoman. In Radloff's *Wörterbuch* (iv. 15), the word Čaghatai is quoted only in the form Djaghatai and as an Ottoman word; cf. also Shaikh Sulaimān Bukhārī, *Lughat-i Čaghatai wa-Turki 'Othmānī*, Istanbul 1297—1300; abbreviated edition with German translation by Dr. S. Künos, Budapest 1902 (*Publ. Sect. Orient. de la Soc. Ethn. Hongroise*, i.).

Radloff (Zap., iii. 1 199.) presumes a purely eastern origin for the Čaghatai literary language. The Uighur alphabet and literary language had survived from the pre-Muḥammadan period among the Muslim Turks; through the adoption of many Arabic and Persian words the Uighur alphabet gradually fell into disuse; we have books written in "pure Uighur language" but in the Arabic

alphabet, such as the *Kīyāz al-Ashīyā* of Rabghūzī written in 710 (1310—1311) (Radloff in the introduction to his edition of the *Kudatku-Bilak*, p. lxxviii. has tried to show that the "Ilek-Khāns" in whose lands the earliest Muslim works in Turkish were written are "without a shadow of doubt to be regarded as Uighur rulers"). In the period of the Mongols the Uighur alphabet and language were widely disseminated. Many "pure Uighur" words and grammatical forms were in this period driven out of use by borrowings from "Central Asian dialects"; but there are still in Čaghatai words and forms of Uighur origin, which are only used in the literary language. As the Eastern Turks, unlike the southern Turks (Constantinople), had no common literary centre, the Čaghatai literary language has been influenced in different districts by various local dialects.

In contrast to this view it has now been proved (notably by A. Samoylovich in *Mir-Ali-Shir*, Leningrad 1928, p. 1 199.) that already in the pre-Mongol period in addition to the oldest Muslim centre of Turkish literary activity, Kāshghar [q. v.], there was a second literary centre in Khwārizm and on the lower course of the Sīr-Daryā. This region retained its importance in the Mongol period under the rule of the Khāns of the Golden Horde. The literature of the Čaghatai kingdom seems not to have arisen till later and to have been influenced by the literature of the Golden Horde. Djāmāl al-Karashī, the author of the *Mulhikāt al-Shurūh* written in Kāshghar, made the acquaintance of the learned Shaikh al-Islām Ḥusām al-Dīn Abū 'I-Mahmūd Ḥamid b. 'Asīm al-'Ajimī al-Bārclnīghī in 672 (1273—1274) in Bārclnend (also called Bārcln and Bārclnīgh) on the lower course of the Sīr-Daryā. In addition to theological works in Arabic, the Shaikh also wrote verses in the three literary languages of Islām (this is probably the first time we have them classed together like this); his Arabic verses were of beautiful form (*faṣḥā*), his Persian ingenious (*maṭḥā*) and his Turkish in keeping with the truth (*ṣaḥḥā*). To the frequently recurring (as early as the *Kīyāz Baghdād* of Ahmad b. Abī Tāhir Tāifūr, ed. Keller, p. 158) contrast between the perfect form of Arabic writings and the ingenious ideas of the Persian is now added the truthfulness of Turkish; and indeed the works of the Čaghatai poets by their simpler language and more simple train of thought give an impression of being more true to life than their Persian models (cf. E. Berthels, *Newā'ī's 'Affār*, in *Mir-Ali-Shir*, p. 24 199., esp. p. 80).

Among the works written in the kingdom of the Golden Horde, Khwārizmī's *Mahabbat-Nāma* (written in 754 = 1353 on the banks of the Sīr-Daryā) had a direct influence on Čaghatai literature. Besides the Brit. Mus. MS., Add. 7914, Rieu, *Turk. Man.*, p. 284 19., we also have the *Mahabbat-Nāma* in the Uighur manuscript written in Rājāb and Shabān 835 (March-April 1432) in Yazd for the emir Djalāl al-Dīn, Or. 8193 (*Comptes Rendus de l'Acad. des Sciences*, 1924, p. 57 19.; *J. R. A. S.*, 1928, p. 99 199.). The *Ta'arūḥ-Nāma* of the Timūrid prince Sidi Ahmad written in 839 (1435—1436) (in the same MS., Add. 7914) is modelled on the *Mahabbat-Nāma*.

A few Turkish poets who lived in the Čaghatai kingdom are known of the viiith (xivth) century; Timūr's contemporary, the emir Saif al-Dīn, is said to have written five poems in Turkish and Persian

under the pen-name of Saifi (Dawlat-Shāh, ed. Browne, p. 108). What has survived to us belongs to the 15th (xvth) century, the period of Timur's immediate successors. Sakkiki was a panegyrist of Halil Sulhān (1405—1409) and Ulughbeg (1409—1449) (Brit. Mus., Or. 2079; Rieu, *Turk. Man.*, p. 284). Ulughbeg is also mentioned by the poet Lutfi, some of whose poems have been included in the Uighur MS., Or. 8193 (more fully on Lutfi: Rieu, *Turk. Man.*, p. 285 and 287; Ahmad Zaki Walidow, *Diagataykiy poet Lutfiy i ego dīwān*, Kazan 1914). Both poets speak of themselves with great pride. Sakkiki says to Ulughbeg: "It will be many years before such a Turkish poet as I and such a learned prince as thou appear again". Lutfi says: "The Khān Ulughbeg knows how to appreciate the services of Lutfi, whose brilliant poems are not inferior to those of Salmān" (q. v.) (text in W. Barthold, *Uluġbeg*, St. Petersburg 1918, p. 112 sq.). To the same period belongs the panegyrist of another grandson of Timur, the prince of Fārs, Iskandar Sulhān (till 817 = 1414), Mir Haidar Maḥmūdī (Dawlatshāh, p. 371; Rieu, *Cat. Turk. Man.*, p. 286; A. Pavet de Courteille, in *P. Et. Long. Or. Vm.*, ser. II, vol. VI, p. xxii sqq.). His *Makḥzan al-Aṣrār* is intended as a reply to the *Makḥzan al-Aṣrār* of Nizāmī (G. J. Ph., ii, 241 sqq.). Parts of it have been published by Pavet de Courteille from a manuscript in Uighur (now in Berlin). This poet also says that earth and heaven have been filled with the echo of his songs. Two other manuscripts written in Uighur belong to the first half of the ninth (fifteenth) century: the *Bakḥīyār-Nāma*, MS. of 838 (1435) in Oxford (G. J. Ph., ii, 324), and the *Mir'āṭ-Nāma* with a Turkish translation of the *Tuḥfat al-Awṭiyā* of Farīd al-Dīn 'Aṭṭār (see 'ATTAR), manuscript said to be (the Hijra year does not agree with the year of the cycle) of 10th Djumādā II, 840 (Dec. 20, 1436) in Paris (P. Et. Long. Or. Vm., loc. cit.).

In the second half of the 15th (xvth) century Caghatai literature reached its zenith in Mir 'Alī Shīr (b. 844 = 1440—1441, d. Sunday, 11th Djumādā II, 906 = Jan. 3, 1501). On the significance of his career and literary interest cf. Bellin, *Notice biographique et littéraire sur Mir 'Alī-Chir-Nerdī* (J. A., xvii, 1861, p. 175—256, 281—357); E. G. Browne, *A History of Persian Literature under Tartar Dominion*, Cambridge 1920, esp. p. 437 sqq., 505 sqq.; *Mir-'Alī-Shīr*, Leningrad 1928. Like the other Caghatai poets, Mir 'Alī Shīr, in his *Dīwān* as well as in his numerous other poems, is simply an imitator of Persian poets, but he does not follow his models slavishly; his poems seem to have suited the taste of his time and people perfectly and have enjoyed great popularity down to the present day. Of importance is his last work, finished in Djumādā I, 905 (Dec. 1499) *Muḥāmmat al-Lughatīn* (Quatremère, *Chrestomathie en turc oriental*, parts 1—2, Paris 1842); the language and culture of the Turks are compared with those of the Persians; the author endeavours to show that the Turkish language is no less suitable than the Persian for poetic efforts and intellectual purposes generally. Mir 'Alī Shīr is frequently described in European works as a minister or vizier; but as a matter of fact he never held any such official position. His influence on affairs of state and his activity as a patron of arts and sciences were the result of his friendship (not

always unclouded) with his prince Sulhān Husain (1469—1506). Sulhān Husain was himself a poet. His *Dīwān* was published in Baku in 1926. A son of this Sulhān, prince Shāh Gharīb, whose pen-name was Gharībī (in the *Bābur-Nāma*, ed. Beveridge, G.M.S., i, 166, probably wrongly Gharībī), has left a Persian (not known to Brockelmann) and a Turkish *Dīwān* in the Hamburg Stadtbibliothek, No. 15 (Brockelmann, *Katalog*, No. 183 and 277), MS. dated Ramaḍān 940 (March-April 1534). Bābur (q. v.), the founder of the Timurid Empire in India, was the author of a number of poems but is most celebrated for his *Memoirs* (*Bābur-Nāma* also *Wakā'ī* or *Wāḥī-i Bāburī*; cf. *Ta'rikh-i Kaḡhānī*, transl. Rose, p. 173 sq.); but Persian was almost exclusively used at the Indian court.

The Timurids were driven out of Central Asia and Eastern Persia by the Özbeġs. Under the latter, especially in the early period, when they had not yet completely adapted themselves to Persian culture, a good deal of Turkish was written both in verse and prose; but they stuck to the old "Caghatai" models without producing anything new or original. Mir 'Alī Shīr remained the model for poets in educated circles, and for the poets of the masses Ahmed Vesowī (q. v.), in the modernised form in which we now possess his *Dīwān*. The historian Abū 'I-Chāṭ Bahādur Khān (q. v.) probably stands alone, who endeavoured in his work (ed. Desmaisons, p. 37) to avoid Persian and Arabic as well as "Caghatai Turkish" words and to write so that "even a five-year-old child" could understand him. One of the most popular poets (also used as a school text-book) of the Özbeġ period was the mystic Shīfī Allāh Yār (end of the xvth and beginning of the xvith century). Later in Bukhārā, Turkish literature was almost completely driven out by Persian (partly influenced by the local Tadjikī (q. v.)). In Khoġand (q. v.) and Khiva (see KHIVARIZM) Caghatai literature experienced a noteworthy revival in the sixteenth century. Cf. especially M. Hartmann, *M. S. O. S. As.*, vii, 87 sqq. (the expression "revival" [*Nachblüte*], p. 79); A. Samoylovich, *Zap.*, xix, 0198 sqq.

The Uighur alphabet was no longer used among the Özbeġs as it still had often been under the Timurids; but the influence of the Uighur script can still be seen in the Arabic here (use of vowels instead of the vowel signs prevailing in South Turkish manuscripts). So far little attention has been paid to the question how far Caghatai literature was influenced by the literature of the oldest Kāshghar period. That, as M. Hartmann thought (*M. S. O. S. As.*, vii, 79), the *Kutadġu-Bilġ* (so to be written instead of Radloff's *Kutadġu Bilig*) "remained almost neglected in the land itself and was taken to Egypt at an early date", can hardly be held any longer. Samoylovich (*Zap.*, xxi, 038 sqq.) has established the fact that on a jar found in Saraitik on the lower course of the Ural of the xiiith century, quotations are given from the *Kutadġu Bilig*. Even in the *Ta'rikh-i Kaḡhānī* finished at the end of Dhu 'l-Ka'da 1280 (May 1864) of Mullā Bihā Khān (the only known manuscript is in Berlin, acquired in 1929, l. 9b), we have the verses which sound exactly like a quotation from the *Kutadġu Bilig* (although not found in it): *wazīr etḡāl dur tamāmī nīzām nīzām olmasa 'adl tapmas kīyām* ("all the activity of the vizier should be directed to

order; where there is no order, justice cannot be carried out").

The same Turkish literary language as was written in the land of the Orzbegs is written to the present in Chinese Turkestan (Kashgharia). Here also day Turkish culture has been influenced by Persian; the only work of importance from Kashgharia, the *Ta'rikh-i Rashidi* of Haidar Mirza [q. v.], is written in Persian; there are at least two Turkish translations of it (by Muhammad Sidiq in the xviiith century; by an anonymous writer in Khotan dated 22nd Jumada II, 1263 = June 7, 1847). Even under Isma'il Khan (1670-1682) Mirza Shah Mahmud Curia (*Zap.*, xxii. 313 sqq.) wrote his history in very bad Persian instead of in his own native Turkish. A little later (beginning of the xviiith century) the history in the Asiatic Museum in Leningrad (*Zap.*, xv. 236 sqq.; M. Hartmann, *Der islamische Orient*, I, Berlin 1899-1905, p. 291 sqq.; in addition to this manuscript, there is now a second, Petrovskiy 9, in the Asiatic Museum) was written in a pure and simple Turkish language. On the most recent historical works from Kashghar cf. e. g. *Zap.*, xvii. 0188 sqq. (on the *Ta'rikh-i Amaniya* of Mulla Musa of Sairam finished on the 11th Shawwal 1321 [Dec. 17, 1903]).

In the xixth century a new Turkish literature has been founded among the Orzbegs under European (directly under Russian and Tatar) influences (sometimes called "Modern Caghatai literature"); it includes dramatic works among its productions.

B.—I. OTTOMAN TURKS.

Language and Alphabets.

Ottoman Turkish has since the end of the xvth century been a language of literature and culture the forms of which have become securely established during the four centuries of its existence. Its evolution and the extension of its sphere of influence have been intimately connected with the political and cultural development of the Ottoman empire. It has therefore become one of the principal languages of the Muslim world, being next in importance to Arabic and Persian. After Ottoman culture had begun its orientation to the west in the period of the *Tanzimat* [q. v.] in the xixth century and in a greater measure since the end of the Ottoman empire in 1922, this same literary language has assumed the character of a national language which in Turkey is now never called anything but Turkish (*Türkçe*). The influence of this language is still to be traced in the languages of those Muslim and Christian peoples who formerly formed part of the Ottoman empire.

Ottoman Turkish is a branch of the southwest or Turkoman group of Turkish languages (cf. Samoylovich, *Nekotorye dopolneniya k klassifikatsii*

tureckikh jazykov, Petrograd 1922, p. 5 sq.; this same group is called by Radloff, *Phonetik der nördlichen Türkischen Sprachen*, Leipzig 1883, p. 280, that of the dialects of the south). These were the dialects originally spoken by the Oghuz Turks. With the other "dialects" of this group, the Adheri and Turkoman, Ottoman shares certain phonetic peculiarities like the dropping of the consonant *g* after another consonant (cf. e. g. *halan* compared with *halgan* of the other groups) and the form *ol-* instead of *bol-* (with certain survivals in Turkoman) for the root of the verb "to be", and, from the morphological point of view, of a special paradigm for the present of the verb (*geliyorum*). In the application of vowel harmony it distinguishes two groups of variable endings, that in which *e* alternates with *a* and that in which we have *i*, *ı*, *u*, *ü* alternately with fairly frequent traces of an inflection, which knew only the alternations *u*, *ü* (V. Grönbech, *Forstudier til tyrkisk Lydhistorie*, Copenhagen 1902, p. 18-19). Ottoman is distinguished from Adheri and Turkoman particularly by the change of initial *m* to *b* (*ben* in place of *men*). The conservative character that belongs to the Turkish language in general, due to the fact that the nominal and verbal roots hardly suffer any change, is the reason why the dialects of Ottoman differ very little among themselves [cf. below, III].

Turkish, as taught in the many grammars in European languages, is based, from the point of view of dialect, on the pronunciation which prevails in Constantinople, a pronunciation which is often characterised as light and melodious. This is due to the fact that the Constantinople dialect tends to make predominate, especially in the endings, terminations with "light" and unrounded vowels, while we do not have there the pronunciation *ek* in place of *ek*, which prevails in the eastern dialects; it is probably also the great number of Arabic loanwords which has brought about the predominance of the "light" articulation. The language taught in the grammars has rather a conventional character, which is seen notably in the great regularity which they represent as prevailing in the vowel system of the roots (the two series *a*, *ı*, *e*, *u* and *i*, *ı*, *ü*, *ü*) and in the rigorous application of the rules of vowel harmony. This regularity is far from being found in practice, although the language of the educated people tends to develop in this direction. The employment of the Arabic alphabet seems to have distracted the attention of the Turkish grammarians themselves from phonetic questions in general; the establishment of an orthography in the Latin alphabet will no doubt reveal gradually what are the tendencies of Turkish pronunciation.

The question of ascertaining which is the standard Ottoman dialect is however somewhat complicated. The opinion predominating in Turkey itself is that the best *Türkçe* is that of Constantinople (Ziya Gökalp, *Türkçülüğün Esasları*, Ankara 1339, p. 97). This however is making the question much too simple. The population of Constantinople is composed of many heterogeneous elements and no doubt a large number of Ottoman dialects have contributed towards the evolution of the language of the ancient capital of the empire. The prevalent view has more real foundation if we apply it only to the language of the educated classes. As regards pronunciation M. Bergsträsser thinks he

can say it is more or less uniform among the educated classes of Constantinople (Z. D. M. G., lxxii. 236). There are however still considerable divergencies in the different classes of society, as regards pronunciation and vocabulary; many memories of ancient dialectal differences must have still survived. We owe to Vámbéry the interesting statement that the members of the dynasty of 'Othmán had retained a mode of speech among themselves which differed from ordinary Turkish. We are however not at all well informed regarding the evolution of the language of the educated classes. For pronunciation, we possess of the xvth century a few Turkish texts written down in Latin characters (cf. especially Foy, *M. S. O. S.*, iv. and v.; and Babinger, in *Literaturdenkmäler aus Ungarns Türkeizeit*, Berlin and Leipzig 1927, p. 43). But these very interesting documents rather reflect a dialectal pronunciation; later documents also like Holdermann's Turkish grammar of 1730 (cf. Babinger, *Stambuler Buchwesen*, Leipzig 1919, p. 14—15) show considerable divergencies compared with the Turkish of Constantinople of today, especially in the retention of endings with rounded vowels.

As to the vocabulary of the Turkish of the educated classes, we are in a position of still greater uncertainty, due to the fact that the ideal of what is good Turkish has considerably changed in course of time. This ideal down to the middle of the sixteenth century was strongly influenced by the literary language.

This written literary language developed from the first attempts at writing the Turkish spoken by the different Turkish groups who were established in Asia Minor in the thirteenth century (cf. below, iv.). It is therefore based on several dialects, which did not differ greatly from one another and still less when written in the Arabic alphabet. This Arabic alphabet even caused the disappearance of a number of peculiarities of the Adheri dialect, which was not without influence in the development of literary Ottoman. The literary language does not, strictly speaking, possess a real classic, which could serve as an ideal model of language and style, as Arabic has in the *Kur'an* and Persian in a more limited sense in the *Shāh-nāma*. The epithet classical is usually given to the language of the great Ottoman poets of the xvth and xvith centuries but the exaggerated artificiality of this language did not permit it a lasting influence.

The most prominent feature of the ancient literary language is the almost unlimited employment of words and expressions borrowed from literary Arabic and Persian. Like the other Turkish languages, whose speakers became Muslims, Ottoman Turkish shows from the first a number of words borrowed from Arabic and Persian belonging to the sphere of religion and culture. The linguistic character of the Turkish language offers no obstacle to the adoption en masse of foreign words which are not at all felt to be intolerable in the system of the language (cf. e.g. E. Sapir, *Language*, New York 1921, p. 210). This circumstance has given Turkish a great richness in possibilities of expression both in the noun and in the verb (by means of the auxiliary verbs *etmek*, *çılmek*, *çılmak*, *almak* combined with Arabic *maḍar*'s). And since Turkish literature for the most part began with translations from Persian, which has the same faculty for

adoption from the Arabic, the literary language has drawn abundantly from this source to enlarge its powers of expression. Thus there arose an ideal of literary beauty which has brought about a wide breach as regards vocabulary between the written language and the spoken language which came to be known as *şah-türkçe*. There have always, it is true, been scholars who condemned this artificial language (on the *baştürkçe* movement see below, iv.: Ottoman Literature) but it was only in the middle of the sixteenth century that a reaction set in against the abundant use of Arabic and Persian loanwords in the literary language. This movement coincides with the ascendancy of European influence on Turkish literature. But at the same time the influence of European civilization in general caused to be felt the want of new terms to express new ideas, technical, scientific, political etc., which came into Turkish civilization when it turned towards the west. In this difficulty, recourse was again had to the inexhaustible resources of the Arabic vocabulary and also to the morphological possibilities of Arabic. The result was that Turkish scholars and men of letters of the second half of the sixteenth century found themselves faced with an embarrassing wealth of foreign elements in the literary and learned language beneath which the Turkish element tended to be stifled. In spite of its faculty for adaptation, the Turkish language seemed to be supersaturated.

The study of the Arabic and Persian elements in Turkish presents much interest for the cultural evolution of the language and the people. The present pronunciation in many cases enables us to distinguish the words which have really passed into the language of the people, which can be seen from their more complete adaptation to the rules of vowel harmony, and those which remained the property of the scholar and man of letters only (cf. M. Bittner, *Der Einfluss des Arabischen und Persischen auf das Türkische*, St. A. Wien, CLXXII/iii.; G. Bergsträsser, *Zur Phonetik des Türkischen*, Z. D. M. G., lxxii.; and A. Schaade, *Der Vokalismus der arabischen Fremdwörter im osmanischen Türkisch*, *Festschrift-Münch.*, p. 449 sqq.). The study of the meanings of these loanwords is equally important; many Arabic words have a different sense in Turkish from Arabic: in these cases the old lexicographers spoke of *ghale-fat-i meḥḥūre*. Several works in Turkish are devoted to this subject.

To the generation of Turks of the period of the *Tamizât* the question presented itself as a problem of culture. It was quite naturally thought that the only means of escaping from the impasse was to return to the language of the people in which the foreign element had always been slighter. Among the first to urge the use of a simpler language was Süleimân Pasha (d. 1893), known from the Russo-Turkish war; he recommended the adoption of the simple language of the soldiers and published a Turkish grammar which he called *Şarf-i türkî*, avoiding the word *'aḥmâni* which Ahmad Djewdet Pasha [q. v.] had still used in the title of his grammar *Kavâ'id-i 'aḥmâniyyi* (Constantinople 1311). Another figure in the same period is Ahmad Wafik Pasha [q. v.] whose *Lehçe-i 'aḥmâni* is a serious attempt to regularise the use of foreign words. The literature of this period, although employing more modern literary

forms, still used the old literary languages which also prevailed in the newspapers and periodicals (school of Mu'allim Nâdî). But in proportion as the Ottoman empire approached its political crisis towards the end of the century, the interest in the language increased more and more. At this period we also find a movement for extreme purism of language, conducted especially by the paper *İhtisâs*; the great promoter of the *İhtisâsçilik* was Fu'âd Kâ'î Bey. He simply preferred to banish all Persian and Arabic expressions from the language and to form new Turkish words, even borrowing them from other groups of Turkish languages, thus creating a language which Ziya Gökalp calls "Turkish Esperanto". Even the lexicographer Sâmî [q. v.] declares himself in theory a supporter of this school. Soon this purism gave way to a more reasonable purism, which was propagated for the first time by the periodical *Gendî Kalemîler* in Salonica (1910) and later by the *Türk Yurdu* in Constantinople. Some innovators like 'Omâr Saif al-Dîn Bey even thought that the reformation of the Turkish language ought to be the principal article in the Turkish cultural reformation (cf. *Newslet-i 'Osmanî*, Constantinople 1330, p. 395). In 1917 the question was investigated by Djelâl Nûrî in his brochure *Türkçüme*. After the War, the new programme of the reform of the language was expounded by Ziya Gökalp in *Türkçülüğün Esasları* (Ankara 1339, p. 100 sq.). As a result of these new views on language, the literary idiom has also taken a direction which brings it closer to the spoken speech; as examples we may quote the language of the literary works of Khâlid Edîb Khânûm and Rüshen Eshref. On the other hand, a knowledge of the written language has spread at the same time among much larger sections of the people. The introduction of the Latin alphabet will undoubtedly influence the mutual relations of the written and spoken language.

Alongside of Arabic and Persian loanwords, Ottoman Turkish possesses a considerable number from other languages. Thus Italian has considerably enriched the terminology of navigation; then there are a fair number of words from Greek and Albanian. French made its influence felt in the 19th century but almost exclusively in scientific and quasi-scientific literature. Indirectly the influence of the great languages of Europe, and especially of French, has been felt in the simplification of literary style, in the tendency to avoid the heavy interminable phrases of the old Turkish prose.

The alphabet used for writing Turkish was the Arabic from the earliest known Anatolian documents of the 13th century. The system of transcription differs from that followed in Çaghatâi in as much as Ottoman makes a larger use of the emphatic Arabic letters (notably the *ğ* in roots with a heavy vowel, which corresponds to a real distinction in pronunciation; cf. the article quoted by Schade, p. 451) and uses the "scriptio defectiva" in the roots with vowel *e*, *i* or *ı* and even often for *a*. In 1727 printing was officially introduced into Turkey (cf. Babinger, *Stambuler Buchwesen im XVIII. Jahrhundert*, Leipzig 1919) but this innovation was far from having the cultural importance for Turkey that printing had for Europe at the time of the Renaissance. A perfect uniformity of orthography in Arabic characters was never attained and, especially after 1900, we find several attempts to make writing in the Arabic

character clearer, e.g. by the use of the final form of the letter *â* for the vowel *e* but none of these attempts at reform met with general approval. The technique of Arabic calligraphy has been much cultivated in Turkey. Several scripts peculiar to Turkish have been evolved, like the *divânî* hand which was used for official documents issued by the sultan and high officials, then the ornamental hand called *thulûth* and the *rif'a* which is a kind of cursive hand, that remained in use up till quite recently. Arabic calligraphy (*hün-i khatt*) in Turkey has at the same time maintained a higher level than in other Muslim countries (cf. the collection of biographies, *Khatt-u Khattâ'in* by Habib, Constantinople 1305). Other alphabets, which have been employed for Ottoman Turkish are the Greek by the Karamanlis and Armenian by the Turkish-speaking Armenians (cf. e.g. E. Littmann, *Ein türkisches Streitgedicht über die Ehe*, in *A Vol. of Or. Stud. pres. to E. G. Browne*, Cambridge 1922, p. 269 sqq.). The Hebrew script has never been used for Ottoman Turkish.

In 1928 the Latin alphabet was officially introduced into Turkey to take the place of the Arabic. Since the Young Turkish Revolution there had been several attempts to simplify the Arabic alphabet for Turkish usage. The difficulty of Arabic orthography, requiring entirely different principles to write Turkish words and words borrowed from Arabic and Persian, was rightly regarded as a serious obstacle to the spread of the written language among the masses. Thus alongside of several attempts to reform Arabic orthography itself (cf. above), there appeared from time to time more radical proposals like the system which Enver Pasha tried to introduce into the army during the war. This system is based on the Arabic alphabet, but it does not join up the letters and has a consistent notation for all the vowels. But none of these systems gained any great success. On the other hand, the use of the Latin alphabet had always been resolutely opposed in religious circles, even for purely scientific purposes. After the restoration of the Nationalist Turkish state the question remained for some years in suspense. Clerical influence no longer counted and from time to time the position of the Latin alphabet was discussed in the press (brochure by A. Galanti, *Türklerde 'arabî ve latîn Harfleri ve İmlâ Mecmûesi*, Constantinople 1925). The question was also influenced by the attitude of other Turkish peoples living in Russia, notably in Adharbâidjân, and by the discussions at the Turcological Congress at Baku in Feb. and March 1926 (cf. *İslâm*, xvi, 173 sqq.) where Turkey was only poorly represented. Finally in 1928 the government, supported by the Nationalist party, decided to push the matter forward. A law of May 20 officially introduced the use of the European numerals. In the meanwhile the government had been studying the new alphabet and on Aug. 21, Mustafa Kemal Pasha delivered his celebrated lecture on the new Latin alphabet in Constantinople. After a few modifications had been made in the first scheme, the new alphabet was at last introduced by a law of Nov. 1. This law orders the use of the Latin alphabet according to the rules elaborated by the *Dil encümeni* (*Dil encümeni*) and the abolition of the Arabic alphabet, at the same time arranging the stages of the transition. It laid down June 1, 1930 as the final date at which the new alphabet must

be used in all kinds of published documents (cf. the text of the law in *Oriente Moderne*, Jan. 1929, p. 41 *sqq.* and the article by H. W. Duda, *Die neue Lateinschrift in der Türkei*, in *O.L.Z.*, 1929, col. 441—453). The newspapers had begun to appear in the new alphabet from Jan. 1, 1928. At the same time steps were taken to have the new alphabet taught to all classes of the population by means of courses lasting four months (*millet mektebi*).

The rapidity of the successive measures and the little resistance that seems to have been offered them show not only the strong position of the government but also the feasibility of such a radical reform. This is probably due to the fact that the percentage of the population seriously affected by the change was relatively small, on the other hand no one will deny that the Latin alphabet is much better fitted to render the phonetic character of Turkish than the Arabic alphabet. The time chosen to introduce the new alphabet was not inopportune but it was equally clear that the sacrifice of an alphabet which for centuries had been bound up with the religious, literary and cultural development of a people meant a cultural crisis which places a great responsibility upon the intellectual leaders of the people. The reform is still too recent to be able to judge of its effects.

The new alphabet shows several original features (like the use of *ç* for the sound *ç*, of *ğ* for *ğ* and of *ı* without dot for *ı*; *ë* for *â* shows the influence of Rumanian orthography); it is not overloaded with diacritical marks. We cannot yet speak of an established orthography but the rules given at the beginning by the *Dil endişmeni* have laid down the principle of an orthography as phonetic as possible, which applies even to words borrowed from other languages written in the Latin alphabet (e.g. *federasyon* for *fédération*). This often gives Arabic words a form which makes their identification difficult to those accustomed to the Arabic alphabet. In general, we can say that the new alphabet tends to be more suited to the spoken language than was possible with the Arabic alphabet; it has already been pointed out that this circumstance may facilitate in many points the scientific study of the Ottoman language.

(J. H. KRAMER)

II. OTTOMAN-TURKISH DIALECTS.¹⁾

1. Area of Dispersion.

For the want of the necessary detailed surveys it is impossible as yet to define the exact frontiers of the areas in which the Ottoman Turkish language is spoken. It extends over territory in Europe as well as Asia. In Europe in the Balkan peninsula, it is found in islets surrounded by other languages, which have very much broken the Turkish bloc. We may mention the following such Turkish speaking areas: 1. Eastern Thrace with the peninsula of Gallipoli, where the Turks form a solid body with a population of over a million. 2. Parts of Macedonia, namely a long stretch on the left bank of the Vardar, the land between Ilip (Štip) and Radoviš (Radoviška), along the Aegean, roughly from Salonika to Dede-Ağaç, especially the country

round the towns of Drama, Eskiçe, Gümüşina (Gümürina). On these lands there is a rich literature of the period of the Balkan Wars, some of it politically biased; cf. especially: *Carte ethnographique de la Macédoine du sud représentant la répartition ethnique à la veille de la guerre des Balkans, 1912*, by I. Ivanov (scale 1:200,000), also *Etnografska karta na egejskija vilajet km 1912 god.* by L. Miletić (scale 1:750,000), *Etnografska karta na Makedonija* by the same (scale 1:1,500,000); cf. also Vasil Kančof, *Makedonija, etnografija i statistika*, Sofia 1900. Since that time however the ethnical proportions have been very much altered. The exchange of population introduced by the treaty of Lausanne (1923) between Greece and Turkey brought about a considerable shrinkage in the number of Turkish speakers on the now Greek part of these lands, after Greece had sent over 400,000 Turks into Turkey. 3. Certain areas in Bulgaria, namely the districts of Deli-Orman, Tosluk and Gerlovo in N.E. Bulgaria (cf. D. G. Gadžanov, *Vorläufiger Bericht über die im Auftrag der Balkan-Kommission der kais. Akademie d. Wiss. in Wien durch Nordost-Bulgarien unternommene Reise zum Zwecke von türkischen Dialektstudien*, Ann. Wien of 8th Febr. 1911 and do., *Zweiter vorläufiger Bericht über die ergänzende Untersuchung der türkischen Elemente im nordöstl. Bulgarien in sprachlicher, kultureller und ethnogr. Beziehung*, *ibid.*, 24th Jan. 1912. For the question of the settlement of the Turks see also L. Miletić, *Savremeno bolgarsko naseljenje i sivozračna Bulgarija*, Sofia 1902; the map in A. Ischirkoff, *Das Bulgarentum auf der Balkanhalbinsel im J. 1912*, in *Petermanns Geogr. Mitteilungen*, Year 1915, is also very valuable, Plate 44 where the distribution of the islets of Turkish speakers is also given), also a considerable area in N.E. Bulgaria around the towns of Kyrgaly and Mastanly. In addition, Turks are found scattered throughout Bulgaria, in the territory round Philippolis (Plovdiv) in the Roza-Balkan and elsewhere; cf. Dr. Constantin Jireček, *Das Fürstentum Bulgarien*, Prag-Vienna-Leipzig 1891, p. 133—146 (out of date). 4. Turkish speakers are found scattered up and down the modern Yugoslavia, the bulk in Macedonia (cf. J. Cvijić, *Ethnographische Karte der Balkanhalbinsel nach allen vorhandenen Quellen und eigenen Beobachtungen*, *Petermanns Mitteilungen*, March etc. 1913 and do., *Raspored balkanskih naroda*, *Glasnik Srpskog Geografskog Društva*, Belgrade 1913, p. 234—265). Isolated little bodies are found along the Danube, as far up as the interesting island of Adakale at Orsova (cf. the introduction to Vol. I. of I. Kinos, *Türkische Volksmärchen aus Adakale*). 5. The whole western and northwestern shores of the Black Sea show considerable Ottoman influence. In the towns and steppes of the Dobruđa a good deal of Ottoman Turkish is spoken (cf. St. Romansky, *Le caractère ethnique de la Dobroudja*, Sofia 1917, and do., *Carte ethnographique de la nouvelle Dobroudja Roumaine*, Sofia 1915). Unfortunately we do not possess fuller information of the dialectal conditions there. It is important to note that the language of the Christian Gagauz is at bottom Ottoman Turkish. The Dobruđian Gagauz whom I met north of Varna speak a dialect which is almost indistinguishable from the popular dialect of Constantinople. The language of the Bessarabian Gagauz also which we know from

¹⁾ For practical considerations the author's system of transliteration is retained in this article. See note p. 926a.

Moškov's rich collection (Radloff's, *Proben der Volkslitteratur der türkischen Stämme*, vol. x., *Mundarten der bessarabischen Gagausen*, St. Petersburg 1904), is simply an Ottoman Turkish dialect. In spite of the fact that some students have regarded the Gagaus as descendants of the Kumans (C. Jireček, *Einige Bemerkungen über die Überreste der Petschenegen und Kumänen, sowie über die Völkerschaften der sogenannten Gagausi und Sarguti im heutigen Bulgarien*, *Sitzungsber. d. kön. böhm. Gesellschaft der Wiss.*, 1889), their present language contains in fact no Kuman elements.

Ottoman influence is very strongly marked on the south coast of the Crimea. The specimens recently published by O. Šatskaja of the popular poetry of Bažęysarai and Tuak (near Alušta) may be described simply as Ottoman Turkish (*J. A.*, April-June 1926, p. 341-369). The same must be said of many of the texts in Radloff, *Die Mundarten der Krym (Proben der Volkslitteratur der nördl. türk. Stämme*, vol. VII). The Crimean Tatar literary language does not differ very seriously from the Ottoman written language (Samoilovič, *Opýt kratkoj krymsko-tatarskoj grammatiki*, Petrograd 1916, p. 7 infra).

We have no accurate information about the present condition of the Turkish language in the islands of the Mediterranean, especially in Crete, Cyprus and the islands of the Aegean.

The Anatolian Turkish speaking area in north, west and south has well marked natural boundaries. In the northeast it gradually and apparently without a definite frontier passes into Ađharbaidžant. Many linguistic peculiarities, which even Foy took to be specifically Ađharbaidžant (*Azerbaidžanische Studien mit einer Charakteristik der Südtürkischen*, *M. S. O. S. As.*, vl. 126-193; vii. 197-265), are also found in Asia Minor dialects, as Giese (cf. above I., p. 531) has rightly pointed out. In the southeast, Ottoman meets the Arabic of northern Syria. In northern Mesopotamia it is much broken up by Kurdish and considerably influenced by Ađharbaidžant from Persia.

In addition to the settled Turks, we find in Anatolia and even in the Balkan Peninsula nomads and semi-nomads. In Asia Minor their numbers are still considerable, while they are disappearing on European soil (cf. P. Traeger, *Die Türken und Konjaren in Makedonien*, *Zeich. für Ethnol.*, 1905, p. 198-206; on the Jürüks and Konjars in Bulgaria: Jireček, *Das Fürstenthum Bulgarien*, p. 139 sq.). In Anatolia, Turkish nomads are known under rather vague names like *Aliretler* ('clans'), Jürüks, Turkomans, or by their own tribal names like Avlars (or Afars) etc. As a rule their language does not differ essentially from that of their settled neighbours.

The frontiers of the area of Ottoman Turkish are still being considerably altered. In the west, i.e. in the Balkans, it is constantly decreasing; while in the east, on the other hand, in places it is gaining ground.

2. Linguistic Minorities in the Ottoman-Turkish Area.

Steps taken by the present republican government have very much reduced the linguistic minorities within the frontiers of modern Turkey. Nevertheless the Ottoman Turkish speaking area is not yet by any means uniform and there are many other

languages in it. The following are the principal minorities: Greeks, formerly very numerous, now, as a result of the exchange of population, practically found only in Constantinople, Armenians (also almost entirely confined to the Constantinople territory), Arabs (Muhammadan on the Syrian and Iraqi frontier, Christian in Mersin and district), Kurds in the eastern vilayets, but also in isolated groups elsewhere in Asia Minor (after Sheikh Sa'id's rising in 1925, a considerable number were deported to the interior of Asia Minor as a punishment), Nestorian Syrians in the eastern vilayets (especially Hakkari), all kinds of Caucasian peoples (Laz, Georgians, Abkhaz, Circassians), who are found scattered all over Asia Minor, most thickly in the N.E., less numerous Albanians (Arnauts), gipsies, Spanish Jews, who live in the larger towns, etc.

Turkish minorities are also found in Asia Minor (e.g. the Krim Tatar emigrants in and around Eski-Shehir) as well as in Rumelia (on the Dobrudja, on the Bulgarian Danube).

3. The mutual influences of Ottoman-Turkish and neighbouring Languages.

We are at present very imperfectly informed regarding the influence of Ottoman Turkish on its neighbours and *vice versa*. We can only indicate isolated phenomena: for example the disappearance of initial *h* (*χ*): *ađ* (= Ar. *حَف*), *ain* (= Ar. *خَئِن*), *one* (= Pers. *خَند*), *ani* (= *hany*, *hany*) etc., which is so characteristic of the Macedonian dialects (Kowalski, *Zagadki ludowe tureckie*, p. 11; do., *Osmansk-türkische Volkslieder aus Mazedonien*, *W. Z. K. M.*, xxxiii. 167-168), but is also found in Bosnian Turkish (Blau, *Bosnisch-türkische Sprachdenkmäler*, p. 27), is to be ascribed to the influence of the Southern Slavonic languages. Similarly the variation between initial *š*/*š* which is often noticed in Northern Bulgaria, may be ascribed to Bulgarian influence. Possibly also the peculiar phenomena of palatalisation in the dialects of the Bessarabian Gagaus (Moškov, p. xxvii. sq.) are to be ascribed to Serbian influence.

Blau has studied the Turkish-Serbian mixed language of Bosnia, but he devoted himself not to the spoken language but almost exclusively to manuscript material. On the Ottoman-Turkish language of the period of Turkish rule in Hungary cf. the valuable information in *Litteratursdenkmäler aus Ungarns Türkenzeit* (ed. by F. Babinger, K. Gragger, E. Mittwoch and J. H. Mordtmann, Berlin 1927).

That in the southeastern regions under the influence of Arabic, a greater variety of gutturals prevails than elsewhere in Ottoman and that in particular the Arabic *ain* is pronounced there in Arabic loanwords has been noted by several observers (cf. M. Hartmann, in *K. S.*, i. 154; Balcanoglu, *Dialecte turc de Kilis*, *K. S.*, iii. 263).

The interaction between Turkish and the neighbouring languages is best seen in the vast number of borrowings. So far, Turkish loanwords in non-Ottoman languages have received more attention than non-Turkish words in Ottoman. On the influence of Ottoman-Turkish on the languages of Southeast and Eastern Europe, see especially the work of Fr. Miklosich (*Die türkischen Elemente in den süd- und osteuropäischen Sprachen*, Griechisch, Albanisch, Rumänisch, Bulgarisch, Serbisch, Kleinerussisch, Grossrussisch, Polnisch, Denkschriften d.

Kais. Akad. d. Wiss. Wien, vol. xxxiv.—xxxviii.; cf. thereon Fr. Kraclitz-Greifenhorst, *Corollarium zu Miklosich „Die türkischen Elemente...“*, S.B. Ak. Wien, vol. cxvi, 1911. Very valuable also in Fr. Miklosich: *Über die Einwirkung des Türkischen auf die Grammatik der südosteuropäischen Sprachen*, S.B. Ak. Wien, vol. cxx., 1890; also N. K. Dmitrijev, *Etjudy po serbsko-tureckomu jeziku*, *izvestija Akademii Nauk S.S.S.R.*, 1928-1929. Turkish loanwords in Serbian in GJ. Popović, *Turske i druge istočanske reči u našem jeziku*, Belgrade 1889, in Rumanian: Th. Löbel, *Elements turcs, arabs et persans in limba Română*, Constantinople-Lipsa 1894, and Lazare Sainéan, *L'influence orientale sur la langue et la civilisation roumaines*, I. *La langue, les éléments orientaux en roumain*, Paris 1902. L. Rouzevalle, *Les emprunts turcs dans le grec vulgaire de Roumille et spécialement d'Adrinople* (J. A., 1911, July-Dec.), discusses Ottoman loanwords in popular Greek, while A. Danon, *Essai sur les vocables turcs dans le judéo-espagnol* (K. S., iv., 1903; v., 1904 and xiii., 1912) discusses the Turkish loanwords in the everyday language of the Spanish Jews.

The Turkish dialects of the Balkans, in Bulgaria, Yugoslavia and Rumania, show a very high percentage of Slav or Rumanian loanwords. The influence of Arabic and Persian on Turkish, unfortunately with reference to the written language only, is discussed by M. Bittner (S.B. Ak. Wien, cxlii., 1900), the Greek elements in Turkish by G. Meyer (*Türkische Studien*, S.B. Ak. Wien, cxviii., 1893).

Our information is very defective regarding the pronunciation of Ottoman Turkish by the numerous non-Turkish minorities in Turkey. A little can be learned from types of dialect in the Karagöz plays, although the greatest caution is necessary since its dialects, as G. Jacob rightly points out (*Das türkische Schattentheater*, Berlin 1900, p. 29-37; *Geschichte des Schattentheaters*, Hanover 1925, p. 143), are not true to life but are traditional caricatures, which cannot be taken as based on actual observation. The Turkish of the Greeks and Armenians living in Constantinople used to be caricatured in the Turkish humorous journals. Important material is also supplied by the until recently fairly important daily press, printed in Greek or Armenian type, for the Greeks (the *Karamanlis*) and Armenians who can only speak Turkish. On such literary material, excluding the spoken language, are based the able *Studien zum Armenisch-Türkischen* of F. Kraclitz-Greifenhorst (S.B. Ak. Wien, vol. cxviii./3, Vienna 1912). They deal mainly with the Armenian Turkish of Constantinople. On the language of the *Karamanlis* (*Karamanli*) cf. N. Dmitrijev, *Materialy po vsmanskoi dialektologii*, *Fontika „Karamanličko“ jazyka*, Zap. Kollegii Vostochnoveden., iii. (1928), p. 417-458.

In the pronunciation of the Turkish speaking Greeks, a striking feature is a kind of rhotacism: $i = r$, $z = r$, $\tilde{z} = r$, as *ceş* (*leş*), *afazak* etc. (cf. G. Jacob, *Zur Grammatik des Vulgar-Türkischen*, Z. D. M. G., iii. 701).

In two Turkish speaking Laz from Laz Käl near Adampol on the Bosphorus whose pronunciation I studied for sometime, I was struck by their pronunciation of *ki* as *hi*, e.g. *skin* (*skin*) "seed", and of the \tilde{z} as \tilde{s} ; the same thing was noted in a Laz in Samzun: *oda kilitlidir* (o. kilit-

lidir). They also pronounced the voiced initial consonants *b*, *d*, *g* voiceless as *p*, *t*, *k* (cf. Jacob, *op. cit.*, p. 699).

The Jewish pronunciation, according to the Turks, is characterized by the spirant pronunciation of initial *g* before *e*, *i*, *ä*, *u*, and by the lengthening of the accented vowels in the last syllable: *den geldim* (= *geldim*), *hakfym*...

4. The history of the formation of the present Ottoman speaking area.

The situation we find in the present Ottoman speaking area is the result of a very long and very complicated process of settlement and assimilation.

It is clear that the inhabitants of Turkey and the adjoining territories who now speak Ottoman Turkish are only to a very small degree descendants of the Turks who migrated hither but, on the contrary, are in the overwhelming majority descended from turkicised native elements.

A history of the settlement of Asia Minor and the Turkish parts of the Balkan Peninsula has yet to be written. So far not even the necessary preliminary work has been undertaken. The process of turkicisation of the territories in question can be represented in general outlines as follows.

Isolated South Turkish groups settled in Byzantine territory even before the Seldjûk invasion, both in Asia Minor and in the Balkans. In the latter area there must still have been also considerable bodies still in existence, surviving from the earlier North Turkish immigrations which came there by the north of the Black Sea. But it is not till the middle of the xth century that we have an immigration on a considerable scale, which may be called Seldjûk and lasts till the end of the xiii century. Towards the end of Seldjûk dominion in Asia Minor, the process of turkicising the native population must have begun. This process continued during the rule of the petty principalities which arose out of the ruins of the Seldjûk empire.

The immigration of the Ottoman Turks in the xiv century seems to have at first played a very minor part in the settlement of Asia Minor, on account of the small numbers concerned. But the political power of the Ottoman state which then began its rapid development had no doubt a far-reaching influence on the process of turkicisation. Only through the gradual unification of Asia Minor by the Ottomans and their great conquests in the Balkans were the preliminary conditions for the turkicisation of these lands created. During the whole period of Ottoman rule we have to think of continual movements of population going on within its frontiers, sometimes large, sometimes small, and with a continual infiltration of Turkish elements sometimes slow, sometimes fast, from outside, especially from the east. Large areas in the Balkans were colonised, although thinly, by Turks from Asia Minor soon after their conquest. Under pressure from the government, great masses of the non-Turkish population adopted Islâm and gradually became assimilated to the Turks even to the extent of exchanging their own language for Ottoman Turkish. The Turks of the Balkans still know in many cases whether they are descendants of Turkish immigrants from Asia Minor or

from converted Christians, who became in time quite turkicised.

The immigration of Turkish elements increased in strength after Russia had extended her power over lands with a Muslim Turkish population. Particularly after the annexation of the Crimea in 1783 and on the final subjection of the Caucasian lands in 1864 great bodies of Turkish immigrants poured over the whole Ottoman territory. The attainment of independence by the Balkan peoples on the other hand began the return of large bodies of Turks to Asia Minor, which is still going on. This latter process increased in strength after the World War and, as a result of the exchange of population with Greece, led to about half a million Turks being moved from the now Greek part of Turkey and distributed over almost the whole of Asia Minor.

That a linguistic area which had been formed in such a complicated fashion cannot be uniform as regards dialect is obvious and it is equally clear that the dialectal relations must be extremely complicated.

As regards language, the Oghuz tribes who migrated into Asia Minor must have been fairly uniform. From all that we know of it, the language of the Seldjûk Turks was barely distinguishable from what is known as Old Ottoman. There were of course dialectal nuances in the speech of the different tribes which in time sometimes became deeper and sometimes disappeared. As regards the mixture and levelling of dialects, it was much favoured, especially in Asia Minor, by the nomadic or at least semi-nomadic mode of life of the pure Turkish population which lasted for a long time and indeed is not yet quite extinct.

North Turkish elements (especially remnants of the Kumans), who were still to be found in the Balkan lands in the Byzantine period, almost entirely succumbed in time to Ottoman influence as regards language. Certain linguistic peculiarities which are observed in the dialects of the lands W. of the Black Sea (Deli Orman, Dobruja, Bessarabia) and, which, it is interesting to note, have certain analogies in the adjoining parts of Asia Minor, may perhaps be regarded as the result of contact between north and south Turkish.

In the language of the turkicised masses, one must expect to have to deal with secondary alterations in Turkish sounds, the result of inherited modes of articulation by the peoples concerned. The mobility of the population, military service, and in recent times the school have however tended to introduce a certain uniformity.

That the mixture and standardising of dialects have not gone further than we actually find, is due to the fact that new settlements do not as a rule merge completely into the old but exist alongside of them and that every settlement retains its own peculiarities for a long period unaltered.

Apart from the historical sources, which have not yet been fully utilised to write a history of the process of settlement by the Turks, we have in place-names a valuable auxiliary source for the study of the gradual settlement and turkicisation of Asia Minor and Rumelia. Unfortunately very little progress has so far been made with such toponomastic studies. In recent years Turkish scholars have devoted some attention to Oghuz tribal names which have become place-names (cf.

Köprülüâde Mehmed Fuâd, *Oghuz etimolojisi dair te'vâk-kı notlar*, *Türkiyat mecmû'ası*, i, 185-211; H. Nihâl and Ahmed Nâdî, *Anadoluda Türklerle 'âid yer isimleri*, *ibid.*, ii, 243-259). The villages of emigrants of recent date usually have artificial names derived from personal names by means of the Arabic ending *-î*, like *Ormanîî*, *Orzanîî*, *Reisîî*, etc.

5. Sources of our knowledge of Ottoman Turkish dialects and their value.

The most important source for our knowledge of the present linguistic conditions on Ottoman territory is the observations made by European students. Relatively little has been done by Turks as yet in this connection.

If we were to mark on a map of Turkey the places about which we have a certain amount of dialectological information, we would at once see what an infinitesimal amount of work has so far been done and how far we are from an exact knowledge of the whole linguistic area.

The value of the observations upon which we have to rely is very unequal. To the majority of students, the folklore content of the texts taken down by them was the main thing while the linguistic interest was quite subsidiary. The localisation of linguistic phenomena found in the texts is often made difficult by the fact that the collectors neglect to give the place of origin of their authority. The fullest collection of material, that of I. Künos, is not free from objection as regards method and has therefore to be used very critically.

Folksongs, so interesting from the folklore point of view, do not form specially suitable material for the study of dialects. For whole songs as well as their individual *motives* wander with remarkable rapidity over wide areas and their language becomes adapted to the local dialect, not at once and even after a considerable period not completely. The songs therefore occasionally show dialectal forms transmitted from distant areas. We have also to reckon with an artificial language for songs, such as has often been noted among Turkish peoples. It is the same with riddles and proverbs, and with the products of folk-literature in general, which show a more or less rigid form.

Most texts have been taken down in the towns where the population is as a rule considerably more mixed than in the country and where dialectal conditions are not so clearly distinguishable. Texts taken down from the lips of villagers on the spot are exceedingly rare. It is no wonder that in such circumstances we cannot yet speak of a study of dialects on Ottoman-Turkish territory on a sound scientific basis.

6. Specimens of language taken down in various areas.

The texts so far published concern either considerable areas or only very limited smaller ones. To the former belong: I. Künos, *Mundarten der Osmanen*, St. Petersburg 1899 (forms vol. viii. of the *Proben der Volksliteratur der türkischen Stämme*, ed. by Radloff). The provenance of the separate specimens is not exactly given, so that the work is of little value for dialect studies (quoted below as *Mund.*). V. Gordlevskij, *Obrazy osmanskogo narodnogo tvorčestva*, Moscow 1916; folklore texts mainly taken down in Constantinople,

some also from Asia Minor (especially at Nigde): Abbreviation *Gard*. T. Kowalski, *Zagadki ludowe turackie*, Cracow 1919; a collection of 141 riddles in phonetic transcription with exact statement of their provenance: Abbrev. *Zag*.

For the separate areas we may mention:

1. The Danube Island of Adakale. I. Kónos, *Ada-Kale török népdalok*, Budapest 1906. A hundred folk-songs collected in Adakale in transcription and with Hungarian translation: Abbrev. *Adak. Lied*; I. Kónos, *Materialien zur Kenntnis der Rumelischen Türkisch*, Part. I.: *Türkische Volksmärchen aus Adakale gesammelt, in Transkription herausgegeben und mit Einleitung vers.*, Leipzig-New York 1907, Part. II.: *Deutsche Übersetzung mit Sachregister*, ibid. 1907. Abbrev.: *Adak*.
2. Bessarabia. W. Moskov, *Mundarten der Bessarabischen Gagausen*, Text, St.-Petersburg 1904 (forms Vol. 2. of Radloff's *Proben der türkischen Volksliteratur*). Abbrev.: *Gagaus*.
3. Bulgaria. S. Čilingirov, *Turski poslovi, pogovorki i charakterni izrazi* (in *Bulletin du Musée National d'Ethnographie de Sofia*, II, 157—71; III, 59—65), Sofia 1922—23. Does not give a correct idea of the dialects of the Bulgar Turks; cf. thereon: N. Dimitrijević, *Zametki po bolgarsko-turckim govorom* (*Doklady Akademii Nauk B.*, Leningrad 1927, p. 210—215).
4. Macedonia. T. Kowalski, *Osmanskotürkische Volkslieder aus Mazedonien*, W. Z. K. M., xxi, 1926, p. 166—231. Abbrev.: *Mar*.
- A few specimens from Macedonia also in *Zag*.
5. Thrace and Constantinople. I. Kónos, *Osmán-török népdalok gyűjtemény*, 2 vols., Budapest 1887 and 1889. Very full collection of folklore materials from Constantinople. Abbrev.: *O. T.*; L. Bonelli, *Lecusani proverbiali del Turco volgare*, K. S., I, 1900, p. 308—322 (transcription of 140 proverbs and idioms collected in Constantinople); I. Halász, *Török dalok*, *Nyelvtudományi Közlemények*, xii, (1892), p. 526—528 (9 short songs in the Constantinople dialect).
6. Western Asia Minor. I. Kónos, *Kiziasai török nyelv*, I. *Brussa-Ajda vidéki nyelvmutatónyak (népdalok)*, *Nyelvtudományi Közlemények*, xii, (1890), p. 113—156, 40 songs from the district of Brusa-Aidin in transcription with Hungarian translation and notes. Abbrev.: *Brus. A.*; II. *Brussa vidéki népdalok*, p. 261—274, 165 proverbs from Brusa with Hungarian transl. and notes. Abbrev.: *Brus.*; I. Kónos, *Nasreddin Hodra Tréfák*, Budapest 1899, 165 pranks of Xoşa Nasreddin said to be in the Aidin dialect, which according to Kónos extends from Aidin to Konya. Abbrev.: *Aid.*; K. Foy, *Das Aidinisch-Türkische*, K. S., I, (1900), p. 177—194 and 286—307; T. Kowalski, *Pisnani ludowé anatolskie a czechyjskie Czasydyim, Roznik Orientalistyany*, I, 334—355, 29 czechyjsk-quatrains taken down from a man of Dumanly (Kara Ulağ). Abbrev.: *Dum.*; T. Kowalski, *Cinq récits de Günni (Vilayet Smyrne)*, *Roznik Orientalistyany*, II, 204—212. Abbrev.: *Gün.*; V. A. Maksimov, *Opyt izsledovanija turskich dialektov v Chudavendzharje i Karamanii*, St. Petersburg 1867. The majority of the authorities used by W. Heffening, in his *Türkische Volkslieder*, I, xii, 236—267 came from Western Asia Minor.
7. Wilayet of Kastamuni. J. Thury, *A Kastamuni-i török nyelvjárás*, Budapest (Academy) 1885, a grammatical sketch of Kastamunian with a glossary from Galib's *Mufayyât-i-türkiye*.

Abbrev.: *Kst.* Cf. also Cl. Huart, *Un commentaire du Qorân en dialecte turc de Kastamuni* (XV^e mois), J. A., ser. II, xviii, (1921), p. 161—216.

8. N. E. Asia Minor. V. Plazev, *Nischolizilev i trebizondskom dialektje* (*Zap. Vest. Old. Imp. Russ. Arch. Otd.*, xiii, [1901], p. 173—201). Abbrev.: *Piz.*; L. Bonelli, *Voci del dialetto turco di Trebizonda*, K. S., III, (1902), p. 55—72; I. Kónos, *Lás dalok*, *Nyelv. Köz.*, xii, (1891), p. 275—298, 11 Las-Turkish songs and a list of Las-Turkish words from the district of Samsun-Trebizond. Abbrev.: *Laz.*; M. Räsänen, *Ein Sammlung von Müni-Liedern aus Anatolien*, J. S. F. O., xli, (1926), 290 quatrains from the wilayets of Erzerum, Rize, Trebizond in accurate phonetical transcription. Abbrev.: *Riz.* [poem and verse are quoted]; Balhassanoglu, *Dialecte turc d'Erzerum*, K. S., v, (1904).

9. Wilayet of Konya. F. Giese, *Erzählungen und Lieder aus dem Vilayet Konjak*, Halle a. S.-New York 1907. Abbrev.: *G.*; F. Vincze, *Beiträge zur Kenntnis des anatolischen Türkisch*, K. S., ix, (1908), p. 141—179, deals with the dialect of the town of Konya itself. Abbrev.: *Vin.*

10. Antitaurus territory. Dr. Hamid Zübeyr, *Azlar Türk öytlaryna dâ'ir*, *Türk Yurdu*, May 1928, p. 21—24, specimens of the so-called *ayyt* (dirges) of the Avlars of the Antitaurus. Abbrev.: *Avi.*

11. Borders of Syria and Mesopotamia. Balkanoglu, *Dialecte turc de Kilis*, K. S., III, p. 261—273, brief sketch of the dialect spoken in Kilis (Kilis) in North Syria; do., *Dialecte de Behesi*, K. S., IV, on the dialect of Behesi, between Maraş and Diyarbekir; M. Hartmann, *Zur türkischen Dialektkunde*, K. S., I, (1900), p. 154—156, some notes on the Ottoman dialects of North Syria (Kilis, Aintab); E. Littmann, *Ein türkisches Märchen aus Nordsyrien*, K. S., II, (1901); Felix v. Luschan, *Einige türkische Volkslieder aus Nordsyrien*, *Zeitschrift für Ethnologie*, vol. xxxvi, (1904), p. 177—236, mainly taken down from an Armenian from Aintab.

As is clear from this short bibliographical sketch, many important areas, in European as well as in Asiatic Turkey, have not yet been studied as regards their dialects.

7. Dialectal Division of Ottoman Turkish Territory.

All the names which have hitherto been in use for Ottoman Turkish dialects, e.g. Kastamunian, Las-Turkish, Karamanian, Kharpo, etc. are of no value as designations of dialects. They correspond simply to geographical or political administrative conceptions, the connection of which with the boundaries of the corresponding dialects would have first to be proved, if it exists at all.

Even the great division, often taken for granted, of Ottoman into the Rumelian and Anatolian, is of no value from the dialectological point of view and should be discarded as misleading, in view of the history of the settlement of European Turkey. We know positively that certain Rumelian districts were colonised from Asia Minor and as a result their dialects still show distinct traces of their Anatolian origin.

After all that has been said above it must be clear that we cannot yet expect in the immediate future a serious attempt at a scientific classification of Ottoman Turkish dialects. What has so far been

done is based rather on intuition and imagination than on established facts. This applies also to the attempt by Künos to divide up Asia Minor according to dialects.

Künos (*Künaşa türk dialectuairöl*, Budapest 1896) distinguishes the following seven dialects: 1. Zeibek in Western Anatolia between Smyrna and Brusa; 2. Kastamunian in the central littoral of the Black Sea; 3. Laz on the eastern coast of the Black Sea, towards the Caucasus; 4. Kharput in the east of Asia Minor, towards the Armenian highlands; 5. Karamanian in southeastern Asia Minor between Mersin and Konya; 6. Angoran in the heart of Asia Minor in the valley of the Kızıl Yrmak; 7. Jürüküş Turkoman in use among the wandering tribes (*aliretler*), which are scattered over a wide area of Asia Minor.

Zeibek, Angoran and Jürüküş Turkoman are regarded by Künos as unmixed dialects of the early Turkish immigrants. The Jürüks in particular are taken to be the descendants of pre-Saldjuk Turkomans and the Zeibeks of the Saldjuk Turks. Angoran is said to be the survival of the language of the earliest Ottoman immigrants. The four other dialects are regarded by Künos as dialects of the turkicised original population of Asia Minor, which arose through the influence of the original languages of these peoples upon Turkish. According to him, Kastamunian was especially influenced by Greek, Kharput by Kurdish, Karamanian by Armenian, Laz however by an "Indo-Germanic" (!) language, not more precisely defined.

This attempt to classify the dialects of Asia Minor has no scientific basis, although at first sight it appears very plausible.

The first serious attempt to collect the distinguishing features of the spoken Ottoman language is in Jacob's essay in the *Z.D.M.G.*, lii. (1898), p. 695-729, *Zur Grammatik des Vulgar-Türkischen*. J. Deny, in *Grammaire de la langue turque (dialecte ottoman)*, Paris 1920, draws the attention on certain dialectal peculiarities.

8. Dialects and the Written Language.

The written language has always exercised a levelling influence on the spoken dialects. It is based on the language of the educated classes of Constantinople, which has till now been regarded as a model and is disseminated generally by the schools.

Of this language we had till lately only a vague conception. It was only quite recently that Bergsträsser began a serious attempt to define more exactly the living written language of the educated classes, at least from the phonetic side (G. Bergsträsser, *Zur Phonetik des Türkischen nach gebildeter Konstantinopler Aussprache*, *Z.D.M.G.*, lxxii. [1918], p. 233-262). It is proved that this is by no means uniform in its phonetics. Hence the conception of an educated Constantinople pronunciation is only to be used with great caution and with all kinds of limitations.

On the origin of the Ottoman written language (cf. above, ii.) we unfortunately still know far too little. We can only suppose that it gradually developed out of the dialect of court circles in northern Anatolia. When the capital was removed to Adrianople and then to Constantinople, the course of development was probably influenced by the dialects predominating there, while it in turn

strongly influenced the latter. In any case the written language is closer to the dialects of the parts of Thrace and Asia Minor adjoining the Bosphorus and Sea of Marmora than to the dialects of the districts farther west and east.

The earliest literary monuments not infrequently reveal dialectal peculiarities, which we can still trace in various living dialects. Unfortunately their systematic study has hardly been begun.

For the history of the written language and its relation to the older and modern dialects the study of the Old Ottoman texts that exist in transcriptions would be most important [cf. K. Foy, *Die ältesten osmanischen Transkriptionstexte in gotischen Lettern*, *M.S.O.S.*, 2nd part, iv. (1901), p. 230-277; v. (1902), p. 233-293 and Dmitriyev, in *Zapiski Kollegii Vostokovedov*, iii. (1928), p. 420].

9. General Characteristics of the Ottoman Turkish Dialects.

The differences between the various dialects of Ottoman are as a rule not great. This is connected with the fact that there is not great differentiation among the Turkish languages in general. In the area over which Ottoman Turkish is spoken at the present day, it would hardly be possible to find two places the inhabitants of which would not understand one another.

The differences between the separate dialects consist mainly in slight differences in the articulation of certain sounds, in a few sound shiftings and in not inconsiderable differences of vocabulary. Morphological differences are as a rule very slight.

Many investigators have already pointed out that there is little uniformity within the separate dialects. It can be observed everywhere that there is considerable variation in the articulation of separate sounds as well as in the use of grammatical forms by one and the same person. Most of our records of the dialects are therefore full of inconsistencies which, although to some extent due to the carelessness of the recorders, in the main give a true picture of the actual conditions. This variation must be ascribed to an advanced stage of intermixture of dialects which is almost general.

It must be remembered that many elements of the Turkish people now settled were till quite recently nomadic and moved about over a very large area. A great body of emigrants (*muhâcir*) from all possible Turkish areas has long been breaking up the early linguistic map, especially in Asia Minor. In quite recent years Anatolia has had to receive large bodies of emigrants from the Balkans. The measures taken by the republican government aim at as great a uniformity as possible within the state as regards language also, which is being attained mainly through the schools and military service. It is obvious that this is breaking up and destroying the local dialects.

If we remember what has been said above about the historical developments, the present confusion in dialects must be regarded as natural.

To a certain degree, the variation in articulation of separate sounds is to be ascribed to a lack of precision in pronunciation, which is peculiar to the Turks. The place of articulation as well as the degree of opening and expanding of the organs of speech often show considerable latitude. I need only mention the very indolent and varying pronunciations of the *r* pronounced on the tip of the tongue (cf. Bergsträsser, *op. cit.*, p. 251).

which, as we know, *u* and *ü* otherwise never occur (cf. Deny, § 25), is doubtful.

Unrounded vowels.

§ 7. Ottoman dialects have two varieties of *e*, a narrow (higher), here written *é*, and a broad (lower) variety, written *e*. In many districts, for example, there is a clear distinction between *el* "people, strangers" and *el* "hand". The narrow *e* is found either primary or as the result of combination. The former appears in *geşe* (Räs. *d'ışe*, 146, 4), *dimek*, *itmek*, *vermek*, etc., the latter in *beş* (G 83, 3) *hiş*, *şel* or *şil* (G 63, 10) *şil*, *şir*, *şir* (G 52, 12) etc. That *e* in the immediate vicinity of *h*, *j*, *ç* becomes narrow is a phenomenon also observed in the educated speech of Constantinople (Bergsträsser, *Z. D. M. G.*, lxii. 240; cf. Deny, § 189 and p. 1000).

§ 8. Most dialects distinguish between an *i* pronounced with the tip of the tongue and a *y* with the middle of the tongue. There are however also dialects in which there is no such difference and which have no pronounced *y*. The absence of a distinct *y* is characteristic of the Macedonian Turkish dialect of the district of Skoplye. At first sight of this dialect one is struck by the forms with final *i*, *i* (from *y* and *u*): *beşim* (*beşim*, *beşim*, Max., p. 172, N^o. 1, 2), *ulı* (*ulu*, *uly* "large", N^o. 3, 1), *oldi* (*oldu*, *oldy*, N^o. 4, 6), *başı* (*başı*, N^o. 4, 28).

In N. E. Anatolia also we find, at least to judge from Räsänen's records, a similar phenomenon: *loşari* (*loşary* 67, 1), *sattı* (*satty* 69, 1), *kaldım* (71, 1).

§ 9. The position of the tongue in pronouncing final *y* in many dialects is considerably lower than usual so that the vowel articulated is similar to an *a*: *carışılaryna* (*carışılaryny*, Hefening, *Isl.*, xiii. 255, N^o. 32), *çançılary* (*çançılary* G 87, 14), *şarmamı* (*şarmamı* Räs. 38, 2), *şofra* (*şofrayı* Räs. 43, 2), *atma aratım* (*atımy aratım* Räs. 209, 2).

The confusion of the dative with the accusative noticed in Tozluğ (Bulgaria) (Gadnanov, ii. 4—5) is probably of purely phonetic origin and to be explained by this peculiarity of final *y* and its confusion with *a*.

§ 10. Ottoman Turkish, as is well known, had originally no nasal vowels. But here and there we find the nasalisation of a vowel where a nasal consonant has disappeared: *şera* (*şerra* or *şorra*), *şunu* (*şunıny*, *şunıny*) etc. In many districts also we find a kind of nasalisation of final vowels or formation of an indistinct *n*-like consonant after final vowels, where there was no nasal vowel originally. This is especially frequent with careless articulation. Most recorders write this nasal element with *n*: *şeririy karmannaryn* (for *karmannary*) *şeririy* (G 77, 1), *demiller kin* (*demiller ki* G 27, 19), *şeririy beşaryn* (for *beşary*) *demil şerir* "the father of that girl said to the girl" (G 30, 10—11), *şeririy ilinde beşunıny şeririy* (for *şeririy* < *şerir* G 79, 2 from below).

§ 11. Contraction of a diphthong from *ei* to *é*, *ei* to *é* is very common in dialects: The *é* and *é* which thus arise are, as indicated, distinctly longer than the usual *e* and *é*. Examples from G: *şer* (37, 1), *şeranda* (*şeranda*, 19, 6), *şer* (37, 86, 6), *şerim* (*şerim*, 86, 13), *şer* (37, 38, 22), *şerim* (*şerim*, 18, 11), *şer* (*şer*, 54, 21; 83, 21) etc.

Consonants.

§ 12. *ç*, *ğ*, *h*, *h* a voiced spirant pronounced with the middle or back of the tongue shows a remarkable gradation in the dialects. In addition to narrow varieties that differ very little and sound like carelessly articulated explosives, we have a broad, half vocalic variety of *ç*, here written *j*.

ç disappears entirely in many dialects, thus giving rise to diphthongs, long vowels and all kinds of contractions. This is especially the case in the Constantinople dialect. Examples from O. T.: *şamı* (*şamı*, i. 40, 2), *şidunı* (*şidunı*, i. 41, 34), *şiriy* (*şiriy*, i. 41, 33), *şir* (*şir*, i. 45, 1) etc. But this phenomenon is frequently noted elsewhere as well.

To judge from Kános' specimens, *ç* remains in all positions in the dialect of Adakale: *şamı* (*şamı*, 140, 1), *şiriy* (1, 2), *şiririy* (89, 2), *şir* (*şir*, 64, 2 from below), *şiriy* (142, 21) etc.

In the district of Skoplye in Macedonia the dative in polysyllabic substantives in *-a* ends in *-a*: *şanzaga* (*şanzaga*, N^o. 5, 3), *şamı* (*şamı*, *şamı*, N^o. 4, 3) etc.

In the same dialect the group *-şir* becomes *-şir*, e. g. *şirir* (*şirir*), *şiririr* (*şiririr*), *şirir* (*şirir*) etc. This phenomenon is also found in Selanik. In Macedonia, final *-şir*, *-şir*, *-şir* becomes *-şir*, *-şir*: *şirir* (*şirir*), *şirir* or *şirir* (*şirir*), *şirir* (*şirir*) etc.

A variety of *ç*, pronounced with a vibration of the uvula, which in popular poetry rhymes with *ç* pronounced on the tip of the tongue is worth noting; cf. Giese, p. 57, note 2; p. 64, note 3; also Hefening, in *Isl.*, XIII, 254, No. 27, 3: *şirir* (*şirir*).

§ 13. In many parts of Asia Minor original velar *ç* or palatal *ç* still survives. It would be of value to ascertain the exact boundaries of this *ç*, *ç*, which however is not yet possible. In any case Central and Eastern Anatolia seem to possess *ç*. It is also found on the Syrian-Anatolian borders (e. g. Kilis; cf. K. Sz., iii. 263). In N. E. Anatolia, on the coast of the Black Sea, *ç* seems to be represented by *n*. But Räsänen's records differ: *şirir* (*şirir* N^o. 222, 2), but in the same *şirir* we have *şirir* "new" and in the next *şirir* "at thy foot". Whether as Foy, K. Sz., i. 289 suggests, the *ç* has begun to extend its area in Asia Minor, is very doubtful in view of the unreliability of the material on which he bases his view.

In the Constantinople dialect, *ç*, *ç* are represented by the corresponding dental variants. So far *ç*, *ç* are not known to have survived in any Rumelian area.

§ 14. The relations of the unvoiced posterior or glottal spirants deserve special attention. In Macedonia, between Skoplye and Salonika, perhaps also beyond, *ç* disappears initially (cf. from below § 22, § 25), medially between two vowels and finally (cf. from below § 33). A very weak *ç* and a somewhat stronger *ç* has survived here only incidentally before consonants. We find a similar phenomenon in the specimens from the southern Crimea (Şatıkaya and Dmitriyev, *J. A.*, April—June, 1926, p. 345).

§ 15. The alternation of *ç* || *ç* after *ş*, *ş* is found in N. W. Asia Minor and in different parts of the Balkan Peninsula. *şirir* "into the village" I have heard in the villages between Scutari and Izmid. We also find: *şirir* (*şirir*: Kános, *Nyctelud*,

Kaleménysk, xxii, 130, 13, 143, 13, *şivüdü* (*şivüdü* or *şivüdü*, *ibid.*, p. 151, 21), *şivüdü* (*şivüdü* or *şivüdü*, *ibid.*, p. 151, 22), *şivü* (*şivü*, *ibid.*, p. 261, 3 from below) — all from the district of Bursa-Aidin. Güve (*şivü*) I noted (Zag., No. 45) from a peasant of Mumja near Balykesir. The most eastern points are probably those noted by Giese in the wilayet of Konya: *şivü* (G 25, 9), *şivü* (*şivü*, *ibid.*, G 22, 7) *şivü* (*şivü*, *ibid.*, G 88, 9, *şivü*).

On Rumelian territory we find *şivü*, *şivü*, *şivü* (*şivü*) from Deli Orman; *şivü* is also the usual form in the dialect of the Bessarabian Gagauz.

§ 16. Posterior *ş* (*q*) became *z* in many Asia Minor areas, particularly, it seems, in the N. E.: *şivü* (*şivü*), *şivü* (*şivü*), *şivü* (*şivü*), *şivü* (*şivü*), *şivü* (*şivü*), *şivü* (*şivü*) — all from Kastamunian (Thury, p. 12, 14); *şivü* (*şivü*), *şivü* (*şivü*), *şivü* (*şivü*), *şivü* (*şivü*) — all from the Bursa-Aidin territory, according to Künos, Bursa-Aidin. On *ş* > *z* finally cf. from below § 31.

§ 17. The *r* sounds offer great variety. In general they are characterized by a careless articulation without a pronounced trilling with the tip of the tongue. As a rule a Turkish *r* is pronounced by the tip of the tongue being brought once up to the nearest gum. This explains on the one hand the ease with which the *r* becomes silent before consonants and finally (cf. from below § 34) and on the other the change to *r* > *z* (or *r* > *l*). In some dialects of N. E. Bulgaria *r* disappears before consonants, slightly modifying the preceding vowel which is marked by the recorders as a lengthening: *arpa* (*arpa*), *götürdün* (*götürdün*), *şivü* (*şivü*), *vânaja* (*vânaja*) (all examples from Gaftanov, i. 5), while in reality there is a change in quality as well as in quantity in the vowel. In Kaizeri and district I noticed after final *r* on *r* of a similar character: *par* (*par*), *şivü* (*şivü*), *şivü* (*şivü*), *şivü* (*şivü*), *şivü* (*şivü*) etc.

§ 18. *ş*, *z*, *ş* appear slightly palatalised in many dialects, even in words with posterior vowels. This palatalisation is rarely indicated in our specimens (cf. Maz. 218, *şivü* from *şivü*, *ibid.*, v. 3, from below *şivü*; Räs. 3, 7, *şivü*, 6, *şivü* from *şivü* etc.). Sounds palatalised in this way sometimes produce a narrowing of the vowels immediately adjoining (cf. § 47): *şivü* (*şivü*, G 77, 9), *şivü* (*şivü*, Moskvi, Gagauz, p. 34, 21) etc.

§ 19. In the Turkish dialects on the S. E. coast of the Black Sea, we find a variety of setazism, *ş* being represented by *z*, *ş* by *ş*. Examples from Räs.: *cimene* (*cimene* 64, 4), *şivü* (*şivü* 67, 3), *şivü* (*şivü* 65, 3), *caira* (*caira* 71, 1), *şivü* (*şivü* 68, 9), *şivü* (*şivü* 68, 4).

As often, here also the language is not quite logical for we sometimes find both *ş* and *z* (e.g. *şivü* from *şivü* 142, 1).

§ 20. *ş* and *z* appear, in the dialects from the region of Trebizond and Rize, slightly advanced before posterior vowels so that they almost become *ş* or *z* (cf. § 48). Examples from Räs.: *şivü* (*şivü* 136, 2), *şivü* (*şivü* 138, 1), *şivü* (*şivü* 139, 3), *şivü* (*şivü* 141, 3), *şivü* (*şivü* 144, 3).

§ 21. In some parts of Asia Minor aspirated

aspirated: *şivü* (*şivü* 38, 4), *şivü* (*şivü* 33, 4), *şivü* (*şivü* 44, 4), *şivü* (*şivü* 53, 1), *şivü* (*şivü* 53, 1), *şivü* (*şivü* 50, 1), *şivü* (*şivü* 49, 4), *şivü* (*şivü* 160, 1) etc. I have noticed slightly aspirated tenues in the dialects of the region between Sivas and Kaizeri.

Initial Sounds.

§ 22. In the dialects the initial sound shows a series of peculiar phenomena. Initial vowels are usually pronounced without very definite clearness. The glottal stop is unusual at the beginning of a word; it is sometimes heard in Macedonia where it takes the place of *z*, *ş* sounds which have disappeared: *şivü* (*şivü*), *şivü* (*şivü*), *şivü* (*şivü*), *şivü* (*şivü*) etc. (cf. § 14 and 23).

§ 23. In many dialects initial vowels, especially at the very beginning, are often introduced by a slight breathing (glottal spirant): *şivü* (*şivü*, G 17, 16), *şivü* (*şivü*, *ibid.*, G 36, 1); cf. Giese G 51, note 1; *şivü* (< Pers. *ش*), Zag. No. 39 from Mumja near Balykesir, *şivü* (*şivü*, Laz., p. 285, 17), *şivü* (*şivü*, Räs., p. 18, 2 from Vezirhan). In Kastamunian there is even said to be a strong posterior spirant: *şivü* (*şivü*), *şivü* (*şivü*); cf. Thury, Kast. 16 from below). Sporadic cases are also found in Gagauz: *şivü* (*şivü*, Gagauz, p. 271, 6), *şivü* (*şivü*, *ibid.*, p. 3, 1).

§ 24. In the dialect of the Bessarabian Gagauz an *ş* has regularly developed before initial *e* and *ö*: *şivü* (*şivü*), *şivü* (*şivü*), *şivü* (*şivü*), *şivü* (*şivü*), *şivü* (*şivü*), *şivü* (*şivü*), *şivü* (*şivü*) etc.; all examples from Moskvi. On the other hand among the Turks and Gagauz in N. E. Bulgaria I frequently heard *şivü* (*şivü*), *şivü* (*şivü*), *şivü* (*şivü*) etc.

A prefixed *ş* is also found in N. E. Anatolia: *şivü* (*şivü*, Räs., p. 142, 3), *şivü* (*şivü*, Räs., p. 105, 1), *şivü* (*şivü*, Räs., p. 217, 1).

§ 25. In Macedonia every kind of initial *ş*, *z*, disappears, sometimes leaving a glottal stop (cf. § 14 and 22); examples from Radovik on the Strumitza: *şivü* (*şivü*, *ibid.*), *şivü* (*şivü*), *şivü* (*şivü*), *şivü* (*şivü*), *şivü* (*şivü*), *şivü* (*şivü*), *şivü* (*şivü*) etc.

§ 26. In Macedonia every initial *şivü* of the written language appears as *şivü*, every initial *şivü* as *şivü*; example from Radovik: *şivü* (*şivü*), *şivü* (*şivü*), *şivü* (*şivü*), *şivü* (*şivü*) etc.

In Asia Minor also a similar phenomenon is observed here and there: *şivü* (*şivü*, Räs., p. 6, 4 from Vezirhan), *şivü* (*şivü*, Räs., p. 87, 4 from Rize), *şivü* (*şivü*, Räs., p. 93, 1 from Rize), *şivü* (*şivü*, Räs., p. 137, 4 also from Rize), *şivü* (*şivü*, Räs., p. 129, 10) etc.

§ 27. Initial *ş*, *z* before *ş* with a consonant following completely disappears in many parts of Rumelian territory or is at least much reduced just as occurs to some extent in the language of the educated classes: *şivü* (*şivü*), *şivü* (*şivü*), *şivü* (*şivü*), *şivü* (*şivü*), *şivü* (*şivü*), *şivü* (*şivü*), *şivü* (*şivü*) etc.

§ 28. Loanwords beginning with *r* and *l* are in most dialects adapted to Turkish mouths by prefixing a vowel (cf. Radloff, *Phonetik der türkischen Sprachen*, § 126): *şivü* (*şivü*, G 18, 1), *şivü* (*şivü*, G 27, 19), *şivü* (*şivü*, Künos, Aid., p. 36, 2 from below, 37, 13 etc.)

ürüfar (*urufar*, Künos, *Brus.-A.*, p. 122, 10 from below), *ürüb* (*reüb*, Thüry, *Kast.*, p. 11 and 29), *ihî* (< Pers. *هه*, Bum. = *R.O.*, i. 351, 12), *ilana* (< Gr. *λαγανα*, Zag., N° 77 from the village of Kaşak near Muş), *ilusim* (< Arab. *إلسيم*, Künos, *Brus.*, p. 205, 22).

§ 29. In many parts of Asia Minor, particularly in the west, the unvoiced initial consonants *p*, *t*, *k*, *ç*, *q* are frequently pronounced voiced. Whether this is a complete voicing is a question which cannot yet be settled for want of phonetic experiments and investigations.

a. Initial *p* becomes *b*: *barmaxıys* (*barmaxıys*, *Brus.-A.*, p. 135, 4), *bülül* (*pillü*, Zag., N° 73: Muşla S. E. of Smyrna), *bilir* (*pillir*, G. 33, 8), *bekmes* (*pekmes* G 89, 17 Jürük) etc.

b. Initial *t* often becomes *d*: *durna* (*turna*, G. p. 53, 1; *Brus.-A.*, p. 121, 16), *donlan* (*taflan*, *op. cit.*, p. 122, 3 from below), *davux* (*tuuf*, *Brus.*, p. 264, 3), *dilhi* (*tiki*, G. p. 17, 5), *dutufmı* (*tutufmı*, G. p. 20, 9). Many examples from Kaştamunian in Thüry, p. 38-42.

c. Initial *k*, *ç*, *q* in considerable areas of western and central Anatolia regularly becomes *g*, *ğ*: *göppek* (*köppek*), *gya* (*kyu*), *guju* (*kiju*), *gütüb* (*kütüb*) — all from Brusa (Künos, in *Nyelotud. Kém.*, 1890, p. 261 *sup.*); *galyt* (*kaity*, Zag., N° 91: from Ayin near Söğ Gazy), *galyr* (*kaıyr*, Zag., N° 34: Mumşu near Balykeşir) etc. This phenomenon is also frequent in the north, in Kaştamunian; cf. Thüry, *Kast.*, p. 52 *sup.*

The closing of initial posterior *g* in Central Anatolia seems to be very slack so that the sound gives the impression of a voiced narrow sound and is written by many authors with *γ* instead of *g*: *γapınzın γaryıı* (*kapınza karyıı*, G. p. 55, 1), *γalem γulağlıyın* (*kalem kulağlıyın*, G. p. 61, 20), *γara γai* (*kara kai*, G. p. 73, 22) etc.

Sporadic cases of the transition from *ç* to *g* are also found on Rumelian territory: *gavuşar* (*çavuşar*: Adak., p. 8, 23). In Toxluk (Bulgaria) there are several villages the inhabitants of which are called *gablîi*, from their habit of pronouncing *ç* as *g*. (Gadlanov, i. 9).

d. Initial *s* becomes sporadically *z*: *zopa* (*sopa*, G. p. 17, 9), *zovda* (*sovda*, G. p. 88, 16), *zıia* (*sıia*), G. p. 80, 22), *zyrtıyan* (*syrtıyan*, *Kast.*, p. 12 *supra*), *zere* (*sara* < Arab. *صرة*, *R.O.*, ii. 206, 3: Güne) etc.

e. Initial *t* becomes sporadically *ç*, e.g. *çinçene* (*tinçene*: *Brus.*, p. 267, 3), *çanı* (*tanı*: Räs., p. 208, 1) etc.

§ 30. On the other hand, a directly opposite tendency is frequently observed, namely a partial or complete reduction of the voicing of initial *b*, *d*, *g*. Especially in the north or northeast of Asia Minor this tendency appears to be very strong. In what is known as Laz Turkish from the region of Trebizond we find (according to Künos, *Laz dalok*): *pevi* (*bemi*, p. 275, 3), *pliridim* (*bivridim*, p. 275, 4), *pejas* (*begas*, p. 275, 5), *paçijorun pama* (*kayijorun bama*, p. 280, 10) etc. almost without exception.

On the other hand, *t* for *d* is only found sporadically: *toşduram* (*doşdurayım*, p. 275, 4 from below), *tibinde* (*dibinde*, p. 278, 8 from below), *tılımi* (*dilimi*, p. 283, 12) etc.

Still rarer is initial *k*, *ç* for *g*: *keminta* (*geminin*, p. 277, 5), *kören* (*gören*, p. 279, 18), *karış* (*garış*, p. 282, 10) etc.

These observations by Künos are to a great extent confirmed by Räsänen's notes. The voiced initial *b*, *d*, *g* appear in his work with partial or completely reduced voicing although not quite regularly: *bir* (p. 214, 1, but in the same quatrains *burda*), *bemi* (p. 217, 3), *hula* (*buyla*, p. 218, 3), *hejüh* (*hüjüh*, p. 221, 1), *benum bolunmi haken* (p. 221, 4), *hula* (*huşa*, p. 223, 4) etc.

Similarly *çavulaman* (p. 244, 1), *çeri* (p. 246, 1), *donup* (p. 248, 4), *çularar* (p. 248, 3) etc., even *çalına* (*daşına*, p. 145, 2; p. 238, 2); also *geleşim* (*geleşim*, p. 244, 4), *gittile* (p. 245, 4), *görünür* (*görünür*, p. 246, 3) etc.

To judge from Räsänen's records initial *tennes* and *medine* are frequently not distinguished from one another in the dialect of Trebizond: *güdesem* (p. 225, 3) and *gim* (*kim*, p. 225, 4) are written initially with one and the same sign; also *beri* "hither" (p. 233, 2) and *beri* "Peri" (p. 233, 4).

I have noticed unvoiced initial consonants which are voiced in the written language, in people from various regions of the former wilâyet of Angora: *şine* (*vüne*, Bei-Tut near Çangry), *putarıyn* (*batarıyn*, Taşoşuk near Kırşehir), *paş* (*başa*, Kuzaş near Joğad), *dayıyr* (*daryıyr*, *ibid.*), *puşat* (*huşat*, Denekmaden) etc. I know sporadic cases also from western Anatolia e.g. from the village of Dumanlı in the region of Uşak. Isolated cases of this phenomenon are even found on Rumelian territory (e.g. the so striking *pinnek* < *hinnek* in N. E. Bulgaria and among the Bessarabian Gagauz; cf. Gadlanov, i. 6 from Deli Orman).

The frequent variation in our records of the spoken speech as regards voicing of initial consonants arouses the suspicion that there are no pure *medias* in this position. A final solution of the question will only be possible when we are accurately informed regarding the condition of voicing in the dialects, if possible by instrumental records.

Final Sounds.

§ 31. Final posterior *ç* (*g*) becomes *-x* in the eastern dialects. The boundary between *-ç* and *-x* may, broadly speaking, be said to be the Kyzyl Yrmak and the central Salt Steppe, although *-x* areas are also found on this side of the Kyzyl Yrmak, notably the Kaştamun district. On the other hand, the change from *-ç* > *-x* is quite unknown, so far as I am aware, on Rumelian territory.

Examples: *ıazyx* (*ıayç* from Kızıl Çaly-Ayy) near Joğad), *ıalyx* (*ıayç*, *ibid.*), *afanaşax* (*afinaşç*, Kuzaş near Joğad), *ne japax* (*ne japaç*, Joğad), *gidiox* (*gidiorus*, village of Boşalyş near Kavza).

Similarly in "Laz Turkish" in Künos: *kyeralyx* (*kyeralyç*, Laz., p. 275, 3 from below), *aralyx* (*aralyç*, *ibid.*, p. 283, 1), *ıatalux* (*ıatalyç*, *ıatalım*, p. 283, 4) etc. On the other hand, the texts given by Räsänen from the coast of the Black Sea between Trebizond and Rize show almost regularly an unchanged final *-ç*. All the more remarkable then are the forms given by him like *lıdix* (*lıdık*, p. 184, 1), *ileşix* (*ileşik*, p. 184, 4) etc., in which final *-ç* on the middle of the tongue becomes *-x*.

The change from *ç* < *x* is found not only at the end of words but also at the end of stems and derivative syllables: *goxu* (*gaşa*, *Kast.*, p. 12, 16),

soxun (*soxunur*, *ibid.*, p. 12, 13), *axdyr* (*axdyr*), *axdyr* (Causal, from *ax*, G 57, 30), *axdyrma* (*axdyrma* Lar., p. 275, 7).

The change of *š* to *ç* appears regularly in the "Aidin" dialect of the tales of Hoja Naseddin in Künas: *braxyr* (*braxyr*, G, p. 65, 9), *axdyr* (*axdyr*, p. 64, 5 from below), *axdyrma* (*axdyrma*, p. 62 ult.), *axdyr* (*axdyr*, p. 63, 1) etc. Possibly his authority came from Eastern Anatolia.

§ 32. Final *-a* pronounced on the middle of the tongue sometimes loses its explosive sound and becomes *ç* or *ç*, or disappears entirely. The cases observed are mainly due to sandhi: *güçü ağı* (*güçü ağı*, G, p. 57 ult.), *güçü xatynym* (*güçü xatynym*, G, p. 58, 3), *güçü xatynym* (*güçü xatynym*, G, p. 58, 4), *çay xatyn* (*çay xatyn*, G, p. 91, 13), *çay gibi* (*çay gibi*, G, p. 83 pu., 84, 3).

§ 33. Final *-a* in loanwords disappears very often in many dialects: *padışa* (G, p. 18, 3), *adışa* (G, p. 22, 23), but *adışa kerindir*, p. 34, 23, *tombi* (Arab. *تنبية*, G, p. 23, 7), *sahi* (Arab. *ساحي*, G, p. 27, 32), *il islam* (Arab. *الإسلام*, G, p. 40, 23), *il islam* (Arab. *الإسلام*, G, p. 25, 3) etc. On the pronunciation of *ç*, *ç* in the language of the educated classes of Constantinople cf. Bergsträsser, *ibid.*, p. 253, 499.

§ 34. For many territories the disappearance of final *-r* in verbal forms and in the words *var* and *bir* is characteristic (cf. § 17 and 64). In certain stereotyped cases, it is also found in the popular dialect of Constantinople, as in *bir kerri* (*bir kerri*, O. T., i. 29, 7 from below) and *bir is* (*bir is*, *ibid.*, i. 176, 27). Very common are *bir* (*bir*) and *var* (*var*), from sandhi also *mü*: *jorganynmü* < *jorganynm var*, Zag., No. 92; cf. below § 40*).

In the 3rd pers. sing. of the present in *-yor*, the final *-r* regularly disappears in some districts of Asia Minor (cf. below § 64). The loss of final *-r* in the 3rd pers. sing. of the aorist is not so regular (cf. § 66).

This dialectal peculiarity is found as early as the 15th century texts in Mühlbacher; cf. K. Foy, *Die ältesten osmanischen Transkriptionstexte*, II. 241.

§ 35. The voicing of the final consonants *ç*, *ç*, *ç* is weakened in the dialects or disappears completely, as it does to a certain degree in the written language also (cf. Bergsträsser, *Z. D. M. G.*, lxxii., 261 19, 20, so that they become *ç*, *ç*, *ç* or even *ç*, *ç*, *ç*. This phenomenon is really much more frequent than is indicated in our texts. Examples: *güçüç* (*güçüç*, G, p. 18, 21), *il is* (*il is*, G, p. 27, 16), *deyis* (*deyis*, G, p. 77, 6), *çap* (Arab. *چاپ*, R. O., II. 205, 27) etc.

The latest official Turkish alphabet in Latin characters does not recognise a final *-a*, *-ç*, *-ç*, but instead has a final *-ç*, which is not exactly in keeping with the actual pronunciation.

§ 36. *ç* at the end of a word, as usually before consonants, especially explosives, becomes *ç*: *ad* (*ad*, G, p. 17, 5), *ad* (Pers. *آد*, G, p. 18, 1), *haril* (Arab. *هاريل*, G, p. 19, 6), *ilmes* (*ilmes*, Zag., No. 66, from *Kuşak* in the region of Manisa), *ilmes* (*ilmes*, cf. *cit.*, No. 73).

Vowel harmony.

§ 37. Several authors have already pointed out that the laws of vowel harmony are frequently broken in the Ottoman dialects (cf. G. Jacob, *Zur*

Grammatik des Vulgar-Türkischen, Z. D. M. G., III. 719: "in Kleinasien ist die Vokalharmonie teilweise arg im Verfall"; cf. K. Foy, in *K. St.*, I. 189 299, etc.).

Vowel harmony is weakest with regard to labialisation. Attention has already been called to certain features in this connection above (§ 6).

To the very frequent cases of defective harmony belong those in which the final syllable of a word is distinguished in vowel harmony from the other syllables. We very often find the endings *-a*, *-da*, *-dan*, *-far*, *-se* after light stems and vice versa *-a*, *-da*, *-dan*, *-far*, *-se* after heavy stems: *destina* (*destina*, G, p. 60, 15), *sinema* (*sinema*, G, p. 62, 15), *sinema* (*sinema*, G, p. 82, 14), *istina* (*istina*, G, p. 60, 14), *gelina* (*gelina*, R. O., p. 209, 3), *verzin* (*verzin*, R. O., p. 85, 4), *derlar* (*derlar*, Moikow, p. 32, 23), *istimilfar* (*istimilfar*, G, p. 37, 9) and vice versa *atale* (*atale*, G, p. 60, 17), *başama* (*başama*, G, p. 51, 20), *başama* (*başama*, G, p. 91, 27), *başama* (*başama*, Moikow, Gogani, p. 32, 26), *başama* (*başama*, Zag., No. 8 from Kalkaniden in Macedonia), *dale* (*dale*, Dum., R. O., I. 344, No. 4) etc.

As these examples show, a very frequently occurs at the end of a word in place of the expected *ç*. It is possibly not a real *ç* but a very broad variety of *ç* (*ç*) as the *ç* in an open final syllable is generally pronounced very open in the language of educated people also (Bergsträsser, *Z. D. M. G.*, lxxii. 239). Dimitrijević (*J. A.*, April-June 1926, p. 343) calls attention to a similar phenomenon in the language of the osmanised Krim Tatars.

On the other hand, we find in the dialects numerous cases of vowel harmony rigidly carried through, where it is not found in the written language. Loanwords form the most cases. The vowel attraction acts progressively or retrogressively according to circumstances.

Examples: a. progressive: *uciden* (*uciden*, Brus.-A., p. 125, No. 4, v. 8), *revde* (*revde*, G, p. 88, 16), *ucur* (*ucur*, R. O., I. 343, No. 2, 3), *gilmen* (*gilmen*, *ibid.*, No. 6, 4), *atal* (*atal*, G, p. 36, 1), *lahan* (*lahan*, Pers. *لاهان*, G, p. 75, 14, 61, 3) etc.

b. retrogressive: *alma* (*alma*, Brus.-A., p. 121), *eiker* (*eiker*, R. O., I. 344, No. 5, 4), *marafly* (*marafly*, G, p. 17, 1), *varaf* (*varaf*, G, p. 17, 17), *dafa* (*dafa*, G, p. 23, 19) etc.

c. retrogressive and progressive: *haradar* (*haradar*, R. O., p. 19, 3).

Certain cases are worthy of special mention: a. *bi* and *-den*, progressively harmonised as *-du*, *-dan*: *ofurmuldu* (*ofurmul du*, G, p. 37, 1), *varmyorju* (*varmyor du*, G, p. 37, 1), *balanyrkana* (*balanyrkana* + *a*, G, p. 51, 9; cf. below § 76), *çalanyrkana* (*çalanyrkana* + *a*, G, p. 51, 11) etc.

b. *bires* "a little" from *bir* as (G, p. 53, 20; cf. K. St., I. 189);

c. by vowel attraction acting retrogressively the demonstratives *bu*, *bu* before light stems often become *bü*, *bü*: *bügün* (*bü gün*, G, 29, 10), *bügün* (*bü gün*, O. T., I. 26, 13; 27, 9; 33, 16 etc.), *bü köler* (*bü köler*, O. T., I. 26 ult.), *bü güerçin* (*bü güerçin*, O. T., I. 160, 23), *bü tençeremi* (*bü tençeremi*, O. T., I. 227, 26) etc.; cf. Foy, in *K. St.*, I. 187 199.

Sound Change in Combination.

Assimilation of Consonants.

§ 38. The dialects are characterised by a large number of peculiarities in assimilation. Most of these occur only sporadically. To define the areas

hined with a more or less pronounced palatalisation. According to Räsänen's records, *k* and *g* are pronounced before *e*, *i*, *ä*, *ö* so far forward and so palatal that they almost become *tʃ* or *dʃ* (cf. § 20). This peculiarity seems to extend from the coast region of Trebizond and Rize nearly towards Erzerum.

In Gagauz, anterior vowels *e*, *i*, *ä*, *ö* cause a regular and pronounced palatalisation of all adjoining consonants (cf. Moškov, p. xxvi-xxvii).

Simplification of groups of consonants.

§ 49. In many cases the complete assimilation leads to the disappearance of a consonant, or the doubling of a consonant is dropped (cf. § 33).

In the following cases we have the simplification of groups of three (or four) consonants:

a. *tem* > *tm* in *atmy* (*aštmy*), G., p. 38, 2 in a man from Isparta; 42 pu., in a Jürük; O.T., i. 108, 21 from Constantinople, *jümalmy* (*jümaštmy*), Räs., p. 26, 1 from Vezirhan. We also find *üt* < *ušt* (G., p. 77, 6). Cf. R.O., ii. 210, 2 199.

b. *fel* > *f* in *fişik* (*fişlik*), almost general "popular" pronunciation of this word.

c. *fiş* > *f* in *fişli* (*fişli*), e.g. O.T., i. 78, 12 from below.

d. *nşil* > *nli* > *li* in *genlik* (*genlik* < *genşlik* < *genşlik*), G., p. 56, 20; *genlik*, Dum., R.O., i. 343, N° 1, 2).

e. *riş* > *ri* in *arısan* (*arısan*), G., p. 58, 8 and frequent elsewhere).

f. *şl* (= *şil*) > *tl* as in *üt-şüz* (*üt-şüz*), G., p. 92, 4, 5).

g. *ti* (= *ti*) > *ti*: *utiam* (*utiam*), G., p. 72, 7). Groups of two consonants:

a. *k* > *h*: *şahbazar* (*şahbazar*), G., p. 19, 14), *şahmas* (*şahmas*), G., p. 19, 14), *şahmas* (*şahmas*), G., p. 19, 14), *şahmas* (*şahmas*), G., p. 19, 14).

b. *rt* > *t*: *gutuşaryn* (*gutuşaryn*), Dum., R.O., i. 348, N° 27), *şahbazar* (*şahbazar*), G., p. 19, 14).

c. *kt* > *t*: *jüşek* (*jüşek*), Maz., W.Z.K.M., xxxiii. 200, N° 38, 1), *jüşeklerden* (G., p. 56, 11 from the region of Konya), *jüşeklerden* (*jüşeklerden*), Brn.-A., p. 145, 11). The disappearance of *k* is here due to a kind of dissimilation.

d. *tk* > *t*: *imel'arşik* (*imel'arşik*), W.Z.K.M., p. 218, 11, from Macedonia).

e. *kş* > *ş*, especially in diminutive forms, before the ending *-şik*, *-şik*. The dropping of *k* is also almost the rule in the written language, cf. Demy, § 511. Examples: *kolüşik* (G., p. 78, 2), *şendüşik* (O.T., ii. 304, N° 72, 1, 305, 1, 333, 1), *şapraşyyn* (*şapraşyyn*), O.T., ii. 334, 1), *şapraşyyn* (*şapraşyyn*), O.T., ii. 334, 1), *şapraşyyn* (*şapraşyyn*), O.T., ii. 334, 1).

On the other hand we find: *şaryşlanmı* (*şaryşlanmı*), *şaryşlanmı*, Räs., p. 154, 1).

f. Finally we may class here the often noted disappearance of a final *t* after *s* or *l*: *akdas* (*akdas*), Kast., p. 16), *dos* (*dos*), G., p. 53, 11), *uz* (*uz*), G., p. 77, 1; for *u* cf. § 1), *paşa* (*paşa*), G., p. 58, 2), *şulşori* (*şulşori*), Maz., W.Z.K.M., xxxiii, p. 196, N° 35, 1; cf. *ibid.*, p. 224 19).

Interchange of sound.

§ 50. *r* and *l* in contact with another consonant show a tendency to change place with the latter.

a. *örgetili* (*örgetili*, *örgetili*), G., p. 28, 11), *terpaz* (*terpaz*), G., p. 31, 2), *derül* (*derül*), G., p. 29, 29), *şevranalar* (*şevranalar*), G., p. 59, 2), *Belirgad* (*Belirgad*), G., p. 52, N° 3 part), *şevra* (*şevra*,

G., p. 86, 20), *şiblim* (*şiblim*), G., p. 73, 1). Many examples in Thüry, Kast., p. 15 19.

b. *şiblim* (*şiblim*), Zag., N° 47 from Mamış near Halyskair, *şiblim* (*şiblim*), Zag., N° 104 from Ayin near Södi Gary, *şiblim* (*şiblim*), G., p. 90, 22), *şiblim* (*şiblim* < Arab. *şiblim*), p. 89, 23), *şiblim* (*şiblim*), Brn.-A., p. 126, 11).

This feature is especially found in Asia Minor.

Development of sounds.

§ 51. Before the explosives *p*, *b*, *t*, *d*, *k*, *g* and the fricatives *f*, *ş* secondary nasals *m*, *n*, *ŋ* are frequently developed. This phenomenon is, it is true, most frequently noticed in loanwords but it is also found in pure Turkish words (*dış* (*dış*), Zag., N° 8 from Kalkaniden in Macedonia), *şapma* (*şapma*, Radović in Macedonia), *şevran*, *şevran* (*şevran*), G., p. 36, note 2; p. 72, 3 from Bugir; *ibid.*, p. 69, 11: *şevran*), *şevran* (*şevran*), Räs., p. 4, 4 from Vezirhan), *şafak* (*şafak*), Ar. *شفاق* (Güneş), *şafak* (*şafak*), *şafak* from Dumanly near Kütahia), *şamşural* (*şamşural*), Thüry, Kast., p. 16), *şamşural* (*şamşural*), Zag., N° 103, from Ayin near Södi Gary; Brn.-A., p. 131, 12; Thüry, Kast., p. 16) etc.

Syllable Division.

§ 52. Simple consonants between two vowels frequently appear somewhat lengthened. They may even be pronounced long under the influence of stress. In this case the consonant is divided between the preceding and following syllables so that the division between the syllables divides the consonant which produces the effect of pronouncing the consonant as a double one: *şafak* pronounced with emphasis sounds almost like *şaf-şaf-şaf*. Examples: *şafak* (*şafak*), G., p. 77, 10), *şafak* (from *şafak* "pluck, pull", not from *şafamak* "to send", G., p. 80, 18), *şafak* (*şafak*), Brn.-A., p. 261, N° 6), *şafak* (*şafak*), *ibid.*, N° 25), *şafak* (*şafak*), *ibid.*, p. 267, N° 88), *şafak* (*şafak*), Räs., p. 4, 4), *şafak* (*şafak*), Räs., p. 31, 4), *şafak* (*şafak*), *ibid.*, p. 34, 2), *şafak* (*şafak*), Räs., p. 93, 1).

§ 53. On the other hand, we do not find a pronounced double sound where it might be expected on etymological grounds. The result is, taken with § 52, that e.g. the two last syllables in *şafak* *şafak* "my (beloved) with the shawl covered head" and *şafak* *şafak* "let us go around" are pronounced identically. Similarly *şafak* *şafak* and *şafak* *şafak* are practically indistinguishable in the usual pronunciation.

This enables us to understand forms like the following: *şafak* (origin *şafak*), G., p. 17, 4), *şafak* (*şafak*), G., p. 23, 1), *şafak* (*şafak*), G., p. 27, 7), *şafak* (*şafak*), G., p. 30, 2; cf. § 40), *şafak* (*şafak*), G., p. 61, 13), *şafak* (*şafak*), G., p. 55, 13) etc.

§ 54. Many dialects allow two vowels to succeed one another directly within a word, where the cultured language and other dialects have an *i* or *y* sound. This is usually found where an original guttural has been lost. Most examples are found in Räsänen's texts from N.E. Asia Minor: *şafak* (*şafak*), *şafak* (*şafak*), Räs., p. 151, 1, 14), *şafak* (*şafak*), Räs., p. 153, 1), *şafak* (*şafak*), Räs., p. 154, 1), *şafak* (*şafak*), Räs., p. 157, 1) etc.

In the wilayets of Angora and adjoining districts I have frequently noted the same thing: *cał* (*cał* "bend!" from *Tal-oluk* near Kırşehir), *zöpma* (*zöpme* from Kuzajje near Jorgad), *kyymadym* (*kyymajordam*, *ibid.*), *kzotilde* (*kutuluja*, *ibid.*), *dear* (*deyar* from Denekmaden) etc.

The same phenomenon is recorded from Tozluğ in N.E. Bulgaria: *buraa*, *beas*, *nerre* (Gadjanov, i. 4).

§ 55. In most dialects an *l* sound has developed between two vowels coming directly together within a word. But sometimes we find *h* instead of *l*: *evahilde* (*evahilde*, *evahilde*, G, p. 31, 3), *toxt-i-paki* (*toxt-i-paki*, G, p. 32, 20), *İsmehal* (*İsmahil*, G, p. 57, 22) etc.

Sentence Sanitli.

§ 56. When two words come together, of which the first ends with a vowel and the second begins with a vowel, in all dialects, as is frequently the case in Turkish languages, the first of the two vowels is usually dropped. Examples: *Hamza eyuf* (*Hamza eyuf*, G, p. 87, 3), *ıslaryyya ildim* (*ıslaryyya ildim*, G, p. 86, 21), *golget ofnuş daf ofnuş* (*golgeti v. dafy v.*, G, p. 77, 23), *elim apdururum* (*elim v.*, G, p. 82, 3), *el alyayy* (*el alyayy*, G, p. 82, 2 from below), *del İsmail* (*deli İsmail*, G, p. 85, 2), *et ofur* (*ofur v.*, G, p. 67, 8), *kele ofmyt* (*kele ofmyt*, G, p. 29 ult.).

Ne and the interrogative particle *my* deserve special mention: *nüñje* (*ne üñje*, R.O., ii. 204, 7 from below from Güne), *nuşdu* (*ne ofdu* very common; cf. e.g. Adak, p. 140 ult.), *nuşmufy* (*ne ofmufy*, G, p. 83, 15), *napsyn* (*ne japsyn*, Brus.-A., p. 149, 4 from below); cf. also the forms given by Kános without references: *nedeşen* = *ne edeşkin*, *nappaşyn* = *ne jappaşyn*, *neşşen* = *ne edeşkin*, *nappaşyn* = said to be *ne jafu* (*afaryyn*), *ayfarym* (*ayfarym ofu*, G, p. 75, 4), *ayfarym* (*ayfarym ofu*, G, p. 53, 11) etc. 1).

In the combination of *-e-* the second vowel sometimes disappears: *afendim* (*a efendim*), *padışad* (*padışad efendi*), *ta viden* (*ta viden*, G, p. 60, 12).

Reduction of Syllables.

§ 57. In words of three syllables, the central one, if it is open, is frequently reduced. This feature, also found in other Turkish languages, is much more common in all dialects than in the written language. It is connected with the accentuation of words of three syllables: *— — —* or *— — —*; cf. W. Bang, *Studien zur vergl. Grammatik der Türkischen Sprachen*, S. B. Pr. Ak. W., xxxvii. (1916), p. 920; T. Kowalski, *Ze studiów nad formą pojęci ludów tureckich*, p. 70, note 1.

Grammar.

§ 58. Declension.

Declension offers no peculiarities of a local nature. The "confusion of the accusative with the dative" noted in various Ottoman speaking districts (Gadjanov, ii. 4—5), e.g. *atima ararim* (for *atym ararim*), Rās., p. 209, 2 from Kysarna, in the wilayet of Trebizond), as explained in § 9, due to a phonetic peculiarity.

Similarly the identity of the locative with the

dative ending, which is frequently met with, is to be explained by phonetic changes (assimilation, with later dropping of the gemination, cf. § 49 and § 53): *Kojunise qe k'iz var* "in your village there are three girls" (from *Kojunise > Kojunise*, Rās., p. 156, 3), *jedi jaluua it'en* (*jaluunda > jaluunna > jaluua*, Rās., p. 149, 1), *İbilyan cimenine den bir idym* "on the meadow of the alpine pasture I was alone" (< *cimenine < cimeninde*, Rās., p. 107, 1 19.) etc.

Nominative forms frequently met with in place of expected dative forms are probably to be explained as the result of contraction: *nerre* (= *nerreje*) *gittini bilememiz* "he could not ascertain where (the other) had gone" (R.O., ii. 205, 4 24 from Güne), *nerre İekara ora gider* "whither (= *nerreje*) thou dragest her, thither (= *oraya*) she will go" (G, p. 66, 20), *İndym dere, jirmaya* "I went down to the valley (= *dereje*) to the river" (Rās., p. 105, 1). The *ne* (< *neje*) "why", often found in dialects, is probably to be similarly explained.

The Pronoun.

§ 59. The personal pronoun of the 1st and 2nd person singular appears in the east of Anatolia in the forms *ben*, *ımar*, agreeing with the other cases, for *bana* (or *bana*), *ıyaya* (or *sana*). I have heard them from a Turk from Urfa. The same forms are given by Balkanoglu (K. S., iii. 264) for the dialect of Kilis. Rāsänen notes them as heard from a woman from the wilayet of Erzerum: *ımar* (Rās., p. 16, 2; p. 23, 3). We must regard these forms as the result of Adharbūdjan influence.

Songs in Rāsänen from Trebizond and neighbourhood show a dative in *ba* (alongside of *bana*), *ba*: *ba* (p. 176, 3), *ba* (p. 263, 2), *ba* (p. 263, 4); alongside however, we have: *ba* (p. 134, 1), *ba* (p. 133, 1).

The demonstrative pronoun *bu* appears in N. E. Anatolia strengthened by a prefixed *ha* (exclamative *a* with an aspirated anlaut): *hadu* (in Rāsänen, p. 159, 4; 215, 3; 250, 3; 256, 1). The same *ha* is added to the *bu* in *buje*, *buray*, *buradu*: *haburadan* (Rās., p. 180, 4; 191, 2; 192, 1; 199, 1; 257, 1), *haburozi* (Rās., p. 258, 1), *habuofje* (Rās., p. 104, 1).

Similarly we find prefixed *ha* in the demonstrative *o*, dialectal *u* (cf. § 4): *ha*, *u* (Rās., p. 240, 4).

Conjugation.

Personal Endings.

§ 60. 1st Pers. sing.

In the dialects we find *-n* for *-m* at the end of forms in conjugation, as frequently in old Ottoman (Deny, § 551); cf. W. Bang, *Studien zur vergleichenden Grammatik der Türkischen Sprachen*, I, S. B. Pr. Ak. W., xxii. (1916), p. 534, note 1.

Examples from Asia Minor: *japaşyn* (*japaşynym*, G, p. 17, 13), *ilçim* (*ilçimim*, G, p. 88, 23), *osman* (*osmanım*, G, p. 89, 26), *ıyarym* (*ıyarymım*, G, p. 79, 19), *ımarım* (*ımarımım*, *ibid.*, p. 351, 4 from below), *ımarım* (*ımarımım*, Zag., N° 33, from Mumşu in the district of Balykesir), *japışın*, *gelışın*, *gidışın* (*japışorum* etc., Brus.-A., p. 134), *görmem* (*görmemim*, Thür., Kast., p. 19).

So far as I know, a similar phenomenon is only found in Rumelian territory at Tozluğ in N. E. Bulgaria: *bilmen*, *gizmen* (*bilmemim*, *gizmemim*, Gadjanov, i. 9), *gelirym*, *gelirymim* (*ibid.*).

§ 61. 2nd Pers. sing.

1) M. Köprülü-Zade Fu'ad is wrong in thinking (K. S., ii. 37 on v. 54), that a contraction like *lad mofurym* < *lad-m ofurym* represents an archaic feature of the 13th century.

bined with a more or less pronounced palatalisation. According to Räsänen's records, *i* and *e* are pronounced before *r*, *l*, *ʃ*, *ʒ* so far forward and so palatal that they almost become *i'* or *e'* (cf. § 20). This peculiarity seems to extend from the coast region of Trebizond and Rize nearly towards Erzerum.

In Gagauz, anterior vowels *e*, *i*, *ə*, *u* cause a regular and pronounced palatalisation of all adjoining consonants (cf. Moškov, p. XXVI—XXVII).

Simplification of groups of consonants.

§ 49. In many cases the complete assimilation leads to the disappearance of a consonant, or the doubling of a consonant is dropped (cf. § 53).

In the following cases we have the simplification of groups of three (or four) consonants:

a. *ltm* > *lm* in *atımlı* (*aftımlı*), G., p. 38, 8 in a man from Isparta; 42 pa., in a *jürük*; O.T., i. 108, 22 from Constantinople), *lücalımlı* (*jümlımlı*), Räs., p. 26, 1 from Vezirhan). We also find *lt* < *alt* (G., p. 77, 6). Cf. R.O., ii. 210, 2 199.

b. *ftl* > *ft* in *iftik* (*iftik*), almost general "popular" pronunciation of this word).

c. *ftl* > *ft* in *iftik* (*iftik*), e. g. O. T., i. 78, 12 from below).

d. *njl* > *nl* in *genlik* (*genlik* < *genlik* < *genlik*), G., p. 56, 20; *genlik*, Dum., R.O., i. 343, No. 1, 2).

e. *rtl* > *rt* in *aralan* (*aralan*), G., p. 38, 8 and frequent elsewhere).

f. *rl* (= *rl*) > *rl* as in *üt-üt* (*üt-üt*), G., p. 92, 4, 5).

g. *rl* (= *rl*) > *rl*: *utranı* (*utranı*), G., p. 72, 7).

Groups of two consonants:

a. *tt* > *t*: *yakıylar* (*kalıylar*), G., p. 19, 14), *başmas* (*başmas*), Güm., R.O., ii. 6 from below, also elsewhere over a wide area).

b. *rt* > *t*: *gutulması* (*hutulması*), Dum., R.O., i. 348, No. 17), *balıstı* (*balıstı*), G., p. 45, 3).

c. *kt* > *t*: *jürük* (*jürük*), Maz., W.Z.K.M., xxxiii. 200, No. 38, 1), *jürüklerden* (G., p. 56, 16 from the region of Konya), *jürüklerden* (*jürüklerden*), Brus.-A., p. 145, 11). The disappearance of *k* is here due to a kind of dissimilation.

d. *kt* > *t*: *temek'arlık* (*temek'arlık*), W.Z.K.M., p. 218, 22 from Macedonia).

e. *kt* > *t*, especially in diminutive forms, before the ending *-lık*, *-lık*. The dropping of *k* is also almost the rule in the written language, cf. Deny, § 511. Examples: *ölüklük* (G., p. 78, 1), *sevdiklik* (O. T., ii. 304, No. 72, 11, 305, 3, 333, 23), *jüprazlık* (*jüprazlık*), O. T., ii. 334, 1), *ayrılık* (G., p. 56, 24).

On the other hand we find: *larıplıamlı* (*larıplıamlı*), *larıplıamlı*, Räs., p. 154, 1).

f. Finally we may class here the often noted disappearance of a final *t* after *s* or *l*: *ahdas* (*ahdest*, Kast., p. 16), *doz* (*dozt*), G., p. 53, 11), *set* (*set*), G., p. 77, 5; for *w* cf. § 1), *paşu* (*paşu*), G., p. 58, 2), *paşları* (*paşları*), Maz., W.Z.K.M., xxxiii. p. 196, No. 35, 2; cf. *ibid.*, p. 224 19).

Interchange of sound.

§ 50. *r* and *l* in contact with another consonant show a tendency to change place with the latter.

a. *ırgıldı* (*ırgıldı*), *ırgıldı*, G., p. 28 11), *torpaç* (*torpaç*), G., p. 31, 2), *devril* (*devril*), G., p. 29, 29), *peranaçlar* (*peranaçlar*), G., p. 59, 1), *Bilgrad* (*Bilgrad*), G., p. 52, No. 3 pa., *perca* (*perca*,

G., p. 86, 22), *ırgıldı* (*ırgıldı*), G., p. 73, 7). Many examples in Thüry, Kast., p. 15 12.

b. *Edinçek* (*Edinçek*), Zag., No. 47 from Mumçu near Balykear), *Edinçek* (*Edinçek*), Zag., No. 104 from Ayin near Sedi Gazy), *Edinçek* (*Edinçek*), G., p. 90, 22), *mexlen* (*mexlen* < Arab. *مخلف*, p. 89, 22), *Edinçek* (*Edinçek*), Brus.-A., p. 126, 11).

This feature is especially found in Asia Minor.

Development of sounds.

§ 51. Before the explosives *p*, *b*, *t*, *d*, *k*; *g* and the fricatives *ç*, *ş* secondary nasals *m*, *n*, *ɲ* are frequently developed. This phenomenon is, it is true, most frequently noticed in loanwords but it is also found in pure Turkish words: *dimbi* (*dimbi*), Zag., No. 8 from Kaşkandelen in Macedonia), *paupier* (*paupier*, Radović in Macedonia), *hyronit*, *huryant* (*furyat*), G., p. 36, note 2; p. 72, 3 from Borgia; *ibid.*, p. 69, 11; *furyant* (*furyat*), Räs., p. 4, 4 from Vezirhan), *lafayış* (*lafayış*), Az. *لافایش* (Güneş), *şeyh* (*şeyh*), *şeyh*, from Damanly near Kütahia), *garımançural* (*garımançural*), Thüry, Kast., p. 16), *mençilis* (*mençilis*), Zag., No. 103, from Ayin near Sedi Gazy; Brus.-A., p. 131, 12; Thüry, Kast., p. 16) etc.

Syllable Division.

§ 52. Simple consonants between two vowels frequently appear somewhat lengthened. They may even be pronounced long under the influence of stress. In this case the consonant is divided between the preceding and following syllables so that the division between the syllables divides the consonant which produces the effect of pronouncing the consonant as a double one: *dofalaşym* pronounced with emphasis sounds almost like *dof-laf-dof-şym*. Examples: *yakıylı* (*yakıylı*), G., p. 77, 16), *ısfarın* (from *ısfak* "pluck, pull", not from *ısfamak* "to send", G., p. 80, 12), *köpek* (*köpek*), Brus., p. 261, No. 6), *elik* (*elik*), *ibid.*, No. 25), *külük* (*külük*), *ibid.*, p. 267, No. 88), *ellinde* (*ellinde*), Räs., p. 4, 1), *ellim* (*ellim*), Räs., p. 31, 14; *ellime*, p. 34, 2), *şeyh* (*şeyh*), Räs., p. 93, 1).

§ 53. On the other hand, we do not find a pronounced double sound where it might be expected on etymological grounds. The result is, taken with § 52, that e.g. the two last syllables in *daly* *ısfayım* "my (beloved) with the shawl covered head" and *dofalaşym* "let us go around" are pronounced identically. Similarly *harab* *ellinde* and *harab* *ellinde* are practically indistinguishable in the usual pronunciation.

This enables us to understand forms like the following: *eveli* (origin. *evetli*), G., p. 17, 1), *ak* *ısfay* (*ak* *ısfay*), G., p. 23, 1), *memlekete* (*memlekete* [locative]), G., p. 27, 7), *ayyamadyş* (*ayyamadyş* from *ayyamadyş*), G., p. 30, 1; cf. § 40), *Barıduca* (*Barıduca*), G., p. 61, 13), *ısfadyar* (*ısfadyar*), G., p. 55, 13) etc.

§ 54. Many dialects allow two vowels to succeed one another directly within a word, where the cultured language and other dialects have an *i* or *y* sound. This is usually found where an original guttural has been lost. Most examples are found in Räsänen's texts from N.E. Asia Minor: *dalaşym*, *alaşym* (*dalaşym*, *alaşym*, Räs., p. 151, 1, 214), *genlişim* (*genlişim*), Räs., p. 153, 3), *ısfayşım* (*ısfayşım*), p. 154, 1), *jürüşim* (*jürüşim*), p. 157, 4) etc.

In the wilāyets of Angora and adjoining districts I have frequently noted the same thing: *el* (*el* "bend!" from *Tal-oluk* near Kırşehir), *şiponda* (*şiponda* from Kuzkış near Jozgad), *şipındam* (*şipındam*, *ibid.*), *şipındak* (*şipındak*, *ibid.*), *dear* (*dear* from Denekmaden) etc.

The same phenomenon is recorded from Tozluk in N.E. Bulgaria: *buraa*, *deat*, *nerre* (Gadžanov, II. 4).

§ 55. In most dialects an *i* sound has developed between two vowels coming directly together within a word. But sometimes we find *h* instead of *i*: *evahlide* (*evahlide*, *evahlide*, G, p. 31, 3), *toxt-i-pahi* (*toxt-i-pahi*, G, p. 32, 30), *limchal* (*limchal*, G, p. 57, 22) etc.

Sentence Sandhi.

§ 56. When two words come together, of which the first ends with a vowel and the second begins with a vowel, in all dialects, as is frequently the case in Turkish languages, the first of the two vowels is usually dropped. Examples: *Hamiz vnyl* (*Hamiz vnyl*, G, p. 87, 5), *şulayyyz ilim* (*şulayyyz ilim*, G, p. 86, 21), *şulgeş vmas dal olmas* (*şulgeş v. dal v.*, G, p. 77, 25), *elim şpudurum* (*elim ş.*, G, p. 82, 3), *el şipary* (*el şipary*, G, p. 82, 2 from below), *del limail* (*del limail*, G, p. 85, 2), *ol şipar* (*ol şipar*, G, p. 67, 3), *hele şipary* (*hele şipary*, G, p. 29 nlt.).

Ne and the interrogative particle *my* deserve special mention: *nilişie* (*ne ilişie*, R.O., II. 204, 7 from below from Günel), *nafda* (*ne nafda* very common; cf. e.g. Adak, p. 140 nlt.), *nufmaly* (*ne şipuly*, G, p. 83, 15), *nafrym* (*ne şiprym*, Brus-A., p. 149, 4 from below); cf. also the forms given by Kinos without references: *nideşin* = *ne idişie*, *nafpaşşin* = *ne şipafşşin*, *neşşin* = *ne idişie*, *nappatyrym* = said to be *ne şipap şiparym*, *şiparmula* (*şiparmy şip.*, G, p. 75, 4), *şiparmula* (*şiparmy şip.*, G, p. 53, 21) etc. 1).

In the combination of *-a-e* the second vowel sometimes disappears: *afendim* (*a şendim*), *padışendi* (*paşendi*), *ta şelden* (*ta şelden*, G, p. 60, 18).

Reduction of Syllables.

§ 57. In words of three syllables, the central one, if it is open, is frequently reduced. This feature, also found in other Turkish languages, is much more common in all dialects than in the written language. It is connected with the accentuation of words of three syllables: *- - -* or *- - -*; cf. W. Bang, *Studien zur vergl. Grammatik der Türkischen Sprachen*, I, S. B. Pr. Ak. W., xxxvii. (1916), p. 920; T. Kowalski, *Ze studjów nad formą pomyślności* (*studjów nad formą pomyślności*, p. 70, note 1).

Grammar.

§ 58. Declension.

Declension offers no peculiarities of a local nature. The "confusion of the accusative with the dative" noted in various Ottoman speaking districts (Gadžanov, II. 4-5), e.g. *şima arajirim* (for *şimay arajirim*, Räs., p. 209, 2 from Kysarna, in the wilāyet of Trebizond), is, as explained in § 9, due to a phonetic peculiarity.

Similarly the identity of the locative with the

dative ending, which is frequently met with, is to be explained by phonetic changes (assimilation, with later dropping of the gemination, cf. § 49 and § 53): *şipındak* *il* *şip* "in your village there are three girls" (from *şipındak* > *şipındak*, Räs., p. 156, 3), *şip* *şip* *il* *şip* (*şip* > *şip* > *şip*, Räs., p. 149, 4), *şip* *şip* *il* *şip* *il* *şip* "on the meadow of the alpine pasture I was alone" (< *şip* < *şip*, Räs., p. 107, 1 19.) etc.

Nominative forms frequently met with in place of expected dative forms are probably to be explained as the result of contraction: *nere* (= *nereşie*) *şip* *şip* *il* *şip* "he could not ascertain where (the other) had gone" (R.O., II. 205, 4 19. from Günel), *nere* *şip* *şip* *il* *şip* "whither (= *nereşie*) thou dragest her, thither (= *şip*) she will go" (G, p. 66, 20), *şip* *şip* *il* *şip* "I went down to the valley (= *şip*) to the river" (Räs., p. 105, 1). The *ne* (< *nere*) "why", often found in dialects, is probably to be similarly explained.

The Pronoun.

§ 59. The personal pronoun of the 1st and 2nd person singular appears in the east of Anatolia in the forms *şip*, *şip*, agreeing with the other cases, for *baga* (or *şip*), *şip* (or *şip*). I have heard them from a Turk from Urfa. The same forms are given by Balkanoglu (R. Şa., III. 264) for the dialect of Kilis. Räsänen notes them as heard from a woman from the wilāyet of Erzurum: *şip* (Räs., p. 16, 2; p. 23, 3). We must regard these forms as the result of Adharbaidžan influence.

Songs in Räsänen from Trebizond and neighbourhood show a dative in *şip* (alongside of *şip*), *şip* (p. 176, 3), *şip* (p. 263, 2), *şip* (p. 263, 4); alongside however, we have: *şip* (p. 134, 1), *şip* (p. 133, 3).

The demonstrative pronoun *şip* appears in N.E. Anatolia strengthened by a prefixed *şip* (exclamative *şip* with an aspirated anlaut): *şip* (in Räsänen, p. 159, 4; 215, 2; 250, 3; 256, 1). The same *şip* is added to the *şip* in *şip*, *şip*, *şip*: *şip* *şip* *şip* (Räs., p. 180, 4; 191, 1; 192, 1; 199, 1; 257, 1), *şip* *şip* (Räs., p. 258, 1), *şip* *şip* (Räs., p. 104, 1).

Similarly we find prefixed *şip* in the demonstrative *şip*, dialectal *şip* (cf. § 4): *şip* (Räs., p. 240, 4).

Conjugation.

Personal Endings.

§ 60. 1st Pers. sing.

In the dialects we find *-m* for *-m* at the end of forms in conjugation, as frequently in old Ottoman (Deny, § 551); cf. W. Bang, *Studien zur vergleichenden Grammatik der Türkischen Sprachen*, I, S. B. Pr. Ak. W., xxii. (1916), p. 534, note 1.

Examples from Asia Minor: *şip* (*şip*, G, p. 17, 13), *şip* (*şip*, G, p. 88, 23), *şip* (*şip*, G, p. 89, 26), *şip* (*şip*, G, p. 79, 19), *şip* (*şip*, *ibid.*, p. 351, 4 from below), *şip* (*şip*, Zag., N^o 33, from Munju in the district of Balykenir), *şip* (*şip*, *ibid.*), *şip* (*şip* etc., Brus-A., p. 134), *şip* (*şip*, Thury, Kast., p. 19).

So far as I know, a similar phenomenon is only found in Rumelian territory at Tozluk in N.E. Bulgaria: *şip*, *şip* (*şip*, *şip*, Gadžanov, I. 9), *şip*, *şip* (*ibid.*).

§ 61. 2nd Pers. sing.

1) M. Köprülü-Zade Fu'ad is wrong in thinking (K.Ch.A., II. 37 on v. 54), that a contraction like *şip* *şip* *il* *şip* represents an archaic feature of the XIIIth century.

By confusion of the forms of conjugation in *-in*, *-sin*, ... *-iz* (*gelirim*, *gelirsin*, ... *geliris*) with that in *-m*, *-y*, ... *-k* (*geldim*, *geldiyin*, ... *geldik*, or *geldim*, *geldiyin*, ... *geldik*) in the Asia Minor dialects we very often find the personal ending of the 2nd pers. sing. *-y*, where elsewhere we have *-sin*: *gidip*, *varıy* (*gidirsin*, *varırsın*, *K. S.*, i. 155, from North Syria), *giditip* (= *gidirsin*, *ibid.*), *gelitip* (*gelirsin*, *Bras.-A.*, p. 133, 19), *gelip* (*gelirsin*, *ibid.*, p. 133, 21), *giditipin* (*gidirsin*, *Bras.*, p. 263, 6), *ofmay* (*ofmayrsın*, *G.*, p. 69, 12), *iditipin* (*gidirsin*, *G.*, p. 19, 16) etc.

In keeping with this we find: *sen*, *adnanımyy* *istimiy*? (for *istimisin*, *G.*, p. 39, 26 27), *batıyır* *İzmir* (*batıyır* *İzmir*, *G.*, p. 18, 4) etc.

§ 62. 1st Pers. plur.

As a result of a similar confusion of the two types of conjugation, the 1st pers. plur. of the opt., pres., aor. and fut. in many, especially East Anatolian dialects, ends in *-k* (*-x*): *gidik* (*gidirim* from the district of Sivas), *batıyırk* (*batıyır*, *K. S.*, i. 155 from North Syria), *doğuruk* (*doğurur* from Tatlıçak, S. from Sivas), *bilmek* (*bilirim*, *ibid.*), *durağank* (*durağır*, *Ras.*, p. 173, 2), *afıyırk* (*afıyır* is given by Balkanoglu for Kilis in North Syria, *K. S.*, iii. 264) etc.

Outside of the conjugation tables we also find *-k* with the meaning "we are" (instead of the enclitic *-(iş)e*): *biz amelek* "we are workmen" (I heard this in Amasia from labourers from Yozgat), *şuclık* "we are beautiful" (*K. S.*, iii. 264 from Kilis).

This phenomenon is characteristic of the east of Asia Minor. While it is not found far east of Angora in northern Asia Minor, in southern Asia Minor it appears to extend much farther east. In the country east of Kızılyirmak, I heard almost exclusively the forms in *-k* (*biz bu zui itmek*, *biz k'iskine giderik* etc.).

§ 63. 2nd Pers. plur.

Everywhere that we find in the 2nd pers. sing. *-y* for *-sin*, we also have in the 2nd pers. plur. *-yız*, *-yız* etc. instead of *-sınız*, *-sınız* etc.: *giditipiniz* (*gidirsiniz*), *varıyınız* (*varırsınız*) etc.

§ 64. Verbal forms ending in *-r* (3rd pers. sing. pres. and aor.) lose this *r* in various dialects (cf. § 34): *millip* (*uc ilçip*, *R. O.*, ii. 204 from Güneş), *değ-kum* (*değ-kim*, *ibid.*, p. 205, 40), *judajın* (*judajır*, Thury, *Kat.*, p. 19), *hemiri* (*hemirir*, *R. O.*, i. 347, No. 15, 4), *balary* (*balaryr*, *G.*, p. 70 from Borçin) etc.

After final *r* of the form *der* (from *dürek*) we sometimes find a vowel-like sound which is difficult to define, like *derf* (cf. *R. O.*, ii. 206, 12).

In some Rumelian dialects (notably in the dialect of Adakale) a final *r* of the aor. partic. almost regularly becomes *l*: *basal* (*basır*), *salafar* (*salafır*), *ıldırıl* (*ıldırır*) etc.

The Tmes.

§ 65. Present.

Besides the forms in *-yor* we find in dialects those in *-ür*, *-ür*, *-ir* with many slight gradations in the quality of the vowel. The half consonantal *l* may sometimes disappear so that the two vowels come together: the vowel of the corresponding gerundive form and the vowel of the ending *-ür*, *-ir*. The final *r* also may disappear completely (cf. § 64).

Forms with the vowel *u* and *i* (*-ür*, *-ir*, *-ur*,

-ir, or *-ü*, *-i*) are found in the two most north-easterly corners of the Ottoman speaking area: on the one side in the northeast on the coast of the Black Sea, towards the Caucasus, on the other in the northwest, in the N.E. of Bulgaria, in the Dobrudja and Bessarabia.

Examples from the N.E.: *d'Aliür* (*gelür*, *Ras.*, p. 68, 12 from the wilayet of Erzerum), *agair* (*agıyır*, *Ras.*, p. 166, 2 from Trebizond), *ceft* (*ceftir*, *Ras.*, p. 175, 2, *ibid.*), *ıaryıjı* (*ıaryıyır*, *Ras.*, p. 194, 4 from the wilayet of Trebizond), *denanılı* (*denanıyır*, *Ras.*, p. 254, 2), *İzmir* (*İzmirir*, *Ras.*, p. 245, 2: with very broad and low final *i*; cf. § 9), *atılmaır* (*atılmaır*, *Ras.*, p. 219, 1) etc.

With Râşid's statements, those of Künos for the district of Samsun-Trebizond agree: *ıaryıjır* (*ıaryıyır*, *Laz.*, p. 278, 12 from below), *ıyryımaır* (*ıyryımaır*, *ibid.*, i. 1, 12 from below), *gelür* (*gelür*, *Laz.*, p. 281, 4 from below).

I have noticed forms in *-ir* (*-ir*) even south of Sivas: *İzmir*, *ıaryıyır*, *ıaryıyır*, *durıyır*, *durıyır* etc., all from the village of Tatlıçak, between Sivas and Kaia-dibi.

Forms in *-ıur*¹⁾ were noted by Thury in Kastamunian (p. 19): *batajın* (*batıyır* < *batajır*, cf. § 46), *judajın* (*judıyır* < *judajır*), *ıyryımaıjın* (*ıyryımaıyır*) etc.

Forms ending in *-ıur* are also characteristic of the dialect of the Ottomanised Tatars of the Crimea: *ıaryıur* (*Satıkaya*, in *J. A.*, 1926, p. 352, 4), *ıaryıur*, *ıaryıur* (*ıaryıur*), *ıaryıur* (*ibid.*, p. 364, 7-9).

The forms in *-ıur* and *-ir* seem to cover an area which begins with the wilayet of Kastamunian and stretches along the coast of the Black Sea far to the east and north. I do not know a single case of such forms from the southern half of the peninsula.

If we now turn to the western coast of the Black Sea we find very peculiar, complicated conditions which cannot yet be considered to have been quite cleared up.

Among the Bessarabian Gagauz, according to Moikov (Gagauz, xxviii, xxix), two forms of present are used alongside of each other: the one in *-yor*, the other in *-ir* (cf. *çinir*, 2, 30; immediately following it *çinajır*, 2, 31). As forms like *ıaryıyır* (from the village of Etalia in the circle of Ismail) show, *-ir* has arisen out of *-ıur*.

Still more involved is the position in northern Bulgaria. The present forms there form one of the most important criteria for distinguishing the dialects of the different districts. According to Gadfanow, whose statements I can generally confirm, we have the following forms of the present in conjugation: a. Vicinity of Şumen, village of Troica (Turkish: Turuza); i. 5:

gelirim, *gelirsin*, *gelir*, *gelirtiz*, *gelirtiniz*, *gelirtiriz* 2).

b. Northern part of Gadlovo (i. 7):

1) I cannot see why this present form should be entirely separated from that in *-yor* and "probably compared with the Gag. present in *-ıur*" (M. Fallo, *K. C. A.*, i. 86). On the contrary, I think it is hardly possible to seek two different starting-points for the forms in *-yor*, *-ıur*, *-ir*, *in*, *-ür*, *-ü*, *-ir*, *-i*, *-ir*.

2) Gadfanow writes *gelirtir*; by *r* he indicates that *l* is not *l*.

(p. 8, 14), *arasyın* (p. 5, 30), *oturtıjı* (p. 5, 30, 6, 21, 22), *ıyğai* (p. 5, 29, 6, 8), *kaşyırjı* (p. 8, 9), *topşaj* (p. 8, 23), *burultırın* (p. 167, 26), *gideller* (p. 6, 23), *calıyırjı* (p. 5, 3) etc. Forms in *-ı* and *-e* are used promiscuously: *e gıze orda jatıj* (p. 173, 19) and immediately following it: *e gıze orda jatır* (p. 174, 8), or *fil hadar olıj* (p. 174, 4) and immediately following it: *fil hadar olur* (p. 174, 14) etc. The differentiation of the vowels before *-ı*: *gidel* but *gelij*, *ıyğaj* but *ayy* or *altıj* indicates with certainty that *gidel* goes back to *gider*, *gelij* to *gılır*, so that the forms are really aorist forms, as Foy supposed, *M.S.O.S.*, vi. 161 (cf. § 64, note 1).

In the dialect of Urfa I have noticed in the 1st pers. sing. of the negative form the ending: *-menem* (as in Adhart) instead of the literary *-mew*: *ıstılemem* (*ıstılemem*), *ellemem* (*ellemem*) etc.

The Future.

§ 67. We usually find contracted forms which may be regarded as coming from the 1st pers. sing. (*başaşım* < *başaşayım*) or from the 1st pers. pl. (*başaşız* < *başaşayız*).

The 1st pers. sing. frequently ends in *-m* (cf. § 60): *ıyğajım* (*ıyğajayım*, *R.O.*, i. 349), *ıyğajım* (*ıyğajayım*, *G.*, p. 17, 23) etc.

On the analogy of the former, the 2nd pers. sing. ends in *-şaj* or *-şan*: *ıstıleşaj* (*ıstıleşekim*, *G.*, p. 19, 16), *ıstıleşan* (*ıstıleşayım*, *G.*, p. 22, 7) etc. Interrogative, or: *gıdeşim-mi* (*gıdeşekimim*, *O.T.*, i. 66, 2), *ıstıleşim-mi* (*ıstıleşekimim*, *Gagana*, p. 1 pu.) or: *başaşajayım* (*başaşayım*, *G.*, p. 18, 4; cf. § 61).

The 1st pers. pl. ends in the east in *-k*, *-ç* (*-X*), in the west in *-ı* (*-ı*): *gidelçik* (*gidelçikiz*, *Türk Yurdu*, May 1928, p. 23^a, 9, from the Aghars of the Taurus territory), *duraşaj* (*duraşajız*, *Ras.*, p. 173, 2), *ayılajaj* (*ayılajajız*, *Ras.*, p. 173, 4), *gidelçik* (*gidelçikiz*, *G.*, p. 18, 22) etc.

The 2nd pers. plur. on the analogy of the sing.: *verekimiz* (*verekimiziz*, *O.T.*, i. 250, 28) etc.

The Optative.

§ 68. The 1st pers. sg. of the optative often shows, as in old Ottoman, the personal ending *-m* added directly to the optative stem in *-a*, *-e*: *ınenim* (*ınenim*, *G.*, p. 60, 4), *ıafam* (*ıafayım*, *G.*, p. 60, 3) etc.; cf. Deny, § 645. Similarly after verbal stems ending in vowels: *avşajam* (*avşajayım*, *G.*, p. 60, 3).

The 1st pers. pl. ends in the east in *-k*, *-ç* (*-X*). It usually represents the 1st pers. plur. of the imper. in *-im*, *-ym*: *gidelçik* (= *gidelim* from *Tatlıçak*, South of Sivas), *hilek* (= *hilelim*, *Türk Yurdu*, May 1928, p. 24^a, 22 from the Taurus territory); *ıyğaj* (*ıyğajım*, *ibid.*, p. 24^b, 3 from below), *başaşajım* (*başaşajayım*, *Kışeri*), *gidelçik*, *başaşaj* (perhaps *başaşaj*, from North Syria; cf. *K. Sz.*, i. 155) etc.

The Imperative.

§ 69. 1st pers. pl.: *ıafajaj* (*ıafajajım*, *Laz.*, p. 283, 2), but *gidelim* (*gidelim*, *Ras.*, p. 172, 1).

In the 2nd pers. pl. of stems ending in vowels or in negative forms we frequently find the ending *ş* added directly: *daşaj* (*daşajım*, *G.*, p. 86, 6), *dışaj* (*dışajım*, *G.*, p. 80, 12), *ıstıleşaj* (*ıstıleşajım*, *G.*, p. 91, 22), *ayramaj* (*ayramajım*, *G.*, p. 53, 2), *ayşajajım* (*ayşajajım*, *G.*, p. 89, 10) etc.; cf. Deny, § 608.

Verbal Nouns.

§ 70. Verbal noun in *-ay* etc. (Bibliography: W. Bang, *Studien zur vergl. Grammatik der Türk-sprachen*, article 1: Über die omanische Fluchform *edıyay* (*yana*) und ihre Verwandten (*S.B.Pr.*, *Ab. W.*, xxi. [1916], 522–535); Böhtlingk, *Türkische Grammatik*, p. 308 sq.; Thury, *Kat.*, p. 21; Brockelmann, *Qizil-Yay*, § 65; do., *Z. D. M. G.*, lxx., 212; do., *K. C. A.*, i. 31 (from Mahmed al-Kāşari); Deny, *Grammaire de la langue turque*, § 793–981).

This verbal noun, which only survives in the modern literary language in a few formal expressions, is still quite vigorous in the dialects, particularly in Anatolia. We find it in the following cases:

a. in many curse-formulae: *ah şurnıyay barmıy* (*O.T.*, i. 256, 10), *ah şurnıyay kerif kaj* (*ibid.*, ii. 19 sq.), *bataşay* (= *şere bataşay*, *ibid.*, ii. 306, 3 from below), *ıyğajay vıram başajay* (*ibid.*, ii. 312, 3), *ekmıjı taylan kucıjı tay şılayıza* (*Konya vilayeti halkıyat ve şırayatı*, p. 322, N^o 6, where many other examples are given).

b. in combination with *-ek* or *-çik*: *gidelçikçik* (*O.T.*, i. 15, 17; 18, 24), otherwise cf. Bang, *op. cit.*

c. in various formulae: *ıyğajayay ınenim* (*O.T.*, ii. 2, 21); cf. Bang, *op. cit.*

d. used as an adjective: *Şar-ıyğajajı bir mal başajay ıerde kaj var* (by a shepherd of Kaşadibi, South of Sivas).

e. predicative, used like a participle: *ayşajay ıstıleşimdir* (in *Türk Yurdu*, May 1928, p. 23^a, 22).

f. as a substantive only in the phrase *verekije* (as in the written language): *verekije bir testi daha aşarak* (*O.T.*, ii. 47, 17), *verekije larab ıltım* (*O.T.*, ii. 316, 4 from below).

g. very common in combination with *gelmek*, as in the following quatrain from Güneş:

*ıafajay varayım gıdıl,
ladır gurayım gıdıl;
ıayım şandan görünşaj,
şamı şırayım gıdıl.*

§ 71. Gerundives in *-ınçaj*, *-ınçaj* etc. appear in the dialects with final *-k*, *-ç* (*-ı*) or *-m* (cf. Deny, § 1392). Examples for *-ınçaj*: *görmünçajçik*, *ermünçajçik* (*O.T.*, ii. 194, N^o 76), *varayınçaj*, *doşunçaj* (*ibid.*, p. 260, N^o 10), *başayınçaj*, *ıayınçaj* (*ibid.*, p. 325, N^o 100), *dününçaj* (*G.*, p. 80, 23); cf. Deny, § 1392, p. 998.

Forms in *-ınçaj* (*-ınçaj*) so far had only been found in Macedonia (*W. Z. K. M.*, xxxiii. 174 and 220), in the region of Konya (Giese), in Marab (Deny), Trebizond (Pisaref) and among the Turkish speaking Armenians (Deny). To the examples given by Deny (p. 999) I may add:

*genç aşılam olunşaj,
başanmam gılınşaj.
ni ıstıleşaj ıafajım,
ıeniy gönlüy olunşaj*

from Güneş, east of Smyrna.

Forms in *-ınçaj* (for explanation cf. § 10) I know only from the texts by Giese: *yayınşaj yayıjı şırlım şala* (*G.*, p. 55, 1), *başanşajın arab alfar ıltınir* (*G.*, p. 59, 30) etc.

The Verbal Noun in *-dik*.

§ 72. By the combination of a verbal noun in *-dik* with a pronominal suffix and the postposition

le (in dialects *imen*, *yman*, cf. § 80) there arises a form with a temporal significance, which is very frequent, especially on Rumelian territory, among the Bessarabian Gagauz, in the dialect of Adakale and in N. E. Bulgaria. Examples: *bi dama jaf-jaflynnan biye künemil* "when he approached the stall, the horse neighed" (*jaf-jaflynnan* < *jaf-jaflynnan-ile*, Gagauz., p. 126, 3), *salil vldilinen (vldilinyile)* "when it became morning" (Adak., p. 2, 36), *ruza var-dyina (var-dyinyile)*, *zu buš-dyib-ise 'geime: 'zora kuce var-dyina (var-dyinyile)* *žaryny bobana jof-lama* "when you come to water and it is turbid do not cross it; also when you come to the village do not send your wife to your father" (from a folk-tale recorded by me in the village of Düşubak in Deliorman) etc.

§ 73. Instead of the usual construction with *-diklen* *ınıra* we very often find in dialects *-diklen geri: aldihdengeri, dūddūhdengeri, aldyhdengeri* (G., p. 52, 2, 3, 10), *aldūhdengeri* (G., p. 59, 21), *aldūhdengeri* (G., p. 59, 23), *gūddūhdengeri* (G., p. 59, 27) etc.

The significance of this construction is partly temporal "after", partly causal: "since however"; cf. Deny, p. 1035, 19.

§ 74. Probably by contamination from *-diklen* and *-dikte* (or *-dikten*) arise forms in *-dikten*, which are found among the Bessarabian Gagauz as well as in Deliorman: *dakije tutublon fōra ev gētiris* "after we have prepared (the boys) for the *dakje* ceremony, we bring them (the boys) into a house" (from an account of the ceremonies of circumcision taken down by me in Kemanlar, Deliorman), *bi dūda* (cf. § 24) *gittikūn xip žyrmyz adamlar* "even when one crosses, one finds nothing but red men" (Gagauz., p. 10, 1) etc.

§ 75. In the construction in *-dikte* in Macedonia, I also found a final *-a* (-): *ūddūdikte lēb ūddime jorgail* "when I freeze, draw the blankets over me" (*W. Z. K. M.*, xxxiii, p. 184, 4), *ūddūdikte ver agzima dīlīni* "when I thirst, put thy tongue in my mouth" (*ibid.*, l. 6).

Iken etc.

§ 76. We find many dialectal peculiarities in the forms composed with *iken*:

a. *-ken* (from *iken*) follows the rules of vowel harmony and after heavy stems becomes *-kan*, in the eastern dialects *-xan* (§ 37). Both *-ken* and *-kan* combine with exclamative *-i*, *-ā* to *-kene*, *-kana*. Examples: *lyxxarxan* (*lyxxarken*, Brus.-A., p. 122, 4 from below), *bolanyrkana, ūnenirkene, žulanyrkana* (G., p. 51, 3, 6, 7); cf. Deny, p. 949, footnote 1.

On the other hand, we find in the dialect of Bessarabian Gagauz *-kan* even after light stems: *giderkan* (Gagauz., p. 1, 2, 165, 13);

b. *-ken, -kan* frequently appears without final *-a* as *-ke, -ka: gelirke* (G., p. 80, 4 from below), *žya žha* (*žya iken*, G., p. 65, 13), *eldike* (*eldē iken*, G., p. 72, 3), *oturnirke* (*W. Z. K. M.*, xxxiii, p. 216, 18 from Radoviš in Macedonia).

§ 77. When the subject of the form in *-mahta* *iken* is a plural, in the dialects (as frequently also in the written language, see Deny, § 1358, p. 954) the plural termination *-lar* is added to the locative ending *-da: gelinip oturmahta-lar-ken* *gōvur-lar-ki* (O. T., ii. 29, 10), *uasmahta-lar-ken* (O. T., ii. 51, 18), *došalmahta-lar-ken* (O. T., ii. 48, 22) etc.

Note: The addition of the plural ending *-lar* to the locative ending is also noted elsewhere: *gōvur-mahdeler idi* (for *gōvur-mahdeler-idi*, G., p. 33, 28), *Otur-mada-lar-ken* (O. T., ii. 23, 1) is an isolated form; cf. A. C. A., l. 321.

On the use of the Participle in *-an, -en* etc.

§ 78. In the northeast as well as in the north west of the Ottoman speaking territory we find constructions with the participle in *-an, -en* (or *-jan, -ien*) instead of with the verbal noun in *-dik* or the gerundive in *-inje* etc. (influence of Agharī!): *jelken došana hadar* "until the sail fills" (Rās., N^o 197, 2), *kežan d'elene hadar* "till thy husband comes" (*ibid.*, v. 4), *her seni görende* "every time I see thee" (Rās., N^o 266, 3), *alup gidene hadar rahatlykle jalarler* "they live in comfort till their death" (Adak., p. 172, 3), *ge alyp kapajana hadar* "in a moment" (Adak., p. 206, 18 sq.).

Vernek as an auxiliary Verb.

§ 79. Accelerative forms combined with *vermek* are used much more frequently in many dialects than in the written language. Their original significance seems to have become much weakened. According to Gadlanow, there are in Bulgaria (Deliorman, Gerlovo) dialects which only have present forms combined with *ver-*; but it would have to be considered whether in the forms quoted by him the element *-ver-* is not perhaps, at least occasionally, a phonetic development from *-jer-* (cf. § 65). The people of South Gerlovo, who speak in this way are called by their neighbours *gelinverji* (Gadlanow, ii. 6).

In Anatolia I heard this name given to the people of Konya among whom the accelerative forms in *ver-* are continually used; *ver-* appears in the dialects also in negative verbal stems: *gelmiti-ve* (*gelmiti ver*, cf. § 34, Brus.-A., p. 140, 10), *gelmitivirdi* (G., p. 69, 4). Cf. Deny, § 824.

The Postpositions.

§ 80. *ile, -ile* is found in the dialects in many forms: *ile, -le, -len, -len, -nen, -nen*; after heavy stems also harmonised: *-yla, -la, -ylan, -lan, -ynan, -nan: jazylan gēlin* "in summer and in autumn" (G., p. 79, 2 from below), *ge jalynan* "with tears" (G., p. 59, 8), *ününen janynan* "with glory and prestige" (G., p. 54 ult.), *ajnan lylyen* "moon and stars" (G., p. 52, 3), *dalynan (tal ile, Brus.-A., p. 130, 16), jallan* (Rās., N^o 181, 2), *jarininan* (*jariny-ile*, Rās., N^o 3, 4) etc.; cf. Deny, § 876, note 2 and p. 924, middle.

§ 81. *yyra*. Much more frequently than in the written language (cf. Deny, § 902) *yyra* is used in the dialects as a postposition. Examples: *arxam yyra* "close behind me" (Brus.-A., p. 127, 7, 147, ult.), *ažderhūayn ardy yyra gidlime* "let us go after the dragon" (Adak., p. 18, 26), *arhary yyra* "close behind her" (O. T., i. 116, 25, 147, 13), *imny yyra alup gider* "takes him with him and goes away" (O. T., i. 127, 32), *ardy emi yyra došair* "he encircles him in front and behind" (O. T., i. 243, 18 sq.) etc.

§ 82. *hadar, hadar* appears in different forms in the dialects:

a. *guda* (with voiced initial, § 205, and loss of the final *-e*, § 34) is noted by Thury in Kašajmanian, (p. 52, alongside of *gudar*, cf. also p. 18).

b. *gadan* (with nasalisation of the final, cf. § 10)

given by Kânos for Bursa: *hıyyıca gadan* (Hew., p. 268, 1), *ne gadan galsa* "however much he flies away" (*ibid.*, p. 271 v. 2 from below).

c. *gadak* (probably assimilation to the post-position *dek* "up to"; cf. § 83) in Giese: *a cantione gadak* (G., p. 37, 16).

d. *ka*, added enclitically, is found on Ramelian territory: *dı'peka* "knee-high", *lı'peka* "up to us", *saba'jaka* (*sabaxa-kadar*) "till morning" (all from Macedonia, *W. Z. K. M.*, xxviii, 178 and 221), *herneka* (*her ne kadar*, Adak., p. 18, 22) etc.; cf. Dery, p. 1133 on § 904.

§ 83. *-dek*, *-dek* (cf. Dery, § 904) also appears in dialects harmonised as *-dağ*: *aylu'madağ* "till evening" (Gagaus., p. 3, 29). Alongside of *-dek* we also have *-den*, *-dan* (different from the ablative ending *-i*): *limi'dandan* "until now" (Gagaus., p. 110, 13). According to Dery, p. 613, middle, this form is also used in the dialect of Selanik.

§ 84. *gibi*. We find the following forms in dialects:

a. *gibini*: Râs., N^o. 179, 2, 4.

b. *gimi*: *girdi jel gimi* "is whirled just like the wind" (G., p. 56, 20), *peşmanlar gimi* "like butterflies" (G., p. 12, 3).

c. *kimi* (Aldharhâldjant form) is according to Dery, p. 1131 also found in the dialect of Maras.

d. *kimisi*: *gül kimin altın* "I flew thither like a bird" (Brus.-A., p. 146, N^o. 28, 3), *Lokman bekim kimin* "like the wise Lokman" (*ibid.*, N^o. 35, v. 3).

The Adverbs.

§ 85. *geri*, *geri* sometimes appears intensified by reduplication: *gerisi gerine dönüp* "returned" (O. T., i, 47, 33), *hıy gerisi gerisi evine gönderirler* "they send the girl back home" (O. T., i, 137, 12), *girdi gersingeri* "he went back" (O., p. 18, 11), *hıllarına girsingeri yalılar* "they flee back to their villages" (G., p. 22, 14).

§ 86. *başan*. In Anatolian dialects the participle *başan* is found as an adverb in the meaning of *arş*, *gairi*: *Myryra sultan iteler istemen başan* "if ever they wished to make (me) sultan of Egypt, I would not have it" (G., p. 59, 26; cf. 72, 15), *baş başan kaç* "fly, fly" (*Nyctolud. Kâl.*, xxii, 1891, p. 289).

§ 87. Adverbs in *-şene*, *-şene*. In the dialects we find the adverbial ending *-şene*, *-şene*: I know it from Kaşamuni and the northern part of Ramelian: *loşene* "in a mass", *loşene* "softly", *pekişene* "strongly", *nuşşene* "moderately" — all in Thrace, *Kast.*, p. 18; *koşşene* "so" (Adak., p. 1, 2, 34, 43; 141, 3 etc.), *oşşene* "so" (Adak., p. 2, 4 etc.).

§ 88. *amaş* etc. Instead of *karşı* "opposite" in many parts of Anatolia we have *amaş*, *amaş* etc. M. Hartmann for example (*K. Sa.*, p. 156) gives for 'Anteb (Aintab): *ümaşymışda* "opposite us"; *amaş* is noted by Balkanoglu (Neşib Asim) from Kilis meaning "vis-à-vis" (*K. Sa.*, iii, 269). *Annaş* found in the Taurus is probably a corruption of *amaş* (< Pers. *amāš*): *annaşymışa kara laze* "opposite us is a black rock" (*Türk Yurdu*, May 4, 1928, p. 22^b), as is *amaş* which I know from the wilkyet of Bolu: *arnušta guzy gördüm* "opposite I saw a lamb" (In a song from Çarşembe in the south of Bolu), *arnušta gördüm seni* "opposite I saw thee" (from the same district) etc.

Bibliography: given in the article. A number of notes and examples for which no reference is given are from the author's unpub-

lished materials. They were collected by him in his dialectological studies among Turkish soldiers in 1917–1918 and during his dialectological journeys in Asia Minor (1923 and 1927) and in N. E. Bulgaria (in 1929).

(T. KOWALSKI)

III. OTTOMAN TURKISH LITERATURE.

The literature to which the name of Ottoman is now generally given is really the literature of the Oghuz Turks, who settled in Asia Minor in the Seldjuk period and later in the time of the Ottomans in Rûm-ili, where they founded a powerful empire. This literature, which has had an uninterrupted development from the time of the Seldjûks down to the present day, is based on the literatures of still older dialects and has remained in touch with these in all periods of its evolution. Especially since the xvth century, it has become the most important and richest branch of all the Turkish literatures and has exercised an influence on the literature of the other dialects. Here we shall only sketch the general evolution of this literature, noting its main genres and principal personalities. We shall deal not only with the classical literature which was confined to the upper classes, but also — in their general features — with the literature of the masses, that of the poet musicians (*şâr şâirleri*) and the literature of the various mystic groups. We have felt the necessity of dwelling more fully on points which have hitherto not been satisfactorily studied or which are not yet well known in the learned world, while, as regards better known aspects, we have not gone into details, confining ourselves to a synthetic exposition. For example the xiiith and xivth centuries — the least known period of this literature — have been treated more fully in proportion to other centuries. This is necessary in order to be able to elucidate more fully unknown points and must not be considered disproportionate in this succinct résumé.

We divide Ottoman literature into three great periods, corresponding to the general development of the history of Turkey:

a. Muslim literature from the xiiith century to the middle of the xixth, i. e. to the period of the *Tanzîmât* [q. v.].

â. The "European" literature from the period of the *Tanzîmât* to the development of the nationalist movement.

c. National literature, arising out of the development of the nationalist movement.

We shall examine these three periods in chronological order, in order to avoid arbitrary distinctions.

a. Muslim Turkish Literature.

xiiith Century.

After the Seldjuk occupation in the xth century, Anatolia had been gradually turkicised and converted to Islam. In the xiiith century however, Greeks and Armenians still formed a considerable proportion in the towns and villages of Asia Minor (Pauthier, *Le Livre de Marco Polo*, Paris 1865, p. 33–39). Among the Turks who settled in Asia Minor some belonged to one and others to other branches of the Turkish people. But as the Oghuz formed the majority, it was the Oghuz dialect

(that formed the foundation of the literary dialect that took shape in Asia Minor. The Oghuz dialect, which had separated from the other Turkish dialects well before the tenth century, had already a rich popular literature; we know of the existence of Oghuz poems in the Ghaznavid period (Köprülü Zâde M. Fu'âd, *Ghaznavî Dövlendê Türk Şi'rî, Edebiyat Fakultesi Mecmû'esi*, vol. vii., No. 2, p. 81—83).

The Oghuz who settled in Asia Minor had brought with them all these literary traditions. But in addition the literary products of other dialects also found their way in for different reasons (cf. on this: Köprülü Zâde M. Fu'âd, *Türk Edebiyatında İlk Mutasavvifler*, Constantinople 1919).

As a result of all these influences there gradually grew up in Asia Minor alongside of the popular literature, a written literature in Turkish; we do not know positively if this written literature had already begun before the xiiith century or not. We do know that from the time of the Seldjûks of Asia Minor in the xiith century, Islâmic culture had established itself in the large towns. Then, after the Seldjûks had exterminated the Dânişmendîds and disposed of the Crusaders, learning and literature attained a considerable development in Asia Minor. The products of this movement were written partly in Arabic, but mainly in Persian. We cannot therefore doubt that Anatolian Turkish had a long struggle with Arabic and Persian in order to become a literary language. We see clearly the predominance of Arabic, the language of religion and that used for teaching in the medreses; it was the official language for the correspondence of the sultans with the 'Abbâsîd caliphs, the Aiyûbîds and the Mamlûks and that used in the inscriptions and *waqf* deeds of this century and also of the following centuries. The influence of Persian was still greater. We know that in the entourage of the sultans and of various scholars and princes, Persian was used and Persian poetry was constantly read. In the same way we find in some *waqf* deeds of the Mongol period — although very rarely — phrases in Mongol, but written in the Uighur character. Nevertheless the predominant language in official transactions and state documents was Arabic.

The use of Turkish was probably confined to dealings with the people. In 676 (1277) when the Karaman Oğlu Mehmed Bey had occupied Konya, he ordered that only Turkish should be used in the business of the chancellery; according to one tradition, he had a number of the old scribes put to death (cf. Sâiyîd Lûkmân, *İdmi'at-ı Ahmâd-ı Âlî-i Sâ'îd*; J. J. W. Lagus, *Seld Lûkmân ex libro turcico qui Oghuznamam inscribitur excerpta*, Helsingfors 1854, p. 13). According to İbn İbîl, the use of any language other than Turkish was forbidden not only in the business of the chancellery but also in private life (*Saltûk-nâme*, Aya Sofia MS. No. 2895). The importance given to Turkish during this brief reign does not of course prove that Turkish had already gained a predominance over the other languages. If we bear in mind that Turkish has come into general use in the religious tribunals of Asia Minor only since the xvth century, and that at Baghdâd Persian was still employed in the registers of the chancellery in the xviith century, we can better understand this. It is however certain that Turkish began to gain in importance in state business from the end of

the xiiith century (cf. *T. O. E. M.*, No. 17—94, 1926). In this century the *siyâsat* hand was used in the Seldjûk chancellery and there was also a system of writing peculiar to the chancelleries. In documents written in Turkish on the other hand, vowels were never indicated by letters in the Arabic fashion, but only the vowel signs were used. This shows perhaps that among the Turks of Anatolia, the tradition of the old Uighur script had been quite forgotten.

It is as a result of all these conditions that we find Turkish literary works appearing in the course of the xiiith century. A very small portion only of them has come down to us. Works which we no longer possess but of which we know of the existence from historical references are: the story of *Şahîd Sâ'ân* in verse by an unknown author; the *Saltûk-nâme* in verse and prose by a poet called Şahîyâd 'Isâ, in which are described the combats of 'Alî with a demon called Şahîl; the *Dânişmend-nâme* composed in 643 (1245) by İbn 'Alî, secretary of the Seldjûk Sultân, by order of the prince Malik 'Isâ al-Dîn Kaika'ûs b. Ghiyâth al-Dîn. It is probable that the stories of Sâiyîd Battâl, the existence of which is known in Egypt as early as the xiiith century, were translated into Turkish in the xiiith century. The *Battâl-nâme* and the *Dânişmend-nâme*, a work which grew up around the personality of Malik Dânişmend Ahmad Ghâzî, a hero who came to Asia Minor in the period of the first Seldjûk occupation and founded the Dânişmandîd dynasty, is a product of the struggle between Muslims and Byzantines in Asia Minor.

The political and economic situation of Anatolia in the xiiith century and particularly the material and moral crisis caused by the first Mongol invasions encouraged the expansion of mysticism in these regions. The Yesewî and Haidarî dervishes, coming from the east, brought to Asia Minor the mystic poems in Turkish of Ahmad Yesewî and his disciples. The Turkish mystics also, under the influence of Arabic and Persian mysticism, were forced to have recourse to Turkish as the language of the people in order to gather round them as many followers as possible. It was for this reason that İjalâl al-Dîn Rûmî wrote a few Turkish verses, although very few, and that Sultân Welâd produced a certain number of Turkish poems. These were until recently the only products of Seldjûk literature known. We may also mention Ahmad Fa'îh of Konya who lived at the beginning of this century and wrote a fairly long mystic *mathnawî*, which we still possess (cf. Köprülü Zâde M. Fu'âd, *Anatolische Dichter in der Seldschukenzeit*, *Körverl. Cisma Archiv.*, ii.), and a little later Şahîyâd Hamza [q.v.], whom we may regard as a disciple of Ahmad Fa'îh. These poets composed their works in the 'arûd metre and in imitation of the Persian mystics. But the mystic movement in Asia Minor was not confined to producing works of no originality. It also created a new kind of poetry, which was purely Turkish and original, in the language of the people, in syllabic metre and in forms suitable for a popular literature. Yesewî and his pupils had a great influence on the genesis of this last poetry.

Yûnus Emre was the greatest representative of this genre; he was still alive at the beginning of the xivth century. His art is essentially one of the people, i.e. it is Turkish. A Neo-Platonic

Muslim element can be distinguished in it, which does not differ at all from the mystic philosophy of, for example, Djalāl al-Dīn Rūmī, and a popular element which determines its language, style, form and rhythmic metre. It was through the mystical verses of Yūnus that there developed a tradition of writing poems in the language of the people and in the popular syllabic metre, which did not lose its power even in the periods when Persian influence was at its height. The mystics of the different orthodox and heterodox sects which arose in Asia Minor in the following centuries wrote popular poetry in the style of Yūnus in order to exert an influence on the masses. Among the latter special mention may be made of the Bektāshī, Hurūfī and Kīllāshī poets who imitated Yūnus with great success.

In the xiiith century we find a profane poetry beginning in Anatolia under the influence of Persian literature. It was encouraged by the luxurious life and freedom in the fullest sense of the word that prevailed among the upper classes. This movement became still stronger under the Mongols. It produced in the palaces of the Saldjūqs a kind of profane poetry quite free from ascetic and didactic tendencies and inspired by Persian literature. The first representative of this school, the aims of which were purely artistic, is the poet Khwādja Dāhhānī. It is very probable that this branch of literature, which was practised among the eastern Turks as early as the xiiith century, had had representatives before him in Anatolia, for his poems were written in quite a perfected style and attained a high degree of perfection from the technical point of view. It is therefore a mistake for Turkish and European writers on the history of Ottoman literature to trace the development of Turkish profane poetry to the time of Bāyard Yildirim at the earliest. Dāhhānī, also wrote, by command of his sovereign, in the reign of 'Alā' al-Dīn III a *Sākhnāma* of the Saldjūqs, in Persian; he was a Turkman of Khurāsān. From the dialectal point of view, his language shows all the peculiarities of the Oghuz dialect of Anatolia. A comparison between the works of Dāhhānī and, for example, the Turkish works of his contemporary Sultān Welad, enables us to see with what success he could use the 'arūz metre. But nowhere in his works do we find any trace of mystic influence (cf. on Dāhhānī my articles in *Hayāt*, N^o. 1 and 103).

It was natural that there should exist in this period in Anatolia among the masses and the nomadic tribes — just as was the case in the preceding centuries — a popular literature and that there should be bards of the people, whom the old Oghuz called *ezan*. The latter, *ezār* in hand, went round the assemblies of the people, the nomads and the villages. They were also to be found in the armies of the Saldjūqs. They recited and sang parts of the old Oghuz epics, like the stories of Dede Korkud. These products of the popular literature were as a rule recited in the popular rhythm and in traditional forms going back to an ancient past. Sometimes the names of these forms show an ethnic origin like *türkü* (q. v.), *türkmanī*, *marzaghi*; others, like *bozhona*, *deyish*, *şayr* *başlı*, reveal their popular character by their name or show that they were always accompanied by a melody. These popular poets usually employed the old Turkish musical instrument called *şebuz*.

xivth Century.

We find the literary development begun in the xiiith century following the same lines in the xivth century. In spite of the political division of Asia Minor, the spread of Muslim and Turkish culture continued at the expense of the Armenians and Greeks. The principality of the Ottomans founded at the western end of Anatolia reached the shores of the Sea of Marmara; towards the end of the century, it entirely subjugated a great part of Anatolia and reestablished the unity of the Turks once again; by its victories over Byzantium, the Serbs, the Bulgars and finally over the united forces of Europe at Nicopolis, it gave rise to a great and powerful empire.

A certain number of beys in Asia Minor had neither Persian or Arab culture, and this was the reason why the language of the people became important, why books were written in Turkish and also why a number of works were translated from Arabic and Persian into Turkish. Ibn Baṭṭūṭa gives some interesting notes on the importance of Turkish at the courts of the Turkoman beys and on poets writing in Turkish.

We know that books were written in Turkish in the xivth century at several centres like Konya, Nigde, Ladik, Kastamuni, Sinub, Sivas, Kır Shehri, Bursa and İsmik. Many of the works of this period have been lost. On the other hand, the compilers of biographies of poets (*shakhs-nāma*), which begin to appear in the xivth century, give for this old period very little information and that for the most part inaccurate. The information we have been able to collect from the sources gives us the following works:

1. The İnandj Oghlu in the region of Denialı and Ladik (1277—1368).

A *Taşir* on the *Fātiha* by an unknown author (manuscript in the library of the University of Istanbul) and a *Taşir* on the *Sūrat al-Ikhlāq* (MS. at Angora) very probably by the same author, written by command of Murād Arslan Bey Ibn İnandj (d. before 763 A. H.). This dynasty had associations with the Mewlevis and the author speaks very respectfully of Djalāl al-Dīn Rūmī. We know also of a poet called Mu'arrif Ladiki who lived in this century at Ladik (*İlk Mulaṣṣaṭ*, p. 263) while Nakīb Oghlu, author of a story of *Hasan and Ruṣayn* in verse (Millet Kütüphanesi, N^o. 1518), probably came from the same town. I think that Nakīb Oghlu Tādj al-Dīn mentioned in Eflakī (*Les Saints des Derviches tourneurs*, transl. Huart, II, 329) as a contemporary of Celebi 'Arif (d. in 719), is the same person.

2. The Aidin Oghlu (1307—1403).

In the library of the Ulu Dīrī in Bursa (N^o. 21) there is a *Ḥisāp-i Evlādī* of which the beginning is lost. From a complete manuscript recently acquired by the Ma'arif Wekāleti we now know that the book was translated from the Arabic for Aidin Oghlu Mehmed Bey (707—734 A. H.). The author's name is not known. Another work is a *Kat'la wa-Dimna* transl. by an author named Mas'ūd for the famous Umur Bey, son of Mehmed Bey. This is dated before 734 A. H. (there is a MS. in the Bodleian among the Turkish manuscripts, Marsh. 180; another copy in the Laleli library, N^o. 1897).

3. The Mentesh Oghlu (1300—1425).

Thanks to Hammer's publication (*Falknerklee*),

we know a *Hisn-nâme* translated from Persian by Mahmūd b. Mehmed of Bardjin for Mehmed Bey (middle of the sixteenth century). Hâdjî Khalifa mentions that Mehmed b. Mahmūd Shirwânî composed for İlyâs b. Mehmed Bey a work in Arabic entitled *İlyâsiye* which he later translated into Turkish, by command of İlyâs Bey, and adds that the language is coarse.

4. The Germiyan Oghlu (1300—1428).

It is recorded that the *Kubûs-nâme* and the *Marzubân-nâme* were translated into Turkish for Sulaimân Shâh b. Mehmed Bey, belonging to this dynasty (770—790 A. H.), but no MS. of it is known (cf. Ahmed Tawhid, *Germiyan Beyleri*, T. O. S. M., No. 8). Shâikh Oghlu in his great Mathnawî *Kawrid-nâme* only mentions it in his introduction.

5. The Hamid Oghlu (1300—1391).

In the Library of Angora there is a manuscript No. 5/42 of which the author is unknown and which contains a *Tefsîr* on the *Sûrat al-Mulk* (lxvii.) written by command of an Anatolian emir named Khidr b. Göl Bey. We believe this Khidr Bey to have been the son of Dundâr Bey, one of the Hamid Oghlu who reigned in the region of Lake Eğirdir (Eghridir Gölü) and that Dundâr Bey perhaps was surnamed Göl Beyi.

6. The Othmân Oghlu (Ottoman state).

An author named Mustafa b. Mehmed of Angora wrote a *tefsîr* on the *Sûrat al-Mulk* for Sulaimân Pasha, eldest son of Orkhan, a work of which there is a manuscript in the Bâyasid public library. Bursallî Tahîr Bey (*Othmanî Muellifleri*, ii. 13) says that there is in the same library a work by the same writer in Turkish called *Hikw al-Nâshîn*. We may add a *Dânişmand-nâme* re-written in 762 (1361) by 'Arif 'Alî, commander of the citadel of Tokat, by order of Murâd I, and a translation in verse of the *Kafla wa-Dimna* by an unknown author and also dedicated to Murâd I (Pertsch, *Die türkischen Handschriften . . . in Gotha*, p. 168).

In addition to these works, we possess also several others written in this century in different parts of Asia-Minor:

a translation of Tabarî written in 710 (Rien, *Catalogue of the Turkish MSS. of the British Mus.*, p. 22);

a *Dastân-i Mahtal-i Husain* written by a poet named Shâdî or Shaiyâd in 763 A. H. at Kastamuni;

a poem *Tûrât*, by 'Izz al-Din Oghlu bound up with the preceding;

Hâfret-i 'Umar Dastân by 'Alî;

a Mathnawî *Mîhr-i Wefâ* written in 760 by an unknown author;

a *Munâzât* by Khwâdjâ Oghlu;

a collection of maxims in verse by Sinân Oghlu (MSS. in my private library);

a mathnawî by Ma'âdh Oghlu Hasan of Bey Pazar, on the *Ghawwâ-i 'Alî* and another mathnawî written by 'Alî and entitled *Fâh-i Kâl-o-i Salât* (Millet Kütüphanesi, MS. No. 1518);

a translation of the *Tadhîra-i Awliyâ* of 'Attâr written in 741 by an unknown author and mentioned by Joseph Thury (*Türk dili Vahâretleri, Milli Tevâizler Medjmu.*, iv. 107);

another manuscript containing the translation of the *Tadhîra-i Awliyâ* in the Bibliothèque Nationale (Anc. Fonds Turc, No. 87);

Manûshîh al-Ahrâr fî Maqûlât al-Akhyâr by

Ahmed b. Derwish, Khalifa of Mewlânâ Sinân al-Din Akshehrî (MS. in the Köprülü Library, No. 253¹³);

the Mathnawî *Warha wa-Gulshâh*, written in 770 (1369) at Siwas by the Mawlawî Yûsuf Meddâh (in the Institute of Turcology);

the *Mathnawî* of Tursun Fakih (q.v.);

the mathnawî entitled *Hikâyet-i Kan'ân wa-Shim'ân*, by 'Alî (in my private library);

Tûkhl, by Hâdjî Pasha (Pertsch, *Die türk. Handschr. . . in Gotha*, p. 97; there are many copies).

Muntahab al-Shifâ, written in 790 by Ishâk b. Murâd (Pertsch, p. 99);

some *ghazals* by Afîakî, author of the *Manûshîh* (Weled Çelebi, at the end of the Turkish verses of Sultân Weled);

translation in verse of Shâhîbî entitled *Kashf al-Ma'ânî*, written in 800 A. H. by Mehmed b. 'Ashîk Selimân al-Lâdîki and another work in verse on the Qur'ân by the same author (in my private library);

a *Futûvet-nâme* by Yahyâ b. Khalîl (O. L. Z., 1928, p. 12);

another *Futûvet-nâme* written in the time of Yıldırım (in my private library);

translation of the *Manûshîh al-Tair* by Gülshehrî in 717 as well as a number of poems (*Ilk Mutezawwifer*, p. 268 sq.);

the Mathnawî *Sukail u-Nawbahâr* written in 751 by Khwâdjâ Ma'âd and his nephew 'Izz al-Din Ahmad (ed. J. H. Mordtmann, Hanover 1924);

translation of the *Farkang-nâme* of Sa'dî, made in 755 A. H. by the same Khwâdjâ Mahmûd (Weled Çelebi, ed. Kilisli Rifat, Stambul 1342; there is a manuscript in the Copenhagen Library; cf. on these two authors Köpr. Zâde M. Fu'ad, *Türkîyat Medjmu'at*, ii. 481—489).

A certain number of works in eastern and western dialects were also written in the Mamîlûk empire, such as a *Farah-nâme*, a mathnawî written in 789 at Tripoli in Syria by a poet named Kemâl Oghlu Ismâ'îl, a work which is in my private library. We mention this work because it was also popular in Anatolia; 'Ashîk Çelebi attributes it to Shâikh Oghlu and 'Alî to Ahmad Dâ'i (cf. Gibb, *Hist. Ott. Poetry*, i. 256).

In a collection of poems entitled *Madjma' al-Naqîr* composed in 840 A. H. by a poet named 'Umar b. Mazîd (unique MS. in the University Library of Stambul), in the *Dîwân al-Naqîr* written in 918 by Hâdjî Kemâl of Eğirdir and in some other collections we find the names of a great number of poets and books belonging to this century (cf. on these books and their bibliographical contents: Köpr. Zâde M. Fu'ad, *Millî Edebiyâtın ilk Muabâhatleri*, 1928, p. 60—62).

The replacement of the Seldjûk Sultâns, who were much influenced by Persian culture, by simple Turkoman beys, knowing only their mother tongue, much encouraged the use of Turkish as a language of learning and of art. Many men of learning, *shâikhs*, and poets to obtain the favour of the Turkoman beys and of the notables of their principalities — who were also equally uncultured — endeavoured to write books in Turkish and to translate into Turkish from Arabic and Persian. The princes themselves ordered the translation of religious and literary works which interested them. They began to translate into Turkish *tefsîrs*,

Nº. 20). He was a great poet whose mystic lyrics are most impressive. His style is simple but full of power and harmony. Few poets have equalled him in the science and passionate expression of mystic love. Yet he observes all the rules of poetical style and uses classical forms with success. In his *Divân* we find *tuyug*, a form peculiar to Turkish poetry and foreign to Persian literature (cf. on this form of poetry Köprülü Zâde M. Fu'âd, *Türkîyat Medjmu'at*, II. 219-243).

In the fourteenth century also the subjects of romances and fables were taken from Persian literature, like the prose translation of *Kahila wa-Dimna* [q. v.] by Mas'ûd, with verses intermingled, and the verse translation of the same work made for Murâd I. The story of *Suhail u-Newbehâr*, however, written in verse by Mas'ûd b. Ahmad and his nephew 'Izz al-Dîn has more considerable literary value. This *methnawî* translated from an otherwise unknown Persian work is not, we believe, simply a translation but rather an expanded adaptation. Instead of the metre /-u-/-/u-/-/u-/-/ almost regularly employed in the *methnawîs* of this period, we have the metre /-u-/-/u-/-/u-/-/ and here and there throughout it *ghazels* written in different metres. The eclectic translation of the *Baiken* by Khwâdjâ Mas'ûd b. Ahmad is of much less literary value.

After Khwâdjâ Mas'ûd, Shaikh Oghlu Muṣṭafâ (born in 741) acquired the greatest reputation as a romantic poet. He was a pupil of Khwâdjâ Mas'ûd and finished his *Khurshîd-nâme* in 789 (1387). Belonging to an influential family of Germiân, this poet was at first in the service of the Bey of Germiân, Salâmânshâh, as *nîhângî* and *defterdâr*; later he was in the suite of Bâyezîd Yıldırım to whom he presented a second version of his *Khurshîd-nâme* [cf. on him and his *Khurshîd-nâme* the article SHAIKH-ZADE]. We do not have a complete *Divân* of Shaikh Oghlu but many of his poems are to be found in early *medjmu'as*. He has also left a work in prose entitled *Kanz al-Kutub*. He finished it in 803 and dedicated it to Pasha Agha b. Khwâdjâ Pasha, an influential personage of this period (unique MS. in Köpr. Zâde M. Fu'âd's library). This work is occasionally embellished with passages in verse and also contains fragments of Yûsuf Meddâlî, Khâss, Dahhânî, Güllühehrî, Khwâdjâ Mas'ûd and Elwân Çelebî (cf. above; Khâss is the only one of whom we know nothing). It is a kind of *Sîyasat-nâme* and in this connection it is interesting for our knowledge of the social life of the period.

Ahmedî [q. v.] must be regarded as the greatest poet of this period, with the exception of Nestmî. He is the author of the *Iskandar-nâme*. This work, finished in 792 (1390), has always been famous and exists in numerous MSS. It has been studied in detail by Joseph Thury (*Türk Nysivmîlîkî a XIV sîzad wîgîg*, Budapest 1903) and was later studied from the philological point of view by Brockelmann (*Z.D.M.G.*, lxxiii, 1/2, 1919). The manuscripts of the *Iskandar-nâme* show great differences. Ahmedî took the subject of his work—a very common one in eastern and western literature—from Persian sources, but he added a long section dealing with the history of Asia Minor and especially with the Ottoman princes. For this reason we may look upon him as the author of the first Turkish chronicle in verse. The *Divân* of Ahmedî is undoubtedly more interesting from

the artistic point of view. Among these poems, there are some which have a local interest from the description of the town of Bursa and the attacks on its inhabitants. In the works of the xvth and xvith centuries we find evidence of his great reputation and many poets of this period wrote *nasîhs* on him. We know that the *Iskandar-nâme* was read and admired in these days in Adharbâidjân, in Khurâsân and in Transoxiana, and that the poet Shaikh Khân, founder of the Shaikhânîd dynasty, much appreciated it.

To complete this general picture of the sixteenth century we must mention Kâdî Burhân al-Dîn, although his works show the peculiarities of the Adharbâidjân dialect. Kâdî Burhân al-Dîn belonged to the tribe of the Salur and was sultan of Siwas; his stirring political life is well known (745-801 A.H.; cf. the article on him). Besides important works in Arabic on jurisprudence and some Arabic and Persian poems, according to the historian 'Ainî, he left a *Divân* in Turkish, containing *ghazels*, *rubâ'is* and *tuyug*s. Although his language lacks refinement and correctness, the poems of Burhân al-Dîn have a note of sincerity and passion of their own.

It is evident from what we have said that Turkish literature developed greatly in the xivth century and that Turkish was successfully making its way against Arabic, the language of religion, and Persian, the literary language. In following the Persian model, a classical Turkish literature laid solid foundations. Its progress had not yet reached its limits, for official documents in various districts were still written in Persian. In inscriptions, legal documents, *waṣf* deeds, Arabic was employed. Works on law and theology were still written in Arabic and books on mysticism in Arabic and Persian. Nevertheless we can see Turkish gaining in importance in official business as is the case in some edicts of Murâd I (Kraelitz, *T.O.E.M.*, xxviii. 242 *seq.*). Many authors and poets, while saying that Turkish is not yet sufficiently polished, felt, under the influence of the general trend, the need of writing in Turkish or rather translating into Turkish. They imitate and translate Persian poets like Firdawsî, Nizâmî, 'Attâr, Sa'dî, Mawlânâ, Salmân Sâwadjî and Kamâl Khudjandî. The language gradually becomes filled with Persian and Arabic elements. The grammars of these languages gave Turkish a certain number of rules, which tended to affect the independence and natural beauty of the language. Prosody and metres were also borrowed from Persian; but Turkish words were still very largely used and the domination of Arabic and Persian which is found in the following centuries is not yet felt.

xvth Century.

The invasion of Timûr in the early years of this century retarded for a brief period the evolution of the Ottoman state in Asia Minor; on the other hand, it strengthened Turkish culture in Rûm-ili, to which many educated Muslims migrated at this period.

The advance of Islâm and Turkish culture continued throughout this century with increasing force, notably through the application of the *devshîrme*. The progress was most marked in Rûm-ili; on the turkicisation of southern Anatolia we have the evidence of Bertrand de la Broquière (*Le voyage d'Outremer*, publ. by Ch. Schefer, Paris

1892, p. 100, 101). The earliest work written in Rûmî is a poem on the death of Fatîma written in 805 (1400) by Khalîl, imâm of the mosque of Kara Balut in Adrianople, which is in no way distinguishable from popular works of this kind of the xvth century (the only known MS. is in my private library).

At the same time Turkish increased in importance as a literary and official language. The *waqf* inscription of the Germiyan Oghlu Ya'kûb II of Sîg (1411) is the first Turkish inscription of this kind (Khalîl Edhem, *T. O. E. M.*, t. 116). There is a Turkish epitaph in verse of 843 (1439) at Angora and another rhymed inscription at Bursa composed by the poet Dîvânî in 870 (1463). All the official documents of the first period of the reign of Sultan Mehmed II are in Turkish (Ahmad Refik, *T. O. E. M.*, index) and also a certain number of edicts (*ferâman*) of this century, the earliest of which is dated 800 (1455) (V. von Knebelitz, *Osmânische Urkunden in türkischer Sprache*, Vienna 1922). We also know from a work written in 828 (1425) by Dewlet Oghlu Yûsuf of Balkh, that Turkish was used in the *medreses*, which we can also assume with considerable probability for the xvth century. In official correspondence with other Muslim or Christian states and in lands inhabited by non-Turkish peoples, other languages continued to be used. The historian Critoboulos mentions a Greek secretary of Mehmed II.

In the first half of the xvth century there were three great princely families who were patrons of scholars and poets: the Karaman Oghlu at Konya, the Dîvânî Oghlu at Kastamuni and the Ottoman princes at Adrianople and Bursa. In this century Fakihî, Khodja Fakih Karamani, Halimi and Nigârî belonged to the Karaman Oghlu circle. Nigârî may be regarded as the rival of Ahmed Pasha of Bursa. At the court of the Dîvânî Oghlu were Mirâmî b. Muhibî b. Sinân Sinûbî, author of the medical work entitled *Miftâh ul-Nûr wa-Shawâhîd ul-Sûrûr* (Bibl. Nat., Anc. Fonds Turc., N° 172), and the unknown author of a commentary on the Kur'an entitled *Dîvânî ul-Ajdâf* (Cl. Harv., *Un commentaire du Coran en dialecte turc de Kastamuni*, *J. A.*, 1921, p. 161—216) which exists in several copies. It is wrong to regard its language as the dialect of Kastamuni. Isma'îl Bey, a member of this dynasty who reigned from 1443 to 1457, wrote a religious work in Turkish entitled *Hulûlîyât ul-Sûlûm* (cf. Rien, *Cat. of Turk. MSS.*, p. 11). This same Isma'îl (on him cf. the translation of the *Sûrah*, p. 121, 125, 139) had a book on *rağ'as* written for him in Turkish by a certain 'Umar b. Ahmad (MS. in the Millet Kütübkhânesi at Constantinople). He also had a translation made of the *Al-Furqân* (in my private library). The poets of the entourage of the Dîvânî Oghlu are Mehmed Sinûbî, the dervish Turâbî of Kastamuni; Hamîdî, Khalkî, Thana'î and De'î were at the court of Isma'îl Bey (the two latter were later at the court of the Ottomans). There is also a *Khatîbat ul-Fîrâ* in Turkish, dedicated to Kâsim Bey b. İsfendiyâr of the same dynasty. Rostem Bey, son of the latter, composed a *Dîvân*. In the xvth century the poets Shemsî Pasha and Emîrî belonged to this dynasty.

But the greatest literary development is found under the Ottomans. Poets like Ahmedî and Ahmed De'î wrote *kasidas* for Emir Süleymân, to whom also was dedicated a *Garz-nâme* by a certain

Mehmed Şahîd Mûsâfî (Bibl. Nat., Anc. Fonds Turc., N° 104) and a *mash'ûr* called *Tuhfe-nâm* or *Ughr-nâm* begun in 800 (1395) by a poet named Mehmed; this poem is an adaptation of a *Hamîd* *work* in eastern Turkish and shows several remarkable features (Bibl. Nat., Suppl. Turc., N° 604). We also have a *Qandâr ul-Madîr*, a theological work written in 809 (1406) by Khalkî b. Ya'kûb (Bibl. Nat., Suppl. Turc., N° 499). The following also belong to this period: a *waq'at* called *Shawâhîd*, finished in 811 (1408) by Ya'qûbî Sa'îd al-Dîn (cf. Fleischer, *Cat. Lips.*, vol. ii); a poetical translation of the *Mash'ûr* *Hikâyat ul-Bakîr* *Wâsî*, in 812 (1409), by Khalkî Oghlu (*Turk. Medîna*, n. 494); and the *Mash'ûr* of Kâth al-Dîn (Bibl. Nat., Anc. Fonds Turc., N° 144).

It was Murâd II who did most for the development of the Turkish language and literature. His court was the centre of scholars, poets and also musicians, for example he had a treatise on music composed by a certain Khalkî b. 'Abd Allâh (a MS. in the Bibl. Nat., Anc. Fonds Turc., N° 150; another at Berlin); another author of this period who wrote two works on music is Ahmed Oghlu Shukrallâh (cf. Albert Languet, *Encyclopédie de la musique*, p. 2978). The poets of this period together with Shukrallâh are: Rûmî, Hamîdî, Shemsî, Hassân, Safî, Azharî, Nûjûmî, Nedîm, Ulûsî and Qasî. The names are found in the earliest *rağ'as*. We have besides the names of many poets, writers and translators, whose works have not survived, like the *Kirâ* *Wear* *Hikâyat* of Şahîd-âle Ahmed Mîrî (cf. the article *Hikâyat* *Wear*), the translation of *al-Furqân* *al-Furqân* of Mehmed b. 'Umar al-Halabî (Rien, *Cat.*, p. 224; H. Vambery, *Alphabetische Sprachstud.*, Leyden 1901), the translation of the *Manâhîk* *al-Furqân* of the same author (in the library of Köpr. Zâde M. Furâd), the translation of the *Khatîbat* *al-Furqân* by Mardînah Ahmed, in 835 (1431) (Bibl. Nat., Suppl. Turc., N° 530; Rien, p. 116; Peruch, *Cat. der türk. Bib. in Berlin*, p. 276), the translation of the *Mir'ât ul-Furqân* by Kâsim b. Mahmud Kara-Hâzîr, the translation of the *Hayât ul-Hayât* by Mehmed b. Salimî (Nile-i 'Osmâniye, N° 2998—99); the translations of the *Hikâyat* and of the *Wîdîya*, made in 828 (1425) by Dewlet Oghlu Yûsuf (several manuscripts), the translation of the *Gulîshân* *ul-Furqân* by Sheikh Elwân Shîrîzî in 829 (1426); an anonymous translation of the *Mathnawî* of Dîvânî al-Dîn Rûmî, made in 840 (1437) entitled *Mathnawî-nâm* (MS. at Cambridge); an anonymous translation of the *Mufradât* of Ibn Kâthîr (MS. in Upsala); a Turkish commentary on the Kur'an in the library of the Museum at Konya with interlinear translation; a *Farah-nâm* presented in 829 (1426) by Khalkî Oghlu (cf. *Turk. Medîna*, ii. 489—496); a *Qandâr-nâm* translated from the Persian in 833 (1430) by Mîrî 'Abdî; the treatise *Bâk-nâm*, translated from the Persian by Mîrî b. Mas'ûd (libr. of Sheikh 'Alî Pasha, N° 283); a *Salimân-nâm* of 3,500 *bill* by Sa'dî of Sîrîz; a translation of the *Turîk* of Ibn Kâthîr (libr. of Dîvânî Ibrahim Pasha); a *Sûlûk-nâm* of Ya'qûbî Zâde 'Alî (vol. iii. of the *Recueil de textes relatifs à l'histoire des Seldjûkides*, ed. Houtsma, forms a part of it); a *Manâhîk ul-Furqân* by Yahyâ b. Muhammad Kâthî, a work containing a number of important historical documents (Bibl. Nat., Suppl. Turc., N° 660); a trans-

lation of a *Tafsis*, entitled *Anfas al-Djannat*, by Abu 'l-Faql Muat b. Hadidji Humm b. 'As al-Ismi, in 838 (O.L.Z., 1927, p. 9). Hadidji Khalifa, also mentions a translation of a *Tafsis* of Abu 'l-Lath and of the *Djani al-Hikayat* of 'Awfi, made by Ibn 'Arabshah. The prose work entitled *A Qasab al-Iqbal*, dedicated in 841 (1437) to Murad II by Maniyas Oghlu Mahmud of Uzun (a MS. in the Bibl. Nat., Acc. Fonds Turc, No. 13) shows that Turkish culture was beginning to gain ground in Rumili also. The most important work for the history of the poetry of this period is however the *Majma'at al-Nuqat*, written in 840 (1436-1437) by Umar b. Mazid and containing the poems of 83 poets of the thirteenth, sixteenth and seventeenth centuries.

A great enthusiasm for the advancement of Turkish literature was shown also by Umur Beg, son of Timur Tash Pasha, one of the great dignitaries of Murad II. A large number of works were dedicated to him, such as a *Djehet-nâme* composed in 831 (1428) by Mehmed b. Mahmud Shirwani (MS. at Dresden) and a translation of the *Kitab al-Sa'adat* (MS. at Dresden). The translator of this work says expressly that he has tried to use as many Turkish words as possible, in keeping with Umur Beg's wishes. A manuscript of the *Anfas al-Djannat* in the Ulu Djami of Iznik has at the beginning a list of books which Umur Beg had given as *mushf*, among them being a large number of works in Turkish. All this shows that in the first half of the xvth century, Turkish was already a language of culture and learning and had produced a literature which included all branches cultivated at this period.

As in the preceding centuries, this activity was not confined to the translation of Muslim works of a classical character; as belonging to popular literature we may mention, as the finest book of *itira*, the poem which Salim Celebi (q. v.) wrote in 812 (1409) at Iznik: his *Mawlid* has been read for centuries by the people and in every century a large number of *mesnevis* have been written on this poem, which has all the qualities of a masterpiece of Turkish literature. Mystic literature gained in importance with the birth of new mystic orders. Alongside of translations of the classical works of mysticism (*Gulistan-i râs*, *Mir'at al-Ibad*, *Faql al-Khalifa*, *Tadhira-i Anvâr*), we find a number of works in prose and verse on mystical discipline and the rules of the orders. To this class of literature belongs for example the *methnevis* *Munawwir-nâme*, *Fatihat-nâme*, *Shir'at-nâme*, *Mu'herat-nâme*, *Ellet-nâme* and the *Hairat-nâme* of Sheikh Esref b. Ahmed, rather primitive works, the composition of which I would assign to the beginning of this century (the only known manuscripts are in my private library) as well as the translation in verse by Eshref Oghlu of the *Witaya-nâme* of Hadidji Bekirish. Several Sultans of this period wrote in verse in the style of Yunus Emre. Among the latter was the famous Emir Sultan, who wrote *itihâs* in syllabic metre under the *mashkaf* Emir Saiyid. The latter, along with Hadidji Bairam Wali of Angora, founder of the order of the Mülâtiye-i Bairamiye, founded a line of poets of this genre. One of these was Mehmed, son of Yavuz Saikh al-Din, mentioned above. He became celebrated under the *mashkaf* of Yavuz Oghlu, especially through his *Muhâsemehiye*, finished in 863, and in the following centuries he acquired a great reputation for sanctity in the Crimea and also among the

Turks of Kazan and the Bashkirts (cf. Ewliya Celebi, *Siyahat-nâme*, vii 812). This great poem is written in several metres in somewhat heavy language; the subject is taken from the books of *ziyar*; it also betrays mystic influences while retaining an entirely orthodox system of ideas. The literary influence of this poem has been enormous and there are several editions printed at Constantinople and Kazan (cf. also A. 'Arr and 'Ali Rahim, *Tatar Edebiyatı Tarihî*, vol. I, part 2, p. 166-177).

One of the most remarkable mystical poets of this period is Kemal Umri. He was a dervish of the Khalwati and his works reveal him as a true poet: his influence extended as far as the Turks of Kazan, the Bashkirts and Ozbeks. 'Abd Allah b. Esref b. Mehmed (d. 874 = 1470), founder of the Eshrefiye division of the mystical order of the Bairamiye and surnamed Esref Oghlu, is equally famous. He is the author of a work entitled *Muski al-Nufus* and of a *Dirâsâ*. The appearance of the great mystics and the foundation of new orders created a regular Turkish hagiography consisting of collections of legends of saints like Emir Sultan, Esref Oghlu and later Hadidji Bekirish Wali, Kağanur and Othman Baba. This literature is of great value from the sociological point of view; it becomes especially abundant from the xvth century.

Hurufî literature, which began with Nesimi, was continued by his pupil Refi'i who wrote in 812 (1409) his *Shihret-nâme*, by Ferid Oghlu (d. 864 = 1459), author of an *Ichk-nâme*, and by Wiranî Baba. Hurufî propaganda even reached the court of Mehmed II, and under Bayazid II these heterodox thinkers were violently persecuted. Nevertheless Hurufî poets were numerous in the xvth and sixteenth centuries: Temennâ'i of Kaisariye, Hasan Rumi of Kara Ferya, Museini, Usuli of Yenidje-i Wardar, Nebati, Tarsi of Baghdad, Wahdeti of Bosnia, Penâhi of Tahriz and Muhihi. In the region in which the Adhari dialect was spoken we find among the members of this sect Shah Ismail Safawi (cf. EHATA'I), Lashkari, Tifli and Habihi, who later came to Constantinople.

To turn to the non-religious literature, the earliest representative is Ahmed Dâ'i, a poet who lived at the court of the Germiyan-oghlu and of the Othmanli. In addition to some translations, we possess by him an Arabic-Persian-Turkish dictionary, the *Ufad al-Djannat*. As a poet he imitates with great success Persians like Salim Samedî and Kamal Khudjandi. He did not however exercise any notable influence on the poetry of his time.

The most important poet of this period next to Ahmed and Nesimi was Sheikhî. He was the author of *hasidas* and was patronised by the Sultans Mehmed I and Murad II. His real name was Sinan Germiyanî but the date of his life as transmitted are in part contradictory (cf. SHAIKHÎ). The date of his death is unknown but must be after 832 (1429). He was buried at Damlu-Pinar near Kutahya (Ewliya Celebi, vol. ix.). Sheikhî must be considered a great poet. His translation of the *Kanun-nâme* of Nizam is more than an ordinary translation. The *Kasr-nâme* which he dedicated to Murad II is a masterpiece of satire (cf. Köpr. Zâde M. Fu'ad, in *Yeni Medîniye*, 1917, No. 13). The influence of this poet remained great down to the xvth century. Poets like Nedjat and

Khayālī mention him with veneration so that he merits the title of *Shāikh al-Shu'arā'*. He was also respected in religious circles and even among the Turkes of Egypt (Ibn Taghribirdi, ed. Popper, vii, 323, 23).

Next to Sheikhī we may mention 'Aṭī of Brusa of whom we possess a *Divān*. His real name was Akhi Çelebi and his epitaph at Brusa is dated 841 (1437—1438). This poet was clearly influenced by Sheikhī but there is a pessimistic note in his poems. It was he who was the first to make use of proverbs in the *ghazal*. Another remarkable figure of this period is the painter Sa'ī of Brusa. His *Divān* contains *ghazals* dedicated to Murād II, to the vizier Khālī Pasha and other great personages. The biographer Saḥī gives a few details of his life.

Other poets of the same period are 'Ulwi of Brusa, Hamāmī of İznik, author of a *methnawī*: *Si-nāme* (Bibl. Nat., Anc. fonds turc., No. 304), dedicated to Khālī Pasha, Ahmed Rūmī of Gallipoli, Baba Nedīmī, the poet of the Bektaşis, Da'īfī of Gallipoli, who described in verse the wars of Murād II. We may also mention Djemālī, who dedicated his books to Mehmed II and Bayazid II; all the sources confuse this Djemālī with the poet Shoiḫ Oğlu Mustafa of the xvth century (cf. also the article *SHAIKH-ZADE*). Djemālī wrote in 850 (1446) a *methnawī* entitled *Gülshen-i 'Ushshāf* for Murād II and another *Humūn-i Humāyūn* for Mehmed II as well as a third called *Miftāḥ al-Farādī* (Pertsch, *Kat. d. türk. Hss. zu Berlin*, p. 371). There is also a poem by him on the art of letters entitled *al-Riḍā al-'adība fi 'l-ṣanā' wa 'l-badā'* (Brown, *Cat. of MSS. in Cambridge*, 1900, p. 87). Laṭīf praises this poet. He also wrote several inscriptions in verse for buildings in Brusa (T.O.E.M., No. xv).

The period of Fatih Mehmed II and Bāyazid II, themselves poets, is marked by a great development in the language and literature of the Ottomans. After the disappearance of the Turkoman dynasties in Asia Minor, the court and entourage of the 'Oḡlmanlı was the only refuge of poets and scholars. The great conquests had carried Ottoman influence to the Crimea and the islands of the Aegean; they were accompanied by an increased movement for the spread of Turkish and Muslim culture. At the same time the economic prosperity of the empire reached a great height, while the legislation of Mehmed II adapted itself to the needs of the period. The *medrese* and the *tekke* and especially the heterodox mystic orders like the Bektaşis contributed much to the spread of Islam; the state on its side secured the political unity of the empire by continual transportations of bodies of its subjects.

Mehmed II and his grand vizier Mahmut Pasha granted considerable pensions to poets and men of learning. Poets and musicians like Nedīmī, Fenāyī, Nūrī, Tahkī, Khafī, Da'ī, Du'āyī, Kādī, Kātibi, Nakīfī, Waḥīdī and others received great rewards for their labours. Mehdi, Melih, Barsaḥ Ahmed Pasha and others were continually with Mehmed II. Hayātī, Şarīfī Kemāl and Enwerī enjoyed the special patronage of Mahmūd Pasha. To the entourage of prince Djem belonged Shāhidī, Sakḥāyī, La'ī, Haidar, Kādī, Sa'ī and Turābī, the tutor of the prince. Bayazid II and his sons kept up this tradition. In the period of Bayazid II over 30 poets were receiving allowances from the

treasury. As the literary and learned activities of the second half of the xvth century are sufficiently well-known from various sources, we shall confine ourselves here to giving a general survey of the various forms cultivated and their most notable representatives.

The greatest poet of the period of Mehmed II was Ahmed Pasha [q.v.] of Brusa; although influenced by Niyāzī, Sheikhī, 'Aṭī and his master Melihī (cf. *Yeni Mecmua*, 1918, No. 31) he surpassed his contemporaries in the *ghazal* and especially in the *ḫalida*. Next to Sheikhī he may be regarded as the greatest figure in Turkish poetry. His influence is obvious on the poets of his time: Resmī, Harṭī, Kādī, Wāḥī, Niyāzī of Konya, Sa'ī (the vizier Djemālī Kāim Pasha) and Sulṭān Djem, and is felt even in Nedjātī, Baḡī and down to the xvth century. Like the other poets of his age, he was also under the influence of Persian poetry, which was unjustly used as a reproach against him by some authors of *tedhirs* like Dja'fer Çelebi and Laṭīfī. On the other hand, the very widespread opinion (which we find for the first time in the *Tedhirs* of Hasan Çelebi) that Ahmed Pasha began his poetical career by making *naṣire* on some poems of Newāyī is quite erroneous (cf. *Türk Yurdu*, 1927, No. 27). Ahmed Pasha collected and arranged his *Divān* by order of Bāyazid II. In it we have satires, *ḫiṣa* and notably very fine *marahib*.

Next to him the greatest poet of the xvth century is Nedjātī, particularly known for his *methnawīs* and his *ghazels*. He owes his reputation notably to his frequent use of proverbs in his poems. İdris Bitlisī calls him the Khuraw of Rūm and all writers regard him as the greatest Ottoman poet after Ahmed Pasha (cf. also Pertsch, *Kat. d. türk. Hss. zu Göttingen*, No. 168). His fame spread beyond the bounds of the empire. The influence of Nedjātī is traced in Şun'ī, Tāḥī, Shawḫī, Rūḫāyī, Zhārī of Uakub, Saḡī of Filibe, Sehi, Kurbī of İznik, Wāḥī, Werdi and Şāwēr, poets of the xvth and xvth centuries, and also in poets of his own time like Mihri. Many poets composed *naṣires* on his works and some of them like Walihī of Tokat have an almost religious reverence for him.

Along with Nedjātī should be mentioned his contemporary Meṣṭhī [q.v.] famous for his *Divān* and his *Shehr-engiz*; his work reflects more or less the life of his milieu. He also had some influence on Baḡī.

The *methnawī*, which came into vogue in the xvth century, became very popular in this period. Among mystical works we may mention the *Gulshen-i ma'nawī* of İbrāhīm Taṣnūfī (d. 887 = 1482), *Khulfa* of Ak Shems al-Dīn, the *Wahdet-nāme* of 'Abd al-Rahīm of Kara Hışar (written in 865 [1460], cf. Pertsch, *Die türk. Hss. zu Berlin*, No. 375—376), the *Methnawī* of Rūḡhenī of Aidin, a famous Sheikh of the Khalwatiya, d. at Tabriz in 892 (1487), the *Firak-nāme*, written in 876 (1471) at İznik by Khālīlī of Diyar Bekr [cf. KHALIL]. The romantic subjects of these poems were taken from Persian literature; the best known are the *Yāfūn-i Zālīkha* of Ak Shems al-Dīn Zāde Hamādī [cf. HAMAD], the *Khuraw-n Shīrīn* of Aḥī (on him cf. *Yeni Mecmua*, 1918, No. 54), the *Tahret-nāme* of Rewānī and particularly the *Remet-nāme*, written in 899 (1493) by Dja'fer Çelebi [q.v.]. This last work is entirely original

and the author shows himself a distinguished poet in whom imagination gains over sentiment. Towards the end of this century, the subjects of the *khamsa* were also very popular. Nişâni's *Khamsa* was several times translated.

A certain number of chronicles in verse also belong to this period. There is a *methnâme* in 11,000 *baits* on the exploits of Kemal Reis, composed by Şaflay of Sinub, a poet skilled in naval matters who lived in his *teke* at Galata; also a *methnâme* in 15,000 *baits* by Şahayî of Edirne on the conquests of Koca Dâvud Paşa in Bosnia; a rhymed chronicle dedicated by Şarî Kemal to Bayazîd II entitled *Selâtin-nâme*; a *Destû-nâme* written in 869 (1466) for Mahmûd Paşa by Enwerî, mainly important for the history of the Aids-oghlu (*Türk Tarihî-i Enjâmî-i Kâliyyat*, No. 15); lastly a chronicle in 15,000 *baits* on the conquests of Mikhal Oghlu 'Alî Beg by Süal of Priştin. We may also mention the *Kutb-nâme*, dedicated to Bayazîd II, in which the poet Urzûn Firdavî describes the taking of the island of Midilli, and which is a valuable historical source. The same poet acquired fame from other works like the *Sifâhî-hur-nâme* and the *Sulaimân-nâme*.

Prose developed considerably in this period. It was mainly artistic prose that was cultivated; its most brilliant representative was Sinân Paşa [q. v.], author of the *Tudarrû-nâme*, as well as of a *Risâle-i Ahlâk* and a *Tedkîk-i Evliyâ*. The former is interspersed with poetry; he shows power as a writer of religious lyrics. His style is the same as in the famous treatise by 'Abd Allâh Anşârî, i.e. artistically elaborated yet natural and sincere. The principal representatives of artistic prose in this period are Şarî Kemal, who translated the *Tarîkh-i Mülkân*; Ahi who adapted to Turkish the *Hün-u Dil* of Fezâhî Nishabûrî; Mesîhî, author of the *Gul-i şad-berg*, and Dja'fer Çelebi. Other great stylists (*münâşî*) were the grand vizier Mahmûd Paşa who wrote under the *mahallat* of 'Adnî; the nishandji Mehmed Paşa (*waḥḥat*: Nishânî) and Tarsun Beg, known as Yârdîlî.

The writing of history in prose also began to develop, Turkish taking the place of Arabic and Persian. In the time of Bayazîd II we find many specimens of the anonymous *Tevârîkh-i Âl-i 'Othmân*, the prose of which is intermingled with poems taken from the *Ishkandar-nâme* of Ahmedî; they show us that there existed in the xvth century among the people and especially the soldiers, chronicles which were almost of the nature of epics. The historical works of Derwîsh Ahmed 'Ashîkî, known as 'Ashîk Paşa-Zâde and of Urzûn-Beg do not differ much in point of style from the anonymous chronicles. The chronicles of Kâtib Şewkî, Behîştî and Neşrî belong to the same period. Works like the *Tarîkh-i Ahn 'i-Fâḥ* of Tarsun Beg [q. v.] and the *Djân-i İsm-i Âḡlu* of Beyâtî, on the other hand, were written for the upper classes of society and are very different from these other chronicles. The work of Yârdîlî 'Alî, who wrote in the time of Murâd II a *Selâḡh-nâme*, which contains among other things a synopsis of Rawandî and a translation of Ibn Bibî is in a way a model for this second class of historiography. Several of these historical works, like that of Tarsun Beg and the *Istanbul Fetḡ-nâmeh* of Dja'far Çelebi were written

rather with the object of displaying a particular style and extensive literary ability, which has had a regrettable effect on some of the literary works in prose.

A fine specimen in unaffected prose of this period is the treatise by Deli Laṭfî which is one of the oldest works of humour (*menâḡ*) in Turkish (publ. by O. Reischer, *Orientalistische Mitteilungen*, II, 1926, p. 40-43; on the life of the author cf. *Hayât*, 1928, No. 100).

In this period we have also a number of works in the Turkish of Anatolia which were composed in Egypt and Syria. In Egypt the Circassian Mamûks were Turkish by language and culture and under their régime works were composed in Eastern and Anatolian Turkish. To the latter category belongs the translation of Kudûrî by the historian 'Ainî [q. v.]. Other works are: a *Hikmet-nâme* in verse written in 893 (1488) by İbrâhîm b. Bâllî, who dedicated it to Kâ'it Bey; the Turkish poems of Kâsû Ghûrî, a translation of the *Sââhnâme* written in 903 (1497) by a poet named Sherîf for Kâsû Ghûrî (manuscripts in the British Museum, at Upsala, Leningrad, in the library of İbrâhîm Paşa in New-Shahr and in the Millet Kütüphanesi in Constantinople). There is also a translation into Anatolian Turkish from the Eastern Turkish of the *Kitâb-i Gûda*, by the hand of Mehmed b. Bâllî, who is perhaps the same as the İbrâhîm b. Bâllî already mentioned. We also have a letter in Turkish written by Kâsû to Selim I (publ. by Khalîl Edhem, in *T. T. E. M.*, 1928, No. 19).

We thus see that Persian influence in Turkish prose and poetry had increased considerably in the xvth century, even to the extent of becoming a fashion. Mehmed II even had the Anatolian poet Şehîdî write for him in Persian a *Şâhnâme* of the 'Othmanî and Bayazîd II also ordered the history of İdrîs Bitlîsî to be written in Persian. Scholars and poets who belonged to Mesopotamia, Aḡharâjdân, Persia and Khurâsân visited the Ottoman court and were treated with honour and given handsome presents, which even caused Turkish poets to complain. A remarkable figure among the poets who came from the east is Hâmîdî (born in 834 = 1430) whose *Divân* contains Turkish and Persian poems. He himself was of Turkish origin. After having lived at the court of İsmâ'îl Beg of Kâstânîni, he enjoyed the favour of Mehmed II from 864 (1459). His *Divân* is of considerable interest for the history of the period.

The court of Mehmed II and Bayazîd II was in very friendly relations with the court of Herât and with other Oriental courts, and the cultural and literary bonds which connected the Ottoman empire with the Muslim lands of the east and especially with Turkish lands remained close. Mehmed II and Bayazîd II as well as Mahmûd Paşa had relations with poets like Khâdîs-i Djihân, Djâmî and Djâlâl al-Dîn Rûmî (cf. e.g. Brown, *A Literary History of Persia*, iii, 422-423). In the same way the eastern poet 'Alî Shîr Newâ'î was famous throughout Turkey at the end of this century. The persistence of the old Turkish tradition in the xvth century is further proved by the fact that the Uighur characters had not been entirely forgotten; there is in the Millet Kütüphanesi a little work prepared to teach these letters to Bayazîd II as well as a copy of the *Hikâet al-Hâḡâ'îk*, written in Uighur characters. Towards

the end of the century there was actually a reaction against the excessive use of Arab and Persian words in poetry. They tried to write poems in the *arud* metre, while avoiding foreign words and expressions; one representative of the movement, called *Türkî-i Basîf*, is the poet Wîşâîl.

The literature of the people, of which the vehicles were the *esna*, continued in this century as in the preceding ones and was still appreciated at the courts although the *esna* had become poor musicians alongside of the great "classical" poets. They retained their popularity however among the people. We know of the existence of *Şîrîn-Şîrîn* also called *Şîrîn-Şîrîn* and *medîhâ* (cf. *Şîrîn*, *Şîrîn*, *Şîrîn* and *medîhâ*). They used to recite the old Muslim epics and were beginning to borrow their subjects from the everyday life of their neighbourhood; the latter provided a coarseness which separated them still further from the classical poetry. We have no longer any work of the popular literature of the period. We may presume that the theatre of *Kara Gök* also developed in this century (cf. *KARA GÖK* and *KHAYAL-İ TİLL*).

xvth century.

The xvth century is the period of the apogee of Ottoman might, in which the empire attained its greatest power in the reigns of Selim I and Süleimân the Magnificent. This was reflected also in the sphere of language and literature, which were fostered by the great centres of culture which had grown up with the foundation of schools, *tekkes* and *medreses*. As Rûm-îlî received the particular attention of the government, it is here that we find many poets appearing. It was also at this period that the Turkish language and the Greek and Slav languages had most influence on one another. By the conquests in the east, where the *Adhari* dialect was predominant, the poets of these regions were led to use the Ottoman dialect. The Crimea also gradually returned to the fold of Turkish culture: it began to produce Ottoman poets among whom were several of the *Khâna* themselves (cf. *III Müstawwîler*, p. 197). The same influence reached the *Dere-bey*s in Kurdistan. The intellectual classes of the non-Turkish populations were forced to learn Turkish and on the other hand, Stambul attracted learned men and poets from other Turkish and Muslim lands.

All the sultans and princes of the dynasty of *Othmân* were patrons of art and learning and their viziers followed their example. Selim I (q.v.) wrote, in addition to a Persian *Dîvân*, poems in Ottoman Turkish and in *Çaghatâi*. Süleimân (q.v.) wrote poetry under the *mukhlâs* of Muhibbî and from the very first recognised the extraordinary talent of the poet Bâkî. The grand vizier Ibrahim Pasha, himself a poet, was the special patron of the poets *Khayâlî*, *Lâmi'î* and *Rahmî*. Under Selim II, Murâd III and Mehmed III, the same tendencies prevailed so that, in this century, Anatolian Turkish became a great vehicle of art and learning.

The influence of the Persian poet *Djâmi* and of the Eastern Turkish poet *Newâ'î* made itself felt very markedly in the xvth century: many of their poems were translated into Ottoman Turkish. The poet *Lâmi'î* is sometimes called the *Djâmi* of Rûm, on account of his translations. On the other hand, it became fashionable to write poems in *Çaghatâi*. Poets from the east like *Djemîlî*

(his *Çaghatâi Dîvân*, containing only *nâzms* on *Newâ'î*, is in the Museum of Topkapı, N° 755) did much to spread the glory of *Newâ'î*. Many *Adhari* poets sought refuge at the court of the Ottoman sultans: the most famous among them were *Shâhî*, who left the court of *Shâh Ismâ'îl*, and *Habîbî* who had been a member of the court of the *Ak-Koyunlu* Sultân *Ya'kûb* and of the *Safawid* *Ismâ'îl*. *Habîbî* was a precursor of *Fuzûlî* (cf. on *Habîbî*: *Köpr. Zâde Fu'ad, Adhari Edebiyatına 'Aid Tadhkirat*, Baku 1926), and a few *Adhari* poets, like *Bâkî*, were also beginning to write in the Ottoman dialect. There is also a good deal of evidence that the cultural relations between the Ottoman court and those of the *Safawids*, *Shahânids* and even of the Great *Moghuls* were quite close. There are interesting details of these relations in the narrative of the famous traveller *Sayyidî Rûn*, who wrote under the *mukhlâs* of *Kâtibî* (cf. *'Alî b. Rûsîkî*).

Literature flourished not only at Stambul but also in *Baghdâd*, *Diya'r Bakr*, *Konya*, *Kastamuni*, *Brusa*, *Edirne*, *Yeni'dje-i Wardar* and *Üskûd*. At Stambul the poets used to meet in various places, such as little shops where some poets plied their trade, gardens (the garden of *Bakshî* at *Beshiktash*), the famous cabarets (*mevâhîr*) of *Galata*, *Teke* (the *teke* of *Djâ'far-âbâd* at *Sütlü'dje*) and the mansions (*kona*) of rich men (among them poets like *Nigârî* and *Zîrekî*). After the introduction of coffee, the *kahve-khâne* also became important meeting-places, and the visitors belonged to all classes of society. This progress in literature goes parallel to the development of architecture, decoration (*muşîk*), calligraphy, music and several branches of science. By the genius of the great poets like *Rahmî*, *Dhîrî* and *Khayâlî*, and especially *Bâkî* and *Fuzûlî*, there was created a Turkish classicism which was of no less merit than the Persian classicism which had been its model. It is wrong to deny an original character to Turkish literature: an intensive study enables one to discover in it the reflection of the ideas of the period and state of society, the results of the great military successes of the empire and of local conditions. In this connection we would especially call attention to the high importance of the different categories of prose and of the historical works.

In the xvth century, the literary language still makes borrowings from the Arabic and Persian. The activity of scholars like *Surârî*, *Sûdî*, *İbn Kemâl* and *Rîyâdî* produced philological commentaries, lexicographical and grammatical works. Books without number were translated into Turkish from Arabic and Persian. The borrowings from the two languages enabled Turkish poets to perfect the prosody and style of their poems according to the taste of the day. The product of the movement however was a beautiful but artificial language in which many of the natural qualities of Turkish were lost. On the other hand, we find poets who fill their poems — probably under the influence of *Nedjâtî* — with proverbs (like the *Pend-nâme* or *Kamî al-Badrî* of *Guwâhî*). Other poets like *Derâzî* of *Trebizond*, *Âgehtî* of *Yeni'dje-i Wardar*, *'Ishâkî* and *Yetim* fill their *fasîhas* and *ghazals* with terms taken from navigation. The movement known as *Türkî-i Basîf* (cf. xvth century) has two representatives in this century in *Mahramî* of *Tatavla* (d. 942 = 1535), author of a *Basîf-nâme*, and *Nâzîmî* of *Edirne* (d. after 962 =

1555); cf. Köpr. Zâde M. Fu'âd, *Millî Edebiyât Tercümanîh ile Muahhizat-ı ve-Divân-ı Türkî-i Sultânî*, 1928).

The greatest figures in the *şâzâde* and *ghazâl* in the xvth century are in chronological order: Dhâtî, Khayyâlî, Fuzûlî and Bâkî.

Dhâtî wrote besides *şâzâdes* and *ghazals* a large number of works in poetry and prose which are of very unequal value. In his early works the influence of Ahmed Pasha and particularly of Nedjârî is evident. His imagination and his new ideas made him very popular and he had a number of disciples. In the evolution of Turkish poetry his place is between Nedjârî and Bâkî.

Khayyâlî [q. v.] began his poetical career when Dhâtî was at the height of his fame, but as a poet he surpasses the latter and many others. The *Tercümanîh-i Ahl-ı Baghdâdî* calls him the "Hâfiz of Rum". His *Divân* contains all his work and is said to have been arranged by a certain 'Allî Celâbi, although the poet himself says in a *şâzâde* addressed to Sultan Süleimân that he had arranged a *divân*. In his youth Khayyâlî had been under the influence of the mystics, notably Uşşî, but mystical poems form only a small proportion of his work. His most original poems are his *ghazals*. He met Fuzûlî in Baghdâd and seems to have written *nağmets* on his poems.

Fuzûlî must be regarded as the greatest poet of Turkish literature in general, although he was born in the neighbourhood of Baghdâd and used the Adhârî dialect in his poems. He was of Turkish origin of the Bayat tribe. He composed a *Divân* and a *methnawî* *Leilâ ve-Mecmûn* which have secured him a place in literary history. Love in his works is never entirely profane in character, thanks to the inspiration of his mysticism. But as soon as he turns to the *şâzâde* we find him falling into artificiality of no value. His *Leilâ ve-Mecmûn* must be regarded as an original work rather than an adaptation. No other poet except Nâzîmî and Newâ'î has acquired a reputation like his throughout the whole Turkish world; he even exercised an influence on the musician-poets of the people (cf. Köpr. Zâde M. Fu'âd, *Introduction aux Kulliyât de Fuzûlî*, Constantinople 1342, p. 3—22; *Türkiyât Medjma*, II. 434—436).

Bâkî after the death of Khayyâlî was undoubtedly the greatest poet in Stambul. His reputation spread very rapidly throughout the empire and even as far as India. All the later poets down to the xixth century have praised him as their master. His *şâzâdes*, *merthiyes* and *ghazals* really do attain a high pitch of perfection. In spite of the fact that he was inspired by a number of predecessors, he retains all his own personality. In the expression of sentiment Bâkî is below Fuzûlî, but the musical charm and faultless ease of his poems have given him the reputation of an inimitable master of classicism.

The xvth century also produced a number of other great masters of the *ghazâl* and *şâzâde*. We may mention Hâfîretî, a very original poet, who describes the towns of Rûm-ili and his amours; his friend Ishâk Çelebi; Rahmî of Brusa, known from his translation of the *Shâh-n-Deiwân* of Hâlîlî and for his fine *ghazals*; Fîghânî executed by order of İbrahim Pasha; his successor Ma'jûlî; Durri Zâde 'Ulwi of Stambul, author of remarkable *şâzâdes*. In the second half of the century, Emrî, 'Ubeidî, Ma'edhîdîn Hadâyî and

New'î are masters of the *ghazâl*. New'î was at the same time a great scholar and stylist. We must also mention Rûhî of Baghdâd whose *Terkibend* only won him fame later. Then Fawrî, Djenânî of Brusa and Selîktî, who became known by their *muhammes* and *misalides*. Sânnî and the celebrated Kara Fazlî wrote *rubâ'îs* in the style of Khayyâm. Sa'atî, Shâhretî, Riyâzî and 'Ata excelled in the *ahîv*. Others like Sâghîrî, Thânnî and Ghazâlî, unnamed Deli Bîrâder, wrote *hesel*, *mevâz* (bantering poems; cf. QHAZÂLî and Köpr. Zâde M. Fu'âd, *Yeni Mecmû'a*, 1917, No. 15). Finally two forms very fashionable in the poetry of this period were the *me'âmme* (enigma) and the *te'rîkâ* (chronogram). The poet Emrî excelled in both of these.

As regards the *methnawî* we find, alongside of numerous translations and imitations of Persian works, original poems on local subjects like the *Şâhr-engele*, mystical poems and rhymed chronicles. The subject of *Yûsuf-u Zuleikha* was very popular, especially one by Hamdî. Many poets also wrote a *Leilâ-u Medjûn*, of which by far the finest was Fuzûlî's. Other subjects were the *Mîhr-u Mûsh-terî*, translated by Mîrî from the Persian, *Ebbâr-ı Eşkâr* and *Bahram-u Zühre*, both of which were chosen by Fîhrî as subjects, and many others. The best known authors of *methnawîs* were Kara Fazlî [q. v.] of Stambul, author of *Gül-u Bâkî*, Yahyâ Bey of Taşhîdjâ and, not quite so celebrated, Lâmi'î [q. v.]. Yahyâ Bey's most celebrated poem is his *merthiye* on the death of prince Mustafa (1553); his *methnawîs*: *Shâh-u Gedâ*, *Gençlîne-i Rûz*, *Kitâb-ı Uşşî*, *Günâhen-i Envar*, *Yûsuf-u Zuleikha* are distinguished by a remarkable originality (cf. YAHYÂ BEY). We must also mention Âdherî İbrahim Çelebi (1593 = 1585), author of a *Nağme-i Kâhyâl*, and Mustafa Djinânî of Brusa (d. 1604 = 1596), who wrote *Mahzun al-Avrâr*, *Riyâz al-Djinân* and *Djalâ al-Kullûb*. Among descriptions of towns we have several descriptions of Brusa beginning with that of Lâmi'î; there are similar works on Edirne, Diyâr Bakr, Stambul etc.; to the same class belongs the *Risâle-i Terâfât* of Fakîrî (d. 941 = 1534) of considerable historical value for its description of the various classes of society (cf. Köpr. Zâde M. Fu'âd, *Hayât*, 1921, No. 2). The *ghazals* of Nihâlî of Brusa (d. 949 = 1542) are of equal interest, in which the poet describes young beauties belonging to the trade-gilds (cf. Köpr. Zâde M. Fu'âd, *Yeni Mecmû'a*, 1918, No. 62).

The *methnawî* form was also still used for mystical works, lives of saints, collections of rules for the mystic orders, lexicographical works etc., most of which have little literary value. Several poets wrote *Hadîth-i arba'in*, in imitation of Djinânî and Newâ'î. To this class also belongs the famous *Hilye* of Khalkânî [q. v.] and the translations of the *Hadîth-i arba'in* by the same author. Encouraged by the fame of the *Mawlid* of Süleimân Çelebi, many poets, beginning with Ak Shams al-Dîn Zâde Hamdî took up the same subject but without attaining the same popularity. Lastly we may mention a *Deh-murgh-nâme*, inspired by the *Manţîk al-Tair* of 'Awhâr and dedicated in 919 (1512) to Selim I by Shemâl.

As the mystic movement increased in strength in this century and new *tekkes* were everywhere opened, it is not surprising that poets belonging to the different orders should write didactic works,

mystic poems and collections of legends of saints, alongside of translations of Arabic and Persian mystical works. We may say that each *tarika* had its own literature; among these literatures the more important belong to the heterodox groups. Thus the literature of the Bektāshis, begun in the xvth century by Nedīmī, had representatives in Yetimī and Āskerī, dervishes of the *ṭāke* of Saīyid Ghāṣī, and others. Many of these figures are of great interest in the history of religion for the freedom with which they expressed their thoughts — which sometimes cost them their lives. Their heretical doctrines were not only disseminated among heterodox bodies like the Bektāshis and Hārūfīa but also in orthodox orders like the Khāl-wettis and Mrlāmts, as we know from the historical sources. Other mystics wrote very simple poems, like Vahyā Efendi of Beşiktaş and others.

Finally a number of historical works were written in the form of *mathnawīs*. With the exception of the Ottoman history of Hādīdī written in 937 (1531), they always deal with a single event (the taking of Buda, of Djerbe, the Yemen etc.) or with the victories of a sultan (particularly Süleimān) or of a commander (like Khair al-Dīn Pasha Barbarossa, Öz Demir Oğlu 'Othmān Pasha etc.).

Prose in this century assumes a heavier and more artificial form: exaggerating Persian models, the simplest ideas are expressed by the most complicated images to the detriment of the subject. This lack of taste is found in the greatest stylists of the period: Lāmī'i, Kemāl Pasha Zāde, Djelāl Zāde, Feridūn Beg, Āṣmī, the translator of the *Humāyūn-nāme*, 'Alī Celebi, Kinnālī Zāde 'Alī Celebi, Khwādja Sa'd al-Dīn [q.v.] and others. This artificial tendency had a much more disastrous influence on prose than on poetry. Works written in simple language were despised by the educated classes. We find however that in very long works, it was only the preface that was written in this turgid and clumsy style. Many literary, historical, religious or moralising works of the period were in fact written in more simple language. The same applies to official correspondence and other state documents. In religious works intended for the people, every endeavour was made to write as simply as possible. The prose which we possess by Bāḳī and Fuzūlī shows an elegant and comparatively simple language.

We shall begin with the historical works, a field in which great progress was made in this century, mainly on account of the interest taken by the educated classes in the military successes of the empire. Beside the rhymed chronicle, in continuation of the Seldjūk tradition, we find from the time of Bāyazīd II and Selīm I historical works in prose. The official Ottoman history written in Persian by İdrīs Bitlīs was translated into Turkish by his son. Other general histories were those of Ibn Kemāl, Djelāl Zāde Muṣṭafā Celebi, entitled *Tuhfat al-Manāzil*, of Muhyī al-Dīn Ejemālī, of Luṭfī Pasha, of Khwādja Sa'd al-Dīn and of 'Alī. There are also a number of special histories, dealing with particular periods or certain events (the *Fethnāmes*) and biographical works (like the *Diwān al-Manāzil* relating to Sokollī). At the same time the office of *Shāh-nāme* was maintained at the court. In the time of Süleimān, it was filled by Feth Allāh 'Arif Celebi, whose successors included Afīkūn

Shirwānī, Seīyid Luḡmān and Ta'likī Zāde (d. 1013 = 1604). These were also Turkish poets, but tradition demanded that the official *Shāh-nāme* should be written in Persian in the *mutkārīb* metre, until Mehmed III ordered it to be written in Turkish. From the time of Ta'likī Zāde, prose began to appear scattered through the text. From the historical point of view these *Shāh-nāmes* are naturally of less importance than the non-official chronicles. While works like the *Tuhf al-Tawārīkh* of Sa'd al-Dīn were regarded as models of style, the *Tārīkh* of Luṭfī Pasha [q.v.], whose style more resembles that of the old chronicles, and especially his *Āṣf-nāme* are very important for our knowledge of the social history of this period. The *Tārīkh* of Seīnīkī Muṣṭafā Efendi shows how corrupt the administration was at the end of the century. We must regard 'Alī [q.v.] as the greatest historian of the time and his other works reveal him as a man of almost encyclopaedic learning. Not only his *Kunh al-Akhbār*, but also his *Nāḥiyyat al-Salāṭin*, *Kawā'id al-Madā'il* and *Menāzil-i Hünerwerān* show that the author was a severe critic, well informed about the conditions of life of his time. The style of his historical works is relatively simple (on his life and works cf. the introduction by Ibn al-Amin Māhūd Kemāl to the edition of the *Menāzil-i Hünerwerān*, Istanbul 1926). To this century also belongs the *Shāh-nāme* written in Arabic by Tashkoprū Zāde [q.v.] and translated into Turkish with additions by Mejdī of Edirne and Khākī of Belgrad; also an extensive biographical literature among which the biographies of the Turkish mystic sheikhs are of considerable historical interest. A similar interest is contained in a few light works of hadīthage (*meṣāliḥ*) like the *Nafis al-umr-nāme* of Lāmī'i and of Nikā'ī Zāde (cf. *Millī Tarihler Medfūn'at*, No. 3).

Among historical works, those which deal with literary history occupy an important place. The first Ottoman *tezkere* is the *Huṣṣat Bekhiyye* written in 945 (1538) by Seḥrī, in imitation of the *Madā'il al-Nafīs* of Newā'i. He was followed by Luṭfī [q.v.], 'Ashīk Celebi [q.v.], 'Ahdī of Baghdad and Hasan Celebi [q.v.]. 'Alī also gives important notices of poets in his *Kunh al-Akhbār*. The compilation of collections of *nāṣīr* on poems of other poets, like the *Djāmī al-Nafīs* written in 918 (1512) by Hādīdjī Kemāl, containing poems by 266 poets, and others, is a custom which is also found in the xvth century and has contributed greatly to our knowledge of Turkish poets.

It is in this century that we find geographical works and travels beginning to appear. In the xvth century we have only translations and excerpts from Ḳarwīm and Ibn al-Wardī as well as a translation from the Greek of Ptolemy. In the xvth century, these two works are again translated, as well as those of Abū 'l-Fidā' (by Sīpāhī Zāde) and Iṣṭakhrī (by Sherīf Efendi) and 'Alī Ḳushdjī's work on mathematical geography, and geographical descriptions of Egypt. A *Cin Siyāhat-nāmesi* written in Persian by the merchant 'Alī Ekber Khāṭrī was translated into Turkish for Murād III. The celebrated *Buḥriyye* of Pīrī Re'īs [q.v.] written in 935 (1529) was a result of the maritime policy of the Turkish empire. It is based in part on older cartographers like Ṣafā'i and

on Italian maps. As a result of Süleimân's campaigns by land we have Mitrâkçî's Naşüh's work, full of admirable little sketches. Seyyidî 'Allî Râ'îs wrote his *Muhtâş* as a result of his unfortunate exploit in the Indian Ocean, although the book is based entirely on earlier Arab works. The *Mirât al-Mamlûk* by the same author is much more original. After it we have the *Siyâhat-nâme* in verse of the merchant Ahmed b. İbrâhîm, describing his voyage to India. The *Manûşîr al-Awâim* of Mehmed 'Ashîk of Trebizond is very important; based on the old Arab geographies, it gives valuable new information about Ottoman lands. Finally we may mention a *Türîk-i Hind-i Garbi* on the discovery of the New World, translated in 990 (1582) from a European language by Mehmed Vüsaf al-Herewî (on this literature cf. Tanschner in the *Z. D. M. G.*, lxxvii, 1923).

Alongside of classical Turkish literature, we find the literature of the people increasing, the knowledge of which was spread by the *şîşâ-kân*, the *meddah* and the *şoragöçü* in the popular cafés and in the barracks of the Janissaries. Many classical poets also wrote *türkü* [q. v.] intended for the masses. These *türkü* are in the *arûs* metre and in the form of *mürceha*; later they were called *şerhî* [q. v.]. This form of poem goes back to the earliest forms of verse among the Turks. But the works of unlettered poets, like Enwerî, Thiyâbî, Kâyi, Raîkî and others, written in imitation of the classical poets, were more to the taste of the people. In popular gatherings such themes as *Abû Muslim*, the *Hamza-nâme*, *Battâl Gâzî* etc. were enthusiastically received. This encouraged Hâşimî of Stambul to write the *methnewî*: *Barîk ve-pûlâs* taken from the *Hamza-nâme* and inspired several authors and poets to write similar works. Sütlân Süleimân had the story of *Fîrâz-nâmâ* translated into Turkish in 8 vols. by Şâlih Efendi, translator of the *Djâmî al-Hikâyet*. There were *şîşâ-kân* even in the palaces of the sultans. Alongside of old Muslim and Iranian subjects we find also collections of stories of everyday life like the *Bursâî Kâwâdjâ 'Abd al-Râ'îf Efendi Hikâyesi* by the poet Wahîdî, also called *Ana Badîlî Hikâyesi*. The stories of everyday life by Muştâfâ Djinânî of Bursa in an unaffected style give us a valuable insight into different aspects of the life of the people in these days. Another poet of this kind is Medhî, whose real name was Derwîsh Hasan, who was the *meddah* of Murâd III (cf. Rien, *Cat. of Turk. MSS.*, p. 42).

In the xvth century we are a little better informed regarding the activities of the *evân*, although they are now generally known as *âzâdî* or *teğürdîn*. These wandering musicians were to be found wherever the people congregated and used to recite their poems in syllabic metres, love-songs, heroic tales, *methwes* and *türkü*. At the beginning of this century we have a portion of Bakhshî's epic on the Egyptian campaign of Selim I and at the end of the century we have the names of Kul Mehmed (d. 1014 = 1605), Okâs Dede, Khayâlî and Kâr Oghlu, and, in the garrisons of the Maghrib, Çirpanîk, Armudlu, Kul Çalkha, Gadâmuslu (cf. also Köpr. Zâde M. Fu'âd, *Türk Saz Sâ'irleri*, 1930). The influence of the various classes of society on one another had even the result that syllabic

metre was sometimes used among the cultured classes (but especially in the *kezel*) and the *arûs* metre in popular poems, just as had been the case formerly for poems of a religious character. The mystic poets however, following the tradition of Yunus Emre, wrote their *ihkâs* in syllabic metre. We may note the names of Umîr Sinân (d. 958 = 1551), Ahmed Sîrhan (d. 952 = 1545), İdrîs Mukhtefî (d. 1024 = 1615) and Seyyid Seif Allâh Khâlvetî (d. 1010 = 1601). But the greatest successors of Yunus and Kaighusar were found among the Bektaşîs and Kıldibash's, such as Kul Hîmet and his pupil Pîr Sütlân Abdal, a native of Siwas who was executed in 1600 by order of Khidr Pasha (cf. Sa'd al-Din Nûrhet, *Pîr Sütlân Abdal*, 1929). Other products of the popular literature of the period were *Haşan Oghlu Türküleri*, *Kara Oghlan Türküsü*, *Geyik Düşünü*.

xviii Century.

In spite of the political decline of the empire we still find intellectual and literary life pursuing its normal course. The knowledge of the Ottoman literary language spread among the Muslim lower classes generally and also through districts with a non-Turkish population or speaking a non-Ottoman Turkish dialect like eastern Anatolia (*Âdharî* dialect) and the Crimea. The Crimea began to produce a number of Ottoman poets, among them actually some of the Khâns. The influence of Turkish literature and culture is found as early as the xvth century in the use of Arabic characters by the Muhammadan Hungarians and Croats (cf. *Ungarische Bibliothek*, 1927, No. 14). There is also a Turkish-Serbian dictionary in verse, called *Petar Şühâdiye*, composed by Hawâyî (*Bull. de la Soc. scient. de Shoplye*, iii, 189-202), a similar Turkish-Bosniak vocabulary by Uskûfî and several rhymed Turco-Greek glossaries.

Stambul was always the centre to which men of letters and learning flocked from all parts of the empire and from beyond its frontiers. With the exception of Murâd IV, no sultan took an interest in literature, and among statesmen there were relatively few patrons of literature like İlyâs Pasha, Muştâfâ Muştâfâ Pasha, Râim Pasha and the Sheikh al-Islâm Yahyâ and Behâyî. In spite of this and of the decline in the medreses this century saw scholars of ability like Şarî 'Abd Allâh [q. v.], İsmâ'îl Ankarawî, İskâk Khwâdjâsî, Ahmed Efendi, and others. The various branches of religious learning and Arabic philology have however no great representatives in this century, and the conflict between the *medreses* and the *tekke* known as the "question of the Kâdî Zâde's" shows what a narrow point of view still prevailed in the *medreses*. The persecutions of the mystical orders, which sometimes had a political object also, did not however prevent these orders from continuing to prosper throughout the empire.

The "classical" Turkish poetry of the xviii century was in no respect below the level of the Persian models. But in place of devoting themselves to imitations and translations the Turkish poets were now working on original subjects. It is true on the other hand that the influence of contemporary Persian and Indo-Persian poets is still felt. Nef'î shows the inspiration of 'Urfî, Nâbî of Şâib and Nâ'illî-i Kâdim that of Shawket.

Nef'i [q.v.] may be regarded as the greatest Turkish master of the *şâzide*, on account of the power of his imagination, the richness of his language and the harmony of his style. His *ghazels* and his *hişn* on the other hand are less successful. The influence of Nef'i was always great on his successors, although his period saw several eminent *şâzide* like New'î Zâde 'Aîyî, Kâf Zâde Fâîdî, Riyâdî, Şabîrî and Rîqâyî. The greatest representative of the *ghazel* is the Sheikh al-Islâm Yahyâ [q.v.] who may be regarded as the successor of Bâkî, especially on account of his great power to express feelings and emotions. His fame likewise survived into the following centuries. Other representatives of the school of Bâkî and Yahyâ are the Sheikh al-Islâm Behâî and Wedjîdî. In contrast to the latter, the poets Fehîm [q.v.], Na'îlî-i Kâdîm [q.v.], Şükrî and even the poet Nâblî [q.v.] were under the influence of contemporary Persian poetry, Nâblî on whom can be noticed the influence of Şâhî became renowned for his *methnawî* *ghazîyes* and his *ghazels*. His poems are characterised by the preponderance of intellectual conceptions but this has not affected his popularity. In many of his poems he describes and criticises the social life of his time. His young contemporary Thâbit [q.v.] endeavours to show his originality by mingling proverbial expressions with his poetry. Among the masters of the *ghazel* in the xviii century we may also mention Nîshâî, Mewlewî, Djewrî and Râmî Mehmed Pasha.

'Azîmî Zâde Hâletî [q.v.] excelled in all poetical genres and is best known for his *rubâîs*. The *şâzide* and the *mu'ammâ* became very popular as did the *tarîkât* (chronogram). The *hişn* and *mezâh*, composed in different forms, came poets of the first rank to write very coarse things. Some products of this genre however can be appreciated, like the *teşhîs* in the form of a *methnawî* by Gûstî in which the author depicts contemporary poets; the *hişn* of Fehîm and of Djewrî, written in the form of *mu'ammâs*, are curious because the text is scattered with passages in non-Turkish languages.

Some *methnawîs* of the first half of the century show a remarkable perfection. The subjects of the old *ghazels* are gradually replaced by more topical subjects. The greatest representative of the style is New'î Zâde 'Aîyî [q.v.] who acquired his great reputation with his *ghazels*, the subjects of which are taken from the life of his time. This poet reveals the influence of his Turkish predecessors like Yahyâ of Tashhîdjâ and Djânânî (cf. xvth century). After him we may note the following authors of *methnawîs*: Kâf Zâde Fâîdî, Çhanî Zâde Nâdîrî and Riyâdî. It was mainly in this century that it became fashionable to write *Şâh-nâmes* in imitation of the Persian poet Zuhârî, although this genre is already found earlier, as is shown by the *Şâh-nâme* of Rewânî (xvth century). Among the *Şâh-nâmes* we may specially note those of 'Aîyî, Riyâdî and Hâletî; all are tinged with mysticism. The *methnawî* thus served for all sorts of subjects taken from daily life, stories, descriptions, speculative works, tales of actual events etc.

The number of religious and mystical works, lives of saints and didactic works connected with the different *tarîques* is very great in this century. Poetical forms were often used for them. Very well known is the *Me'râdîye* of Nâdîrî. Then there were

panegyrics of the Prophet (*nâ't*), imitations in verse of the *Hadîth-i arbabîn*, of *muwâlids* etc. Among the mystic poets there were some who used the syllabic metre; we may note Niyâzî-i Mîsrî, founder of the Mîsrîye division of the Khalwatiyye order, whose poems were long popular; the Bektaşîya also numbered several poets in their ranks. There are also a large number of historical works in verse, *Şâh-nâmes*, *Çhan-nâmes*, etc., like the *Şâh-nâme* of Nâdîrî of the time of Othmân II and others. The *Şâh-nâme* written by Mülhemî by order of Murâd IV has only the preface in Turkish; the rest is Persian in keeping with the old tradition. It is in this century also that the custom begins of writing brief Ottoman histories in verse; we have that of Tâlibî, written in 1017 (1608), of Nîshâî (d. in 1075 = 1664) written for Mehmed IV and the *Fîrîst-i Şâhân*, dedicated to Mehmed IV by Söleğ Zâde Hemdemî, and continued by a series of poets down to Zîyâ Pasha in the xixth century. This kind of work has neither much historical nor literary value.

Literary prose follows the same lines as in the preceding century. The great stylists (*munâzzîs*) like Weîsî, Nergîsî, Oğdju Zâde and others carried affection of language to a still more advanced degree. A fine specimen is given by the official documents addressed to the Persian court and written by *munâzzîs* like Hâkîmî; this same style, devoid of any taste, was sometimes used even in private correspondence. The works which were considered to have no literary value in their day are those which are now most appreciated, like those of Kocî Beg, Kâtîb Çelebî, Ewliyâ Çelebî and Na'imâ. Histories, in this century also, take first place among prose works. There are several which have the character of semi-official chronicles like the *Şâh-nâme* written in prose by Tashkôprüzâde for Othmân II. Murâd IV appointed Kâbilî as *wağ'a-nâmîs* for the Eriwan campaign. In 1074 (1664) the nîshândî 'Abd al-Rahmân Pasha was appointed by Mehmed IV to chronicle events, as was Mehmed Khalîfa of Fındıklî by Muştafâ II. It is only later that Na'imâ was appointed *wağ'a-nâmîs*. The historical works of this century are translations of the general histories of Islâm, original works on the same subject, general and special works and monographs on Ottoman history. From the historical point of view, the most important are the *Djâmî al-Dawal*, written in Arabic by Münedjîm Bâshî, the *Fedâleke* of Kâtîb Çelebî, the *Tarîkîk* of Peçewî and the best that of Na'imâ. The great encyclopaedist Kâtîb Çelebî (cf. HÂJJIJÛ KHALÎFA) also reveals himself in his *Musn al-Hatâ* and *Dastûr al-Amâl* as a historian of penetrating insight. Peçewî [q.v.], who made use of Christian sources, is also very valuable for his sound judgment and impartiality. Na'imâ [q.v.] who possessed descriptive powers of the first order, gives vivid psychological analyses of historical characters. Kocî Beg [q.v.] examines in his celebrated *Ricâli* the causes of the decline of the empire. Kara Çelebî Zâde is a *munâzzî* rather than a historian. We must also mention chroniclers like Wedjîhî, Hasan Bey Zâde and Söleğ Zâde, as well as the *ahkâl* to the *Şâh-nâmeh-i nu'mûniye* by New'î Zâde 'Aîyî and the continuation by 'Ushshâkî Zâde.

The *teşhîs* is much below the level of the xvth century; the most notable is that of Riyâdî written in 1018 (1609). The *Riyâd al-Su'arâ* of

Kâf Zâde Fâzîlî composed in 1030 (1621) also contains specimens of the work of the poets dealt with in it. There is also the *ahîrî* to this work by Mehmed 'Asîm (d. 1086 = 1675), the concise *teferrûat* of Rîdâ and that of Gâfîr already mentioned. The *Ma'ârif al-Nasâ'ir* by Khîsâlî (d. 1062 = 1652) is a collection of *ma'ârif*.

In the field of geography the most important works are those of Kâtib Çelebi and Abû Bakr Dimashkî. They use European as well as Muslim sources. The *Seyâhat-nâme* of Ewliyâ Çelebi [q.v.] is important for the history of all aspects of social life. In spite of its defects it is a work without an equal in Turkish literature. In this century also the first *isfret-nâmes* appear.

The great popularity of the *shihînâcelîs*, *medtâh*, *karagöçlî* etc. continued in this century in all classes of society. At Bursa we have Derwish Kâmilî, Kurbânî 'Alîî and others, at Erzurûm Kâsîb Kûrdî, Kandillî Oğlû etc. At Stambul there were eighty *medtâh*, who were organised in a gild (*çinnîf*); the best known is Tîfîlî [q.v.] who was *medtâ* to Murâd IV. Towards the end of this century the *medtâh* Kîrîmî (d. 1120 = 1708) flourished.

The musician-poets (*sânî şâirleri*) became very numerous in the xviii century. We find them among the Janissaries, the sipâhîs, the lewends, the dîvalîs, and in the religious bodies like the Kâfîyah and the Bektaşîs. They were always to be found in military retinues. The writer has succeeded in collecting and identifying the works and names of about thirty musician-poets of this century. The most notable are Gemherî and 'Ashîk 'Omâr; the latter has almost become the patron saint of the *sânî şâirleri* (cf. Köprülü Zâde M. Fu'âd, *Türk sazâirlerini ait metinler ve tefkîkler*, 1-5, Istanbul 1929-1930). The influence of this popular literature is felt even among the upper classes, as in the poems of the Khân of the Crimea, Mehmed Girây, who wrote under the *mahtâf* of Kâmil, and a *merthîye* of 'Aîfe Sultân, one of the favourites of Mehmed IV. Several "classical" poets also wrote *ghazels* for the masses. The poem on the hero *Gendî 'Othmân* by Kayîkçîlî Mustafa has actually given rise to a folk-tale which still survives in Anatolia (Köprülü Zâde M. Fu'âd, *Kayîkçîlî Mustafa wa-gene antan hikayesi*, Istanbul 1930). It is probable that several other folk-tales originated in this century, like those called '*Asîk Kerem*', '*Asîk Ghârib*', and '*Sâhî İsmâ'îl*'. Lastly we see from the statements of Ewliyâ Çelebi that it was in this century that the *Orta Oyuna* [q.v.] began to be popular with the people.

xviii century.

Literature and culture continued in this century to follow the same lines as in the preceding centuries. There was a vast output in prose and poetry, while the intellectual links with Persia and Transoxania continued to exist. Persian poets, especially Shawkât and Sâ'ib, exercised a great influence on Turkish poetry. But in spite of all this, the tendency to a more individual development gained in strength and was shown in the endeavours to simplify the language. It is mainly due to the great poets of the beginning of this century that classical Turkish poetry entered on a path entirely independent of contemporary Persian poetry.

The period of Dâmâd İbrâhîm Pâshâ [q.v.] is a very important one. Many works were written

and translated by his orders or those of Sultan Ahmed III. Committees were appointed to translate important works rapidly. Among the poets of this period we may mention 'Othmân Zâde Tâ'ib, who was called the king of poets, Seyyid Wehbî, Sâmi, Râshîd, Neillî, Selim, Kâmil, of Edirne, Durî, Thâkîb, 'Arîf, Sâlim, Çelebî Zâde 'Âşîm, and 'İzzet 'Alî Pâshâ. Nedîm [q.v.] in particular acquired a great reputation in the second half of the century and later. His *ghazels* and his *ghazîs* recall the period of Sa'd-ahâd and by his original subjects, rich imagination and harmonious language, he surpasses his predecessors and his contemporaries. In the *ghazîs* he reached a level which neither Nâzîm before him nor Fâzîlî Enderûnî after him attained. It was also through the patronage of Dâmâd İbrâhîm Pâshâ that İbrâhîm Muteferrika [q.v.] was able to inaugurate Turkish typography; but for several reasons printing remained confined to a very restricted sphere throughout this century and did not exercise any particular influence on intellectual or artistic life.

Among the great poets of this century we must also make special mention of Kâdî Râşîb Pâshâ [p.v.], the greatest representative of the school of Nâzî, and Sheikh Ghâlib [q.v.], the last great poet of the classical period. In the *ghazîs* it was the influence of Neftî that dominated, while in the *ghazels* there was a rivalry between the disciples of Nedîm and Sâmi on the one hand and admirers of Nâzî on the other. But towards the end of the century a decline in both schools became apparent; poets like Fâzîlî Enderûnî [q.v.] and Sübûlîzâde Wehbî [q.v.] are only mere imitators. The poets of this century practised all forms of poetry and special attention was devoted to genres characteristic of an epoch of decadence, like the *şîrîze*, the *hazîl*, the *nu'ammû* (enigma) and the *tarîkîh* (chronogram), while immortality and a general decline in good taste increased. On the other hand, true religious inspiration still continued, as may be seen from the *munâşşîrât* and the *na'îs* of Nâzîm, the *Mî'râ'îyye* of poets like Nâzî 'Othmân Dede, Nâzîfî and 'Arîf Süleimân Bey and the verse translation of the *Methnawî* of Mowlânâ by Nâzîfî. The *methnawîs* of this period are numerous but of little literary value, the old subjects of the *ghammas* are entirely dropped, with the exception of the *Hum-u 'Ishk* of Sheikh Ghâlib, the last masterpiece of this class. Finally, the rhymed historical works of this period and the mystic poems by initiates of the various orders are of little importance.

Literary prose tends to become gradually simpler, although we still find imitations of the style of Nergîs and Okâs Zâde. A well-known stylist like 'Othmân Zâde Tâ'ib openly declared against exaggerated artificiality in prose. Historical works occupy the first place. Among authors serving as *wa'û-nâmîs* [q.v.] we may mention Râshîd, Çelebî Zâde 'Âşîm and Wâsîf, but none of them can be compared to their predecessors like Nâ'imâ, although hundreds of people were writing biographical and historical works. The political and military decline of the empire caused a large number of *îshk* ("memoirs") to be written investigating the causes. The most remarkable of these memoirs is that of Kâdî Segbân Bâshî. From the point of view of geography we may note a number of important *isfret-nâmes*, of which

the *Fransız Sefâret-nâmeleri* of Yirmi Sekiz Çelebi Mehmed Efendi is a typical example; these works were occasionally, although rarely, written in verse. The *sür-nâmeler* written to celebrate the splendid festivals held by the sultans are important sources for sociological research. Those best known are the *Sür-nâme* of Selyid Vehbi and of Hâşmet. The collections of biographies of poets are even more numerous than in the preceding century. We may mention the *tevhîdler* of Safâî and Salim and that of Beligh; the *tevhîdler* of Esrâr Dede is specially devoted to Mewlavi poets; to this century belong also the *Wakâ'i al-Fuqatâ'* of Sheikhî, which is the final continuation (*dhail*) of the *Shakâ'ik*. Lastly the *Tuhfe-i Khattâ'in* of Mustafaîm Zâde — whom we may regard as the greatest encyclopaedist of this century — is the most important source for the Mualim and Turkish calligraphers (*khattâ'in*). In the field of geography we have only translations and excerpts from European works.

The *meddah*, *harâgânî* and *orta ayundju* continued to enjoy the same popularity among all classes of society. The works of the musician-poets were also known everywhere; we may mention Kîmetî, Nûrî, Lewnî, Kâba Sa'âl Mehmed and Fa'îhî, but the popularity of Gewherî and 'Ashîk 'Omer continued; some of these poets were of Armenian origin, like Medjûn and Warjan who lived at the beginning of the century. This influence of Turkish musician-poets on the poems of the Armenian *aybûğ* perhaps begins as early as the xvth century (cf. Köpr. Zâde M. Fu'âd in *Edebiyat Fihristi Medjmu'at*, 1922, No. 1, p. 1—32). The best example of the way in which the literary taste of the people had penetrated among the upper classes is the fact that the great poet Nedim also wrote a *türkî* in the popular metre. This tendency became more marked as the century advanced.

xixth century.

At the beginning of this century, Ottoman literature had sunk to a very low level which continued till the period of the "Tanzîmât". Wâsîf Enderûnî [q.v.] and 'Izzet Molla [q.v.] alone show some originality. Wâsîf appeals to the popular taste and shows the influence of Nedim as well as that of Fâzil Enderûnî. 'Izzet Molla, while strongly influenced by Nedim and Shaikh Ghâlib is, however, a much greater poet than Wâsîf, especially as regards the purity of his language and his poetical technique; in addition to *ghazels* and *ghazels* he wrote quite good *metârets*; he is the last "master" of classical poetry before the "Tanzîmât". It is true that even after the "Tanzîmât", many poets wrote *ghazels* and *ghazels* in the ancient style and among them the great advocates of literary innovations like Nâmîk Kemal and Ziyâ Paşa; to this period also belong Ghâlib Bey of Leskofca, 'Awnî Bey and 'Arif Hikmet Bey, all imitators of Nâ'îlî and Fehîm-i Kâdim. They had, however, no influence on the course of literary development. It was only natural that the old literary tradition could not disappear at one stroke; Shio'îs and his school had to maintain a long and hard struggle against the old school.

The prose of the period before the "Tanzîmât" is not of much value, although the production was not less than in preceding centuries. In history,

the *Târîkh* of Mâterdjim 'Âşim is remarkable for its style and critical ability; the author uses even simpler language in his translation of the *Burhân-i Kâfî* and of the *Kâmûs*. The well-known Es'âd Efendi, translator of the *Mustatraf* and author of the well-known *Usûl-i Zâfer* on the extermination of the Janissaries, is far below 'Âşim, with his insipid language and confused style. The same writer edited the *Tahvîn-i Wâk'î* and Sulţân Mahmûd II reproached him with the obscurity of his language in an account of a journey of the sultan which he had drawn up in this capacity. On the other hand, in his translation of the *Mustatraf*, he recommends the use of Turkish instead of Arabic and Persian words and the simplification of literary style, which shows to what an extent the movement to simplify the language had made progress. Lastly we must not forget the celebrated poet and stylist 'Âkif Paşa [q.v.] who, in spite of several poems written in the popular metre and some works in simple prose, ought not to be regarded as the first to spread literary innovations. 'Âkif Paşa, indeed, remained entirely unaffected by European culture and is one of the last representatives of the old literature.

Among the representatives of the popular literature we have information about the *meddahs* Pîç Emîn, Kîz Ahmed, Hâdjî Mû'eddhîn, Kôr Hâfîz and others, as well as of some writers of shadow-plays (*khayâlî*) like Sherbetdjî Emîn, Hâfîz of Kâim Paşa, Mu'âhib Sa'îd Efendi; it is only towards the end of the century that Kâzîb Şâlih in breaking with the ancient tradition began to imitate the modern theatre.

The best known musician-poets of this century are Dirdîl, Dîhânî of Baiburt and Emrah of Erzerum, who acquired a great and well merited popularity in Asia Minor as well as in Constantinople among all classes (cf. Köpr. Z. M. Fu'âd, *Erzurumlu Emrah*, İstanbul 1929). Down to the end of the reign of 'Abd al-'Azîz these *âshîqs* used to assemble in a café in Tû'âk Pasarl. They had an organisation of their own with a chief (*velî*) at their head, recognised by the government. This organisation was broken up later on, but in the xth century we still find musician-poets in Asia Minor.

This classical Turkish literature and especially the poetry had lost almost all its vigour and originality by the time the Tanzîmât began. Classical poetry had lost the ability to create anything new within its narrow limitations, and the poets could only produce imitations (*nâzire*) of the great masters of the past, or in their efforts to show a little originality fall into artificiality and platitude. As a result of continually repeating the same conceptions by the same limited means of expression, all the vitality of Turkish poetry was destroyed. Even great artists like Nedim and Sheikh Ghâlib had not been able to escape the rigid rules of the old models. On the other hand, the attempts to draw upon the language and literature of the people and to appeal more to popular taste and language, efforts such as we observe in Fâzil Enderûnî and Wâsîf, only resulted in vulgarity and banality. In spite of the political and economic connection with Europe which had existed for centuries, the social structure of the Ottoman people had never emerged from the frame of

Islamic civilization, which kept it imprisoned in a mediaeval system of ideas. It is true that the continual military defeats and the gradual economic decline had impressed upon thinking people the material and technical superiority of Europe and that, as early as the xviiith century, they had begun to take advantage of European skill to reorganise the army and the fleet. But it was much more difficult to admit the superiority of Europe in the field of culture. The *medreses*, which were in a very backward state compared with earlier centuries, still clung tenaciously to the mentality and tastes of the middle ages. Modern science was beginning to be introduced only in institutions founded for the army, like the Engineering School (*mühendishānane*) and the Medical School (*tibb-hānane*). These innovations owed a great deal to a few individuals, who had studied western languages and modern sciences, like Khodja Ishāk Efendi, Gelenbert and Şānī Zāde. It was the need felt by Selīm III and especially by Mahmūd II to reorganise the army and navy and to establish a central administration to prevent the empire being parcelled out between feudal chiefs, that led them to consent, in spite of the opposition of the *medreses*, to the reform of the teaching of mathematics and natural sciences.

From the end of the xviiith century, there were in Turkey men who knew French and recognised the cultural superiority of Europe. In bringing teachers from France and sending students to Europe, the movement of Europeanisation was encouraged in Turkey. It was natural then that as a result of all these needs, European influence began to show itself little by little, as in every branch of life, also in the field of thought and art.

δ. "European" Turkish Literature. Period of the "Tanzīmāt" and the New Literature.

The great industrial and capitalist development in Europe as well as the political expansion and rivalry of the imperialist Great Powers could not long ignore so vast and rich a field of exploitation as Turkey. At the same time the mediaeval institutions of the empire had lost their power of resistance and the revolutionary movements in France had propagated the principle of nationality among the non-Muslim elements. All these circumstances made the urgent need felt of introducing reforms in the social and administrative institutions of the empire. These reforms were to meet with considerable resistance, not only among the lower classes but also among those members of the educated classes who had been educated in the *medreses*. It was due to Reshīd Pasha and his little group of followers that the reforms were gradually introduced into the country. In Turkish history these reforms are known as "Tanzīmāt" [q.v.].

The Tanzīmāt were not confined to the fields of administration, justice and finance; with the object of securing the progress of education among the Muslim Turks, primary and secondary schools were opened and plans made to found a university. An *Enfjūmen-i dānīh* was formed to prepare schoolbooks (1269 = 1853) and students were sent to Europe. The *Enfjūmen-i dānīh* was soon replaced by the *Diyānet-i ilmiye 'otkūnātıye* (1277 = 1860), which began to publish its own organ: *Medjma'ı-i Funūn*. In the following year,

the Girls' School was opened and in 1279 (1862) University courses were begun. In 1282 (1865) was formed a *Terdjüme Dīm'iyyeti*, in 1284 (1867) the Civil School of Medicine (*Tibbiye-i mülkiye Mektebi*) began its lectures, and in the following year, the Lycée of Galata Seray was opened, the curriculum of which was adapted from western secondary schools and French was used for teaching alongside of Turkish. The University (*Dār al-Fünūn*) was opened in 1286 (1869) but the intrigues of the conservative elements forced it to be closed two years later. In 1287 (1870) the School of Law (*Hukuk Mektebi*) was opened and in 1294 (1877) a School of Political Sciences (*Mekteb-i mülkiye*). At the same time museums and libraries were founded as well as technical schools like the engineering, agricultural and commercial schools. Thus there was gradually created an educated class outside of the *medreses*. All this activity was accompanied by a gradual development of the daily press. In 1247 (1831) the official publication *Tağvīm-i Vekāf* began to appear which was followed by the *Diğerde-i Hawādith* in 1256 (1840), the *Terdjüman-i Ahvāl* in 1276 (1859) and the *Tağvīm-i Efkār* in 1278 (1861) [cf. DJARIDA]. These two last mark an important stage in the history of modern developments for it was through them that Şināsi, founder of the new literary school, and his disciple Nāmīk Kemāl addressed the public. Down to the period when the absolutism of 'Abd al-Hamid prevented any kind of publication, the Turkish press developed very rapidly. Many scientific and literary works were translated from European languages, especially from French, and the Turkish language began to be simplified, at the same time enriching itself with a large number of scientific expressions.

The three great figures of the new literature are Şināsi [q.v.] who had been educated in France, his great disciple Nāmīk Kemāl [cf. KEMAL] and Ziyā Pasha [q.v.], both of whom had lived in France as exiles. Through these circumstances the new school was imbued with the French literature of the xviiith and xixth century, and the principles proclaimed during the political revolutions in France. The innovators wished to exterminate the old feudal literature and proclaim the ideas of "fatherland" (*vatan*), "liberty" (*hürriyet*), "democracy" (*halkıyılık*) and "constitutionalism" (*mushavvıfıye*); they aimed at creating a "bourgeois" literature. It was in this way that journalism, political and literary criticism, the theatre, the translation of western literary works, the novel and the philosophical and sociological essay began. Şināsi was neither a brilliant stylist nor a great poet, but his programme was well defined; he wished to free himself from the trammels of the old unintelligible language; although he was not able to realise all this programme, his theories exercised a great influence on those around him. Ziyā Pasha, by his translations of Rousseau and Molière and by his literary and political criticism, gave great support to this movement. He was well versed in the classical literature, yet he went so far as to allege that this literature had no relation to the Turkish character; he upheld the thesis that one ought to follow nature, i.e. borrow from the popular language and literature. In reality Ziyā Pasha had neither the strength nor the courage to put these theories into force.

It was undoubtedly Nāmīk Kemāl who assured

the definite success of the new school. He was a great artist, a keen fighter, a prolific author and a great patriot. For him art was a means of provoking a revival in the land and he contributed vigorously to the cultural and political revolution in Turkey by his political articles, his dramas, his novels, his patriotic poetry, his historical works, his critical essays and even by his private letters. He exercised a profound influence. The presentation of *Watan* was a great political event in the country. He attacked the old literature even more bitterly than Ziya Paşa and thought that it was impossible to write Turkish poetry in the *arud* metre. However, not even Kemal could cast off the old traditions entirely, nor could his friends. It is for this reason that Sa'd Allāh Paşa was able to write in 1297 (1880) in an anonymous article in the journal *Wakıf*, that pupils should only be given literal translations of western works because the "new" writers had not been able to produce in reality any really new.

'Abd al-Hak̄k̄ H̄amid [q.v.], a pupil of Nāmīk Kemal, brought about a great revolution in the field of poetry, which hitherto had not been able to free itself from ancient forms. This extremely prolific poet introduced into Turkish the lyric and the drama in which his models were Dante, Racine, Corneille and Shakespeare. Even Nāmīk Kemal acknowledged that the new Turkish poetry begins with H̄amid. Other important figures were Rıd̄a's Zāde Ekrem [cf. EKREM] and Sami Paşa Zāde Sez'î [q.v.], but in proportion as the pressure of despotism increased, the second generation of the period of the Tanzimat began more and more to pursue purely artistic ends.

Many other thinkers or writers have contributed to the cultural evolution of the country. We may mention the famous historian Ahmed Djewdet Paşa [q.v.], Ahmed Tewfik Paşa [q.v.], Süleiman Paşa, and the great writer and encyclopaedist Ahmed Midhat Efendi [q.v.], as well as the lexicographer Şams al-Din Sâmî Bey [q.v.]. Djewdet Paşa, well versed in oriental learning and author of a Turkish grammar in collaboration with Fu'ad Paşa, has written beautiful prose in Turkish. Ahmed Tewfik, animated by western ideas, wished to revive national culture, and proclaimed the fact that the Turks of Anatolia were a branch of the great Turkish nation. He compiled the first dictionary of Anatolian Turkish, collected proverbs and translated the *Shahjahan Turk* of Abu 'l Ghāsi. By his adaptations of the comedies of Molière he played a great part in the development of the Turkish theatre. Süleiman Paşa, who reorganised the military schools, was a great patriot. He claimed that the language and literature should be called "Turkish" and not "Ottoman"; in his *Tarih-i 'Alam* he devoted a special chapter to the early Turks, taking his material from Deguignes and other sources.

Lastly Ahmed Midhat wrote and translated hundreds of volumes of a popular nature, beginning with books of the alphabet; he thus trained the people to read and contributed to raising the level of education, which was his only aim, for his books have no scientific or literary value. Sâmî Bey showed himself a worthy successor of Tewfik Paşa in his *Kamûs al-'Alam* and *Kamûs-i Türkî*.

At the end of the sixteenth century appeared

Mu'allim Nâdî [q.v.], who obtained great fame under the protection of Ahmed Midhat. Nâdî was well versed in eastern culture and wrote *ghazels* in the classical style alongside of good poems in the new style. The followers of the old school expected from him almost a resurrection of classicism, although Nâdî was not at all a champion of such a reaction, as is shown by his beautiful simple prose (as in *'Omri'n ledvulluğu*). His quarrels with Ekrem Bey originated rather in personal reasons. At the same time Nâdî Zāde Nâzım, who died very young, came to the front; his novel *Zehrâ* makes him a figure of first importance in literary history.

The most important event at the end of the sixteenth century is the literary movement begun by a group of youthful men of letters who had associated themselves, at the instigation of Rıd̄a's Zāde Ekrem, with the periodical *Theruet-i Fünûn*; this movement marks the second and last stage of the Europeanisation of Turkish literature. It is dominated by the figures of Tewfik Fikret [q.v.] and Khâlid Ziyâ and is very much under the influence of the literary movements in France at the end of the sixteenth century. Started in a period of absolute despotism and having only a short life of five or six years, this movement produced works of a neurotic and pessimistic sentimentality. Its motto was "art for art's sake". If we except Djewdet Shihâb al-Din, who acquired after the revolution the reputation of a great prose writer, Süleiman Nâzîf, who may be considered a pupil of Nāmīk Kemal with an originality of his own, Fa'ik 'Alî, an imitator of 'Abd al-Hak̄k̄ H̄amid, and İsmâ'il Safâ, an independent figure, who finds his subjects in everyday life, all the poets who wrote in the *Theruet-i Fünûn* were imitators of Tewfik Fikret. Khâlid Ziyâ, who has a very choice style, is the true founder of the literary novel in Turkish. He takes his subjects generally from the upper middle classes, but some of his short stories describe the life of the people. The latter genre has been more successfully treated by the novellists Ahmed Hikmet and Hüsein Dîshid, in more simple language. Mehmed Re'îf is a novelist who makes excellent psychological analyses, but his language is incorrect. In the field of science, philosophy and criticism, the collaborators on the *Theruet-i Fünûn* did no more than translate. But the severe censorship and the short life of the group did not enable them to show greater vitality.

While the school of Tewfik Fikret and Khâlid Ziyâ reflected only the life of the upper classes, Hüsein Rahmî [q.v.] depicted in his novels various aspects of the life of the people; and at the same time the notable publicist Ahmed Râşid [q.v.] was dealing in several of his works with the same subject. Among the poets of this period, we may further mention Rıd̄a Tewfik [q.v.] who has written the finest lyrics in the style of the *zâfir* poets and Bektaşî, but in syllabic metre, the poetess Nigâr Khânım and lastly Mehmed Emin Bey [q.v.] who suddenly became celebrated during the Turco-Greek war by his *Tuhtâ Şâirler*. Mehmed Emin employed a very simple language in the syllabic metre and wished to reach the people directly (*khafîya doğru*), although the existing popular literature with its mentality, tastes and traditional forms were entirely unknown to him. As a man of letters he was entirely of the school

of Fikret; he was not however an individualist like his contemporaries but imbued with the democratic spirit (*halkçılık*). This was the first occasion on which a Turkish poet had descended to the level of the people. Perhaps it is right to charge him with a lack of lyrical feeling, but this does not prevent us from regarding him as an interesting figure in literary history. At the same time the movement to simplify the language continued and even gave rise to an exaggerated purism. By the translation of the works of European scholars the early history and culture of the Turks became known, while the journalistic activities of the young Turks abroad began to envisage Turkish nationalism from the political point of view. These were the main elements in the cultural and literary life of Turkey before the Revolution of 1908.

xxth century.

The revolution of 1908, having brought about the abolition of the censorship, caused an extended literary activity. The patriotic pieces of Kemal and Hâmid re-appeared on the stage and a large number of works of a sociological, philosophical and historical nature were translated into Turkish. At the same time, great improvements were made in education and the relations with Europe raised the general cultural level to a height never before reached.

The most important literary organisation after the Revolution was "Fedâî-i Âl", although it was a literary circle which lasted only a short time; its members began by following the school of Fikret and Khâlid Ziya, but the majority of them ended up as members of the national literary movement. Ahmed Hâşim alone continued to develop in the way he had first chosen. He never abandoned the *'arûf* metre, nor the conception of "art for art's sake" in its strictest form. Besides, he had ideas of his own on the relation between music and poetry (cf. H. Duda, *Ahmed Hâşim* in W. L. II., 1928, No. 3-4, p. 300-244). The poet Yahyâ Kemal who had a great influence after 1912 had literary views entirely different from those of Ahmed Hâşim for he sought music rather in the exterior elements of his poems, while he retained the motto "art for art's sake".

Another poet, who remained outside of the national literature is Mehmed 'Akif, the advocate of Panislâmism and unrivalled master of the *'arûf* metre; in simple language he describes the life of the people in its most realistic aspects. 'Akif, whose lyrics sometimes rise to great heights, has remained quite uninfluenced by western poetry; he is a democratic poet, born of the people. In the work of these three poets, very different from one another, we see Turkish poetry striving to free itself from the too limited sphere of Tewfik Fikret and his school; but under the stimulus of the great development of the nationalist movement which manifested itself in the whole domain of art, poetry also has ended by entering on new paths.

a. The National Literature.

After the Revolution of 1908, it was the ideal of Ottomanism (*'osmanlılık*) that animated the governing classes. But the political events which rapidly followed, soon proved that this ideal was a chimera, by the attitude of the Muslim elements no less than by that of the Christians. The Turkish element, which was dominant in the empire, thus

needed a new ideal; this was the national ideal, which had already revealed itself in the period of the Tanzimat and which had existed through the Hamidian period in a cultural form. After the revolution also, this movement began by assuming a cultural aspect. On December 28, 1908, the society *Türk Dervisi* was founded, the object of which was to study the past and present of the Turkish peoples, to simplify the Turkish language and to make it a language of science. This society had not much power, but in November 1911 the periodical *Türk Yurdu* began to appear and on March 12, 1912, the *Türk Odjagı* was founded. This movement was not confined to a few Turkish patriots; associated with it were a number of Turkish intellectuals from other countries who had fled from the oppression of Tsarism, like Agha Oghlu Ahmed, Hussein Zade 'Ali and Ak. Çora Oghlu Yusuf. The movement was violently opposed by the followers of a badly understood occidentalism (*gharbçılık*) on the one side and by the partisans of Panislâmism (*ittihâd-ı İslâm*) on the other. At the same time, the periodical *Gemî-i Kalemîler*, published at Salonika, again started, under a pretentious name, a campaign to purify the Turkish language, and Ziya Gök Alp, a member of the Committee of Union and Progress (*ittihâd-ı terakki*), began his activities. With the transfer of the central office to Constantinople, Ziya Gök Alp joined the *Türk Yurdu*. Later, after the disastrous conclusion of the Balkan War, the younger generation also rallied to the national movement. The time was very opportune for the success of the national ideal; it only required a man capable of directing the national idea and laying down a programme and giving it a philosophical basis. It was Ziya Gök Alp who did this. He exercised a great influence on the youth by his university courses, by his lectures and by his articles and poems; all his life, from the time of the Balkan War to the Armistice, when he was exiled to Malta, and later during his sojourn in Diyar Bakr and Ankara, he displayed an uninterrupted activity: the résumé of his teaching is contained in his book *Türkçülüğün Esasları* (Angora 1339 = 1923). His death, soon after, was a cause of general mourning throughout the land.

As in all branches of life, the national movement made its influence felt in literature: the syllabic metre attained the dominant position in poetry; the language was simplified; the motto "art for art's sake" was replaced by "art for life"; writers began to borrow from popular literature and its traditional forms; literature began to reflect the life and characteristics of all branches of society. Philological and historical studies were made on the works of the musician-poets, on the popular literature, the music of the people. In brief, the science of Turkology was founded. [It is to Köprülü Zâde Mehmed Fu'ad, the author of this article, that almost all the credit of these important studies is due. Edd.] All this contributed greatly to give a definite direction to the new literary movement.

Among the poets of this movement we may give first place to Fâruk Nâfidî, who in his last poems depicts the scenery of Anatolia, then Orkân Seifî, Enta Behîdî, Yusuf Ziya, Khâlid Fakhrî, Nedîb Fâzîl. All these show the influence of Ziya Gök Alp and Yahyâ Kemal rather than of Mehmed Emin. In prose, the

progress is still more marked and the writers in it have still greater force. The greatest figure of the period is Khalide Edib Khanım. After the stories of love and passion which are characteristic of her first period she wrote books in the style of *Ateşden Gümlek* in which she describes the struggle of Anatolia for independence. Ömer Seifeddin, who died young, has left a number of very good little stories, some of which, like *Bombı*, are masterpieces of national literature. Refik Khailid, who is perhaps the best writer of simple Turkish, describes in his *Memleket Hükümetleri* realistic scenes of Anatolian life, hitherto unknown to literature; his realism however is expressed in a merciless sarcasm, quite devoid of sympathy and feeling. Ya'kub Kadri, even in his novels, is rather a stylist and a mystic poet than a story-teller. Other well-known figures in the new prose are Faliş Rifki, who describes in *Ateş ve Güneş* episodes of the war in Palestine and Rüshen Eşref. Among the novelists Reşad Nuri achieved fame by his novel *Canlı Kadın*. The evolution of the Turkish theatre is being hampered by the interminable adaptations of worthless French vaudeville. But the fact that the Turkish woman has appeared on the stage, that there are many good actors and that important western pieces are now being played gives good hope for the future.

By the foundation of the Turkish nationalist republic, nationalist principles have entered into the things of everyday life. The government is devoting much attention to the simplification of the language and to the creation of a scientific terminology in Turkish. The adoption of the Latin alphabet will contribute a great deal to the simplification of the language. But there is no resting. While the nationalist literature is still in its beginnings, we already see announced an internationalist literature. The young and vigorous Marxist poet Nâzım Hikmet, who has returned to Turkey after a long stay in Russia, is endeavouring to create a proletarian literature with poems without metre and without rhyme, at the same time launching his thunderbolts at the capitalists and the literary men who defend them. Several young poets and novelists have gathered round Nâzım Hikmet, while others are trying to spread futurist ideas. It may be doubted if this new seed, brought by wild winds from beyond the Black Sea, will find a fertile soil in this country, where industry and capitalism are only beginning to develop. It is impossible to say if the young national literature will be capable of resisting these foreign influences. In any case, future developments will take a course parallel to that of the country's destiny.

Bibliography: a. Methodology: Köprülü Zâde Mehmed Fu'ad, *Türk Edebiyatı Tarihinde Üçü* (in the periodical *Bilgi*, i, 1329, p. 1-52); do., in *Millî Tebbül'ar Medî-nâtı*, i, 1331, p. 35-46.

b. Texts: The majority of the texts of the old literature are still in manuscript. Some have been printed at Cairo and Constantinople but not in critical editions. For the manuscripts, the catalogues of libraries in east and west may be consulted. Very few texts have been translated into European languages. For details, see this article and other articles relating to the subject.

c. Chrestomathies: The most important

manuscript selections are mentioned in the article. In Europe there have been published: E. J. W. Gibb, *A History of Ottoman Poetry*, vol. v, vi; W. D. Smirnov, *Münâzâhât-ı Akhâr-ı 'Eshmâniye*, St. Petersburg 1903; M. Wickerhauser, *Wegweiser zum Verständnis der türkischen Sprache*, Vienna 1853; A. Fischer and Muhleddin, *Anthologie aus der neuzeitlichen türkischen Literatur*, i, Leipzig-Berlin 1919. *La Muse ottomane* by Servan de Sagny, publ. in 1855, gives translations in verse. For the classical poetry we have *Kharâât* by Ziya Paşa (3 vol., 1291), and *Muntahabât-ı Mir Nâzif* (Bulâk 1261). For prose: Ebazzîyâ Tewfik, *Namûnât-ı Edebiyât-ı 'Eshmâniye* (6th ed., Constantinople 1330). Lastly there are a number of chrestomathies for Turkish schools; the most recent is *Türk Edebiyatı Numûneleri* by Hıfzı Tewfik, Hammâmî Zâde İhsân and Hasan 'Alî (vol. I, Constantinople 1927).

d. Biographies of poets. The most important *tezkere-i şâ'arâ* have been mentioned in the text. A large number are not yet printed. For bibliographical information see the introduction to Ibn al-Amin Mahmûd Kemâl, *Şa'ir Türk Şâ'irleri* (publ. by the T. T. E., vol. i, Constantinople 1930). There one will find information about old and new bibliographical works on literary history. In addition, there are important notices of the poets in all the historical sources, the *siyâhatnâme*, and books of legends (*menâkıb-nâmâ*) etc.

e. General Works. There is not yet a literary history on really scientific lines, either in Turkey or Europe. J. von Hammer, *Geschichte der osmanischen Dichtkunst* (4 vols., 1836) is a collection of biographies taken from the *tezkere-i şâ'arâ* which were known to the author. The works of Smirnov, Krymski and others are defective as regards the information and the judgment of their authors. For the bibliography of these works see Th. Menzel, *Die türkische Literatur* (in *Kultur der Gegenwart*), who however has omitted to mention Krymski, *İtiryâ Turîyî-i yzya literatürü*, 2 vols., Moscow 1916. The most important work on the early poetry of Turkey is E. J. W. Gibb, *A History of Ottoman Poetry*, 6 vols., London 1900-1909; this work is still of great value, although the account of the xiiith-xvth century is very inadequate. It is rather a collection of biographies of poets, which is complete only down to the Tanîmât; also P. Horn, *Geschichte der türkischen Moderne*, Leipzig; M. Hartmann, *Aus der neueren osmanischen Dichtung*, M. S. O. S., xix.-xxi.; O. Hachtmann, *Die türkische Literatur des zwanzigsten Jahrhunderts*, Leipzig. As to the value of the literary histories publ. in Turkey (cf. also Menzel, article here quoted), we may mention: Şihâb al-Din Süleimân, *Tarih-i Edebiyat-ı 'Eshmâniye*, Constantinople; Fa'ik Reşad, *Tarih-i Edebiyat-ı 'Eshmâniye*, Constantinople 1913; İbrâhîm Nedjmi, *Tarih-i Edebiyatı Dersleri*, 2 vol., Constantinople 1338-1341; İsmâ'il Habbî, *Türk Tefeddüd Edebiyatı Tarih-i*, Constantinople 1340; İsmâ'il Hikmet, *Türk Edebiyatı Tarih-i*, 4 vols., Haku 1925-1926. But these works are superficial in method and in information supplied. Köprülü Zâde M. Fu'ad's *Türk Edebiyatı Tarih-i* endeavours to gather together in a systematic fashion the literatures of the various Turkish peoples. So far only

the first volume has appeared (Constantinople, Dewlet Mafit'ası, 1926—1928). The most important monographs on the different figures and subjects in the literary history of Turkey are mentioned in this article and in the special articles. (KÖRKTÜ ZKÖS. MAHMED FÜ'AD)

IV. HISTORY.

1. General Features.

The Ottoman Empire is the largest and most lasting state that has been formed in Islamic times by a people of Turkish tongue. At the same time it is the largest state formed in the later centuries of Islamic history. Its original centre was Asia Minor, situated in the north-westernmost angle of the Islamic world, a country that had seen four centuries less of Islamic domination than most of the lands of the ancient 'Abbasid Caliphate. It was founded about A.D. 1300, at a time when everywhere in the Islamic world the earlier political traditions were broken and none of the existing governments seemed to give much guarantee of durability, while Muslim civilisation itself was passing through a critical period of weakness.

These circumstances are not sufficient in themselves to account for the rising of a new strong Muhammadan empire. It is right, therefore, to seek the explanation of the birth and the part played by the Ottoman Empire in the general course of political events in the world history of the later Middle Ages. It has been observed that the rise of a new strong power in the Mediterranean world had only become possible after the extinction of the 'Abbasid Caliphate and its political traditions, in 1258, and after the excessive weakening of the Byzantine Empire by the Latin occupation of 1204 (cf. R. Tschudi, *Vom alten Osmanischen Reich*, Tübingen 1930). This enabled a new state, to come into existence that continued at the same time a somewhat changed Islamic tradition and a good deal of the already much easternized Byzantine civilisation.

The process of interpenetration of these two cultural spheres had already been in action a long time before the nucleus of the Ottoman state was formed, during the epoch of the Seljuk empire of Rüm. Consequently the rapid conquests of the Ottomans in the sixteenth and seventeenth centuries were not the elementary invasions of a wild horde of barbarians, but the realisation of a scheme that may have been in some degree present to the mind of great conquerors like Bayezid I, Muhammad II, Süleimân I and some of their statesmen. The conquest spread at the time a type of civilisation that took its definite shape in the sixteenth century. As history advanced, this Ottoman civilisation came into an ever more pronounced contrast with its eastern Muhammadan neighbours, thus giving a new political meaning to the Sunna-Shi'a controversy while the ancient relations with Turkish Transoxania gradually slackened. At the same time the gap between the Ottoman and the western European civilisation — which in the sixteenth century did not yet seem unbridgeable — became constantly wider, as Turkey did not join in the transition from the Middle Ages to modern times. All the more firmly was Ottoman civilisation rooted in the many countries that had been subjected to the rule of the Turkish sultans, and this Ottoman tradition became most perceptible

at the very time of the weakening of the Ottoman political power; a very good example is Egypt (cf. KAPITZ). It is a curious fact that, when after the revolution of 1908 the Young Turks tried for a brief period to make this Ottomanism once more a political reality, these endeavours proved to be a complete failure, owing to the political decomposition caused by the penetration from the west of nationalist feelings.

Born in a religious sphere that was far away from orthodox Islam, the Ottoman Empire soon took a definite turn towards official orthodoxy after the Hanafite *madhhab*, but with remnants of older tradition. The claim to the Islamic Caliphate, however, and to the hegemony of the Muhammadan world, as well as the pan-Islamic policy of 'Abd al-Hamid II do not belong to the primary features of the Ottoman Empire; they were more a part of its outward politics, especially towards Christian powers (cf. KHALIFA).

The influence of western civilisation began in the sixteenth century, at a time when the Ottoman Empire, having acquired its own cultural type, began to feel its political inferiority towards Europe. Ancient relations made France the first European country to provide Turkey with some technical (military) innovations; this tradition remained stable until the first part of the eighteenth century. The introduction of western reforms and institutions has never had a revolutionary character; it consisted chiefly in government measures and its programme was successfully carried out during the period of the *Tanzimat* [q. v.]. A more indirect result of western ideas was Turkish nationalism, which new ideal the war of 1914—1918 has enabled Turkey to realize in a most unexpected manner. Modern Turkey has become a state of much smaller territory than the Ottoman Empire, but continuing a great deal of the traditions of the Ottoman Empire.

2. Historical survey.

First period. The founding of the state and its first expansion until the temporary dissolution by the invasion of Timur.

'Othmân I	1299—1326
Orkhân (son of 'Othmân I)	1326—1359
Murâd I (son of Orkhân)	1359—1389
Bayezid I Yildirim (son of Murâd I)	1389—1402

The dates of 'Othmân and Orkhân cannot be established beyond doubt. Bayezid's reign was closed by his capture in the battle of Angora (July 20, 1402); it was followed by a period of 11 years, during which Bayezid's sons 'Isâ, Muhammad, Süleimân and Mûsâ disputed with each other the crown. This period ended by Mehmed's victory over Mûsâ in July 1413 at Çamurlı near Sofia.

Second period. The restoration of the state and its rapid growth until its greatest expansion.

Muhammad I (son of Bayezid I)	1403—1421
Murâd II (son of Muhammad I)	1421—1451
Muhammad II Fâtih (son of Murâd II)	1451—1481
Bayezid II (son of Muhammad II)	1481—1512
Selim I (son of Bayezid II)	1512—1520
Suleimân I Kânîni (son of Selim I)	1520—1566

Third period, during which the state maintained its territory, until the loss of Hungary.

Selim II (son of Suleimân I)	1566—1574
Murâd III (son of Selim II)	1574—1595

Muhammad III (son of Murād III)	1595—1603
Ahmad I (son of Muhammad III)	1603—1617
Muṣṭafā I (son of Muhammad III)	1617—1618
Oṭmān II (son of Ahmad I)	1618—1622
Muṣṭafā I, 2nd time	1622—1623
Murād IV (son of Ahmad I)	1623—1640
Ibrāhīm (son of Ahmad I)	1640—1648
Muhammad IV (son of Ibrāhīm)	1648—1687
Suleimān II (son of Ibrāhīm)	1687—1691
Ahmad II (son of Ibrāhīm)	1691—1695
Muṣṭafā II (son of Muhammad IV)	1695—1703

Fourth period, during which the state gradually loses its strength and is broken up at the hands of powerful vassals.

Ahmad III (son of Muhammad IV)	1703—1730
Mahmūd I (son of Muṣṭafā II)	1730—1754
Oṭmān III (son of Muṣṭafā II)	1754—1757
Muṣṭafā III (son of Ahmad III)	1757—1774
‘Abd al-Hamid I (son of Ahmad III)	1774—1789
Selīm III (son of Muṣṭafā III)	1789—1807
Muṣṭafā IV (son of ‘Abd al-Hamid I)	1807—1808
Mahmūd II (son of ‘Abd al-Hamid I)	1808—1839

Fifth period. Cultural and administrative renaissance of the state under the influence of western ideas.

‘Abd al-Medjid (son of Mahmūd II)	1839—1861
‘Abd al-Aziz (son of Mahmūd II)	1861—1876
Murād V (son of ‘Abd al-Medjid)	1876
‘Abd al-Hamid II (son of ‘Abd al-Medjid)	1876—1909
Muhammad V (son of ‘Abd al-Medjid)	1909—1918
Muhammad VI (son of ‘Abd al-Medjid)	1918—1922

The national Turkish state, since October 29, 1923 a republic under the presidency of *Ḳāsim Muṣṭafā Kemāl Paṣha*.

A good general view of the history of the Ottoman Empire is given in *Ḳhalīl Edhem, Dīwān-ı İslāmiye*, İstanbul 1927, p. 320 *ff.*

3. Conditions in Asia Minor at the end of the thirteenth century.

The more recent researches on the subject of the founding of the Ottoman state have made clear many things that formerly had been seen mainly through the medium of Ottoman historical tradition as reflected in the sources belonging to the xvth century and later. Epigraphic and numismatic discoveries, combined with a critical study of older historical sources (the different versions of the chronicles of the *Alī ‘Oṭmān*) and half legendary sources (*menākıb-nāma*s and *vilāyet-nāma*s of mystic orders) have cleared up many historical relationships, hitherto unsuspected.

The nucleus of the state of the dynasty of ‘Oṭmān was a far advanced outpost (*hüdud*) on the north-western frontier of the territory once ruled by the Seljūq dynasty of *Ḳonya*, which had gradually relapsed into anarchy after the victory of the Mongols over *Kāikhuraw II* in 1243. Asia Minor, at that time, had already been turcized to a large degree; the greater part of the Anatolian Turks belonged to the *Oghuz* tribes who had been introduced during and after the Seljūqian invasion; there were also groups of Christian Turks, who had come by way of the European part of the Byzantine Empire, besides Turkish elements from Russia. Moreover the Mongol conquests in the east had brought crowds of fugitives into the country, especially from the former *Khwariz-*

miya sultanate; many of these immigrants were Iranians. We do not know the relative strength of the graecized original population of Asia Minor; they probably were found chiefly in the towns. In *Ḳonya* the original inhabitants no doubt were already considerably islamized. But the Christian element was still largely represented in the areas under Byzantine rule in the west and in the north-west in the Empire of Trebizond, where many of the population were Lazes, in the mountains of central Armenia and in the Cilician Armenian Kingdom (1080—1375). It does not appear that, within the former frontiers of the Seljūq empire, there existed a sharp social controversy between Muhammadans and Christians. Much sharper, at any rate, had become the antithesis between the townspeople and the still nomadic Turkish tribes or Turkomans (*avāḡim-e Kān*), who were roving all through Asia Minor, as they did also in the adjacent territories of Syria, Mesopotamia and Persia. The Turkish tribes had still preserved many pre-islamic religious traditions within the particular form of Islam they had adhered to. This form of Islam was the result of the preaching of wandering derwishes, known under the name of *Kalenderiye* and *Haidariye*, who spread from the xth century all over northern Iran and Transoxania; their preaching was imbued with mystical doctrines containing a large amount of Shi’ite elements. After their immigration into Asia Minor the Turkomans had remained under the same influences and those who exercised religious authority amongst them, called *bādes*, had still much resemblance to the pre-islamic *shāhans*. Under these religious leaders in 1239 the fearful revolt of the *Bābā*s under *Bābā Ishāq* had taken place. The government, at that time, had been able at last to suppress the revolt, but the heterodox opposition among the lower classes in Asia Minor has still deeply influenced the history of the first centuries of the Ottoman Empire. These Turkomans were indeed far more numerous than the governing classes and the townspeople, as is shown by the present geographical nomenclature of Asia Minor; the names of numerous villages, rivers and mountains are now pure Turkish and we meet among them ancient tribal names as such *Ḳay*, *Salur*, *Bayat* and *Çepni* (cf. *Koprulu-Zāde Fu’ād, Oghuz Etnolojisi Türkiye Neflari, Türkiye Mefrū’atı*, i, 185 *ff.*). As far as the Turkoman tribes were still militant, the best use that could be made of them was as frontier guards and as conquerors of new territory. After settling down, they may have mixed with a good deal of the original rural population and by this mixture is to be explained the curious religious, half-Christian, views and customs that are reported in later times as existing among the lower classes in Anatolia, and that were especially current among the mystic order of the *Bektāshī* in the time of the Ottoman Empire. The *Bektāshī* derive their name from *Hādjdj Bektāsh Wali*, who is reported to have been a disciple of the above mentioned *Bābā Ishāq* (*Kopr. Z. Fu’ād, Les origines du Bektachisme, in Actes du Congrès International de l’Histoire des Religions, tenu à Paris 1925*).

The government and the higher classes of society had followed in Seljūq times the orthodox Islamic tradition, just like the other Seljūq dynasties, and this tradition is to be traced back to the times of the Sāmānid empire in *Ḳhwarizm* and Transoxania. These were also the regions with

which the Turkish element in Asia Minor has been, since its immigration, in constant relations; in the Seldjûk period, the higher culture of Asia Minor was mainly Iranian in character. These relations explain also how the Hanafi *madhhab* became officially predominant in Anatolia and afterwards in the Ottoman Empire. But the upper classes of society were not free themselves from a strong mystic influence of a higher order. It had likewise its source in Khurāsān, whence had come Djālāl al-Dīn Rūmī [q.v.] himself, who lived at the Seldjûk court in Konya, and who influenced for centuries Ottoman-Turkish culture through the Mewlawi-order. So the townspeople were likewise familiar with formations of fraternities on mystic lines, entering within the category of the *futuwa* [q.v.]; on the fraternity of the Akhi's we are now fairly well informed (F. Taeschner, in *Islamica*, iv., 1929, fasc. 1); a similar fraternity was formed by the Ghaziyān.

On this basis of religious and social controversy is to be understood the development of events since the end of the thirteenth century. In the many small principalities that appeared (*şarā'ifi mulūk*) we see sometimes the influence of the orthodox element and sometimes of the heterodox Turkoman element predominant. This last was especially the case with the powerful principality of the Karamān Oghlu [q.v.], at least in the beginning.

As the date of the foundation of the state of 'Othmān in Bithynia the year 1299 is generally accepted. About the same time sprang up the principalities of the Karasi Oghlu [q.v.] in Mysia, of the Şarukhān Oghlu [q.v.] in Lydia, of the Aidin Oghlu [q.v.] in Ionia, of the Monteshe Oghlu [q.v.] in Caria and of the Teke Oghlu [q.v.] in Lycia. All these dynasties had this in common with the 'Othmān Oghlu, that they held large parts of the western coast of the Peninsula; their territories were on the outskirts of the former Seldjûkian empire and the dynasties were the descendants of the chiefs of the Turkoman frontier guards (*uđı begleri*); these regions were the most remote from the Islamic cultural centre of Anatolia; on the other hand they entertained relations with the Greeks of the coasts and with the Italian colonists on the islands; some of these principalities (Şarukhān, Aidin, Monteshe) even had coins with images and Latin letters. But the most important feature of these principalities of the coast was the possession of fleets, by which they were able to undertake raids on the Greek isles and on the European continent from Morea as far as the Dobruča. Especially the Aidin Oghlu Umur Beg (died in 1348) is famous for his maritime expeditions as ally of the Byzantine emperor Cantacuzenos. It was this opportunity of westward expansion, which has been most favourable for the 'Othmān Oghlu and secured them in the end the superiority over the other principalities.

To the east of the maritime principalities had risen at the same time the Germiyan Oghlu [q.v.] in Phrygia and the Hamid Oghlu [q.v.] in Pisidia, together with the less important Eshref Oghlu in Bey Shehir (later incorporated in the dominions of the Hamid Oghlu) and the Denizli Oghlu in Ladik (later incorporated in the territory of the Germiyan Oghlu). The important dynasty of the Djandas Oghlu — later called Isfandiār Oghlu [q.v.] — in Paphlagonia held the Black Sea with Sinûb, but had less opportunity of maritime ex-

pansion, although these regions too were in relation with the European continent, especially the Dobruča. A similar position on the south coast was held by the Karamān Oghlu [q.v.], whose origin can be traced back to about 1256, and who, by their geographical position on the main road to Syria, were able to develop more power and stability than the other principalities (cf. Khalil Edhem, *Düvel-i İslamiye*, p. 270 sqq.).

The regions enumerated can be said never to have been a part of the territory administered by the Mongols in the thirteenth century. The Mongol governors, appointed by Uldjaitu (1304—1316) and Abū Sa'īd (1316—1325), resided principally in Kaizeriye and governed the central plateau of Asia Minor as far as Ankara. The last of these governors was Timur Tash, who, in 1327, had to fly to Egypt, leaving as his lieutenant Ertēnā. This Ertēnā made himself independent in 1325 and founded the dynasty of the Ertēnā Oghlu [q.v.]. About the same time, in 1301, originated in Mar'ash and Elbistan the dynasty of the Dūhā 'l-Kādiriye [q.v.]. In these south-eastern parts of Asia Minor the Mamišk power of Egypt was at that time an important political factor and both the Karamān Oghlu and the Dūhā 'l-Kādiriye had many dealings, friendly and unfriendly, with state state.

The social and religious conditions in all the principalities enumerated were much the same. The military power of the Beg or Emir depended on still more or less nomadic tribesmen, and to this class are to be reckoned the half religious and half military chiefs that in several regions bear the title of Paşa [q.v.], as for instance with the 'Othmān Oghlu, Teke, Aidin, Denizli and Djandar Oghlu. In several regions we meet also with the *ghazis*; these apparently were akin to the more orthodox *futuwa*-organisations of Seldjûk times. The court of the beg became also a gathering place of more orthodox scholars and of literary men who now began to write their works in Turkish (cf. LITERATURE, *supra*, B, III.). The bigger towns had often retained older social forms; this is especially known for Ankara, situated at the extremity of the Mongolian territory; the government was here really in the hands of the corporation of the Akhi's.

On the religious history of this pre-Ottoman period are to be consulted the works of Köpr. Züde Fu'ād, *İlk Muhtawwifler*, İstanbul 1918, and *Anadoluda İslamiyet, Edebiyat Fakültesi Mecm.*, 1922—1923.

4. The first period (1299—1402).

The historical tradition of the Ottomans has preserved reminiscences of the Turkoman nomadic origin of the founders of the state. The father of 'Othmān, Ertoghul [q.v.], is said to have established himself with his little tribe in the neighbourhood of Sögüd [q.v.] as an *uđı begi*; the pedigree given for Ertoghul and his father Suleimān Şah shows them as belonging to the Kayi [q.v.] division of the Oghuz Turks. The various reports, however, about Ertoghul and his clan have a good deal of a legendary character and this is also the case with what is told about the youth and the first exploits of 'Othmān himself. The different sources allow a historical reconstruction according to which 'Othmān — or 'Othmānşah, as the oldest known form of the name is given — was not even a real son of Ertoghul, but rather belonged to the non-

nomadic element of the population, with whom the orthodox Islamic tradition was stronger than with the Turkomans (J. H. Kramers, *Wer was Osman?*, in *A.O.*, vi. 242). He was, at any rate, one of the *ghaziyūn-i Rūm* and, together with other *ghazis* (Turkish *alps*), he possessed, after Ertoghul's death (about 1265?), the leadership of the clan. He likewise was surrounded by people belonging to the fraternity of the Akhi's, and it is probable that even 'Orkhān's father-in-law, the Shaikh Edeballi, whatever his extraction may have been, belonged to the same fraternity. As a result of the collaboration of these various elements the clan was transformed into a territorial state with the fortress Karadja Hisar as centre; in this state gradually the more orthodox Islamic tradition became predominant, though the popular religious leaders (*baba, dede, abdal*) remained in high esteem.

During his reign and that of Orkhān the history of the small principality was not different from that of the contemporary Anatolian principalities. With the aid of his tribesmen, but also by stratagem and personal relations, he succeeded in extending his territory, so that at his death, the Sakarya was practically the eastern boundary of the state; to the south 'Orkhān's power had probably reached Eski-Shehir. The Greek towns near or on the coast, however, Iznik, Iznikmid (Izmid) and finally Bursa were only taken in the beginning of Orkhān's reign; forthwith Bursa became the capital. All these new territories had been conquered from the Byzantines, mostly local commanders of garrisons; the Turks were seldom (in 1301 and 1329) opposed by a regular Byzantine army. Under Orkhān there was also added other Turkoman territory to his dominions, namely the principality of the Karai Oghlu [q.v.]; by this territorial acquisition the 'Orkhān Oghlu became at once the most prominent maritime power among the Anatolian principalities.

It is a noteworthy fact in the history of 'Orkhān and 'Orkhān, that there apparently existed close relations with Christian chiefs and commanders in the neighbourhood. Kösé Mikhāl, lord of the fortress of Khirmendjik, is said to have been a constant friend to 'Orkhān; and after the acquisition of the Karai principality, Orkhān was joined by Ghazi Ewrenos [q.v.], also of Christian descent. The descendants of both become afterwards notable feudal families in the Ottoman state. This early collaboration with Christian Greek elements makes it probable that in this way Byzantine traditions and customs early entered the Ottoman state, in the same way as was the case in some other contemporary maritime principalities. Both the Christian and the Turkoman-nomadic element were gradually assimilated by the growing influence of the orthodox mollas, often indicated in the older sources as *dünishmänd*; some of these belonged to the Akhi-circles, as is said of the Kadi Djandaril Kara Khalil, later vizier to Murad I under the name of Khair al-Din Pasha; many of them had also come from the more eastern parts of Asia Minor. To them may have belonged also 'Alā' al-Din Pasha, Orkhān's vizier and, according to tradition, his elder brother.

So, during Orkhān's on the whole peaceful reign, these very different elements contributed to the foundation of a typical form of administration and civilisation, from which the later development of the Ottoman state must be explained. The details are little known. The administration was a military

one and probably followed Seldjuk tradition; the division of territory among feudal chiefs may have reposed on earlier Byzantine institutions [cf. TIMAK]. Fiefs were given under Orkhān to the newly created cavalry called *müsellem*. During Orkhān's reign was also formed the new regular infantry called *yaya*, as the irregular force of the *apingir*, originally composed of the Tarcoman tribesmen, was no longer adequate. In this time also the title *paşa* [q.v.], originally peculiar to militant derwishes, began to be given to statesmen (e.g. Sinan Pasha under Orkhān) and military commanders.

The natural extension of the young state was towards the west, in keeping with the naval raids of the Sarukhan Oghlu and Aidin Oghlu on the iles and on the Greek coast. Already under Orkhān there had been several military expeditions on the other side of the Hellespont, mostly in connection with his alliance with the emperor Cantacuzenos and the latter's civil wars. In 1353, however, begins the military occupation of towns on the European side by the famous expedition of Orkhān's son Süleimān Pasha, followed in 1357 by the capture of Gallipoli. This was the prelude to the military operations of Murad I and Bayazid I, which took place nearly entirely in Rūm-ili. At first all the Byzantine territory to the west of Constantinople was taken; Adrianople (Edirne), conquered in 1361, became in 1365 the European capital of Murad. Then followed the wars against the Bulgarians and the Serbians, which assured the Ottomans the greater part of the present kingdom of Bulgaria. The Serbian power was crushed in the battle of Kosovo in 1389, where Murad I was killed, and Wallachia became tributary. Bayazid's military expeditions extended over a still wider range, including Hungary, Bosnia and southern Greece, but in these regions the Ottoman conquests were not yet permanent, notwithstanding the victory won at Nicopolis in 1396 over the allied Hungarian, French and German armies. Constantinople became a mere vassal town where the Ottoman sultan could exercise his influence as he pleased; it did not come yet to a real occupation, although Bayazid's attitude towards the town was little less than a continuous siege [cf. F. Giese, *Türkische und abendländische Berichte zur Geschichte Sultan Bajazids I.*, *Ephemerides Orientales*, No. 34: April 1928]. The Ottoman policy in Asia Minor had another character. Ankara, in 1359, fell to them in a peaceful way; Murad acquired a large part of the Germiyan Oghlu territory as a wedding present to his son and the country of the Hamid Oghlu by sale; even the expeditions against the Karaim Oghlu in 1386 and 1391 were conducted with much leniency, and it seems that the definite conquest of Konya, Siwas and Kastamuni in 1392 was a mere consequence of political necessity, felt perhaps through the conquests of Timur, who finally crushed the impetuosity of Bayazid in the battle of Ankara (1402). Many of Bayazid's conquests, indeed, were as ephemeral as those of Timur himself.

While the sultans conducted the military operations, the organisation was in the hands of their statesmen, among whom Djandaril Kara Khalil, later known as Khair al-Din Pasha, is the most notable (cf. F. Taeschner and P. Wittek, *Die Vaterfamilie der Gendaryas und ihre Denkmäler*, *Der Islam*, 1929, p. 61 sqq.). To him is attributed the institution of the Janissaries in con-

nection with the reservation of a fifth part of the war booty for the sultan. The Janissaries [q. v.] were taken from the captured Christians, and there is no indication that in the sixteenth century the *devshirme* [q. v.] was already applied. Their organisation on the lines of a fraternity after the model of the *ahls*' or the *ghāsi*'s, and their connection in this respect with the derwish-order of the Bekrahi's, shows again the influence of the peculiar religious tradition of the state.

The first beys of the 'Othmān Oghlu, in the older sources generally bearing the title of *ahunkār*, had originally taken over some of the Saljuk customs and traditions, such as the bearing of *labas*'s composed with *dir* and *dunya*, but from the time of Murād I this custom was abandoned. Murād is also the first to take the title sultan in inscriptions. These first rulers followed also the traditions of other Anatolian rulers by marrying high born Christian ladies; Orkhan was the first to take a Byzantine princess for his wife. On the other hand, the proper names of some of the first Sultans (Murād, Bāyazid) have preserved older, mystic-Shi'i, traditions; to the same early time is to be traced back the investiture of the sultan by the girding on of a sword, which perhaps symbolized originally his admission to the order of the *ghāsi*'s [cf. *ḡilīḡ alayī*]. An important fact of the first century of Ottoman history was the enforced migration of populations, which ancient oriental custom was particularly applied by Bāyazid I, mostly from the east to the west. This general drift towards the west may have occasioned also the increasing estrangement between 'Othmān Oghlu and Ḳaramān Oghlu and, together with other influences, the religious opposition in Anatolia.

On this first period of the Ottoman Empire are particularly to be consulted: H. A. Gibbons, *The Foundations of the Ottoman Empire*, Oxford 1916, and F. Giese, *Das Problem der Entstehung des Osmanischen Reiches*, Z. S., vol. I. (1912), p. 246 sqq.; Köpr. Zāde Fu'ād, 'Othmānī İmparatorlukunun Kuruluşu Metelisi, in the weekly review *Hayât*, No. 11 and 12 (February 10 and 17, 1927).

5. Second period.

When Timur left Asia Minor again, he left the peninsula as divided as it had been hundred years before; the principalities on the west coast, as well as Ḳastamuni and Ḳaramān, had been given back to their former dynasts, one of whom was replaced in 1403 by the enterprising İsmir Oghlu Dünceid [q. v.]; two sons of Bāyazid, İsa and Muḥammad, were residing at Brusa and at Amasia respectively. Although the European possessions, where Süleimān resided, had been left untouched by the Tatars, the restoration of the Ottoman state had again its centre in Anatolia, where Muḥammad had been able in a short time to establish himself as master of a considerable territory, including the old capital Brusa. After that his first move was the reconquest of the European possessions that were held first by Süleimān and afterwards by Mūsā. Only after 1413 was Muḥammad I in a position to begin the gradual incorporation of the other Anatolian principalities into the newly restored state; this policy was followed by Murād II and by Muḥammad II. This time again the rounding off of the Anatolian territory was effected without much bloodshed, with the exception of the Ḳaramān Oghlu state, the old rivals of the 'Othmān Oghlu. But even here the Ottomans began

by following a remarkably conciliatory policy. The descendants of these dynasties were generally granted high military posts in Europe. Muḥammad II finished the conquest of Anatolia proper by the conquest of the empire of Trebizond in 1461 and when, at last, the Ḳaramān dynasty was extinguished in 1468, the Ottoman Empire stood face to face with the Ak Ḳoyunlu dynasty in the north and the Egyptian state in the south-east. The dangerous raid of the Ak Ḳoyunlu Uzun Hasan, in 1472, had not, however, the disastrous consequences of Timur's campaign, the Ottoman Empire being now more firmly established; under Bāyazid II this neighbour was succeeded by the young Ṣafawid dynasty of Persia; still, until the end of the reign of this Sultan, the Ottoman territory was not enlarged on the Asiatic front, though there were several inglorious frontier wars with the Mamlūk forces in Syria.

All through the reigns from Muḥammad I to Bāyazid II the chief military activity of the Ottomans was given to the establishing of the Ottoman power in Europe. The sultans themselves resided most of the time in Europe, where they led many campaigns in person. Already under Muḥammad I there broke out a conflict with Venice with the advance of the Turks in Albania and Morea, and under Murād II Hungary became the other chief Christian opponent, as a consequence of the Turkish raids and conquests in Serbia and Wallachia. These raids and conquests, as well as those in Albania and Morea, frequently were not ordered by the sultans themselves, but they were undertaken by the frontier chiefs. The first results were more often the occupation of a few towns, where a *pa hasıl* was appointed as chief of the garrison; most of the territory was left under the administration of the local rulers, who were responsible for the payment of the *harādj* in the form of a tribute. Also Constantinople and the rest of the other Byzantine possessions kept for a long time their semi-independence in this way and succeeded even several times in defying a siege. Gradually these strongholds of Christian political and cultural independence were taken; the capture of Constantinople in 1453, which made such a profound impression among the Turks as well as in the Occident, was only the realisation of a part of the political scheme of Muḥammad II, of bringing the whole Balkan peninsula under the direct government of the Ottoman state; at his death this scheme had nearly become a reality. There were still Venetian colonies in Morea and Albania, and in the north Belgrad was still held by the Hungarians, but even Bosnia was ruled by Turkish beys. The isles of the archipelago, except Rhodes, were incorporated in the same manner. Only the Danube principalities Wallachia and Moldavia and, since 1475, the Crimean Khanate had remained vassals.

During all this time the Christian powers had been scheming and planning crusades to expel the Turks from Europe, while trying also alliances with the Asiatic opponents of the Ottomans. But no really great enterprise was ever undertaken; only temporary damage was done by the Hungarian Hunyadi, the Wallachian Wlad Dracul, the Albanian Skander Beg [q. v.] and by some Venetian naval expeditions.

All these military successes in Europe would not have been possible without the strong base in Turkish Anatolia. Still more astonishing is per-

happened the permanence of the Turkish occupation. The reason may be sought mainly in the lack of any sufficiently great political Christian power in the much divided Balkan peninsula.

After the relatively peaceful reign of Bāyazīd II, there is no more question about Asia Minor or the Balkan Peninsula. The struggle continued in Albania and Morea, but had on the whole a local character. The empire was now strong enough to face its new Asiatic neighbours. The war waged against Persia by Selīm I was in a way a continuation on an international scale of the former internal struggle against the Shī'ī opposition in Asia Minor itself. This war secured Turkey the temporary possession of Aḡārbağdījan and the lasting domination over Kurdistan and Northern Mesopotamia. Very soon afterwards the Egyptian state of the Manlikas, with whom the Ottoman Empire had clashed under Bāyazīd II in a rather unglorious way, was incorporated by Selīm in one single campaign. The consequence was the extension of Turkish overlordship to the holy cities of Islām and soon to Yaman. Finally, under Suleimān I the Magnificent, the empire obtained its greatest extension by the conquest of the greater part of Hungary, one of the two great mediæval opponents in Europe; in the same campaign the Turks went even so far as to besiege Vienna. Only the other old rival, Venice, was not broken by the victorious empire. After Muhammad II's death, official wars with Venice had become rather an exception. The Ottoman empire never had acquired an absolute maritime superiority, and this weakness appeared almost immediately after the great period of conquest was over, in the battle of Lepanto. Rhodes was conquered, but Malta has never been Turkish and the maritime exploits of Kemal Re'is [q. v.] under Bāyazīd and those of Barbarossa Khair al-Dīn and others, which assured Turkey's political authority in the Suleimānian era on the North coast of Africa and in the Indian Ocean, never wholly lost the character of piracy. On the Asiatic front the continuation of the conflict with Persia led for the time to the conquest of Baghdad and 'Irāq, so that the sultan was now in reality *ṣifān al-barrain wa'l-bahrain*.

In the course of this second victorious period the inner religious and social evolution of the state had not been less astonishing than the enormous expansion of its territory. The originally somewhat dubious Islāmic orthodoxy had gradually converged towards an unimpeachable orthodox attitude of life among the higher classes; many Muhammadan jurists had found their way from eastern countries to the new cultural centres of the Ottomans and the jurists of Christian extraction (as e.g. Molla Khuraw) joined without reserve the leaders of the official form of Islām. Under this orthodox cover the sympathies for mystic organisations and doctrines continued to exist; the mystic orders and the derwishes were generally favoured and the ancient mystic traditions continued to be reflected in many points, such as in the proper names of persons. Very probably we must see a reminiscence of the older influence of mystic religious leaders in the state in the remarkable institution of the *Shaykh al-Islām* [q. v.] which first appears distinctly under Murād II and was gradually sanctioned by the *ṣultān*. On the other hand, the controversy with the more extremist Shī'ī under-current of mystic feelings, which existed of old in Asia Minor, has

several times taken the form of open revolts against the government, such as the rebellion connected with the name of Simawna Kaḡi Oghlu Badr al-Dīn (cf. Ibn Kaḡi Simawna and F. Babinger, in *IL*, xi.) in 1415, and the revolt of Shāh Kālī or Shāhān Kālī and his Khālī Bāgh under Bāyazīd II. This last revolt was intimately connected with the contemporaneous political-religious movement that led to the establishment of the Safawid dynasty in Persia. For this reason the Khālī Bāgh rebellion was also a grave danger to the existence of the Ottoman state itself, and this explains the ferocity with which under Selīm I the adherents of the Shī'a were persecuted. The attitude of the Muhammadan rulers towards the Christian and Jewish population followed the tolerant tradition; no one was compelled to embrace the Muhammadan faith, with the exception of the Christian children levied by the *devshirms*. It is true that many churches were converted into mosques — like Aya Sofia —, but the constitution of the Greek-Orthodox and of the Jewish *millet* as autonomous communities, immediately after the capture of Constantinople, is the most famous example of a policy that was constantly applied. Muhammadan fanaticism began only in the end of the xvth century.

The overwhelming importance of the person of the sultan for the existence of the state is still more accentuated during this period. This is shown by the menace of military revolts after the death of nearly every sultan and the artifices by which his death was kept secret until the arrival of his successor; also by the grave disturbances caused by pretenders [cf. *DIEM*] and the tradition of fratricide, inaugurated by Bāyazīd I, which was the necessary consequence of it. The supporting of Ottoman pretenders was justly considered as one of the most effective means at the hands of the Christian enemies of the empire. For the Christian subjects the conquest made little difference; after Muhammad had taken the Byzantine capital, he had taken for them all the attributes of their legitimate "basileus".

The wars of Timur had again caused great racial movements in Asia Minor, and in the times that followed it remained the policy of the sultans to transplant contingents of the population from one part of the empire to the other. In this way Constantinople — to which town now all the main military roads in Asia Minor were directed — was deliberately peopled with the population of different parts of Anatolia (Istanbul = Islambol), and in the same way Adrianople had become earlier an Islāmic town. Still the Turkish settled population in Rūm-ili has always lived side by side with the Christians, the relative proportions varying considerably in the different territories. The islamisation of large parts of the population in Bosnia and Albania had other causes.

Now it is especially this state of affairs in European Turkey that has been important for the development of the Ottoman political system that has found its highest achievement in the reign of Suleimān I. The beginnings of this new inner evolution of the Ottoman civilisation are to be sought in the reign of Murād II, parallel with the consolidation of the Ottoman type of religious orthodoxy. The new leading men in the state and in the army were now for the greater part Christian renegades of Albanian, Slav, Greek or even more western origin; the older families that had

come from Asia Minor, such as the Mikhāh Oghlu and the Ewrenos Oghlu, receded to the second place as owners of large fiefs on the Danube and in Thessalia; the high position of the Djandar Oghlu as viziers ended with the execution of Khalil Pasha shortly after the fall of Constantinople. The newly converted Christians served the state to their best, but the all-dominating authority of Islam prevented the formation of a hereditary nobility; statesmen and military commanders (as beglerbegs and sandjaks) were the slaves (*kul*) of the sovereign and much less independent than they had been in a former century. Less dependent was the class of the scholars and jurists who provided the ecclesiastical hierarchy with the *Shaykh al-Islām* at the head; among them there are signs of an ecclesiastical nobility. So there was formed an Ottoman ruling class composed for the greater part of non-Turkish elements; they were continually recruited from the ranks of the Christian renegades that were taken in war or by the *devshirme*-levy. Under these circumstances it was inevitable that the administrative institutions should show the influence of Byzantine ideas, as was also the case with the court organisation. By *Kānūn-nāmis*, of which those of Muhammad II and Süleimān I are the best known, the hierarchy of officials was minutely regulated.

Besides the older troops of irregular *ashuks* and *azabs*, the army consisted chiefly of the *spahis* — whose organisation was intimately connected with the military administration of the territory (cf. *Tümāk*) — and of the Janissaries who, in the time of Murād II, were for the first time (probably 1438) levied by the method of the *devshirme* [q.v.]; guns were for the first time used during the siege of Constantinople by Muhammad II. The fleet [cf. *KAPUDAN PAŞHA*] was mainly manned with *azabs*, besides Christian prisoners as galley-slaves, but had not by far the importance of the army.

The revenues of the state or rather of the sultan consisted for the most part of the constantly increasing *harāḍī* levied on non-Muhammadan subjects and of the tributes paid by the semi-independent states. The different kinds of customs-duties were equally considerable. Trade remained mainly in the hands of Greeks and, so far as foreign commerce was concerned, it was in the hands of the colonies of Venetian, Genoese and Florentine merchants. These colonies were treated in the same way as the indigenous non-Turkish communities; they were allowed considerable autonomy under their consuls, including consular jurisdiction. These privileges were granted by the sultans in the well-known form of "capitulations", in which were prescribed also the commercial duties to be paid by the foreigners, who, in accordance with the principles of Muhammadan Law, were considered as *muslimin*. On account of the various wars, those with Venice had to be renewed after each peace concluded (1454, 1479, 1502, 1540). Only afterwards the capitulations took the character of bilateral international treaties. It was after the same model that the famous capitulation of 1535 was granted to France, but the political side of this instrument was much more important than in the capitulations with the Italian republics; it is the beginning of the normalisation of Turkey's international position in the following period.

The civilisation of the Ottoman Empire of the later Middle Ages was not yet separated from central and western Europe by the wide gap that became characteristic for later centuries. It has even been pointed out that the friendly relations between Muhammad II and Italian princes and artists and his liking for pictorial art entitles him in a way to a place among the renaissance rulers of the time (Tschudi, *op. cit.* p. 19). Soon afterwards, however, the Muhammadan attitude to life began to be again more predominant.

6. Third Period (1566—1699).

At the end of the reign of Süleimān I the Ottoman Empire found itself between two powerful continental neighbours: the Austrian monarchy in Europe and the Safawid empire in Asia. In Europe the Turkish provinces of Bosnia and Hungary were the bulwarks against Austria, while further to the east the half-independent principalities of Transylvania, Wallachia and Moldavia, and the Tatar Crimea were allowed to exist; from the Turkish point of view also Poland with its Cossacks, and even Muscovy held similar intermediate positions between the two empires; during this period Turkey raised more than once claims to the suzerainty of the last-mentioned countries. In Asia the geographical situation did not allow for the existence of this intermediary kind of state, with the exception of Georgia, which was invaded and brought under Turkish authority in 1578. In Asia, however, the Turkish feudal system left places for a number of petty local rulers who were given the title of Pasha. They were found on the Persian frontier in Kurdistan (the princes of Bitlis), but also in Syria (the Druse emirs). The sharif of Mecca occupied likewise a vassal position, while Yaman, after its reconquest in 1568—1570, was again partly a more direct Ottoman possession. After 1550 the Turks had even obtained a footing in Maghawi on the African coast and had begun to interfere with Abyssinian affairs; the opportunities here came to an end after the unlucky war of 1578. Egypt was at this time still somewhat under the control of the Turkish Pasha [cf. *MAMLUKS*]; the Barbary states were nearly independent; the sharif of Morocco recognized in 1580 the authority of the Turkish sultan.

This general political system of the empire was maintained throughout the third period, a kind of equilibrium being established between the Ottoman Empire and the great continental powers.

Under Selim II, or rather under the administration of Mehmed Sokollu Pasha, Cyprus was conquered (1570—1571), but this conquest occasioned immediately the naval defeat in the battle of Lepanto [q.v.] in 1571, considered to be the first great military blow inflicted on the Turks. The impossibility of further military expansion brought about an inner weakening of the Empire that was marked on the whole by unsuccessful campaigns against Austria (defeat of Keresates in 1596) and against Persia (loss of Tabriz and Eriwan in 1603 and 1604) and found its expression in the unfavourable peace treaty of Zsitvatorok with Austria in 1606 and the peace of 1612 with Persia, then under the strong rule of Shah 'Abbās the Great. In the last decade of the 17th century, Transylvania and the Rumanian principalities even made themselves for some time independent; from 1572

Poland also played often an active rôle in the complicated political and military course of events on these northern frontiers of the Turkish Empire. The raids of the Cossacks in the Crimea had not yet the dangerous aspect of a century later, when the Muscovite power began to appear on the horizon. A favourable circumstance for Turkey was the weakening of Central Europe by the Thirty Years War; among the west-European countries the already existing friendly relations with France, followed in 1580 by England and in 1603 by Holland were on the whole profitable for the Empire, while Spain had ceased since the end of the century to be a serious maritime danger. In view of the never very strong maritime position of Turkey, the relations with Venice remained subject to surprises on both sides, such as the annexation of Cyprus; during the xvith century this was followed by the not less astonishing conquest of Crete (1645-1666) and about 1655 by the important Venetian conquests in Morea and in the archipelago, so that for a moment even Constantinople was threatened. Still the relations with Venice were on the whole friendly, Turkey being the stronger power on account of its continental position. On the Asiatic frontier Turkey's weakness led temporarily to the loss of Baghdad in 1623 and a renewed Persian danger. But here the old position of the Empire was restored by the revival of its military strength under Murâd IV; under his reign and after Shâh 'Abbâs' death Persia was invaded by Ottoman troops, Eriwân and Tabriz, and finally Baghdad reconquered (1638); in 1639 there began a long period of peace with Persia. After 1640 the stronger position of the Empire was used, as well as for the conquest of Crete, for strengthening the authority of the Porte in Transylvania and the Danube principalities, and for a fortification of the frontier to the north of the Black Sea, where Azov was taken from the Cossacks, now under Muscovite authority, and fortified in 1660. In this same year the hostilities with the now recovered Austria began again and took at first a crusading character; even France was this time an ally of Austria (Turkish defeat of St. Gothard 1664). But this was only a prelude to the final struggle with Austria that began in 1683 with the unsuccessful siege of Vienna and finished in 1688 with the loss of the Ottoman province of Hungary, and the invasion of the Balkan peninsula by Austrian armies, followed at last by the peace of Carlowitz (1699) in which Turkey, considerably weakened again, had to give up nearly the whole of Hungary and its claim on Transylvania, while it had to recognize the authority of Venice in Morea.

The weakening of the Ottoman Empire at the beginning of this period was mainly due to domestic reasons. During the xvith century it had already been observed that the Empire in this form could only subsist by continuous warfare; it had to be adapted now to peaceful conditions and this went beyond the possibilities of the personal rule of the sultan, which was based essentially on military conquest. The successors of Selim the Great were not equal to the task of meeting these new conditions; it is true that Muhammad III, 'Othmân II and Muhammad IV occasionally accompanied their armies, but Murâd IV was the last sultan to revive the military traditions of his dynasty, the last real ghâzi. So the sultans, whatever their personal qualities were, became less directly concerned

in the administration of the state, though their personality remained surrounded with the traditional veneration. This did not prevent, however, the deposition and murder of 'Othmân II in 1628, nor the deposition of Ibrahim in 1648 and of Muhammad IV in 1688. Instead of the sultans, the statesmen and generals became now more prominent, first in time and in importance Mehmed Sokollî Paşa [q. v.] under Selim II, Sinân Paşa [q. v.], the great enemy of the Austrians, under Muhammad III, Murâd Paşa [q. v.] and Khalîl Paşa [q. v.] under Ahmad I and 'Othmân II; and in the second half of the century the great members of the Köprülü family: Mehmed Paşa, his son Ahmad Paşa and their cousin Mustafa Paşa; to the same period belonged also Kara Mustafa Paşa [q. v.], the besieger of Vienna in 1683. These military statesmen belonged to the numerically feeble renegade class and were supporters of the typical Ottoman government system as it had been perfected under Selim I, but they did not represent any considerable group of the strongly diverging population of the empire. There was not yet an Ottoman-Turkish nation. Several other groups were competing with them in the direction of the state affairs; the most formidable being the military corps of the Janissaries and the Sipâhîs, who several times, especially after serious military defeats as at the time of the enthronement of Murâd IV in 1632 and of Muhammad IV's deposition in 1688, were masters of the political situation. The Janissaries were now even less recruited in the ancient way from the Christian populations, while many abuses had ruined the former discipline of their corps. Several grand viziers fell victims to their fury. Another powerful group, that made occasional use of these military elements, was the court circle, led several times by a powerful Walide Sultân or by a Kizlar Aghâ. Finally the 'ulama' with the Shâikh al-Islâm succeeded repeatedly in playing a decisive part in the direction of the state affairs (e.g. the muftî Sa'âd al-Dîn under Muhammad III); the deposition of Sultan Ibrahim was sanctioned by *fermân* of the Shâikh al-Islâm. These symptoms of decay were truly analysed in Koçî Bey's [q. v.] famous *Risâle*. Only Murâd IV was able to suppress, often by violent means, the influence of these different groups; he succeeded even in raising a new military force (the *Seğbân*) alongside of the Janissaries. In the capital there were several times outbursts of religious fanaticism directed against the Christians, as happened under Ibrahim I, but it cannot be said that political events were influenced by them; the great statesmen showed on the contrary a remarkable tolerance.

The non-Muslim element, though excluded from all direct influence on the government, had adapted itself to the circumstances. A new Greek aristocracy had arisen in Constantinople, which by wealth and intrigue had powerful relations in Turkish circles, as well as in the leading circles of the Christian principalities on the Danube; they likewise were able to control the nomination of the Greek patriarchs. To this time belongs also the definite turn of the Ottoman Greeks towards Greek orthodoxy under the influence of the patriarch Cyrillus Lucaris (executed in 1638); the consequence was a decisive rupture with the Roman Christian world and indirectly a strengthening of the Ottoman Empire. The Ottoman Turks had still many religious traditions in common with the Greeks, and Christian

saints were also venerated in Turkish circles. Next to the Greeks the Jewish element, considerably strengthened since the arrival of the Spanish and Portuguese Jews under Bayazid I, played a great social role, chiefly as bankers; the best known representative of this group was Joseph Nassy, the favourite of Selim II.

The lower classes in Asia Minor participated as little in the direction of the state as those of European Turkey. Some dangerous revolts proved, however, that the old religious traditions of the xiith and xivth century had not wholly disappeared. In 1599 began the movement of Kara Vaulâdî [q.v.] in Urfa; much more dangerous for the unity of the Empire was the revolt of Kalender Oghlu in Şarukhân (1606), who ruled for some years independently over a great part of western Anatolia, until he was crushed by Murâd Pasha. Soon afterwards, 1623—1628, took place the insurrection of Abâza [q.v.], the relentless persecutor of the Janissaries. Farther to the east the movement for independence under the Kurd Djanbulat [q.v.] in Northern Syria like that of the Druse Fakhr al-Dîn [q.v.] in the Lebanon had to be tolerated to some extent. The inclination to mysticism and veneration for mystic shaikhs (such as Mahmûd of Skutari, where several grand viziers found asylum under 'Othmân II) continued its hold on all classes of the population; several new mystic orders were founded during this period. The foreign trade remained as before in the hands of foreigners, Venetians and other Italians; of Italian origin were also many of the leading personalities of the Turkish navy that was rebuilt after the battle of Lepanto, such as Cigâle Zâde Sinân Pasha [q.v.].

7. Fourth period (1699—1839).

During the xviiith century the inevitable action of the elements of decay began to be felt more and more in the empire and brought about a situation that has been, too superficially, described as decadence. The causes of the decline were to be sought mainly within the body politic; they were still the consequences of the transition from a conquering state to a peaceful administration, but they were now ever more exploited by foreign powers. Among these Austria was in the beginning still a formidable opponent; after the war of 1716—1718 the peace of Passarowitz meant the loss of what had been left to Turkey of Hungary and Transylvania, and even of Belgrad, but the peace of Belgrad in 1739, in which this town itself was restored, proved that from the Austrian side the real danger had ceased. Moreover, in 1715, Morea had been reconquered from the Venetians by the grand vizier Dînn 'Alî Pasha, which success had shown that Venice also was no more to be feared. A new and formidable enemy had risen, however, in the form of the now much enlarged Russia, which, to the Orthodox Christians of Rumania and Servia, seemed a more welcome liberator than even Austria had ever been. The war of 1711 with Peter I, intimately connected with the coming of Charles XII of Sweden to Turkey, ended with a Turkish victory at Poltava and brought back Azov to the Empire in 1712, and the war of 1732, equally successfully closed by the already mentioned treaty of Belgrad in 1739, was not yet disastrous for Turkey; Russian navigation in the Black Sea was even formally prohibited. After 1739 there followed a period of peace for the empire in Europe. The military and

peaceful relations with Persia during this time were mainly influenced by the political events in that empire, by which the Turks sought to profit. The successes of Nadir Shâh in 1730 were for a moment threatening; they even occasioned the deposition of Ahmad III, but at last the peace of 1736 restored the frontiers of the time of Murâd IV. The real military weakness of the Ottoman Empire was finally revealed in the conflict with Russia that had begun in 1768 with a Turkish declaration of war; this war brought the Russian armies deep into Bulgaria and was ended by the memorable treaty of Küçük Kainardî in 1774, by which the Crimea became wholly independent (to be annexed in 1783 by Russia), while Turkey had to recognize the Russian protectorate in the Danube principalities. The right of religious protection accorded to the sultan with regard to the Muhammadans in the Crimea, was the beginning of the religious claims of Turkey, that were to acquire such importance in its international relations in the xixth century. After an equally unhappy war with Kerim Khân in Persia (1776), in which Basra was temporarily lost, the Ottoman Empire again suffered serious losses to the Russians by the war of 1784—1792, closed by the peace of Jassy; this time the Dniepr became the frontier between the two Empires. Austria also had tried to profit by this war and occupied Bukarest, but in the separate peace of Zsitowa (1791) Austria did not gain the expected profits.

During all this time the friendly relations with the western countries, France, England and Holland, to which Sweden was added in 1737, Denmark in 1756 and Prussia in 1763, had often been of great value to Turkey by the services rendered by them as intermediaries in the peace negotiations; especially France, which obtained in 1740 its well-known final capitulation, had considerable influence by its right to protect the Roman Catholics. At the end of the century, however, the Ottoman Empire began to be a factor in the new imperialistic schemes of the western powers, in connection with their colonial acquisitions and political influences in Southern Asia. These colonial interests did not show at that time any wish to possess Ottoman territory, but the rising colonial powers needed between themselves and their possessions a state over which they could exert control, since they saw the necessity of communicating with the Persian Gulf and India by a more direct way than the southern sea-route. The more immediate cause of the occupation of Egypt by the French in 1798 was the rivalry between France and England; this made for the moment England and even Russia allies of Turkey. But in 1802 peace with France was restored, to be followed some years later by a new war with Russia and hostilities with England (the English fleet before the capital in 1807). By the peace of Bukarest (1812) the Ottoman Empire again lost territory (Bessarabia) to Russia, while England, after the elimination of France's colonial power in India and the weakening of the Ottoman authority in Egypt, was for the moment satisfied. The Empire was again severely affected by the ups and downs of the Greek insurrection, that began in 1820 and ended in 1830 with the recognition of the independence of Greece, not, however, before a disastrous war with Russia — that had played from the beginning an important part in the Greek

troubles — had obliged Turkey to conclude the peace of Adrianople (1829). Still, the action of the other European powers had prevented Russia from realising its territorial aims; it had to be contented with a strong political ascendancy over Turkey, as was proved in 1833 by the treaty of Hünkâr İskelesi, which, in a secret article, forced Turkey to become Russia's ally in the matter of the navigation in the Black Sea. This unnatural alliance with Russia was occasioned by the action of Mehmed 'Ali of Egypt (begun in 1831), who threatened for a moment to deprive the Empire of Egypt, Syria and Cilicia, but led at the end only to the recognition of Egypt as a privileged part of the Empire under a hereditary dynasty (1840). This time again the intervention of the European powers had been decisive for the territorial status of the empire. The existence of the Ottoman Empire was justly considered as a political necessity; already in 1789 there had been a treaty between Prussia and Austria to guarantee the northern frontiers of the Empire. About the year 1830, moreover, Turkey concluded several new treaties, on the lines of the capitulations, with the United States of America, Belgium, Portugal and Spain. The conquest of Algiers by France (1827—1857) could hardly be called a loss to the empire.

The administrative system of the empire remained much the same during this period; in every direction the central authority was however losing its influence. In the beginning of the xviiith century this was not yet very perceptible. Constantinople was still the brilliant capital of a powerful empire, where the court of Ahmad III set the example of a luxurious life; to this time falls the curious passion for the cultivation of tulips, that makes the epoch known as *lale devri*. To this period also belongs the expansion of higher literary, specifically Ottoman, culture beyond the class of the 'ulamā'; a new class of literates came into existence, who were the precursors of the intellectual Turkish middle class that originated in the beginning of the xixth century. The beginning of Turkish printing in 1727 is likewise intimately connected with the new cultural orientation of the higher classes. Most of them served the government in higher or lower functions, and from this class have come forth grand viziers, such as Dâvid İbrâhîm and Râghîb Paşa. This changed considerably the ancient military character of the government system; the home and foreign affairs of the empire were now treated in a more statesmanlike way by the Sublime Porte (Bâb-ı 'Âli), and the modest office of the Re'is al-Kuttâb [q. v.] now became more and more important since the holders began to act as competent ministers of foreign affairs; one of them, Ahmad Rasîm, is well known as one of the first Ottoman ambassadors. Still this new class of functionaries was, according to tradition, the sultan's slaves; only under Mahmûd II was their position regulated in a more liberal way. The new cultivated upper classes had manifold relations with the cultivated Greek Phanariots of their time, many of whom occupied high offices in the government service, especially as dragomans (as e.g. Nikusios and Mavrocordat); there were no ties with the lower Muhammadan classes. Under these governing functionaries the Janissaries and Sipâhîs, now that their discipline was loosened, more than once interfered in a dangerous way. The Janissary rebellion under Patrona Khalil in 1730, which cost Ahmad III

his throne, seems to have been directed mainly against this new aristocracy. After Ahmad III court life became much more sober. The ruling classes and most of the sultans with them had begun to realise the weakness of the empire and sought now a remedy in the introduction of military reforms, in which they were aided by several foreigners, of whom the Frenchman Bonneval (died in 1747) is the best known. Another French officer, de Tott, worked in the same direction under Mustafa III, but the Russian war that broke out under this sultan showed how little effective the measures had been. Selim III undertook the army reforms with much more energy, but even in his time very few leading people had real understanding for these things; the institution of the new troops (*nizâm-ı cedid*) provoked another formidable rebellion of the Janissaries, seconded by a large percentage of the 'ulamâ'. Mahmûd II, finally, took up the question of reforms with more deliberateness; this sultan finally concluded there was no other way of imposing the reforms than by the famous massacre of the Janissaries in Constantinople on June 16, 1826; at the same time the Bektîshî derwish order was persecuted. The events showed, however, that so far more destructive than constructive work had been done; still this sultan succeeded at least in subjecting a number of powerful semi-independent local dynasts. The weakening of the central authority had indeed been characteristic of the Ottoman Empire of the xviiith century. Algiers, Tunis and Tripoli were ruled by hereditary Beys; only Tripoli was brought by Mahmûd again under the direct authority of the Porte. Egypt had seen in 1767 the usurpation of 'Alî Bey. In Rûm-ili some powerful vassals had come forth from the ranks of the great timariots: they were called *a'yân*. Under Selim III and Mahmûd II the most noteworthy were 'Alî Paşa of Vanîna and Farvân Oghlu at Widdin. In Anatolia there had been in 1739 the dangerous insurrection of Sarî Beg Oghlu, after which the so-called *dere-beys* were as good as independent, as was also the case in Kurdistan. In Mesopotamia and 'Irâk the same conditions were prevalent; in 1706 was formed in 'Irâk the powerful Bedonî confederation of the Muntakî, and under Selim III Baghdâd was ruled autocratically by Sulaimân Paşa (died in 1810). In Syria the Druses of the Lebanon had their own emirs, and on the coast ruled, in Selim III's time, Dîarrîr Paşa [q. v.] of 'Akka. In Arabia the Wahhîdîs had taken Mecca in 1803, and Yaman and 'Asir could hardly be called parts of the Turkish empire. On the islands of the archipelago hardly any Turks were to be found; here as in Syria there was strong European influence. Still, although the Ottoman real power had sunk everywhere, the Ottoman type of administration had put its seal on the cultural life of all these different regions; the great Ottoman tradition held them together and enabled Mahmûd II and the statesmen who, after him, continued the centralisation of the Empire, to keep together their political unity for a century more to come.

8. Fifth period (1839—1922).

In this period the transition of the Ottoman Empire to a national Turkish state was completed, but in a way not intended by the Christian powers, nor expected by the Turkish ruling classes themselves. The new course followed in the admini-

stration by the gradual application of the *Tanzimat* [q. v.] had meant to establish, mainly after the French model, a modern state where all citizens, whatever their religion, had equal political and civil rights, under the direct authority of the Ottoman Government; only Egypt, the Danube principalities and Serbia (since 1815) and in Asia the *Hijaz* were allowed a privileged position. The ideal of the new Ottoman State was, however, far from the democratic ideals that worked in Europe and which by now began to show their effect, especially among the Christian populations. The democratic revolutionary movement of 1849 in Moldavia and Wallachia was equally opposed by Turkey and by Russia, but had as result the convention of Balta Liman, by which the Turkish authority in these principalities was reduced to a negligible point. When Russia, as a result of a conflict over the holy places in Jerusalem, invaded again the principalities, in 1853, the Ottoman Empire found England and France at its side; this was the beginning of the Crimean war. By the peace treaty of Paris (1856) the integrity of the Empire seemed secured. In reality the intervention of England and France and soon again of Russia was now more firmly established than ever. This was not only the case in political questions, as for instance the armed intervention in the Syrian troubles of 1845 and 1860, after the troubles of Djidda in 1858, and in the international regulation of the position of Crete in 1866. For the influence of the foreign powers was likewise extended to many points of inner administration, which kind of intervention was made possible by the capitulations. These originally unilateral privileges were looked upon now as bilateral treaties, but their contents had become incompatible with the new state conception that the *Tanzimat* tried to realize. From 1856, indeed, the Porte had tried in vain to get rid of this international servitude, which, at the end of the sixteenth century, had taken the character of a collective tutelage of all countries possessing capitulations. Not till 1914 did the conflict between the European powers enable the Turkish government to put the capitulations aside.

In 1862 the Ottoman government was able to restore its authority in Montenegro and the Herzegovina, while, on the other hand, Serbia, and the two Danube principalities, since 1861 united in one state, recovered a nearly complete independence in 1865. Twelve years later the Bulgarian troubles again brought about an armed conflict with Russia, which country, in 1870, had already broken the conventions of 1856 about the Black Sea. The preliminaries of San Stefano (1878), mitigated by the Treaty of Berlin (1879), brought the definite loss of Serbia, Montenegro and Rumania, while Bulgaria was constituted a semi-dependent principality; on the Caucasian frontier Turkey lost Kars and Batum, and Great Britain obtained the administration of the Isle of Cyprus. This abandonment of England's policy hitherto followed of respecting the integrity of Ottoman territory was followed in 1882 by the occupation of Egypt [cf. *KHEDIW*]. The remaining dates in the dismemberment of Turkey in Europe are the Greco-Turkish war (1897), by which the Greek territory was enlarged towards the north, the autonomy of Crete (1898) and, after the deposition of 'Abd al-Hamid, in 1909 the declaration of independence of Bulgaria and the annexation of Bosnia and the Herzegovina

by Austria. Then, after Tripoli had been lost in the war with Italy (1912, peace of Lausanne), the Balkan war of 1912-1913 reduced the territory of Turkey in Europe to Eastern Thrace, including Adrianople, which town had even been occupied for some time by the Bulgarians.

During the sixteenth century the relations with Persia had been on the whole peaceful; conflicts were only occasioned by frontier questions, such as the dispute about the authority over the Kurdish territory of Salcimāniye, which was settled in 1847 in favour of Turkey. The territory round the Persian Gulf had come more and more under the control of the British, but the territorial status in Asia remained for a long time unchanged. In the meantime Turkey had been drawn gradually into the economic expansion schemes of the German Empire as manifested by the project of the Baghdad railway; this diminished England's interest in the territorial integrity of the Ottoman State. So, when in the first year of the world war, Turkey was not able to maintain its neutrality and joined the central powers, Russia and England co-operated for the first time to take away Turkish territory. The attempts of the Allies to enter the Dardanelles by sea and by land failed however during the war; but the combined action of the French and English troops in Palestine and Syria, and the different English campaigns in Iraq and Mesopotamia succeeded at last in conquering these provinces from the Ottoman armies. In Syria they were aided by forces of the Sharif of Mecca, who had made himself independent in 1917 as King of the *Hijaz*. The Russians, in the meantime, had made considerable progress in north-eastern Anatolia, but from this side the danger came abruptly to an end with the Russian Revolution, and the peace of Brest-Litovsk (August 3, 1918) gave back to Turkey the lost territory, besides Kars, Ardahan and Batum. Soon afterwards the war with the other powers came to an end by the armistice of Mudros (October 30, 1918). Subsequently Constantinople was occupied by Allied troops; France occupied the whole of northern Syria and Cilicia, England occupied the not yet conquered parts of northern Mesopotamia, including Mosul, and Italian troops landed in Adalia. Greece was allowed to occupy eastern Thrace and Smyrna in May 1915. All this the Constantinople government had to witness passively. The Turkish parliament, convoked in January 1920, took for a moment a firmer attitude by adopting the so-called National Pact (*millet-i Milli*); but when in March the occupation of Constantinople was rendered more severe, the parliament was dissolved. Finally, in August, the Ottoman Government was compelled to sign the Treaty of Sevres, by which large parts of the remaining Ottoman territory, including Constantinople and Smyrna, were brought under the control of one or more foreign powers. In the meantime another, interior, enemy had risen against the Ottoman Government as a result of the organized national opposition against the foreign occupations, especially the Greeks' landing in Smyrna. In the course of 1920 the Constantinople government lost gradually all control over Anatolia and the measures undertaken with Allied help to restore its authority failed. Under the growing successes of the nationalists the authority of the Sultan's government dwindled down ever more, and the Great National Assembly of Angora was able at last to pronounce on November 1, 1922 the abolition of the Constan-

tinople Government and the deposition of Sultan Muhammad VI Wahid al-Din. This meant nothing less than the extinction of the Ottoman Empire and its dynasty. Constantinople and eastern Thrace were occupied by nationalist troops and the last Sultan left his capital, that now ceased to be the capital of Turkey. The only remnant of the dynastic tradition was that 'Abd al-Medjid, son of Sultan 'Abd al-'Aziz, continued to reside in Constantinople as Khalifa. This dignity was abolished by decree of the Great National Assembly of March 2, 1924; 'Abd al-Medjid, as well as all other members of the dynasty of 'Othman were at the same time banished from Turkey.

Such was the outcome of a long series of events, in which the inner development of the empire played no less a part than the outward political circumstances. The "tanjimat" period, in fact, was a no less powerful factor in the dissolution than the political interest of foreign powers. The "tanjimat" was a more deliberate continuation of the reforming measures under Selim III and Mahmud II and it was by no means the execution of a programme supported by a large group of the population. Rasid Pasha, 'Ali Pasha and their helpers wanted to turn Turkey into a modern state ruled by a council of ministers, whose president kept the title of *pad-i a'zam*, but their methods were those of an absolute government in the name of the sultans, who did not in the beginning interfere. When, however, the first real constitution was elaborated by Midhat Pasha, it happened that the new Sultan 'Abd al-Hamid preferred to govern himself, and with the same absolutist methods as his predecessors; only his aim became ever less the copying of a western European state, but rather the strengthening and the securing of the position of the sovereign, to which end there was finally developed the notorious system of censorship and espionage which has made known this period in Turkish history as *devir-i istihlal*. This period cannot be called reactionary in that it abolished the institutions of the "tanjimat"; it opposed only some consequences of the reforms. The reforms had brought into existence a middle class of intellectuals of Turkish speech and Islamic religious tradition, mostly divided between the army and the state functionaries and, in a less degree, the 'ulamā'. These intellectuals, of very different extraction, had developed a new ideal of patriotism, as reflected most eloquently in Namik Kemal's *Watan*, and they had begun to form a public opinion that claimed a certain influence in the government of the state. About this time was also born the Turkish daily press (cf. *QARIDA*). Gradually, as this social group took more definite forms, it became ever more separated from the different groups of the Christian and Jewish population, and also from the non-Turkish speaking Muhammadans in the Asiatic provinces. At the same time, however, the general religious controversy between Christianity and Islam had been deepened since the beginning of the sixteenth century as a result of the subjection of many Muhammadan countries to the rule of Christian powers. By this process was generated the pan-Islamic feeling and Constantinople, as the capital of the relatively most powerful independent Islamic state, became the political capital of Islam. With a great many of the Turkish intellectuals, and among them chiefly the 'ulamā', the pan-Islamic feeling surpassed the still somewhat vague patriotism.

Moreover the Islamic sentiment found sympathy with the lower classes of the Turkish population, still strongly imbued with mystical traditions and with the non-Turkish Muhammadans of the Empire. 'Abd al-Hamid, while emphasizing his dignity as Khalifa, relied mainly on Islamic sentiment, though, in course of time, the persons who surrounded the ever more suspicious monarch came to be of the worst kind. Utterances of patriotism were opposed in the most drastic way and many intellectuals had to take refuge abroad. The growing opposition against the *istihlal* found at last a means of organizing itself in the province of Macedonia, since 1906 governed by a Turkish governor under European control. Saloniki became the centre of the new patriotic, more conscious, Young Turkish movement, led by the Committee of Unity and Progress (*ittihad-ı ısmailiyye*) and supported to a great extent by the army. Its influence obliged the sultan to promulgate again the constitution of Midhat Pasha on June 24, 1908 and to abolish at once the onerous system of censorship and espionage. In November the first Ottoman parliament came together, but in the troubled years that followed this parliament never had the opportunity to exert a real influence on the government. On April 13, 1909, followed an attempt to reestablish the Sultan's former authority; this time the Young Turkish cause could only be saved by the occupation of the capital by the Macedonian army and the deposition of the Sultan (April 27). Then, for a time, Ottomanism became the political ideal, meaning the equality of all Islamic and non-Islamic elements in the state. But it soon appeared that these elements were already too much estranged from each other, so that the foundation of a strong state on these principles became impossible. The Young Turks, under the influence of the ideas of Pan-Turkism, began now a policy with the final object of making the Ottoman Empire a state where the Turkish element should be predominant; they turned to the lower Turkish speaking classes, especially in Anatolia, to form a real Turkish nation. Pan-Islamism, too, was propagated again by several persons as a way of attaining this aim, but this course was gradually abandoned, although used occasionally for outward political manifestations. The very unfavourable international development after the revolution, however, brought the Young Turkish rulers to measures that certainly were not originally on the programme, such as the Armenian massacres during the war and the severe government in Syria. And as a consequence of the final loss of nearly all non-Turkish territory in the war, Turkish nationalism was born at last, the simplest and at the same time the most effective form of Turkish patriotism, not hampered by any ideas of religion or original racial connections.

The statesmen who had carried out the "Tanjimat" programme had been careful not to offend the religious scruples of the leaders of orthodox Islam. In spite of the remonstrances of foreign representatives no measures were taken that were in direct conflict with the *sharia*, though the application in practice might have been changed. The *sharia* was also the basis of the new Civil Code or *Medjelle* [q.v.]. In Midhat's constitution, Islam was declared the state religion and the Shaikh al-Islam was given a rank as high as the grand-vizier. This wise religious policy could not prevent, however, occasional religious outbursts of which

Christians were the victims, as in 1858 at Djidda and in 1860 at Damascus, both places situated outside the purely Turkish provinces. Under 'Abd al-Hamid religious activity was mainly under the influence of pan-Islamism, shown in the various attempts to enter into relations with Muhammadans in all parts of the world. Even the Young Turkish government did not refrain from proclaiming the Holy War on its entering into the world war. In their inner administration the Young Turks clearly opposed the influence of the religious authorities, as was proved by their attempt in 1917 to bring the medreses under the administration of the ministry of Public Instruction. Another break with the Islamic tradition was the reform of the calendar. In 1789 the Greek Julian calendar had already been introduced officially for the financial administration but by a curious compromise the era of the Hijra (*senc-i millîye*) was preserved; and in 1917 the Gregorian calendar was adopted. The Christian era came gradually into use after the war.

It was also by the "Tanziimat" that domestic administration was separated from the military by the laws concerning the *vilayets*. The chief occupation of the home department was still for a long time the tax-gathering. The europeanisation and centralisation of the financial system proved to be one of the chief difficulties, as a reliable corps of functionaries had to be created at the same time. After the Crimean war, Turkey was able to conclude a number of foreign loans, but the money was not well administered nor well used. In 1876 a state bankruptcy had to be declared with foreign intervention as a consequence and the establishment of the service of the Public Debt, which was very much resented in all Turkish circles. A serious hindrance for the recovery of the finances was also the antiquated custom rules of the capitulations, although the original dues of 3% were several times raised. After the Revolution, however, the greatest difficulties seemed to have been overcome.

The new Turkish army created gradually by conscription, after the extinction of the Janissaries, had during this period many occasions to show its valour. It contributed considerably to the strengthening of the patriotic Turkish spirit and played an important role in the Revolution. After 1856 it was theoretically admitted that Christians and Jews also could be enrolled, but in practice they always liberated themselves by paying an exemption tax. It was only after the revolution that these non-Turkish elements also became Turkish soldiers.

9. The national Turkish state (since 1922).

The nucleus of the new Turkish state was the opposition to the foreign occupations after the armistice of Mudros. The organisation of the opposition began in 1919 under the leadership of Mustafa Kemal Pasha, who had gone at first to Asia Minor as army inspector. The first stage was the Congress of Erzurum (July 23, 1919), followed by the Congress of Sivas (September 11). Here a Representative Committee (*hey'et-i temhiliye*) was formed under the presidency of Mustafa Kemal, and this Committee was charged with the execution of the new national programme; the armed opposition of the *hümayt millîye* against the occupation of Smyrna was supported and the landing of English

troops in Samsun, as well as the attack on Iznik from Constantinople were frustrated. In 1920, after the Constantinople parliament had been dissolved, many deputies escaped to Asia Minor, where in Ankara, on April 23, the Grand National Assembly of Turkey was convoked by the Representative Committee. The Assembly gave itself legislative and executive powers and appointed a governing committee (*hey'et-i vukûfiye*) under Kemal Pasha's presidency. In 1921 began the struggle with the Greek troops (battles of Inönü on January 11 and March 31), followed in July by a Greek advance as far as Eskişehir. This advance was ended by a Greek defeat on September 13. In the meantime, the new national government had entered into relations with the Allies; by the treaty of November 20, 1921, France restored Cilicia. As other negotiations did not lead to definite results, the Ankara government decided in August 1922 on an attack on the Greek forces and gained a decisive victory at Dumlupınar; on September 9 Smyrna was recovered and for a short time it seemed that Constantinople was threatened. By the armistice of Mudania (October 10) the national government obtained the right to occupy Thrace and Constantinople, which was effected in the following weeks. Therewith the war was finished, and after difficult negotiations the peace treaty of Lausanne (July 23, 1923) established peaceful relations between the Allies and the new Turkey, this country being recognized as a completely independent state. The peace treaty had left undecided the question of the wilâyet of Mosul, the restitution of which was claimed by the Turks; after great efforts of the League of Nations, Turkey and England came at last to an arrangement by which Mosul was left to Iraq (June 5, 1926). The new Turkey had already concluded a consular treaty with Russia in November 1922; after the peace of Lausanne relations of friendship and commerce were successively renewed with other countries. The relations with England and Russia are now the most important in Turkish foreign policy.

Since the Turkish constitution of April 20, 1924, Turkey is a Republic. Ghâzî Mustafa Kemal Pasha has been state president (*re'is-i cumhûriyet*) from the beginning. Constantinople has fallen from the rank of capital and has been replaced by Ankara, the Medina of the new Turkey. The Grand National Assembly has displayed since 1922 a considerable legislative activity in order to adapt the country to its new conditions and to modernise its institutions. In religious matters the new rulers have taken deliberately the way of laicization, after the abolition of the Caliphate in March 1924. There is no longer a *Shâikh al-Islâm* and no Minister of *Evkâf*.

In September 1925 the *Tekkes* of the mystic orders were closed and these orders themselves interdicted. These measures, directed against the traditional popular forms of religious expression, were a consequence of the great rebellion of the Kurds under Shâikh Sa'îd, which began at the end of 1924. Similarly in September 1925 the *fez* was abolished as head-dress; only the "ulama" were henceforth allowed to wear the turban. A noteworthy reform was the official introduction of the Latin alphabet and the abolition of the use of Arabic letters in 1928, which measure had also an anti-clerical aspect. The principal aim of these and other measures is, to raise the Turkish people to a higher cultural level;

their application has repeatedly provoked resistance in several parts of the country among circles attached to traditional institutions. Still the national evolution aimed at by the republican government has in any case more chances of success than ever before, as the large majority of the population is now really Turkish or turkicised. Many *wahhajir*'s had returned already after the Balkan war to Asia Minor and the population exchanges with Greece have likewise increased the Turkish majority.

A comprehensive collection of the historical facts since 1918 is to be found in G. Jaschke and E. Pritsch, *Die Türkei seit dem Weltkriege, Geschichtskalender 1918—1928*, in *Die Welt des Islams*, 2, 1927—1929, containing also extensive bibliographical notes on the new Turkey. An independent survey of this period is contained in the article *Türkiye Dönüşümü*, in Khalil Edhem, *Dünya-i İslamiye*, İstanbul 1927, p. 334.

Bibliography: Among the sources of Ottoman political history the historiographical literature of the Ottoman Turks themselves takes the first place. For this literature it is sufficient to refer to F. Babinger, *Die Geschichtsschreiber der Osmanen und ihre Werke*, Leipzig 1927. The study of documentary sources is still in its beginnings; historical documents have been published in various places, as in the *T. O. E. M.* (*T. T. E. M.*) and in the works of the Turkish historian Ahmed Refik. Some of the *Gâzî-nâmeler* have been published in *T. O. E. M.* and other Turkish publications. For the treaties of the Ottoman Empire a most valuable collection is to be found in Gabriel Effendi Noradounghian, *Recueil d'Actes Internationaux de l'Empire Ottoman*, iv. vols., Paris 1897—1903. On the epigraphical sources there are important monographs, such as those of Khalil Edhem and the more recent publications of Muhârek Ghalib. The chief work on Ottoman Numismatics is still İsmâ'il Ghalib, *Taşınmaz Mevâkîf-i 'Othmânîye*, Constantinople 1307, besides other publications (such as Ahmed Refik, *'Othmânî İmparatorluğunda Mevâkîf*, in *T. T. E. M.*, No. 6, 7, 8, 10; *British Museum Catal. Oriental Coins*, vol. viii.).

Of non-Turkish literary sources the Oriental ones have been partly treated by Babinger in his bibliographical work. Among the Western sources the Byzantine historians are of extraordinary importance for the first centuries of the Ottoman Empire (Phrantzes, Ducas, Chalcocondyles, Critobulos). Since the xvth century a very important place is also taken by the *Relazioni* of the Venetian bailios, to be consulted in the great publications of Albéri (Florence 1839—1865) and Barozzi and Berchet (Venice 1856—1877). To them were added in course of time the reports of the representatives of other governments that entered into relations with the Ottoman Porte. To the same category may be reckoned the numerous descriptions of travels in the Ottoman Empire by European travellers, beginning in the xvth century. Not sharply separated from the travel literature are the many descriptions of the Turks and of the Ottoman Empire, of which the best known is d'Ohsson, *Tableau Général de l'Empire Ottoman*, vol. i.—iii., Paris 1787—1820. This kind of literature continued all through the xixth century (the important works of Ubbelini) and the beginning of the xxth century.

The first great "general work on Ottoman Turkish history was Josef von Hammer's *Geschichte des osmanischen Reiches*, vol. i.—x., Pest 1827—1835; zweite verbesserte Ausgabe, vol. i.—iv., Pest 1834—1836 (French translation by J. J. Hellert, *Histoire de l'Empire Ottoman*, vol. i.—ix., Paris 1835—1843). This work is for the greater part based on Turkish literary sources and ends with the peace of Küçük Kainardji in 1774; vol. x. contains an extensive list of works concerning Ottoman History, that had appeared in Europe until 1774. A work of the same scope is J. W. Zinkeisen, *Geschichte des Osmanischen Reiches in Europa*, vol. i.—vii. (until 1812), Hamburg 1840 and Gotha 1854—1863; Zinkeisen uses Western sources much more than von Hammer, but does not draw directly from original Turkish sources. The same is the case with N. Jorga, *Geschichte des Osmanischen Reiches*, vol. i.—v. (until 1912), Gotha 1908—1913. The *Histoire de l'Empire Ottoman* of de la Jonquière, vol. i.—ii., Paris 1914, is important for its historical treatment of the end of the xixth and the beginning of the xxth century. Among the several works that treat only a certain period of Ottoman history may be mentioned G. Rosen, *Geschichte der Türkei* (1826—1856), Leipzig 1866.

As a result of the greater interest in Turkish history after the war, there began to be published in 1922 the *Mitteilungen zur Osmanischen Geschichte*, by F. von Kraelitz and P. Wittek; it is much to be regretted that this publication has had to cease after only two years.

Ottoman history has begun to be studied more and more in Turkey itself since the revolution of 1908. Since 1910 was published the *Türkî-i 'Othmânî Endjümeni Mecmû'atı*, the name of which was changed, after the war, to *Türk Türkî Endjümeni Mecmû'atı*; the last number in Arabic script was No. 19 (96). This valuable publication contains a great number of historical contributions, but other publications too (such as the *mecmû'a* of the Literary Faculty and the two vols. of *Türkiyat Mecmû'atı*, İstanbul 1925 and 1928) contain important articles on historical subjects. The *Türkî Endjümeni* has made possible, moreover, the publication of considerable historical monographs in its series *Kulliyât*. A comprehensive survey of recent historical studies in Turkey is to be found in the series of articles by P. Wittek in *O.L.Z.* under the title *Neuere wissenschaftliche Literatur in osmanisch-türkischer Sprache* (since 1928). A complete new History of the Ottoman Empire has not yet been written in Turkey; there has already appeared, however, the first volume of an *'Othmânî Türkî-i* by Nedjib 'Asim and Mehmed 'Arif, İstanbul 1335 (1917).

(J. H. KRAMERS)

TÜRKÜ is the usual name for the folk-song in Ottoman Turkish. It is to be distinguished from *manî* [q. v.] on the one hand and from *şarh*, on the other. The distinction between *türkü* and *manî* lies in the fact that the former are polytrophic and the latter monostrophic. This distinction is not however always observed. In many districts of Ottoman Turkish the people know only the name *türkü* and use it without distinction in speaking of mono- or polytrophic songs. As to the distinction between *türkü* and *şarh*, the

former are genuine folk-songs, the latter more artificial in character. The former go back to proto-Turkish models and have marked analogies among other Turkish peoples, while the latter belong to the sphere of Muslim culture and follows Arabic and Persian models. The language of the *türkü* is therefore as a rule much purer Turkish than that of the *şarkî*.

As to the form of the *türkü* it is written in a syllabic rhythm or accented syllable rhythm in rhymed strophes. The single lines contain 7 to 15 syllables; the seven (4-3, 3-4, rarely 2-3-2) and the eleven syllables (usually 4-4-3 and 6-5) are the most frequent. It is worth noting that the nine syllabled form, so popular among the Kasas Tatars, is not found among the Ottomans. The rhyme is in the great majority of cases purely grammatical and owes its origin, as in Turkish generally, to the combination of two factors: the construction of the strophe in two parts and the linguistic conditions of the Turkish language. The effect of the former was to cause the Turkish strophe to fall into two rigidly parallel sentences; of the latter that these sentences, especially towards the end, represent two series of grammatical forms corresponding to one another. With the agglutinative character of the Turkish language however such forms must rhyme with one another. Turkish rhyme is therefore as a rule polysyllabic. Rhymes extending over three or more final syllables are not at all rare.

The strophes of the *türkü* number two, three or four lines; three lined strophes are the most common and are the most characteristic of Ottoman poetry in general. The three lined strophe with the same rhyme *aaa* throughout seems to have arisen out of the quatrain common to all the Turkish languages rhyming *aaa* by dropping the third unrhymed line. This as a rule destroys the bipartite character of the strophe. The single separate songs are as a rule made up of similar strophes: the only exceptions are the refrain strophes so common in love-songs and the final strophes sometimes found in longer songs. In songs collected from the lips of the people we may often find marked corruptions of the poetical form, a circumstance which points to the gradual disintegration of long poems that have been handed down for a considerable time.

As regards the subject, the *türkü* are predominantly lyrical poems. They include love-songs, soldier-songs, religious hymns, Ramadan songs of the *bekî* night-watchmen, which usually have a dash of humour in them, etc. Special mention may be made of one variety of love-songs, the poems in the popular romances, in so far as they are not artificial products (cf. D. Spies, *Türkische Volkslieder*, Leipzig 1929, p. 41 sqq.). The soldier-songs frequently contain allusions to historical events. We can observe how old songs are continually being adapted by slight alterations to new events as they crop up. In favourable circumstances one can trace these adaptations through many stages. The love-songs in the form of dialogue deserve special mention, such as for example, the ballad *Türkmen A'îs* ("The Turkoman maid") first made known by Kinos. It is not necessary to assume that this form arises out of the Persian dialogue-ghazal (Jacob, *Die türkische Volksliteratur*, p. 19). Such poems in the form of a dialogue between a young man

and a maid, recited or sung, are common to all branches of the Turks. It is evidence of their independent Turkish origin that they are found in lands where the influence of Muslim culture is very weak or does not exist at all (cf. Radloff, *Ant. Sibirien*, i. 493 on singing matches in Kirghiz between a youth and a maid) and among the Altai Turks (cf. e.g. the Teleut dialogue poem *Myrat* in Radloff, *Proben der Volksliteratur*, i. 200-204). The *türkü* are true songs, i.e. they are intended to be sung to music. It often happens however that the texts do not at all fit the melodies with which they now appear associated. In these cases the number of syllables in the text has to be adapted to the number of notes in the melody by artificial means. As the lines are usually too short, the equation is usually done by inserting superfluous exclamations like *vay vay, aman aman, validem, annem*, etc. or by quite nonsensical expletives like *gug gug, lilla tarilla*, etc. The texts of the *türkü* are often completely broken up by such parasitic intrusions.

Türkü songs are also used to accompany popular productions of trances.

Bibliography: G. Jacob, *Die türkische Volksliteratur*, Berlin 1901, p. 19 sqq.; T. Kowalski, *Ze studiów nad formą poezyi ludowej tureckiej*, L. Krakau 1922, p. 61-102; Ahmad Tal'at, *Kâhîl şehrîrinin şekli ve nevi*, Istanbul 1928, p. 32 sqq. (cf. thereon *Archiv Orientalni*, ii. 505 sqq.); Mahmud Râghib, *Anadolu türkîleri ve musikî istikbâlleri*, Istanbul 1928. The fullest collections of Ottoman Turkish folk songs have been made by I. Kinos. The following of his publications may be mentioned:

Orman-türk nâkışları gümüşü, ii., Budapest 1889, *Nyelvtudományi közlemények*, xxii. (1890), p. 113-156 and 275-284; Radloff's vol. 8 of *Proben der Volksliteratur der türkischen Stämme*, St. Petersburg 1899; *Chrestomathia turcica*, Budapest 1899; *Janua linguarum ottomanicarum*, Budapest 1905; *Ada-Kalei türk nâkışları*, Budapest 1906. Shorter specimens by the same author: *Türkische Volkslieder*, W.Z.K.M., ii. (1888), p. 319-324; iii. (1889), p. 69-76; iv. (1890), p. 35-42; *Küçükler türk nâkışları*, Budapest 1896; *Küçükler türk nâkışları*, Budapest 1896; *Chanson populaire turque*, Z.D.M.G., liii. (1899), p. 233-255. Shorter or longer specimens of Ottoman Turkish folk-poetry are also contained in: W. A. Makalimow, *Opis izludowanjia türkizkich dialektow w Chudawendziarje i Karamanii*, St. Petersburg 1867; A. Alio, *Fragmente de poésie turque populaire*, J.A., ser. viii., vol. 14 (1889), p. 143-192; M. Bittner, *Türkische Volkslieder nach Aufzeichnungen von Schahen Efenâi Alan*, W.Z.K.M., x. (1896), p. 41-54 and xi. (1897), p. 357-373; E. Littmann, *Türkische Volkslieder aus Kleinasien*, Z.D.M.G., liii. (1899), p. 351-363; W. Plarlew, *Nisbelko slow o trebizondskom dialektie*, Zap. Vost. Otd. Imp. Russk. Arkh. Ob., xiii. (1901), p. 173-201; R. W. Miller, *Turekija narodnyja pizni*, *Etnografickoje Obozrenije*, iii. (1903), p. 113-155; also with introduction by Krymskij in *Trudy po wostokowiedieniju*, Moscow 1903; F. v. Luschan, *Einige türkische Volkslieder aus Nordsyrien*, *Zeitschr. f. Ethnologie*, xxxvi. (1904), p. 177-202; F. Güese, *Erzählungen und Lieder*

aus dem Vilajet Qonjak, Halle a. S.—New York 1907 [cf. thereon Wl. Godlewskij, *In nabliudienij nad turckoj piewniju, Etnogr. Obozr.*, lxxix, Moscow 1909]; Hadank, *Jungtürkische Soldaten- und Volkslieder*, M. S. O. S. A., 1919; Wl. Godlewskij, *Obrascy Ormanskiego twórcstwa*, I, Moscow 1916; *Trudy po wostokowiedieniju iad. Leningradskij Institutom*, part 34. A large collection of *şîrîz* songs with notes was published by the Stambul Conservatoire of Music under the title *Halk türkileri* (Istanbul 1926—1930, 13 parts). Texts of folk-songs have also been published in Turkish ethnological periodicals like *Halk bilgisi haberleri* (Istanbul 1929 *ay.*) and *Halk bilgisi mecmuası* (Ankara 1928 *ay.*).

On the musical aspect of the *Türk* cf. O. Abraham and E. Hornbostel, *Phonographische türkische Melodien*, *Zeitschr. f. Ethnologie*, xxxvi, (1904), p. 203—221; B. W. Miller, *Türkische narodnyje piewi*; T. Kowalski, *Ze studiów nad formą poezji*, i. 97—102; Mahmūd Rāghib, *Anadolu türkileri*. (T. KOWALSKI)

TURSHIZ (Yākut: Turshish, Muḥaddas: Turshiz, Turashiz), a town in Persia, capital of the district of Buḡt in the province of Nishābūr, four or five miles from the latter town. It was destroyed in 530 (1136); its hereditary governor at that time was al-'Amīd Mansūr (or Mas'ūd) b. Mansūr al-Zur Abādī; an enemy to the Bāḡiyya or Ismā'iliyya, he summoned the Turks to aid him to defend his lands, but the latter behaved with their usual greed so that, not being able to continue the struggle, he submitted to the Ismā'iliyya. His son 'Alī' al-Dīn Mahmūd recognised the suzerainty of the 'Abīdī Caliphs in 545 (1150); receiving no support from them, he fled to Nishābūr and the Ismā'iliyya established their authority in this region. The town was besieged and taken by Timūr (784 = 1382); it was regarded as impregnable on account of its deep moat and high walls, but the water of the moat was pumped out and a mine made a breach in the wall. The garrison was spared and served in Turkestan under the conqueror. Here Timūr received an embassy from Shāh Shadja', the Muzaffarid ruler of Fārs, from whom he asked a daughter in marriage for his grandson Pir Muḥammad. During the campaign of 'Abīdī Mīrā against Herāt, Turshiz was taken by Khuraw-Mīrā in 1248 (1832).

Celebrated natives were Kātibī of Nishābūr, born in a village in the vicinity, Abī (d. 934 = 1527—1528) and Zuhūrī (d. 1024 = 1615). In the vicinity was the village of Kishmar where, according to tradition, Zoroaster planted a cypress tree which became famous and was ordered to be destroyed by the Caliph al-Mutawakkil (Firdawsi, *Shāh-Nāma*, ed. Turner Macan, p. 1068, 6; ed. and transl. J. Mohl, iv. 364; Fr. Spiegel, *Erän. Altertumskunde*, i. 54, n. 2, 703; Muḥammad Maḡdī, *Zinat al-Maḡdīr*, in Barbier de Meynard, *Dict. de la Perse*, p. 390, n.).

(CL. HUARY)

TURSUN BEG, an Ottoman historian. Tursun Beg whose *waḡḡay* was Lebībī, is of unknown origin; his father was an uncle ('*amīdja*) of the Bursa city bailiff Iḡubbe 'Alī and also possessed a fief which soon passed to the son. Tursun Beg took part in the capture of Constantinople and the Rumelian campaigns of Mehmed II and we find him in the campaign against Trebizond as a clerk in the *dīwān* (*dīwān kātibi*); he later became *asferdar* of Anatolia and finally of Rumelia. He still held this office in the reign of Bayazid II. The date of his death is not known. Under the title *Turikh-i Ebu 'l-Fetḥ*, Tursun Beg wrote a history of the reign of Sulṭān Mehmed II and of the first six years of Bayazid II. The work, composed between 903—905 (1497—1500), comes down to the year 893 (beg. Dec. 17, 1487). An edition of this *Chronicle* was published by Mehmed 'Arif Beg as a supplement to *T. O. E. M.*, parts 26—38. On the MSS. cf. Babinger, *G.O.W.*, p. 26 *ay.*

Bibliography: F. Babinger, *G.O.W.*, p. 26 *ay.*, where further references are given.

(FRANZ BABINGER)

TURSUN FAḤIH, an Ottoman jurist.

Tursun Faḥih was, like Sulṭān 'Othmān the husband of Malkhatun, a son-in-law of Sheikh Ede Ball who died in 726 (1326) aged, it is said, 120, and was buried in Bileḡja. He succeeded him as *muderris* and *imām*. In this capacity he accompanied Sulṭān 'Othmān in his campaigns and preached the first Friday sermon in Kara Hışar in 'Othmān's name and the first Bairam sermon in Eski Shehit. The *Sigill-i 'Othmānī* without any apparent reason gives 726 (1326) as the year of his death. He must therefore have died practically at the same time as Ede Ball and Sulṭān 'Othmān.

Bibliography: J. v. Hammer, *G.O.R.*, i. 56, 77; Tāshkoprāzade-Medjī, *al-Shāḡiḡ al-nawāliyya*, p. 21; *Sigill-i 'Othmānī*, iii. 254; J. Leunclavius, *Hist. Musulm. Turc.*, p. 150, 48 *ay.*

AL-TURTŪSHI, ABU BAKR MUHAMMAD B. AL-WALID B. MUHAMMAD B. KHALAF B. SULAIMAN B. AYYUB AL-KURASHI AL-FIHRI, an Arab author, see Ibn Abī Raddāḡa.

TŪS (original Iranian form Tōs, in Arabic transcription Tās), a district in Khurāsān.

In the historical period Tūs was the name of a district containing several towns. The town of Nawḡān flourished down to the end of the third (ninth) century. The form Nawḡān < Nōḡān is confirmed by the present name of the Meshhed quarter Naughān (where the diphthong *au* corresponds to the old *awāu-i mufḡḡal*, i. e. *ū*). At a later date, the other town Tābarān became more important and was considerably extended so that the original Tāharān seems to have become one of the faubourgs of the new town (cf. *Idrīzī*) which then became generally known as Tūs. The name Meshhed, at first a simple sanctuary in the village of Sanābād, is already mentioned in Muḥaddas. Meshhed first of all encroached upon the adjoining town of Nawḡān, the name of which disappears about 1330. In 1389 Tūs was destroyed and never rebuilt. The waters which supplied it were diverted to Meshhed. Under the Safawids this, the sacred city of the Shī'as, became the capital of the old district of Tūs (the valley of the Kashaf-rūd) and of all Khurāsān.

Situation. Two ranges of mountains stretch

along the north of Khurāsān. The one (Kopetdagh etc.) rises in the north of Khurāsān and runs through Transcaspiāna. The other (which is a continuation of the Alburz) is parallel to it in the south. To the south of Kūcān, the two approach one another and this narrowing forms the watershed. By the corridor which opens towards the northwest the Atrak descends to the Caspian. Through the plain in the southeast runs the river Kashaf-rūd "Tortoise river", a left bank tributary of the Hari-rūd (river of Herāt). The district of Tūs lies on the upper part of it. The outer spurs of the southern range (Himālad, with peaks of c. 2,800 feet) separate it from Nishāpūr, the waters of which lose themselves to the south in the central desert.

Origins. The nomenclature of the region seems to suggest the presence in Tūs of old non-Aryan elements. Regarding the Kashaf-rūd, the *Bundahish* says: "The river of Kānak comes out of a ravine of the province of Tūs and is there called the river of Kasp..." (transl. West, p. 81). Marquart (*Untersuchungen z. Geschichte v. Iran*, II, 28) traces the names Kasp and Tābarān (town of Tūs) to the lost peoples of the *Kābarān* and *Tābarān*, of whom traces are found in many places. The Pehlevi list of the towns of Iran (transl. Blochet, in *Recueil des travaux relatifs à la philol. et archéol. égypt. et assyriennes*, XVII, 1895, p. 165-176, §§ 14-15) relates in connection with Tūs that the hero Tūs, son of Nōtar, was *siyahpat* there for 900 years. In the *Shāh-nāma* (ed. Mohl, IV, 253) Kai Khosrow when distributing fiefs gives Khurāsān to Tūs. Other more explicit stories (*Nashat al-Kulūb*) attribute to Tūs (Tōs) only the rebuilding of the town of which the actual founder was Ijāmshīd, which reflects the pre-Sāsānid date of Tūs. According to Saif al-Dawla, I, 199, 277 and Sir P. M. Sykes, the ruins of the oldest inhabited place in the district of Tūs are at Shahr-i Band (or Kāhkhā) on the right bank of the Kashaf-rūd 4 miles S. E. (read S. W. ?) of Tūs and 10 miles N. E. of Meshhed. The ancient Tūs has been connected (Spiegel, *Iran. Altert.*, II, 539; Tomaschek, *Zur hist. Topogr. v. Persien*, I, 219; Marquart, *Untersuch.*, II, 65; Sykes, *op. cit.*) with Susia, a town in the province of Arela to which Alexander the Great went from Parthia (Arrian, *Anabasis*, XXV, ed. C. Müller, p. 84: *Σοσιας, πόλιν τῆς Ἀπλίας*). As the province of Arela (Old Pers. *Haraiva*) was traversed by the Hari-rūd (Kiepert, *Lehrb. d. alt. Geogr.*, 1878, p. 59) we may be permitted to add to this Tūs, situated on the tributary of the Hari-rūd. On the other hand, the change in the original *Sōs [Shōs] to Tōs would have parallels in Shūstar > Tostar and perhaps in Shāh > Tāshkand. [The identification of Susia with Zōtan by Khanikow, *Artacama*, in *J. A.*, Aug. 1875, p. 235-242 is untenable].

[In his recent publication, *Archäol. Mitteil. aus Iran*, 1930, I, 2, 110 and I/3, 182, Hensfeld interprets the Avestan *Taova nasharānām* as "T. of the cadet branch" and explains it from the fact that Vištāspa, father of Darius and ancestor of the younger line of the Achaemenids, lived there. According to the Iranian *Bundahish*, the mythical Vištāspa removed the fire Atarburasimihir from Khurāsān to Mount Rōshan in the land of the *Kānārang*].

Sāsānid period. In the Sāsānid period we have very little information about Tūs. Legend attributes the death of Yazdagird I (420) to a mortal

kick given him by a horse which came from the spring of Saw, near Lake Shabd (*Shāh-nāma*, ed. Mohl, v. 519-523). Noldeke, *Geogr. d. Perser und Araber*, 1879, p. 77-78, thinks that the topographical details have been added by Firdawsi. We have therefore to ascertain what the latter actually meant. Saif al-Dawla locates this spring at Cāshma-yi Gilās (Gulasp), one of the eastern sources of the Kashaf-rūd, but the *Nashat al-Kulūb*, p. 241, more in keeping with Firdawsi, places it near Lake Cāshma-yi Salar, to the west in the mountains between Tūs and Nishāpūr (cf. *Maftā' al-Sāma*, I, 241).

In 497 we find the first reference to a Nestorian bishop of Tūs and Abarsbahr (= Nishāpūr); cf. *Chronicon orientale*, ed. Chabot, p. 311, 310 and Guldī, *Ostsyrische Bischöfe*, *Z.D.M.G.*, XLIII, (1888), 410 (under year 499). On Christianity in the Mongol period, cf. below.

According to the Armenian historian Sebōs, the general Smbat Bagratuni seni (c. 616-617) by Khosrow against the Kāshān encamped in the district of Tōs of the province of Apr-shahr (= Nishāpūr; cf. Marquart, *Erānshahr*, p. 66).

The Arabic sources are less explicit regarding the administration of Tūs before the conquest.

The Arab conquest. According to a story given by Balādhuri, p. 334, c. 29 (649) the marbān of Tūs wrote simultaneously to the walls of Kūfa and Basra, inviting them to Khurāsān, on condition that the conqueror should put him in possession of this province. Khurāsān was conquered under 'Othmān (in 29-31 = 649-661) by the wall of Basra, 'Abd Allāh b. 'Amir b. Kurāiz. The marbān of Nishāpūr after some resistance agreed to pay a tribute (*wafā'a*) of 1,000,000 dirhems (another version 7,000,000 dirhems) while the Marbān of Tūs (Kāztk; read Kanārang) appeared before 'Abd Allāh and made peace by paying 600,000 dirhems (Balādhuri, p. 405). One would think that the two marbāns were different individuals, and Ya'qūbi, *Kitāb al-Buldān*, p. 295, also speaks of a letter from the *malik* of Tūs and of 'Abd Allāh's reply which the descendants (*malad*?) of the *malik* still preserved in his time. According to Tabari, I, 2586, however, when 'Abd Allāh had established himself in Nishāpūr, the other half of the province, i.e. Nasā and Tūs, remained in the hands of Kanāre with whom 'Abd Allāh had to make peace in order to be able to go on to Marw. As Marquart has shown, the title Kanārang (or Kanāre; in Greek *Καναράγγος*, cf. Procopius, *De Bello Persico*, I, ch. 5, 7, 21 and 23) was that of the hereditary governors of all the province of Abarsbahr (Nishāpūr, Tūs, Nasā, Abward) probably descended from a pre-Sāsānid dynasty (cf. Marquart, *Erānshahr*, p. 75; Christensen, *L'empire des Sasanides*, p. 27). The intrigues to which Balādhuri and Ya'qūbi allude and which were to facilitate the conquest may have originated with some member of the family of the Kanārang, a rival of the lord of Nishāpūr.

In the period of Arab rule Tūs played no independent part but its name is however often mentioned in the records of civil wars. Under the Omayyad 'Abd al-Malik (65-86) the citadel of Tūs was occupied by a body of Banī Tamīm (Balādhuri, p. 415) who still held control in 125 (Tabari, II, 1771). In 130, Kāhkhā, a lieutenant of Abū Muslim, inflicted a decisive defeat on the

Omayyad *waḥī*: Naṣr b. Sa'yār near Tus (Tabari, ii. 2000; Ibn al-Athīr, v. 282, 292, 295). In 84 a certain Abū Ṭ-Khaṣīb of Naṣr rebelled in Khurāsān and for a time seized Tus, Nishāpūr etc. On the 3rd Dhu'l-Ḥijja II, 193 (March 24, 809) Ḥārūn al-Rashīd, who was operating in Khurāsān against the rebel Rāfi' b. Laith b. Naṣr b. Sa'yār, died at Tus (Tabari, iii. 733). On 1st Šafar 203, the 'Alid 'Alī b. Muṣā al-Riḍā died in the village of Sanābād of Tus. According to Ibn al-Athīr, vi. 203, al-Ma'mūn prayed to God for the deceased and interred him near the tomb of his father ("in the garden of Ḥumaid b. Kaḥṭaba", following Muṣ'ir b. Maḥalbil quoted by Ya'qūṭ). Sanābād is the modern Meshhed (q.v.). The tomb of Ḥārūn al-Rashīd, now completely disappeared, was beside that of the Imām 'Alī for, according to Ibn Buṭṭa, iii. 77, the 'Alid pilgrims who visited the latter used to kick the tomb of Ḥārūn (which however was still kept in good order in the 14th century).

According to Idriṣī, Muḥān (read Nawḥān) was the capital of the Tahirids, but "after the siege" the capital was moved to Nishāpūr (between 213 and 230; cf. Jāhiz). The historical sources state that in 265 (878) Tus was destroyed (*ukhribat*), evidently as a result of the rebellion of Ahmad b. 'Abd Allāh al-Khudjastānī, an old servant of Muḥammad b. Tahir who had seized Nishāpūr in 262 (*Ibid.*, iii. 1931; Ibn al-Athīr, vii. 227; cf. Defrémery, *Mémoires... sur Ahmad, fils d'Abd Allāh*, in *Z.A.* [1845], 345-362). Ya'qūṭ (278=891) still mentions Nawḥān as the principal town of Tus. In 283 the Saffarid 'Amr b. Laith reported to the Caliph that his men had defeated near Tus the Amir Rāfi' b. Harthama who had been asserting his independence in Khurāsān from 271 (884) (Tabari, iii. 2160; Ibn al-Athīr, vii. 334).

The Sāmānids. In 309 Laith b. Na'mān, one of the generals of the 'Alid *da'ī* Ḥasan b. Kāsim, came to Nishāpūr and had the *ḥuṣūṣ* read there in the name of his chief. By orders of the Sāmānid Nūḥ I, Hammūya b. 'Alī left Bukhārā against Laith. He was at first defeated near Tus but Laith later lost his life (Ibn al-Athīr, viii. 91). In 336 (947) the governor of Tus and its dependencies Abū Manṣūr Muḥammad b. 'Abd al-Razzāk rebelled against Nūḥ b. Naṣr. The latter sent Manṣūr b. Kara-tegin to Khurāsān. Muḥammad went from Nishāpūr to Ustawa (=Kūzān). His brother Rāfi' was besieged in the fort of Sumailān and later in the fort of Darak (3 farsakhs from Sumailān). Sumailān was dismantled but Rāfi' succeeded in retaining what was left at Darak. Lastly in 339, Muḥammad b. 'Abd al-Razzāk, being pardoned by Nūḥ, returned to Tus (Ibn al-Athīr, viii. 353, 361). The personality of Abū Manṣūr is particularly interesting on account of his friendship with Firdawsī (cf. *Šāh-nāma*, ed. Mohl, i. 20, ed. Vullers, i. 10-11). Abū Manṣūr beautified the cathedral mosque of the town of Tābarān which henceforth was the first in Tus (Maḥaddast, p. 319). In 349 Abū Manṣūr was appointed *shah-dār* but immediately dismissed in favour of Alp-tegin. The latter settled in Nishāpūr and Abū Manṣūr retired to his fief of Tus. In 350 (961) after the accession of the Sāmānid Manṣūr, Alp-tegin fell into disgrace. Abū Manṣūr who had sent troops from Tābarān and Nawḥān towards Čāba (on the road from Nishāpūr to Marw; cf. *Čakūr Maḥāla*, G.M.S., p. 51) did not succeed in stopping Alp-tegin. Fearing the wrath of his master

Abū Manṣūr rebelled and was ultimately poisoned (Gardizi, *Zain al-Akbar*, Berlin 1928, p. 41-44).

The Arab geographers to the end of the fourth (tenth) century. Ibn Khurdādhbih (232=846), p. 24 and Qudāma, p. 201, place the district of Tus on the Nishāpūr-Sarakhs road; Nishāpūr-Baghīs 4 farsakhs (Ibn Rusta, p. 171; Faghīs 5 farsakhs); al-Ḥamra 6 farsakhs (according to Ibn Rusta, the distance is 5 f.; this "red village", so called from the colour of its walls, is situated in the mountains); al-Muḥakkab (Ibn Rusta: Barda') belonging to Tus 5 f.; al-Nawḥān 5 f.; Maudūn al-Aḥala 6 f.; Abḡna (Awḡna) 3 f.; Sarakhs 6 f. This makes the distance between Nishāpūr and Nawḥān (=Meshhed) 20 f. (Ya'qūṭ, 2 *marḥala*; Ibn Ḥawḳal, 3 *marḥala*) which shows that the road ran round the south side of the mountains which separate Nishāpūr from Tus, for Ibn Ḥawḳal, p. 331, says that one can "ascend" in a single *marḥal* from Nishāpūr to Tus, 5 farsakhs before Nawḥān the land of Tus began which evidently means the whole district.

Ya'qūṭ (278=891), p. 277, says Nawḥān is the largest town in Tus. Ibn Khurdādhbih valued the *ḥarāḍī* of Tus at 740,860 dirhams. Ya'qūṭ says that the *ḥarāḍī* of this district (*balad*) is included in that of Nishāpūr. The people of Tus were mainly Persians but there were also some Arabs (Ta'y; cf. also p. 306).

Iṣṭakhri (340=951), p. 257 mentions four towns of Tus: Rādān, al-Tābarān, Buzdighawī (?) and al-Nawḥān. The tomb of 'Alī b. Muṣā al-Riḍā (like that of Ḥārūn al-Rashīd) was in the territory of Nawḥān in the village, of Sanābād 1/4 farsakh from the town (Nawḥān). Ibn Ḥawḳal adds that Sanābād was surrounded by a solid wall within which lived hermits (*nu'atshifun*).

Balādhuri (the passage quoted by Maḥaddast, p. 331, is not found in the *Futūḥ al-Buldan*, ed. de Goeje) already mentions Tus among the dependencies of Nishāpūr (Iṣṭakhri, read: Aburīḥāh). Maḥaddast, author of the most complete description of Khurāsān, emphasises the subordinate character of Tus. "If some said that Nishāpūr has eclipsed Tus, one would reply that Tus has never been a large town to be eclipsed". Maḥaddast repeats several times that Tus, like Naṣr and Abiward, is only a *shūṭna* ("granary, depot") of the *khāra* of Nishāpūr (p. 50, 295, 300, 301^b). Among the towns of the district of Tus, Maḥaddast mentions al-Tābarān, al-Nawḥān, al-Rādān, Djuṣab, Usir-kān, Trughbūh (the last three are uncertain). The largest of these at this time was Tābarān (375=985). It had a citadel and from the distance resembled Medina. Maḥaddast mentions its busy market in which there was the cathedral mosque which Muḥammad b. 'Abd al-Razzāk had embellished (*naḥḥaraha*). The water ran in shallow subterranean canals; fruits and firewood were abundant and the prices of merchandise moderate. In spite of all this, Tābarān was a wretched little town (*bulaida*) the outskirts of which were in ruins, the water bad and the climate cold. The inhabitants professed the Shī'ī rite and were capable of being very troublesome in times of turmoil. Tus produced stone cooking vessels (*birām*), mats and wheat as well as striped materials and *tikūḥ* (cords for supporting trousers) of good quality. Nawḥān was below Tābarān (*dūna*, perhaps "lower down the river"). In Meshhed there was a citadel with houses and a market; the mosque built on the

tomb by 'Amīd al-Dawla Fā'ik was the best in Khurāsān (*ibid.*, p. 319, 323, 324—325, 333).

The Ghaznawids. In 385 (995) when Mahmūd b. Sabuk-tegin was installed in Nishāpūr by the Sāmānid Nūh II, Abū 'Alī Simjūrī and Fā'ik (a former Sāmānid general, builder of the mosque of Meshhed; cf. Mukaddasī, p. 333), refugees in Djurdjān, attempted to reconquer Khurāsān but Sabuk-egin defeated them near the village of Andarakh (?) of Tūs (Gardīzī, p. 36; Ibn al-Athīr, ix, 75; Barthold, *Turkistan*, G.M.S., p. 262). In 389, Mahmūd sought to reassert his rights over Khurāsān. His rival Bek-Tuzun was driven from Tūs and in his stead Mahmūd appointed his chief amir Arslān Djādhīb, who is still mentioned as lord of Tūs in 401 and 420 (Ibn al-Athīr, ix, 103, 155, 267). In 397 however, the Kara-Khānids of Transoxiana sent an expedition which took Tūs and Nishāpūr but the tables were soon turned when Mahmūd returned from India (Barthold, *Turkistan*, G.M.S., p. 272). Ibn al-Athīr, ix, 283, without giving a date, records that Mahmūd as a result of a dream rebuilt the sepulchral building of Tūs (i.e. Meshhed) which his father Sabuk-egin had destroyed, and prevented the people of Tūs (i.e. Shūfīs?) from harassing the pilgrims ('Alids).

The Seldjūqs. In 421 the Seldjūqs making short shrift of the attempts at conciliation made by the Ghaznawid Mas'ūd penetrated into Balakh, Nishāpūr, Tūs and Djurdjān. In 425 their strength increased, which had repercussions on the situation generally. Turbulent elements gathered round the people of Tūs who declared war on Nishāpūr. The wall of this town fled but the amir of Kirman, who was on his way to Mas'ūd, arrived with 300 horsemen. The people of Nishāpūr defeated those of Tūs and Abiward. The amir of Kirman massacred 20,000 people of Tūs. He crucified them on trees and along the roads. The landlords of the villages (*qu'ami' burū Tūs*) had to give hostages.

In 428 Mas'ūd's commander-in-chief (*ru-bāshī*), defeated by the Seldjūqs near Sarakhs, was driven back to Tūs. In 430 Khurāsān became the arena of the struggle between Mas'ūd and the Seldjūq Tughril. The latter from Ustuwā (Kūcān) took refuge in "the inaccessible mountains and difficult passes" of Tūs. As from there Tughril went to Abiward the reference is probably to the district of Kalāt [q.v.]. Some people of Tūs who had been intriguing with Tughril entrenched themselves on an inaccessible summit but in spite of the winter these positions were taken by Mas'ūd who personally directed the attack.

In 465 (1072) Malik-Shāh conferred on Niẓām al-Mulk a number of fiefs including Tūs, the native city of the great vizier (Ibn al-Athīr, x, 54). Niẓām al-Mulk is said to have built there two cathedral mosques, one at Tūs and the other at Nawkān (Sanī' al-Dawla, i, 190).

In 510 a disputation at Tūs on the 'Ashūra' day (10th Muharram) between an 'Alawi and the Sunnī doctors ended in great riots. The Sunnī inhabitants laid siege to Meshhed and did great damage there. To protect Meshhed against such attacks again, a wall was built around the town in 515 (*ibid.*, x, 366). In 548 the Ghuzz having captured Sultān Sindjar invaded Tūs, this "mine of learned and pious men", slew the men, carried off the women and destroyed the mosques. Of all the wilāyet of Tūs, only the place (*balad*)

where the Imam 'Alī was buried was uninjured. Ibn al-Athīr gives a list of individuals of note slain on this occasion.

The family of al-Mu'ayyid. In 548 (1153) a slave of Sultān Sindjar Ay-Abū al-Mu'ayyid carved out for himself a small kingdom including Nishāpūr, Tūs, Nasā, Damghān etc. Sindjar's successor, his nephew Mahmūd b. Muhammad (the Kara-Khānīd; cf. Barthold, *Turkistan*, text, p. 27), had to be content with the payment of tribute by Mu'ayyid. In 552 Mu'ayyid's rival Althāk (Ay-tak?) devastated Tūs and its townships, after which the district was left waste (*ibid.*, xi, 150). In 553 the Ghuzz, having defeated Mu'ayyid near Marw followed him up and sacked Tūs. In the same period a quarrel broke out in Khurāsān between the leader of the Shāhīs Mu'ayyid b. Husain and the 'Alawids. The people of Tūs, Isfāryīn and Djuwain supported this other Mu'ayyid but the Shāhīs were vanquished. These internecine struggles brought about fresh devastation (*ibid.*, xi, 155). In 555 Mu'ayyid Ay-Abū after a quarrel had a reconciliation with Mahmūd and as soon as he was reestablished in his post began to harass the 'Alawids. In 556 his suzerain Mahmūd who was dependent on the Ghuzz quarrelled with them. The Ghuzz sacked Tūs (*nahān fāshikan*) including Meshhed but did not touch the sanctuary. In 557 (1161) Mu'ayyid blinded Sultān Mahmūd and had the *Khayfa* said in his own name (*ibid.*, xi, 180; Barthold, *op. cit.*, p. 335). He laid siege to the fortress of Waskarah-Khūy (?) which belonged to Tūs, where a certain Abū Bakr Djāndār had installed himself. Mu'ayyid took the fortress and Karastān (?) also. In 558, Mu'ayyid recognised the suzerainty of Sultān Arslān (of the 'Irāk). Ibn al-Athīr gives a list of his lands which included Kūmis, Nishāpūr and Tūs and extended from Nasā to Tabas-Knklī (?). In 568 Mu'ayyid, who had taken the side of the Khwārizmshāh Sultān Shāh Mahmūd, was taken and executed by the latter's brother Sultān Takash. Under Tughan-Shāh, son and successor of Mu'ayyid, his slave Kara-Kush in 568 took Tūs and Zām (= Djam; cf. Ibn al-Athīr, xi, 248; according to the *Matārīb al-Tadjarib* of Abū 'I-ḥasan Baihaqi). According to another source used by Ibn al-Athīr, xi, 253, the Khwārizmshāh Takash (in 568?) before his final struggle with Mu'ayyid advanced as far as Tūs. In 576 (1181) Sultān-Shāh having received the support of the general of the Kara-Khitai Fūmā defeated Tughan-Shāh and seized Sarakhs and Tūs. Tughan-Shāh died in 581 (cf. Djuwainī, ii, 19—22; Barthold, *op. cit.*, p. 339).

The geographers of the 12th century. Sam'ānī (d. 562 = 1166), G.M.S., p. 373, mentions in Tūs two towns (Tābarān and Nawkān) and over 1,000 villages. Idrīsī (548 = 1154), transl. Jaubert, li, 184 (= MS. f. 164 v) puts the distance between Tūs and Nishāpūr at 4 days' journey (*marḥal*?). Tūs was a considerable town, well built and thickly populated. In the vicinity were a number of towns with minbars: Rātkān (*nīc*), Brdghūr, Dūdān, Mīhrjān (according to Yāqūt a town of Isfāryīn) and Mīkān (*nīc*), "a most noteworthy town" with a good citadel and earth-work. On "the mountain of Mīkān" there were quarries for stone out of which were made mortars and cauldrons (*birān*), and also mines of silver, copper, iron, turquoises, *sahandī* and rock crystal. A number of inaccuracies were inevitable in Idrīsī who was writing in Sicily.

The Khwārizmshāhs and the Ghūrids. In 594 Takash, who had risen against the Ghūrids with the help of the Kara-Khitai, went by Tūs to Harāt. In 597 the Ghūrīd Ghiyāth al-Dīn seized the lands of the Khwārizmshāh in Khurāsān. Tūs surrendered after a siege of three days and was sacked (Djwaini, ii. 48). In the next year, the Khwārizmshāh 'Alā' al-Dīn Muhammad reconquered Khurāsān and laid siege to Harāt, but the Ghūrīd Shihāb al-Dīn drove him back. Takash before returning put to death the lord of Nishāpūr, the amir Sandjar b. Tughan-shāh b. al-Ma'āyid, suspected of plotting against him. Shihāb al-Dīn came to Tūs and spent the winter there (Ibn al-Athīr, xii. 89, 108, 116—118).

The Mongols. At the beginning of Rabi' al-Akhir 617 (1220), the generals of Čingiz-Khān Veme (Djebe) and Subutai pursuing the Khwārizmshāh came to Nishāpūr. Subutai left for Djam and Tūs. The eastern township of "Tūs-Nawkān" submitted but the inhabitants of the town (i.e. Tūs-Tābarān) did not give a satisfactory reply. Subutai ordered a great massacre (*katl-i ba-iṣrāf*) in the town and vicinity. Rakhān, the situation of which Subutai liked, was spared (Djwaini, *Djāhān-gushā*, G.M.S., i. 114—115). After the two generals had gone, the people were able to breathe again (*ibid.*, p. 117). The chief of the militia of Tūs (*hachariyān*) was bold enough to kill the Mongol *shahān*, but the Mongol general Kishitmur, hastening from Ustuwā (= Kācān) arrested the culprit and began to dismantle the fortifications. In the meanwhile, the advance guards of the army of Tuluy (Tūti), son of Čingiz-Khān, had arrived in Khurāsān. The last forts of Tūs were occupied. Nawkān (and Kārī) resisted vigorously; but Nawkān was taken on the 28th Rabi' al-Akhir 617. In the spring of 618 (1221), Tuluy himself arrived from Marw. At one stroke the army occupied all places in the wilayet of Tūs and the last remnants of the population (*baḡayā-yi ādamīyār*) were put to death (*ibid.*, p. 130—138). The first wali of Khurāsān appointed by the Mongols (under Ugedai, 624—639) was the Kara-Khitai Khamidbūr (Djantimur?), reading uncertain; cf. Rashid al-Dīn, ed. Blochet, p. 37). The citadel of Tūs was occupied by an adventurer, Tajī al-Dīn Farizana', who submitted to Külbulai (i) who was sent by Khamidbūr (Djwaini, ii. 220). In 637 (1239) the Uighur Buddhist Karkūz ("the Long") was appointed to Khurāsān and made Tūs his headquarters. In all the town (the old Tābarān) there were only 50 houses still inhabited. Karkūz began to build government offices (*imārāt*). "Contrary to the Mongol custom" he built a solid treasury (*khāzāna*) in the centre of the citadel (*shūr*). The town began to recover rapidly and the prices of municipal plots went up a hundredfold in a week (Djwaini, ii. 238, 240).

Karkūz was succeeded by the famous amir Oyrat Arghūn. On returning from his journey to the *arḍ* in 643, he saw that the Manṣūriya palace and the forts (*fuṣūr*) were completely in ruins and gave orders to rebuild them (*ibid.*, ii. 245, 247). Confirmed in office by Möñke-kaḡān (649) Arghūn entrusted the government of Nishāpūr and Tūs to Malik Nāṣir al-Dīn 'Alī (*ibid.*, p. 255). Arghūn then entered the service of Hülāgū and in the reign of Abaka died in 673 (1275) at Rakhān of Tūs (Rashid al-Dīn, ed. Blochet, p. 559). The place of death of Arghūn suggests that his own estates were in the district. The activities of his

son Nawrūz (who converted Ghāzān to Islam but was executed by his orders at Harāt in 696 [1297]; cf. d'Oshson, iv. 196) were closely associated with Khurāsān and thus paved the way for the later successes of his family.

Christians in Tūs. Traces of Christianity must have survived in Tūs from the Sassanid period (cf. above). In the biography of Shaikh Abū Sa'īd (967—1049), *Asrār al-Tawḥīd*, ed. Żukowsky, p. 70, we have a curious story of his meeting with the child who was later to become Niḡm al-Mulk (born in 1017—1018) at Tūs (= Tābarān) "at the beginning of the street of the Christians" (*bar sar-i k̄h̄y-i turīyān*). In the Mongol period the Christians enjoyed greater freedom. When in 1278 the future patriarch Yabballāḥ III was on his way from Mongolia to Jerusalem, he went to the monastery of Mār Šehyōn "near the town of Tūs" and there received the blessing of the bishop and of the monks. In the year 1590 of the Greeks (= 1279) the bishop of Tūs, Simeon, was ordained metropolitan of China (Bar Hebraeus, *Chron. Eccl.*, ii. 449).

The geographers of the thirteenth century. Yāqūt, iii. 560, gives few details about Tūs and only reproduces the fables of Mi'sār b. Muḥallil about a powerful stronghold on the road between Tūs and Nishāpūr built by a Himyar king (*ṭahhī'a*). Under Tābarān (iii. 486) and Niḡm (iv. 824) Yāqūt says: "Tūs consists of two towns of which the larger is Tābarān". At Nawkān Yāqūt mentions the manufacture of pots and cauldrons of stone (cf. *Lisān al-Arab*, xiv. 311 on the stone pots which the pilgrims bring from Meshhed). A village of Tābarān also existed at Bokhārā and there was a village of Nawkān at Nishāpūr. Zakariyā Kāzwinī, *Atṭār al-Bilād*, p. 275, seems to have been the source of many confusions (cf. their excellent analysis in Sanī' al-Dawla, i. 196—199) by saying that Tūs was "a town of which the two parts (*muḥallatayn*) were Tābarān and Nawkān". In reality these are two towns separated by a distance of 4 farsakhs, as Hamid Allāh Mustawī (*G.M.S.*, p. 151) rightly points out.

According to Ibn Battūṭa, iii. 77, Tūs (= Tābarān), which he reached from Djam, was one of the largest towns in Khurāsān. From Tūs he went to Meshhed which at this time must have encroached upon Nawkān for of the latter the traveller says nothing and from this time the name disappears completely.

The Djūn-Ghōrbān. These rulers were the direct descendants of Nawrūz b. Arghūn. Their name which was probably that of one of the sections of the Mongol tribe of Oyrat (**djun-ghurban* = "the three [detachments] of the left [wing]"), was later given a Persian dress as *Djān-kurban* ("those who sacrifice their souls"; cf. Dawlat-Shāh). After the extinction of the Mongol dynasty of Persia, the son of Nawrūz, called Arghūn-Shāh, won for himself a kingdom in Khurāsān which, according to Hāfiẓ Abru (quoted in Barthold, *Isis. Geogr. esset Irania*, p. 70), included Tūs, Kācān, Kāfiṣ, Abtward, Nām and Marw. Dawlat-shāh (Bombay edition 1887, p. 121) calls Arghūn-Shāh "*ṭahhī'a* of Nishāpūr and Tūs", but in 738 Nishāpūr was taken from him by the Sarbadār Mas'ūd. Arghūn-Shāh played a considerable part in the election of Tughā-Timūr [q. v.]. After the latter's death (754), his possessions were divided among the Sarbadārs, the Kartis and Arghūn-Shāh, but the Sarbadār Karābi at some time took Tūs from

Arghūn-Shāh (cf. SARBADĀR; one of the gates of Kalāt now called Darwāza-yi Arghawan-Shāh (iel) owes its origin to this prince rather than to the Ilkhān Arghūn who was never called Shāh).

The successors of Arghūn-Shāh were his sons Muḥammad-beg and 'Alī-beg. When at the beginning of 783 (1381), Timūr came to Tūs, 'Alī-beg went to pay homage to him but in the winter of 1381 he shut himself up in the fortress of Kalāt. After many vicissitudes, 'Alī-beg surrendered to Shaikh 'Alī Bahādur in 784. As a reward Timūr gave the latter Rādān. 'Alī-beg was deported to Andijān and executed there towards the end of the year. Others of the Dīnī-Ghurbānī were exiled to Tāshkent (*Zafar-nāma*, i. 324, 335, 351, 385). But in 791 (1389) a rising took place in Khurāsān which was joined by the Sarbadār, Hādījī-beg (younger brother of 'Alī-beg) and the troops of Kalāt and Tūs. The *Zafar-nāma* briefly records the suppression of the rising by Mirān-shāh (i. 468—469). A much more detailed account is quoted by Sanī al-Dawla (*op. cit.*, p. 208—209). Timūr is said himself to have appointed Hādījī-beg to Tūs (in 789?) where he amassed great wealth. The rumours of Tokhtamīsh's successes turned Hādījī-beg's head and he stopped the *khutba* for Timūr and proclaimed his desire for independence. He fought for several months with the amir Aq-buqa who remained faithful to Timūr. On the arrival of Mirān-shāh, Hādījī-beg fled but was captured and put to death. The town was taken in Rājab 791 (1389): 10,000 men were killed and towers of skulls (*munāra*) erected at the gate of the city. "No trace was left of Tūs". In 807 again, Timūr had executed near 'Ishkādān (Ashkādān) the Dīnī-Ghurbānī Aq-buqa and Kara-buqa, who had been plotting in his absence (*Zafar-nāma*, ii. 592). At the present day, the country north of Meshhed (from Colay-khāna to Kal'a-yi-Yūnī-khān which is 4 farsakhs north of Kācān) is called the encampment (*yurt*) of the Dīnī-Ghurbānī tribe (Sanī al-Dawla, *op. cit.*, p. 158).

End of Tūs. Tūs (i.e. Tābarān) never was able to recover from the events of 791. It is true that Shāhrukh after his accession to the throne of Khurāsān in 807 sent to Tūs the amir Saiyid Khwādja with orders to rebuild the town. In 809, Tūs, Kācān, Kalāt etc. were given to prince Ulugh-beg. In the period of the decline of Timūr's line, some members of it exercised more or less independent power at Tūs: in 862 Mirā Shāh Maḥmūd, in 905 Mirā Muḥammad Ḥusain (son of Saljān Ḥusain Baikara).

In 918 'Ubaid Allāh-khān Ōzbek, having raised the siege of Harāt, came to Tūs and Isfārayn but after some months evacuated Khurāsān on the approach of Shāh Ismā'il. In 927 the *Ḥabīb al-Siyar* mentions a governor "of Tūs and Meshhed". Khanikow found at Tūs a funerary inscription of a shāh-rāde Ibrāhīm dated 985. The argument of the same traveller from the fact that the name Tūs does not disappear from Persian astrolabes till the 13th century A.H. is by no means conclusive, for we know how tenacious geographical memories are in the East. Amin Ahmad Rāzi in the *Ḥafīz al-Ḥim* (Bibl. Nat. Paris, MS. suppl. Pers. 356 sq., f. 262—274) no longer mentions Tūs; in speaking of Meshhed he says: "this wilāyat was at one time called Tūs". At the beginning of the 16th century, Zain al-'Abidin Shirwānī, *Bustān al-Sayyāt*, Teherān 1315, p. 354, says: "This was a well-known town

in Khurāsān. Destiny has so destroyed it that all that remains is a village of 30 houses".

Two causes have contributed to the disappearance of Tābarān-Tūs: the weakness of its geographical situation in the plain, open to every invader, and the popularity of Meshhed which is protected by the renown and sanctity of its sanctuary, and attracts crowds of pilgrims. The Indian traveller 'Abd al-Karīm who visited Meshhed with Nadir-Shāh in 1153 (1741) rightly observes that the splendour of this town caused the ruin of Tūs (transl. Langlès, 1797, p. 74).

Antiquities. Frazer, Khanikow, O'Donovan, Żukowsky, Jackson, Dietz and notably Sanī al-Dawla and Sykes have described the ruins of Tūs, i.e. of the town of Tābarān. They are situated on the left bank of the Kashaf-rūd about 15 miles (4 farakhs) north of Meshhed (Nawkān). The walls of the town are of brick and form an irregular circle a farsakh in circumference. Their thickness at the base is 5 *dhars* (about 15 feet). The remains of 106 towers and 9 gates can still be traced. The area occupied by the old town according to Sykes is about 2,300 yards each way.

On the north side of this area are the ruins of a square fortress each side of which measures 200 *dhars* (= yards). It has 12 towers. The ditch surrounding it is 15 *dhars* broad. In the middle of this *ark* on an artificial mound was a fort, oblong in shape 80 × 50 paces (*ḥadam*). It had 9 towers. Two little villages, each of 25 houses, lie at the foot of the wall inside: to the west Tūs-i Karīm-khān and to the east Tūs-i Bahādur-khān. To the N.E. outside the wall are the fields of a third village (*maṣra'*) Iskūtiya.

In spite of all the lack of attention on the part of the authorities, popular memory, even after the lapse of nine centuries, has not forgotten the site of Firdawsi's tomb. It is shown inside the town near the N.E. wall. Niḥāmī-yi 'Arūjī, who visited the tomb in 510 (1116) locates it in the garden which had belonged to Firdawsi "inside" the Rīzān gate (*Chahār-maḥalla*, G.M.S., p. 51; *darūn-i darwāza*). By a slip, Browne, *A Liter. Hist. of Persia*, ii. 138, translates "outside the gate". As Sykes has shown, the village of Rīzān (modern pronunciation; Rādān) still exists 9 miles N.E. of Tūs and the "Rīzān gate" corresponding to it ought therefore to be at the village of Tūs-i Bahādur-khān. The Rūdār gate (cf. the story of Firdawsi) must have been at the opposite end of the town. The *Nuḥāt al-Kulūb*, p. 151, moreover positively asserts that it was S.E. (*ḡānī-i ḡibī*), i.e. opposite the great bridge over the Kashaf-rūd which still exists to-day. According to Sykes, Rūdār was the name of a mountainous district between Tūs and Nishāpūr but Rūdār may simply mean the part of the town near the river, i.e. the Kashaf-rūd. The village of Bāf, which Firdawsi owned, corresponds to the present village of Pāz (or Fāz) 4 miles S.S.E. of Rīzān (see the photograph in Sykes, *A seventh journey*, G.Z., xiv. [1915], 365. The village of Bāf-i Tūs 2 farsakhs from the town of Tābarān is mentioned in the biography of Shaikh Abū Sa'id (967—1049), *Asrār al-Tawāhid*, p. 68, which also mentions a place called Duḥirātārān, one farsakh from the town and the khānagāh of Ustād Abū Ahmad in the town). The village of Shādāb, the birthplace of Firdawsi, has also been identified in the neighbourhood of Tūs (as I am informed by Taḡī-rāde).

Tūsī's political attitude was determined by his strong sympathy with the "Twelvers", which made him with his talents and versatility a leader of the Iranian-Shī'a oligarchy on the Mongol side against the caliphate. It was through his influence that a certain degree of mercy was shown the Shī'as during the Mongol holocaust and their sanctuaries in Southern Mesopotamia were spared. Among his writings (see 56 titles in *G. A. L.*, i. 308 sqq.; cf. also Nallino, in *Oriente Moderno*, viii. 43 sq.) are two hand-books of dogmatics much esteemed by his co-religionists and several times commented upon: the *Tadwīd al-'Aḥād* (Teherān n. d.) and *Kawā'id al-'Aḥād* (Teherān 1305 with the commentary of his pupil Ibn al-Mutahhar). The teaching of the Twelvers concerning the Imāms is clearly worked out and also in the metaphysics *al-Fuṣūl* written in Persian (cf. the annotated Arabic edition in Berlin MS. N° 1770, fol. 138b sqq.). Tūsī's logic and philosophy is also occasionally expressed in his dogmatic writings as the formal preliminary to the dogmas, which are substantially derived from Shī'a tradition. It belongs to the school of Ibn Sina [q. v.]. On the latter's *al-Ishārāt wa 'l-Tanbihāt* he composed the commentary *Ḥall Muḥḥilāt al-Ishārāt* (Lucknow 1293). Here he defended Ibn Sina against Fakhr al-Dīn al-Rāzī [q. v.] and further wrote against the latter's *Muḥaṣṣal Afkār al-Mutaḥaddithīn wa 'l-Muta'akkkihīn* the critical commentary *Talkhīṣ Muḥaṣṣal*... (see at the foot of the *Muḥaṣṣal*, Cairo 1323). The true Shī'a with a real devotion to the Imāms is further revealed in his mystical work in Persian entitled *Awqāf al-Aḥrāf* (Teherān 1320), however much the fact of his Sūfism and reverence even for al-Hallāj distinguishes him from most of his co-religionists. In Fīqh he wrote on the law of inheritance; of his occult works a *Kitāb al-Raml* has survived (Munich, Arab MS., N° 880). While still in Sertakht he dedicated to his patron there the Aḥab-book *Aḥḥāḥ-i Nāḥir* still frequently reprinted (Lahore 1265; Bombay 1267 etc.) which shows the influence of Ibn Miskawāh. His devotion to his own sect did not in any way cut him off from others. He discussed scientific matters with Djalāl al-Dīn Rūmī by letter and with Naḍīm al-Dīn al-Kātib (*G. A. L.*, i. 466) orally; at court he worked with the brothers Djuwainī [q. v.]. To one, the historian 'Alī al-Dīn, he dedicated his *Talkhīṣ Muḥaṣṣal* and to the other, the Ṣāhib al-Dawā Shams al-Dīn, the *Awqāf al-Aḥrāf*; and he owes his fame beyond Shī'a circles to his books and researches in the exact sciences: medicine, physics, mathematics and particularly astrology and astronomy.

(R. STROTHMANN)

AL-TŪSĪ's medical works are of no particular scientific importance. In Physics, as an astronomer, he was primarily interested in questions of optics, both geometrical and physiological. To this field belongs his *Tahzīb Kitāb al-Manāẓir*, a version of the *Optics* of Euclid, and the *Risāla fī 'Nikāḥ al-Shu'arāt wa 'n-Nifāḥāt*. The industry is remarkable which al-Tūsī displayed in editing and improving the translations made by Ṭahīṭ b. Qurra, Ḳusṭā b. Lūḥ and Ishāḳ b. Hunayn of Greek mathematicians and astronomers; we may mention among mathematicians, Euclid (*Elements*, *Data*, *Phainomena*), Apollonius (*Conica*), Archimedes (*Dimension of the Circle*, *Sphere* and *Cylinder*, *Lemmata*), among astronomers, Theodosius, Menelaus, Autolycus, Aristarchus, Hipparchus and Ptolemy. His most famous original work is the *Kitāb Shāh al-Kaff*, a work on the principle of the transversal, from which he deduces relations of fundamental importance in spherical trigonometry. He also wrote a book on arithmetic, *Muḥḥṣat al-Djāmī al-Hudūd bi 'l-Takht wa 'l-Tharāḥ*.

Tūsī acquired the greatest fame by his achievements in the field of astronomy. He owed the means to conduct his researches to the astrological interests of the Mongol Khāns, particularly his patron Hūlāgū. The latter entrusted him with the building of a great observatory at Marāgha which was equipped with the best instruments, some of them constructed for the first time, and a large staff of observers. Tūsī was already 60 when the building was begun, but he was spared another 12 years to finish completely his task of calculating new planetary tables based on comprehensive observations. His calculations he recorded in the *Zīj-i Ilkhānī*. The first *Maḥallā* deals with eras, the second with the movements of the planets; the third and fourth are devoted to astrological observations. Of further works we may mention the *Kitāb al-Tadhkirat al-Nāṣiriya*, a survey of the whole field of astronomy, on which numerous later scholars wrote commentaries, and the astrological *Kitāb-i al-Faḥl*.

Bibliography: The best account of the mathematical and astronomical works of al-Tusi and the MSS. still existing is given by H. Suter, *Die Mathematiker und Astronomen der Araber und ihre Werke*, Leipzig 1900, p. 148—153. Further references in E. Wiedemann, *Beiträge z. Gesch. d. Naturwissenschaften*, lxxviii., *Notiz al-Din al-Tusi*, in S.E.P.M.S. Erg., vol. ix., 1928, p. 315.

(J. RUSKA)

AL-TUSI, MUHAMMAD b. AL-HASAN b. 'ALI ABU DJAFAR, was born at Tus in Rāmān 385 (995). After receiving early education at his native place he came to Baghdad in 408 (1017) and studied under al-Shāikh al-Mufid (Muhammad b. Muhammad al-Nu'mān al-Baghdādī, d. 413 = 1022). On the latter's death, al-Tusi associated himself with al-Sayyid al-Murtadā (Abu 'I-Kāsim 'Alī b. al-Husain, d. 436 = 1044) and was his companion and pupil for about twenty-three years. When the latter died he stayed on at Baghdad for twelve years and tried his utmost to spread the doctrines of the Shī'a sect. His enemies once complained to the Caliph al-Kā'im (422—467 = 1031—1075) of his hatred of the first three orthodox Caliphs and supported their allegations by quoting passages from his book *Kitāb al-Miqbāl*. Summoned to the presence of the Caliph, he explained the passages in such a way that the Caliph became satisfied that no disrespect was meant to the Sunnī doctrines and no action was taken against him. But the public agitation against him grew vehement and at last in 448 (1056), his residence was burnt to ashes. He left Baghdad that year and came to Najaf where he passed the rest of his life. He is the greatest doctor of the Shī'a sect, and is popularly known as *Shāikh al-Tā'ifa* or simply as al-Shāikh. He died according to most of the biographers in Najaf in 460 (1067) or according to some, 458 (1065). Two of his works, *Ta'ādhūn al-Ahkām* and *al-Itibār*, are among the four canonical books (*al-Kutub al-arba'a*) which are held in the highest veneration by the Shī'a sect. He is the author of numerous books, a list of which he has given in his work called *Fihrist Kutub al-Shī'a* (*Bibliotheca Indica*), p. 285.

The more important of his works are:

1. *Kitāb Tahdhīb al-Ahkām*, a work on *Hadīth* according to the Shī'a school. Lithographed in two volumes, Tehrān.
2. *Kitāb al-Itibār fi ma 'l-hakā'ifa fīhi min al-Ahkām*, another book on *Hadīth*. The first work is a comprehensive one and contains all kinds of *Hadīth*, while the second deals only with those traditions which appear to be discrepant. Lithographed, Lucknow 1307 and Tehrān 1322.
3. *Kitāb al-Mabūd*, a digest of Muhammadan law according to the Shī'a school. Lithographed, Tehrān 1271.
4. *al-Nihāya fī 'l-Fiqh*, a compendium of Muhammadan law according to the Shī'a school. Lithographed with a collection of treatises on the same subject under the title of *al-Djawānib al-ahdiyya*. Lithographed in Tehrān 1276.
5. *Fihrist Kutub al-Shī'a*, a list of Shī'a books. Printed in the *Bibliotheca Indica*, 1848.
6. *Du'a' al-Djāwānib al-kabīr*, a book on prayers, ascribed to al-Imām 'Alī Zayn al-'Abidin (d. A. H. 94) from whom it descended to the author. Lithographed with interlinear translation in Persian, Lucknow 1288.
7. *Du'a' al-Djāwānib al-saghir*, another book

on prayers, ascribed to al-Imām Mūsā Kā'im (d. A. H. 183) from whom it descended to the author. Lithographed with interlinear translation in Hindustānī, Lucknow 1288.

8. *Kitāb al-Fuṣūl fī 'l-Uṣūl*, a treatise on the fundamental dogmas of the Shī'a creed.

9. *Miqbāl al-Mutahaddith al-kabīr*, a book of pious rites and prayers to be observed throughout the year. The author abridged this book and named it *Miqbāl al-Mutahaddith al-saghir*.

10. *Kitāb al-Hall wa 'l-Iḥdā*, a book of religious duties, especially prayer.

11. *Kitāb al-Tibyan fī Tafsi'r al-Kur'ān*, a comprehensive commentary on the Kur'ān in twenty volumes.

12. *Uddat al-Uṣūl*, a work on Principles of Jurisprudence. Lithographed in Tehrān.

13. *al-Amālī fī 'l-Ahkām*, a work on traditions. Lithographed in Tehrān.

TUSTAR. (See SHUSTER.)

TŪTĪ NAME. (See NAKHEHWĀN.)

TUTUSH b. ALF ARSLĀN, TADJ AL-DAWLA, a Seljuq ruler in Syria, 471—488 (1079—1095). In 474, or according to Ibn 'Askir 472, Tutush took possession of Damascus, after he had been allotted Syria by his brother Sulṭān Malikshāh. He had, it is true, to conquer this province first, for the Turkoman chief Arḍī [q. v.], a few years before, had taken Jerusalem and the whole of Palestine with the exception of a few fortresses from the Fātimids, but the latter had not given up their claim to the country and waged continual war with him so that he had great difficulty in holding his own. In this same year, he was besieged by them in Damascus and therefore appealed for help to Tutush; the latter, then only a boy of 14 — he was born in 458 — answered his appeal but at once had the unfortunate Atafz put to death in order to secure the city for himself. He then turned his attention to Halab, which he besieged in vain, then retired from it and made conquests in the surrounding country (Buzā'a, al-Bira etc.). In his absence the Halabīs appealed to Muslim b. Kuraish, who succeeded in driving the ruling family of the Mirdāsids out of the town and getting his rule recognised by Malikshāh [q. v.]. This was naturally not what Tutush desired; he at once became involved in war with the 'Ukalid and was even besieged by him in Damascus (476 = 1083). He got rid of this enemy however when in the following year he fell in battle with the Seljuq of Rūm, Sulaimān. As now both Sulaimān and Tutush were rivals for Halab, they went to war, which ended in the death of the former in battle (479 = 1086). But Tutush did not yet succeed however in taking the city, for Malikshāh brought up a very large force in order to organize these districts in person; he gave Halab to his friend Aksonkor [q. v.]. Tutush had retired on his approach and had to be content to combine with Aksonkor and Buzān, to whom Malikshāh had given Edessa. In 485 (1092) they made notable conquests in Syria, Hama, Apamea etc.; but when they reached Tripolis, the commander there, Ibn 'Ammār, was

able to win over Aksonkor, so that the latter refused to do anything against him and went home with his troops, when he was vigorously reproached by Tutush for this step. Burān also did the same so that Tutush was forced also to retire, when the sudden death of Malikshāh altered the whole situation in a moment. In view of the uncertainty regarding the succession, the two Turkish emirs were forced to pay homage to the claimant Tutush and support him on his campaign to the east. Nisibis, Amid, Malyāfāriqn and al-Mawzīl had to submit and in the first named town a fearful massacre was wrought by Tutush. When it became known that Barkiyārūq was coming forward as his father's rightful heir, the emirs left Tutush in the lurch and joined Barkiyārūq, so that Tutush had to retire to Syria, firmly resolved to revenge himself on the emirs. He thereupon collected new forces to take the field against them while the emirs, who were supported by Kurbūka on behalf of Barkiyārūq, did the same. At Tell al-Sultān, six farsakhs south of Halab, the two sides met (487 = 1094). Tutush was victorious; Aksonkor was taken prisoner and at once executed. Kurbūka and Burān escaped to Halab but had finally also to surrender. Tutush had the latter also executed and sent his head to Edessa to frighten the inhabitants into obedience. Every one now submitted to the victor, who at once entered the Irāk with his troops and came to Hamadhān, while Barkiyārūq, who had only a small army at his disposal, had to flee before him to Isfahān where he took smallpox. Nevertheless the Turkish emirs in the town hesitated to submit to Tutush and when Barkiyārūq recovered from his illness, they pointed out to him that the claims of the two pretenders could only be settled by the sword. Barkiyārūq was then joined by troops from all sides so that he was able to attack Tutush at a place called Dushillā near al-Raiy (17th Šafar 488 = Feb. 26, 1095). Tutush, abandoned by his soldiers, made a valiant stand but is said to have fallen at the hands of one of Aksonkor's men who wished to avenge his master. Syris then passed to his sons Ridwān [q. v.] and Duḡāq.

Bibliography: Of the works mentioned in the article *SETDJUKS* special mention may be made here of the historians of Damascus: Ibn al-Kalānisi, ed. Amedroz, cf. index, and of Halab: Kamāl al-Dīn, *Zuhdat al-Talab* and *Bughyat al-Talab*, especially the excerpts in *Historiens Orientaux des Croisades*, iii. (p. 703—706 biography of Aksonkor); Ibn Khallikān, ed. Bulaḡ 1299, i. 168 sq. (M. TH. HOUTSMAN).

TUWAIŠ, ABŪ ‘ABD AL-MUN‘IM IBN ‘ABD ALLĀH AL-DHĀ‘IR, was the first great singer in the days of Islām. It is said that his real name was TĪ‘IS (peacock); but that when he became a *mukhannath* it was changed into Tūwais (little peacock), and that ‘Abd al-Mun‘im was changed into ‘Abd al-Na‘īm. He was born on the day of the death of the Prophet Muḥammad (June 8, 632), was weaned the day that Abū Bakr died, was circumcised the day that ‘Umar was assassinated, was married the day when ‘Uthmān was murdered, and his first son was born on the day when ‘Alī passed away. These extraordinary coincidences gave rise to the proverb: “More unfortunate than Tūwais”. He belonged to Madīna and was a *wasalā* of the Banū Makhḥūm, being in the service of Arwā, the mother of the Caliph ‘Uthmān. He first attracted attention by singing

certain melodies that he had learned from Persian slaves, and rose to fame as a musician in the reign of ‘Uthmān (644—666). About this time a new style of music was introduced into Madīna which was known as the *ghinā’ al-ruḡib* or *ghinā’ al-muḥannath*, its especial feature being the application of rhythm (*ihās*) to the melody (*lahn*) [see *MUSIQ*]. He is said to have been the first to sing this “new music” in Madīna (*Aghāni*, iv. 38; *al-Iḥd al-farid*, iii. 187). What is attributed to him elsewhere in the *Aghāni* (ii. 170) can only be properly apprehended in conjunction with the above, so that this must be read: Tūwais was “the first who sang [the *ghinā’ al-muḥannath*] in Arabic in Madīna”. Like many other musicians in Madīna at this period, Tūwais was a *mukhannath* (see my *Hist. of Arabian music*, p. 45) and the proverb arose: “More effeminate than Tūwais”. Indeed it was said that music (*ghinā’*) had its origin in Madīna among the *mukhannathūn* (*Aghāni*, iv. 161) which is probably a canard started by the *‘ulamā*. That Tūwais was the first *mukhannath* in Madīna, as the author of the *Aghāni* says, can scarcely be correct (cf. al-Bukhārī, iv. 32; al-Tirmidhī, i. 271; *Uṣd al-ghabā*, iv. 268). Whilst Abū b. ‘Uthmān b. ‘Affān was governor of Madīna, Tūwais was favoured by the *amir*, but when Mu‘āwiyā I (661—680) became Caliph, and Marwān b. al-Hakam was appointed governor, the *mukhannathūn* were suppressed, and Tūwais fled to al-Suwaid, a two days’ journey on the road to Syria. Here he remained until his death about 710—711. Some say that he died at Madīna, whilst others say elsewhere.

In spite of the fact that Tūwais only used a square tambourine (*duff*), which he kept in a bag or in his cloak, to accompany himself when singing, yet he had so high a reputation in music, says Ibn Khallikān, that his talent became proverbial and a poet of Madīna said, “Tūwais, and after him Ibn Suraidj, excelled [in singing], but pre-eminence belongs to Ma‘bad”. Among his pupils were Ibn Suraidj [q. v.], al-Daif Nāṣidh, Nawma al-Duḡā and Fand. Ibn Suraidj said that Tūwais was the finest singer of his day, and he was considered the best exponent of the *kaṣidī* rhythm.

(H. G. FARMER)

TÜZER, a town in Southern Tunisia, 230 miles S.S.W. of Tunis and 120 W. of Gabes in 33° 34' 48" N. Lat. and 8° 8' E. Long. (Greenwich).

Tüzer is the most important place in al-Djārid [cf. *MĀD AL-DJĀRID*]. Situated on the isthmus which separates the Shott (Gharsa) in the N. from the Shott al-Djārid in the S. and in the immediate neighbourhood of the latter; it consists of a town and a few scattered villages in the oasis which runs southwards over an area of about four sq. miles. The principal town is quite regularly

built; the majority of the houses are built of bricks arranged in geometrical patterns; the dwellings in the oasis are usually only "gourbis" of trunks and branches of palm-trees. The people make carpets and woollen and silk blankets which are much esteemed, but they are mainly dependent on their gardens and palmgroves. The oasis, the richest in al-Djard, owes its fertility to the numerous springs (194) which rise to the west of the sand-dunes and unite to form a stream which runs towards the south. The water is distributed for irrigation purposes by a system devised by al-Bakri (*Masālik*, transl. de Slane, revised by Fagnan, p. 102) and still in active use. The palm-trees, numbering 228,000, supply dates of various kinds, notably the *deblat-nūr*. Export has assumed considerable proportions since the railway was connected Tüzer to Sfax and the rest of the Regency. The population are arabicised Berbers; Tüzer itself has 11,056 inhabitants of whom 10,723 are Muslims, 181 Jews, 152 Europeans (Census of 1926).

Tüzer (*Thuzur* of the *Tab. Pent.*; *Thuzur* of Ptolemy) is of very ancient origin. The Romans founded near the site of the village of Blidat al-Hader, a township, remains of which can still be seen in the base of the minaret of the mosque, a well, shafts of columns, fragments of capitals etc. Taken by the Vandals, it was reoccupied by the Byzantines; pillaged no doubt by the first Arab invaders, it finally fell to the Arabs at the end of the viiith century A.D. The population had to adopt Islām or go into exile. Those who migrated were probably very few, since al-Tijānī (*Rihla*, transl. p. 143) regards the people of Tüzer as descendants of the Rūm who were in Ifrīqiya at the Muslim conquest.

During the centuries that followed, Tüzer seems to have enjoyed great prosperity. Ibn Hawqal (*Deser. de l'Afrique*, transl. de Slane, in *J.A.*, 1842) — who calls this district Kasilīya —, al-Bakri (*loc. cit.*) and Idriṣī agree in recording the importance of the trade here and the wealth of its palmgroves.

According to al-Bakri, 1,000 loads of dates were exported every day.

The history of Tüzer has been by no means without incident. Nominally subject to the various dynasties who ruled in Ifrīqiya the people of Tüzer endeavoured to retain their independence in practice. They showed their hostility to the Fātimids by supporting the rebel Abū Yazīd. Under the Zirids, they had local chiefs of the families of the Banū Furghān, then of that of the Banū Warrāṣ (cf. *UJAID*). In the Almohad period, their town was pillaged by 'Alī b. Ghāniya, then reoccupied by the Caliph Abū Yūsuf. At the end of the xiiith century, they threw off Hafsid suzerainty and in the xivth recognised that of Ibn Yamin whom Saḥān Abū 'I-Abbās had great difficulty in disposing of in 1379 A.D. Under the successors of this prince they continued to be distinguished for their insubordination and on several occasions forced the rulers of Tunis to resort to force to reduce them to obedience. The town was also disturbed by the fighting between the citizens and the Arab tribes of the neighbourhood (Leo Africanus, Bk. I., ed. Schefer, iii. 257). The position hardly changed in the Turkish period. The people of Tüzer took part in several risings in the xviith and xviiith centuries; the beya had always difficulty in collecting the taxes. The quarrels of the Soff also contributed to disorders. In the xixth century two of these Soff, the Ulād Hadel and the Zebda, each occupied a quarter of the town and maintained a fierce warfare until the French occupation definitely established peace and tranquillity (1882).

U

'UBAID ZĀKĀNĪ (NIZĀM AL-DĪN 'UBAID ALLĀH), a Persian poet of the xivth century, born c. 700 (1300) at Kāzwin in the family of the Zākānī, which took its name from a village in the neighbourhood, whence it had originated, lived in Shirāz, which left him happy memories, in the reign of Shaikh Abū Ishāq Indjū (d. 747 = 1346—1347), was a judge in Kāzwin, went to Baghdad where Solṭān Uways of the Ilkhānīan or Djālā'irid dynasty was reigning, to visit the poet Selmān Sawedjī and died in poverty in 772 (1371). He was a satirical and erotic poet. A selection of his facetiae was printed at Constantinople in 1303 (1885—1886) by M. H. Feriḥ and at Berlin 1343 (1924); it contains: *Abḥād al-Aḥrāf* ("Morals of the Aristocracy"), a satire written in 740 (1340); *Rik-nāma* ("Book of the Beard"), a dialogue between the poet and the beard regarded as a destroyer of youthful

beauty; *Sad Fend* ("100 Counsels") in prose written in 750 (1350); *Ta'rifāt* ("Definitions"), ironical, in prose; *Risāla-i dil-gushā* ("Little book which dilates the heart"), Arabic and Persian anecdotes and facetiae; several obscene poems. This edition does not include the *'Ushshūb-nāma* ("Book of Lovers"), *Fal-nāma* ("Book of Prophecies"), etc. *Mūsh u-Gurba* ("The Mouse and the Cat") has been lithographed in Bombay, n.d. and Berlin.

Bibliography: Dawlat-Shāh, *Tadhkira*, p. 288—294; Lutf 'Alī-Beg, *Atesh-kade* (Bombay 1277, no pagination, chapter on Kāzwin); J. v. Hammer, *Geschichte d. schön. Redek. Persiens*, p. 249; Edw. G. Browne, *History of Pers. Literature under Tartar Dominion*, p. 230—257. (CL. HUARY)

'UBAID ALLĀH. [See AL-MAMDĪ 'UBAID ALLĀH.]

UBAID ALLĀH b. ZIYĀD, an Umayyad governor. 'Ubaid Allāh was the most distinguished of the sons of the favourite of Mu'āwiyā I, Ziyād b. Abihī [q. v.], celebrated for his rigour and severity, and was appointed governor of Khurāsān at the age of five and twenty. According to the usual statement, this took place in 54 (673—674). Soon afterwards he crossed the Oxus with an Arab army and advanced as far as Bukhārā [q. v.]. But he did not remain long in Khurāsān; in 55 (674—675) or according to others 56 (675—676) or the beginning of 57 (676—677) the governor of Baṣra, 'Alid Allāh b. 'Amr b. Ghailān, was dismissed and the administration of the city entrusted to 'Ubaid Allāh who temporarily appointed Aslam b. Zur'a al-Kilābi as his deputy in Khurāsān and only later was relieved of his former office. After his arrival in Baṣra, 'Ubaid Allāh at first endeavoured to win over the Khāridjīs there by kindness, but when his efforts failed, he had to use more vigorous means and exerted all his energy to bring the Baṣran Khāridjīs under his authority. In time he succeeded in restoring peace to Baṣra. In the year 60 (679—680) he was appointed by the caliph Yazid governor of Kūfa, while retaining his post in Baṣra. When Ḥusain b. 'Alī [q. v.] was persuaded to set out from Mecca to go to Kūfa, 'Ubaid Allāh sent troops against him and on the 10th Muḥarram 61 (Oct. 10, 680) the battle of Kerbela was fought in which Ḥusain lost his life. With the death of Yazid on 14th Rabi' I 64 (Nov. 10, 683) a troubled period began. 'Ubaid Allāh had homage paid to himself in Baṣra but only provisionally. The Kūfans however were dissatisfied and he had to escape to Syria, and by 1st Djumādā II of the same year (Jan. 25, 684) 'Abd Allāh b. al-Hārith b. Nawfal called Ḥabba was recognised as governor of Baṣra. After the death of Mu'āwiyā II 'Ubaid Allāh supported the Umayyad party and urged Marwān b. al-Ḥakam to come forward as a claimant to the throne. At the battle of Marj Rāhit (end of 64 = 684) where al-Daḥḥāk b. Qais [q. v.] fell, 'Ubaid Allāh commanded Marwān's left wing. In the following year he was sent with Ḥusain b. Numair al-Sakūni [q. v.] by the caliph to Ḳarḥisiyā in order to invade the 'Irāk from there and to bring this unruly province to obedience once and for all. He is said to have been appointed in advance governor of all the country to be conquered by him. Soon after his arrival in Mesopotamia the news of Marwān's death reached him; his son and successor 'Abd al-Malik confirmed 'Ubaid Allāh in all the offices and privileges which Marwān had given him. 'Ubaid Allāh spent the whole year in Mesopotamia continuously fighting with the enemies of the caliph. He then advanced on al-Mawṣil. An army, which al-Mukhtār b. Abi 'Ubaid [q. v.] sent against him in Dhū l-Hiǧǧa 66 (July 686) put to flight the advance-guard of the Syrian army but did not dare attack the main body. Soon afterwards the Shi'ī leader Ibrāhīm b. al-Aḥṭar attacked the Syrians and on the 'Āshūra' day 67 (Aug. 6, 686) a battle was fought on the river Khābir in the vicinity of al-Mawṣil. One of 'Ubaid Allāh's subordinates, 'Umar b. al-Ḥubāb, is said to have gone over to the enemy. The Syrians suffered a disastrous defeat and both 'Ubaid Allāh and Ḥusain b. Numair were killed.

(K. V. ZETTERSTEN.)

UD, the lute, is the most important musical instrument of Islāmic peoples from the Atlantic to the Persian Gulf (cf. also TUNBUR, KĪTARA, ŠITĪARA).

Arabic authors do not discriminate between the *barbat* and the *'ūd*, but there seems to have been a fundamental distinction between them. The *barbat* had its sound-chest and neck constructed in one graduated piece, whereas in the *'ūd* proper the sound-chest and neck were separate. Al-Mas'ūdi says (*Murūǧ*, viii, 88) that the lute was "invented" by Lamak (Lamech of *Genesis*, iv.), but elsewhere (viii, 99) he tells us that it was generally acknowledged that the Greeks were the inventors. Pythagoras, Plato, Euclid and Ptolemy are also given the credit of its invention, although in the *Tanbih* (B. G. A., viii, 129) al-Mas'ūdi says that since Ptolemy does not mention the lute the Greeks evidently did not know of it. The instrument was certainly of ancient origin. Whether the terra cotta figure found at Goshen in Egypt, and attributed to the sixth—xxth dynasty, shows a lute or not (Petric and Duncan, *Hyksos and Israelite Cities*, p. 38, pl. xxxvii. B), we see undoubted examples of it in India from the 3rd century B.C. (sculpture from Bharhut in the Indian Museum, Calcutta). For later Indian examples see *J. Am. O. S.*, I, 244, 253; Burgess, *Buddhist stupas of Amarāvati and Jaggaṇyapeta*, fig. 7. It also occurs in a frieze from Aīghānistān (1st cent. A.D.) presented to the British Museum by Maj. Gen. Cunningham.

We are told that the lute (*'ūd*) was known in Persia at the time of Shāpūr I (241—272 A.D.) during whose reign it is said to have been invented (Abu 'l-Fidā, *Historia antislamica*, p. 82). It is more likely however that this instrument was the *barbat*, and that the reference is rather to an improvement, possibly the substitution of a belly of wood instead of skin. The Persians called the instrument the *barbat* because it resembled the breast (*bar*) of a duck (*bat*) (*Maḥāṣin al-'Ulūm*, p. 238; cf. Lane, *Lexicon*). J. P. N. Land was of opinion that the Persian lute referred to by Arabic authors was actually a two-stringed *funbūr* (*Trans. IXth Congress of Orientalists*, 1891, p. 154), but several specimens of Sāsānian art (ivth—viith century) have preserved designs of the Persian lute showing four strings (Dalton, *Treasures of the Oxus*, ed. 2, p. 211), and the number of strings is confirmed from other sources (*J. R. A. S.*, 1899, p. 59). That a two-stringed lute (*'ūd*) existed at the end of the viith century in al-'Irāk we know

from the *lūd al-farūd* (iii. 181), and the design of a two-stringed lute (*barbat*) of the viiith–ixth century has been preserved (Pérez, *La céramique archaïque de l'Islam*, pl. 67). The *barbat* was the chief instrument of the Arab Ghassanids in pre-Islamic times (*Aghāni*, xvi. 15) and also of the Syrians in early Islamic times (*Aghāni*, iii. 84). The Greek *barbaros* would appear to have been borrowed from the Orient (Athenaeus, *Deip.*, iv. 14), and Strabo remarks on its barbaric name (*Geog.*, x. iii. 17).

The Arabs of pre-Islamic times had certain types of the lute known as the *mishar*, *kirān* and *muwatat*. These would appear to have been identical with the *barbat* but with skin bellies. The *mishar* is unanimously identified with the lute (*ūd*) by the Arabic lexicographers (see also al-Mas'ūdī, *Murūj*, viii. 93; *al-lūd al-farūd*, iii. 186). In the xth century *Glossarium Latino-Arabicum* however, the *mashar* (p. 362) or *mishar* (p. 308) equates with *symponium*, and the modern *mashar* is a tambourine. Indeed, the identification by the older Arabic lexicographers is suspect. The praises of the *mishar* are sung by the vith century poets Imru' al-Qais (al-Shalāhi, fol. 13) and 'Alkama (*Musaddaliyat*, text, p. 812). It was a great favourite with the Quraysh until al-Nadr b. al-Hārith (d. 624) introduced the *ūd* from al-'Irāk. The *kirān*, according to al-Harbi (d. 898), was also a lute (*ūd*), and this author says that it was so called because it was placed [in playing] against the breast. This instrument is also mentioned by Imru' al-Qais (al-Shalāhi, fol. 15). The *muwatat* is referred to by Labid (d. 612) (q. v.) and is generally considered to be a lute (*ūd*) (Lane, *Lex.*, i. 126). About the close of the vith century al-Nadr b. al-Hārith, as mentioned above, introduced the *ūd* from al-'Irāk into Mecca (al-Mas'ūdī, *Murūj*, viii. 93–94), the probable special feature of the instrument being its wooden belly (*ūd* = "wood"). Al-Kalbi (d. 763) records (*Aghāni*, vii. 188) that the first to play the lute (*ūd*) in Medina was Sa'ib Khathir (d. 683). About the year 684, Ibn Suraidj [q. v.] was playing on a lute (*ūd*) constructed after the Persian manner (*Aghāni*, i. 98) (see the lute delineated in Herzfeld, *Die Malereien von Samarra*, 1927). This Persian type of lute continued to be favoured by the Arabs until Zalzal (d. 791) [q. v.] invented his "perfect lute" or *ūd shabbūz* (*Aghāni*, v. 24). The Persian lute, i. e. the *barbat*, continued however to be favoured side by side with the *ūd* proper, and the xth century Mesopotamian lute shown in Bowen's *Life and Times of 'Alī b. 'Iṣā* (frontispiece) may very well be a *barbat*. The same remark may be applied to the lute depicted on the Hispano-Moorish box of the xth–xith century in the Victoria and Albert Museum London (*The Legacy of Islam*, fig. 89), whilst the lute shown in the xiiith century *Cantigas de Santa Maria* (Riaño, *Notas on early Spanish Music*, fig. 45) undoubtedly represents the *barbat* (cf. the *ūd*, or lute proper, in fig. 44, b). Two other instruments of this type that we know of are the *pipa* and *habas*. The *pipa* is the so-called "balloon guitar" of the Chinese (Van Aalst, *Chinese Music*, Shanghai 1884, p. 64), who are said to have possessed it since the days of the Han dynasty. It was introduced into Mesopotamia by the Mughals in the xiiith century, and Ibn Ghaybi (d. 1435) describes it. It may be found in the paintings of the Mughal-Persian school (Marteau-

Vever, *Miniatures persanes* . . . 1913, fig. 212). Al-Mutarrifi (d. 1216) refers to an instrument which he calls the *ma'raf* [see art. MĀ'RAF] and describes it as "a sort of *shabbūz*" made by the people of al-Yaman. According to the author of the *Tawfī al-'Arūs*, this was the instrument now known as the *shubb*. The *shubb* (al-Ḥijāz), *shabbūz* ('Uman), *shabbūz* (Hadratmūt), *shubb* or *shubb* (Turkey) is a very old instrument. Perhaps that illusive name of the musical instrument of the Varāṁika *गुणवत* or *गुणवत* in the *Murūj* of al-Mas'ūdī is a copyist's error for *گوند* (Farmer, *Studies in Oriental Instruments*, p. 59; *History of Arabian Music*, p. 6). Ewliyā Çelebi (xviiith cent.) says that the *shubb* was invented by a vizier of Muhammad II (d. 1481) named Ahmad Pasha Harsak Ughit. He describes it as being a hollow instrument, smaller than the *shabbūz*, and mounted with three strings (*Travels*, i. iii. 235). On the other hand, Ibn Ghaybi (d. 1435) says that the *shubb* *rimī* had five double strings. The instrument is no longer used by the Turks, although it has survived under the name of *boban*, *boban*, in Poland, Russia, and the Balkans, but here it is the lute proper and not a *barbat* type. For the *shubb* of the modern Ḥijāz, a long, shallow chested *barbat*, hollow throughout, with a part belly of skin and six strings see Farmer, *Studies* . . . p. 72. (For the Hadrami instrument see Landberg, *Arabica*, iii. 15, 29, 113. For a Malay gambus see *Journal of the Straits Branch of the R.A.S.*, 1904 [N^o. 40], p. 13, fig. 5). In Turkestan a rather primitive bowed instrument is known as the *shubb* (Filtrat, *Ustik Kiličik Muzikant*, Tashkent, p. 43).

The *ūd* or lute proper, as introduced by Zalzal in the viiith century, had, apparently, a separate neck like the modern instrument, whereas the *barbat* or Persian lute, which the Arabs had used until then, had no separate neck, the whole instrument from the head downwards being in one graduated piece, perhaps hollow throughout like the *shubb*. Zalzal's *ūd al-shabbūz* was so named because it resembled the fish called the *shabbūz*. The description of the *shabbūz* given by the Arabic lexicographers leads to the inference that the sound-chest of Zalzal's lute was ovoid rather than pear-shaped (cf. the Spanish *machete* in Engel's *Mus. Instr. in the South Kensington Museum*, pl. facing p. 248, which is in the form of a fish). We see the form of the *ūd al-shabbūz* persisting in Islamic art for centuries, but the pear-shaped sound-chest, upon which the *barbat* was founded, eventually became the more popular type (Lachmann, *Musik des Orients*, pl. 11). Ziryāb (viiith–ixth century), the famous Andalusian musician, is claimed to have improved the *ūd* at Baghdad, and in al-Andalus he introduced a plectrum of quill instead of the one of wood that had hitherto been used (al-Maqqari, *Andalus*, ii. 86–87). He is also said to have introduced a fifth string, a device dealt with by both al-Kindi (d. 874) and al-Fārabi (d. 950). For a full statement of the influence (*ta'athir*, cf. *ibid.*) of the strings of the *ūd* on man see Farmer, *The Influence of Music: from Arabic Sources*, London 1926.

At this period the names of the various parts of the *ūd* were: *ra's* (head, scroll), *ma'raf* (tuning pegs), *anf* (nut), *ibrah* or *unh* (neck), *awṭar* (strings), *daṣṣin* (frets), *muḥt* (bridge-tailpiece), *waḍā* (belly), *'ain* (sound-hole), *maḥṣab* (plectrum).

For the particular names of the strings and frets see art. *mūsīqī*. Dimensions and other details are given by al-Kindī (Berlin MS., No. 5530, fol. 25), al-Fārābī (D'Erlanger, *La musique arabe*, i. 163), the Ikhwān al-Safā' (Bombay ed., i. 98) and al-Khwārizmī (*Mafātīh al-'Ulūm*, p. 258). By the time of Ṣafī al-Dīn 'Abd al-Mu'min (d. 1293) [q. v.], the 'ūd had five strings (Carra de Vaux, *Le traité des rapports musicaux*, p. 52), and this continued up to the xvth century in the East. This instrument, called the 'ūd *kāmīl*, was slightly larger than the older classical lute ('ūd *ḥadīm*) of four strings. Some very large types of lute have been preserved in Persian art (*Jil*, iii, fig. 6). A Persian treatise on music, the *Kanz al-Tuhaf* (xivth century) and a Turkish imitation of the game by Ahmad Ughlu Shukrullah (xvth century) give full details of the construction of the 'ūd. In the xvth century copy of a Maghribi treatise on *Ac 'ūd* we have a four-stringed instrument (Farmer, *an old Moorish Lute Tutor*, p. 4). Unlike the *iedia* val lute (see Farmer, *Arabic musical MSS in the Bodleian Library*, front.) the modern lute is not fretted. For the modern Moroccan 'ūd with four double strings see Hōst, *Nachrichten von Marokko und Fes* (1787), p. 261, pl. xxxi, and for a seven double stringed instrument see Lavignac, *Encycl. de la musique*, v. 2927. Neither Russell (*Nat. hist. of Aleppo*, 2nd ed., 1794) nor Niebuhr (*Reisebeschreibung von Arabien und anderen umliegenden Ländern*, 1774-1778) mention the 'ūd, but the seven double stringed instrument is figured and fully described by Villoteau in the *Description de l'Égypte* (1809-1826), fol. ed., i. 847, and in Lane's *Modern Egyptians* (1836). The Egyptian 'ūd of to-day has five double strings (Darwish Muhammad, *Ṣafī al-Awḥād*, Cairo 1910, p. 11; Muhammad Kāmil al-Khulā'i, *al-Mūsīqī al-ṣarāfī*, Cairo 1904) although occasionally six double strings may be found (Lavignac, *op. cit.*, v. 2785). In Syria and Palestine a seven double stringed instrument was in use (Mushāraka, *Risālat al-Shihābiya*) in the early xixth century, but this has now fallen into desuetude in favour of the five double stringed instrument (Dalman, *Palästina'scher Diwan*; *M. F. O. B.*, vii, pl. iii; *Z. D. P. V.*, I, pl. 4). Turkey favours a six stringed 'ūd with five double and one single string (Lavignac, *op. cit.*, v. 3017; Fakhrī Bey, *Nazarı ve 'ilmi 'ūd dersleri*, Istanbul). Specimens of the 'ūd may be found in most museums (South Kensington, London, No. 689/69; Brussels, No. 164; New York, No. 378). Europe owes both the instrument and its name (al-'ūd = Port. *laud*, Span. *laud*, French *luth*, German *Laut*, Engl. *lute*) to the Arabs.

Among other types of the lute are the *tuhfat al-'ūd*, *kuwitra*, *lawṣa*, *rūd*, *shahrūd*, *ṣarab al-futūḥ*, *ṣarab sūr*, *awān*, *rubāb*, *mughni*, *ghidīghā* and *rūh afū*. The *tuhfat al-'ūd* is described by Ibn Ghāibī as a half-sized 'ūd. The *kuwitra* or *kuwitra* is a lute with a smaller and shallower sound-chest, its head being fixed obliquely rather than at a right angle as in the 'ūd. It is common to the whole of the Maghrib and has four double strings (Salvador-Daniel, *La musique arabe*, 1879, p. 81; Christianowitsch, *Esquisse historique de la musique arabe*, p. 30, fig. 4). The name is a diminutive (vulg.) of *kitāra* or *kitāra*, an instrument used in Moorish Spain as early as the xth century (al-'*Id al-farīd*). The *شهرود* of al-Shakundī (d. 1231)

quoted by al-Maḥḥārī (*Analestes*, ii. 144) is doubtless *شهرود* (cf. Dozy, *Suppl. Dict. Arabes*, and Fagnan, *Add. aux Dict. Arabes*). In the xth century (Seybold, *Gloss. Lat.-Arabicum*) and the xiiith century (Schlaparelli, *Voc. in Arabico*) the words *kuwitra* and *kuwitra* equate with the Latin *citara*. For specimens of the *kuwitra* see Brussels, Nos. 292-295; New York, No. 401; Paris, No. 852. The *lawṣa* is somewhat similar to the *kuwitra*. It has four double strings, and is very popular in Turkey. It appears to have been borrowed, together with its name, from Italy, and is certainly of comparatively modern adoption since it is not mentioned by Ewliyā Celebi (xviiith century). The *rūd* is of Persian origin and the word, like *tār*, means a string. It was also an instrument of the lute family (cf. Advielle, *op. cit.*, p. 14). Ibn Ghāibī mentions a *rūd khāṣṣ* (Bodleian Library MS. Marsh, No. 828) or *rūd khāṣṣ* (Bodleian Library MS. Onseley, No. 264; cf. *rūd jāma* in Vullers' *Lexicon*). The *rubāb* and *rūda* are also mentioned. Ewliyā Celebi describes a *rūfa* which had "recently" been invented by a certain Shukrullah Beg. He likens it to the *ṣarab*. Al-Maḥḥārī (*Analestes*, ii. 143-144) quoting al-Shakundī (d. 1231) mentions the *rūfa* in al-Andalus. This may have been identical with the Latin *ruta*, *ruda*, *rotte*. The *shahrūd* or *shahrūd* was invented in the year 912 by Hakim b. Aḥwas al-Sughdī (*Mafātīh al-'Ulūm*, p. 237; cf. Kosegarten, *Lib. cant.*, p. 43 and Carra de Vaux, *op. cit.*, p. 16). In al-Fārābī's day it had a compass of three octaves (D'Erlanger, *op. cit.*, p. 42). Ibn Ghāibī says that it had ten double strings and that it was twice the length of the ordinary 'ūd. The *ṣarab al-futūḥ* and *ṣarab sūr* are described by Ibn Ghāibī. The first-named had six double strings (cf. the *ṣarab rūb* in *Z. D. M. G.*, xx. 492). The name *ṣarab* is still to be found in an instrument of India (Shahinda, *op. cit.*, p. 79). The *ṣarab* was probably the original of the European *clorha* (Farmer, *Historical Facts for the Arabian musical Influence*, p. 144). The *awān* is also described by Ibn Ghāibī. It was a Turkish instrument popular with the Mamlūk sultans of Egypt (al-Maḥḥārī, *Hist. des Sult. Mamlouks*, i/i. 136). It was certainly not a drum as Quatremère thought, since Ibn Ghāibī places it among the lutes of three strings, and says that it was played with a wooden plectrum by Turkish minstrels. The *rubāb* (a lute) is to be distinguished from the *rubāb* (a viol). The former is a Persian and Eastern Turkish instrument with a vaulted sound-chest and incurvations at the waist. For a xith century Persian *rubāb* (misprinted *rubāb*) see *The Legacy of Ilūm*, ed. Arnold and Guillaume, fig. 90. It is described at length in the Persian *Kanz al-Tuhaf* (xivth century). The lower part of the belly was of skin, and three double strings were mounted on it. Ibn Ghāibī says that sometimes four or five double strings were adopted. In Persia it has fallen into disuse. In Turkestan however, it still continues to be favoured, but here it is strung with three single strings together with twelve sympathetic strings (Fitrat, *op. cit.*, p. 42). It has found its way into India (Day, *op. cit.*, p. 128) and China (Lavignac, *op. cit.*, i. 179). The *mughni* or *mughni* was invented by Ṣafī al-Dīn 'Abd al-Mu'min (d. 1294). It was a sort of arch-lute and is described in the *Kanz al-Tuhaf* (xivth century) and by Ibn Ghāibī and Ewliyā Celebi. For a design and other particulars see Farmer, *Studies in Oriental*

musical Instruments, p. 14—15, and frontispiece. The *shidūghā*, as it is written by Ibn Ghaiṭi (cf. Sachs, *Lexikon*, s.v. *shidūghā*), was a long instrument with half of its belly covered with skin. It had four strings but was mostly used, he says, in China. The *rūh aṣṣā* had a hemispherical sound-chest with six double strings of silk and metal. Many instruments with a hemispherical sound-chest are to be found in Persian art (*Fantheon*, 1929, p. 173; *Münchener Jahrbuch der bildenden Kunst*, 1911, I, 131).

(H. G. FARMER)

'UDHRA, an Arab tribe of the southern group, belonging to the great subdivision of the Qud'a. Genealogy: 'Udhra b. Sa'd Hudhaim b. Zaid b. Laith b. Aslam b. al-Hāf b. Qud'a (Wüstenfeld, *Geneal. Tabellen*, I, 18). We know nothing of their history in the remote past, for their identification with the 'Aḥqar (var. 'Aḥqar) of Ptolemy, proposed by Sprenger, *Die alte Geographie Arabiens*, p. 205, § 333 is anything but certain; in the historical period we find them established in the north of the Hāḡāz, in the vicinity of other Qud'a tribes (Nahd, Djuhaina, Ball, Kalb) and their territory adjoined that of the northern tribe of the Ghatafa. The Wādī 'I-Kurā and Tabūk are mentioned as their principal centres and they were found as far away as Aila on the Red Sea. Their settlement in districts in the north of Arabia is said to be due to the great migration of Qud'a tribes, which took place after the war with the Himyarites (see especially al-Bakr, *Muḥṭaṭar*, p. 18, 22, 27, 29, 30. = Wüstenfeld, *Die Wohnsitze u. Wanderungen d. arab. Stämme*, p. 25, 31, 37, 41; cf. *Aghāni*, xvi, 161) and the 'Udhra are said to have concluded an agreement with the Jews living in the Wādī 'I-Kurā by which they were allowed to lead a nomadic life there and they respected the palm-groves and gardens of the latter.

The 'Udhra seem always to have been closely allied with other tribes of the Sa'd Hudhaim (especially the Banī Dīnna, who had the same name as a clan of the 'Udhra and the Banī Salīmān) and were known together with them by the name of Ṣuḥr (of which the doubtful etymology is given by Yāqūt, *Muḥṭaṭar*, iii, 368); they were also associated with the Djuhaina, to whom some sources also extend the name Ṣuḥr; this alliance is said to have been a result of the 'war of al-Karīq' which broke up the Qud'a and caused them to leave al-Tihāma, where they had settled after their departure from the Yemen.

We know that modern historical criticism attaches hardly any value to these statements of genealogical tradition, and indeed the 'Udhra seem to be allied with tribes which the same tradition assigns to the northern group, like the Bakr b. Wā'il and the Djarā. It is true that al-Hamdānī (*Djastrat al-'Arab*, ed. Müller, I, 116, I, 17) puts a section

of the 'Udhra in southern Arabia, but it is impossible to decide if he is referring to this tribe or to another of the same name, especially as the genealogical lists mention almost everywhere other tribes bearing the name 'Udhra (cf. Maḥammad b. Ḥabīb, *Mukhtalif al-Kabā'il*, ed. Wüstenfeld, p. 37, gives four of them; Ibn al-Kalbī in his *Djamharat al-Ansāb* gives us another five).

According to tradition, the 'Udhra were closely related to the Meccan Quraysh; the latter's ancestor Kuṣayy [q. v.] whose mother had married an 'Udhri is said to have been brought up with this tribe, and his half-brother Riṣāḥ (in Wüstenfeld, *Geneal. Tabellen*, i. 24, erroneously: Darrādī) b. Rabi'a b. Ḥarām is said to have fought on the side of the Quraysh defending Mecca against the Khuz'a. On the other hand, the mother of the eponyms of the two tribes of Yathrib, al-Aws and al-Khazraj, is also said to have been an 'Udhri called Ka'ila bint Ka'bil (or bint Hālik) b. 'Udhra; so that the Anṣār as well as the Quraysh were connected with the 'Udhra on the female side.

The 'Udhra are said to have worshipped a deity Shams, the sun (al-Ya'qūbī, i. 296, l. 3), but we know no details.

The principal subdivisions of the tribe (Ibn Duraid, *Kitāb al-Ishṭiqāṭ*, p. 320) are the Banū Dīana, Banū Dīuḥuma, Banū Zaḥḥaḥa, Banū 'l-Djālḥa, Banū Ḥardath, Banū Hunn; Ibn al-Kalbī (*Djamharat al-Ansāb*) also adds the Banū Mudlīdj, who are said to have been numerous and powerful (they are not mentioned in Wüstenfeld, *Geneal. Tabellen*).

The pre-Islamic history of the 'Udhra is poor in warlike episodes. This is probably due to the fact that the 'Udhri poets of this period are not numerous and we know that the records of the wars of the tribes depend almost entirely upon the verses which mention them; there is just a mention of a battle which took place at some time not precisely stated between the 'Udhra and the Banū Maṣra b. Naṣr, a clan of the Banū Ashdūd (Yaḳūt, *Mu'djam*, i. 174). An allusion to a defeat which they sustained at the hands of the 'Abs is found in a verse of a poet of the latter tribe (*Mufaḍḍaliyyāt*, ed. Lyall, p. 826, l. 2). But the 'Udhra must certainly have attained a considerable degree of influence through the control which they exercised over the road between the Hīdžra and Syria; this explains the title 'Master (*raḥb*) of the Hīdžra' borne by a certain Hawḍha b. 'Amr (Ibn Duraid, *Kitāb al-Ishṭiqāṭ*, p. 320) or better: b. Abī 'Amr, whose praises were sung by al-Nābigha (cf. Dénobourg, *Nābigha Dhabyānī inḍit*, p. 48, n. xlvii. [*J. A.*, 1899] where one should read *Qinnā* for *Qabbā*). This Hawḍha is a descendant of the semi-mythical *mu'ammār* poet 'Uss or 'Ithyar (numerous other variants) b. Labīd (cf. Goldziher, *Abhandl. z. arab. Phil.*, i. 42 and notes, p. 30; Noldeke, *Z.D.M.G.*, lvi. 168). It is again al-Nābigha who sings praises of another clan of the 'Udhra, the Banū Hunn, against whom the king of al-Hira al-Nu'mān III proposed to take the field (n. xiii., Ahlwardt; cf. Yaḳūt, *Mu'djam*, i. 583).

But it is only after Islām that the part played in history by the 'Udhra becomes better known; it was undoubtedly their dominant position in the Wādī 'l-Ḥarā, which caused Muḥammad to enter into friendly relations with them; in the year 2 of the Hīdžra he sent them a letter (Ibn Sa'd, i/li. 33) but without any apparent result, and in

the year 7 he is said to have assigned a fief (*ḥaḥḥa*) to a descendant of the above mentioned Hawḍha, because he was the first of his tribe to bear the *ḥaḥḥa* to the Prophet (al-Ḥalāḥūrī, *Futūḥ*, p. 35); in the following year they fought at Mu'ta against the Byzantines (Ibn Hishām, *Sira*, p. 793; Tabari, i. 1612). These facts suggest that the 'Udhra were early converted to Islām, but on the other hand it is not till the year 9 that we find the first mention of an official embassy from them to Medina (Ibn Sa'd, i/li. 66-67); this is what makes one think that the earlier references are not authentic and even that the 'Udhra did not become Muslims until after the death of Muḥammad (cf. Caetani, *Annali dell' Islām*, ii. 50, 229, 444, 1126).

The 'Udhra took part in the Syrian expedition of the year 12 under 'Amr b. al-'Āṣ and we find them settled in this country in the Omayyad period (cf. Tabari, ii. 1792, 1818) and also at Kūfa (*Aghāni*, xvi. 7, 37), but it does not seem that they distinguished themselves in any way; although their presence in Upper Egypt is noted (al-Ḥamḍānī, *Djaḥrat al-'Arab*, p. 130, l. 4-6), they played no part in politics and gave neither here nor elsewhere any personage of note to the history of Islām.

What has given the 'Udhra a fame without equal even beyond the bounds of the Arab world down to French and German (Heine) romanticism, is their love of poetry and the touching stories of some of their poets (cf. *Udhra*), whom an unfortunate passion for a woman of their tribe reduced to death by consumption (notably 'Urwa b. Ḥizām, the "victim of love" [*ḥaḥḥa al-ḥubb*]) who is the representative of this type; cf. Ibn Kūtaiba, *al-Sayr wa 'l-Shawā'ir*, ed. de Goeje, p. 394-399; *Aghāni*, xx. 152-158 etc.). But that love-poetry did not exclude the cultivation of other varieties, is evident from the example of Djamīl [q. v.] whose celebrated love affair with Buthna (Buthaina) did not prevent him writing panegyrical and satirical poetry. Besides, the romantic conception of love is found also among other tribes; in this connection is recorded the answer of an 'Udhri who was asked if his tribe was really the most tender-hearted in all Arabia (*Aghāni*, i. 179): "We were", he said, "but the Banū 'Amir (b. Ṣa'ā'a) have vanquished us with their *Madjūn*" (the poet Ka'is b. Mu'adh or b. al-Mulawwah [iii. 102]). The 'Udhra were also celebrated for their eloquence (cf. *Aghāni*, vii. 54).

The charge of cannibalism, so frequent in the satires exchanged between tribes (cf. al-Djāhiz, *Kitāb al-Buḥālā*, ed. Van Vloten, p. 260-261; *Kitāb al-Haiyawan*, i. 129-130), has also been levelled against the 'Udhra, who are said to have eaten a female slave (Ibn al-Kalbī, *Djamharat al-Ansāb*, Brit. Mus. MS., Add., 23, 297, fol. 184v); we know that such statements have no value except the very general one of showing that a particular tribe was reputed to be in a miserable state of poverty, and in reality the 'Udhra appear from the rather meagre information we possess about them to have been an essentially nomadic tribe, living mainly in the pre-Muḥammadan period on the tribute paid them by the Jews of the oases. The occupation of the latter by Islām must have undoubtedly reduced the resources of the Beduins.

(G. LEVI DELLA VIDA)

'UDHRI, a patronymic from the name of the Arab tribe of the Banū 'Udhra [q.v.], a small tribe of the Hidsa, probably of Kahtanid descent (cf. *Aghāni*², vii, 72—73), which amalgamated with the Dihaina; the remnants of them are still to be found to-day near Yanbu' (Hidsa) and in the Egyptian Sūdān.

Ḥubb 'udhri, "Udhri love", is in the history of Islamic thought a literary and philosophical theme, related to the "platonic love" of the Greeks from which it is derived, and to the *amour courtois* of the western Christian middle ages which it inspired.

This theme, which probably was invented by the Yemeni colonists of the *ḡund* of Kūfa, celebrates an ideal Beduin tribe, in which, carrying to its extreme a refinement of tenderness from delicacy of feeling and vows of chastity, lovers "die of love" rather than "place a hand" on the beloved object. The 'Udhri ideal is *Qamḥ*, who dies in this way for love of Buḥaina.

In a well-known ḥadīth inspired by this point of view, Muḥammad is represented as saying that "he who loves but remains chaste, never reveals his secret and dies, dies the death of a martyr" (*man 'aḥibba...*).

This subject is hardly found in Aṣma'ī (Ibn Kūtaiba, *Ta'wīl*, p. 410—412). It attains its fullest development in an exquisite work, the *Kitāb al-Zuhra* of Ibn Dāwūd al-Iṣfahānī (d. 297 = 910), a Ṣāḥirī legist. Following him, other Ṣāḥirī jurists sang of Platonic love, notably Ibn Ḥazm and later Ibn 'Arabī in his *Tarḡumān al-Aḥwāṣ* on which his *Ḍaḥḥā'ir* form a commentary; this is compared by Asin Palacios to the *Vita Nova* and *Convito* of Dante.

Finding a place in the classical collections like the *Maṣāirī* al-'Uḥḍiyyah of Sarraḍī, the *Divān al-Sabūḥa* of Ibn Abī Ḥaḍjāla, the *Taswīf al-Awāṣ* of Anṣārī, the theme was taken over into mysticism by Abū Ḥamza al-Baḥdādī (d. 269 = 882) who made of it an exercise in paradoxical asceticism; and by Aḥmad al-Ghazālī and 'Ain al-Qudāt al-Hamadīyāt who sang the damnation by pure love of Iḥlās. It was also celebrated by poets, adepts of a uranism, at bottom very profane, to conceal the weakness of the flesh, in Arabic (al-Safadī), in Persian (Hāfi, *Ghul*; Hūmī, *Shah n-Gadā*), in Turkish (Mevnā, *Shakir*), in Urdu and in Japanese.

'Abd al-Ghanī al-Nābulusī has made the Prophet Muḥammad the ideal type of the 'Udhri lover (in his *Ghāyat al-Mafḥūḥ*) on account of his attachment for Zaid b. Ḥāritha.

(LOUIS MASSIGNOU)

'UDJ, also 'Adj b. 'ANAK or 'ANAK, is the Arabic name of the Biblical 'Og, the giant king of Bashan. The Qur'an does not mention him. Tabari, *Annales*, i, 500—501 tells of his great stature and death: Moses was ten ells in height, his staff ten ells long, he jumped 10 ells high and smote 'Udj in the heel; the body of the fallen giant served as a bridge across the Nile.

Tha'labi gives more details: 'Udj was 23,533 ells high, drank from the clouds, could reach to the bottom of the sea and pull out a whale which he roasted on the sun. Noah drove him in front of the ark but the Flood only reached his knees. He lived for 3,000 years. When Moses sent out the twelve spies, 'Udj put them into the bundle of wood on his head and wanted to trample on them but on the advice of his wife he sent them back so that they might put fear by their report into the heart of those that sent them. When 'Udj saw the camp of Israel, he broke from the mountain a rock large enough to crush the camp at one blow but God sent the *hukūd* (hoopoe) and birds who made a hole in the rock so that it fell like a collar on 'Udj. Moses overthrew him in one leap.

Al-Kisā'i expands the story and increases the marvellous element in it. 'Udj was the son of Kābil (Cain) banished by Adam and of his sister 'Anāk ('Anāk thus becomes a woman's name). Although chastised by his mother, 'Udj caught the stone with which Iblīs tried to kill her. She therefore blessed him with strength and longevity. When he waded through the sea, it reached to his knees; when he walked, the earth trembled; when he wept, rivers flowed from his eyes; he used to eat two elephants at a meal. He slept twice a year. In Nimrod's time, he boasted that he controlled the heavens. He worked on the Ark with Noah. He was sitting on Pharaoh's council when Yūsuf, sent by Moses, demanded that he should worship God. In order to win Pharaoh's daughter, he was going to destroy the camp of Israel with the gigantic rock, but was slain by Moses.

The sources of these legends are to be found in the Bible and in the Haggadah. The Bible mentions 'Og's great size (*Deut.*, iii, 11) and his fall (*Num.*, xxi, 33—35). E. Jōhanan describes 'Og as a fugitive who had escaped the Flood (*B. Nidda*, 61^a). Sometimes he is said to be the fugitive who brought Abraham the news of Lot's capture (*Gen.*, xiv, 13). As a reward for this, he was given long life (*Gen. Rabba*, xlii, 8). Like al-Kisā'i, *Dint. Rabba*, i, 25 puts him at the court of Pharaoh. *B. Serakh*, 54^b, *Palat. Targum* on *Num.*, xxi, 35 records how Moses slew him in one leap. It is in keeping with Muslim legend that in place of the ants, or worm, which eat away 'Og's rock we have the *hukūd*, celebrated in the legend of Solomon.

UDJDA. [See QUDJDA.]

AL-UFRAŪ. [See AL-WAFRANI.]

UGANDA, a British Protectorate in Eastern Equatorial Africa lying to the North of Lake Victoria. It takes its name from the Bantu Kingdom of Buganda, which is one of the four provinces comprising the Protectorate. The Swahili name Uganda ("Country of the Baganda"), the Swahili prefix "u" "Country of" replacing the Baganda *ba* with the same meaning) was first applied to the kingdom of Mutesa, discovered by J. H. Speke in 1862, and in time came to include the whole Protectorate which grew out of the extension of British influence in Buganda.

a. Geographical Outline. The Uganda Protectorate lies approximately between latitude 1° S. and 4° N., and longitude E. 30° and 35°, and has an area of approximately 94,204 sq. miles including 13,616 sq. miles of water. The general level of the country is 4,000 ft., with the slopes of Mt. Elgon (14,000) in the East, and the highlands of Toro in the West at an altitude of 5,000 ft. rising to the Ruwenzori range with its snow-clad peaks, of which the highest is Mt. Stanley, 16,816 ft. Highlands are found in the South-West, culminating in the volcanic regions of Mfumbiro where great cones rise to 11,000 or even 15,000 ft. But with the exception of some highlands on the Belgian Congo boundary West of the Nile 2° 15' N., the general level in the northern districts of the protectorate has been influenced by the Nile drainage system and is consequently lower and may not be more than 3,000 ft.

Lake Victoria, or Victoria Nyanza (3,726 ft.) feeds the Nile at the Ripon Falls (discovered by Speke in 1862), and is looked upon as the source of that river. Lake Albert (2,028), which forms part of the western boundary of the Protectorate, is fed by the Semiliki River draining from Lakes George and Edward, and in its turn discharges into the Nile proper, soon after receiving the waters of the Victoria Nile at its northern end. Accordingly Uganda is situated at the headwaters of the White Nile, and the Nile is the main drainage system of the whole country. The climate of the Protectorate is more temperate than that of other tropical countries; the mean maximum in most districts averages 80° F., and the mean minimum 60° F. In the lowlying areas in the North the mean maximum may be as high as 90° F. The annual rainfall varies considerably; on the North littoral of Lake Victoria the average approximates 60 inches, and there is a good rainfall on the slopes of Mt. Elgon and in the Toro Highlands. To the North the rainfall diminishes until conditions similar to that in the Southern Sūdān are reached. In areas where the rainfall is adequate, bananas are cultivated, and constitute the staple diet of the people; elsewhere grains of various kinds are grown. The vegetation of Uganda ranges from a sparse desert type of flora to equatorial forests of the Congo type, and on the Highlands of Elgon and Ruwenzori is found an Alpine Zone of considerable interest. A great portion of the

Protectorate consists of rich grasslands in a rolling savannah country.

b. Inhabitants. The population in 1929 is given as 3,410,857, of which 1,995 are Europeans and 12,539 are Asiatics. In the 1921 Census, the native population was returned as 2,848,735, made up of 267,522 Protestants, 255,014 Catholics, 98,000 Muhammadans, and 2,228,199 pagans. The population of the Baganda Province of 774,753 includes 72,263 Muhammadans, so that nearly 75% of the adherents to Islam are found amongst the Baganda. Ethnologically the inhabitants may be divided into three divisions, following the classification of Prof. C. G. Seligman: Eastern Bantu, Half Hamites and Nilotes. Of the Eastern Bantu the Baganda are the best known. It seems that several centuries ago there were successive migrations of a Hamitic cattle-owning people into this part of Africa, who established the large kingdom of Kitara, dominating the agricultural Bantu. This kingdom in time broke up into the three present divisions: the kingdom of Ankole, where the Hamite is dominant, the kingdom of Bunyoro, where there has been considerable fusion between the original Hamitic stock and the Bantu, and the kingdom of Baganda in which, though the dominant Hamitic stock still carries on the line of Kings, there has been a still greater fusion with the Bantu element. The Half Hamite is represented by such tribes as the Karamojong and the Iteso; whilst the Nilote is represented by the Acholi, Lango and other tribes in the North West of the protectorate.

c. History. The Victoria Nyanza was discovered by Burton and Speke in 1859 and the source of the Nile, the Ripon Falls, by Speke and Grant in 1862. Stanley reached Uganda in 1875 and wrote the famous letters, depicting the native kingdom of Baganda dominated by the influence of the slave trading Arabs, flirting with Islam and ripe for Christian missionary endeavour, which had such influence in determining the future destinies of that country. A band of Protestant missionaries reached Uganda in 1877 by way of the route used by the Arabs from Zanzibar, followed in 1879 by a party of French priests. Meanwhile Sir Samuel Baker, having discovered Lake Albert in 1864, was sent by the Khedive in 1869 as Governor General to the Sūdān with instructions to suppress the slave raiding which was carried on by Turks and Arabs, whose base was Gondokoro and whose furthest station was some 15 days farther south. By 1872 he had reached Bunyoro and annexed it to the Sūdān. Gordon followed him as Governor-General and sent emissaries to the kingdom of Buganda, one of whom met Stanley at the court of the Baganda King, Mutesa, and took back with him for despatch to England Stanley's celebrated letters. On the outbreak of the Mahdi rising in the Sūdān, Emin Pasha, who was Governor of the Equatorial Province of the Egyptian Sūdān, which included the northern part of Uganda, was cut off from al-Khartūm, and was rescued by Stanley. A portion of Emin's force remained and remained in Toro, in what is now the Belgian Congo, under the leadership of Salim Bey, an Egyptian officer.

The route to the interior from Mombasa [q.v.] through what is now Keoya Colony having now been opened up by the Arabs, the Imperial British East Africa Company in 1889 sent an expedition to Uganda with a view to annexation, and on the

Anglo-German negotiations for the partition of the east coast and hinterland, Uganda was assigned to Britain.

In 1890 Captain (now Lord) Lugard, who was engaged in building a series of forts from the coast, was ordered to Uganda to consolidate the Company's position there. Mwanga, the son and successor of Mutesa, had been deposed by both Christians and Muhammadans, and had fled to the South end of Lake Victoria to take refuge with some Catholic Missionaries, and Kiwewa was put on the throne. The Muhammadans soon tired of Kiwewa, who refused to adopt their customs, and eventually Kalema was proclaimed Kabaka (king) in his stead. He, profiting by the experience of his brother, professed himself a devout Muhammadan, and tried to enforce Muhammadan rites, including circumcision, on the peasantry, which caused a considerable exodus of Christians into Ankole. Mwanga was then invited by the Protestant party to return, and with a large following, he defeated the Muhammadan army and entered the capital. The Muhammadans retreated to Bunyoro whence they made frequent raids into Buganda, and on the death of Kalema chose Mbogo, Mutesa's brother, to be their Kabaka. Lugard on his arrival forced Mwanga to sign a temporary treaty, and in order to obtain a reliable force, came to an agreement with Salim Bey, the leader of the remnant of Emin Pasha's troops. He enlisted some of these Sudanese for service in Buganda, and the others he posted in forts in Bunyoro and in Toro. The Sudanese in the forts were not under proper supervision and were left to the care of their native officers. They were allowed to forage for themselves, and accordingly the cause of Islam was not helped by them amongst the neighbouring peasantry.

In 1892 the Imperial British East Africa Company proposed to abandon the country on the grounds of expense unless subsidised by the British Government, who at first refused to assist them, but subsequently, partly owing to the pressure of public opinion, mainly organised by the Church Missionary Society, and partly because they were given proofs that the country showed every sign of returning prosperity, reversed its decision, and assumed control in 1894, when a provisional treaty was completed with Mwanga.

In 1897 a series of revolts broke out. Mwanga had never become reconciled to the new state of affairs and was secretly plotting. Finally he fled to Buddu and raised the standard of rebellion, but being defeated by the Sudanese troops, fled to German territory. Macdonald, who had been engaged on the railway survey, was under orders to survey new and unexplored country near Lake Rudolf, and required a large escort, and Sudanese troops who had been almost continually fighting in various areas were detailed for this purpose. The troops were underpaid and in a discontented state of mind, and consequently several companies seized this opportunity to break into open revolt. Messengers were sent to the Muhammadan Baganda and an endeavour was made to induce Mbogo, their leader, to throw in his lot with the mutineers who would place him on the throne. Mbogo, however, refused and remained loyal to the British despite his religion, for not only had he no wish to join the rebels, but he also knew that according to the customs of the Baganda, he, as eldest son of the late Kabaka, could not properly be placed on the

throne. Affairs were also complicated by Mwanga joining up with Kabarega, the Mukama (King) of Bunyoro, in an endeavour, whilst the troops were in a state of mutiny, to drive the British out of their countries. Eventually the mutiny was quelled and the capture of the two kings and their deportation to the Seychelles brought the troubles to an end, and since 1899 the country has enjoyed almost unbroken peace. The story of Buganda and its troubles is the real story of the Protectorate. From Buganda the other tribes have been brought under British rule, sometimes by a show of military force and minor expeditions, more often by peaceful penetration.

Islam was brought to Uganda both from the East Coast and from the North. Arabs from the East Coast had penetrated to the kingdom of Uganda and were in a dominant position when Speke arrived at Mutesa's court. With the guns obtained from the Arabs in exchange for slaves and ivory, the Baganda, a most intelligent and enterprising race of people, who had already evolved an elaborate system of government, were enabled to gain the ascendancy over neighbouring tribes, but they were anxious to learn from the Arabs the secret of writing also, as they realised the power which this would give them. In the early days the Arabs refused to give them this, but made converts. No sooner had the Christian missionaries arrived than the Baganda quickly learned that they were willing and anxious to teach them to write, and to give them other instruction which would enable them to assimilate a culture, which they recognised to be superior to their own. The Arabs, realising that they were losing ground, sent for teachers from the coast and established schools, where children were taught to write Swahili in Arabic characters. The fluctuating fortunes of Islam and Christianity represent the conflict of two different cultures, and the final ascendancy of Christianity must, in the main, be attributed to the superior educational facilities offered by the Christian missions.

Islamic influence from the North has not been so important. In the early days the Turks and Arabs were interested only in raiding slaves from unorganised tribes. The troops and followers of the Provincial Governors and other officials from the Sudan made few converts, and the imported Sudanese, remnants of Emin Pasha's force, all of whom are adherents to Islam, have not had a great influence on the native population, though they live in communities scattered through the Protectorate and at one time formed the backbone of the Protectorate military forces and the civil police. In the West Nile district, inhabited by Nilotes, there has of recent years been a spread of Islam, mostly due to the strong personalities of a few chiefs, who have embraced Islam, encouraged education, and set up schools, but this is offset by large numbers of pagans who have become Christians and receive the benefits of a better education under European supervision.

UḲĀB, the eagle, the king of birds. al-Ḳazwīnī and al-Damīrī tell remarkable things about his habits, some of which go back to Greek tradition. According to al-Damīrī, there are black, brown, greenish and white eagles. Some nest in the mountains, others in deserts, in thick woods or in the vicinity of towns. (Here there is of course a confusion with the vulture and also in the statement that they follow armies and devour the fallen). The eagle hunts small wild animals and birds and eats only the liver, because this is a protection for him against disease. He does not stalk his prey but gives a cry when he sees a bird from his lofty perch and this gives it an opportunity to escape. Sometimes it happens that his beak grows so long that he can no longer hunt and must die of hunger. When the eagle is weak with age and becomes blind, according to al-Ḳazwīnī, he rises into the air until his feathers are consumed by the sun. He then falls down, plunges into a well of bitter water and comes out again completely rejuvenated. According to al-Damīrī, the young eagles carry the old ones, when they are blind, from place to place until they reach a spring in India. They are plunged into this and then dried in the rays of the sun while the old feathers fall off and new ones grow and at the same time their eyesight is restored. According to the author of "Agriculture", vultures come out of eagles' eggs and eagles out of those of vultures. According to others, all eagles are female and mate with other birds. They lay three eggs but throw the third young one out of the nest because they can only rear two. The third is brought up by the bird called *ḥāṣir al-ḥāṣim* ("bone-breaker"). Eagles fly so quickly that in the morning they can be in the 'Irāq and in the evening in the Yemen. Their eyries are built on steep hillsides; the young ones know they must not move or they would fall out and perish but as soon as they have feathers, they fly excellently.

The eagle-stone is brought by the eagle from India and put in the nest to enable the female to lay more easily. It is a stone with another stone loose inside it, the rattle of which can be heard. It is used to relieve women in child-birth. This wonderful stone is taken from Greek tradition also.

In astronomy *al-Uḳāb* is the name of the constellation Aquila, N. of Capricorn (*ḥarīq, Aquila*). It has three outstanding stars, which are called *al-nār al-ḥāṣir*, "the flying eagle", Persian: *shāhin*

ḡūzād, "the thieving falcon". The brightest star α is called *Atair* or *Atair* on our star-maps. Opposite it in the Lyre is the star *al-nār al-wāḥī*, "the falling eagle", the *Vega* of the star-maps.

In alchemy *al-Uḳāb* (Lat. allocoph, etc.) is the most usual name for sal-ammoniac.

AL-UḲAIṢIR, the name of a divinity of pre-Muhammadan Arabia, or better an epithet, the meaning of which (diminutive of *ḥāṣir*, "he who has a stiff neck" or perhaps simply "the short") seems to indicate an idol in human shape. All that we know of this god (whose real name is unknown) goes back to the references to him by Ibn al-Kalbi, *Kitāb al-Aḡḡām*, Cairo 1914, p. 38–39, 48–50, followed by Yāqūt, *Muḍjam*, i. 340–341 (transl. and annotated by Wellhausen, *Reise arab. Heidentümer*, 2nd ed., p. 62–64), *Djāhiz*, *Ḥayawān*, v. 114, *Buḥārā*, p. 237, *Khizānat al-Adab*, iii. 246 (abridged), Mahmūd al-Alūst, *Buḥār al-Arab fī Ma'rifat al-Ḥayāt al-Arab*, Cairo 1343, ii. 209 below (abridged). Al-Uḳaiṣir was worshipped by the tribes of Ḳuḏā'a, Lakhm, Djudham, 'Amila and Ḥaṭṭāṣān living on the plateau of the Syrian desert. Verses in old poets quoted by Ibn al-Kalbi mention the stones (*anḥāḥ*) put up around the sacred place (which another anonymous verse, *Lisān al-Arab*, vi. 416, already quoted by Wellhausen, describes as dripping with the blood of the victims), the "garments" (*al-ḥawāḥ*; is the reference to those of the idol or to a covering for the sanctuary in the style of the *ḥimā* of the Ka'ba?), the ditch (*al-ḥaṣr*) into which were thrown the offerings, the cries and chants of the pilgrims. The sacrifices offered to the god were not always slaughtered; they are said to have also included hair kneaded with flour (according to the widespread custom of pre-Muhammadan Arabia; cf. Wellhausen, p. 123–124, 198–199): in this connection a story is told, according to which the tribe of the Hawāṣin, reduced to great misery and entirely without food, went to beg around the sanctuary of al-Uḳaiṣir for the filthy remains of these offerings. The truth of this story is very doubtful; it is a common motif in the *ḥiḡḡa* between tribes, but in itself it has nothing improbable.

As Wellhausen notes, the expressions used in the verses which Ibn al-Kalbi quotes in connection with al-Uḳaiṣir might refer to a sanctuary as well as to an idol. We might then suppose that the epithet reflects the squat form of the building. It is worth while recalling that the name Uḳaiṣir is also applied to a tribe (*Aḡḡānī*, xiv. 98), to individuals (*Aḡḡānī*, xiv. 74; Tabari, ii. 647, 970, 997, 1000) and even to a sword (Ibn al-A'rābi, *Les livres des chevaux*, p. 87, 4).

(G. LEVI DELLA VIDA)

UKHAIḌIR, the name of an imposing castle now in ruins in the Mesopotamian desert, twenty-five miles from Kербel' and ten south-east of Shīrātīya; it perhaps preserves the name of Ismā'il b. Yūsuf b. al-Ukhaiḏir who came from Yamkma and was appointed governor of Kūfa by the Karmatians in 315 (927). The Beduin tribe of the Ruwāla, which leads a nomadic life in the vicinity, pronounce this name "al-Akheizer" but prefer to call the castle Qaifar or Kajr al-Khafādīr.

Discovered by Pietro della Valle in 1625, re-discovered in 1908 by L. Massignon, visited by Miss Gertrude L. Bell in 1909 and A. Muḥil (1912) it was systematically examined by O. Reuther in 1910.

The castle, built of stone and cement, with a few bricks, consists of a rectangular fortified enceinte with forty-eight bastions, with sides 354 feet long, 69 feet high, and 9 feet thick; blind arcades support a machicolated chemin de ronde; there are four staircases in the four corner towers and four gates in the centre of the four sides. The north gate, which is the main one, gives access to the palace, one of the halls of which was, according to Miss Bell, perhaps used as a mosque, although wrongly oriented, and rooms for the women, built on to the north wall, with three stories on this side and a single storey on its three other sides around the inner court. Outside the enceinte are two annexes of less importance. From the architectural point of view we may note in the palace the numerous niches, the fluted vaulting and the seven domes on drums.

The date of the building of Ukhaiḏir is disputed: the regularity of its plan, the large scale, and the finish of the work place it in a period when the Mesopotamian *hinter* of the desert still contained royal residences. Dieulafoy and Massignon see in it a pre-Islamic winter palace, like Hīra, built by an Iranian architect for a prince of Hīra; it might be the *Kajr al-Sadīr* of the poets. Miss G. L. Bell prefers to regard it as the site of Dūmat al-Hīra and would bring its date down to the Umayyad period. Herzfeld dates Ukhaiḏir about 215 (830) from architectonic analogies with Sāmarrā. Finally Muḥil brings it down to 277 (890) in order to identify it with the *ḏur al-ḥīra* built in this year by the Karmatian rebels. It is indeed very likely that they restored it to install themselves in it, but they had not the means nor was it their custom to build such an imposing palace as a "place of refuge".

UKUBAT. [See **ADHAR**; **HADD**.]

ULAMĀ is strictly the plural of *ʿālim*, one who possesses the quality *ʿilm* [q. v.], knowledge, learning, science in the widest sense, and in a high degree (*mudallīḡ*). In usage,

however, the accepted singular of *ʿulamā* is *ʿālim*. Both singulars are Kurʿānic and can be used of Allāh and of man; but the plural *ʿulamā* occurs only twice in the Kurʿān and three of men (xxvi. 197; xxv. 25). The plural *ʿālimūn* occurs four times: twice of Allāh (xii. 52, 81) and twice of men (xii. 44; xxix. 42). On all this see *Mafradīr* of al-Rāghib al-Iṣfahānī, Cairo 1324, p. 348 sqq. and *Lisān*, xv. 310 sqq.

Inasmuch as *ʿilm* in the first instance was knowledge of traditions and of the resultant canon law and theology, the *ʿulamā*, as peculiarly custodians of that tradition, were canonists and theologians. They, thus, as a general body, represented and voiced the Agreement (cf. article **ḤIMMA**) of the Muslim people, and that Agreement was the foundation of Islām. In consequence the *ʿulamā*, in whatever stated form they functioned, came to have, in a wide and vague fashion, the ultimate decision on all questions of constitution, law and theology. Whatever the *de facto* government might be, they were a curb upon it, as a surviving expression of the Agreement and of the right of the People of Muḥammad to govern itself. The different governments might try to control them by giving them official status and salaries, and to some extent might succeed in that. If the success were too glaring the people would react by contempt for such government agents and would give their respect and devotion to private scholars who refused thus to be mastered. This was a constantly recurring situation under all Muslim governments. The *ʿulamā*, therefore, might be government functionaries, either controlled by the government or keeping the government in a certain awe; or they might be private and independent students of canon law and theology.

The term *ʿālim* is applied at the present day in its literal meaning to any one who is evidently a scholar in our sense. For this situation in Egypt in the early sixteenth century see Lane's *Modern Egyptians*, chaps. iv. and ix. and by index. For a similar situation under the Mamlūks see Gaudelroy-Demambryne, *La Syrie à l'époque des Mamlouks*, passim and especially p. lxxvi. sqq. It is plain that the organization of the *ʿulamā* was the solid framework of permanent government behind those changing dynasties. For the Ottoman Empire see E. J. W. Gibb, *History of Ottoman Poetry*, ii. p. 394 sqq. For the same situation in the Muslim world generally see Sir Thomas W. Arnold, *The Caliphate*, by index under *ʿUlamā*. For the distinction between the *ʿālim*, canon lawyer and systematic theologian, and the *ʿarif*, the mystic who knows Allāh by religious experience and vision, see article **ʿILM** above; so, too, for the distinction between the *ʿālim* who was at first a knower of definite facts (Kurʿānic texts and traditions and their meanings) and the *ṣāḡīḡ* [q. v.] who was at first the independent thinker about these by his intelligence (*ʿaql*). It is, perhaps, hardly necessary to notice the error of western writers who frequently use *ʿulamā*, in many spellings, as a singular.

ULDJAITU KHODĀBENDE. [See **OLJAITU**.]

ULUGH BEG, MUḤAMMAD TURGHĀY, son of Shāh Rukh and of Gawhar Shād, was born in Sulḡāniya in 790 (1393). He became governor of a part of Khurāsān and of Māzandarān in 810

(1407). In the following year Shāh Rukh, breaking his promise, took Turkostān and Transoxiana from Khālīl Sultān, ruler of Samarqand, to give them to Ulugh Beg, who, a man of letters, artist and scholar, "really made Samarqand what Timūr had dreamt of, the centre of Muslim civilisation" (R. Grousset, *Hist. de l'Asie*, iii, 127). A theologian, he had specialised in the study of the Qur'an which he could repeat by heart according to all seven readings. Fond of poetry he had an official poet, Khwājā Jamet Bukhārī, and was the patron of others like Barandak, Rustam Khuryānī and Tāhir Abīwardī. A historian, he not only encouraged research but himself wrote a "History of the Four Sons of the House of Čingiz", *Uluḡ-i arḡa-i Čingiz*, a work which seems to have been lost and which would have been valuable for the history of the Uluḡs of Taltū in Persia and for that of Čaġatai: for the whole period before 703 (1303) it would be less complete than the work of Rashīd al-Dīn (Blochet, *Introd. à l'Hist. des Mongols*, p. 86-92). An artist, he enriched Samarqand with superb buildings: a monastery, *Khānqāh*, with the highest dome in the world; the "carved" mosque, *mosḡḡa* (or mosque of Ulugh Beg), so-called from its interior decoration in the Chinese manner, of carved and coloured wood, finished in 823 (1420); that of Shāh Zinde, finished in 838 (1434); a madrasa built in 828 (1424) the bath of which is decorated with wonderful mosaics; the palace of the 40 columns flanked by four high towers and decorated with a colonnade in blocks of marble; the throne room, *körünüş-khāne*: its pedestal, eight cubits in breadth and fifteen in length and one in height is not the "black stone" mentioned by Vāmbery; the *Činikhāne*, a pavilion, the walls of which were adorned with frescoes by one of those Chinese artists of whose work the loveliness of Samarqand was fond; lastly, the famous observatory to be discussed below; its architect was 'Alī Qāshġī and Gawhar Shād journeyed to Samarqand to pay it a visit. Ulugh Beg was a great bibliophile. A learned mathematician, he could solve the most difficult problems in geometry, but he was above all an astronomer. In 832 (1428) he began the building at Samarqand, on the other side of the Kuhik, of an observatory now destroyed, which in its day was regarded as one of the wonders of the world. Shāh al-Dīn, an astronomer of Jewish origin, was the moving spirit in it along with three other astronomers from Qāshān: Hasan Čelebi, called Qādi-zāde Rūmī, whose son Maryām Čelebi wrote a commentary on the work of Ulugh Beg; Ghiyāth al-Dīn Djamahid and Mu'in al-Dīn Qāshānī. Working with them, Ulugh Beg invented new and very powerful instruments for their joint researches. Finding Ptolemy's computations did not agree with his own observations, he sought to correct them and thus there came to be compiled the *Zīj-i Dīdād Sultānī*, a collection comprising: 1. diverse computations and eras; 2. the knowledge of time; 3. the course of the stars; 4. the position of the fixed stars. The whole is prefaced by very complicated and obscure prolegomena on the reasons which determined Ulugh Beg to compile this collection and on his collaborators. These tables became celebrated in Europe and attention was called to them by John Greaves (in Latin Graevius), Professor at Oxford (1642-1648); in 1665, Hyde gave a Latin translation afterwards revised by Sharpe (1767); the prolegomena have been edited and translated by A. Sédillot (Paris 1847-1853: 2 vols.), who

had previously undertaken to publish the Tables (Isac. i., Paris 1839). E. B. Knobel has published the *Catalogue of stars...*, after collating all the manuscripts in Great Britain and adding a Persian and Arabic glossary (Washington 1917). It has been disputed whether the original version was in Arabic, Persian or Turkish; it is probably the Persian version that we possess. The work seems to have been finished in 841 (1437). Ulugh Beg, it seems, did not observe all the stars which he mentions and takes his latitudes and longitudes from Ptolemy; he gives a disproportionate space to astrology. But Sédillot (*op. cit.*, i., p. cxxii.) can say that with him the "period of astronomical works in the East finishes".

Ulugh Beg was less happy in war and politics. He drove the invading Özbeġs back to the Aḡ Sū but Borġk Oġlān's cavalry and that of Muḡammad Dīkī soon had their revenge, advanced as far as Khodjand and laid the country waste (828 = 1422). The sole survivor of the children of Shāh Rukh, he inherited the power on the death of his father (25th Dhu'l-Hijja 850 = 12th March 1447); but plunged into despair, he remained inactive for several months, enabling the Timūrid princes to act against him. Gawhar Shād wanted to secure the throne for Ulugh Beg's son 'Abd al-Latif, but the latter, misled by false reports, thought it had gone to 'Alī al-Dawla, another claimant, who, a few days after the death of Shāh Rukh, led her prisoner with all her suite to Semnān. From there he set out for Herāt, seized it and had himself proclaimed ruler there. Sultān 'Abd Allāh, son of Ibrāhīm Sultān, took possession of the district of Shirāz. Kābul and Ghazna formed a new state with the sons of Soyurghutmish. Two other princes, Muḡammad Mirzā and Bābā Mirzā, also aspired to the power and the second had himself proclaimed ruler of Djurdjān and Māzandarān. 'Abd al-Latif, who returned from Nishāpūr with his prisoners was surprised by the entry Mirzā Salīh and Uwais. The prisoners were released and 'Abd al-Latif, who took to flight, was captured. He was brought before 'Alī al-Dawla who treated him generously.

Ulugh Beg finally cast off his lethargy, listened to the advice of his ministers and set out for Khurāsān. Wishing to conciliate a rival, Abū Bakr, he gave him his daughter in marriage but had to imprison him on being convinced of his treachery. He crossed the Oxus, heard in Balkh of 'Abd al-Latif's doings, pardoned him and ready to make any concession to be free of his troubles, sent his first minister Niḡm al-Dīn Mirek to Herāt with this object. But Bābā Mirzā invaded Khurāsān and at Dīām routed 'Alī al-Dawla's advance-guard and the latter, caught between him and Ulugh Beg, surrendered. Prisoners were exchanged and 'Abd al-Latif became governor of Balkh. Through fear of Ulugh Beg the generals of 'Alī al-Dawla forced their master to make peace with Bābā Mirzā; Khabūshān was to be the frontier.

The treachery of 'Abd al-Latif, who refused to deliver up his hostages and had them massacred after the defeat of an attack on a detachment sent to fetch them, brought about new hostilities. 'Alī al-Dawla made plundering raids but abandoned an expedition, which he had planned, on the threats of Ulugh Beg, who had now decided to assert his rights as sole heir of Shāh Rukh and to avenge the massacres of Balkh (852 = 1448-1449) by the murder of several of his son's officers. 'Abd al-Latif brought large contingents to his father

on his crossing of the Oxus. Defeated through treachery at Tarbāh after a desperate battle, 'Alī al-Dawla sought refuge in Meshhed where his brother Bābar Mirzā promised to assist him to regain his lands. He pretended to submit but Ulugh Beg was not deceived, occupied Herāt and its forts and marched on Isfārā' in where he divided his army into two: the one with Mirzā 'Abd Allāh Shīrāzī was to lay siege to Bistām and the other with 'Abd al-Latif marched against Astarabad. At this moment the Özbeks invaded Transoxiana. Samarqand was sacked, Ulugh Beg, taking the sarcophagus of Shāh Rukh and the treasure of Herāt, returned in haste. His rearguard was attacked by Bābar Mirzā and the Özbeks captured his baggage at the crossing of the Oxus. He finally reached Bukhārā, where his father's obsequies were held. Khurāsān, which was disputed between the Timūrids and the Turkmens was in complete disorder. Yār 'Alī, prince of the Black Sheep, escaped from the castle of Neretū and laid siege to Herāt. Ulugh Beg relieved the city but Bābar Mirzā rebelled and attacked it in his turn. 'Abd al-Latif escaped to his father and Yār 'Alī, entering the town by surprise, had himself crowned there and became popular. An emissary of Bābar Mirzā gave him a narcotic and he was executed.

In Dhū l-Hijja 852 (Feb. 1449) the whole of Khurāsān belonged to Bābar Mirzā who gave a ludicrous compensation, the governorship of the little town of Tūn, to 'Alī al-Dawla, who was replaced by his son. The two, accused of plotting, were sent to Herāt and suffered a harsh captivity. The discontent was general: Bābar Mirzā was reproached with debauchery, drunkenness, incapacity and the exactions of his agents. Refusing to lead an expedition against Badghīs, the powerful emir Hindūke sought to raise the country with the help of Ulugh Beg, to whom he sent an emissary Eldekkā. The latter was captured by 'Abd al-Latif and sent to Bābar Mirzā to whom he confessed everything. In spite of prodigies of valour Hindūke was defeated and slain.

'Alī al-Dawla escaped; he went to Sīstān, then to the 'Irāk where his brother Muḥammad Mirzā, who was also lord of Fārs, was ruling. The two invaded Khurāsān and at Dīlm inflicted a terrible defeat on Bābar Mirzā, who with eight horsemen escaped and sought refuge in the castle of 'Imād. At Herāt, Muḥammad Mirzā showed himself generous; he liberated his nephew Ibrāhīm and sent Bābar's son Shāh Mahmūd to his mother.

'Abd al-Latif had a hatred for his father which has been explained in various ways. Ulugh Beg in his communiqué at the battle of Tarbāh is said to have substituted the name of his other son 'Abd al-'Azīz for his. He is said to have refused to restore to him the money and arms which he had stored in Herāt, relying on astrological predictions, he distrusted a son in whom he saw a parricide. Rebelling, 'Abd al-Latif seized Balkh, defeated his father and his brother 'Abd al-'Azīz at Shāhrukhiya and handed over Ulugh Beg to a Persian servant 'Abbās who, after a pretence at trial, had him executed on 10th Rabi' al-Thani 853 (Oct. 27, 1449) after a reign of two years eight months. After this murder, the dismemberment of the Timūrid empire made rapid progress; claimants arose in all directions, many of whom achieved their aims. At the end of six months, 'Abd al-Latif himself met a violent end.

Pédégon, who is an orientalist as well as an astronomer, had made a special study of them, has given us valuable information about them. (L. BOUVAT).

UMAIYA a. 'ABD SHAMS, ancestor of the Umayyads, the principal clan of the Quraysh of Mecca. His genealogy (Umayya b. 'Abd Shams b. 'Abd Manāf b. Qurayy) and his descendants are given in Wustenfeld, *Geneal. Tabellen*, U. V. Like all other eponyms of Arab tribes and clans, his actual existence and the details of his life have to be accepted with caution, but too great scepticism with regard to tradition would be as ill-advised as absolute faith in its statements. As those Umayyads who were living at the beginning of the Muslim epoch were only in the third generation from their eponym (e.g. 'Abū Sufyān b. Harb b. Umayya), there is nothing improbable in the latter's being a historical personage; besides there is nothing in tradition to suggest he was a mythical individual or a later invention. The name Umayya is common in Arab nomenclature and is found in both northern and southern tribes; the meaning which anti-Umayyad polemic gives to it (a diminutive of *ama* "servant") would make it a sobriquet; we also have the positive form Banū 'Ama as the name of a tribe (cf. Ibn Durayd, *Kitāb al-Ishārah*, p. 34).

Umayya was the cousin on the father's side of Ḥāshim b. 'Abd al-Muttalib, and tradition relates that, being jealous of the latter's influence, he challenged him to a *munāfara*, the judge of which was to be a *shāh* of the Quraysh. Being defeated, Umayya had to exile himself from Mecca for ten years (cf. Tabari, i. 1090; Ibn Sa'd, i. 43—44). This story is evidently only an anticipation of the rivalry between the Umayyads and Ḥāshimids ('Alids and 'Abbāsids) which forms the centre of the political struggle in the Arab empire during the first two centuries of the Hijra (cf. al-Makrīzī, *al-Tawārīkh wa'l-Taḥqīq* from *ḥadīth* Banī Umayya wa-Banī Ḥāshim, ed. Vos, Leyden 1888): it looks like a legend of learned origin. Similarly the story of the embassy of Umayya and his nephew 'Abd al-Muttalib b. Ḥāshim and other chiefs of the Quraysh to the Hīmanite king Saif b. Dhī Yazan after the latter had defeated the Abyssinians (al-Azraqī, in *Chron. d. Stadt Mekke*, ed. Wustenfeld, i. 99; *Aghāni*, xvi. 75—77; Ibn 'Abd Rabbihī, *al-'Iqd al-farīd*, Cairo 1293, i. 131—133 etc.) is only intended to enhance the

prestige of the Quraysh and to prophesy the coming of Islam. Lastly the truth seems very problematic to us of the stories of alleged eye-witnesses who had seen Umayya, a decrepit old man going through the streets of Mecca leaning on his son Abū 'Amr (according to the historian Haiṭham b. 'Adī, this was really his slave whom he afterwards adopted; cf. Tabari, i, 967; *Aghāni*, i, 7-8).

We come down to historical ground with the statement (Asraḳī, p. 71, etc.) that Umayya, like his father 'Abd Shams, commanded the Meccan army in time of war (*al-ḥiyāda*), a post which was later transmitted to his son Ḥarb and his grandson Abū Sufyān. Although we perhaps should not interpret this literally as implying a permanent military post (it seems to have been rather an occasional appointment) and although we find alongside of descendants of Umayya as military leaders, numerous members of other clans and even *ḥulafā'* (clients) (cf. on this question: Lammens, *Les 'Aghāni' et l'organisation militaire de la Mecque*, in *L'Arabie occidentale avant l'Égipe*, Beyrouth 1928, p. 273-293), there is nothing improbable in the story, especially if we regard the *ḥiyāda* as the direction of the military affairs of the republic rather than the actual command of troops in the field. As a matter of fact, the descendants of Umayya never lacked talent either for military organisation or for politics.

At the beginning of Islam, the clan of the Banū Umayya appears as the most powerful in Mecca; it was represented by two main branches: the *ʿA'yā* and the *ʿAnābisa* (plural *a'yan* from the name 'Anbasa common in the family). The former claimed to be descended from a son of the eponym whose names come from the same or a similar root (a common occurrence in Arabic nomenclature): Abū 'I-ʿIs, al-'Uwais, al-'Āṣi, Abū 'I-ʿĀṣ; the others were represented by families of Ḥarb, Abū Ḥarb, Sufyān, Abū Sufyān (from his name 'Anbasa, uncle of the celebrated Abū Sufyān b. Ḥarb), 'Amr, Abū 'Amr (the latter whose name is said to have been Dhakwān was probably, as already mentioned, an adopted son of Umayya). From a son of Abū 'I-ʿĀṣi, al-Ḥakam, are descended, through Marwān b. al-Ḥakam, the Umayyad caliphs who succeeded Marwān, as well as the emirs (later caliphs) of Andalusia. Some branches of the family of the caliphs settled in Egypt and Persia; although the greater part of the family was exterminated in 132 A. H. by the 'Abbāsids, some of its members survived: among these were Abū 'I-Faraj al-Iṣbahānī, the author of the *Kitāb al-Aghāni*, a descendant of a brother of Marwān I; his Shi'ite views contrasted strangely with his descent. Another son of Abū 'I-ʿĀṣi, 'Affān, was the father of the Caliph 'Uthmān; his descendants are numerous (among them the poet al-'Arḍī; cf. *Aghāni*, p. 153-166), and several of them held important offices under the Umayyads. Of the line of al-'Āṣi b. Umayya, the most celebrated member is Sa'īd b. al-'Āṣi b. Sa'īd b. al-'Āṣi, governor of Kufa under 'Uthmān, whose misdeeds were one of the main causes of the rebellion against the latter. The family of Abū 'I-ʿIs also produced a number of notable individuals under the Umayyads who were all descended from Asīd b. Abī 'I-ʿIs.

As to the *ʿAnābisa* branch, its most illustrious family is undoubtedly that of Ḥarb, whose son Abū Sufyān plays so remarkable a part in the story of the origin of Islam. Through his son

Mu'āwiya, he is the founder of the dynasty of Sufyānid caliphs, which early became extinct with Mu'āwiya II, son of Yazīd I. Another son of Yazīd, Khalīd, is said to have been the founder of Arabic alchemy, and a grandson, Abū Muḥammad Ziyād b. 'Abd Allāh b. Yazīd al-Sufyānī, was slain by the 'Abbāsids at Madīna in 132 (Tabari, iii, 54). Yazīd b. Abī Sufyān, who was Mu'āwiya's predecessor in command of the army of Syria in 'Umar's reign, left no descendants. Of the other sons of Abū Sufyān, 'Uṭba, 'Anbasa, Yazīd, Muḥammad, 'Amr, only the two first had issue. A collateral branch of the Banū Umayya, descended from Abū 'Amr b. Umayya, whose paternity, as we have seen, was not absolutely certain, included among its members al-Walīd b. 'Uḳba b. Abī Mu'āṣi b. Abī 'Amr, governor of Kufa under 'Uthmān and later a favourite of Mu'āwiya during his caliphate and also known as a poet (*Aghāni*, iv, 175-190); his father 'Uḳba had been made prisoner at the battle of Badr and put to death by Muḥammad, who could not forgive the insults which he had heaped upon him at the beginning of his preaching in Mecca; the shameful memory of the father weighed heavily on the son and is often revived in 'Alid polemics against the Banū Umayya. A son of al-Walīd, Abū Ḥaṭifa 'Amr, is also known as a poet (*Aghāni*, i, 7-18). All the members of the line of Abī 'Amr settled in al-'Irāk and al-Djazīra.

UMAIYA n. Amr 'L-SALT, an Arab poet of the tribe of Thaqif, lived in Tā'if, the son of Abū 'I-Salt, 'Abd Allāh and Raḳaiya bint 'Abd Shams b. 'Abd Manāf, grandson of Abū Sufyān, cousin of the 'Uṭba and Shaiba who were killed at Badr and closely related to the Quraysh patrician families of Mecca. A lament on the Quraysh who fell at Badr, preserved by Ibn Hiṣham, p. 331 *app.*, shows that he was still alive in 624 A. D. According to tradition, he died in 8 or 9 A. H. Traditions differ regarding his attitude to the Prophet and to Islam. But the statement that he was not in personal touch with the Prophet and refused to recognise his claim to be a prophet may be regarded as the better founded. It is also in keeping with his sympathy for the Quraysh expressed in the poem above mentioned. The poems and fragments transmitted under Umayya's name, which have been collected by F. Schulthess and added to by E. Power, may be divided according to their subject into two main groups. The one, a smaller group, consists of poems and verses which are panegyrics of individuals — notably the rich Meccan 'Abd Allāh b. Djud'ān — and do not differ essentially from similar pieces by other old Arab poets. The other, a larger group, which begins in Schulthess' edition with N^o. xxiii., reveals almost entirely the point of view which we may call Hanifi. On a basis of the recognition of one personal God as "lord of the slaves" we have apocalyptic pictures of the abode of God and the angels of his kingdom, stories of the creation, eschatological conceptions of the last judgment, hell and paradise; appeals are made for the practice of a moral life and reference

made to "warning examples" which are taken, some from Arab ('Ad, Thamūd) and some from Biblical legends (the Flood, Abraham, Lot, Pharaoh etc.). As the same time he is fond of using the beautiful. We may also note the references to magical practices (charms to produce rain, poem xxxiv. towards the end). As regards religious ideas and the treatment of these themes, Umayya's poems thus show a far-reaching agreement with the Qur'an, which in many passages is almost word for word (cf. Frank-Kamenetzky's investigations). The question of the dependence of the one on the other has therefore naturally been raised. Haart (see *Bibl.*) holds the view that Umayya's poems on Biblical legends quoted in Pseudo-Balakh's "Book of Creation" are all genuine and direct sources of the Qur'an. As to their genuineness, this is, as in the case of old Arabic poems in general, in each case questionable. But apart from some Muslim insertions, which at once strike one by their bias (e.g. p. xxiii, a panegyric on Muhammad) and such pieces, as have already been recognised by tradition as not genuine, there are no cogent reasons to doubt the genuineness of the poems handed down in Umayya's name as a whole. But that Muhammad actually drew upon Umayya's poems seems to be improbable for the simple reason that Umayya had a greater knowledge of the legendary material in question and one that differs in many details from the Qur'an. The same fact is against the view that Umayya might have borrowed from the Qur'an, although this is not chronologically impossible and one tradition (*Agghānī*, iii. 187, 10) says that Umayya

(H. H. BRÄN)

UMAIYADS (BAND UMAIYA), the dynasty of the caliphs from 41-132 A. H. = 661-750 A. D. It takes its name from the fact that its founder Mu'awiya b. Abī Sufyān was the representative of the principal branch of the Banī Umayya; even after the exclusion of this branch from the caliphate on the death of Mu'awiya II, the dynasty retained its name, for the caliphate passed to the head of another branch, Marwān b. al-Hakam b. Abī 'l-'Ās. For the reader's convenience we give below a list of the Umayyad caliphs with their dates of accession.

Mu'awiya b. Abī Sufyān
Yazīd b. Mu'awiya
Mu'awiya (II) b. Yazīd
Marwān b. al-Hakam
'Abd al-Malik b. Marwān
al-Walīd b. 'Abd al-Malik
Sulaimān b. 'Abd al-Malik
'Omar (II) b. 'Abd al-'Āzīz b. Marwān
Yazīd (II) b. 'Abd al-Malik
Hishām b. 'Abd al-Malik
al-Walīd (II) b. Yazīd (II)
Yazīd (III) b. al-Walīd b. 'Abd al-Malik
Ibrāhīm b. al-Walīd b. 'Abd al-Malik
Marwān (II) b. Muḥammad b. Marwān

Rabī' I or II or Djumādī 1 41 (July-Sept. 661)
Radjab 60 (April 680)
Rabī' I 64 (November 683)
Dhu 'l-Ka'da 64 (June 684)
Ramadān 65 (April 685)
Shawwāl 86 (October 705)
Djumādī II 96 (February 715)
Safar 99 (October 717)
Radjab 101 (February 720)
Sha'ban 105 (January 724)
Rabī' II 125 (February 743)
Radjab 126 (April 744)
Dhu 'l-Hijja 126 (October 744)
Safar 127 (December 744)

was the first to read Allāh's book. The agreement between Umayya's poems and the Qur'an may more easily be explained from the undoubted fact that about the time of Muhammad's mission, and probably for some time before, currents of thought of a Hanifi nature had attracted wide circles of the Hajaris, especially in Mecca and Ta'if, stimulated and nourished by Jewish legends and Christian legends, which were in circulation there and over South Arabia in many recensions — and this explains the occasional divergences between the Qur'an and Umayya. Muhammad and Umayya like other *hominis religiosi* (Zaid b. 'Amr, Waraka, Maslama, etc.) drew upon common sources, whether written or oral as Nöldeke holds (see *Bibl.*). Recently Tor Andrae (see *Bibl.*) has put forward with weighty arguments the view that none of the religious poems of Umayya are genuine and should be regarded as the work of older Qur'anic exegetes, *huffa*, like al-Suddi, Ibn 'Abbās etc.

Bibliography: Fragments of the lost *Diwān* with commentary by M. b. Jahis, in *Khāṣṣa*,

*The Arab empire" is the title given by Wellhausen to his classic work on the Umayyad period; by this he wished to indicate that the Umayyad caliphate represents the attempt made by the Arabs to assert their power in the world as a nation, while religion only played a secondary part in this attempt. After thirty years Wellhausen's historical structure still stands; if on the one hand the numerous researches of Lammens, full of erudition, have filled up with details the framework supplied by Wellhausen, a little remote and rather schematic; if Cartain on the other hand by happily developing — perhaps rather too systematically — a hint from Winckler, has connected the expansion of the Arabs after their conversion to Islam with a long series of armed migrations made by the desert tribes seeking more fertile settlements in the north of their peninsula, the main lines laid down by Wellhausen are still followed in modern research in the field of Umayyad history. If there is one thing to be modified in Wellhausen's panoramic view, it is perhaps the too strictly political idea which he had of the

development of Arab history, as if one ought to recognise in the actions of the Umayyad caliphs a conscious desire to give expression to purely national values (cf. Becker's remarks in *ZfA*, ix, 95-99). Although the existence of a national consciousness among the Arabs, especially in the Umayyad period, is beyond doubt (Goldziher, *Mus. St.*, i, 101-145), we are now convinced that the irrational element plays as important a part in individual initiative as reasoned reflection; in this particular case it should be recognised that Wellhausen and still more those who have followed in his footsteps have somewhat neglected the importance of the religious factor. In reality, if pietist or mystic tendencies were quite foreign to the descendants of this Meccan aristocracy which had fought Islam in its early stages, and if one ought rather to recognise in it the survival of the spirit of the *saḥāba* of the Dāhiliya and of the business men of the merchant republic, we should run the risk of evading the historical truth if we took no account of the fact that the unprecedented triumph of the Arab movement took place under the banner of the religion of the Qur'ān, and no mentality, even the most modern and "agnostic", could escape the impression made by this circumstance. The Umayyad caliphs, as men of their period and milieu, must have believed in good faith that the propagation of the Muslim faith and the expansion of their temporal power were one and the same thing, and they must have been convinced that the enemies of their policy, whether Shī'a or Khāridjīs, were also enemies of the true tradition of the Prophet. The tradition of the historians has preserved us a certain amount of evidence which leaves no doubt of the presence of this conviction among the Umayyad caliphs; and if tradition, as established after their fall under the influence of the ideas dominant in pietist circles, has cursed the memory of the Umayyads, we ought not to forget that it was precisely under their regime and partly under their stimulus that Islam established itself as a universalist religion.

This pietist tradition, which under the 'Abbāsids became the official history of Islam, further reproaches the Umayyads, even more than with having failed in the duties of religion, with having betrayed the spirit of the constitution of the theocratic state as Muhammad had established it and with having replaced the caliphate by *mulk*. In this charge we find (analogous to what may be noted in the attitude of the prophets of Israel to the monarchy) combined the protest of the theocratic spirit which gives to God alone power on earth and the intolerance of the Beduins towards any kind of regular authority. In reality, as the researches of Caetani and Lammens have shown, even the governments of Abū Bakr and 'Umar were far from corresponding to the ideal of the theocratic regime which the schools of *fuḳahā'* later constructed; but the personal prestige of the two great companions of the Prophet, if it did not succeed in silencing the opposition that centred round 'Alī, prevented a constitutional theory which was in contradiction to the actual situation from being developed in the early days of the caliphate. It is only under 'Othmān, whose rule marked the open triumph of the Umayyad party at the expense of the first converts, that people began to regard the historical paradox, which made the former enemies of the new regime now reap the profits of it, as treason against the "rights of

God" by which the Prophet's work was disowned and destroyed. We can easily see how the same aim of opposition united on one side the resentment felt by the pious souls of the heroes and martyrs of the infant religion, and on the other the ambitions of a more positive nature of those who sought to maintain for the family and entourage of the Prophet the privileged position which the founder of the new theocratic state had secured for them. Religious legitimism and dynastic legitimism found a common champion in 'Alī. 'Alī was able to boast an initial success in his elevation to the caliphate at Medina; then the occupation of Kūfa, the victory which he won at Basra against the coalition of Talha, al-Zubair and 'Ā'isha, the triumph of his party in Egypt seemed to have secured him authority over the whole Arab empire. In the conflict with Mu'āwiya, 'Alī actually represents, at first at least, considerations of state in conflict with the primitive and quite pagan idea of blood vengeance demanded by Mu'āwiya and by the Umayyads for the murder of their relative. But the situation, ambiguous even from the point of view of the new Islamic ethics, in which 'Alī found himself by his compromise with the murderers of 'Othmān, was skillfully exploited by the political talents of Mu'āwiya and was not long in developing and dividing the anti-Umayyad party into its two original constituents: on the one side the religious intransigence which culminated in the extremist attitude of the Khāridjīs; on the other, the dynastic legitimism of the Shī'a. This division made the fortune of the Umayyads, who came to stand for the moderate element which would guarantee law and order in face of the guerilla war which was ravaging the 'Irāk and brought the country into a position to reap the benefit of the conquests.

At what moment was Mu'āwiya's formal candidature put forward? This is still an obscure point on which tradition gives divergent views, dating the candidature from the beginning of Mu'āwiya's struggle with 'Alī (37 A.H.) or putting it as late as the latter's death (40 A.H.). In any case it raised a new and exceedingly delicate constitutional problem: that of the assumption of supreme power over the believers by one who was not among the earliest companions of the Prophet. The different chronological statements are themselves an indication of the confusion which must have prevailed when the solution given by the course of events suddenly caused a breach with the precedents. Indeed the indignation of the *fuḳahā'*, which takes no account of the requirements of historical development, is quite legitimate from the point of view of doctrine: the caliphate of Mu'āwiya opens an entirely new period in the constitutional history of Islam: the caliph ceases to be the executor or continuator of the *sunna* of Muhammad, to which he has been a witness since its beginning. He is henceforth something more: the outstanding personality of the Arab world, the first among the tribal chiefs in military strength, in family connections and influence and in individual prestige, he is in fact, if not in official title, a "king" or rather a "tyrant" in the Greek sense of the word. This was the ambiguous situation which lasted for a century, i.e. as long as the Umayyad dynasty lasted, and which formed the platform for the Shī'a propaganda, which was to be ended by the victory of the legitimist idea and by the fall of the Arab "empire".

It is exceedingly difficult for us to judge the extent to which Mu'awiya was aware of the difficulty of the situation. If we were to confine ourselves to certain aspects of his policy, usually so clever and farseeing, we should be tempted to conclude that he did not fully appreciate the importance that the religious factor would assume in the political struggle. It is true that he sought a reconciliation with the sons of his unfortunate rival — he succeeded completely with one, al-Husain, but was less fortunate with al-Husain — and in general he was full of consideration for the whole family of Muhammad, 'Alids and 'Abbāsids as well as for the Ansār, proud of their title of "helpers" of the Prophet. But he did not go so far as not to insist on the auspicious elements taking an oath of loyalty (the "curse of Abū Turāb"), a hateful measure which seems to be a prelude to the *miḥna* of the 'Abbāsids and which brought more secret hatred upon the Umayyads than real benefit, and he made the mistake of giving a free hand in the 'Irāk to Ziyād b. Abīhi's merciless policy of suppression, so different from the policy which he himself practised and which he might also have applied in person in the 'Irāk with the insinuating mildness of which he had the secret. It is worth noting that during the twenty years of his reign Mu'awiya never himself went to the 'Irāk to try to form personal attachments. The 'Irāki population seems then to have been justified in thinking that the Umayyad caliphate really represented the hegemony of Syria over the rest of Islamic territory and the memory of 'Alī, which legend soon seized upon, was in a way bound up with the nationalism of the 'Irāk.

Mu'awiya was moreover detained in Syria by other problems, really formidable, which the organisation of the empire laid upon him. The first question was that of the relations of the sovereign with his own family and with the tribes. Mu'awiya did not fail (*more arabico*, or rather in obedience to a general human feeling) to see that his relations profited largely from the good fortune that had befallen him; but he was careful not to fall into 'Othmān's error and did not become the prisoner of his clan. It is worth noting that it was the most important provinces which were assigned to non-Umayyad governors; the relationship with Ziyād, all-powerful in the 'Irāk, was purely a fictitious one, while in Egypt where, after the death of 'Amr b. al-'Āṣ, Mu'awiya put his own brother 'Uthba, the latter was not succeeded by another Umayyad when he died after barely a year of office. But it was particularly in his relations with the turbulent chiefs of the tribes that Mu'awiya showed the complete measure of his talent; the latter, little disposed to be impressed either by the authority of the Qurāshī or by the religious prestige of the *amīr al-mu'minin*, made the caliph's position something like that of a European suzerain in the age of feudalism. The long and patient work by which Mu'awiya tried to gain for his cause the influence of the tribes, which he could not have destroyed, aimed on the one hand at strengthening his power and on the other at achieving the great aim of his life, the *da'wa* of the tribal chiefs for his son Yazīd, which he succeeded in extracting from them in his lifetime; by this he succeeded in making the caliphate hereditary. It is this that we must regard as the most tangible success of Mu'awiya's policy and it was owing to this act that the caliphate of the Umayyads lasted a century in spite of the

convulsion that followed the death of Yazīd. But how precarious the situation remained even after the dynastic principle was solemnly affirmed! The principle had only been won by Mu'awiya's personal prestige, as is shown by the fact that immediately after his death, al-Husain thought the moment had come to raise his standard as a legitimist claimant while 'Abd Allāh b. al-Zuhair came forward as a champion of neglected Arabia and the memory of the first Companions. The tragic end of al-Husain's effort at Kербала' left a memory of martyrdom which was later exploited against the Umayyads; but for the moment it crushed the 'Alid opposition. Perhaps, if Yazīd had lived longer or if he had left a son old enough to succeed him worthily, in place of Mu'awiya II who was still a child, the position of the Umayyads would have been strengthened. Yazīd, if he was not the monster of dissipation and impiety which pious tradition likes to represent, had certainly not the distinguished qualities of his father but he lacked neither energy nor brains to continue the latter's work.

The haphazard method in which the vast Arab empire had been formed in the days of the early conquests and the lack of any system in the administration of a dominion so vast and varied (if the story of the constitution of 'Umar is not quite legendary, the measures taken by him certainly only represent the embryo of the later financial and civil organisation of the empire) raised a series of problems which Mu'awiya could not help tackling in his usual realist spirit. Unfortunately it is just on his activity as an administrator that the biography of Mu'awiya, so rich in anecdotic details, is exceedingly weak and his work as a statesman is known to us only from scanty and insufficient notices. There was a slackening in the progress of the conquests, one of the causes of which was the serious resistance offered to the advance of the Arabs by the Byzantines, who were directly threatened in Asia Minor and in Europe; the series of expeditions into Asia Minor, which brought Muslim arms up to the gates of Constantinople and naval raids in the Aegean Sea and on the coast of Sicily recorded local successes which brought no definite result, while the attacks by the Byzantine fleets on the Syrian coast, supported by risings of the highlanders of the Lebanon (the *Darajima-Mardaites*), made it advisable for Mu'awiya to sign a truce on conditions little satisfactory to Arab amour-propre (57 A.H.). Successes were more brilliant in the east where the penetration of the plains of eastern Iran was actively continued, and in Africa where Egypt continued to form a base for expeditions to the west and south, but here also there was little definite acquisition of territory. These expeditions were as before left to the initiative of the provincial governors and carried out by the resources of the tribes who had settled there following the first conquests (the *muhājirūn*); the caliph's own army, formed by the *ghunām* of Syria, was reserved for campaigns against the Byzantines and the protection of the caliph against possible rebellions at home. It was to the existence of these forces, so loyal to the Umayyads, that the latter owed their victory in the civil war of 64 A.H.

In the internal administration of the empire, Mu'awiya, even more than his predecessors, made use of the experience of the Christians with whom he had been in close relations in Syria since the years

of his governorship under 'Omar and 'Othmān, when he had learned to appreciate their knowledge and practical ability. It was at this period that Christian culture of Aramaean-Byzantine type began to penetrate into the Arab milieu, a penetration which ultimately led to the formation of the characteristic civilisation of Islam. But if we can see the beginnings of this process under Mu'awiya, the process itself escapes us.

The premature death of Yazid enabled Ibn al-Zubair's rising to involve the whole of the 'Irāk by incorporating the Shi'a hostility, with which however it later broke. As always happens in periods of crisis, all the problems which had only been lulled under Mu'awiya's government presented themselves again in an aggravated fashion: the unruliness and particularist tendencies of the tribes; the relations of the subject peoples with their conquerors; the rivalry of interests and feelings between Syria, the 'Irāk and Arabia; all these combinations of conflicting forces which the genius of Mu'awiya had been able to restrain, retained all their strength and were even intensified under the stimulus of the war of religion. The support of the great Syrian tribe of the Kalb, which Mu'awiya had won through his marriage with the daughter of Bahdal b. Unāif, the mother of Yazid, continued to be assured to the collateral branch of the Umayyads, that of al-Hakam b. Abi 'Aṣ b. Umayya, which replaced the Sufyanids in the control of the clan (there was however a feeble attempt to keep the direct line of descent by making Yazid's young son Khalid caliph). Marwān b. al-Hakam was already an old man when he came to power: in his long career he had had experience of feuds among the tribes as well as of the rivalries and intrigues among the Companions covetous of the heritage of Muhammad. The victory at Mardj Rāhit (64 A.H.) over the forces of the Kais, whom Ibn al-Zubair had won over to his cause, secured him Syria, and Egypt, where the anti-Umayyad party had triumphed, soon came back to him; but his death very soon after this last success left his son 'Abd al-Malik the enormous task of subduing Arabia and the 'Irāk. Succeeding to the caliphate, almost unexpectedly, 'Abd al-Malik represented a new attempt to establish a dynastic sequence in the succession: it was Mu'awiya's scheme, in complete contrast to Arab custom which regarded the power as an appanage of the family group as a whole. 'Abd al-Malik himself and almost all his successors were to have as the principal aim of their dynastic policy the securing of the succession for their direct descendants and the exclusion of collaterals.

In the confusion of the struggles between caliph and anti-caliph, between the latter and the Shi'a and Kharijī rebels, struggles which extended to the remote regions of Fārs and Khurāsān and in which the particularist tendencies of the tribes were revealed in all their vigour, taking as their badge the standard of one or other of the contending parties (the diwāns of the poets of this period and the historical anecdotes that accompany them are the best documentation of this), 'Abd al-Malik had the good fortune to hit upon two men of the first ability who secured success for him: first al-Muhallab [q. v.], an old partisan of Ibn al-Zubair who joined the victor (as Ziyād had lately been); then, far superior in talent and devotion, al-Hadjdjad who was able to take up with unselfish and ruthless energy the task of restoring the authority of the state above

any particularism of tribe or party. Al-Hadjdjad whose mentality seems almost foreign to the Arab character, looks to us like the precursor (who was however far in advance of later incarnations) of the vizier of the 'Abbāsid period, knowing no other master than his sovereign (or, we might say in modern language, the interests of the state) and resolved to serve him in every possible way. The hatred with which tradition has surrounded his name is well justified: al-Hadjdjad's views and the methods he employed to make them successful must have appeared almost diabolical to the old tribal sentiment as well as to the new individualist and antistatal conception of religion which was in process of formation. In reality al-Hadjdjad was a faithful Muslim; one might even say that in a way he represented the continuation of the tradition of the theocratic state founded by Muhammad. This tradition is linked up with that of monarchy by divine right which western Asia and Egypt had known for millennia, from the time of the Pharaohs and Sumerian priest-kings down to the Roman and Sāsānian empires whose actual heirs were now the successors of the Prophet. The whole caliphate of 'Abd al-Malik under the driving power of al-Hadjdjad is simply an attempt to establish an absolute monarchy. What the times were not ripe for in the time of Mu'awiya (although Ziyād was in this respect a precursor of al-Hadjdjad) seemed possible to 'Abd al-Malik who directed a whole series of measures towards this same end. First of all the powers of the governors of the provinces and their connections with the tribes were cut down: this policy was exercised with most success in the eastern provinces, the farthest from the centre of the caliphate, where the wars against Turk and Iranian kept alive the bellicose spirit of the tribes: al-Hadjdjad by suppressing the attempts to gain autonomy by the Muhallabids and Ibn al-Ash'ath asserted the political unity of the state and endeavoured to transform the governors into mere officials (he who, although lord of half the empire, regarded himself as his sovereign's servant). The foundation of Wāsit, the establishment of the Zangī in the marshes of Bagra were all measures tending to reduce the importance of the tribal element. Egypt, a land which since the time of 'Amr b. al-'Āṣ had retained a position of semi-independence towards the central government, could not have been reduced to such a position of dependence: on the other hand, its importance for the security of Syria was so fundamental that the caliph thought he could save the principle of the unity of the empire, while respecting Egyptian desire for autonomy, by allowing his brother 'Abd al-'Āṣ to rule there uncontrolled. The latter however regarded his vice-royalty as a stepping-stone to the caliphate. Other steps taken by 'Abd al-Malik had also as their object the unification of the state: the fiscal census aimed primarily at the *ahl al-dhimmā* which however ended by weighing on the Muslims themselves; the adoption of Arabic as the official language; the reform of the coinage; the buildings and sanitary work carried out, mainly in the 'Irāk but also in Egypt and Arabia. In a reign of twenty years 'Abd al-Malik was able to give the Arab empire an outward appearance which more and more resembled a monarchical state. This was following in the path laid down by the true tradition of Islam; and indeed 'Abd al-Malik's attitude to religion is marked by a renewal of

piety (at least externally) as well as by a more severe treatment of the non-Muslim population, the result no doubt in large measure of the fiscal needs of his policy, but also, we believe, of the desire to prevent the survival of a "state within a state". We should also regard the attempt made by 'Abd al-Malik to get his brother to renounce his claims to the succession in favour of the caliph's sons as evidence of monarchical tendencies. The death of 'Abd al-'Aziz got him out of his difficulty and assured al-Walid the throne; but the question came up again on each change of caliph and was never settled, not even under the 'Abbasids.

To sum up, one may say that the caliphate of 'Abd al-Malik strengthened the "Arab empire" to the limit that circumstances permitted. Kharijism in which were combined the protests of the social and religious extremists against the established order and in which the malcontents and oppressed of all classes expressed their exasperation in the extremist forms of anarchy and brigandage, had been encouraged by the division of the parties aspiring to the caliphate in the time of Ibn al-Zuhair and al-Ash'ath; the unity of the state once re-established, the movement was, if not destroyed completely, at least reduced to temporary impotence by the fierce repressive measures of al-Hadidj. Shi'ism, completely defeated in the open field, took refuge in secret propaganda which was only to bear fruit much later, and in this period of subterranean existence it assimilated many heterogeneous elements which were destined to give a character quite its own to the later development of the policy and religion of Islam. But this was the secret of the future; for the time being, the order secured in the interior permitted a great renewal of activity in the policy of expanding the empire, which, resumed in east and west by 'Abd al-Malik, yielded its most brilliant results under his immediate successors. The great Berber counterthrust organised by Kusaila and later by the Kahlina was overcome and Arab rule securely established in North Africa, destroying the last remnants of Byzantine rule and paving the way for the conquest of Spain. In the east, although the vast conquests of Kutayba b. Muslim began only in 86, at the beginning of the reign of al-Walid, we find the advance towards Central Asia being already resumed under the rule of 'Abd al-Malik, which was to have a most wonderful result, the conversion to Islam of the Turks, the masters of the future. The struggle with the Byzantines remained unchanged in character; in spite of their successes in Armenia, where they subdued the native kingdoms, the Arabs did not succeed in establishing themselves in Asia Minor, and the raids of the Greek fleet on the Syrian coast continued to make the caliph feel that the hereditary enemy was still capable of threatening the very heart of Islam. But the expansion of Islam was always going on; it assimilated into the new civilization that was being formed peoples and races who were no longer peaceful Aramean or Coptic peasants, destined to be arabicised without resistance or to exist as spiritless religious minorities, but who, like the Berbers and Turks, dauntless fighters and jealously attached to their national feeling, were disposed to accept Islam as a religion but not Arabism as a nationality. It was to these two races, placed at the two extremes of the Arab empire, that Islam owed the greater part of its future successes but also a profound change in its civilization.

The caliphate of al-Walid saw the harvest of the seed planted by the long work of 'Abd al-Malik: the imposing personality of al-Hadidj continued to dominate it; Maslama b. 'Abd al-Malik, the Umayyad who was to besiege Constantinople, Mu'awiyah b. Nu'ayr, the conqueror of Spain, and Kutayba b. Muslim secured great triumphs for Muslim arms. The mosque of Damascus and many other splendid buildings proclaimed the power of the Umayyads. But the problem of the succession reopened the crisis; this time, it was the "Arab" principle that triumphed, in excluding from the caliphate al-Walid's son in favour of his brother Salim, and the duel between the caliph who wished to keep the power in his line and his brothers seeking to supplant him, continued until the end of the Umayyads with the result that it affected the prestige of the dynasty. The results of the lavish expenditure of 'Abd al-Malik and al-Walid began to weigh heavily on their successors: the economic crisis and the problem of the converts made themselves felt. 'Umar II, the Benjamin of orthodox tradition, which makes an exception for him in its comprehensive malediction of the impious Umayyads, felt that a policy of "consolidation" was needed if a terrible catastrophe were not to overwhelm the destinies of Islam itself together with those of the Umayyad house. The deep mark which the work of 'Umar, although it only lasted two years, has left on history, shows that this caliph really possessed high qualities and that he was gifted with a vivid feeling for realities; at the same time, we are surprised to find at this time a system already fully developed of principles and religious regulations, a system which it had taken barely two generations to elaborate. The pietist and legalist mentality of Islam was already formed at the end of the first century and had the stamp it was to bear through all successive ages. It had been encouraged in the course of its development by the fact that it had been elaborated in the circles of the opposition, who were kept remote from the exercise of power and from a knowledge of practical politics; at the same time, by one of the most singular paradoxes in history, its authority has been recognised, owing to the prestige of those who championed it, in the very circles of government against which its reproaches were directed; one might almost think we have here the quite modern phenomenon of the influence which the opposition in a parliamentary government insensibly exercises on the direction of the policy of the party in power! This paradox is simply the consequence of that which was, as we have seen, at the very foundation of the Umayyad regime; for this regime represented the carrying out and definite triumph of the preaching of Muhammad, going back to historic precedents and working by methods and through individuals who were clearly opposed to the spirit of this preaching. 'Umar II, in anticipating the 'Abbasids with perhaps more good faith than they, tried to reconcile the political and financial demands of the state with respect for religious tradition. Although his attempt must be regarded as having failed as regards the destinies of the dynasty, his fiscal reforms paved the way for the equal treatment of Arabs and *mawali* and contributed more than anything else to the fusion of the descendants of conquerors and conquered. It was undoubtedly to the beneficial activities of 'Umar that was due the third period of splendour which the Umayyad

caliphate experienced under Hishām. During the twenty years of his reign, the conquests were resumed on the old grand scale, in the west (in spite of the great Berber rising of 123) as well as the east: the Arabs advanced into the heart of Gaul; the Mediterranean began its transformation into an "Arab lake"; the Turks who had begun to slip off the Arab yoke on the dismissal and death of Kutayba were subdued for a third time.

The Umayyad caliphate was at its zenith when Hishām died: one can hardly believe that a few months later this state which seemed to be solidly built on the authority of the caliph would be in complete disorder and fall a prey to anarchy. Tradition is undoubtedly to some extent right in attributing to the vicious conduct of al-Walid II, a dissolute drunkard, an important part in the collapse of the established order. But the faults of one individual are not sufficient to explain the unexpected appearance of all the signs of dissolution. The causes must be sought, as usual, in the very elements which gave the caliphate of Hishām the appearance of prosperity. The latter had exploited to the limit the fiscal reforms of 'Umar and exhausted his Muslim and *dhimmi* subjects alike (the risings caused by excessive taxation, the memory of which is preserved by the Christian historians in particular, are symptomatic in this respect). Misery, counsellor as ever of extreme measures, had brought about a revival of Kharijism, which was even introduced into Syria, an unprecedented phenomenon; and in Syria again, the *ghazas* on which was based the military strength of the Umayyads threw off their discipline, tired of the more and more marked tendency of the government to an absolute monarchy. The Shi'a movement began again to show itself openly in the 'Irāq as is evident from the attempt, which however failed miserably, of Zaid b. 'Alī b. al-Husain (123). The increasing extent of the conquests had finally removed the remotest provinces from the control of the central power: the tribal feuds, combining with religious differences, had been resumed with violence, while in distant Khurasān, in spite of the energetic measures taken by Naṣr b. Sa'yār the secret propagandists of the Shi'a met with rapid success. We can understand therefore how indignation at al-Walid's scandalous conduct found a soil prepared for it to burst forth upon, especially when the ambitions of the various descendants of 'Abd al-Malik were frustrated by the proclamation, as soon as al-Walid mounted the throne, of his two children as his successors designate. A rising in the *djumas* of Palestine and al-Urdunn brought Yazid III to power; al-Walid was slain. But neither Yazid nor his brother Ibrāhīm, who succeeded him after a few months, succeeded in checking the anarchy which was spreading throughout the empire. The Kharijids under al-Dahhāk b. Qays al-Shabāhī seized Kūfa. It looked for some years as if salvation would come from a distant member of the ruling branch, Marwān b. Muḥammad, grandson of the great Marwān, governor of Armenia, who had created an army devoted to himself during the long years he had been successfully fighting against the Byzantines. He arrived in Syria to support the claims of al-Walid's children: finding they had already been assassinated by the usurpers, he proclaimed himself caliph and in a few months had put down rebellion in Syria and destroyed the members of the Umayyad house who opposed

him; he next took Egypt and the 'Irāq. The work he did in the first three years of his caliphate is hardly comparable to that of his grandfather whose name he bore and of his uncle 'Abd al-Malik. But the circumstances were much more difficult for him than they had been for them: the family bonds of the Umayyads had been broken and the energy of the stock was exhausted; at the same time, the confidence of their adversaries in their success had increased: instead of having to fight with the improvised armies of Ibn al-Zubair or with desperate bands of Shi'a who had escaped the disaster of Kerbelā', Marwān had to meet troops hardened by the wars with the Turks and Persian forces of Khurāsān organised by Abū Muslim, while in the background the 'Abbāsids were preparing to enter the field. The soi-disant Shi'a threw down the gauntlet in 130: Khurāsān and Fārs were rapidly conquered and in the following year the invaders occupied the 'Irāq where the 'Abbāsids suddenly put forward their claims and proclaimed Abū 'Abbas 'Abd Allāh caliph at Kūfa. The latter having defeated Marwān on the Zab, sent his lieutenants in pursuit of him through al-Djazīra and Syria and again defeated him in Egypt where the last Umayyad caliph was slain on 27th Dhū 'l-Ka'da 132 (July 7, 750). The assassination of the members of the Umayyad family, the fruitless rising in favour of Abū Muḥammad al-Sufyān in Syria and the flight of 'Abd al-Rahmān b. Mu'āwiya b. Hishām from Medina to Africa and Spain form the epilogue of the tragedy which marked the end of the fall of the dynasty of Mu'āwiya and Marwān.

It is undoubtedly an exaggeration to say that the end of Arabism coincides with the fall of the Umayyads and to attribute to the 'Abbāsids a kind of iranianisation of the Muslim world. In reality not only did the dynasty of the caliphs remain Arab, but the governors of provinces and generals in the army were recruited from Arabs for nearly a century. It is true on the other hand that the internationalisation of Islām, in the sense that the Arabs ceased to be the sole active element in the organisation of the state and in the development of civilization, had already begun, at least as a theoretical possibility, when the reforms of 'Umar II had made the *mawali* equal with the Arabs. Further, the adoption of Islām brought these heterogeneous elements to form part of a civilization, which we are justified in continuing to regard as Arab even if the analytic research of the last half century has shown that its constituent factors were for the greater part foreign. Not only did the Arabic language give a homogeneous colour to this civilization but all the varied elements which composed it were kneaded together under Arab influence. The merit of having given this composite civilization an Arab colouring is undoubtedly due to the Umayyads. We can unfortunately no longer recognise in detail the preliminary work which sowed the seeds, the fruits of which were seen only in the 'Abbāsid period; but the fact that in the second half of the second century, Islāmic civilization is in full bloom, as regards not only religion but also science and the arts, makes it clear that the Arabs did not await the coming of the 'Abbāsids to begin their transformation from Beduins to civilized people. What strikes one in the Arab civilization of the Umayyad period, is the coexistence of two worlds, the old and the new, existing side

by side, just we find happening elsewhere in periods of transition: Beduin customs and mentality, the poetry of al-Farazdaq, of Jharr and Akhial were still real and alive when the religion of the Kur'an was already being penetrated by Hellenistic and Christian theological speculation, when the interest of traditionists, historians and philologists was beginning to be attracted to the literary products of the spirit of the desert which they knew through the venerable memorials of an epoch now closed. Even the administrative system of the 'Abbasids in its main lines is practical what the Umayyads had built up on a basis of Byzantine and Sassanian tradition, and the original contribution by Yahya b. Barmak was very much less than what tradition credits him with. In conclusion, what the Umayyads lacked, namely the power to transform the colossal Arab empire into a homogeneous unity, was equally deficient in the 'Abbasids: what the latter accomplished, the intellectual and moral unification of the Muslim world had already been begun under the Umayyads.

On matters of detail, which it has not been possible to deal with in this general article, see the articles on the individuals and place-names connected with the history of the period.

Bibliography: Being unable to give the complete bibliography for so vast a subject, we shall confine ourselves to works of a general character. The sources for the history of the Umayyads have been collected by L. Caetani in his *Chronographia Islamica*, Paris (1912 299.) p. 461—1716, an invaluable repertory but unfortunately without an index; in it are given along with the Arabic sources, also those from Syrian, Greek, Latin, Armenian and Chinese. Very few really important texts are still unpublished; the chief of these is undoubtedly al-Baladhuri's great compilation *Ansh al-Ashraf*, of which only a fragment has been published by W. Ahlwardt (*Anonymi arab. Cronik etc.*, Greifswald 1883), the publication of which is being undertaken by the university of Jerusalem; we may hope to find in it some remnants of the Umayyad historical tradition which has almost entirely been swept away by writers with 'Abbasid bias. This same tradition is in part preserved, so far as we can judge from the little we know of it, in the history of the Spanish Arab al-Balyat (*al-Futuh bi'l-Hispania* fi *Sadr al-Ham*, cf. J. Horowitz, *M.S.O.S.*, 1907, p. 22—27), which would be worth publishing. One regrets not to find in Caetani's *Chronographia* the results of a methodical search of the *diwans* of the poets and their commentators (in first place the *Nasb* of Jharr and Farazdaq) which might supply some new information (a good deal of this work has however been done by Lammens). The papyri also constitute a source, of great importance though limited range, especially the series which bears the name of Kurra b. Sharik (q. v.). The general work which is of fundamental importance for the Umayyad period, is, as we have seen, J. Wellhausen, *Das arabische Reich und sein Sturz*, Berlin 1902, in which Tabari's great work was utilized for the first time; his *Die religiös-politischen Oppositionsparteien im alten Islam* (*Abh. G. W. Gött.*, v., 1901) and *Die Kämpfe der Araber mit den Römern in der Zeit der Umayyaden* (*Nachrichten G. W. Gött.*, 1901) are also of an less importance for two essential

aspects of the history of this period; H. A. R. Gibb, *The Arab Conquest in Central Asia*, London 1923 (James G. Fortson Fund, II.) carefully studies another point of great historical significance; it is a matter of regret that we have nothing similar for the conquests in Africa; the researches of H. Lammens (*Études sur le règne du calife omayyade Mawla Ier*, *M.F.O.E.*, I—III.; *Le califat de Yazid Ier*, *M.F.O.E.*, IV.; *Le califat de Yazid Ier*, *M.F.O.E.*, IV.—VI.; *Études sur le siècle des Omayyades*, Beirut 1930), without constituting a complete survey of the history of the Umayyad caliphate, are nevertheless indispensable for the immense quantity of material that is examined in them, for the wealth of detail and the keen penetration with which historical problems are investigated; C. H. Becker's essays (collected in *Islamstudien*, I., Leipzig 1924, also *Beiträge zur Geschichte Ägyptens unter dem Islam*, II., Strassburg 1901) have contributed in remarkable fashion to illuminate the problem of the Umayyad caliphate's place in history. (G. LEVI DELLA VIDA)

II. THE UMAIYAD OF SPAIN.

THE BANU UMAIYA or BANU MARWAN of the Arab historians, direct descendants of the Umayyads of Syria, reigned from the VIIIth to the XIth century over the Muslim empire which they founded in the Iberian peninsula with Cordova as their capital.

The restoration in the extreme west of the Muslim world of the sovereignty of the Umayyads, which had been destroyed in the east by the 'Abbasids, is one of the most striking events in the history of the Arabs in the Middle Ages. It was this dynasty which encouraged the separation of Muslim Spain from the rest of the Arab world and made it a real political unity; it was this dynasty which gave the social physiognomy of this country, already so characteristic, a decided stamp of Syrian tradition. Thanks to the vigour of its princes, it was able to resist the designs of the 'Abbasids and then of the Fatimids. It succumbed in the end, exhausted by civil wars, only through allowing a hereditary dictatorship to be established alongside of it and because it failed to restrain in time the excesses of its foreign mercenaries.

The history of the Umayyads of Spain may be divided into three principal periods: 1. the independent emirate of Cordova; 2. the caliphate; 3. the decline and fall of the dynasty. Here we shall only give a very brief résumé.

Chronological list of the Umayyads of Spain.

- I. 'Abd al-Rahmān I, *al-Dhahil*, 138—172 (756—788).
- II. Hishām I, 172—180 (788—796).
- III. al-Hakam I, 180—206 (796—822).
- IV. 'Abd al-Rahmān II, 206—238 (822—852).
- V. Muḥammad I, 238—273 (852—886).
- VI. al-Mundhir, 273—275 (886—888).
- VII. 'Abd Allāh, 275—300 (888—912).
- VIII. 'Abd al-Rahmān III, *al-Nāṣir li-Dīn 'Ilāh*, 300—350 (912—961).
- IX. al-Hakam II, *al-Mustanṣir bi 'Ilāh*, 350—366 (961—976).
- X. Hishām II, *al-Mu'ayyad bi 'Ilāh*, 366—399 (976—1009), and 400—403 (1010—1013).

- XI. Muḥammad II, *al-Mahdi*, 399—400 (1009—1010).
 XII. Sulaimān, *al-Murī'in bi 'l-lāh*, 399—407 (1009—1016).
 XIII. 'Abd al-Rahmān IV, *al-Murtadā*, 408—409 (1017—1019).
 XIV. 'Abd al-Rahmān V, *al-Mustafīr bi 'l-lāh*, 414 (1023).
 XV. Muḥammad III, *al-Mustakfi bi 'l-lāh*, 414—416 (1023—1025).
 XVI. Hishām III, *al-Mu'tadd bi 'l-lāh*, 418—422 (1027—1031).

1. The independent emirate of Cordova.

The Arab historians usually give the date 138 (756) for the foundation of the independent emirate of the Umayyads of Cordova by 'Abd al-Rahmān I, the son of Mu'āwīya b. Hishām, whom they call *al-Dūkhil*, "the immigrant". When his relatives were being persecuted by the 'Abbāsids, 'Abd al-Rahmān, still quite a young man, — he was born in 113 (731) — succeeded in escaping secretly to Palestine and from there, accompanied by his freedman Badr, went to Egypt and then to Ifrīkiya. He was soon obliged to fly from al-Kalawīn, where he was exposed to the persecutions of the governor 'Abd al-Rahmān Ibn Hahb and went to the Maghrib. He spent some time in Tahert [q.v.] at the court of a petty dynasty, the Rustamids, then enjoyed the hospitality of various Berber tribes, among them the Mikhāssa and the Nafsa. From the day of his arrival on African soil, 'Abd al-Rahmān, encouraged by Badr, had shown a desire for political activity. But his ambition did not find a suitable soil in the Maghrib, and his eyes naturally turned towards Spain.

'Abd al-Rahmān was able, very cleverly and with a keen political sense, to turn to his own interests the rivalries which for some years had made a profound cleavage between the Kaīs and the Yamanīs settled in the Peninsula. On the other hand, he had no difficulty in securing the support of clients of the Umayyads, who had come some years earlier into Spain with Balj b. Bishr [q.v.] and were scattered, some 500 in number, over the military districts (*ghumāt*) of Elvira and Jaén in the S. E. of Spain. The governor of the Peninsula at this time was Yūsuf b. 'Abd al-Rahmān al-Fihri, who derived most of his authority from the chief of the Kaīs of Spain, al-Ṣumail al-Kilābi [q.v.]. Judging the moment had come to land on Spanish soil in the guise of claimant to the throne, 'Abd al-Rahmān left the Maghrib and arrived at Almuñecar [q.v.] in Rabī' II, 138 (Sept. 755). The welcome he received surpassed his expectations; he took the field against Yūsuf al-Fihri and as a result of meetings, military engagements and negotiations, for the details of which the reader may be referred to the Arab historians, he was ultimately recognised as emir on the 10th Dhū 'l-Hijja 138 (May 15, 756) in the town of Cordova, the traditional residence of the Arab governors.

The founder of the Umayyad emirate of Cordova was destined to rule for over 33 years. The first of these he spent in consolidating his position in the capital itself. News of his success spread through the whole of the East and there was soon an influx into Spain of clients and partisans of

the Umayyads, who came to do their share in restoring in Spain the dynasty which had fallen in Syria. But the Cordovan emir had soon to deal with a number of political complications. He had first of all to put down Yūsuf al-Fihri, who was not taking kindly to his fall and, having gathered round him a number of followers, tried to retake Cordova; but he was defeated in 141 (758) and in the next year killed in the region of Toledo. But rebellion continued to smoulder in all parts of Spain, as in the period of the governors; trouble was continually stirred up not only by bodies of *muwalladūn* i.e. neo-Muslims, Spaniards recently converted to Islām, but also by the Berbers and Arabs always at daggers drawn with one another on account of their ancient clan-feuds. 'Abd al-Rahmān I therefore had to put down in succession risings by the Yamanīs and the Fihris, led by al-'Alā' b. Muḥith al-Ljodhāmī in 146 (763), by the Berber Shakyā who rose at Santabariya (Santaver) in 152 (769) and never dared allow any slight local disturbances to spread. In the latter half of the reign of 'Abd al-Rahmān I, a coalition was formed of a number of Arab chiefs of the east of the Peninsula, who sought the aid of Charlemagne. The latter himself crossed the Pyrenees at the head of an army and laid siege to Saragossa in 162 (778). But the emperor, suddenly recalled to the Rhine, had to raise the siege. On his way back to France he suffered in the pass of Roncevaux, where the Basques had prepared an ambush for him, the famous defeat associated with the memory of Roland. 'Abd al-Rahmān I took advantage of the departure of the Franks to besiege Saragossa in his turn, and occupied it in 164 (780) but for a short time only. An expedition against the Basques was crowned with success. On the death of the founder of the new Umayyad dynasty, which took place in 172 (788), the Cordovan kingdom had already become solidly established from the political and territorial point of view and was possessed of powerful military resources. The success of the exile from Syria and the remarkable way in which he was able to build up a kingdom for himself and to undertake the task of pacifying his new territory has aroused the admiration of all the Arab historians, who give him the flattering epithet of "Eagle of the Kuraish" (*ṣāḥib Kuraysh*).

The pacification of the new kingdom was to be the main task of all the successors of 'Abd al-Rahmān I. On his death the power passed to his son Hishām I, who reigned only a little over seven years for he died young in 180 (796). He had at first to fight against his brothers, who wanted to seize the power, and as a result he had to send out two summer expeditions (*ḡazā'if*) in 177 (793) and 179 (795), one against Narbonne and the other against Galicia. The chroniclers describe Hishām I as a noble prince full of virtues and regret that he reigned so short a period.

His son al-Hakam I succeeded him for 26 years. It is not certain whether it was he or his father who introduced the Mālikī rite into Muslim Spain: the *madhāhib* hitherto followed had been that of al-Awā'ī [q.v.]. In any case, it was only on his accession that the lawyers or *fuḥalā* assumed an excessive importance in Cordova and tried to dictate the decisions of the sovereign. Al-Hakam I, unlike his father, had very little sympathy for them; he at once took up a stand against them and showed them that he could resist their demands.

But the *fakhs* determined to resist, made common cause with another body of malcontents, the neo-Muslims or *muwalladun*, and thus to some extent made themselves in the name of Islam the champions of Spanish nationalism. The result, with a ruler so vigorous and decided as al-Hakam I, was a series of measures cruelly and vigorously enforced during the greater part of the reign. The first rising took place in Cordova itself in 189 (805): conspirators from the aristocracy urged on by the *fakhs* tried to drive al-Hakam from the throne; but the plot was discovered and the sovereign dealt most vigorously with the rebels. In the next year, he took Merida and stifled in blood another rising in Cordova. In 191 (807) there took place at Toledo the celebrated "day of the ditch" (*waḥat al-buḥra*). The inhabitants of this town from the beginning of Umayyad rule had been almost continually in rebellion; al-Hakam sent to govern them 'Amrū, a renegade who was absolutely devoted to him; he with his master's approval prepared an ambush for the Toledan notables from which none emerged alive. But it is the "affair of the suburb" which best reveals the implacable character of the grandson of 'Abd al-Rahmān I. Determined to destroy completely the seeds of rebellion in his capital, he surrounded himself with a guard of foreign mercenaries, the "silent ones" (*al-kharr*) who began a reign of terror in Cordova. The discontent continued to increase and in 202 (817) a rising on a large scale broke out in the southern suburb of the capital on the other bank of the Guadalquivir: the mob, stirred up by the *fakhs* led by Yahyā b. Yahyā, tried to take by assault the emir's palace but were soon surrounded and cut down by al-Hakam's troops. The emir then decided at once to banish from Spain all the Cordovans of the suburb who had survived the massacre. Over 20,000 families had to leave the country: about two-thirds went to Egypt and later to Crete. The remainder went to Fās and settled in the quarter still called the "bank of the Andalusians" (*idwat al-Andalus*). The suburb itself was razed to the ground and it was forbidden for any one to build there again. This drastic suppression of the rising made such a sensation in the Muslim world that the historians often call al-Hakam I *al-Rahātī* (the "suburban").

The whole of al-Hakam's reign was passed in this way in dealing with domestic troubles stirred up by neo-Muslim malcontents with the *fakhs* behind them. His energy enabled him to triumph over all but with his attention continually occupied in the interior of his country he could not always defend his frontier districts (*thughāt*) sufficiently. In the reign of al-Hakam I we find the kingdoms of Asturia and Galicia making a notable advance to the south. Barcelona was also taken from the Muslims in 185 (801) by the Duke of Aquitaine.

Al-Hakam's son and successor 'Abd al-Rahmān II was the very opposite of his father. He reigned from 206—238 (822—852) and was completely powerless to control events. It has been said with justice that he was guided throughout his reign by a *fakh*, a musician, a woman and a eunuch: Yahyā b. Yahyā who had managed to save his neck after the rising in the suburb; the singer Ziryāb, a pupil of Ibrāhīm al-Mawṣilī, who had just arrived in Spain and brought there the refinements of the 'Abbasid capital; the favourite Tarīb and the eunuch Naḥr, who

dictated to the ruler most of his political acts. The reign of this weak ruler, after the reign of terror begun by al-Hakam I, corresponded with a recrudescence of the nationalist movement. It was in this period that the Spanish Mozarabs [q. v.] who had retained the Christian faith, felt themselves strong enough to rebel, led by Eulogio and Alvaro. As a result of the counter-measures of the Muslim government, we find a wave of voluntary martyrdom descending on Spain and particularly on Cordova between 236 and 238 (850—852): a council, summoned by the Umayyad emir, endeavoured to put a check on it. Besides the opposition of the Christian communities, the caliph had to deal with new rebellions by the *muwallads*: Merida and Toledo had again to be taken by force. It was in this reign also that the Normans, called by the Muslims *al-Maghīr* [q. v.], made their first appearance in Spain. In 230 (844) Norman raiders took Seville and a truce was concluded between their leader and the emir of Cordova who had sent them an ambassador, Yahyā b. al-Hakam al-Gharnī.

Muḥammad I, son of 'Abd al-Rahmān II, succeeded his father on the throne of Cordova when the latter died in 238 (852). His reign, which was to last till 273 (886), was also marked by a series of domestic troubles which in spite of the cruelty of the prince continued to increase. The Mozarab rebellion broke out again on his accession and vigorous persecutions of the Christian communities were at once begun. The Christians of Toledo having appealed for help to Leo Ordoño I, he sent them an army under Count Biezro, which the Muslim troops routed in 240 (854) at the battle of Wādī Salḥ (Gundacete). The Christian risings ceased only in 245 (859) after the martyrdoms of Eulogio and Leontilla. But the political instability of the Cordovan emirate had been emphasized and gradually separatist movements began to take shape in all the provinces which were in theory subject to Cordova, usually led by neo-Muslims who posed as independent chiefs and nationalist champions. This attitude of the *muwallad* aristocrats and soon the pretensions of the great Arab families were to keep the Cordovan emirs busy till the beginning of the ninth century.

It was in the reign of Muḥammad I that the long rebellion of the independent chief 'Umar b. Hafṣūn [q. v.] began in the S.W. of the Peninsula; he soon exercised absolute power over all the mountainous country between Ronda and Malaga and established his headquarters in an impregnable citadel, Bobastro [q. v.]. Except for a few brief periods of truce, he kept up the struggle against the central Muslim power and soon became recognised by all the malcontents of the country as their undisputed leader.

The successor of Muḥammad I, his son al-Mundhir, had only a short reign (273—275 = 886—888), entirely filled with the war with Ibn Hafṣūn, whose influence daily increased, and with the siege of Bobastro, which would have perhaps been successful but for the emir's untimely death, poisoned, it appears, by his brother 'Abd Allāh, who succeeded him.

The reign of the emir 'Abd Allāh (275—300 = 888—912), eclipsed in some degree by that of his glorious grandson and successor 'Abd al-Rahmān III al-Nāṣir, is rightly said to mark an important stage in the pacification of the kingdom

of Cordova. It is not quite right to see in him only a bloodthirsty tyrant. Like all the rulers of the period, he undoubtedly dealt most cruelly with those who tried to overthrow him, even his own brothers. But he had to face numerous dangers, to fight the movements with which his predecessors had had to deal and which had been increasing in strength in the meanwhile. The rebellion of Ibn Hafsūn alone was to occupy almost the whole of his reign. On the other hand, in spite of the relative proximity of Cordova, the country of Seville seemed to be about to cast off Umayyad rule; the Spanish party and the Arab party there were continually undermining the authority of the governor sent from Cordova and occasionally let loose on the town bodies of Berbers who were settled in the neighbouring mountains. The hostility of the great Arab families, the Banū Haddādī and the Banū Khaldūn, became more and more disquieting; the representatives of these families were great landowners who had large numbers of devoted serfs whom they could equip and arm when necessary. Kurāib b. Khaldūn, the head of the second family, soon after the accession of 'Abd Allāh raised the whole region of Aljarafe (Arab. *al-Sharafa*) and got the chief of the Banū Haddādī to join him. Then he concluded a treaty with the emir and by arrangement with him attacked the neo-Muslims of Seville which he reduced to ruins (278=891). But his submission was only temporary. In 286 (899) the chiefs of the two great Seville families quarrelled and Ibrāhīm b. Haddādī, after disposing of his rival Kurāib, concluded an alliance with the leader of the rising in the S.E., Ibn Hafsūn. 'Abd Allāh finally received his submission but had to give him such privileges that in practice he ruled in Seville as an independent chief. In this period also the growing influence of the nobles, vassals, more or less in theory, of the Cordovan sovereign, contributed largely to break up his authority. The chief of these nobles (*qāhils*) were the lords of Sargossa, Ucles, Huesca and, in the S.W., of Osasonha. As to Ibn Hafsūn, after having shown at the beginning of the reign of 'Abd Allāh some slight signs of submission, he was not long in resuming the struggle against Cordovan rule. Supported by the Christians of Cordova and their chief, Count Servando, he extended his influence northwards so that the capital itself was soon threatened. Prompt measures became necessary: in 278 (891) the emir 'Abd Allāh marched against the fortress of Poley (now Aguilar, in the south of Cordova) where Ibn Hafsūn had established himself and forced the rebel to take refuge in his citadel of Bobastro. This success strengthened the emir's authority and procured him, for a brief period only it is true, the submission of the districts (*lāwa*) of Ecija, Archidona, Elvira and Jaen. Down to the last years of the reign of 'Abd Allāh, the work of pacification continued with continually varying results, but the activity of the prince, never giving his turbulent adversaries rest, gradually achieved a consolidation of his authority and the break up of the anti-Umayyad league. When he died in Šafar 300 (Oct. 912) the situation was more settled; he had prepared the way for and been one of the most vigorous workers for the pacification of Spain, which his grandson was to complete in the first part of his long reign.

2. The Umayyad caliphate of Spain.

'Abd Allāh's successor, 'Abd al-Rahmān III b. Muḥammad, was only twenty-three on his accession; in spite of his youth he had been chosen to succeed to the throne by his grandfather on account of his good qualities, and the choice was fully justified. No reign in the annals of Muslim Spain was more brilliant or more glorious. Its great length (half a century: 300=350=912-961) assured the prince's policy the benefit of unusual continuity and enabled him to extinguish for several decades the various centres of rebellion which had been always active in Spain since the coming of the Muslims. The reign of 'Abd al-Rahmān III marks, with that of his successor al-Hakam II and to a certain point the period when the two first 'Amirid dictators, al-Manṣūr and al-Murraḥ, assumed power, the culminating point in the Muslim occupation of Spain. Spain was never afterwards able to attain in the eyes of the Christian and Muslim worlds the political influence and brilliant culture which she attained in the time of these great princes nor to play a part of the first importance in the west, in Europe as well as in Africa.

We are not going to give here a detailed account of the reign of 'Abd al-Rahmān III, but only to study it in its main outlines. It may be divided into two main periods: the first, the period of restoration of peace at home, the result of which was the realisation of the political unity of the Cordovan empire; the second is a longer period marked mainly by preoccupation with foreign affairs, relations with the Christian kingdoms of the north and with North Africa, then more or less under Fatimid suzerainty.

On his accession 'Abd al-Rahmān III set to work and traced out his programme: to put an end to the rebellions which had been drenching Spain with blood since the foundation of the dynasty, to neutralise the influence of the powerful Arab aristocracy and to maintain the Muslim frontiers on the north. He carried through his programme point by point. In the first year of his reign Ecija was taken and its fortifications dismantled; another campaign ended in the taking of the strong castle of Monteleon and in the pacification of the districts of Jaen and Elvira. The subjugation of the south of the Peninsula was continued down to 305 (917): Seville, then Cremona submitted; finally the aged leader of the rebellion, 'Umar b. Hafsūn, died. His sons Dja'far, Sulaimān and Hafsūn endeavoured to continue the struggle but without any great confidence in the success of their arms: the result was the taking of Bobastro by 'Abd al-Rahmān in person, who laid siege to it and captured it in 315 (beginning of 928). Five years later the last centre of resistance fell: Toledo [q.v.], to which the predecessors of 'Abd al-Rahmān III had been forced to grant a kind of political independence, was strictly blockaded and had finally to surrender in 320 (932).

At the same time the sovereign did not lose sight of the aspirations of the Christian kingdoms of the north, particularly the programme of territorial expansion by the kingdom of Leon, over which there then reigned an energetic and ambitious prince, Ordoño II. The latter had taken the stronghold of Alanje (*Kaldī al-Hanzh*) to the south of

Merida, and a little later with the help of King Sancho of Navarre had sent an expedition into the districts of Tudela and Valtierra. But the Leonese advance was checked by 'Abd al-Rahmān III, who in 308 (920) gained a series of successes, with the capture of the fortresses of Ossa, San Esteban de Gormaz, Clunia, Carcar, Calahorra and Maza and the victory of Valdejunquera. Four years later, as a result of a new offensive by Leon, the Umayyad ruler re-established the situation to his advantage in a victorious campaign, profiting by the troubles caused in the Christian country on the succession to Ordoño II.

Throughout all this first period of his reign, 'Abd al-Rahmān III was closely watching what was going on in Africa and by building fortifications on the coast and organising a powerful fleet, was preparing for the eventuality of an invasion by the Fātimids, against whom he now committed acts of open hostility. To show it still more he assumed in 316 (929) the lofty title of commander of the faithful (*amīr al-mu'minin*) while his predecessors and he himself had previously been content with the simple title of *amīr*. The little Cordovan kingdom became at the same time a great Muslim empire, and the restoration of the Umayyad caliphate of Damascus in Spain was completed. He assumed at the same time the honorific title (*ṣaḥāb*) of al-Nāṣir li-Dīni 'llāh (cf. E. Levi-Provençal, *Espagne musulmane du X^e siècle*, Paris 1932, p. 45 sq.).

A little later in 319 (931), the Caliph captured the stronghold of Ceuta [q. v.] on the African coast and installed a governor and a garrison there; this was the beginning of the Umayyad attack on the western Maghrib. A few years before, the petty rulers of the kingdom of Nāḥir had asked for and obtained Umayyad suzerainty. Al-Nāṣir did not stop there and was able to rally to his side the little local dynasties who were trying to hold their own against the Fātimid invaders. With the help of an alliance with the Maghrawa [q. v.] he was soon able to subdue the whole of the central Maghrib except the region of Tāhert.

The second part of the reign of 'Abd al-Rahmān III shows rather less personal activity by the caliph, and at the same time the formation, in the heart of the united and pacified Cordovan empire, of parties, no doubt of little weight at first, which were in the end to cause the greatest disorder in the internal affairs of the caliphate: the Slav party and the Berber party. The Slavs (cf. *SAKĀLIRA*), prisoners not only from the east of Europe but also from Italy and northern Spain, soon formed a large class in Cordovan society, and it is in the reign of al-Nāṣir that we find them for the first time occupying high offices in the state and even in the army. The sovereign seems to have used these Slavs, originally devoted to his cause, to reduce or even annihilate the influence of the old Arab aristocracy. In 327 (939) for example, we find him giving the Slav Nadjda the command of an important expedition; but he was to regret it; indeed on this occasion Muslim troops suffered the first reverse of his reign and were defeated by the Leonese under Ramiro II and their allies of Navarre at Simancas and Alhandega. Henceforth al-Nāṣir's policy with regard to the Christian kingdoms, while remaining watchful, was confined to taking advantage of any possible occasion. Civil war had broken out

in the north of Spain as a result of a feud between Ramiro II and the Count of Castile, Fernán González. On the death of the King of Leon in 951, his sons Ordoño III and Sancho fought for the crown and the former, to have his hands free against his brother who was supported by Castile, offered 'Abd al-Rahmān III an advantageous peace and promised to pay him tribute regularly. When Ordoño III died in 955, Sancho succeeded him; but, disliked by the nobles and defeated by the armies of the Cordovan caliph, he was forced to take refuge in Pamplona with the aged queen Toda of Navarre and then appealed to al-Nāṣir for help to regain his kingdom which had passed into the hands of Ordoño IV. Negotiations were begun and through the skill of al-Nāṣir's representative, the Jew Ḥaḍḍā b. Šapraḥ, Sancho and Toda came in person to Cordova to seek the caliph's help. This was an event without precedent in the annals of Muslim Spain. The king of Leon had to abandon ten fortresses in exchange for which the caliph gave him troops who assisted him to take Zamora in 959 and Oviedo in the following year.

The Fātimid threat to the Peninsula had not yet completely disappeared. In 343 (954) the Fātimid caliph al-Mu'izz sent his governor of Sicily to make a raid on the Spanish shore. He ravaged the district of Almería and brought back prisoners and considerable booty to Sicily. As a reprisal, al-Nāṣir gave Ghālib, one of his most devoted clients, command of a fleet of seventy ships, which went and burned Marsa 'l-Kharaz near Calle on the North African coast.

'Abd al-Rahmān III al-Nāṣir died on the 2nd Rabi' al-Thani 350 (Oct. 25, 961), aged 73. His political work was to be continued by his son and successor al-Ḥakam II al-Mustansir bi 'llāh who was nearly fifty when he came to the throne. He was a pious and scholarly prince and his name is especially associated with the Great Mosque of Cordova which he enlarged and embellished; on it he spent considerable sums and even brought from Mediterranean lands and Byzantium skilled craftsmen and valuable material. His father had been mainly interested in public and strategic buildings and had built for his own residence the town of *Madīnat al-Zahrā'* [q. v.], 3 miles N.W. of Cordova.

His love of study and his age, it is true, pre-disposed al-Ḥakam II to a quiet life; but he is too often represented as taking no interest in political affairs. He had to maintain the situation created by his father and for this he had only to watch the normal working of the wheels of government. But like his predecessor, whose programme he continued to carry out, he did not remain an inactive spectator of events in northern Spain and Africa. He received at Cordova with great pomp Sancho's brother, Ordoño the Wicked, and gradually became the suzerain of all the Christian princes of the north. His political right hand men were the *ḡālib* al-Muḥāfi and Slav dignitaries, and he may be reproached with having given them too much confidence. On the African coast, the Umayyad government continued to display considerable activity. The Fātimid peril seemed to have disappeared with the departure of al-Mu'izz for Egypt, but his representatives, the Šanhādja, resumed the fight with the vassals of the Umayyads in North Africa. On the other

hand, the petty Idrisid dynasts of the region of Tangier and Arzila had remained faithful to the Fātimids. The resistance of Ḥasan b. Ghannūn was long but in the end he was taken in his stronghold at Hajarat al-Naṣr and imprisoned in Cordova. The reign of al-Ḥakam II was also marked by a new attempt by the Normans to land in Spain in 355 (966) (cf. *AL-MADJLIS*).

al-Ḥakam II soon felt himself growing old and his principal care became the maintenance of the succession in direct line in the Umayyad dynasty. He had only one son, still a youth, Ḥishām, and he had him recognised as heir presumptive (*waḥī al-ahd*). He died soon afterwards on the 3rd Šafar 366 (Oct. 1, 976).

The reign of Ḥishām II al-Mu'ayyad bi 'l-lāh, the third Umayyad caliph of Spain, is the period of the establishment of the hereditary dictatorship of the 'Amirids and their effective seizure of civil and military power, the sovereign himself being relegated to his palace and deprived of all political initiative. The circumstances under which this new state of affairs was brought about after the death of al-Ḥakam II are very complicated but quite well known. A detailed account, which need not be repeated here, is given under *AL-MANŠŪR B. ABĪ 'AMIR*. We would only recall that, while in theory preserving for the young caliph the exercise of sovereign power, the famous ḥājjib, whose ambition knew no bounds, does not ever seem to have really thought of dethroning him in order to take his place. All official measures were taken in the name of Ḥishām II, who never seems to have shown any inclination to resist the 'Amirid control of his lands. It is really only with the disappearance of al-Manšūr that the weakening of the Umayyad caliphate begins.

Al-Manšūr in the name and on the purely nominal behalf of Ḥishām II continued the policy of the caliphs 'Abd al-Raḥmān III and al-Ḥakam II, not without, however, giving it the stamp of his powerful personality; but the era of peace and glory which al-Nāṣir had begun continued undiminished throughout the dictatorship of al-Manšūr. The influence of the Arab aristocracy and of the Slav party was soon completely destroyed. The army was reorganised with the help of mercenaries recruited outside the Muslim lands of Spain, in northern Africa and in the Christian kingdoms of the north of the Peninsula. In the western parts of Barbary, al-Manšūr established a kind of Umayyad protectorate so that African expenses became less heavy in the caliph's budget. The ḥājjib was a successful general, the worst enemy of the Christian kingdoms, against which he undertook an expedition almost every year to preserve his personal prestige. Among these expeditions we may mention that of 374 (985) against Catalonia: Count Borrel was defeated and Barcelona taken. Three years later, he turned against Leon and its ruler Bermudo II who had broken a treaty made with Cordova: Coimbra, Leon and Zamora were taken. Al-Manšūr also covered himself with glory in the famous campaign against Galicia in the course of which on 2nd Ša'abān 387 (Aug. 10, 997), he took Santiago da Compostella (Arab. *Šaunt Ya'qub*; q.v.). In 392 (1002) he led his troops against Castile, took Canales and San Millán de la Cogolla. On his return from this victorious campaign he died at Medinaceli (*Madinat Salm*; q.v.) in the same year.

3. The Decline and Fall of the Umayyad Caliphate.

On the death of al-Manšūr, his son 'Abd al-Malik, who had already distinguished himself in Africa a few years before, succeeded him as ḥājjib and was installed by the caliph Ḥishām II. During the six years in which he held the power, down to 399 (1008), Muslim Spain continued to prosper as regards peace at home. He reinforced the caliph's army with new contingents, recruited mainly in Africa, and undertook several expeditions against the kingdoms of the north. In 393 (1003) he conducted a series of raids against Catalonia, in 395 (1005) against Galicia, in 396 (1006) against Pampeluna, in 397 (1007) against the Castilians whom he defeated at Clunia. On the conclusion of this last successful campaign, he had himself given the honorific title of al-Muṣaffar bi 'l-lāh. In spite of the sullen opposition that was felt in Cordova against 'Amirid control and several plots, which were, however, quickly thwarted, 'Abd al-Malik al-Muṣaffar secured the Umayyad caliphate a few more years of existence, abnormal no doubt but free from serious danger at home or abroad. But the second 'Amirid ḥājjib died soon, poisoned, it is said, at the instigation of his brother 'Abd al-Raḥmān, who succeeded him, again with the approval of the weak caliph Ḥishām II.

This 'Abd al-Raḥmān was the son of al-Manšūr by his marriage with a Christian princess, daughter of King Sancho of Navarre. The new ḥājjib was therefore everywhere known as Sanchuelo, little Sancho. Not long after he had assumed control, he made himself singularly detested by the Cordovan population by breaking the restraint which his father and brother had always prudently observed. Strong in the support, which he thought he could always rely on, of the Berber soldiery, he was seized with unbounded ambition and meditated succeeding Ḥishām II with the title of caliph. The monarch was sufficiently cowed to receive the request favourably and by an edict of 399 (1008) the ḥājjib was proclaimed heir-presumptive to the Cordovan throne. This proclamation roused the country generally against the 'Amirids and the party of the disaffected, singularly increased by this unexpected news and led by the Umayyad princes cut off from the throne, took advantage of the departure of 'Abd al-Raḥmān b. 'Abi 'Amir on an expedition against Galicia to let loose a rebellion in the capital, seize the palace of the caliph and force him to abdicate in favour of a great-grandson of al-Nāṣir, Muḥammad b. Ḥishām b. 'Abd al-Djabbār, who was proclaimed with the honorific title of al-Mahdi in 399 (1008). The new sovereign cleared out and razed to the ground the 'Amirid palace al-Madinat al-Zāhira [q.v.]; a few days later, Sanchuelo, hurrying back to Cordova, was arrested some distance from the capital at the same time as his faithful ally, the Count of Carrion, and executed.

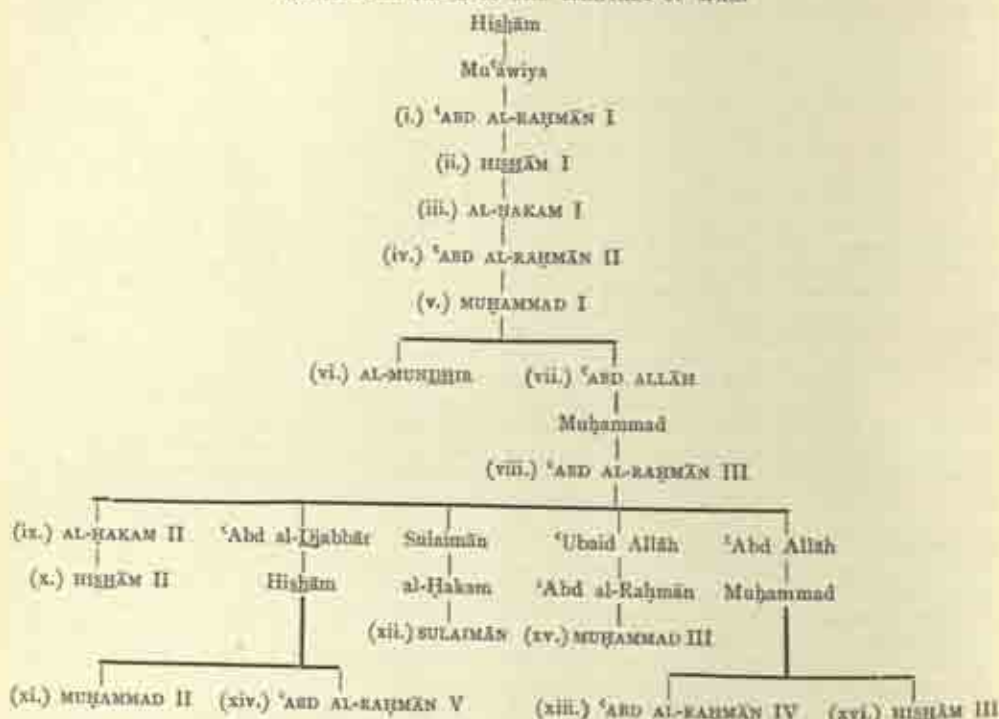

From this time and down to the fall of the caliphate, which was not far distant, civil war reigned in Cordova and the caliphate. The Berber element augmented by the Šanhādja contingents from Ifrīkiya, recruited by the 'Amirids, played a more and more disastrous part in the troubles that followed. Al-Mahdi, instead of conciliating the chiefs of these mercenaries, alienated them very soon by his brusqueness, the contempt which he

showed for them and particularly by dismissing a large number of Africans from the military *al-mawān*. The latter, who were joined by the regular malcontents of the Cordovan mob, gained the country and soon proclaimed another Umayyad prince, Sulaimān b. al-Ḥakam b. Sulaimān b. 'Abd al-Raḥmān al-Nāṣir who took the title of al-Musta'in bi 'Ilāh. With the new caliph the Berbers took Calatrava and Guadalajara; at Medina-celi they tried in vain to get the general Wāḍiḥ to join their movement; then appealing successfully to the Castilians, they returned, revictualled and reinforced by the latter, towards Cordova. Al-Mahdi was unable to oppose their advance and the capital having fallen into their hands, Sulaimān al-Musta'in

peace with the Berbers. The latter refused to come to terms and resumed their blockade of Cordova. This situation continued down to 1013, and the Arab historians have left us detailed accounts: cabals in Cordova, periods of hope, timid sorties against the besiegers. In the end, the Cordovans had to capitulate and the Berbers forced them to renew their oath of fealty to Sulaimān al-Musta'in.

The latter appointed Berbers to the offices of *hājibs* and *viziers*. The people of Cordova were subjected to a régime of vexations without precedent. The last freed "Slaves" of the 'Amirids went to join their relations in the east of the Peninsula. The Cordovans then agreed to entrust their destinies to an ambitious 'Alid, the governor of Ceuta

GENEALOGICAL TABLE OF THE UMAIYYADS OF SPAIN

was installed in the caliph's palace by the *Sanhādja* chief Zāwī b. Ziri.

Al-Mahdi did not consider himself beaten. With the help of Wāḍiḥ and the Counts Raymond of Barcelona and Ermengaud of Urgel he attacked Sulaimān al-Musta'in and his Berber followers near Cordova, at 'Aḡabat al-Baḡar (near *Castillo del Vaca*), to the north of Cordova), routed them and returned victorious to the capital, which was plundered by the Catalans. But the Berbers re-assembled, seized the whole country between the Mediterranean and the Guadalquivir and harassed Cordova and the country round. In face of this, the Cordovans soon attributed to their sovereign al-Mahdi, whose incapacity became more and more evident, the blame and responsibility for the evils that had befallen them. A conspiracy was hatched, al-Mahdi slain and Hishām II replaced on the throne (Dhu 'l-Hijja 400 = July 1010).

Hishām's first care after his second accession was to appoint Wāḍiḥ first minister and make

'Alī b. Ḥammūd, who, taking advantage of a moment when al-Musta'in's Berbers were scattered, advanced on Cordova, seized it and had himself proclaimed there (406 = 1016). Al-Musta'in was slain but 'Alī b. Ḥammūd himself was assassinated not long afterwards.

The years that followed were no less troubled. Hammūd's pretenders: Kāsim b. Ḥammūd and his nephew Vahya b. 'Alī, Umayyad pretenders: 'Abd al-Raḥmān IV b. Muḥammad al-Murtada, 'Abd al-Raḥmān V al-Mustaḥir, Muḥammad III al-Mustakfi and Hishām III al-Mu'tadd shared a more and more precarious power down to 420 (1030). All Spain was, however, tired of these perpetual changes of government and the Cordovans decided on the final suppression of the caliphate. Hishām II disappeared. Perhaps he was slain in the course of a raid on the palace, or, as is sometimes said, he may have fled and left Spain to end his days in obscurity in the east. It is difficult to ascertain

what exactly was the end of his inglorious career. In any case, the beginning of the xth century saw the united political state of the Umayyads gradually breaking up and the moment was not far distant when all the provinces of Muslim Spain were to proclaim their independence under a Spanish, Slav or Berber chief and form the numerous little kingdoms of the *mulūk al-jawā'id*. As to Cordova, it was soon to become the centre of a kind of little republic, very soon transformed with the *Umayyads* [q. v.] into a principality. In any case, a few decades sufficed to destroy completely the solid edifice which the great Umayyad princes had built up, among whom the great figure of 'Abd al-Rahmān III al-Nāṣir, one of the greatest sovereigns of the middle ages and of the Muslim world, is the dominating figure.

Bibliography: A. Arabic sources. The history of the Umayyads of Spain has been the subject of numerous works in Spain itself, during the period of the dynasty and later also. Unfortunately not all these chronicles have survived; the most important were those of al-Rāzī and Ibn Ḥayyān. Ahmad b. Muḥammad al-Rāzī, who lived in the first half of the fourth (tenth) century, wrote a history of the rulers of Muslim Spain (*Akhbār Mulūk al-Andalus*) which was to be the main source for later writers. Among contemporary histories, which still survive, we may mention the following in chronological order: the anonymous chronicle entitled *Akhbār madīnāt* (ed. and transl. into Spanish by E. Lafuente y Alcántara, Madrid 1867, under the title *Akhbār madīnāt, Crónica anónima del siglo XI*); it is a vivid and colourful chronicle and full of information which seems to be free from legendary matter of the history of Muslim Spain to the reign of 'Abd al-Rahmān III; the *Kitāb Iftitāḥ al-Andalus* of the Cordovan Ibn al-Kaṭīya, d. in 367 (977), which covers the history of the Muslims in Spain down to the reign of al-Nāṣir. It has on several occasions been edited and in parts translated, and more recently in full by J. Ribera, Madrid 1926. Of the monumental work of the great historian Ḥayyān b. Khalaf Ibn Ḥayyān, who died in 496 (1076), entitled *al-Muṭabā'āt fī Ta'rīkh al-Andalus* and *al-Maṭn*, there only survives the manuscript of one volume in the Bodleian dealing with the reign of the amir 'Abd Allāh (ed. Melchor M. Antuña, *Textes Arabes relatifs à l'histoire de l'Occident musulman*, iii., Paris 1932) and the copy of a manuscript from Constantinople (in the Library of the Academy of Madrid) covering a portion of the reign of al-Hakam II. Considerable extracts have fortunately been preserved by later writers, notably Ibn Bassām in his *Dhakhira*. We may also mention as indirect sources, written in Spain itself, the history of the *hujas* of Cordova by al-Khushani (ed. and transl. J. Ribera, *Historia de los Jueces de Córdoba*, Madrid 1914) and the works of the Spanish biographical writers which have been published by F. Codera and J. Ribera in the *Bibliotheca arabico-hispana*, 10 vol., Madrid and Saragossa 1883—1895.

But our fullest sources for the history of the Umayyads of Cordova are undoubtedly two compositions of comparatively late date, one of the xivth century by Ibn 'Idhārī al-Marrākushī, the other of the xvth by al-Maḥḥārī. The first

is called *al-Bayān al-maḥḥārī fī Akhbār Mulūk al-Andalus wa'l-Maḥḥārī*; of three volumes now known, two deal with Spain; the first covers the history of the Peninsula from the conquest to the death of the ḥajjib al-Manṣūr b. Abī 'Amir; as Dozy, its editor, has shown this volume reproduces almost in entirety the Spanish part of the work of a Cordovan annalist of the tenth century, 'Arib b. Sa'd, who continued down to his time the chronicle of Tabari (ed. Dozy, *Histoire de l'Afrique et de l'Espagne intitulée al-Bayān 'l-maḥḥārī*, Leyden 1848—1851; transl. into French by E. Fagnan, Algiers 1901—1904; partly translated into Spanish by Fernández González, Granada 1862); the next volume which deals with the history of the fall of the Umayyad caliphate from the time of the 'Amirid 'Abd al-Malik and that of the *mulūk al-jawā'id* was discovered and published by E. Lévi-Provençal (*Textes arabes relatifs à l'histoire de l'Occident musulman*, ii., Paris 1930). The other work no less valuable for the history of the Umayyads is the *Nafḥ al-Th* of the Maghribi al-Maḥḥārī. The first half was published by Dozy, Dugat, Krehl and Wright under the title *Analectes sur l'histoire et la littérature des Arabes d'Espagne*, Leyden 1855—1861 (also at Bulak 1279 A.H. and Cairo). An English adaptation was made by P. de Gayangos, *The History of the Muhammadan Dynasties in Spain*, London 1840—1843. Ibn Khaldūn devotes a part of his *Kitāb al-Ibar* to the history of the Umayyads of Spain (Cairo ed., vol. iv., p. 116—155); as do the earlier historians Ibn al-Athīr in his *A'māl* (transl. by F. Fagnan, *Annales du Maghreb et de l'Espagne*, Algiers 1901) and al-Nuwairī, author of the *Kitāb Nihāyat al-Arab* (*History of Spain*, ed. with Spanish translation by M. Gaspar Remiro, Granada 1917—1919).

This brief sketch of the Arabic sources for Umayyad history may be completed by consulting the valuable but now somewhat out of date work of F. Pons Boigues, *Ensayo bio-bibliográfico sobre los historiadores y geógrafos arábigos-españoles*, Madrid 1898, and the brilliant survey by L. Barrau-Diigo, *Recherches sur l'histoire politique du royaume asturien*, Tours 1921, p. 55—78.

B. European writers. In spite of its date, the *Histoire des Musulmans d'Espagne* by R. Dozy (Leyden 1861; new ed. by E. Lévi-Provençal, Leyden 1931; Span. transl. by M. Fuentes, Madrid 1920; Engl. transl. by F. Griffin Stokes, London 1913 etc.) is still the best and fullest modern work on the Umayyads in Spain. More recent but very short is that of A. González Palencia in his *Historia de la España musulmana* (Barcelona-Buenos-Aires 1925; 2nd ed., 1930). — On institutions and social life in the caliphate see also: E. Lévi-Provençal, *L'Espagne musulmane du XI^{ème} siècle*, Paris 1932. Among European works we may also mention: R. Altamira, *Historia de España y de la civilización española*, Barcelona 1911, vol. i.; A. Ballesteros, *Historia de España*, Barcelona 1928, vol. I; L. Barrau-Diigo, *Le royaume asturien* (cf. above); F. Codera's studies which for the most part appeared in the *Boletín* of the Academy of History of Madrid; R. Dozy, *Le Calendrier de Cordoue de l'année 961*, Leyden 1873; R. Dozy, *Recherches sur l'histoire et la littérature de l'Espagne pendant le Moyen-âge*, Leyden 1881; A. González Palencia, *El Califato*

accidental, in *Revista de Archivos*, Madrid 1922; do., *The Western Caliphate*, in *The Cambridge Medieval History* Cambridge 1922, iii. 400-442; E. Lévi-Provençal, *Inscriptions arabes d'Espagne*, Leyden-Paris 1931; G. Margolis, *Manuel d'Art musulman*, in *L'Architecture* (with valuable historical notes), I, Paris 1926; E. Saavedra, *Abderrahmān I, monografía histórica*, in *Revista de Archivos*, Madrid 1910; F. Simonet, *Historia de los Almorávides de España*, Madrid 1903.

(E. LÉVI-PROVENÇAL)

UMM AL-KITĀB, the original copy of the Book with Allāh in heaven, from which the revelations of the Qur'ān come and from which Allāh "abrogates and confirms what He pleases" (Sūra xiii. 39). This original copy, called *Aṣl al-Kitāb* in *Hadīth* (e.g. Tahaṣṣi, *Tafsīr*, xxv. 26), is according to Sūra lxxxv. 21 written in a "carefully preserved tablet" (*fi laḥḥi mahfūḏi*; cf. Enoch 93. 2; Book of Jubilees 5. 13; 16. 2; 32. 22). In the Medina period Umm al-Kitāb is used in another sense: according to Sūra iii. 3, the book revealed by Allāh to Muḥammad, i.e. the Qur'ān, consists of verses "clearly expressed" (*āyāt muḥkamāt*) and of "others ambiguous" (*mutashābihāt*); only the first however constitute the Umm al-Kitāb. In keeping with this expression post-Qur'anic linguistic usage calls the *Fatḥa*, as containing the essential content of the Book, *Umm al-Kitāb* or *Umm al-Qur'ān*.

Bibliography: Lane, *Lexicon*, v. v. *Umm*; Horowitz, *Koranische Untersuchungen*, Berlin-Leipzig 1926, p. 65. (J. HOROWITZ)

UMM KULTHUM, daughter of Muḥammad. Tradition knows even less of her than of her sister Ruḳaiya and this little consists mainly of a repetition of what is told of the latter. Umm Kulthum is said to have married a son of Abū Lahab but to have been divorced by him by his father's orders before the marriage was consummated; what this means is discussed in the article ROḤAIYA. The view there expressed that Umm Kulthum was really married to a son of Abū Lahab is supported by the usual and literal interpretation of her *kunya* (her real name is nowhere recorded). That at a later date efforts should have made to suppress all record of such a grandson of the Prophet is only natural. Otherwise we are only told of her that her brother-in-law 'Othmān married her after Ruḳaiya's death during the Badr campaign. She died in *Shā'ban* of the year 9 without having borne a son to him.

(FR. BUHL)

UMM AL-WALAD (أُمّ), a slave-girl who has borne her master a child.

1. The master's right to take his slave-girls as concubines was recognised by Muḥammad in continuation of a general practice of Arab paganism. In regard to the position of the children of such unions a change of view had been perceptible among the Arabs in the period just before the coming of Islām. In place of the previous unrestrictedness in marriage and concubinage a certain decree of regulation had grown up, and a higher value began to be attached to marriage with free women and to good birth on the mother's side also; corresponding to this however, the position of the

children of slaves became worse; they were as a rule called only after their mother and not after their father, and only received their freedom when expressly recognised by their father (this condition probably always held) and even then were not fully privileged: the slave-girl, it was argued, must not give birth to her future master as the son would reveal the qualities of a slave like his mother. The position of such a slave was not at all a privileged one. Even her designation *umm al-walad* ("mother of children") is in contrast to *umm al-banīn* ("mother of sons") as the name for a free woman. Although the personal position of a woman taken in war was hardly different from that of a slave, yet we frequently find a marriage in this case instead of concubinage, and her sons were considered free men, although they were as a rule only called after their mother and not regarded as having full privileges; but an endeavour was often made to remove even this stain due to the irregularity of the union by a new regular marriage.

2. This state of affairs was continued under Islām without any essential change at first. The Qur'ān permits concubinage with a man's own slaves in several passages dealing with the limits of lawful sexual intercourse as against *zinā* (iv. 3, 28 sq.; xxiii. 6; lxx. 30, all Medinese; cf. the references in Noldeke-Schwally, *Gesch. d. Qur'ān*, i); the passage specially addressed to the Prophet (xxiii. 49-51) expressly describes them as prisoners of war. In Islām therefore there was no distinction in theory between the slave-girl and the concubine taken in war, which is not surprising after the above remarks; in practice the old procedure towards a woman taken in war remained in operation (cf. e.g. Wellhausen, *Fakih*, p. 178; do., in *N.G.W. Gott.*, 1893, p. 436; although not always historical in the particular case, yet typical). In the Qur'ān the position of the *umm al-walad* is not defined and it is certain that the Prophet issued no decrees altering her position or that of her children. That he is said to have set free the slave-girl Māriya, when she had borne him his son Ibrāhīm (cf. Ibn Sa'd, viii. 155, sq.; cf. also 156, 4) should not in any case be taken as a general rule; this episode is not at all prominent in the material of tradition relating to the *umm al-walad*. The story that the Prophet recognised Māriya's son only after serious consideration (*ibid.*, p. 154, 4) might be possible as regards substance but is incredible in the form in which it is given.

3. That an *umm al-walad* should become free *ipso iure* on the death of her master, and no longer liable to be sold (or given) was first ordained by the caliph 'Umar (cf. below). The starting point for this ordinance must be found in a *hadīth* transmitted by Abū Dāwūd (*Aṣṭ*, bāb 8) and Ibn Hishām (vi. 360) the genuineness of which is thereby rendered certain (a later recasting: *Kanz al-'Ummāl*, iv. 512b). According to this, a woman, who had been sold in the heathen period by her uncle as a slave had borne her master a son and now on the death of her master was to be sold again to pay his debts, lamented her sad lot to the Prophet; the latter ordered the administrator of the estate to manumit the woman and gave him a slave in compensation. Ibn Hishām observes on this case with justice that the different possible interpretations of the Prophet's treatment of the case gave rise to later *ikhtilāf*; there is

no doubt that it was a decision for this one case only. A tradition given by al-Bukhārī (*Ṣaḥīḥ*, bāb 8; and several other passages) and al-Tabāwī (*Sharḥ Maʿāni l-ʿAḥḥāḥ*, ii. 66) deals with a dispute over the paternity of a child of a slave-woman; Saʿd b. al-Ḥakīm claimed it as the illegitimate child of his dead brother ʿUṭba, in accordance with the latter's last wish and ʿAbd, the son of Zaʿma, claimed it as the legitimate child of his deceased father by his concubine. In spite of the child's resemblance to ʿUṭba, the Prophet decided on the principle *al-walad li-l-firās* ("the child belongs to the legitimate bed"). In view of the difficulties of interpretation raised by this ḥadīth (cf. the commentaries, especially al-Aʿīnī, on al-Bukhārī) it might be in the main genuine (the secondary recast form which al-Tabāwī [ii. 67] also gives is certainly not genuine); in any case there is no mention of the manumission of the slave-woman here.

4. The above-mentioned ordinance of ʿUmar's is certain from numerous accounts, although the details vary and are embellished with legends (cf. especially *Kanz*, iv. 5118, 5122, 5124; al-Ṣanʿānī, *Subul al-Salām*, *Kitāb al-Buyʿ*, on N^o. 11). Setting aside the settlement of the question whether it was preceded by another divergent ruling (*Kanz*, iv. 5118), the story that ʿUmar ordered the *umm al-walad* to be free from the birth of her child (al-Kh̲w̲ārizmī, *Djāmiʾ Maʿānī al-Imām al-aʿam*, ii. 166; also *Kanz*, v. 5116?) must be regarded as a product of the later dispute over this question. For ʿUmar's decree in no way made a final settlement; it gave trouble under ʿUthmān (*Kanz*, iv. 5122). Ali again diverged from it (*ibid.*, p. 5129-5131). Ibn ʿAbbās is specially mentioned as another opponent of ʿUmar's view among the Companions of the Prophet. In the dispute that now arose between the different opinions, the attempt was made on the one side to ascribe ʿUmar's decision to the Prophet (*ibid.*, p. 5115, 5117) and to ascribe the same opinion even to ʿAlī and Ibn ʿAbbās (ʿAlī: *ibid.*, p. 5132; Ibn ʿAbbās: *ibid.*, p. 5039-5041; Ibn Ḥanbal, i. 303; Ibn ʿAbbās from the Prophet: al-Dārimī, p. 18, 38; Ibn Māǧja, *Ṣiḥḥ*, bāb 2; Ibn Saʿd, viii. 155, 20; Ibn Ḥanbal, i. 317), on the other hand, it was insisted, sometimes quite polemically, that the Prophet approved the sale of the *umm al-walad* (Ibn Māǧja, *ibid.*; Ibn Ḥanbal, iii. 321; al-Ṭayālīsī, N^o. 2200; *Kanz*, iv. 5125, 5127); against this, evidence was quoted to show that the Companions of the Prophet gave approval to ʿUmar's ordinance (Abū Dāwūd, *Ṣiḥḥ*, bāb 8; al-Aʿīnī giving al-Bukhārī as authority, *Ṣiḥḥ*, bāb 8). But these were not the only two theses put forward: another view ascribed to ʿUmar has already been mentioned (some traditions make the Prophet utter a corresponding opinion but one easily distorted to mean something else: Ibn Māǧja, *Ṣiḥḥ*, bāb 2; Ibn Saʿd, viii. 155, 17 both transmitted through Ibn ʿAbbās; also *Kanz*, iv. 5128?); ʿAlī is credited with having said: "If the master wishes, he can set free his *umm al-walad* and consider her manumission as her bridal gift" (*Kanz*, iv. 5133) and Ibn Maʿūd held the view that the *umm al-walad* should be manumitted at the expense of the share of the estate falling to her child (presumed free) (al-Aʿīnī, *ibid.*), both variants of the fundamental thesis. — From the point of view of the criticism of Muslim Tradition, none of these ḥadīths is unimpeachable with the exception of the one quoted

above in paragraph 3, which itself is not free from ambiguity, so that it is usually preferred simply to quote ʿUmar and his *raʾy* as authority for the view that later prevailed.

5. Al-Aʿīnī (on al-Bukhārī, *Ṣiḥḥ*, bāb 8 at the end) is therefore able to give a list of seven different expressions of opinion on the *umm al-walad* in addition to ʿUmar's from the period of the earliest jurists before the origin of the *madhāhib*: 1. The master may release her for money (i. e. as *muḥabbaba*); 2. she may be sold without restriction; 3. the master may sell her at any time during his life-time and when he dies she becomes free (she is thus regarded as *muḥabbaba*; al-Shāfiʿi is said to have held this view); 4. she may be sold to pay a debt due by the estate; 5. she may be sold, but if her child is alive at the death of his father and her master, she is manumitted at the expense of any share he may have in the estate and inherits with him; 6. she can only be sold on condition she is set free; 7. even if she is contumacious and runs away, she cannot be sold, but only if she is immoral or becomes an unbeliever (according to al-Murazī al-Shāfiʿi could not come to a decision on this point). But even by this time the thesis that the *umm al-walad* could not be sold but became free on the death of her master, had won most supporters, among whom al-Ḥasan al-Baṣrī, ʿAṣā, Muḥammad, al-Zuhri, Ibrāhīm al-Nakhaʿī (cf. on him al-Kh̲w̲ārizmī, *op. cit.*, ii. 167; *Kitāb al-ʿAḥḥāḥ*, p. 71, 102) and others are specially mentioned. Particular questions which now arise for the first time, are referred back to older authorities, such as the decision N^o. 5 to Ibn Maʿūd, Ibn ʿAbbās and Ibn al-Zubair (*ibid.*), decision N^o. 6 to ʿUmar (*ibid.*; also *Kanz*, iv. 5123), other details also to ʿUmar (*Muwattaʿ*, vulgate, *Ṣiḥḥ*, bāb 8, *riwāya* of al-Shaibānī, *Kitāb al-Buyʿ*, *Bāb Baʿʿ Ummahāt al-Awḥād*, al-Kh̲w̲ārizmī, *ibid.*, etc.).

6. In the time of the formation of the *madhāhib* the view that the *umm al-walad* cannot be sold is held by Abū Ḥanīfa with Abū Yūsuf, Zufar, al-Shaibānī and their colleagues, al-Awzāʿī, al-Thawri, al-Ḥasan b. Ṣāliḥ, al-Laith b. Saʿd, Malik (*Muwattaʿ*, *loc. cit.*; *Mudawwana*, viii. 23) and his colleagues, Abū Thawr and Ibn Ḥanbal. This is also the final opinion of al-Shāfiʿi and therefore that of his colleagues and pupils, while he, according to a reliable tradition, had previously sanctioned the sale of the *umm al-walad* (al-Aʿīnī on the authority of al-Bukhārī, *Ṣiḥḥ*, bāb 8; al-Nawawī, *Madmūn*, ix. 243; cf. also above, section 5); the liberation of the *umm al-walad* was deduced therefrom in three ways (al-Nawawī, *ibid.*) so that in all we have four different opinions attributed to al-Shāfiʿi (al-Shawkānī, *Nail al-Awḥār*, *Kitāb al-Ṣiḥḥ*, *Bāb Umm al-Walad*, on N^o. 7). According to Dāwūd also, and the Zāhiri, the Shīʿi Imāms and the Twelver-Imāms (here however sometimes with the qualification that she becomes free if she was still in the possession of her master at his death and her child is alive) and the Muʿtazilis (al-Shawkānī, *op. cit.*), she can be sold. Although the four *madhāhib* in the end all declared that the *umm al-walad* could not be sold, the existence of *igʿmāʿ* on this point is nevertheless sometimes doubted (al-Ṣanʿānī, *op. cit.*, on N^o. 12; al-Shawkānī, *op. cit.*), sometimes however also definitely asserted (al-Nawawī, *op. cit.*). The verdict of a *kādī* who gave a decision opposed to this teaching is not absolutely without support (cf. e. g. Nawawī, *op. cit.*, etc.).

7. In order to prevent the birth of a child the practice of 'awl was frequent in intercourse with slave-girls, and it is therefore often discussed in connection with the *umm al-walad*. The most important of the references in tradition on this subject have been collected by Wensinck, *Handbook of Early Muhammadan Tradition*, s.v. "Intercourse"; here it is sufficient to say that 'awl was considered to be permitted with a slave-girl. — To prevent a slave-girl becoming *umm al-walad* the master had also the possibility of not acknowledging the paternity of her child; this goes back to a similar usage in the pagan period (cf. above, sect. 1). While this was never so rigidly regulated as the case of disputing the paternity of a wife's child (cf. thereon Wensinck, *op. cit.*, s.v. *Child* and the article *ṭalāḥ*), nevertheless an effort was made to restrict the right of disputing the paternity in the case of the *umm al-walad* also. Hadiths are quoted from 'Umar and Ibn 'Umar to the effect that no one who has had intercourse with a slave-girl has the right to dispute the paternity of her child, even if he says he used 'awl or if there is another paternity possible. The Mālikis and Shāfi'is agree with this. The Hanafis on the other hand hold the view that the paternity of the child and the character of the slave as *umm al-walad* in this case depends entirely on an acknowledgment by the master. For this they cite traditions to the effect that Ibn 'Abbās and Zaid b. Thābit had disputed the paternity of children of their slave-women on the ground that they had used 'awl. This question is discussed by al-Tahāwī (*op. cit.*, p. 66, 68) and the traditions cited: — That the child borne by a slave to her master (on the assumption that his paternity is established) is free, has always been recognised in Islām without any difference of opinion and in the discussion of the position of the *umm al-walad* it is regarded as a presumption and argument for her not being sold. The deduction is natural that the father's recognition of children born in concubinage (cf. above, section 1) must as a rule have been regarded as a matter of course in the days just before Islām: the survival of considerable possibility of disputing paternity with regard to a concubine seems to have actually been caused primarily by the considerable improvement in the position of the *umm al-walad* under Islām at the expense of her master.

8. The details of the teaching of the *fiqh* about the *umm al-walad* are as follows. Every, even non-Muslim, slave-girl who has borne her master (even after his death) a child is considered *umm al-walad*; on the death of her master she becomes *ipso iure* free (so that she can neither be sold to pay off debts on the estate [cf. however below] nor can she be included in the third of the estate set aside for legacies); a legacy set aside by her master in her favour is therefore valid, as tradition even from 'Umar's time shows (al-Dārīmī, *Waṣāyā*, bāb 27); all legitimate and illegitimate children whom she has after becoming pregnant by her master are likewise free — in so far as they are not already free as children of her master. Even in the case of a stillborn child, the mother becomes *umm al-walad*; opinions differ regarding a miscarriage. There is also a difference of opinion in the case where a man marries a foreign slave, makes her pregnant, and then sells her, as well as in the case where a man makes his son's slave pregnant. From the *umm al-walad*'s expectancy of reversion to free-

dom, it follows that she cannot be sold or pledged; if she commits a crime the master cannot evade his responsibility for her by disposing of her. In other respects she remains a slave: she has no right to property; the *diya* or *arḥ* paid for injuries to her belong to her master etc. On the question whether the master may marry her without her consent, opinions differ. In any case, the master has the right to her body and to her labour, but the Mālikis allow him only to demand light work from her and prohibit him hiring her out. On the legal position of the *umm al-walad* of a *mukātib* and that of a non-Muslim, who adopts Islām, opinions vary. — Apart from the fact that the *umm al-walad* can be sold to pay debts which her master had incurred before she became pregnant, she loses her reversion to liberty only, in the opinion of the Hanafis and Mālikis, if she deliberately kills her master. According to the Hanafis, in this case she is liable to *ḥudūd*, but in the case of accidental killing nothing is done to her; according to the Mālikis, in the case of deliberate killing she becomes the slave of the heirs who can kill her or not; if they leave her alive she receives 100 lashes and is put in prison for a year. According to the Shāfi'is, she has to pay *diya* in both cases and among the Hanbalis, according to one *riwāya*, not more than her own value or the *diya*, according to another *riwāya*, her own value. — On the opinion of the Shī'ī imāms, which differs not inconsiderably, see Query, *Druid Musliman*, II, 147 sqq.

9. In Muslim law a most rigid distinction is made between marriage and concubinage, so much so that the master cannot enter into marriage with his slave at all. Divergences from this rule are extraordinarily rare. Shadhād b. Ḥakīm (d. 210), a companion of Zuhār, is said, when he bought a slave, to have married her on the ground that "perhaps she may be a free woman" ('Abd al-Kādir, *al-Diyār al-muḥalla*, I, No. 668; Ibn Kullūbghā, ed. Flügel, No. 81); and the *Fihrist* (p. 207, 15) records with reservation of al-Tahāwī (d. 322) that he wrote a work in which he justified marriage with slaves (but probably one's own). But the authenticity of such stories is not certain; the first is among a number of anecdotes and the second is based on hearsay only. A trace of the old Arab custom of a concubine merging into a marriage (cf. section 1) is not necessarily however to be seen in this; the first story would be explained by the overgreat scrupulousness often shown by religious people in secular affairs, and the second by the also not rare complaisance towards princes, which could be attributed to al-Tahāwī in polemic.

10. In spite of all the ameliorations which the development of Muslim law brought to the position of the *umm al-walad*, the old contemptuous feeling towards a union with a slave and the children born from it long remained. Among the hadiths which condemn the maintenance of concubines, one with a doubtless anti-'Abbasid bias survived down to al-Bukhārī (*Imān*, bāb 37; *Ṭḥ*, bāb 8) and Muslim (*Imān*, trad. 1, 5, 7), but had its meaning distorted. This was the last echo of the old pre-Islamic point of view. Under the completely changed social conditions, the absolute equality of the children born from a marriage with a free-woman and in concubinage has now been long completely established.

(JOSEPH SCHACHT)

UMMA, the Qur'anic word for people, community, is not to be derived from the Arabic root *um*, but to be explained as a loanword from the Hebrew (*umma*) or Aramaic (*umma* *ṭā*). It has therefore no direct connection with the homonyms also found in the Qur'an, which mean "a period" (Sūra xi. 11; xii. 45) and "descent" (Sūra xliii. 21 *sq.*). Perhaps the loanword found its way into Arabic at a comparatively early period (see Horowitz's citation of the Saffa inscription, iii. 407). In any case the word was taken up by Muhammad and henceforth becomes a specifically Islamic term.

The passages in the Qur'an, in which the word *umma* (plur. *umam*) occurs are so varied that its meaning cannot be rigidly defined. This much however seems to be certain, that it always refers to ethnical, linguistic or religious bodies of people who are the objects of the divine plan of salvation. Even in passages like Sūra vii. 164 and xxviii. 22, where *umma* is used in quite a colourless fashion, there is a hint of this significance. The term is in isolated cases applied to the Djinn (Sūra vii. 36; xii. 24; xvi. 17), indeed to all living creatures (Sūra vi. 38) but always with the implication that these creatures are to be included in the divine scheme of salvation and are liable to judgment. *Umma* is exceptionally applied in one passage (Sūra xvi. 121) to an individual, Abraham. Here the term either has the meaning of *imam* (so the Arab lexicographers), or Abraham is so called in his capacity as head of the community founded by him (Horowitz), by a use of the part for the whole. Otherwise *umma* always refers to whole groups or at least to groups within large communities.

God has sent to each *umma* a messenger (Sūra vi. 42; x. 48; xiii. 29; xvi. 38, 65; xxiii. 46; xlii. 17; xl. 5) or admonisher (Sūra xxxv. 22, 40) to guide them on the right path. But like Muhammad, these messengers of God have often been attacked and called liars (Sūra xxiii. 46; xxix. 17; xl. 5). They will therefore appear on the day of judgment as witnesses against them (Sūra iv. 45; xvi. 86, 91; xxviii. 75; cf. ii. 137). For each *umma* is brought to judgment (Sūra vi. 108; vii. 32; x. 50; xv. 5; xxiii. 45; xxvii. 85; xlv. 27). In contrast to those who could not be converted, a number within the individual *ummas* however heeded the appeal of God's messenger and thus came on to the right path (Sūra xvi. 38). This is particularly true of the *ahl al-kitāb*.

The companies of the righteous among the *ahl al-kitāb* are also called *ummas* (Sūra iii. 109 *sq.*; v. 70; vii. 150; cf. ii. 128, 135; vii. 167, 180;

xi. 30). They are relatively small groups within larger communities.

Muhammad frequently discusses the question why mankind consists of a plurality of *ummas* and has not remained a unit. He sees the ultimate reason for this in God's inscrutable decree. "Men were a single *umma*. Then they became disunited. If a word had not gone out from thy Lord, the matter would have been decided between them, about which they disagreed" (Sūra x. 20; cf. v. 53; xl. 120; xvi. 95; xlii. 6). Sometimes he traces this disruption to the malevolence of mankind (Sūra ii. 209; xli. 92 *sq.*; xliii. 54 *sq.*). In another passage it is traced to the division of the Israelites into 12 tribes (Sūra vii. 160; cf. 167). These rhetorical rather than logical utterances of Muhammad are most likely to be taken as replies to objections raised by his opponents (of the *ahl al-kitāb*). The Prophet would hardly have come to tackle this difficult problem of his own accord.

As regards Muhammad's *umma* in particular, we can trace a number of variations and changes in the meaning of the term. But the question is simpler here as we are dealing to some extent with a historical phenomenon.

In the first period of his prophetic activity Muhammad regarded the Arabs in general or his Meccan countrymen as a closed *umma*. Just as the earlier messengers and admonishers of God had been sent to the *ummas* of the past (see above), so he had now been given the task of transmitting the divine message to the Arab *umma* which had hitherto been neglected, in order to show it the way to salvation. Like the earlier messengers (see above), he also was fiercely attacked by his *umma* and accused of lying. After he had finally broken off relations with the pagan Meccans and migrated with his followers to Medina, he created a new community there. He went beyond the circle of Muslims proper and included those citizens of Medina who had not yet heeded his religious appeal in one political combination. "The constitution of the community of Medina", in which this unification was laid down in writing, expressly states that the citizens of the town, including the Jews, formed an *umma* (Ibn Hishām, p. 341, *sq.*, 342, *sqq.*). The predominantly political character of this new *umma* was however only a makeshift. As soon as Muhammad felt himself firmly established and had successfully attacked the pagan Meccans, he was able to exclude from his politico-religious community the Medinese (especially the Jews) who had not yet adopted his religion. As time went on, his *umma* came more and more to consist only of his proper followers, the Muslims. In contrast to the *ahl al-kitāb*, with whom he had previously been in alliance, he now described the Muslims as an *umma* and laid stress on their religious and ethical qualities (Sūra iii. 100, 106). His final breaking away from the *ahl al-kitāb* had as a result that he turned more and more to the Meccans and their centre of worship, the Ka'ba (cf. in this connection Sūra ii. 119 *sqq.*, esp. 122, and Sūra xxii. 35, 66). He only apparently resumed his original idea of an *umma* embracing all the Arabs. In reality the final result was fundamentally different from the starting-point. The Arab *umma*, which Muhammad had originally taken for granted, was only created by him after much hard work. If it at first represented a community of Arabs, this was more or less a secondary phenomenon. The essential

thing was the religious foundation on which it was based. The umma of the Arabs was transformed into an umma of the Muslims. It is no wonder then that it spread very soon after Muhammad's death far beyond the bounds of Arabia and in course of time brought together very different stocks and nations to form a higher unit.

UMMI, an epithet of Muhammad in the Kur'an, connected in some way with the word *umma* [q. v.]. It does not seem however to be a direct derivative, as it only appears after the Hijra and has a different meaning from *umma*, which is already common in the period before the Hijra. In Sura iii. 19, Muhammad invites the *ahl al-kitab* and the ummi to adopt Islam (*hu li'ladkina uta 'l-kitab wa 'l-ummiyin*...). *Ummiyun* here means "heathen", as it does in the same Sura, verse 69, where the word is put with this meaning into the mouths of the *ahl al-kitab*. The latter passage makes it probable that *ummi* or *ummiyin* is a word coined by the *ahl al-kitab* (probably the Jews especially) to describe the heathen. This explanation is all the more probable since Horowitz has shown that it has an equivalent in the Hebrew *ummi'at ha-'alam* (Greek = τὰ ἐν τῷ κόσμῳ).

In Sura lxii. 2 there is an allusion to God having sent an apostle to the *ummiyin*. As Muhammad here is unmistakably called an apostle from the heathen and for the heathen, it is natural to assume that he also refers to himself as the heathen prophet in the words *al-nabi al-ummi* (Sura vii. 156, 158) and presents himself "to the Jews as a *nabi al-ummi'at ha-'alam*" (Horowitz; cf. Sura vii. 156: "whose name they find written in their *Tawrat* and the *Injil*"). What further shades of meaning Muhammad himself gave to this epithet is however very difficult to ascertain. If we compare the words of Sura vii. 156 with the praise which Muhammad gives in Sura iii. 100, 106 to his *umma* we cannot help thinking that he might possibly also have been making a play on the etymology *ummi* < *umma*. In any case, he did not in the least consider the epithet *al-nabi al-ummi* as derogatory.

Frants Buhl has recently again put forward the thesis that *ummi* means not "heathen" (*ἄπιστος*) but "untaught" (*ἀνάστος*). In spite of the fact that this could very well fit the text of Sura ii. 73, there is on the whole more against than for it. *Ummiyun* in Sura ii. 73 can, if necessary, no doubt be translated "heathen", if one does not want to try something else (see Horowitz). On the other hand, the same word in Sura iii. 69 cannot from the context possibly be translated "untaught", even if we really understand the heathen by it. *Ummi* would also on etymological grounds be difficult to

explain as "layman" for neither the Arabic *umma* nor the Hebrew *ummi'at* nor the Aramaic *umma'at* means people in the sense of the laity. Finally Buhl's objection to the Prophet calling himself a "heathen prophet" loses weight when we remember that Muhammad was perhaps not quite clear about the full significance of the Jewish conception of "heathen" and that he, as above indicated, may have given it a new significance.

The application of the term *ummi* to Muhammad was often quoted as evidence that he could not read or write. In reality the expression has no bearing on the question. For the text of Sura ii. 73 which gives rise to this assumption does not charge the *ummiyin* with ignorance of reading and writing, but with a deficient knowledge of the holy scriptures.

UMRA, "the little pilgrimage". 1. The ceremonies of the (Muslim) *umra*. The *umra*, like the *hajj* [q. v.], can only be performed in a state of ritual purity (*ihrām* [q. v.]). On assuming the *ihrām*, the pilgrim (*mu'tamir*) must make up his mind whether he is going to perform the *umra* by itself or in combination with the *hajj* and express his intention in an appropriate *niya* [q. v.]. If he combines the *umra* with the *hajj* (see below) he can assume the *ihrām* for both pilgrimages at once; in the other case the *ihrām* must be specially assumed for the *umra* in the unconsecrated area (*hull*) outside of the *haram* of Mecca. This holds also for native Meccans who, when they are going to perform the *hajj*, can assume the *ihrām* within Mecca. Three places are preferred for the assumption of the *ihrām* for the *umra*: Dhir'ra, Hudaibiya and especially Tan'im. The latter place was therefore also known as al-Umra. With the utterance of the *labbaik* [q. v.] formula, the actual ceremony of the pilgrimage begins. The *mu'tamir* goes to Mecca in order first of all to go around the Ka'ba [cf. *TAWAF*]. He enters the mosque through the north door of the north-east side (*Bab al-Sallam*), goes under the portal of the Banu Shaiba to the Black Stone built into the wall of the Ka'ba and, turning right, begins the sevenfold circumambulation of the Ka'ba, saying prayers all the while. The first three circumambulations are performed at a rapid pace (*ramal*), the four last at an ordinary rate. After this is finished, in order to acquire a special blessing he presses himself against the part of the Ka'ba wall which lies between the Black Stone and the door of the Ka'ba. In conclusion he prays two *rak'as* behind the Maqam Ibrahim, drinks a draught of the holy Zamzam water and touches once again in farewell the Black Stone (these last ceremonies are however not considered absolutely necessary). The *mu'tamir* now leaves the mosque through the great al-Saff door in order to perform the second essential part of the *umra*, the running between al-Saff and al-Marwa [cf. the article *SA'Y*]. He goes to the hill al-Saff and utters a few prayers there. He then goes to the hill al-Marwa, over

four hundred yards farther north, past the north-east side of the mosque. A short low-lying stretch at the east corner of the mosque is covered at a more rapid pace (*hawal* or *ḥabab*). Reaching al-Marwa, the mu'tamir again utters a prayer. He then returns the same way in the reverse direction and so on until he has covered the distance seven times and ends at al-Marwa. He has thus completed the ceremony of the 'umra, and has only to have his hair cut or be shaved by one of the barbers waiting there. If he is making the 'umra in combination with the ḥajj, he only has his hair trimmed and has the proper cutting done on the 10th Dhū l-Hiǧǧa at the end of the ḥajj.

2. The History of the 'Umra and its relation to the Ḥajj. The ceremonies which make up the Muslim 'umra are undoubtedly for the most part taken over from the pre-Islamic period. They completely lack any close connection with the religion preached by Muḥammad, except for the Muḥammadan prayers used in them. The Prophet did not alter these practices but only assimilated them to his teaching. This he could all the more readily do as their original significance seems to have become but obscurely understood by his contemporaries. That he allowed them to persist at all is probably less to be attributed to his personal reverence for them than to his political instinct which made him respect the traditions of his conservative fellow-countrymen.

On the parts played by the separate ceremonies of the Muslim 'umra in the pre-Islamic period see the articles *ḤIKĀM*, *SA'Y* and *TAWĀF*. The Muslim 'umra as a group of ceremonies forming a single whole also goes back to a pre-Muḥammadan institution. This is shown by the very fact that Muḥammad refers to it by a name which in his time seems already to have been a special term and enables us to assume that the thing itself was well-known. This however does not mean that the separate parts of the pre-Islamic 'umra exactly corresponded to those of the Muslim 'umra. The two institutions, so far as we can see, did not exactly coincide. It is however very difficult to make out in what the difference lay, as we do not even know the earliest form of the Muslim 'umra, much less that of the Dǧāhiliya. We have therefore to make up for the lack of authentic sources by deductions from material which is not absolutely above reproach.

The pre-Muḥammadan 'umra probably consisted of ritual acts, which were performed in a state of *iḥrām* within Mecca and included the *tawāf* of the Ka'ba. On the other hand, the course between al-Safā and al-Marwa (*sa'y*) does not seem to have been included. This follows from the text of Sūra ii. 153, which clearly distinguishes between ḥajj and 'umra on the one hand and the course between al-Safā and al-Marwa on the other and describes the performance of the latter in connection with the ḥajj or 'umra as irreproachable, indeed even meritorious, but still as a work of supererogation. Muḥammad himself performed it in 632 following the *tawāf* and thus by his example gave a further stimulus to the incorporation of the *sa'y* into the Muslim 'umra. If the Muslim 'umra in this respect shows an accretion compared with that of the pre-Muḥammadan period, it seems also to have lost something. For the 'umra in the Dǧāhiliya can hardly have consisted of the *tawāf* only. Probably an additional essential element in it was

the sacrifice of animals bought for the special purpose, a custom which was later mainly confined to the ḥajj. Muḥammad himself brought sacrificial animals to the unfortunate 'umra of al-Ḥudāibiya and a year later to the so-called 'Umra al-Ḳadā'.¹

As to the relation of the 'umra to the ḥajj, the very similarity of these two institutions has contributed to confuse them and to blend their distinguishing features. Their reciprocal fusion had already begun in the last years of the Prophet. Muḥammad began the only ḥajj in which he took part as head of the Muslim community shortly before his death, by performing the *tawāf* and *sa'y* after his arrival in Mecca, ceremonies which did not originally form the beginning of the ḥajj but were elements of the Muslim 'umra. He thereupon put off the *iḥrām* and said that the ceremonies so far performed formed an 'umra. When moreover 'Umar and others of those with him did not approve of putting off the *iḥrām* and did not follow him, this clearly shows how closely the ceremonies of the 'umra were associated with those of the ḥajj for them and that in their view these holy acts should be performed in one and the same *iḥrām*. If we reflect that the revelation announced on this occasion (Sūra ii. 192) laid down a penance for using the ḥajj for the 'umra in this way and that Muḥammad to some extent acknowledged himself guilty, then it is natural to suppose that Muḥammad had only put off the *iḥrām* in order to be able to associate with his wives who were there and not with the object of keeping 'umra and ḥajj absolutely distinct (see Spöck Hargronje, *Het Mekkaansche Feest*, p. 83—102). In any case, Muḥammad in the year 632 made the 'umra precede the performance of the ḥajj and thus put his approval on the combination of ḥajj and 'umra. This combination had a deeper cause: Muḥammad on the one hand proclaimed Mecca with the Ka'ba as the centre of the worship of Islām and on the other took over the ḥajj, which originally had very little, if anything at all, to do with Mecca, into Islām. He had indeed every reason to bring the Muslim ḥajj into connection with the sanctuary of Mecca. The more he succeeded, however, the more the 'umra lost its *raison d'être* as a special pilgrimage to Mecca. It was therefore quite a natural development when the Muslim 'umra became more associated with the Muslim ḥajj and original elements of the 'umra were absorbed by the corresponding elements of the ḥajj, as was presumably the case with the sacrifices (see above). The 'umra and the ḥajj did not however absolutely combine into one. This was prevented by, amongst other things, the fact that Muḥammad in the pilgrimage above mentioned drew a line of separation between the two by discarding the *iḥrām*.

In the consensus (*ijmā'*) of Muslim opinion, two ways of combining the 'umra with the ḥajj came to be recognised in course of time: *tamattu'* and *ḥirām*. The former term was applied, following Sūra ii. 192 (*man tamattu'a ḥi l-'umra illa l-ḥajj*), to the way which Muḥammad had actually followed, namely combining 'umra and ḥajj with a break in the *iḥrām*. 'Umar threatened during his caliphate to punish its observance with the punishment of stoning and even under the early Omayyads it does not seem to have been usual. *Ḳirām* is the name given to the combination

of 'umra and ḥajj without breaking the *ḥajr*. In this the *ḥajr* is assumed for the 'umra and the ḥajj at the same time. As in the Muslim ḥajj the ceremonies which constitute an 'umra are also performed, according to the prevailing view an 'umra is completely carried out when they have been performed, so that — if the *ḥajr* of *ḥajr* has been taken — the ḥajj is completed. Some authorities however demand that the ceremonies of the 'umra should be specially carried through. The *ḥajr* must not be broken in any circumstances.

The 'umra, in spite of its partial absorption in the ḥajj, has however retained its independence, although only to a limited degree. When the ḥajj is performed alone in the *ḥajr*, i.e. by itself (in contrast to *ṭawāṭ* and *ḥajr*), the 'umra also must be performed separately. Pilgrims who come from outside to Mecca seem as a rule in this case to perform the 'umra after the completion of the ḥajj ceremonies so that they naturally have to assume the *ḥajr* again. In the course of time this independent 'umra ceremony seems to have become gradually confined to such Muslims as were permanently or for a considerable time resident in Mecca or came there at a time other than that of the ḥajj. But it was just this local limitation of the independent 'umra that favoured the survival of traditions from the pre-Muhammadan period. If we therefore learn that the 'umra for centuries was celebrated as an independent ceremony, preferably in the month of Raddab, we can probably see in this a survival of pre-Islamic tradition: the 'umra in the time of *Uḥḥ* was presumably a ceremony observed annually in Raddab and therefore had nothing to do with the ḥajj, the pilgrimage in *Uḥḥ* 'Uḥḥ (cf. also the tradition according to which 'Uḥḥ had his hair cut in Raddab of the year 2 to make himself look like a pilgrim). As Muhammad could only prepare the way for the combination of the 'umra with the ḥajj but not complete it, the old tradition of performing it in Raddab survived for centuries later. It is only in comparatively modern times that Raddab seems to have lost its significance for the performance of the 'umra. The custom of the Meccans of journeying to the holy places of Medina in Raddab perhaps broke it down. When 'umras are now performed in dissociation from the ḥajj (i.e. in *ḥajr*), the nights of the months of the fast (Ramaddān) are specially favoured for this purpose and especially the last ten which are connected with the *ḥajr al-ḥajr*.

3. The significance of the pre-Islamic and the Islamic 'umra. If the pre-Islamic 'umra was annually performed in Raddab and also if the calculation is correct which places Raddab originally in the spring, its similarity with the Jewish passover strikes one at once. The animals which are sacrificed at it were perhaps, as in the Jewish ceremony, originally first born (cf. Wellhausen, *Reise*, p. 98 sq.; W. Robertson Smith, *Lectures on the Religion of the Semites*, p. 227 sq., 464). In Muhammad's time however, the original significance of the 'umra seems to have been practically forgotten and it no longer fell in the spring.

The Islamic 'umra is an expression of piety, mainly of a personal nature, especially if it is undertaken separately and not with the ḥajj, the ceremony observed annually by the Muslim

community together. Probably this individual character is the result of the fact that it lost its independence in time and so far as it was not associated with the ḥajj constituted a work of supererogation. Before Islam the 'umra had probably a more collective character.

The question, answered differently by the different *madhabs*, whether the Muslim is bound to the same degree to perform the 'umra as he is the ḥajj is of little significance, in as much as every Muslim who performs the ḥajj as a rule performs the 'umra at the same time. The case of a pilgrim who has begun a ḥajj and for any reason cannot complete it, is a special one. Under these circumstances he is bound to perform an 'umra in order to be able to put off the *ḥajr* for a time. The omission is however not made good by this. The ḥajj on the contrary must be made good in the following year.

(R. PAKET)

'UNAIZA, one of the most important towns in southern Najd, and of the district of Ḥamā. The vocalisation used here is confirmed by the Arab geographers (e.g. expressly by al-Bakr, *Ma'āḥim*, p. 670; Yāqūt, *Ma'āḥim*, iii. 737 and *pass.*) and lexicographers (e.g. *Lisān al-'Arab*, vii. 251) and also by the modern pronunciation [C. M. Doughty, *Travels in Arabia Deserta*, Cambridge 1888 (London 1924), ii. 551 gives for it as his authority the educated negro Shaikh b. 'A'idh at 'Unaiza]. The transcription varies with different writers [Aneizeh, Anizeh, 'Aneiza, Anizeh, Anizeh(h), Anizeh, Anizeh; English also Anizeh, 'Aneiza(h), Anizeh, Anizeh; French Aneizeh, 'Aneizeh] and sometimes agrees with that of the tribe 'Anaza, transcribed in different ways. As regards the etymology, M. v. Oppenheim (*Vom Mittelmeer zum Persischen Golf*, Berlin 1900, ii. 54) deduces too much from the assonance when he thinks that the name suggests the original home of the 'Anaza. If any etymological relation between the two names may be assumed, the most we can

may be that the foundation of the town may be ascribed to the tribe. The note in the *Taḥḍīb al-Arabī*, iv. 62 (cf. *Lisān*, op. cit.) is also based on a connection with a tribe-name. The explanation given to Doughty (op. cit., ii. 562, s. v. *Blackstone* [of Aneyza]) is untenable: "The name of Aneyza is from a berg upon which it is built".

In ancient times the site of Unaiza seems to have been occupied by *Ṭāḡa* (Ptol. vi. 7. 31), i. e. the *Djard al-Kasim* of the Arab geographers (e.g. *Yāḥūt*, ii. 56), the old capital of *Kasim*; none of the positions given by Ptolemy corresponds to the position of Unaiza so closely as that of *Gorda*, 76° 10', 24° 30' (still better the vulgate 24° 10'). *Djard(a)* was located by A. Sprenger, *Die alte Geographie Arabiens*, Berne 1875, p. 168, in the vicinity of the modern Buraida or *Uyūn* (north of Unaiza), by Doughty (op. cit., ii. 606) with more reason, in the ruined site of the modern el-Eheli on the Wadi 'I-Rumma, east of al-Rass (S. W. of Unaiza). Unaiza is mentioned in the older Arabic poetry, e.g. in the *Ḥamāza*, p. 211, 501 (ed. Freytag), in *Imru'u 'I-Kais* (ed. Ahlwardt, *The Divan*), No. 34, 3, in the *Nabḥ al-ḥiḍ* (ed. Devan), p. 334, 964, in a quotation from Aws b. Ḥaritha in al-Hamdāni, *Djazīra* (ed. D. H. Müller), p. 172; there is also the Unaiẓain in the *Mu'allaka* of Antara, verse 9, which however does not quite fit (the dual form also in the quotation from a poet in *Yāḥūt*, ii. 135 etc.), a place-name, which according to al-Bakrī, op. cit., and *Yāḥūt*, iii. 739 is identical with Unaiza; it perhaps was applied to two adjacent settlements (cf. al-Karyatāin) of the same tribe, and similarly with Unaiẓt in *Yāḥūt*, iii. 298. It should be remembered however that other places in southern Naǧd with dual endings can be cited, like *Sirraīn*, *Rāmataīn*, *Uḥayyāīn*; but one can hardly see in this simply a local fondness for dual names, as Sprenger, *Z.D.M.G.*, xlii (1888), p. 329 would like to. However little they may weigh singly, these references enable us to conclude that the place was already of some importance in ancient times, as one might expect from its natural situation. It was one of the later Muslim period that its importance began to increase. — Of the references in the Arab geographers the most comprehensive is that in *Yāḥūt*, iii. 737—739; according to him, Unaiza lies between Basra and Mecca (i. e. the halfway caravan station), in the *Baṭn al-Rumma*, the gathering-place of the waters of the wādī, near a hill, which served as a dam (cf. al-Bakrī, p. 207). The place belonged to the Banī 'Amir b. Kurayz. This emphasises the features which made Unaiza important at a later date also, its central position on one of the great roads of northern Arabia and the fact that it was at the place where numerous small streams combined to form the main wādī. In this main passage *Yāḥūt* only adds scraps of information relating to the plentiful water-supply of the district, which include the statement that (according to Ibn al-Fakih) Unaiza was one of the wādīs of al-Yamāma (inaccurate for Naǧd or *Kasim*) near (mount) *Suwādj*, and quotations from poets (including early ones) which are of as little importance as the references to other mentions in poetry as other passages such as i. 626, 762; ii. 259, 855; iii. 262, 298, 398; iv. 93 or the passages from poets in al-Bakrī, p. 207, 310, 670, 684, 801 842. *Yāḥūt* refers, iv. 77, s. v. *Karyatāin* (cf. the article *GIRATHA* in Pauly-Wissowa's *Realencyklo-*

pädie der klass. Altertumswissenschaft.) only briefly to the state of the water-supply in the vicinity of Unaiza. No further information is afforded by the passages quoted from the poets by al-Hamdāni, p. 172 (see above) and in the list of old watering-places (verses from Muḥallid also given with variations by *Yāḥūt*, iii. 739). In al-Hamdāni, p. 178, Unaiza (with *Wādī* and *Zaby*) is mentioned among the watering-places of the *Kalb* (and so described by B. Moritz, *Arabien*, Hannover 1923, p. 56). Hamdāni's editor (D. H. Müller, ii. 188) has already called attention to the fact that al-Hamdāni in this passage seems to have taken the female name Unaiza in the *Mu'allaka* of Imru'u 'I-Kais, verse 11 as a place-name (and so have others, cf. *Lisān*, vii. 251); *Wādī* also is derived from this *Mu'allaka*, verse 30, and *Zaby* from verse 36. The preceding place-names in Hamdāni, p. 177, are also taken from the poem; this passage is therefore rightly omitted from the *Index geographicus* in Müller, ii. 83b. — In the excerpt from *Yāḥūt* in the *Marāʾid al-Iḥṣāʾ* (ed. Juynboll, ii. 286), Saʿī al-Dīn gives Unaiza as a place between Basra and Mecca, then as a wādī near Mount *Suwādj* in al-Yamāma, and lastly as a well 2 miles from al-Karyatāin in the Wādī 'I-Rumma (the original is *Yāḥūt*, iii. 738; iv. 77). — Sprenger's statement (*Die alte Geographie Arabiens*, p. 171) that Ibn Khurdaǧhbih mentions along with other stations Unaiza after Bina, a station on the road leading from the S.E., does not agree with the text but the place-names in this passage cannot be read with certainty (see *B.G.A.*, vi. 191). Sprenger's remark: "The shortest route from Yamāma to Mecca, no itinerary of which is known to me, joins the Basra-Mecca road at Dar'ya and the road to Medina joins it at Unaiza or near it" as regards the second statement is by no means indisputable. The maps show why we cannot agree with the first. The pilgrim road from al-Yamāma joins the great caravan-road Unaiza-Mecca at the watering-place of *Sparra* (North of the *Djabal Khāl*). Sprenger's idea (*Z. D. M. G.*, xlii. 324, 326) that the Unaiza of the Arabic sources is different from the present Unaiza would not be without parallel but there is not sufficient foundation for it. The statements in the Arab authors are perfectly applicable to the modern town. There are ruins of an old settlement of the Banī Khālīd, *Djannah*, not far from Unaiza (Doughty, op. cit., ii. 354 sq.); if the name Unaiza really used to be attached to another town, it was scarcely farther away from the modern town than *Djannah*. The latter place is said to have been founded about 1300 A.D. by the *Kaisi Sabāʾ*, who also established other settlements in *Kasim* (Doughty, ii. 241, 355; on this tribe we now have more accurate information in H. Philby, *The Heart of Arabia*, London 1922, ii. 350, index).

Of modern geographers, the first to mention Unaiza is C. Niebuhr, from second-hand information however. In 1763 he ascertained that "Anāse" was 10 days' journey from Basra (*Reisebeschreibung von Arabien*, Copenhagen 1772, p. 344; Ritter, *Erskunde*, xiii. 343, 873^a, separates this name and its mention from his Aneyzeh, p. 873^b). The first more accurate information about the interior of northern Arabia dates from the beginning of the 19th century, as a scientific result of the Turkish and Egyptian operations against the Wahhābīs. L. A. Corance's *Histoire des Wahhabis* (Paris

1810) already contains reliable geographical information, in the publication of which S. de Sacy co-operated. The latter in the *Tableau*, note 39, p. 214 on p. 218 of this *Histoire* (appendix) gave the first fairly accurate list of the divisions of the Wahhābī kingdom and gave the provinces of al-Nadjd including among them in the third place Kaṣīm, with the three towns 'Kaṣīm, Beryd (Buraida) and Eneyrā' and ten more (cf. the extract in Ritter, *op. cit.*, p. 467 *sq.*). When the Egyptian troops under Tusun, the second son of Muhammad 'Alī, Pasha and afterwards viceroy of Egypt, in the campaign against the Wahhābīs in 1815 had advanced into the interior of Nadjd as far as the borders of Kaṣīm and then began to retire, 'Abd Allāh, son and successor of the Wahhābī ruler Sa'ūd who died in 1814, was in 'Unaiza with a hostile force but did not allow himself to be involved in a battle for a decision. After the withdrawal of the viceroy, 'Abd Allāh deposed in 'Unaiza as a punishment the chiefs of Kaṣīm who had joined the enemy, and incited the Arab tribes against one another (cf. on the events of the campaign: F. Mengin, *Histoire de l'Égypte*, Paris 1823, II, 33 *sqq.*). On Ibrahim Pasha, the eldest son of Muhammad 'Alī, advancing on Nadjd in 1816, 'Abd Allāh again collected his forces in 'Unaiza. Ibrahim forced his way into 'Unaiza out of which 'Abd Allāh had retired to Buraida a few hours before. The citadel of 'Unaiza, about a quarter of an hour from the town, surrendered after several days' bombardment whereupon the town itself which had been abandoned by most of its inhabitants also surrendered (cf. Mengin, *op. cit.*, p. 105 *sq.*). After the fall of 'Unaiza the rest of Kaṣīm soon submitted to Ibrahim, who had nearly 6,000 palm-trees cut down in 'Unaiza to use them in the manufacture of war material. — Just before the defeat of the Wahhābīs, J. L. Burckhardt (1815 and 1816) had collected at Mecca information about 'Unaiza and Kaṣīm (cf. his *Travels in Arabia*, London 1829, app. vi, p. 457 *sqq.*). He gives Buraida as the capital of Kaṣīm because this was the residence of the Shaikh at this time; but 'Unaiza was much greater in size, which he compares with Siyūt in Upper Egypt (3,000 houses!). He mentions bazaars and prominent merchants in the town (extract in Ritter, *op. cit.*, p. 452 *sqq.*). — The next eye-witness was Captain G. F. Sadlier, who (1819) was the first European to cross Nadjd from east to west, from Kaṣīm to Medina. He mentions (*Account of a journey from Katif . . . to Yambu*, in *Transactions of the Lit. Soc. of Bombay*, London 1823, III, 474) 'Anizeh' as a place of importance, but it like other towns had been for the most part destroyed in the fighting; a few date-palm groves had survived. According to him, 'Unaiza was the capital of southern Kaṣīm and as a result of its central position in a well watered valley was the centre of a busy trade, indeed the emporium for a considerable part of North Arabia, a junction of caravan routes from Baṣra, Kaṣīm and al-Aḥsā to Medina and Yambu'. The town thus had a political as well as a commercial importance. Sadlier still found a number of merchants in the devastated town. His journey was frankly too hurried to enable him to gather scientific information of value. — Berghaus, *Arabia* (Gotha 1835), p. 88 *sq.* calculated the geographical position of 'Unaiza as 26° 26' N. Lat. and 41° 17' East Long. Paris (more exactly 26° 23' N. Lat., 41° 30' East Long.

Paris [44° 7' East Long. of Greenwich]; on Moritz's map the position is put too far to the south and east). Ritter published (*op. cit.*, III, 523) from W. Schimper's *Arabische Reise* (MS.) a table of population statistics which the botanist had drawn up in Tā'if from the unchecked statements of a Wahhābī in 1836, i.e. about 15 years after the war; 'Unaiza according to this had 25,000 inhabitants, which is probably too high a figure. The cruelty of Ibrahim's borders had only stimulated Wahhābism and about 1849 the last remnant of Turkish-Egyptian influence in Nadjd disappeared. — Later explorers of North and Central Arabia went through Hā'il to the north, passing 'Unaiza. W. G. Palgrave (*A narrative of a year's journey through Central and Eastern Arabia*, 1865) in 1862–1863 on his journey from Hā'il only came as far as Buraida. His statement that 'Unaiza has 32,000 inhabitants is untenable, like his other figures for Kaṣīm. His account has always been distrusted; cf. most recently Philby's doubts (*op. cit.*, II, 134 *sqq.*) on the reliability of Palgrave's account of his stay south of Hā'il and his polemic against D. G. Hogarth (*The Penetration of Arabia*, London 1905, p. 248 *sqq.*) and other champions of Palgrave; among the latter are F. Hommel, *Grundriss der Geographie und Geschichte des alten Orients* [*Handbuch der Altertumswissenschaft*, sect. III., part I., book 1, 2nd half], Munich 1926, p. 527. From about 1855 Faṣāl, who lived in Riyāḍ and was presumably a grandson of 'Abd Allāh, was trying to take 'Unaiza; but the warlike inhabitants led by Zāmil repelled his attacks and peace was made. The treacherous Faṣāl however again began fighting in 1862; the town could not hold out against the superior numbers of the enemy and after its defenders had suffered a disastrous defeat, it was incorporated with the rest of Kaṣīm in the Wahhābī state of Nadjd (on the events after 1847 see Palgrave in A. Zehme, *Arabien und die Araber seit hundert Jahren*, Halle 1875, p. 379 *sqq.*). The fetters of dependence were soon cast off however for by Doughty's time 'Unaiza was again the model of a free independent community in Arabia. — In 1864 C. Guarnani (*Il Neged Settentrionale, itinerario da Gerusalemme a Anizeh nel Casim*, Jerusalem 1866; with a map [N^o 7] of his road from Buraida to 'Unaiza) tried to penetrate into Kaṣīm from Hā'il southwards but was taken for a Turkish spy and was brought a prisoner to 'Unaiza, the base of operations of 'Abd Allāh b. Faṣāl, who was at war with the Beduins; the emir Zāmil however released him and he went to the Djabal Shammar. The fact that he was a prisoner prevented him making any special observations in 'Unaiza. According to him, it is the most important town in Central Arabia, the capital of Kaṣīm and has 15,000 inhabitants in seven quarters. He confirms isolated statements by Palgrave. — Shaikh Ḥamid of al-Raṣa, J. G. Wetstein's authority (*Nordarabien und die syrische Wüste nach den Angaben der Eingeborenen*, in *Zeitschr. f. allgem. Erdkunde*, Berlin 1865, xviii, 408 *sqq.*), talks of an alliance between 'Unaiza and Buraida for protection against the people of the Shammar territory, the capital of which is Hā'il and gives a few geographical statements, e.g. on the stations on the road from 'Unaiza to Buraida. 'Unaiza, 'the mother of Nadjd', he calls the largest town of Nadjd; it is surrounded by gardens; the palms cut down by Ibrahim had been

replanted (cf. e.g. J. Euting, *Tagebuch einer Reise in Inner-Arabien*, ii., Leyden 1914, p. 14 on dates from 'Unaiza).

The information so far available only enabled a rough picture of the appearance of the town to be drawn. It was known for example, that outside the strong city wall lay palm-groves around which there ran an outer wall. The first and so far the only traveller to give a full and reliable account of 'Unaiza is Doughty (in *Arabia Deserta*; a not always well chosen abridgment is E. Garnett's *Wanderings in Arabia*, London 1912²). On his journey through northern Arabia, which occupied nearly two years (1876–1878) he also visited Ha'il and when he was driven from there and afterwards from Buraida also, was given a better reception, at first at least, in the rival of the latter town. Under Zamil's patronage, he was enabled to stay some months in 'Unaiza (April 29–July 16, 1878), unlike other European travellers before and after him, and had therefore sufficient leisure for thorough exploration and observation. He describes (*Arab. Des.*, ii. 337 sqq.; *Wanderings*, ii. 161 sqq.) the aspect and the walls of the town, the town itself, its streets, the houses outside and inside, the wells and water-supply, the date-groves around the town; he gives a vivid picture of the life of the citizens, their personal qualities and manners and customs, their food and clothing, the religious and secular life of rich and poor, the social conditions, and the distribution of labour. In a special chapter (*Life in Anayza*, ii. 365 sqq.) are collected observations on the characteristic features of tribal life, the defences and other aspects of the life and work of the town. Commerce is especially well developed; among the numerous merchants are some from abroad; merchants of 'Unaiza on the other hand have their depots in Djidda, Mesopotamia and elsewhere. Caravans (coming from Basra) go from there to Mecca and Medina. Various classes of artisans and tradesmen are to be found there (field-labourers, masons, gold- and silversmiths and other workers in fine crafts whose filigree work is much esteemed in Mecca; cf. also Moritz, *op. cit.*, p. 57). From his account it is clear that the city occupied an outstanding position in Central Arabia for its prosperity and culture. In the fifteen years before Doughty's visit, it had doubled in size and now had about 15,000 inhabitants; Guarnani gave about the same number. It is called the centre of Arabia from its position in the middle of the caravan route from Basra to Mecca; it could really be regarded as the metropolis of Najd. Learning is held in high esteem by the rich merchants. Half of the townspeople are Wahhābīs (on the movements of Wahhābism for 25 years before Doughty's arrival see ii. 428 sqq.). Wahhābī fanaticism brought about Doughty's expulsion from 'Unaiza; the "Nasrānī" set out towards Mecca with the "batter caravan" which had come from Basra. — Doughty's investigations established the main lines of the system of wādis of North Arabia and ascertained that the wādī, which runs south of Buraida, just above 'Unaiza (on this region see Leachman, *Geogr. Journal*, London 1914, p. 512, the first to visit it since Nolde), is the Wādī 'l-Rumma (according to Yāqūt, ii. 823, to be written with one *m*, not Rumma, as Ibn Duraid for example requires; pronounced 'r-Rumh in northern Arabia, see Moritz, *op. cit.*, p. 22), about the course of which erroneous ideas were previously

current (cf. Yāqūt, *op. cit.*). Southern Kašim may be called a gift from this wādī.

What we are told about 'Unaiza by writers since Doughty amounts only to a few notes on local history. Euting (*op. cit.*, i. 63) records in his diaries for 1883 (at Kāf) the struggle between the two Wahhābī families, that of Ibn Sa'īd and that of Ibn Rashīd, for supremacy in North Arabia; ii. 226 (in 1884 at el-Ōlā) a message of victory from Ibn Rashīd. — Ch. Huber, who came in 1884 from Ha'il via Buraida to 'Unaiza, where he only stopped a few hours, mentions in his *Journal d'un voyage en Arabie*, Paris 1891, p. 685, that 'Unaiza was completely independent and had over 5,000 rifles; Palgrave gives a similar estimate for the fighting men of 'Unaiza and the villages belonging to it (cf. Zehme, *op. cit.*, p. 380). Huber (p. 709) gives only a few cursory remarks on the immediate neighbourhood of the town; his map No. 13 gives a very useful sketch of the route for the stretch from Buraida to the Djabal al-Nir. — E. v. Nolde in 1893 on his journey to the camp of the emir of Ha'il, Muḥammad b. Rashīd (between Shakrā and Riyāḍ), also made a brief visit to 'Unaiza; in his *Reise nach Innerarabien, Kurdistan und Armenien 1892* (recte 1893!), Brunswick 1905, p. 78 sqq., he gives only details that were already known. His statement based on his enquiries, that 'Unaiza has about 35,000 inhabitants, is wrong. His information about the wars of Ibn Rashīd (p. 68 sq.) who became lord of Najd after taking 'Unaiza in 1891, is more valuable. — As Nolde (p. 69) had prophesied, the situation changed; soon after the death of Ibn Rashīd (1897), the political preponderance of the Shammar capital Ha'il disappeared and 'Unaiza again became independent. Buraida which is smaller, has recently come much to the front in the hegemony of Kašim. — Philby is the first to have acquired a knowledge of the land S.W. and S. of the political capital of Najd (Riyāḍ), especially of the district of al-Aḥlāḍj; in 1917–1918 he went from Riyāḍ around the whole Tuāḡ range to the south to the Wādī Dawāḡir. He tells us nothing special about 'Unaiza, although (*op. cit.*, ii. 120) he went not only to Midnab, but also via Buraida into Kašim, where Raunkjaer had been some seven years before him and Leachman in 1912, as far as Kuḡaliba (cf. also his references to 'Unaiza, i. 47, 54, 365). He gives in some details an account of the most recent developments of Wahhābism (see ii. 334, index).

Bibliography: The authors of the standard works (such as Yāqūt, al-Bakrī, al-Ḥamdānī; of modern writers: Burckhardt, Sadlier, Ritter, Guarnani, Palgrave, Zehme, Sprenger, Doughty, Huber, Nolde, Philby, Moritz) are given in the article with the necessary bibliographical details.

(J. TRATSCH)

UNŠUR (plur. 'ANŠUR) means, like *apē, rukn, isṭak* (στυλῶν) etc., principle, basis, element in the general sense. It is used in the special sense of *materia prima*. The hellenising philosophers, as a rule, use *arḥān* or *isṭakīyāt* for the four elements of the sublunar world, which are composed of matter and form and, according to the prevailing view, are mutable. The material of the heavenly spheres is called *rukn* by these philosophers, more frequently however a fifth nature (*tab*).

Bibliography: Sprenger, *Dict. of Techn. Terms*, p. 960 sqq. (TJ. DE BOER)

UNŞURI, ABU 'I-KĀSIM HASAN B. AHMAD AL-UNŞURI of Balḫ, a Persian poet. The year of his birth is unknown and that of his death is variously given, this most probable date being 441 (1049–1050). Very little is known of his life. The matter, mainly anecdotes, recorded by the Persian literary historians is of very little value. According to a very late source, Riḍā Kuli Khān's *Majma' al-Faḡāh* (Tehran 1295, i. 355), he was captured by robbers while on a trading journey in his youth and deprived of all his goods. He was later brought by Amīr Naṣr, brother of Maḥmūd of Ghazna, to the latter's court, where he was highly esteemed as a court poet. According to the Persian sources, he held the office of poet laureate (*shāh-i shu'arā'*) at the head of 400 other poets. How far this is accurate, it is impossible to say. That Unşuri was highly esteemed by his contemporaries as an artist is evident, at any rate from the reverence in which he is held by Miṣṭāḥīrī. The latter sang his praises in the celebrated *ḡazals* of the candles (N^o. xxxiii. in Kasimīrskī's edition). The stories however which tell how Unşuri was commissioned by King Maḥmūd to produce a poetic version of the Iranian epic and how he did not feel fit for the task and recommended Firdawsī to the king for the work (e.g. Dawlatshāh, *Tadhkirat al-Shu'arā'*, ed. Browne, p. 51), are part of the legend that has grown up around the great author of the *Shāhnāma*.

Works. Unşuri wrote three *mathnawīs* all of which are lost. Their titles were *Kāhīn But u-turkī But* (The White and the Red Idol), *Nāḥ-i 'Ain al-Hayāt* (this is the most probable reading but the forms in which this title is given vary) and *Wāmīk u-Adhrā*. His *Diwān* however has survived and exist in manuscripts and in a Tehran edition of 1298 (1881).

A. The *Mathnawīs*. While the two first mentioned romantic poems by Unşuri are more titles to us, we know at least the contents of his *Wāmīk u-Adhrā*. The subject was taken later by several Persian poets, but not much seems to have survived of this poem. There is a fragment of a Persian *Wāmīk u-Adhrā* poem by a certain Nāmī in a manuscript in the British Museum (Add. 7721, cf. Rieu, *Catalogue*, ii. 813). The version of this romantic theme by the Ottoman poet Lāmī'i (d. c. 940 = 1533) is well known [cf. J. v. Hammer-Purgstall, *Geschichte der osmanischen Dichtkunst bis auf unsere Zeit*, ii. 45 sq., where a full synopsis is given. We may note that von Hammer's much abbreviated verse translation *Wāmīk und Asra* (Vienna 1833) does not give a proper idea of the contents of the original].

Lāmī'i mentions Unşuri as his precursor in the poetical treatment of this subject in the following lines:

*caḡlān bu ḥisr-i khorāsh manzar
nazm edib yamīk meḡr kim 'Unşuri;
Rūma dāḡmūsh āḡhīr al-kūr-āḡh
Turkī dīden ḡullān āḡlūsh palāz*
(from the Leyden MS. N^o. 566).

The subject of the romance is the love story of Wāmīk, son of the Khāḡān of Cīn, and the princess Adhrā. The young man falls in love with a picture of the princess and has to go through many adventures and suffer much before he is united with his beloved. He is for example taken prisoner in war, falls into the hands of the

black fire-worshippers, who wish to sacrifice him but he escapes, because the flames will not attack him and has adventures with *ferīs* (whose king is his friend) and *ghim*. Adhrā has not much better fortune. She also falls into dangers of all kinds, until the lovers meet at the court of King Miṣḡān of Tā, where not only is their marriage celebrated in brilliant fashion but several other happy couples, secondary characters in the romance, are also united. The Turkish poem of course only enables us to learn the subject of the lost Unşuri poem; its external form with its numerous lyrics and rather precious style is a creation of Lāmī'i. The nature of Unşuri's poem would have been quite unknown to us if a few verses had not been preserved in Asadī's Persian dictionary *Lughat al-Farī* (ed. P. Horn, p. 25 where these fragments are given). We thus learn that the romance was written in *mutabā'irī*; this metre survived in later times only for the heroic epic, while the romantic epic used other metres.

As to the subject of the poem we know — only on the very poor authority of Dawlatshāh however — that a romance of Wāmīk and Adhrā had already been written in Pahlavi for Khusrāw I and that a copy was brought to 'Abd Allāh b. Tāhir. The latter, however, is said to have ordered it to be destroyed because, as he said, he abominated the books of the fire-worshippers (Dawlatshāh, *Tadhkirat*, ed. Browne, p. 30; cf. E. G. Browne, *A Literary History of Persia from Firdawsī to Sa'dī*, p. 275 sq.). This story probably caused von Hammer (G. O. D., ii. 45) to say: "The cause of the disappearance of this poem in Islām seems to have been mainly the fact that it originally contained the teaching of the fire-worshippers.... in its present form therefore it cannot be regarded as the original story but only as a feeble echo of it". E. J. W. Gibb's judgment (*Hist. of Ottoman Poetry*, iii. 26) is also based on this passage.

Von Hammer's assumption is however unnecessary even if we grant that there was a Pahlavi original. The subject of the poem is the final union of two lovers in spite of all obstacles. This very subject is the main theme of the Hellenistic romances of the early centuries A. D. We may perhaps assume that there were free versions of such romances in Pahlavi literature (which perhaps came through Syriac) and that the original story of Wāmīk was based on a work of this kind. The matter must of course have been adapted to the East and Muslim authors must have later contributed their share. That the supposed Pahlavi original had a religious bias, as von Hammer thinks, can never be proved and is, besides, very improbable. One circumstance which makes the assumption of a Pahlavi original less probable is the fact that the two chief characters in the poem have Arabic names, as P. Horn (*Gesch. d. Pers. Litt.*, p. 178) has already recognised.

B. The *Diwān*. Unşuri's *Diwān* contains, as one might expect, mainly *ḡazals* in praise of Maḥmūd of Ghazna, his brother Naṣr and his son Maṣ'ūd as well as of nobles like the vizier Maṣṡūdī. It of course also contains *ghazals*, *ḡifās* and *rubā'īs*; the author himself says that he is a writer of love-poems as well as a panegyrist:

*marā bahra du lā 'amad ā gīst
dū-ā pāk u-wāḡān-i madh-gustar
yakt bar mīhr-i ḡānān wāḡf kardam
yakt bar madh-i Shāḡanānān-i kishwar*
(*Majma' al-Faḡāh*, i. 357).

'Unšuri's primary importance is as a writer of *ḡazals*. The oriental literary historians are most enthusiastic about these panegyrics but the value of their judgment is lessened by the well-known fact that in most cases they are too lavish in their praise. To a European, the whole panegyric poetry of the Persians offers little attraction; one must however recognise that 'Unšuri shows himself by no means unfitted for his task. The subjects of the *ḡazals* are usually the great deeds of King Mahmūd: in these cases the poems contain an epic element. There are other subjects which we find in other panegyricists, e.g. Minūčihri, such as the descriptions of festivals (*ḡazal-i sada* etc.) or the king's war-horse. 'Unšuri also writes on Mahmūd's war-elephant and his sword. That the poet occasionally expresses the same ideas and images in different *ḡazals* can hardly be avoided in view of the uniformity of his subjects. 'Unšuri's *taḡhīb*s are often erotic but we also find the descriptions of nature which we know so well from Minūčihri and Azrakī for example. In such *taḡhīb*s we often find quite beautiful lines, for example in a description of the beginning of spring:

Afšar-i simin firū ḡraz zi sar kūh-i buland
(*Maḡjma' al-Fuḡḡā*, i. 356). His *guzāḡā*s (transitions from *taḡhīb* to *maḡh*) not infrequently contain original ideas, as when he says that in spring the days increase in length like the power of the king and the nights become shorter like the lives of Mahmūd's enemies.

In these poems we find all the rhetorical embellishments of the period just as in the panegyricists of the later Gharnawids and Saldjaks. We frequently find very pretty comparisons: e.g. in the description of one of the king's victories:

har āb dar ḡamaḡ ḡharḡā ḡḡand ān
[*Fir'awn*,
In har ḡuḡḡāḡḡ har ān āb ḡḡḡ Mūsāwār
(*Maḡjma' al-Fuḡḡā*, i. 358).

Very neat is an allusion like:

ān kih dar har ān dārād raḡm ḡamīn
[*nām-i ḡḡwād* (= Mahmūd)
wān kih dar har kām dārād ḡim ān
[*rām-i fuḡār* (= Mas'ūd)
(*Maḡjma' al-Fuḡḡā*, i. 360).

Less fine, even to European taste rather frigid, pictures are not lacking; thus he compares a garden bright with flowers to a copy of the book of Euclid with its many mathematical figures.

In one pleasing and ingenious form of poem he attained considerable success, e.g. in the poem on Naṣr, which consists of questions and answers (transl. by Browne, *Lit. Hist. of Persia from Firdaws to Sa'di*, p. 121 sq.), as in another *ḡazida* on the same prince (*Maḡjma' al-Fuḡḡā*, i. 362) which has three internal rhymes in each couplet:

ḡḡiradrā ḡāḡi n-firāya, udabrā ḡḡwār
[*n-māya*,
ba dīl ba fāḡḡ ḡamīya, ba ḡimmat ba
[*ḡadā ḡambar*.

The reading aloud of such a piece must have been very effective, but practically all the beauty of these pieces disappears in translation (cf. P. Horn's observations in his *Genh. d. Pers. Litt.*, p. 80).

Some of 'Unšuri's smaller poems are said by the literary historians to be improvisations composed on certain occasions. The best known is the quatrain which he is said to have uttered when Mahmūd had his favourite Ayāz's locks shorn and regretted it afterwards (cf. Browne, *op. cit.*, p. 38). Other short poems were improvised on the king's falling from his horse and on Mahmūd being blind.

Even in the middle ages 'Unšuri was reckoned a classic. Ibn Kaṡi, the celebrated writer on poetics, quotes him ten times (cf. Ibn Kaṡi, *Maḡjma' G. M. S.*, x, index). We may note the passages on p. 325, where the line which is given as an example of the figure of speech called *taḡhīb-i maḡh* may be a fragment of the *Wāmīḡ*; on p. 445, where in the discourse of borrowing in poetry (*naḡl*), a passage from 'Unšuri's poetry is quoted, the idea of which is borrowed from Rūdaki but is better expressed by 'Unšuri, and lastly on p. 269 where Ibn Kaṡi cites a passage in 'Unšuri for the archaic form *abar* instead of *bar*, of which idiom he however disapproves.

(V. F. BOCHNER)

'UNWĀN, MUHAMMAD RIḡĀ R. HĀḡIDJI ŠĀḡḡI TABRIZI, Persian poet who flourished in the middle of the sixteenth century. He lived in Meshhed; Tāḡir Naṣr-Ābādi met him there and quotes him in his *Taḡhīb* completed in 1089 (1678). His *diwān* is in the Library of the Asiatic Society of Bengal (Ivanow, *Descriptive Catalogue*, coll. Curzon, Calcutta 1926, p. 198).

Bibliography: 'Alī-Kūli Walīh Dāḡhistāni, *Riyāḡ al-Shu'arā'* (apud Ivanow, *Descriptive Cat.*, coll. Curzon, Calcutta 1926, p. 41; wrongly transcribed 'inwān); Sprenger, *Cat. Oudh* (Calcutta 1854), i. 102. (CL. HUARY)

'UNWĀN (A.), the title of a book, usually decorated in fine manuscripts by a frame work of arabesques which the printers have sought to imitate by a happy arrangement of fleurons, tail-pieces and other printers' ornaments. In Persian manuscripts the first two pages, very much ornamented with floral patterns, are called *nar-fawḡ* "head-plate". (CL. HUARY)

'URBĀN. [See ARABIA, b.]

URDŪ, an Indian language. The Urdū language, which as the result of a series of causes has now come to occupy the position of a *lingua franca* for India, is of mixed origin. Neither Indo-Aryan nor Persian can claim a monopoly in its creation and formation; it has, lexically and grammatically, thrived upon the linguistic and cultural stocks borrowed from both. It is the ineffaceable monument of the mingling of two peoples and their cultures — the Hindū and the Muslim.

With the advent of the Muhammadan conquerors from the North-West the first foundations of this language were laid in India. During the reigns of sultān Mahmūd of Ghazni [q.v.] and his son Mas'ūd [q.v.], many Hindūs, such as Tilak, Nāth and others, held highly responsible posts at the court

of Ghazni. A Hindū army also was stationed there, of which, during Mahmūd's reign, Swendra Rāo, a Hindū, was the commander. The last rulers of the Ghaznavi dynasty left Ghazni and settled in the Panjāb, where they continued to live until their rule came to an end. Thus, both in Ghazni and at Lāhor, Hindūs and Muhammadans began to enter into close contact with each other. Many lords, nobles, and other protégés of Mas'ūd's court, whom the raids of the Saljūq Turks had made homeless wanderers, also sought his protection and made Lāhor their permanent home. This daily contact between the Hindūs and the Muhammadans had a far-reaching influence on the languages spoken by the two communities. Thus we find in *Prithvir Rāj Rāso*, the famous work of Cand Bardai, the court poet of Prithvir Rāj (died A.D. 1192), distinct traces of this influence, for, as he himself states, he "has made use of the Korānic language" (canto i. 23), and his book contains in fact many Arabic and Persian words.

Urdū is a Turkish word meaning "camp" or "army". As the Turks, Persians, and Indians all lived together in the Royal camp, their language, which was an admixture of these three languages, was called the language of the *Aāl-i Urdū*, "people of the camp", or more simply, the language of the *Urdū*, the camp, and after some time the language itself became known as Urdū. Whilst the Muhammadan rulers of India spoke Persian, which enjoyed the prestige of being their court language, the common language of the country continued to be Hindi, derived through Prākṛit from Sanskrit. On this dialect of the common people was grafted the Persian language, which brought a new language, Urdū, into existence. Sir George Grierson, in the *Linguistic Survey of India*, assigns no distinct place to Urdū, but treats it as an offshoot of Western Hindi. This view overlooks the preponderating influence of Persian, which has deeply affected Urdū in its formative process. It is not merely words that are borrowed; the whole poetry of Urdū — its prosody, themes, style, imagery, allusions, grammar, and peculiarities of construction — and even its prose are saturated with Persian. It cannot strictly be called either a branch of Hindi or an offshoot of Persian, but is a distinct language of a mixed character.

The first great Persian poet and writer of India who used Hindi words in his compositions was Amīr Khusrō (655-725 = 1255-1325) (see KHUSRŪ, AMIR 'L-HASAN AMIR). It is generally believed, and has been mentioned in some Taḥkīkāt, that Amīr Khusrō composed many works in Hindi; but these, unfortunately, are not extant, though one or two of his ghazals are still frequently quoted in which one *mirzā* (hemistich) is in Persian and the other in Hindi, and also many verified conundrums (*ḥisā*) etc. in the mixed language.

This practice of writing mixed poetry, with alternate hemistichs in Hindi and Persian, continued long after the time of Khusrō, and it was for this reason that such poetry was called *Rikhta*. Now the word *rikhta* has various meanings, one of which is to produce and rhyme something new. After Amīr Khusrō had succeeded in producing a new combination of Persian and Indian rhymes, the word *rikhta* came to be used as a term of music, denoting a composition of such mixed Hindi and Persian verses or hemistichs as were in harmony both in respect of the subject matter and of the

tune. Gradually, however, the term lost this strictly musical sense, and came to be loosely applied to such bilingual metrical compositions. Still later, every branch of Urdū poetry was called by this name, and finally the language itself came to be known as *Rikhta*. The word *Rikhta* is thus another proof of the mixed character of the Urdū language.

For a long time this new language was called Hindi or Hindwi; subsequently it became known as *Rikhta*, and after some time was called Urdū. This name was the one most popularly accepted, and it survives to this day. During the days of the East India Company, Urdū was called Hindustani (i.e. the Indian language), which is a recognition of the fact that of the numerous languages of India this alone deserves to be regarded as an Indian *lingua franca*.

Though the Urdū language originated in the Dakh (the land of the Two Rivers, the Ganges and the Djenna), or more strictly in Dihli and its vicinity, it was in the tableland of the Dakhan [q.v.] that it first assumed literary form. The earliest users and promoters of Urdū were mostly the learned Sufis, who may be regarded as the real patrons of this language. Just as the great Buddha had given up Sanskrit for Pālī in order to carry his divine message to the masses, so too these learned saints, realising that to reach the people the language of the people must be used, employed Urdū instead of Arabic and Persian, which were the two polished languages of the day; and when in the course of their wanderings they came to such parts of the Dakhan as Dawlatābād, Gulbarga, Ahmadābād, Bidjapur, Patan (Gujarat), etc., they preached to the natives of those parts in the language which they had brought with them from Dihli. Some of them, e.g. Saiyid Muhammad Banda Nawāz (who came to the Dakhan in 800 = 1398 and whose tomb is at Gulbarga), wrote brochures, verses and books in this language. Their example was followed by their disciples, who also wrote books in this language and contributed in no small measure to its popularity. The frequent use in it of Arabic and Persian words and phrases and the use of Persian script distinguished it from Hindi proper.

Besides Banda Nawāz, whose brochure *Mirzā al-Ashiq* has been edited by the present writer (Hyderabad, Dakhan, 1900), there are many other Sufis who used Urdū as the vehicle of their prose and poetic productions. Mirzādī, surnamed Shams al-'Ushshāq (died A.H. 902), a saint of Bidjapur and follower of a disciple of Banda Nawāz, together with his son and successor Shāh Burhān Dīnām (d. 990) and the latter's son Amin al-Dīn 'Alī (d. 1076), were prose and poetry writers of no mean order in Dakhani Urdū. Similarly in Gujarat the credit of popularising the Urdū language goes to Sūfī Shāh 'Alī Muḥammad Dīrī (d. 973) was a great Sufi poet, the collection of whose verses is known as *Ḥayāt al-Arār*. Another Sufi poet, Shaikh Khūb Muḥammad, was the author of the *maṣnawī* called *Ḥabīb Tarang* (written in 986 = 1578). Amīn, author of *Yusuf Zuleikha* (1109 = 1697), also belongs to Gujrat.

There were three great centres of Urdū in the Dakhan, viz. Golkunda, the capital of the Kujab Shāhī kings; Bidjapur, the capital of the 'Adil Shāhī kings; and Ahmadābād (Gujarat); and it is interesting to note that the language spoken

in each of these three centres shows slight local variations.

While almost all the rulers of the Kutub Shāhi dynasty were great patrons of art and learning, sultan Muhammad Kuli Kutub Shāh (reigned 899—1020 = 1580—1611), whose *Kulliyāt* is a voluminous work, was a poet of versatile genius, and his two successors, sultan Muhammad Kutub Shāh (1020—1035 = 1611—1626) and sultan 'Abd Allāh Kutub Shāh (1035—1083 = 1625—1672), and also Tānā Shāh (1083—1098 = 1672—1687), the last ruler of the dynasty, were themselves good poets and used to compose Urdu verses. Other famous poets of the Kutub Shāhi period are: 1. Wajidi, who related a love-story of Muhammad Kuli Kutub Shāh in his mathnawī *Kutub-e-Mughlānī*, written in 1018 A.H.; 2. Shihāb al-Dīn Kuraishi, author of *Bhag Bat*; 3. Shaikh Ahmad Sharif, author of a mathnawī on medicine; 4. Ghawwāsi, author of *Saif al-Muluk wa-Baṣṣat al-Diyāl* (1035) and *Tāpī Nūma* (1049); 5. Ibn Nishāṭi, author of *Phul Ban* (1076); 6. Rāzi or Kuṭubi, translator of *Tuḥfat al-Nāṣirī* or *Pandā āh Tuḥṭa*; 7. Tabī, author of *Bakrām-e-Gulandām*; 8. Walah, author of *Talīb-e-Mohul*; 9. Muḥallī, author of *Zafar Nūma-i-Ishk* (the four last-named belong to the period of 'Abd Allāh Kutub Shāh); 10. Fā'iz, author of *Riqā'at Shāh Rūh-Afsā*; 11. Shāhi and 12. Mirzā, both elegists; 13. Nūrī of Hyderabad and others flourished under Abu 'l-Hasan Tānā Shāh.

The 'Adil Shāhi kings were also great patrons of art and learning. Under Muhammad 'Adil Shāh (1035—1067 = 1626—1656) there flourished four great poets: 1. Hasan Shawkī, author of *Faṭḥ-nāma-i-Niṣām Saḍā* (describing the battle of Tālikotā), and of *Mishkāt-i-'Adil Shāh*; 2. Muḥṣinī (Morzā Muḥṣin Khān), author of *Faṭḥ-nāma-i-Yakheri* (an account of the victory of 'Adil Shāh) and a love-poem of Mahyār o Candar Khān; 3. Rustamī (Kamāl Khān), author of the voluminous mathnawī *Shāh-warnāma* (an account of the wars of the Khalifa 'Alī), written in 1059 A.H.; 4. Malik Khushnūd, author of *Diyānat Singār* (the story of Bahram), written in 1055. Whilst it was Ibrahim 'Adil Shāh II (988—1035 = 1580—1626), called the *Diyānt-Gurū* on account of his mastery of music, and author of the famous book *Nusrat* on Hindi music, who made Hindi (or, more correctly, Dakhani Urdu) his court language in place of Persian, 'Alī 'Adil Shāh II (1067—1083 = 1656—1673) was particularly interested in the Urdu language. Amongst the Dakhani Urdu writers who were active during his reign are: 1. Mullā Nusratī, the famous author of *Gulshān-i-Ishk* and *Alināma*; 2. Ayāghī (Muhammad Amin), author of *Nadīyat-nāma* (1076) and *Shamā'il-nāma*; 3. Saiyid Bulukī, author of *Mirāj-nāma* (1065). During the reign of Sikandar 'Adil Shāh we find the following poets: 1. Shāh Amin al-Dīn A'la (see above); 2. 'Abd al-Mu'min of Bidjāpur, author of *Ishk-nāma* (an account of Saiyid Muhammad of Dīwanpur, *Mahd-i-maw'id*); 3. Hāshimī, the author of *Yūsuf Zulāikha*, the best-known and greatest poet of this period. He was born blind. It was perhaps he who laid the foundation of *rekht*, i.e. poems written in the language and idioms of women, developed by Rangin (see below).

Behri (Kāzi Mahmūd) of Gogi author of *Man Lagan* (1112 = 1700), Wajidi author of *Panchhi Bacha*, the translator of *Aṭṭār's Manṭiq al-Tair* and

some other poets flourished in the 12th century when Awrangzeb conquered the Deccan. In prose, the first books to be written in Urdu were in the Dakhani idiom. Besides sayings of the saints (such as Shāh Rādī Saiyid Katul, Saiyid Muhammad Banda Nawās, and Shāh Amin al-Dīn A'la), some short treatises on mysticism composed by them are still extant, but these do not possess any great literary significance. Other more voluminous and important works on literature and theology were also written, such as the *Sharḥ-i-Sharḥ-i-Tamhid*. This was a translation into Dakhani Urdu by Saiyid Mirzā of Hyderabad (died 1074 = 1663) of the Persian work called *Tamhidāt* written by kaḍī 'Ain al-Kudāt Hamadānī (died 535 = 1137).

The above-mentioned poet Wajidi or Wajidi was the author of a prose work which has great literary significance, called *Sab-Ras or Husn o Dil* ('Beauty and the Heart'). It is a kind of allegory, describing the conflict between beauty on the one hand and the love sentiments of the heart on the other. The whole book is written in rhymed prose, and was composed in 1045 (1635). Another voluminous prose work, bearing the name of *Tarjama-i-Shamā'il al-Atfiya*, is a translation, made by Mirzā Ya'qūb about 1080 (1670), of the Persian book of Rukn 'Imād al-Dīn, who was a spiritual disciple of Khwāja Burhān al-Dīn (died 732 = 1332 at Dawlatābād). Many other prose works were also written soon after this time.

In this early language, just as Arabic and Persian words have been allowed to intermingle freely with Hindi words, so also the authors have drawn freely upon both Hindi and Muhammadan legends for the subject matter. While some of the themes versified are translations from Persian writers and poets, for others the authors are indebted to popular legends in the Sanskrit and Hindi languages, and also to Hindi folklore, e.g. Nal Damay, or Nusrat's famous mathnawī *Gulshān-i-Ishk*, which is a love story of Madhmālū and Manohar, or the story of Kām-rūp Kāmā. In the books written by the Sūfis, words of all three languages, Arabic, Persian and Hindi, have been freely used, and the poets too have drawn their similes and metaphors from all three.

It was, however, only when these works began to be written in Persian characters, and the system of Persian (or Arabic) prosody was adopted, that the real foundations of the Urdu language can be said to have been laid. The *Padmāvat* of Malik Muhammad of Dīwān (947 = 1540), although composed in the perfect Hindi of that period and containing but a sprinkling of Arabic and Persian words, was nevertheless written in Persian characters. The prose works as well as the verses composed in the early Dakhani Urdu were similarly written, and the majority of the poems have Persian metres. Malik Muhammad, by presenting the pure Hindi language of that period in Persian characters, represents the fusion of Indian and Islamic cultures. The writers who came after him went a step further, and by writing prose and poetry in a combination of Hindi, Persian and Arabic words still more closely cemented this alliance. Their adoption too of Persian (i.e. Arabic) prosody helped to make the foundations of the new language permanently strong. This may be ascribed to the influence of Persian culture, which was then predominant. Closely in the wake of foreign prosody

came foreign music, and these two helped to give an entirely new colouring to the nature and moral tone of Urdu poetry.

The beginnings of what may be called modern Urdu poetry were made in the time of Muhammad Shah (1151-1161 = 1719-1748). Even Wali Dakhani (1099-1159 = 1688-1744) of Awrangabad learned from the masters who were then at Delhi, and drew his inspiration from them. His verse shows a tendency to select and refine, and he sincerely endeavours to choose the most polished words and idioms. The proportion of Hindi and Persian elements in his verse, both as regards diction and subject-matter, is about equal. His contemporary Siraj is also a good poet, and uses a purer language than Wali.

The classical period of Urdu poetry begins with Mir Taqi (1137-1225 = 1713-1799). Mir's poetry truly reflects his own life. As he was the son of a pious darwish who had kept himself strictly aloof from everything worldly, the tender and impressionable years of his life were spent in the society of saintly darwishes. He lost his father at the age of eleven, and leaving Agra, his native place, came to Delhi to earn his living. At this time, the once famous and powerful Mughal empire was fast crumbling to pieces, and the frequent incursions of Ahmad Shah Durrani, coupled with the plundering activities of the Daks and the Marathas, had deprived it of even that meagre share of prestige which had been left to it after the devastating onslaughts of Nadir Shah. All this had a deep effect upon Mir (see his autobiography *Chir-i Afsar*), and accounts for the general pessimism and tender pathos of his poetry. His verses are lyrical and are couched in the sweetest, simplest and most melodious language, a combination but rarely met with in other poets. His ghazals and mathnawis are by far the best to be found in Urdu literature, and their merit has been acknowledged by almost all the great poets in Urdu. Mir was a man of very strong character, self-respecting even to a fault, and led a severely disciplined life. During the reign of Shah Alam (1759-1806), when there was no one left in Delhi to encourage poetry, a number of poets migrated to Lucknow, which was then the seat of a flourishing court. Mir too, on the invitation of Nawwab Asaf al-Dawla of Awadh, went to Lucknow and remained there until his death in A.D. 1799.

Sawda (1125-1195 = 1713-1781), a contemporary of Mir, was also a good poet, but he falls far short of the latter. He was impatient of criticism, had no control over his temper, and wrote long satires, but is nevertheless to be ranked among the masters. The chaste and graceful poetry of Khwaja Mir Dard (see the article DARD) (1133-1199 = 1721-1784) reflects the mystic religion of his age. The realist Mir Hasan (d. 1201 = 1786), a follower of Mir Dard, depicts in his poetry the social manners and customs of the age to which he belonged. His famous mathnawi *Shir al-Bayan*, in which he describes both human passions and natural scenes with remarkable fidelity, is the best and most popular mathnawi in Urdu.

We now come to the age of Rangin and Iqbal (d. 1233 = 1817), both of whom, like Sawda, Mir, and Mir Hasan, migrated to Lucknow. At that period Lucknow was the home of fashion and follies and the centre of a polished and pleasure-loving society, which fact could not but

be reflected in the poetry written there. Rangin is generally considered the real originator of *rekht* (see above under Haghini), a form of verse in which everything was written only about women and in the language and idioms used only by them. He is fond of using Hindi words but his standard is very low, and his verses are full of erotic suggestions and other obscenities. Iqbal, on the other hand, is not sensual but misanthropic. He was a true poet but born in a decadent age, when the place of honour was usurped by servility. He regards life as a sport, and in his poetry, though the colours are usually heightened, the sentiment is often falsified. But it should be remembered that he is a master of technique, and that, while his affectations harmed Urdu literature in a general way, they also contributed to it an element of refinement and freshness. Thus his influence on literature has been both good and bad. His book *Darya-i Lafazat* bears eloquent testimony to his mastery of the Urdu language.

Nazir (d. 1830) stands out as a solitary figure in the history of Urdu literature. Though one of the most neglected of Urdu poets, and by some biographers even refused the title of poet, he is an Indian poet in the real sense of the word. Even when swayed now and then by sensual pleasures, he does not cease to be a perfect artist. His best poems are those in which he merrily sings the songs of his native land, or on common topics which appeal alike to young and old, poor and rich. Like nature in India, his imagination too is rich and fertile. Several of his poems on birds and beasts (e.g. "The poor Swan", "The Bear-Cub", and "The young Squirrel") indirectly criticise the social manners and customs of his period. In some of his poems he has portrayed the happy scenes witnessed at Indian festivals, and his love of nature is shown in his vivid descriptions of the seasons. His style, however, is sometimes careless, his verse is faulty, and he has no feeling for the choice of words. He is really a poet of the people and allows nothing to stand between himself and his swiftly-flowing narrative.

Dhawan (d. 1272 = 1855) is a follower of a long line of Persian poets who reduced literary flattery to a fine art. His *ghazals*, most of which were written in praise of the last ruler of the Mughal dynasty, are famous in Urdu literature. Not so, however, are his ghazals, to which his genius was totally unsuited.

At this stage in the history of Urdu literature poetry seemed to have come to a standstill. The poetical productions of the period were mostly imitative, inartistic, and uninspiring, repeating with wearisome monotony the old ideas, themes and even the words which had been again and again employed by earlier poets. At this moment Ghalib suddenly appeared like a new planet in the literary firmament.

Ghalib (1212-1286 = 1787-1869) was descended from a family of warriors, and the warm blood of the Aibek Turks in his veins shows itself in his poetry. While yet a schoolboy he had begun to compose verses, but his real merit as a poet arose only after the great mutiny of 1857. This revolution, representing as it did the conflict of contradictory forces, was destructive of much that ought not to have perished. The complete destruction of many a useful institution of

the Mughal reign, and the extinction of the great Mughal dynasty itself, deeply moved Ghālib and imbued his poetry with that pathos which makes it so poignant. Like all truly great men, he was far ahead of his time, and for this very reason was not appreciated by his contemporaries. He was a pioneer of the modern movement in Urdu poetry. In the whole realm of Urdu literature there is none to surpass him in originality, strength of imagination, or flight of fancy. Ghālib was the first to introduce philosophical conceptions into Urdu poetry, with the result that his verses offer a captivating combination of philosophy, mysticism and pathos. His style is decorative, expressive, and pleasing to the ear. Its one defect is that its literary idiom is Persian, but in spite of this a considerable number of his verses were written in a clear and simple style.

The most famous of the Persian elegies on the martyrdom of Husain, the *Hoft Band* of Muhtasham Kāshī, served as model for the Indian elegiac poets. But Anis (1803-1874) and Dabir (1803-1875) have far excelled their Persian prototype, except that, as in it, the nature of their grief is far from manly. Religious devotion and the literary excellence of their poems have accorded to them a very high position in Urdu literature. Anis is so graphic in his description of battle scenes, and so realistic in his portrayal of the Martyrs of Karbalā', that the whole narrative seems to be alive and is surprisingly true in details. The verse is fluent and majestic, and in places so simple as to be suitable for every-day conversation. But a veil of gloom drapes all the poems. Instead of recounting the heroic deeds of the Imām in a vigorous epic strain, both Anis and Dabir mourn for him, for his sufferings and death, with true feminine grief. The Imām as depicted in these verses does not possess that forcefulness of character which marks all those who have gained martyrdom in the cause of truth. In spite of these defects of characterisation, however, Anis is a true master of language and of the art of poetry.

The period which marks the downfall of Lakhnāi is one of stagnation and reaction in the history of Urdu literature. The poets are innocent of originality, in matter as in style, and overlaid their verse with redundant figures of speech. Atish and Nāsikh are both great masters of technique, but they do not deserve to be ranked with the other great poets of the Urdu language, and the entire "poetical" talent of their followers and pupils consists in puns and plays upon words. The mathnawi of Dayā Shānkar Nāsim (1811-1843), written about this time, is a fine specimen of perfect versifying skill, and would have been good poetry had it not been figurative and ornamental to a fault. The various mathnawis by Shawk are nothing more than mere word-pictures of the corrupt and free manners which characterised the society of that period, and in writing them the poet has drawn his inspiration from the gay and gallant court of Wājid 'Alī Shāh, the last ruler of Awadh. But to do him justice, wanton mirth is not unmixed with grace of art. That is all that can be said in justification of his mathnawis. The poet has sacrificed his art on the altar of frivolity.

After Daḡh (1831-1905) and Amir (1828-1900), the foundations laid by Mir's classical

poetry may be truly said to have fallen asunder. The poetry of both of these shows marked degeneration; both are upholders of that effete tradition which devoted its entire efforts to purposeless but sometimes decorative word-play. Of the two, however, Daḡh is a master of expression, and he has certainly enriched the language by introducing into his poetry colloquial idioms and some exquisite expressions.

It was, however, at this stage in the decline of Urdu poetry, when literature had degenerated into a mere farce, that the influence of the West began to make itself felt in the intellectual life of the country. The West formed a new world of thought laid open for the benefit of the Indian mind. Old traditions were changed; modern sciences replaced subjective egoism by objective art; instead of the classical, ornamental, and rhymed language, a simpler and more natural style of expression was adopted, and the effeminate dilettantism of the age gave way to manliness and self-confidence. In short, there began the true renaissance of Urdu letters.

Muhammad Husain Āzād (d. 1910) was a remarkable embodiment of the characteristics of this period. He was the first poet to drink deep of the fountain of the Occident. He was a philologist and a master of the *muṣawwaf* metrical prose; but he was not a great poet. His contemporary Hālī, however, was altogether different. Hālī was born at Pānīpat in 1253 (1837) and died in 1332 (1914). His boyhood and youth were spent at Dilli at a time when the Mughal empire was fast declining, and as is natural at all such times, social and political upheavals were the order of the day. Hālī was an eye-witness of the setting sun of the Mughals, and all that he saw had a deep effect on his sensitive soul. Though in his literary pursuits he was the successor and pupil of Ghālib and Shāfi, yet intellectually he was a true descendant of the great Arab poets of pre-Islāmic days.

His early poetical productions were of the type then common, but gradually the modern tendencies of the age began to influence him and led him ultimately to Naturalism and to a minute study of the society around him. The genesis of his didactic poetry was the 'Aligarh movement. Through the efforts of Sir Saiyid Ahmad Khān the era of a new humanism dawned upon India, and a new spirit suffused the intellectual and cultural life of Indian Muslims. Hālī was destined to be the bard of this new movement. In his *Musaddas* he not only made the dead past of History a living present, but he also described with surprising detail the national life of the Indian Muslims. Although his poetry is founded on a deep pessimism, he was filled with a passionate longing for truth and burned with the desire to rebuild and reconstruct. Besides being a great poet, Hālī was also one of the interpreters of English literature to the Indian people. But he was a true realist, and never allowed the surging tide of Occidental ideas to carry him off his feet. Before his time, literature was but a medium for expressing the ideas of a class. It was he who opened it up to the masses, and expressed himself in the common language, which was essential for the success of his mission. This, as was to be expected, raised a storm of hostile criticism and satire, but time has vindicated him against his critics. Moreover

his diction is immaculate, and he uses Hindi words in his verse with great beauty and skill.

In face of the flood of new ideas that swept away old-time conventions, Akbar Hussain (1846—1921) raised his voice in support of what to him was Oriental culture, and indulged his humour at the expense of the admirers of Europe and of their follies. Even the modernism of 'Aligarh' could not escape his venomous satires. He regarded Islam and Islamic culture as in grave danger of submergence under the swelling tide of Western materialism, and made it the aim of his poetry to avert this catastrophe. Newfangled ideas came in for a good deal of criticism at his hands, and he has nothing but supreme contempt for those short-sighted Indians who blindly imitated Europeans. His style, at its best, is polished and humorous, even though his verse is marred by a too-studied effort to create effect by word-play and rhyme. It is doubtful if he will be popular with posterity once his present utility as a satirist is exhausted. Though he is not one of the great ones among the poets he is certainly the least imitable of them all.

In modern Urdu poetry three figures stand out preeminent; Ghālīb, Hāli and Iqbāl. Ghālīb's soaring imagination and philosophical ideas broke through the crust of old-time poetry, but his verse is filled with the deepest pessimism. Hāli is one who stands alone amid the fast crumbling ruins of ancient grandeur and weeps over it, but who yet burns with the desire to reconstruct and to revive that which is fast decaying. Iqbāl may not possess the soaring imagination of Ghālīb nor the deep pathos of Hāli, but he has a vigour, an enthusiasm and a creative force all his own. Though not favourably disposed to occidentalism, he has, more than any other of the poets, availed himself of western ideas, which have widened his poetical outlook. His early poetry was of the popular patriotic type, but of late he has developed a keen pan-Islamic feeling. He calls upon Muslims to make religion a basic and unifying principle and to develop the characteristics of the believers of old, and sees the vision of a day, not far distant, when Islam will prove to be the salvation, not only of Asia, but of the whole world. Of late he has devoted his talent to Persian rather than to Urdu verse, for he considers the Persian language to be more serviceable in propagating his ideas throughout Islamic countries than his mother-tongue Urdu.

The beginnings of Urdu prose have already been referred to above. The first prose books in the language were also written in the Dakhn, but most of them dealt with religion and other allied subjects, and none except the *Sab-Ras* (1045 = 1635), which is in metrical and rhymed prose, can claim any literary significance. In northern India, even so late as the post-Mutiny period, people wrote books and carried on correspondence in Persian. Shāh Rasūl al-Dīn of Dīhlī (1163—1233 = 1750—1818) and Shāh 'Abd al-Kādir (1157—1230 = 1754—1815) both translated the Qur'ān into Urdu, but their translations were too literal. The foundations of modern Urdu prose were laid in the Fort William College at Calcutta, founded by Lord Wellesley in 1800. Of the languages taught there, most attention was paid to Persian and to Hindustani or Urdu. Dr. John Gilchrist, who was in charge of the College and was himself a

keen student and author of Hindustani books, may well be regarded as a great patron of Urdu. Mir Amman, the compiler of the *Baḡh-e-Bahār* or *Āmūd-i Chāhr Daryā* (1801—1802), and Mir Shēr 'Alī Afṣar, the compiler of the *Arṣ-i-Mahfūz* (1805), deserve special mention. Both of these books are admirable in point of diction and description, especially the *Baḡh-e-Bahār* ("The Garden and the Spring") which will remain a perennial source of literary enjoyment. One notable influence of these compilations and translations produced under the auspices of the Fort William College was that Urdu writers began to develop a taste for simple language, and the old metrical rhymed style, laden with Arabic and Persian words and expressions, went out of fashion. But the majority of these books dealt with fiction in one form or another. It was left to the great Sir Saiyid Ahmad Khān (1817—1898) to teach his generation the art of writing on serious and scientific subjects in the simplest and most fluent language. His magazine *Tahdīb al-Akhbār* almost completely revolutionised Urdu literature. It was for this reason that the masters of modern Urdu prose were mostly those who had come either under the direct influence of Sir Saiyid, or else were in some way connected with the Dīhlī College, where Urdu was a medium of instruction, and where books were being translated and written in Urdu. In the meanwhile I cannot overlook the letters of Ghālīb (see above) published under the title of "Urdu-i Moalla" which are model of freshness, purity and wit.

Among the principal modern Urdu prose-writers are the following:

Muhammad Husain Azād of Dīhlī writes chaste prose, and his books, though not free from artificiality, are couched in simple language, and have a genuine charm. His *Āl-i Hayāt*, a biography of Urdu poets, should always remain a living thing in literature.

Khẓāja Aḡaḥ Hussain Hāli was a master both of prose and poetry. His style, besides being sober and vigorous, is fluent, and he possessed a fine literary taste. He may be regarded as the founder of literary criticism and of biography in Urdu. His *Hayāt-i Sa'adī*, *Yādgar-i Ghālīb* and *Muḥaddamāt Shēr-e-Sā'ir* are epoch-making books in Urdu literary criticism, and his *Hayāt-i Daryā* (life of Sir Saiyid Ahmad Khān) is the high-water mark of Urdu prose literature.

Nadhr Ahmad (1831—1912) was a forceful writer and speaker, with a wonderful command of language. In spite of his frequent use of Arabic words and phrases, his vigorous language penetrates to the hearts of his readers, and his works of fiction, such as *Mir'at al-'Arūs*, *Tawbāt al-Nayūb*, *Faṣāḥ-i Muḥilla*, will always be read with interest by lovers of Urdu. Some of his characters have become household words among Urdu-speaking people. His translation of the Qur'ān into Urdu is undoubtedly the best that has appeared.

Shihlī [see *SHIH LĪ* SO'MANĪ] (1857—1914), who was a professor at 'Aligarh, was mainly instrumental in developing a taste for history in the Urdu-reading public. In addition to a series of lives of Muslim heroes, he wrote many treatises on Islamic questions and was a distinguished literary critic.

Novel-writing in Urdu dates only from the time of Ratan Nāth Sarḡār (1847—1902), the author of *Faṣāḥ-i Aḡad*, which, in itself some-

what confused, is yet well-known for its delineation of some of the chief features of the Lakhnau society of its day. The novels of 'Abd al-Halim Sharar (1860—1926) are mostly historical, but are weak in characterisation. The fact is that with the exception of some of Naḡhīr Aḡmad's stories, no novel worth the name has yet been written in Urdū. Sharar's novels no doubt helped to create a literary taste, but they did no more.

With the advent of the British into India, a taste for the drama also began to be cultivated, and the Parsis were the first to popularise it. This naturally produced some dramatists who wrote a number of ordinary plays, but unfortunately there has not yet appeared even one drama in Urdū which is deserving of serious mention.

Although at first the influence of English education tended to alienate the sympathies of the younger generation from their own language, a phenomenon for which the style of education introduced into India was largely responsible, yet when their taste became more mature they turned to their mother-tongues with greater zest and began to enrich them with translations of European books on the arts and sciences. The Anḡjuman-i Tarāḡḡī-i Urdū of Aḡrangābād, Dakhān, and the Osmania University of Haidarābād, Dakhān, with its Translation Bureau, are the foremost institutions to-day for the advancement of the Urdū language. On the whole systematic progress is being made, and the people are beginning to love and feel proud of their language. During the last few years many magazines and journals have been started, some of which are rendering signal service to Urdū, and assisting in the development of a more refined taste.

(ABDUL HAQ)

AL-URDUNN, the Jordan, Hebrew (*ha*) *Yardēn*, but in LXX, Josephus, Pliny and others *ē*

Iardān. The etymology of the word is obscure and it is even thought by some to be a loanword (cf. the river name *Iardān* in Crete). After the Crusades the name *al-Sharī'a* (*al-kabrā*), the "(great) watering-place" came into use and is still the most usual name among the Beduins.

1. The Jordan is formed by the combination of three streams: al-Ḥashbānī, Nahr Leddān and Nahr Bānyā. Shortly after their junction, the Jordan reaches the Hīlle district and here flows through the lake of Bahret al-Khet (Bahret al-Hīlle according to Dalman is only the papyrus swamp in the north). The valley of the Jordan sinks rapidly towards the south, so that the surface of the Lake of Galilee, Bahr Tabariya, through which the Jordan flows (cf. *ṬABARIYA*), is 682 feet below the level of the Mediterranean. The valley is known as al-Ghōr (cf. *GHAWK*) from the south end of the lake to an elevation 3 hours' journey south of the Dead Sea. Here it assumes a character different from that of its northern half: a plain of dazzling white marl, through which the river runs with numerous windings, looking to one who surveys it from a height like a twisted green ribbon, as the banks are covered with dense vegetation, which hides the river. Otherwise the plain is devoid of vegetation but at the foot of the hills on its western edge are several very fertile oases ("the gardens of Urdunn"; cf. *Ṭabari, Annals*, i. 1232; see the article *KHXX*). The Jordan terminates in the Dead Sea, Bahr Lāḡ (Lot's Sea), the surface of which is 1,292 feet below sea-level and the deepest point 2,600 feet. It has no exit to the south or west and never has had one. The 1,300 million gallons of water brought down to it every day by the Jordan, evaporate in the burning heat so that the level of the water, apart from slight seasonal variations, remains the same. The result is that nothing can live in the water as the salts and other mineral constituents remain while the water evaporates. The depression south of the Dead Sea is called al-'Araba; the ground rises considerably here and then sinks again to the level of the Gulf of 'Akaba.

The following tributaries of the Jordan may be mentioned. Soon after its exit from the Lake of Galilee it receives on the left bank the important stream of the Sharī'at al-Saḡhira (the little watering-place) or Sharī'at al-Munāḡīr, in the earlier period Yarmūk [q. v.], and farther south the Nahr al-Zetkā' (the ancient Jabbok) which flows in at al-Dāmiya. On the right bank comes the Djalūt, rising in Goliath's spring ('Ain Djalūt), which runs by Bēsan into the Jordan.

On account of its currents, its numerous windings and many shallows, the Jordan cannot be used for navigation. On the other hand, even in ancient times several of these shallows formed fords which connected the lands east with those west of the Jordan and thus linked up the Mediterranean coast and Egypt with Damascus. North of Lake Tiberias there are five and south of it 54; they are most frequent opposite Bēsan. In the Old Testament they are mentioned under the names *ma'har* or *ma'hera*. Whether the Israelites had ferries is uncertain and in any case not proved by the obscure passage 2 Sam., xix. 19. On the other hand, it is difficult to imagine that in their fighting with the Arameans in the lands east of the Jordan, they would take their troops, horses and chariots (1 Kings, xxii. 35) across the Jordan by

fords, but how they did it we are not told (with floats?). If necessary it was possible to swim the Jordan (1 Macc., ix, 48) but in view of the strong current it required skill and strength. There were certainly no bridges since these only began to be built in the Roman period. The ford a little south of the Hüle district is specially celebrated; from it a road led via *Ḥunayra* to Damascus. Whether there was a Roman road here is, according to P. Thomsen's map in *Z.D.P.V.*, xi, (cf. p. 33), uncertain but in the middle ages this ford, called *Vadum Jacobi* (wrongly from Gen. xxii, 22), is often mentioned and was of considerable strategic importance during the Crusades. Here Baldwin III was defeated in 1157 by Nur al-Din and in 1178 Baldwin IV built a fort below the crossing, but in the following year it was stormed by Saladin and destroyed. At a later date, a three-arched bridge was built of large blocks of basalt at the site of the ford (cf. pictures in *Z.D.P.V.*, xiii, 74). It is known to have been in existence in 1450 and was probably built not long before. The name "bridge of Jacob's daughters", *Djār Banūt Ya'qūb*, points to the old *Vadum Jacobi* but is remarkable as Jacob did not have a number of daughters (cf. above i., p. 1050).

One of the most important roads from Damascus to the lands west of the Jordan has probably always been the route via *Fik* (or *Afik*, perhaps *Afek* [Aphek] 1 Kings, xi, 26, 30; cf. xiii, 22) to the south end of the Lake of Galilee, where the Jordan was crossed by a ford where it leaves the Lake. A little south of the crossing are the ruins of two stone bridges: *Umm al-Kanātir* and *Djār al-Sidd*. Nothing is known of their history but one of them is probably the bridge at the south end of the lake which *Muḥaddas* mentions in his description of *Tabariya* and of which *Yāqūt* says that it had over 20 arches. As late as the sixteenth century we are told by W. de Baldensel that he crossed the Jordan by a bridge here (Robinson, *Biblical Researches in Palestine*, iii). Close to the junction of the Yarmūk with the Jordan is a bridge *Djār al-Mudjāmi'* whence roads led to *Mkēs* and *Irbid* below the hills of *Karn Sartaha*. Further to the south we again find a bridge *Djār al-Damiya* but it is now on dry land as the river has dug out a new bed here. It was built in 1266 by the vigorous Mamlūk sultan Baibars, who also had bridges built at several other places (cf. Röhrich, *Archives de l'Orient latin*, t. vi, 382; Clermont-Ganneau, in *J.A.*, ser. viii, vol. x, [1887], p. 518). Among the most used is the bridge north of *Jericho* which leads to W. Nimrin.

In the brief descriptions of the Jordan in the Arab geographers there are a few details of some interest. *Muḥaddas* mentions that the river is unnavigable. *Yāqūt*, quoting an older authority, says that the Jordan above the Lake of Tiberias was called the "Great" and between the Lake and the Dead Sea the "Little Jordan", which statement however is probably based on a confusion with the Yarmūk (see above). He mentions the sugar plantations watered by the river in al-*Ḥawr* (cf. *al-Ḥawr*). *Dinashiri* mentions the hot springs near the Lake of Tiberias and of *Mudjāmi'* where the Yarmūk joins the Jordan. He also gives an account of the remarkable phenomena at the river's end. The Jordan flows night and day into the Dead Sea without any outflow, yet the Sea does not increase in winter or decrease in summer. The main road

from Damascus to Egypt goes, according to Ibn Khurdaḍḍih (*B.G.A.*, vi, 214) and the geographers who follow him, via *Fik* to the south end of the Lake of Tiberias and thence by a circuitous route via *Tiberias* to *Baiṣān*. In the sixteenth century on the other hand, the route lay through a part of *Adjila*, as one descended from *Baiṣān* into the Jordan valley to *Mudjāmi'* and thence over the bridge to follow the road to *Irbid*. In the sixteenth century, a more northerly route began to come into use by going eastwards from the new capital *Safat* (see below) crossing the Jordan on the above mentioned "bridge of Jacob's daughters" and thence via *Nu'ayn* and *Ḥunayra* to Damascus. This road remained the usual one and has recently been made more convenient by improving the road leading to and from the bridge.

2. The Jordan province of the Arabs, *Djund al-Urdun* (military district of the Jordan), corresponded to the *Palaestina Secunda* of the older division and included the two Galilees, the valley of the Jordan and the western part of the lands east of the Jordan. Most of the towns in it were taken by *Abū 'Ubayda* in 14 (635), the remainder by *Khālīd* and *Amr b. al-ʿĀṣ*; others name *Shuḥrāḥ* as the conqueror. They were all taken by force of arms except *Tabariya* which capitulated under shameful conditions and probably on that account was made the capital instead of *Skythopolis*. The size of the district may be judged from the list of towns given by the historians and geographers as belonging to it: according to *Belkdhuri*: *Tabariya*, *Baiṣān*, *Kadas*, *'Akka*, *Šūr*, *Šaffuriya* and in the land east of the Jordan *Sūsaiya*, *'Afik*, *Djarash*, *Bait Ras*, *al-Djawlān* and (?) *Sawād* — according to *Yā'qūt*: *Tabariya*, *Šūr*, *'Akka*, *Kadas*, *Baiṣān* and in the land east of the Jordan *Fahl*, *Djarash* and (?) *Sawād* — according to *Ibn al-Faḥr*: *Tabariya*, *al-Samira* (i.e. *Nābulus*), *Baiṣān*, *'Akka*, *Kadas*, *Šūr* and in the land east of the Jordan *Fahl* and *Djarash* — according to *Muḥaddas*: *Tabariya*, *Kadas*, *Šūr*, *Faradhiya*, *'Akka*, *al-Ladjdjān*, *Kabul*, *Baiṣān* and in the land east of the Jordan *Adhira'it* — according to *Iḍris*: *Tabariya*, *al-Ladjdjān*, *al-Samira* (*Nābulus*), *Baiṣān*, *Artha* (*Jericho*), *'Akka*, *Nasira*, *Šūr* and in the land east of the Jordan: *Zughār*, *Amata* (*Amathus*), *Habia* (*Yābis*), *Djarash*, *Ahil* (*Abila*), *Sūsaiya* — according to *Yā'qūt*: *Tabariya*, *Baiṣān*, *Šaffuriya*, *Šūr*, *'Akka* and in the land east of the Jordan *Bait Ras* and *Djarash* etc. These lists show that the boundaries have not always remained the same.

Regarding the yearly tribute of the province of *Urdun* the Arab authors give the following figures (cf. *SLASTIN*): towards the end of the eighth century 96,000 dinars, under *Ma'mūn* 97,000, according to *Ibn Khurdaḍḍih* and *Ibn al-Faḥr* 350,000, according to *Kudama* 109,000, according to *Yā'qūt* 100,000, according to *Muḥaddas* 170,000 (cf. *Z.D.P.V.*, vii, 225).

In the Crusading period, the previous divisions were abolished and the members of Saladin's family constituted various kingdoms (*wamlakāt*) instead. The province of *Urdun* is represented mainly by the kingdom of *Safat* which in addition to the town of that name included the following districts: *Mardī*, *'Aiyūn*, *Ladjdjān*, *Djinnin*, *'Akka*, *Šūr* and *Saida*, i.e. all towns in the lands west of the Jordan. In *Shihāb al-Dīn al-Maḥdī*, who wrote his *al-Mudhīr* in 1351 and was often copied, we find another division, in which al-*Ḥūr* and the lands east of

the Jordan are more prominent: al-Hawrān with the capital Ṭabariya and the districts of al-Ghawr, Yarmūk and Baisān.

(F. Buhl)

URF (أ), defined by Djardān (*Ta'rifāt*, ed. Flügel, p. 154) as "[Action or belief] in which persons persist with the concurrence of the reasoning powers and which their natural dispositions agree to accept [as right]". It stands therefore to represent unwritten custom as opposed to established law, *ḥarḥ* (cf. Māwardi, ed. Enger, p. 5; *Bihar-nūma*, ed. Beveridge, f. 124^b, line 7; transl., p. 194) though attempts have not been lacking to regard it as one of the *uḥūl* (cf. Goldziher, *Zakiriden*, p. 204 sq.). It is sometimes held to be equivalent to case law or common law. This may be where civil laws (*ahkām*) are based on recognized local customs (*ʿārf*), and it is a well-known fact that in many tribal and other communities these are native codes of unwritten laws and traditions by which life is regulated locally. In Southern Palestine these existed as late as the middle of the nineteenth century a *fellāḥ* code called *ḥasat ḥalil*, i. e. "the law of Abraham", as distinct from the Muḥammadan code (*Palestine Exploration Fund, Quarterly Statement*, Jan. 1879, p. 38). Amongst the Bedouin of Arabia also these have always existed, as distinct from the *ḥādis* of the *ḥarḥ*, special judges possessed of the customary lore of their tribe, to whom recourse is had in matters affecting tribal interests (cf. J. v. Barckhardt, *Notes on the Bedouins and Wahabys*, London 1831, i, 120-122; A. Muall, *Arabia Petrea*, Vienna 1908, iii, 209, 357 sq., 346, 365). Frequently *urf* is simply the decision made in various cases by the sovereign or his agent — not the *kāfi* — according as the requirements of the state demand or as prejudices dictate. In Persia, since the Safawi period or even before, decisions based upon *urf* have been made by the *Shāh* or his governors or by the special court of *urf* presided over by the *Dimān-beg*. There was however never any rule to decide which cases were to go to the latter court and which to the courts of the *ḥarḥ*, though mainly it was offences against the state and against law and order — e.g. rebellion and disloyal conduct, debasing the coinage, rioting, theft, highway-robbery, and murder — which came before it.

The *mullās* have never recognized its competence, denouncing as illegal any judgment based on *urf*. In Turkey it stood for the conception of the Sultān's own arbitrary power as distinct from *ʿāda* (customary law, q. v.), *ḥāḥ* (civil law) and the *ḥarḥ*. Sometimes *urf* might run counter to the *ḥarḥ*, e.g. when the Sultān enslaved Christians, though they were *ghimmas* and thus "protected", in order to recruit the corps of the Janissaries.

(R. Levy)

URFI, DJAMĀL AL-DIN, of Shirāz, a Persian poet. His personal name is variously given: al-Saiyidi (*Arafāt*), Khwāja Saiyidi Muḥammad (*Maʿāthir-i Rāḥim*), and Muḥammad Husain (*May-khāna*). He was known in his younger days as Ṣaidi (*Maykhāna*, cf. *Oud Cat.*, p. 126). His father's name was Zain al-Din Balawī (?) and his grandfather's Djamāl al-Din Saiyidi, but the latter was more commonly known as Khwāja-i Čādar Bāf. Urfi was born in Shirāz, where his father held a post in a Government Office. According to the author of the *Maʿāthir*, the post was that of the vizier of the *Dārughā* (Prefect) of the town. Urfi received his early education of the usual kind in Shirāz, and began to compose verses in early youth. His *takhalluṣ* had reference to the occupation of his father, who had to deal with matters relating to canon law (*ḥarḥ*) and customary law (*urf*). At the age of twenty he had a severe attack of small-pox, which disfigured him very much. The various *tashkīras* give us only a few glimpses of his poetical career in Persia. He entered into poetical contests with Mullā Ghairatī (for whom see *Haft Iqlīm* s.v. Shirāz, and Bādʿat, iii, 292) and other poets of Shirāz. Awhādī tells us that a few years before Urfi left for India, he wrote *ghazals* in the same metre and rhyme as those of Fighānī (d. 922 or 925) and other famous poets. His extreme self-conceit and arrogance brought him into serious conflict with his contemporaries, especially with Wahīdī of Yazd (d. 991 = 1583), and caused much unpleasantness. The mortification caused to him by his own disfigurement, his conflict with his contemporaries, and the lure of Indian patronage are given among the causes which induced him to leave his own country and emigrate to India.

Leaving the port of Djirūn, he came by the sea-route to Ahmadnagar in 994 (1585-1586) (*Takī Kāshī*, *Oud Cat.*, p. 37), perhaps more correctly in 993 (1585), and thence went to Fatḥpur-Sikrī, where he arrived about the new year's day (19th Rabi' I, 993 = March 10/11, 1585). There he attached himself to Faiḍī, who took him along to Attock, where Akbar encamped early in Muḥarram 994 (Nov. 1585), to control the operations against the Yūsufzāi Afghāns, in which expedition Faiḍī himself took part (*Akbar Nāma*, iii, 476). Later, Urfi attached himself to Masūḥ al-Din Ḥakīm Abu 'l-Faḥr, and, on his death in 997

(1589), to Mirzā 'Abd al-Rahmān Khān Khānān, to whom the Hākīm had recommended him, and from whom he was already receiving considerable grants of money every year. The Khān Khānān treated him with great kindness and consideration. Finally, the Emperor (Akbar) took 'Urfī in to his own service but he died soon after in Lahore, at the age of 35 or 36, on the 18th Amurdād (= Shawwāl) 999 (August 1591), of dysentery, or, as later writers say, of poison. He was buried in Lahore, but thirty (lunar) years after his burial his bones were sent by Mir Šābir of Isfahān, visier of 'Imād al-Dawla (father of Nūr Dīhān), to Nadjaf, where they were reburied.

'Urfī's contemporaries describe him as a conceited and arrogant person and the fact is borne out by many disparaging remarks which his *diwān* contains about great Persian poets. As a poet, however, he enjoyed great popularity in his time in India, and outside India, though his early death prevented his genius from developing fully. He was praised as the inventor of a new style of poetry, some of the outstanding features of which were a forceful diction, coining of new and original expressions, the continuity of topics, and freshness and novelty of metaphors and comparisons. In *ghazal* his chief merit lies in his giving a poetical expression to philosophic ideas and lofty ideals but his fame rests mainly on his *ḡajdas*. In the following centuries 'Urfī suffered somewhat in popularity, especially in his own country, where Aḡhar condemned his excessive use of similes (see *Atash-Kada*, Bombay 1277, p. 276), and more recently Rīfā'ullāh Khān indicated that his style was not to the taste of that writer's contemporaries (*Maḡma' al-Fayḡā* ii. 24).

'Urfī published his first *diwān* in 996 (1587—1588), which comprised 26 *ḡajdas*, 270 *ghazals*, and *ḡajras* and *rubā'is* containing 700 *bayts* ("320 of the former and 380 of the latter"; cf. *Oude Cat.*, p. 529). In 1026 (1617) Sirāḡja-i Isfahānī edited a *Kulliyat* of 'Urfī (14,000 *bayts*) from the MSS. which the poet had sent from his death-bed to the Khān Khānān. For Nāṣim Tabrizī's claim to have edited these after 1033 (1617) see Mayhūdhāna, *Ḥawāṣh*, p. 102. The *Kulliyat* included, beside the poems of the kind comprised in the first *diwān*, some *mathnawīs* (viz. *Maḡma' al-Aḡhar*, *Farḡad wa-Shīrin* and a *Seḡnāme*). Apparently Sirāḡja's edition had a preface from the pen of Mullā 'Abd al-Bāḡi Nahāwandī. 'Urfī also has a short prose treatise called *Nafīya*. Several commentaries on his *ḡajdas* exist in Persian and Turkish (see *Bānkīpūr Catalogue*, ii. 198 *seq.*). His *diwān* has been frequently lithographed in India. An English translation of his *ḡajdas* was published in Calcutta 1887.

(MORAMMAD SHAFI)

URGENC. [See KHARIZM.]

URMIYA, a district and town in the Persian province of Ādharbāldjān.

The name. The Syrians write Urmiya, the Armenians Ormi, the Arabs Urmiya, the Persians Urmī, the Turks Urmīye or Rūmīye (through a fanciful derivation from Rūm "Byzantium, Turkey"). The name is of uncertain, non-Iranian origin. Assyrian sources mention a place called Urmeite in the land of Mann in the vicinity of the Lake of Urmiya (cf. Streck, in *Z.A.*, xiv. 120; Belek, *Das Reich der Mannier*, in *Verhandl. d. Berl. Gesell. f. Anthropol.*, 1894, and Minorsky, *Kelachin* etc., in *Zap.*, xxiv. [1917], 170). On the other hand, the name is unknown to the classical geographers and to the *Avesta* and Pahlavi sources (cf. Jackson, *op. cit.*, p. 87). It is also unknown to Armenian geography of the fifth century (cf. Marquart, *Erānshahr*); this in spite of the fact that late Zoroastrian tradition early recorded by the Arabs (cf. Balādhuri, p. 331; Ibn Khurdādhbih, p. 119) placed the birthplace of Zoroaster at Urmiya.

Geography. The district of Urmiya is bounded on the east by the Lake of Urmiya and in the west by the mountain range which runs north and south and separates Persia from Turkey. In the north it is bounded by the transversal range (Shāh-Bānd-Awghin-dagh) which separates it from Salmas [q.v.]. To the south Urmiya is bounded by the valley of the Gadir, the upper course of which belongs to Ushnā [q.v.] and the lower waters the Suidaz [q.v.] valleys. Urmiya is about 80 miles from N. to S. and 35 from E. to W.

The district of Urmiya consists of plain and mountains. The rivers that water it and which flow from W. to E. are:

1. the Barānduz which unites the waters of the district of Mārgāvār and then runs through the gorge of Nergi into the plain which it runs round on the south side. On the right (south) bank the Barānduz receives the Kāsimān which runs through the little Daḡhtabel. The mountains of Māh separate the eastern Daḡhtabel from the Dol. This last district lies in the shape of a horse-shoe on the S. W. shore of the lake (to the north of Saldur).

2. the Barde-Sūr (= Kurd. "Red Stone") runs out of the gorge of Bēdkār (belonging to Turkey), through the mountainous region of Daḡht, which belongs to Urmiya and then through the pass of Bānd into the plain and through the town of Urmiya, whence its other name, Sāthar-kai, "the river of the town".

3. the Rouza (Rawża)-čai drains the hilly district of Targavar and before reaching the lake has been used up by irrigation canals.

4. the Nēziu-čai is made up of a number of streams of which the southern rises in the Turkish district of Deiri (where the monastery of Mar-Bishō is) and below the village of Arzin runs through the northern part of Targavar (where on the right bank it is joined by the Mawāna); the middle one comes out of the gorge of Balirga (Turk.) and near the village of Sērō enters the Persian district of Brādest; the northern stream is that of the district of the Somai [q. v.] which belongs to Salmas. The waters of these three join at the foot of Mount Māndjil-sār (in Kurdish = "pot on the head") and from the fort of Isma'il Khān Shakhāk [q. v.] the river formed by their union flows through the northern part of the plain. On the north of its left bank on the slope of the Awghān-daghl is the district of Anzāl.

The lake of Urmīya lies at a height of 4,245 feet above sea-level, the town of Urmīya 4,390 feet; the heights of the outer spurs are: 4,780, 7,330, 8,395, and that of the frontier range is 11,220, 11,542, 11,830 feet.

The abundant water-supply renders the alluvial plain of Urmīya extremely fertile. The villages are buried in verdure. In the mountain districts the agriculture is dependent on the rains. The natural conditions there are very favourable for the breeding of sheep.

Archaeology. Several tells in the vicinity of the town (Gök-tāpā, Degala, Tarmānī, Ahmād, Saratān, Ditrā-tāpā) have already produced objects of great antiquity (cf. Virchow, *Fundstücke aus Grabbügeln bei Urmia*, in *Zeitschr. f. Ethnologie*, xxxii., 1900, p. 609—612; Jackson, *op. cit.*, p. 90—98; Lehmann-Haupt, *Armenien*, i. 276). In 1888 in a vaulted chamber discovered at Gök-tāpā at a depth of 25 feet was found a cylindrical seal representing the Babylonian gods. W. H. Ward, *Amer. Journ. of Archaeol.*, vi., 1890, p. 286—291 and Lehmann-Haupt, *Materialien z. Alter. Gesch. Armeniens*, 1907, p. 8—12, date it c. 2000 B.C. If Urmīya is the ancient Urmeiate it must have been included in the land of the Mannaeans (Minni of Jeremiah, lii. 27), exposed to the invasions of the Assyrians as well as to the influence of the kingdom of Wan (Urartu); cf. the rock chambers at Nergi and Kal'a Isma'il-khān which have a Vannic character; cf. Minorsky, in *Zap.*, xxiv., p. 188—191. [There seems to be a third chamber on Mount Kotul at Brādest].

The assonance of the two names had suggested to d'Anville the identity of Urmīya with *Urmias*, where stood the great fire-temple and which was burned by Heraclius in 623. But it is strange to find Thebarmāis on the road which Khosraw Parwēz took to go to Dastagerd (cf. Ritter's remarks, *Erdkunde*, ix. 942). According to the text of Theophanes, restored by de Boor, i. 308, li. 190, 619, Thebarmāis was situated to the east of *Avareas*, evidently with reference to Garaka. Since Rawlinson, the latter place has been located at Takht-i Sulaimān (cf. *ibid.*). De Boor connects Thebarmāis with Bitharmāis, Berthemaïs, and Barmāis mentioned by several classical authors.

Muslim period. Urmīya was conquered by Šadaka b. 'Alī, a client of the 'Azd, who built several castles there (Balādhuri, p. 331—332); according to another story, the town was taken

by 'Utha b. Farḡad whom the caliph 'Umar had sent in 20 (640) to conquer the district of Mawṣil.

The geographers of the ninth century (Istakhrī, p. 181; Ibn Hawḡal, p. 239) give Urmīya the third place among the towns of Ādharbāidjān (next to Ardabil and Marāgha) and emphasise its wealth in water, pasture and fruits. Muḡaddasi, p. 51, puts Urmīya in Armenia and says it is governed from Dvin. At this period Urmīya was on the great road Ardabil-Marāgha-Urmīya-Barikī (to the N.E. of the lake of Wan)-Āmid (Muḡaddasi, p. 302). As Tabriz [q. v.] was not yet of any importance, the road made a detour to the south to serve the principal towns. It is possible that the presence of unsubdued elements in the north of Ādharbāidjān (cf. the name of the lake Buḡairat al-Shurāt and the history of Bībāk) also influenced this deviation of the road towards the south.

The district of Urmīya, being inhabited by Kurds and Christians has never played a great part in Muslim history. It was a remote fief in which the offshoots of the dynasties that reigned in Ādharbāidjān lived in isolation.

In the period of Dailamī domination in Ādharbāidjān we find in Urmīya a certain Džastān b. Šurmazan. This general had begun in 342 (953) as a devoted partisan of the Kurd Daisam [cf. KURDS]. Later won over by the Dailamīs, he became governor of Armenia under Marzubān. When Džastān succeeded his father Marzubān in 346, Džastān b. Šurmazan did not recognise his suzerainty. At first he left Urmīya to throw in his lot with Ibrāhīm b. Marzubān for whom he conquered Marāgha. He later left him to return to Urmīya which he surrounded with walls; he also built a strong fortress there. He then entered the service of the claimant to the caliphate Mustadīr bi 'Alī and had the support of the Kaḡhānī Kurds. But the sons of Marzubān (Džastān and Ibrāhīm) defeated him with the help of the Hadhbānī Kurds. In 349 at the instigation of Wahsūdān, brother of Marzubān, he inflicted a defeat on Ibrāhīm b. Marzubān, captured the remnants of his army and annexed Marāgha to Urmīya. In 355 through the mediation of the Būyid Rukn al-Dawla, he again recognised the authority of Ibrāhīm (Ibn Miskawaihi, *Taḡjārīk*, ed. Amedroz, ii. 150, 167, 177—178, 180, 219, 229 and Ibn al-Athīr, viii. 395).

When the Ghuzz invaded Ādharbāidjān in 420—432, the lord of Urmīya was a certain Abu 'l-Hidja b. Rabīb al-Dawla, chief of the Hadhbānī Kurds, whose mother was the sister of the prince of Tabriz, Wahsūdān al-Rawwādī [cf. TABRIZ and MARĀGHĀ]. This son of Rabīb al-Dawla boasted of having destroyed near a bridge 25,000 Ghuzz of the 30,000 who were trying to cross his territory (in 432?); cf. Ibn al-Athīr, ix. 271.

In Muharram of 455 (1063) Sultān Tughrīl passed through Urmīya (al-Bundārī, p. 25). When Sultān Mas'ūd returned from Baghdād to Ādharbāidjān (in 526?), the amir Hādīb Tatar had fortified himself in Urmīya but later he submitted to the Sultān (*ibid.*, p. 165). In 544 (1149) Urmīya belonged to Malik Muḡammad b. Maḡmūd b. Muḡammad, nephew and son-in-law of Sultān Mas'ūd b. Muḡammad b. Malik-shāh (*Rāḡar al-Sudūr*, G.M.S., p. 244). When the last Saljuḡ Tughrīl quarrelled with his uncle, the Ildegiḡid Kīlī Arslān, Tughrīl had the support of the amir Ḥasan b. Kīfījāk and with him laid siege to

Urmiya in 585. The town was taken by storm, sacked and destroyed (Bundārī, p. 302). From the same Saldjūq period must date the building of Se-Gunbadān, on which Khanykov read the name of Abū Manṣūr b. Mūsā and the date 580 (1184).

In 602, the Atābeg of Tabriz Abū Bakr gave Ushnū (sic for Ustawa) and Urmiya to the Atābeg of Marāgha [q. v.] 'Alī al-Dīn to recompense him for the loss of Marāgha (Ibn al-Athīr, vii. 157). Yāqūt who visited Urmiya in 617 speaks of its lack of security on account of the weakness of its ruler, the Ildegizid Ōzbek b. Fahlawān.

During the rule in Adharbāydjān of the Khwārizmshāh Djalāl al-Dīn, Urmiya, Salmas and Khōi formed the personal appanage of the Saldjūq princess whom Djalāl al-Dīn had carried off from her first husband the Ildegizid Ōzbek. In 625 the Iwān Turkomans seized Urmiya and levied *sharāfi*. On the complaint of the princess his wife, Djalāl al-Dīn sent troops who defeated the Turkomans (Ibn al-Athīr, xii. 301). Later Urmiya was given to Boghdi, a former slave of the Ildegizid Ōzbek; cf. Nasawi, ed. Houdas, p. 118, 153, 165.

On the other hand, according to Djuwaini, ii. 160, 184, the Georgian generals Shalwa and Iwane, taken prisoners in the battle of Karhi (622 = 1225) and at first treated with honour by Djalāl al-Dīn, were given for a short time Marand, Salmas, Urmiya and Ushnū. In 628 (1230-1231) the Khwārizmshāh when hard pressed by the Mongols spent the winter in the region of Urmiya-Ushnū (cf. Abu 'l-Faraj, ed. Pococke, p. 470; Rashid al-Dīn, ed. Blochet, p. 32). His stay there may explain the story of the building by the Khwārizmshāh of the Se-Gunbadān (cf. above) and even of his burial at Urmiya; cf. Bittner, p. 75; Hörnle, p. 488.

According to Khanykov, the cathedral mosque of Urmiya bears the date 676 (1277) [reign of the Ilkhān Abagha].

Timūr. According to the local chronicle (Nikitine), Timūr had given Urmiya as a fief to Gurgin-beg of the Afshar tribe, who established himself in the fortress of Toprak-Kal'a, a quarter of a farsakh from the town of Urmiya. The *Zafarnāma*, however (l. 424), mentions as governor a certain Tizak (?) whose rights were confirmed by Timūr in 789 (1307).

The Brādōst. According to the *Ālam-ārā*, p. 559, in the time of Shāh Tahmāsp the great amirs were governors at Urmiya while the Kurd Kara Tadj of the Brādōst tribe who had been made *shāhīrūdān* was given the districts of Targavār and Mārgiyār. In 1012 (1603) Shāh 'Abbās to reward the loyalty of Amīr-Khān Brādōst, who had not submitted to the Ottomans, gave him Urmiya and Ushnū. But Amīr-Khān under the pretext that the fortress of Urmiya was dilapidated made his stronghold at Dīmdīm (to the south of Urmiya at the mouth of the river Kāsimlu in the Barūdus) and became suspected. Dīmdīm was taken in 1019 (1610) and the district (*sigā*) of Urmiya given to Kāban-Khān Bagdālī. The Brādōst, by a stratagem, recaptured Dīmdīm after which Budak-Khān Pōrnak (of Tabriz) was appointed in place of Kāban-Khān and later Aka-Khān Mukaddam (of Marāgha). In the list of the great dignitaries of the kingdom, however, the same source (p. 762) mentions as governor of Urmiya Kalb-'Alī Sultān, son of Kāsim-Khān of the Imānu class of the Afshar tribe.

Conversions to the Shī'a (cf. above) under the

Safawids seemed to have been of an isolated character among the natives of the region of Urmiya where to this day the Kurds and a few villages (Balaw) are still Sunnī. The influence of the Sunnī Nayshabandī shāikh is may be judged from the fact that in 1639 Sultān Murād executed in Diyār-bakr the shāikh Mahmūd of Urmiya who had 30-40,000 partisans. His ancestors were also shāikhs of Urmiya; cf. v. Hammer, *G. O. R.*, iii. 187; cf. *Diyār-nama*, p. 385.

Ewliya Çelebi. For the year 1065 (1655) we have the very detailed account of Ewliya Çelebi (iv. 271-318) who had gone from Wan to Urmiya to recover the flocks of sheep which the Khān of Urmiya (whose name is not mentioned) and 20 other Khāns had carried off from the Kurd tribe of Fīn-yānīsh. Unfortunately Ewliya's itinerary and story are very confused.

According to him, the founder of the fortress was Ghazan in 694 (1295); it was enlarged by Shāh Tahmāsp in 930 (1524). At the Turkish conquest in the reign of Sultān Sulaimān Urmiya was fortified by the Fīghīs Sulaimān and Dī'lar. The usual name of the fortress is Toprak-Kal'a but the Persian (?) historians call it Surtlay-Ghazan. The fortress the walls of which were covered with plaster looked "like a white swan". Its circumference was 10,000 paces, the walls were 70 *dhīr* high and 30 *dhīr* wide; the ditch was 80 *dhīr* wide and 15,000 paces round. During the night the walls were lit by torches. The garrison consisted of 4,000 men and 310 (?) guns. The Khān had at his disposal 15,000 soldiers and 20,000 *nāher*.

The town was a gunshot from the fortress. It had 60 quarters, 6,000 houses and 8 cathedral mosques, among which was that of Usūn Hasan, which was finished under his son Sultān Ya'kūb. In the plain of Urmiya (*sigā*) there were 150 villages with 300,000 peasants.

Ewliya Çelebi says the town was exceedingly prosperous and gives a list of its sanctuaries (Hazarret Koçgha Sultān), its medreses, schools, cafés, fixed prices (*nirāhi Shāikh Safti*).

The Afshars. In the xviiith century the fate of Urmiya was closely bound up with the fortunes of the Afshars settled in the plain (cf. above). Their chief bore the title *biglar-beg*. The best known among them are (Nikitine):

- Khādīdād Beg Kāsimlu 1119-1134 (1707-1722)
- Path 'Alī Khān Areshlu 1157-1172 (1744-1758)
- Kidā Kuli Khān 1182-1185 (1768-1771)
- Imām Kuli Khān 1186-1197 (1772-1783)
- Muhammad Kuli Khān 1198-1211 (1784-1796)
- Husain Kuli Khān Kāsimlu 1211-1236 (1796-1821)
- Nadīf Kuli Khān 1236-1282 (1820-1865) [cf. Fraser, I. 56].

These chiefs were continually fighting with their neighbours (in the north, the Dumbul of Khōi, in the south, the Zaza and Makri Kurds) and in troubled times, so frequent in the xviiith century, they even led expeditions to the east of the Lake of Urmiya.

During the campaign of 1724, the Ottomans employed the Hekkārī Kurds to ward off the Afshars who were threatening the provisioning of the army. When in 1725, the Turks organised the administration of the country, the Khānate of Urmiya was recognised as hereditary in the family of Kāsimlu (Afshar?). In 1729 Nādīt recaptured from the Turks Marāgha, Sa'adī-bulāh

and Dimdim (cf. *Histoire de Nadir*, transl. Jones, p. 104), but in 1731 the Hekim-oghlu Pāshā 'Alī and Rustam seized Urmīya after a desperate resistance which lasted a month. Urmīya was entrusted to the Hekim-oghlu Bīnālshīn (cf. v. Hammer, iv, 225, 228, 279). It was only by the treaty of 1736 that the Turks were put out of Ādharbāidjān.

Āzād-Khān. After the disappearance of the Nādirid Ibrāhīm-Shāh (in 1161 = 1748), one of his generals, Āzād-Khān, a descendant of an Afghan chief, retired first of all to Shahrzūr and then taking advantage of the troubles among the Afghans, seized Urmīya where he was favourably received by Fath 'Alī Khān. Urmīya became the capital of the ephemeral principality of Āzād. The mountain name Awghān-dagh to the north of Urmīya seems to preserve the memory of Afghan rule.

The Kādījars. In 1169, Muhammad Hasan Khān Kādjar having defeated Āzād in Gilān, seized Urmīya. Fath 'Alī Khān Afghar joined Muhammad Hasan. On the latter's death Fath 'Alī Khān reappeared on the scene and from Urmīya captured Marāgha and Tabriz. In the winter of 1173 (1759) he was besieged in the latter town by Karīm Khān Zand and in the following year, after the battle of Kāra-Chīnān (near Miyanā), Ādharbāidjān passed into the power of Karīm Khān. Urmīya was taken after a siege of seven months. Fath 'Alī went into *hāt* in the stables of Karīm Khān (cf. the *Tarikh-i Gilt-Gilt* of Sādik Nāmī for these years). After the end of the Zand dynasty, the Afghar of Urmīya with the Shākh [q.v.] of Sarīb and the Dumbull of Khōi formed a coalition against the Kādījars but had no success. Fath 'Alī Shāh had Muhammad Kūli Khān put to death but married the sister of Husain Kūli Khān Afghar (Fensler, i, 55), whose sons were the first governors of Urmīya to be appointed by the central government in Teherān.

In 1828 in the course of the Russo-Persian war, Urmīya was occupied for several months by Russian troops. In the absence of the governor (the prince Malik Kāsim Mirzā), the town was ruled by the *beglarbēgi* Nadjaf-Kūli Khān Afghar (cf. Gangelslov, *op. cit.*).

'Ubadullāh. In 1880 the Shāikh 'Ubadullāh of Shāmdīnān [q.v.] invaded Ādharbāidjān. Urmīya was besieged by the Kurds and was about to surrender when the arrival of the Khān of Mākū [q.v.] saved it.

Turkish occupation. In August 1906, after the reverses suffered by Russia in the Far East, Turkey, under the pretext that the Turco-Persian frontier had never been settled, occupied the district of Urmīya except the enclave of the town (cf. Nicolas, *op. cit.*). The Turkish troops were recalled at the beginning of the Balkan war. After the incidents at Tabriz [q.v.] in Dec. 1911, Urmīya was occupied by Russian troops. During the world war Urmīya changed hands several times. As early as Oct. 9—12, 1914, it suffered the first attack from Turks and Kurds. The town was vacated by the Russians on Jan. 2, 1915, occupied by the Turks from Jan. 4—May 20 and retaken by the Russians on May 24. As a result of the break up of the Russian army in 1917, the actual authority in the town passed into the hands of the council of "Assyrian" Christians (*mutwa*). After a series of tragic and bloody events (massacre of the Muslims of Urmīya by the Christians on Feb. 22, 1918, the assassination of the patriarch Mār Shimūn by followers of the Kurd chief Simko on Feb. 25,

the arrival of 20,000 Armenian refugees from Wan, fights between Assyrians and Turks), all the Assyrian population collected in the plain of Urmīya and to the number of 50—70,000 set out for the south to put themselves under British protection (end of July—beginning of August). This exodus with women, children and cattle took place via Sa'in-Kal'a and Hamadān in the midst of fighting with Turkish troops and the Kurds. The refugees were settled at Ba'qūba to the north of Baghdad (cf. Rockwell, Causole, Wigram, Sklowski, *op. cit.*). After the departure of the "Assyrians", the Catholic Bishop Mgr. Soutag and the Baptist missionary H. Pfäumer were killed at Urmīya on Aug. 1, 1918.

The peace found Urmīya in ruins and depopulated. Only gradually was the central government able to reassert its authority in the west of the Lake of Urmīya.

Population. We have given above the figure, probably exaggerated, given by Ewliya Čelebi (in 1655). At the beginning of the sixteenth century there were at Urmīya 6—7,000 households of which 100 were Christian, 300 Jewish and the remainder Shi'i Muslims (Persian memoir published by Bittner). According to Fraser (1821), there were 20,000 inhabitants at Urmīya. According to Hornle (1835), the population consisted of 7—8,000 families of whom the majority were Sunnis (?), 300 Jews and 100 Nestorians. In 1872 Arsanis reckoned 8,000 houses with 40,000 inhabitants. In 1900 (Maximović) the total population of the province was put at 300,000 among whom the Christians numbered 45 % of whom 40,000 were Nestorians, 30,000 Orthodox, 3,000 Catholics and 3,000 Protestants, and 50,000 (?) Armenians. The town had 3,500 houses. During the world war Dr. Causole reckoned 30,000 inhabitants at Urmīya, of whom a quarter were Assyrians, and 1,000 Jews occupied a special quarter. Nikitine (*Ethnographie*, 1926, p. 25) enumerates 37 villages in the plain of Urmīya, inhabited by the Christians only and 59 with a mixed population.

We do not know at what period the Aramaean Christians ("Syrians") who since the war have called themselves "Assyrians" appeared in Urmīya. The town is not given in the oldest lists of the eastern dioceses (Guidi, in *Z. D. M. G.*, 1889 and Chabot, *Synodicon Orientale*). Assemani, ii, 449 and 453, notes the presence of Nestorian bishops at Urmīya in 1111 and 1289. According to the same author, the Nestorian patriarch settled at Urmīya in 1582 (*ibid.*, iii, 621). In a document of 1653 the Chaldaean (Uniate) patriarch Simon (writing to Rome from Khosrowa in Salmas) gives a list of his congregations in Salmas, Arna (?), Saphan (?), Targawar, Urmīya, Anzāl (district N. E. of Urmīya), Saldur, Ashnakh (Ushnū); cf. *ibid.*, iii, 622 and Perkins, *Residence*, p. 9; Noldeke, *Grammatik d. neusyrischen Sprache am Urmia-See und in Kurdistan*, Leipzig 1868, p. xxiii. and Hoffmann, *Anzüge*, p. 204.

The first American missionaries of the "Mission of the Nestorians" (Perkins, A. Grant) settled at Urmīya in 1835. The Lazarists followed them in 1840 and a Catholic bishop was appointed to Urmīya. In 1859 the Americans organised an evangelical community in Urmīya. Towards the end of the century, Anglican missionaries were sent to Urmīya by the Archbishop of Canterbury. In 1900, an important Russian Orthodox mission began its

activity among the Christians; it was dissolved however by the Perso-Soviet treaty of Feb. 28, 1921.

The Lake of Urmīyah. The lake is about 90 miles long (N.—S.) and 35 broad (E.—W.). Its area is 2,230 sq. miles and the area drained by its tributaries is 20,265 sq. miles.

The most important rivers flowing into the Lake are: in the east, the Aḡḡ-zai "bitter river", which waters Sarīl and Talrīz; the Sof-zai and Mūrī-zai which flow from the S. W. face of Mount Sahand [cf. MARĀGHĀ]; in the south, Djaghātū, Tatawū and Sāwāj-Balāk [q. v.]; to the south-west, the Gādir [cf. BULDUZ and URMŪ]; in the west, the

river of Urmia (cf. above) and Salmas (q. v.). In the north, the mountain of Meghaw overshadows the narrow strip of the northern shore (cf. TARDI and TARDI).

In the southern half of the Lake are several inhabited islands. Much more important is the mountainous peninsula of Shāhi (Shāhā, Shāhū) which is now separated from the eastern shore by a channel crossed at a ford.

In the Assyrian records, the "upper eastern lake" seems to correspond to the Lake of Urmia. Streck, in *Z.A.* xv. 263, thinks he can identify the latter as the "sea" mentioned by the Assyrians near the Maramia country; but this "sea" may be Lake Zaribār. In the account of the eighth campaign of Sargon (714 B.C.; ed. Thureau-Dangin, Paris 1912), the name of the lake is not mentioned.

Strabo, xi., ch. xiii., calls the Lake *Σαῶρα* (emended by St. Martin to *Καῶρα* = Kapōt "blue") and xi., ch. xiv., *Μαῦρανός*; Ptolemy, vi., ch. ii., calls it *Μαῦρανός* ("Μαῦρανός"; cf. MARAGHA). As a rule, the name Mantiane is connected with that of the Matienoi people in whose country Herodotus (I. 189, 202; v. 52) makes the Araxes (?) rise and the Gyndes (Diyālā). Marquart (*Süd-aramien*, 1930, p. 431) thinks he can identify these Matienoi (or Mantianoi) with the Mannaeans (Mann, Mannai; cf. above). Perhaps Mantiana should be connected with the name Manda which from the earliest times was applied to Indo-Europeans; cf. Reinach, *Les Mantiens*, in *Revue des études grecques*, vii., 1894, p. 313—318; Forrer, *Die Inschriften d. Hatti-Richter*, in *Z.D.M.G.*, 1922, p. 174—269, and Meyer, *Gesch. d. Altertums*, I/I., 2nd edition, p. 35, note 3.

The *Avesta* knows the lake by the name of Čačasta "deep lake with salt waters". Bartholomae, *Altir. Wörter*, col. 575, interprets the name as "shining white" (*weißschimmernd*). On its banks Kavi Haosrawah slew the Turanian Frašrasyān (Yasht, ix. 18 etc.). According to the *Bundahish*, xvii. 7, transl. West, the same Kai Khosraw destroyed the temple of idols near the Lake Čačast (cf. the *Shāh-nāma*, ed. Vullers, ii. 441, where Khandjast خاندجست should be emended to Čačast چاچست). From the name Čačasta must come the Arabic name of the sanctuary Shāh (= Gāznā, Ganza) to the south of the lake, identified by Rawlinson with Takht-i Sulaimān. (As Hoffmann has already pointed out (*Auszüge*, p. 252) Lailān is perhaps a better identification of the site of Shāh).

Another old name which was applied to the Lake is Kapōtān "blue" (cf. above). The Armenian geography of the viiith century gives Kaputan; cf. Marquart, *Erzählung*, p. 137 and Ibn Hawkal, p. 237: Kabūdān.

Istakhri, p. 181, calls the Lake Buhairat al-Shurūt, "the Lake of the Khāridīs", but more often it bears the name of adjoining towns: Urmia, Shāhi, Tardī (q. v.).

The name Shāhi (Shāhā) although only found late, is connected with the old fortress which stood on the peninsula to the N.E. of the lake. The fortress of Shāhi is known to Tabari, iii. 1171 and 1379 (under 200 = 815). It is mentioned in the time of the Khwārizmshāh Djalāl al-Dīn (Nasawi, p. 157). It was at Shāhi that the first Mongol

Ighāns Hūlagū and Abaka were buried (cf. Rashid al-Dīn, ed. Quatremère, p. 416; Hafiz Abrū quoted in *Le Strange*, *op. cit.*, p. 161; d'Ohason, *Hist. des Mongols*, iv. 340). Abu 'l-Fidā' calls the Lake Buhairat Tālī. It is not clear if Tālī = Shāhi. The Persian translation of Istakhri (cf. de Goeje in *Ibn Hawkal*, p. 247, note 28) seems to distinguish between the two names, and the fortress of Tālī mentioned by Nasawi, p. 153—154 (cf. Yāqūt, iii. 541 who takes Tālī to be a Persian word) would seem rather to be connected with the west bank. In this case, it should be sought at Güwercin-Kāl'a on a cliff which rises above the lake on the Salmas shore; cf. Ker Porter, *Travels*, ii. 593; Khanykov, in *Freytag's, Verhänd. Geogr. Anst.*, 1852, vi. (Khanykov found at Güwercin-Kāl'a the inscription of a certain Abū Nāsir [al-Nasr?] Ḥusain Bahādur Khān [should this Ḥasan be Uzūn Ḥasan, whose title was exactly Abū 'l-Nasr?], and Lehmann-Haupt, *Armenien*, i. 306—314).

On the other hand, it remains to be seen whether Güwercin-Kāl'a is not identical with the stronghold of Yakdur (or Bakdur) which Tabari mentions along with Shāhi and which in turn may correspond to the mountain of Bakyr (which may be read Bakdr; cf. *Bundahish*, xii. 2 and 20) where Afrāsiyāh (Frānāsīyan) took refuge. In the *Avesta*, Yasht v. 49; ix. 18, Khosraw slays him "behind Lake Čačasta", which seems to indicate the region west of the Lake. [The later tradition puts the place of Afrāsiyāh's death in Arrān; cf. *Shāh-nāma* and especially Nasawi, *Sirat Djalāl al-Dīn*, p. 225; transl. p. 375].

The Arab geographers know that the salt waters of the Lake will not support organic life. According to Tabari, iii. 1380, the Lake does not contain fish or anything of value. Istakhri (p. 189) and Gharnāṭi (in *Kawwini*, p. 194) alone affirm the contrary. The first talks of the "fish-animal" called "water-dog"; Gharnāṭi delights in wonderful stories, which are later repeated by Ewliyā Celābi.

(V. MINORSKY)

URMU, a district in Ādharbāidjān.

According to Balādhuri, p. 328, Sa'īd b. al-'Ās, sent to conquer Ādharbāidjān, attacked the people of Mūkān and Gīlān. A number of inhabitants of Ādharbāidjān and Armenians who had gathered in the nāhiya of Urm and at *تلونكر* *Balwānkaradj

were defeated by one of Sa'īd's captains. The leader of the rebels was hanged on the walls of the fortress of Bādjarwān (*Nuḥas al-Kulūb*, G.M.S., p. 181; Bādjarwān was 20 farsakhs north of Ardabil).

Ibn Khurādādhbih, p. 119, mentions the citadel of Urm between al-Bādhā (a town of Bābak's on a river which flows into the Araxes above the river of Ardabil) and Balwānkaradj. Ibn al-Fakih, p. 216, speaks of several districts (*ruḥāt*) of Urm. Yāqūt, i. 216, mentions the region (*ruḥ*) of Urm but gives only an abridgment of Balādhuri.

The names mentioned by Balādhuri and by Ibn Khurādādhbih suggest a district in the N. E. of Ādharbāidjān, perhaps in the Karadja-dagh of the present day (the capital of which is Ahar and in the northern districts of which we find Armenians). [On the other hand, the element *Balwān could be connected with the name of the river *Balhārū (Bolguru) in Mūkān; q. v.].

(V. MINORSKY)

'URS, *'Urus* (A., Pl. *arūs* and *urūṣ*), originally the leading of the bride to her bridegroom, marriage, also the wedding feast simply; whence a denominative verb iv. *arāsa* "to celebrate a marriage". *Arūs* means both bridegroom and bride; in modern linguistic usage this term has however been supplanted by *aris* "bridegroom" and *arūsa* "bride" (as early as the 1000s *Nights*, cf. Dozy, *Supplément*). Two kinds of weddings have to be distinguished: *urs* is the wedding performed in the tribe or the house of the man, and *umra* is the wedding performed in the house or tribe of the woman (this distinction is already made by Ibn al-'Arabī [d. 231—845] in the *Lisān al-'Arab*, vi. 283; cf. Fīrābādī, *Kāmil*, s.v. *mar* and *ur*). The two forms agree for the most part in practice; they only differ in the choice of place for the main ceremonies and in the fact that in the *umra* the *saffa* of the bride is omitted.

a. "We learn little from the poems" says G. Jacob "of the wedding customs" of the pre-Muḥammadan Arabs. They seem to have been very simple in the Arabian Peninsula itself, as is still the case among the Beduins (cf. below). The pomp and display of later centuries, especially in the bridal procession, was probably unknown. The wedding lasted a week, whence it is also called *uḥū* (cf. *Agḥāmī*, xii. 145). The bride is adorned, perfumed and painted with *kuḥl*. There is an old proverb which says: "The scent behind a bride cannot be concealed" (Nöldeke, *Delectus*, p. 48, 4; Māldīnī, *Proverbia*, ed. Freytag, xxiii. 269). The bride is called "the conducted one" (cf. *Antara*, xxvii. 1); she was therefore conducted to the bridegroom, usually by a number of women without any pomp, but very quietly and simply. This at least is indicated by the story of 'Ukāl b. 'Ullāfa who betrothed his daughter to the caliph Yazīd I; he made it a condition that the caliph's people

should not come for his daughter but that he should bring her himself on a camel (*Agḥāmī*, xl. 90). Sometimes she was brought in a litter (*minafa*) (cf. Djawhūrī, *Ṣiḥāḥ*, s.v. *ṣ-f-f*), as is still the case in Mecca (Sinnock Hurgroze, *Arabia*, ii. 182). A special tent was always put up for the young couple. About the bridegroom there is an old proverb: "The bridegroom wants little to be an amir (or king)" (Djawhūrī, *Ṣiḥāḥ*, s.v. *ṣ-r-r*; Māldīnī, *Proverbia*, xii. 143).

In the lands adjoining Arabia on the other hand, weddings were celebrated with great splendour. Thus we are told (*Kiṭāb al-Aghāmī*, xx. 23) of a Persian wedding in the 'Irāk with a splendid bridal procession; similarly for Syria as early as I. Macc., ix. 37: "... ταύτην γάμος πύγος καὶ ὕψους τῶν ὀρέων ... μετὰ παρασκευῆς μεγάλης. As late as the beginning of the third (ninth) century, we find a simple Beduin much surprised at a splendid wedding in North Syria (*Agḥāmī*, xii. 35 sq.), which shows that Syrian usages were foreign to the Arabs (cf. on the above section: Freytag, *Einführung in das Studium der arabischen Sprache*, Bonn 1861, p. 203—204; Wellhausen, *Die Räte bei den Arabern*, in *N. G. W. Göttingen*, 1893, p. 441 sq.; Jacob, *Altharab. Belangen*, Berlin 1897, p. 57—58).

Δ The records in Tradition are on the whole in keeping with the simple usages of the Arab pagan period. 'Ā'isha wore at her wedding with the Prophet a robe of red striped material which came from Bahrain (*dir* *ḥifḥ*; cf. Ibn al-Athīr, *Nihāya*, s.v. *ḥ-f-r*) and "every woman in Medina, when dressing (for her *uḥū*), used to borrow it from her" (Bukhārī, *Ḥiṣā*, bāb 34). For Fāṭima's wedding with 'Alī, 'Ā'isha and Umm Salama made the preparations at home; they scattered soft dust from the Baḥā' over the ground and filled two cushions with fibre (*ḥif*) and teased it out. They laid out dates and figs to eat and sweet-tasting water to drink; they also put up at one side of the room a stand for the clothes and the water-skin (Ibn Mādjā, *Nihāya*, bāb 24). Fāṭima's trousseau consisted of a silken robe with fringes (*ḥamīl*), a water-skin (*ḥirḥa*) and a cushion filled with rushes (*ḥalḥīr*) (Nasā'ī, *Nihāya*, bāb 81). In another tradition the Prophet allows considerable expenditure on large carpets with fringes (*anḥāl*) (Nasā'ī, *Nihāya*, bāb 83). From numerous traditions (Bukhārī, *Nihāya*, bāb 58, 64; *Taḥṣīl*, Sūra xxiii. bāb 8; Ibn Mādjā, *Nihāya*, bāb 21, 24; Nasā'ī, *Nihāya*, bāb 18, 77; Ahmad b. Ḥanbal, iii. 196), it is evident that the bride was conducted by her mother and other female relatives to the house of the bridegroom. When the Prophet married 'Ā'isha who was then six years old, she was brought by her mother Umm Rūmān to the Prophet's house; there women were waiting her and greeted her with "For good, and bliss, and good fortune". The women then washed her hair and adorned her while the Prophet stood smiling by. She was then handed over by the women to the Prophet (Muslim, *Nihāya*, bāb 69; cf. Bukhārī, *Nihāya*, bāb 58). Tradition gives no further details of the toilet; but the men seem also to have been perfumed; a perfume was used which left yellow stains (*ḥalḥāḥ*, *zafar* or *sa'far*), such as the Prophet noticed on 'Abd al-Rahmān b. 'Awf still a few days after his wedding (according to Anas b. Mālik in Bukhārī, *Nihāya*, bāb 7, 55, 57; Muslim, *Nihāya*, tr. 79—81; Nasā'ī, *Nihāya*, bāb 67, 75, 84; Ibn Mādjā, *Nihāya*, bāb 24; Dārimī, *Nihāya*, bāb 22; Ahmad b. Ḥanbal,

iii. 163, 190, 204, 227, 271). According to a tradition transmitted by Abū Huraira the Prophet uttered the following blessings at weddings: *Baraka 'lāhūm* (var. *laka*) *wa-baraka 'lāhūm* (var. *'alāhū*) *wa-ḥamda 'lāhūm* (var. *'alā 'lāhū*) or instead of the third part: *wa-baraka laka fīkū* (Ibn Māḍja, *Nikāḥ*, bāb 23; Tirmidhi, *Nikāḥ*, bāb 7; Abū Dāwūd, *Nikāḥ*, bāb 35; Ahmad b. Hanbal, ii. 381; cf. i. 201; iii. 451; Nasā'i, *Nikāḥ*, bāb 73; Dārimi, *Nikāḥ*, bāb 6), while he forbade the wish from the period of the Djahiliyya *bi-l-riḥa*, *wa-l-hamla* "in harmony and with sons!" (Nasā'i, *Nikāḥ*, bāb 73; Ibn Māḍja, *Nikāḥ*, bāb 23; Dārimi, *Nikāḥ*, bāb 6; Ahmad b. Hanbal, i. 201; iii. 451). The bride was conducted to the bridegroom by young girls who sang *ghazals*; two opening lines of such a *ghazal* are preserved: *Atainākum atainākum fa-ḥayyūnā wa-ḥayyūnā* "we come to you, we come to you, may (God) give us long life and give you long life" (Ibn Māḍja, *Nikāḥ*, bāb 21; cf. also Bukhārī, *Nikāḥ*, bāb 64) or *atainākum atainākum fa-ḥayyūnā nuḥayyūnā* (so it should be read!) "We come to you, we come to you, then greet us, we greet you" (Ahmad b. Hanbal, iv. 78). The participation of women and children in the wedding ceremonies is according to Anas b. Malik expressly approved by the Prophet (Bukhārī, *Nikāḥ*, bāb 76; *Manārik al-Anjūr*, bāb 5). On these occasions young girls used to beat tambourines (*duff*) and sing of the death of the champions of Badr, which the Prophet is definitely said to have permitted (Bukhārī, *Nikāḥ*, bāb 49; *Maḡhīz*, bāb 12; Ibn Māḍja, *Nikāḥ*, bāb 20, 21; Tirmidhi, *Nikāḥ*, bāb 6; Nasā'i, *Nikāḥ*, bāb 72, 80; Ṭayālīsī, N^o. 1221; Ahmad b. Hanbal, iii. 418). Other instruments are mentioned, such as another variety of tambourine (*ḡhīrāḡ*; Ibn Māḍja, *Nikāḥ*, bāb 20) and the drum (*ṭabl*; Ibn Māḍja, *Nikāḥ*, bāb 21). The object of this music was to call public attention to the marriage (Ibn Māḍja, *Nikāḥ*, bāb 20; Tirmidhi, *Nikāḥ*, bāb 6; Ahmad b. Hanbal, iv. 5). According to one tradition, the Prophet is even said to have forbidden marriages to be performed in complete quiet (Ahmad b. Hanbal, iv. 78).

A wedding feast (*walima* or *ṣ'ūm*) for the men was part of the wedding (Bukhārī, *Nikāḥ*, bāb 69; Ahmad b. Hanbal, v. 359; Zaid, *Muḡmū*, N^o. 949; etc.). A feast is obligatory for the first day (*ḥayḡ*) and commendable for the second (*ma'raḡ*; Tirmidhi regards it also as *ḥayḡ*), and on the third day ostentation (*sum'a wa-riḡ*), i.e. done in order that people may hear and see it (Tirmidhi, *Nikāḥ*, bāb 10; Abū Dāwūd, *Aḡima*, bāb 5; Dārimi, *Aḡima*, bāb 28; Ibn Māḍja, *Nikāḥ*, bāb 25; Ahmad b. Hanbal, v. 28, 371). Sa'id b. al-Musaiyab (according to Dārimi; the Prophet) is said to have accepted the invitation for the first two days, but refused that for the third (Abū Dāwūd, *Aḡima*, bāb 5; Dārimi, *Aḡima*, bāb 28). Bukhārī, in the super-scription to *Nikāḥ*, bāb 72, speaks of a week's feasting and says that the Prophet did not limit it to one or two days. The feast at the Prophet's wedding with Ṣaffiya consisted of *ḡhīr*, a dish of dates, curds (*akḡif*) and fat, to which according to some traditions was added meal of roasted barley (*ḡmīḡ*) (according to Anas b. Malik in Bukhārī, *Nikāḥ*, bāb 13, 61, 69; *Buyū*, bāb 111; *Ḍiḡḡād*, bāb 73; *Aḡima*, bāb 8; Muslim, *Nikāḥ*, tr. 84, 87, 88; Nasā'i, *Nikāḥ*, bāb 79; Ahmad b. Hanbal, iii. 99, 102, 159, 195, 264); according to another tradition, the Prophet used on this occasion another

1 1/2 *mudd* of the best kind of dates (*ṣaḡḡwa*) (according to Ḍiḡḡār b. 'Abd Allāh in Ahmad b. Hanbal, iii. 333). At the Prophet's wedding with Zainab (according to Anas b. Malik in Muslim, *Nikāḥ*, tr. 87, 89, 91, 92; Ahmad b. Hanbal, iii. 98, 105, 172, 196, 200, 263) and at the wedding of Rabī'a al-A'alami (Ahmad b. Hanbal, iv. 58) bread and meat were given, which seems to have been usual along with *ḡhīr* as in some cases it is specially mentioned that there was no bread and meat (Ibn Māḍja, *Nikāḥ*, bāb 24; Malik, *Nikāḥ*, bāb 48; Ahmad b. Hanbal, iii. 99, 195, 264; Bukhārī, *Nikāḥ*, bāb 13, 61; Nasā'i, *Nikāḥ*, bāb 79). In other passages 2 *mudd* of barley is mentioned (Bukhārī, *Nikāḥ*, bāb 71; Ahmad b. Hanbal, vi. 113), a sheep and millet (Ahmad b. Hanbal, v. 359); but for the *walima* at least a sheep should be slaughtered (according to Anas b. Malik in Bukhārī, *Nikāḥ*, bāb 7, 55, 57, 69, 70; *Dāwūd*, bāb 54; *Adab*, bāb 67; *Buyū*, bāb 1; Muslim, *Nikāḥ*, tr. 79—81, 90; etc.). Anas b. Malik also records that his mother Umm Sulaim sent the Prophet a dish of dates (*ḡhīr*, see above) on the occasion of a marriage and that the Prophet offered it to his guests in groups of ten until they were satisfied (Muslim, *Nikāḥ*, tr. 94, 95; Nasā'i, *Nikāḥ*, bāb 84). Saḡl b. Sa'd records that at the wedding of Abū Asyad al-Sa'idi his bride offered the guests after the feast a beverage made by steeping dates (*naḡḡ*), which she herself had prepared (Bukhārī, *Nikāḥ*, bāb 72, 78, 79; *Aḡriḡa*, bāb 7, 9); Bukhārī concludes from this that on the one hand non-intoxicating beverages are allowed at weddings and on the other that women may wait on the men at a wedding. — As a rule the traditions give no information about the time of the *walima*. In the few passages which admit a definite time, the *walima* took place after the bride had been taken to the bridegroom's house but before the wedding night (Bukhārī, *Taḡfir*, Sūra xxxiii., bāb 8; Ahmad b. Hanbal, iii. 196 and the other traditions about Zainab's wedding); but the *walima* at Ṣaffiya's wedding seems to have taken place next day, probably as a result of the special conditions, as the Prophet married her on the return of the expedition to Khaibar (Bukhārī, *Buyū*, bāb 111; *Ḍiḡḡād*, bāb 73; Muslim, *Nikāḥ*, tr. 88; Ahmad b. Hanbal, iii. 195 and the other traditions about this wedding; cf. however one tradition about Zainab's wedding in Ahmad b. Hanbal, iii. 98, 105). — An invitation to a wedding feast ought always to be accepted (Muslim, *Nikāḥ*, tr. 100, 101; Abū Dāwūd, *Aḡima*, bāb 1; Ahmad b. Hanbal, ii. 22). 'Abd Allāh b. 'Omar used never to refuse an invitation even when he was fasting (Bukhārī, *Nikāḥ*, bāb 78; Muslim, *Nikāḥ*, tr. 103; Dārimi, *Aḡima*, bāb 40). People of all conditions, rich and poor, should be invited; in one tradition given by Abū Huraira, we read: "The wedding feast at which the rich eat and from which the poor are kept away is an evil feast" (Ahmad b. Hanbal, ii. 494). For further references see Wensinck, *Handbook of Early Muhammadan Tradition*, Leyden 1927, s. v. *Walima* and the article *WALIMA*.

The following two traditions presumably refer to the procedure in the bridal chamber: "If any one of you marry a woman ... he shall take her by her forelock and pray (to God) for blessing (*baraka*) ... and pray to God for refuge from the accursed Satan" (Malik, *Nikāḥ*, bāb 52) and "If any one of you marry a woman ... he shall say:

O God, I pray Thee for her good and for her good inclinations which Thou hast created, and I seek refuge with Thee from her evil and from her evil inclinations which Thou hast created" (Abū Dāwūd, *Nikāḥ*, bāb 44). Umm Salama for her wedding night with the Prophet prepared a meal of barley and fat (*ʿayḍa*) (Ahmad b. Hanbal, vi. 307). According to many traditions (Anas b. Malik, among others), it is a *sunna* for the young husband to spend seven days and nights with his young wife if she is a virgin (*ḥayṣa*) and only three days and nights if she is not (*ḥayṣa*); only after this does the regular rotation with the other wives begin (Bukhārī, *Nikāḥ*, bāb 101, 102; Abū Dāwūd, *Nikāḥ*, bāb 33; Tirmidhī, *Nikāḥ*, bāb 40; Muslim, *Raḍā*, tr. 45; Zaid, *Madīna*, No. 737; Ibn Mādjā, *Nikāḥ*, bāb 26; Malik, *Nikāḥ*, bāb 15; on the Prophet's marriage with Sāfiya [who was *ḥayṣa*]: Abū Dāwūd, *Nikāḥ*, bāb 33; Ahmad b. Hanbal, iii. 99; on the Prophet's marriage with Umm Salama [who was *ḥayṣa*]: Muslim, *Raḍā*, tr. 41-44; Ibn Mādjā, *Nikāḥ*, bāb 26; Abū Dāwūd, *Nikāḥ*, bāb 33; Malik, *Nikāḥ*, bāb 14; Ahmad b. Hanbal, vi. 292, 295, 307, 343, 320, 321 [this was done by her request; the Prophet had given her the choice between seven and three days]). According to another tradition, the young husband should only stay three days even with a virgin and only two with a bride who is not (Ahmad b. Hanbal, ii. 178; Tirmidhī, *Nikāḥ*, bāb 40).

As to the season of the year, the month of Shawwāl is expressly mentioned in Tradition as the month in which the Prophet celebrated his wedding with ʿĀʾisha (Nasāʾī, *Nikāḥ*, bāb 18, 77; Muslim, *Nikāḥ*, tr. 73; etc.).

2. In the Fīkh, the Mālikīs pay special attention to wedding customs, since most of them are primarily intended to call public attention to the conclusion of the marriage. According to Mālik b. Anas as well as Ibn Abī Lailā (cf. Sarakhsī, *Mabṣūṭ*, v. 30) in contrast to other schools, making the wedding public (*ʿiṣā*) is a necessary condition for the validity of a marriage. Witnesses are not essential for the conclusion of a contract of marriage, although with the Mālikīs it is usual to have them in practice; if the two witnesses were not present at the conclusion of the contract they must be present on the night of the wedding and for example push the bridegroom into the bridal chamber (Kairawānī, *Riḍā*, Cairo 1338, p. 66; Khali, ii. 1459; Kāsim, *Baḍʿ al-Sanāʿ*, Cairo 1327, ii. 252; Ibn Rashd [Averroes], *Bidʿat al-Mudṭalib*, Cairo 1349, ii. 16 where we already find witnesses mentioned among the essentials). On the same grounds of publicity, Khali (ii. 1) also recommends congratulations to the bridal pair. The doors of the house should therefore not be closed at the *walimat al-ʿurs* (Khali, ii. 117). This *walima* is considered praiseworthy (*mustaḥabb*) among the Mālikīs, Hanafīs and Hanbalīs while the Shāfiʿs hold a stricter view: according to one view, it is *sunna muʾakkada*, according to the others, it is even *wājib* (cf. Shīrāzī, p. 205; Qhazālī, ii. 22; Nawawī, p. 90; Ardabīlī, ii. 94). According to Khali, it should be held the day after the wedding, according to other Mālikīs, however, before, so that the wedding is only consummated after its public proclamation (Tidjānī, *Tuḥfa*, p. 35). A wealthy man should kill at least a sheep, a poorer man provide as much as he can afford (Shīrāzī, Ardabīlī). To accept an invitation to a *walima* is according to the Hanafīs

praiseworthy (*mustaḥabb*), among the Mālikīs, Hanbalīs and Shāfiʿs on the other hand a duty (*wājib*; Shāfiʿ, *Umm*, vi. 178 says: *ḥaḍḥ*). Among the Shāfiʿs it is praiseworthy to accept the invitation for the second day also; on the other hand, it is best to refuse it for the third day (Nawawī describes acceptance for the third day as *makrūh*). If the person invited is fasting, he should nevertheless accept the invitation; he need not however eat anything; it is best however if he breaks his fast unless he is pledged to observe it. If an intoxicated man is at the *walima* or wine or anything else forbidden, it is best to stay away; similarly if there are in the room representations of living creatures, even if one tramples on them (e.g. on carpets). According to Shīrāzī, one should also stay away from the *walima* where songs are sung, even if one does not listen to them and only pays attention to *ḥadīṭ* and eating. Music is on the other hand permitted to some extent — for example that of the tambourine (*duff*) already mentioned in tradition; Khali gives a list of permitted instruments: another kind of tambourine (*ghirgiz*), an older kind of lute (*misḥar* [cf. 'Up]; cf. H. G. Farmer, *History of Arabian Music*, London 1929, p. 46-47), a kind of flute (*sumnāra*) and horns (*ḥaḍ*).

The question is much discussed whether one should scatter among the crowd at weddings nuts, almonds, sweets (Ardabīlī also mentions dates, dirhams and dinars). According to Dimishqī (ii. 76), Abū Hanifa and Ahmad b. Hanbal had no objections, while Mālik, Shāfiʿ and Ahmad b. Hanbal in a second opinion declare the practice *makrūh*. The views of the later Shāfiʿs are however divided. Muḥṣin recommends the omission of the practice, as the things would be hurriedly picked up as plunder by the people; it is not however forbidden except when the people fall upon one another and try to take the things from each other. Qhazālī allows the scattering of sweets, since it was done in the time of the Prophet [i. no reference in the canonical works; cf. above], and Nawawī and Ardabīlī, while regarding it as permitted, consider it better omitted. Shīrāzī on the other hand declares it *makrūh*.

d. Later usages down to the present day. For the older period we are dependent on occasional scattered notes; it is only with the literature of European travellers (from the xvth century), with the recording of texts in dialect and the systematic collection of folklore in recent decades (Westermarck for Morocco, Jaussen for Nablus etc.) that we have a wealth of material which it is almost impossible to deal with. These sources are however not all of equal value. On

the one hand, particularly with the earlier literature, we have first of all to investigate the trustworthiness of the traveller. To take a striking example: The Fleming van Ghistels who made a pilgrimage in 1481-1485, says (*Voyage*, Gent 1557, p. 15) that the bridal pair before the marriage contract is signed are put one in each of two adjoining rooms with an eyehole through which they can see one another naked. This is contradictory to Muslim ideas. (Cf. however the fact that some jurists like Da'ūd al-Zāhiri permit the man before marriage to see the whole of the woman's body except the pudenda; Ibn Rushd, *Bidāya*, ii. 3; Dimishki, *Fiṣḥa*, ii. 62.) On the other hand, there are gaps in the records of the travellers; they only record what is done in the street or more or less publicly. Full accounts of the customs observed, as in Leo Africanus and Lane, are by no means numerous and can be supplemented for the earlier period by scattered references in the *Alf Laila wa-Laila* and the popular romances.

Wedding customs are more or less distinct according to country. This is most clearly seen on the periphery of the Muslim world, for example in the Malay Archipelago, in Central Africa or among the Kirghiz and Turkomans. Here Islam has taken over old local customs and sometimes adapted them to its point of view. For the original lands of Islam however, the same observation can be made, except that the process was completed in the early centuries of Islam. In modern Syria and Egypt the customs among Muslims and Christians are almost identical except as regards purely ecclesiastical and religious matters (cf. the sketches in Littmann, *Neuarabische Volkspoesie*; Jaussen, *Contumes Palestiniennes*; Blackman, *The Fellāḥin of Upper Egypt*, p. 93). This fact shows that we have to deal in this case with old customs of the nearer East, at any rate not with specifically Muslim practices. In this connection we may call attention to the already mentioned pompous pre-Islamic practices in Syria and Mesopotamia. Pre-Islamic origin can in some points be definitely proved. In many districts the Muslim bride wears a crown of flowers or of pasteboard (cf. below); in this I see the adoption of a practice of the Christian east where the crowning of the bride was and still is a part of the wedding ceremony. (This crowning is mentioned as early as a liturgical poem by Ephraim the Syrian in Densinger, *Ritus Orientalium*, Würzburg 1864, ii. 443; in Barhebraeus, *ibid.*, ii. 385; among the Copts of the 12th century, *ibid.*, ii. 365; cf. also *ibid.*, ii. 391-399, 408-409, 433-434.) The carrying of lights in the bridal procession may also be of Christian origin (for the Copts of the 12th century, cf. Densinger, *op. cit.*, ii. 364; cf. the carrying of lights in the Mawlid festival and its Christian origin, *ibid.*, p. 420). The ceremonies on the seventh day have also their parallels in the Christian liturgy of the East; on the seventh day the bridal crown is solemnly removed among the Copts (Densinger, *op. cit.*, ii. 380).

From the point of view of method, it would be more correct to deal with wedding customs by regions. But this would take up too much space here. I shall therefore endeavour to give the most important customs in vogue in towns in the old lands of Islam and as far as possible to treat them historically. It should be noted in this connection that practices differ in different levels of society.

Therefore, three groups have at least to be distinguished: customs in the towns, among the fellāḥin and among the Beduins. The two last named are essentially simpler and agree more with the old Arab practices than do those of the town-dwellers.

Among the Ruwala Beduins (Musil, *The Manners and Customs of the Ruwala-Beduins*, New York 1928, p. 228-229), a camel is killed on the morning of the wedding before the bridegroom's tent and its flesh distributed. In the course of the day the bride puts up her tent—the woman always brings it with her—and at night she is taken by a few female relations in all secrecy to this tent; soon afterwards the bridegroom enters the tent. There are no ceremonies, no singing or dancing, not even the usual *zaghārit* cries of the women. On the next morning the bridegroom goes to his relatives while the bride is visited by the women and congratulated; she then receives a gift from her father-in-law and remains for seven days in her tent while the bridegroom goes about his usual business. He must however spend seven nights with his young wife (cf. the traditions above quoted). Among other Beduin tribes in Arabia Petraea (Musil, *Arabia Petraea*, iii. 196-197) the youths and maidens sing bridal songs and dance. Here as on the Sinai Peninsula (Burckhardt, *Bemerkungen über die Beduinen*, Weimar 1831, p. 216-217) the bride runs away into the desert after the first night, sometimes for six days, sometimes even for longer and the husband must go to look for her.

Between these very simple practices of the Beduins and the highly developed rites of the town-dwellers numerous intermediate stages are to be found among the fellāḥin, among whom we can observe the gradual advance of usages from the towns.

Let us now come to the towns. Weddings were celebrated with great pomp at the 'Abbāsī court in Baghdad. In the sources, sums of 50 and 70 million dirhams are mentioned as having been expended by the caliphs Hārūn al-Rashīd and Ma'mūn for their weddings. But the common people also on such occasions liked to appear wealthier than they really were. Even in early times, the coiffure used to lend ornaments to the bride (cf. the tradition above quoted about 'Aṣṣha). The carpets, utensils etc. were also sometimes borrowed (Mez, *Revue de l'Islām*, p. 404, 453).

As was mentioned early in the article, two kinds of weddings have to be distinguished: the *'urs* and the *'umra*. The *'urs* seems to be the usual kind; at least it is almost exclusively the one that is described by travellers. We find the *'umra* for example in the case of the wedding of the caliph Ma'mūn with Būrān (210=825; Tabari, *Annales*, ed. de Goeje, iii. 1081-1082); in Ibn al-Muḍāwir (d. 690=1291) in Landberg, *Études sur les dialectes de l'Arabie méridionale*, ii/1. 859 for Mecca; *Alf Laila wa-Laila*, transl. Littmann, i. 263-264; in the Karagöz play 'The Wrong Bride' in Ritter, *Karagöz*, Hanover 1924, p. 109-110.

Here we may also note that these wedding customs are only observed when a woman marries for the first time. When she marries for the second time they are content with the legal *malṭa*. The parties often agree to have no festivities (Snouck Hurgronje, *Mekka*, ii. 155; Lane, *Manners and Customs*, London 1871, i. 219-220).

The celebrations extend over several days; they

usually begin on Monday and the actual wedding takes place on Thursday. In Arab popular poetry we therefore have frequent reference to seven days of celebration while the *duhla* takes place on the eighth (e.g. *Alf Laila wa-Laila*, ii. 461; iii. 437; *Sirat Saif*, iii. 22, 33; v. 28; xii. 59). When however we find references to 30 days of feasting and the 31st night as the *lailat al-duhla* (*Alf Laila wa-Laila*, iii. 642; *Sirat Saif*, xii. 45; xiii. 12) or when 40 days and nights are mentioned in Turkish romances and fairy tales (Spies, *Türkische Volksbücher*, Leipzig 1909, p. 25), this is only a stereotyped literary form to express that the wedding celebrations lasted a long time.

The principal usages are as follows:

1. Immediately after the formalities of the marriage contract, the *malima* takes place in the bride's house; only men are present at it. This is already found in *Hadith*. On this occasion sweets, money and other things are often thrown to the crowd. For example the vizier al-Hasan b. Sahl at the wedding of his daughter Būṭn with the caliph al-Ma'mūn (210 = 825) had tickets scattered among the nobles on which were inscribed the names of pieces of land, slave-girls and the distinguishing marks of horses. Any one who got one of the tickets received what was written on it. The vizier also had gold and silver coins, little bags of musk and pieces of amber thrown among the populace (Tabari, *Annals*, ed. de Goeje, iii. 1083 *infra*; Ma'sūdi, *Murūj al-Zahab*, Paris 1873, vii. 65 *sq.*). — At the *malima* on the occasion of the wedding of the Mamlūk Muḥammad b. al-Sulṭān (920 = 1514) wine (*sakar*) was served in vessels of Chinese porcelain (Ibn Iyās, iv. 406). In general however, the *malima* consisted simply in the offering of sweets and other dainties (cf. *Alf Laila wa-Laila*, ii. 23-24); sometimes however, roast meat and vegetables etc. were also served. Music and dancing are not usual on this day. In Nablus (Syria), according to Jausen, there is only a meal for the women, while in Fās a feast is held in the house of both bride and bridegroom (Leo Africanus [1526], Tharaud [1930]). The real wedding ceremonies do not usually begin until a week later.

2. The bride's bath. A few days before the wedding the bride goes to the bath with her friends; rich people perform this ceremony in their own house; usually however, a public bath is hired for a whole or half day. In Cairo in Lane's time, they went with great pomp to the bath (*saffat al-hammām*). In front walked two men carrying dishes on which lay the bath requisites covered; then came water-carriers and men with rose water and censers to sprinkle the passers-by and offer them beverages. Then came musicians with oboes and drums and the bride's friends two by two. The bride herself thickly veiled with a crown on her head walked between two female relatives under a canopy carried by four men; musicians brought up the rear of the procession. In the bath itself there were all kinds of diversions and feasting while women-singers sang songs. In the evening in the house there was a banquet for the women at which women-singers sang to pass the time. In modern Fās, the bride is taken to the bath and led home dressed like a doll with shouts of joy (Tharaud [1930]). In xvth century Morocco the bride's bath before the wedding was unknown (Leo Africanus) while in Algiers in the same

period, according to Haedo, the bridal bath was usual. It is also unknown in Mecca. In Syria and Asia Minor they go very quietly to the bath while Cotovius at the end of the xvth century in Syria saw a solemn procession with wax candles.

In the bath itself numerous ceremonies and diversions take place. In Nablus (Jausen [1927]) the bride is put on a throne in the bath while her friends sing and dance around her with lights in their hands. They then all bathe, the bride last. After the bath the bride is sprinkled with perfume and refreshments are taken. She is then taken home very quietly and thickly veiled. For Constantinople, White (c. 1840) also reports that the bride sits on a throne while dramatic presentations are given and refreshments offered. Then comes, just as in Persia (Polak [c. 1860]) and Tunis (Berthelin [c. 1900]), the henna ceremony which in other lands does not take place till next day. The finger-nails (in Persia also the hair) are dyed with henna. The guests thereupon distribute money to the bath attendants. This is called the 'henna gift'.

3. The adornment of the bride. This day is often called after the principal ceremony *lailat al-hanna* or *henna gahiri* (e.g. in Mecca, Egypt, Tunis and in Turkey). In the presence of her female relations and friends, the bride's eyelids are blackened with *duhl* and the hands and feet coloured with henna. In doing this the hands and feet must be coloured exactly the same and no pictorial representations put on them (cf. Abū Bakr Ahmad b. Muḥammad al-Marwazi [d. 275 = 888], *Kitāb al-Warā'*, Cairo 1340, p. 104). In earlier times, yellow patches (*nafat al-urūq*) used to be put upon the cheeks (Dhu l-Rumma [d. 107 = 719] in *Agḥāni*, xvi. 115; Mā'idān, *Fraseria*, ed. Fraytag, ii. 762, N^o 24; Sharīf [d. 619 = 1222] in the commentary on *Hariri*, *Mafāmat*, p. 610). On the same day the bride's wedding ornaments are put on, including necklaces, bridal girdle (*hiṣṣa*; cf. *Sirat Saif*, xvii. 53), crown (*taḍ* or *skil*; oldest reference: *Sirat Saif* [xvth century], iv. 36; xvii. 53; cf. also the title of the celebrated dictionary *Taḍ al-'Arūs* [xviii century]). The bride on these occasions often puts on different dresses (e.g. in Sfax: Nabeshuber; cf. *Alf Laila wa-Laila*, i. 265 *sq.*: 6 different dresses). The great display in silver pendants and foot-rings, pearls, henna, aloe-wood (for perfuming the face), rose-water, sesame-oil and other aromata is already mentioned in the papyri (cf. *Papyrus Erziehung Rainer*, *Führer*, N^o 584, 1014). After being dressed the bride is put on a raised seat or throne, where she has to sit quite still with downcast eyes while the women guests sing, dance and make music. These ceremonies often last far into the night (for the older period cf. Leo Africanus for Morocco; d'Arvieux [1674], *Mémoires*, Paris 1735, v. 287, for Algiers and the other travellers). In Mecca and Sfax (Nabeshuber) the enthronement does not take place till the next day. In Cairo (Lane [1835]) on this day the bride takes a lump of henna in her hand and her friends stick coins into it. In Nablus (Jausen [1927]) there is a similar collection for the bride. In Constantinople also we find the henna ceremony; but before it, all the women guests with wax candles in their hands go into the garden with the bride and dance there in long rows (Garnett [c. 1890]). Pictures of the bride in her wedding

finery: Snoeck Hargronje, *Mekka*, Bilder-Atlas pl. 25; Goichon, *La vie féminine au Mésopotamie*, Paris 1927, pl. 5.

4. The bridal procession (*saffat al-arūs*), and the elevation to the throne. As Friday is frequently recommended by the theologians for the completion of marriage (cf. Ghazālī in H. Bauer, *Islamische Ethik*, Halle 1917, II. 90) it is the custom to take the bride to her new home on Thursday evening when she passes the night with her husband. The bride is usually fetched by her bridegroom and his relations and accompanied by her own relatives in an imposing and solemn procession. From the superscription alone in Bukhārī, *Nikāḥ*, lib. 62 (*al-bint bi-l-ḥaḥār bi-ḡhair markab wa-fa nīrān*) it is clear that the solemn procession was general as early as the beginning of the third (ninth) century; in those days the bride was taken at dusk in a litter borne on a beast of burden and accompanied by lighted torches (cf. Tiddjānī, *Tuhfa*, p. 40-41, who for this reason makes a distinction between a bridal procession by day and one by night; but the *bi-ḡhair markab* is against this). The other oldest references known to me for the bridal procession are the wedding of Umm al-'Ulūf in Kaḥrawān (425 = 1024); the bride was taken on Thursday by slaves and nobles of the kingdom to the tent put up for her (Ibn 'Idhārī, *Bayān al-Mughrib*, ed. Dozy, I. 284). In a story from al-Yamāma, the bride is accompanied by slave-girls who sing and play stringed instruments (*ma'āzif*) (Kaḥrawān [d. 682 = 1283], *Aḥḥār al-Bilād*, ed. Wüstenfeld, II. 88). A miniature by the painter Yahyā b. Maḥmūd of Wāsiṭ of 634 (1237) in the Paris MS. of Ḥariri, *Arabe* 5847 (Kühnel, *Miniaturmalerei im islamischen Orient*, Berlin 1923, pl. 13) shows a bridal procession; in front go horn-blowers, drummers and men with peacocks sitting on camels; the bride herself is completely hidden in a splendid camel-litter and the bridegroom rides beside her on a finely caparisoned horse. Further references may be found e.g. in *Alf Laila wa-Laila*, II. 12; *Sirat Saif*, xiii. 12. The oldest western reference is in the travels of the Dominican monk Ricoldus de Monte Crucis [d. 1309], ch. 9, 46 (Laurent, *Peregrinatorum modii aevi*, Leipzig 1864, p. 116): "*Tartari* (= Mongols in eastern Asia Minor)... *quando tradunt tam [i. e. uxorem] ad nuptias, parentes et consanguinei viri, qui eam accipiunt, ducunt eam cum tympanis et cantu, sed parentes et consanguinei mulieris sequuntur eam cum planctu quasi mortuam*". Later European travellers all describe the bridal procession more or less fully. Almost everywhere the bride, who is always closely veiled, is fetched by the bridegroom in a procession carrying lights (candles, torches or lanterns) and accompanied to her new home by relations and friends of both sides. In modern Fās, as in the time of Leo Africanus [1526], she gets into a silk-hung octagonal box which is carried on the shoulders of eight men (Westermarck, p. 166) or she goes on foot, if she belongs to the lower classes (Westermarck, Tharaud) while in the rest of Morocco a "covered cage" on a mule is generally used (Mocquet [1605], Hoest [1760], Westermarck [1914]). In Algiers in the xvth century she was also carried (Hædo). In Egypt and Syria she walks or rides under a canopy (so as early as Cotovicus [1598]). In Turkey in olden times the bride used to ride on a horse

(Dernschwam [1553]) usually veiled in a red silk cloth, the ends of which were held up by many people accompanying her (Schweigger [1578], della Valle [1615], Tournetfort [1717]). In the Turkish album of miniatures of the xvth century published by Taeschner entitled *Altstambul Hof- und Volkleben* (Hanover 1925, pl. 32) she is on foot, led by two women. According to della Valle (1615), in place of the procession of lights in front of the bride, a kind of high candlestick is carried which was made with flowers, painted paper, beaten gold, and other foliage, sometimes decorated with gold, silver and ivory; Schweigger [1578; cf. the pictures there] describes them as "wedding candles of green wax, made transparent but not burning". In the same connection may be mentioned the tray of candles which is carried before the bridal procession in the Karagöz-play "The Wrong Bride" (pict. in Ritter, *op. cit.*, fig. 34). In the sixteenth century, the bride rode in a covered carriage as did the women accompanying her, while the men were on horseback (White, Garnett). In Persia she usually rides, robed in red (Olearius [1637], Chardin [1673], Polak [c. 1860], Willis [c. 1870]). At the present day, the motor car is of course also used in large cities like Cairo. — For pictures of the bridal procession see for Morocco: Dapper, *Reichreibung von Afrika*, Amsterdam 1760, p. 177; for Cairo: Niebuhr [1763], *Reisebeschreibung nach Arabien*, Copenhagen 1774, pl. 28; Cassas, *Voyage pittoresque*, Paris 1806, pl. 63; Lane [1835], *Sitten und Gebräuche*, pl. 32-33; for Constantinople: Schweigger [1578], *Reisebeschreibung*, p. 207; Taeschner, *loc. cit.*

The trousseau is usually carried in the bridal procession, distributed over as many horses and mules as possible; often empty chests are carried to make the trousseau look as large as possible, while in many districts the delivery of the trousseau is a special solemn ceremony (cf. e.g. Ibn 'Idhārī, I. 284 for Kaḥrawān [415 = 1024]; Ibn Iyās, IV. 107 for Cairo [912 = 1506]).

On leaving her parents' house and entering her new home, a series of symbolic ceremonies are performed which refer to married life, averting evil spirits, fertility etc. I omit these here as they vary much in different towns and districts. In her new home she is welcomed by the bridegroom or her mother-in-law and taken to the bridal chamber. There she is placed by the woman on a high chair or throne and congratulated. Sometimes the bridegroom now gives her a present of money — if it is only a piastre — and she is unveiled so that the bridegroom sees her face for the first time. In a (not genuine) *ḥadīth* in Muḥaddas (*B. G. A.*, III. 126) it is said "God shall place Mu'awiya by his side and cover him and then unveil him to the people like a bride". The throne (*mināḡa*) on which the bride is raised and unveiled is mentioned as early as Zawṭānī (d. 486 = 1093) and Baṭalyūsi (d. 494 = 1100; in their commentaries on the *Mu'allaf* of Imru' al-Qais, ed. Hengstenberg, Bonn 1823, verse 32 or Cairo ed. 1282, p. 33). Cf. also *Alf Laila wa-Laila*, III. 455; *Sirat Saif*, v. 29, where a throne (*marṭ*) of juniper wood decorated with plates of gold and shining jewels is mentioned. In Mecca at the present day, the throne is called *riḥa* (= *arika*); cf. the picture in Snoeck Hargronje, *Bilder aus Mekka*, Leyden 1889, pl. 18.

The bridal procession is followed by a feast

which lasts far into the night with music, singing and dancing (the men and women of course separate); in Turkey of the xviiith and xviiith century *Karagöz* performances were also given (Thevenot, *Voyager*, Paris 1689, I. 172; cf. I. 109—110) while in Persia of the xviiith century wrestlers (*fahlan*) performed (Chardin). A Persian miniature of 1604 shows festivities on the occasion of a wedding in the reign of Alp Arslan (beginning of the xth—xith century) (Grohmann and Arnold, *The Islamic Book*, Munich 1929, pl. 67).

5. The bridegroom's bath and his *saffa* take place on the same day as the bridal procession, i.e. on the Thursday; a visit is usually made to a mosque in connection with it (cf. *Alf Laila wa-Laila*, II. 24). In the story of Nūr al-Dīn and Shams al-Dīn (*Alf Laila wa-Laila*, I. 263)—it is however a case of *uṣra*—the bridegroom goes to the bath and is carried on horseback in a torchlight procession to the bride's house; singers with tambourines accompany him and stop from time to time to get money from the bridegroom. Another *saffa*—but without a bath—is described in the *Sirat Saif*, xiii. 12. The bridegroom rides on a richly caparisoned steed through the town accompanied by dignitaries. Wax candles with camphor are carried, while slaves swing censers and sprinkle rose and jasmine water (cf. *Sirat Saif*, vii. 63; xv. 32). Ibn Yūsuf (iv. 107, 196) records for Cairo in the early xviiith century that the bridegroom goes through the streets accompanied by emirs with lighted candles in their hands. This was also still usual in Lane's time in Cairo. Shortly before sunset the bridegroom was taken by his friends to the bath, accompanied by musicians or singers and torches (*maḥḥal*); from there they went to the mosque to attend the evening prayer. On their way back from the mosque, the friends carried candles and flowers in their hands. For a later date (c. 1875) Kluninger describes the bridegroom's bath and *saffa* for Kuṣair on the Red Sea. In other lands, the bridegroom's bath appears to be less usual; at least it is only rarely mentioned in the sources (for Palestine: Rothstein [1907] with pictures of the *saffa*; Jaussen [1927]; for Tunis and Sfax: Bertholon and Naubehuber [ca. 1900]; for Tlemcen: Godefroy-Demonbynes, p. 40 [c. 1900]; for Tangiers: Westermarck, p. 118; for eastern Asia Minor: van Lennep, *Travels*, p. 267 [c. 1860]; for Persia: Polak [c. 1860]). The bath and *saffa* seem to be quite unknown in Constantinople. Similarly the bath (but not the *saffa*) for the bridegroom have been long unknown in Mecca (Ibn al-Muḍjāwī [d. 690 = 1291] in Landberg, *op. cit.*; Snouck Hurgronje; Rutter), while Niebuhr, *Reisebeschreibung*, I. 402, mentions both in 1763 for Yarm in South Arabia. Leo Africanus also does not know of the bath in Fās (nor does Westermarck [c. 1914] nor Tharaud [1930]); on the other hand, he describes an imposing procession of the bridegroom, which met the bridal train in the principal square of the town and went home along with it.—Pictures of the splendid *saffa* of the bride in India: Thevenot [1666], *Voyager*, Paris 1689, III. 66; H. Goets, *Bilderatlas zur Kulturgeschichte Indiens in der Graeco-moghul-Zeit*, Berlin 1930, pl. 15 (xviiith century miniature).

6. The wedding night (*laḥḥat al-dukkā*). During the festivities mentioned at the end of 4 the bridegroom goes to the bridal chamber or feigning reluctance is thrust in by his friends. In

addition to the *laḥḥat* (see p. 1039⁴) we have two descriptions from the early Islamic age of the proceedings in the bridal chamber. According to one (*Aghāni*, xv. 70), the caliph 'Uthmān stroked his bride Nā'ila on the head, asked the blessing of God (*baraka*) upon her and then unveiled her. According to the other (*Aghāni*, xvi. 37), Sharrāh took his bride Zaynab by the forelock while she knelt down, then prayed two *ra'ās* with her, just as now is the usual practice in the two enthronement ceremonies in Mecca (Snouck Hurgronje, II. 180 and 185). In the oldest parts of the *Alf Laila wa-Laila* (Baghdād stratum, c. xth century A.D.), we find the following usages. In the story of Nūr al-Dīn and Shams al-Dīn (I. 269—272) the bride is undressed by her maids and led by an old woman in a long robe into the bridal chamber where the bridegroom awaits her. While in this case the unveiling has already taken place, in other passages it is only done by the bridegroom himself in the bridal chamber (e.g. III. 524). In the story of Unṣ al-Wuḍūd and al-Werd b. 'Akmām (III. 437—439) the two drink together and entertain one another with poems and entertaining stories. In the story of Kamar al-Zandā (II. 478—479) after the consummation the bride summons her maids who give shouts of joy.—In Cairo in Lane's time, the bridegroom was carried by a friend a part of the way up the steps to the harem, during the festivities. He was only allowed to unveil his bride in the bridal chamber in return for a sum of money and see her for the first time. He then undressed her, laid her with her head in the direction of Mecca and performed two *ra'ās*. After the consummation he summoned the women waiting outside the door to give shouts of joy (*saghāra*) and then returned to the guests. Jaussen gives a similar description for modern Nablus. Polak records (c. 1860) a very old and widespread practice for Persia (Leo Africanus knows it for Fās [1526], Haedo for Algiers [xviiith century], Bertholon for Tunis [c. 1900]); after the unveiling the couple try to tramp on one another's feet; the idea is that whoever does it first will be master in the house. In Turkey, according to Schweigger [1578], the bride is pushed into the bridal chamber by her companions with jests and scoldings. In the xviiith and xixth centuries in Turkey after the unveiling and the usual prayers in the bridal chamber, coffee was served to the bridal pair and then a wedding feast held. Only then were they left alone (Olivier, White, Garnett).

In some districts of Morocco (e.g. Fās), it is considered seemly for the bridegroom only to entertain his bride in the first night and to consummate the marriage only in the second night (Tharaud [1930]; Westermarck, *av. Consummation*). In Egypt on the other hand, it is a frequent practice to deflower the bride by mechanical means (Schwally, in *Nöteborg-Festschrift*, p. 418 ff.). Both these customs are due to superstition, the fear of evil spirits, and perhaps in the first case to a certain feeling of shame.

During the wedding night, if the guests are still there, or on the next morning, the nurse shows the token of virginity to the women friends and relatives. If the bride is not a virgin, the bridegroom can send her back to her parents. The nurse or the mother therefore frequently make arrangements in case of need. In the *Alf Laila wa-Laila* (II. 478) a pigeon is killed. In some districts the

bloodstained cloth is carried through the streets to the house of the bride's parents with drumming and shouts of joy. This is reported by Mocquet [1605] and Hoest [1760] for Morocco, Tournefort [1717] for Turkey, while in Burckhardt's and Lane's time (beg. of 19th century) in Cairo, it was only the custom among the lower classes.

On the morning after the wedding night in obedience to the precepts of religion both go to a bath [see TAHARA].

7. The ceremonies after the wedding night, especially on the seventh day. Sometimes the prescribed *walima* is not performed till the day after the wedding night (cf. p. 1039 sq.). This is also the case in the story of Kamar al-Zamān (*Alf Laila wa-Laila*, II. 461, 478). In Turkey on this day, the wedding ceremonies conclude with a feast, the "festival of the sheep's trotters" as it is called from a traditional dish; then the bride has one or two days to receive congratulations (Garrett [c. 1890]). In Egypt and North Africa the bride remains for a week in the bridal chamber and is visited and entertained by her female relatives. On the seventh day the bride and bridegroom usually hold a reception or give a banquet. The first seven days of marriage called *sab' al-arūs* have always played a special part and go back to a usage sanctioned by the Prophet (cf. Dory, *Supplement*, I. 626—627; s. above p. 1040a). In the story of Uns al-Wuddūd women singers come on the seventh day and gifts are scattered among the populace (*Alf Laila wa-Laila*, II. 439—440). Leo Africanus [1526] mentions "a very old custom" in Morocco: on the seventh day the husband buys fish, which his mother or other women throw over the bride's feet. A similar practice is still found in Sfax (Narshesher, p. 16). Probably there is some old magical practice to secure fertility concealed in this.

In conclusion we may briefly mention the entirely different customs in Mecca and Medina as recorded by Snouck Hurgronje (1884) and Rutter (c. 1928) for Mecca and Burton (1853) for Medina. Here there is a peculiar combination of the two kinds of wedding, the 'urs and the 'umra. On the evening of the fourth day, the *ghumra* day (= 'umra), the bride in her wedding finery is put on a throne in her house, while the bridegroom goes to the Haram in a procession with lights, to go through the evening prayer there and then goes to the bride's house. He is there taken into the throne room and there unveils his bride. After a supper, everyone, including the bridegroom, goes home. Towards morning the bride is taken by a few women secretly in a litter borne by two mules to the house of the bridegroom, which is in keeping with the old Arab practice. After a meal with the bridegroom the throne scene is repeated in his house on the fifth evening in a simpler form, after which consummation takes place. From this duplication, a combination of two different ceremonies, it may be concluded that the modern Meccan wedding customs are not native to Mecca and Medina, but some features have penetrated in course of time from lands adjoining Arabia, been misunderstood and combined. This is confirmed by the simple practices in pre-Muslim and early Muslim Arabia (cf. p. 1038 sq.), and also by Ibn al-Mudjāwir (in Landberg, *op. cit.*, p. 859) who describes a pure 'umra for the 11th (12th) century in Mecca: the bridegroom

goes to the Haram, performs the sevenfold circumambulation, two *saḥas* at the Maḥām Ibrāhīm, kisses the Black Stone (i. e. makes the *ṭawāf*) and then goes with candles to the bride's house. — Weddings are usually celebrated in Muharram in Mecca, when the ḥajj is over and most of the pilgrims have gone (Ibn al-Mudjāwir, *op. cit.*; Burckhardt, *Travels in Arabia*, I. 361).

Although the history and origin of Muslim wedding customs are very difficult to ascertain in view of the lack of early sources, it can be said that in Islām in general many old oriental customs of Syria, Mesopotamia and Egypt, partly taken over from Christianity, have been preserved and have been disseminated by Islām in other Muslim lands and there have become mingled with local customs.

(HEFFENING)

URWA b. AL-WARH b. HĀRIS of the tribe of 'Abs, an old Arab poet. His father, whose fame was sung by 'Antara, played a part in the Dāhīs war. His mother belonged to the less esteemed Banū Nahd, a branch of the Qurā'a (cf. Wüstenfeld, *Tal.*, i. 17; allusions to them in poems ix., xix., xx.). He lived, as is expressly stated, in the Dāhiliya. But his allusions to individuals who survived into the time of Muḥammad, like 'Amir b. Tufail (schol. on i. 1) show that he must have flourished just before the coming of the Prophet. His poems and the anecdotes related of him give us a picture of a true Beduin, devoted to a chivalrous life of adventure, who for his protection of the poor later became known as 'Urwat al-Sā'ikī. Among his adventures may be mentioned his raid from Māwān in the region of Yathrib upon the Balkain in N.W. Arabia, and the story of his wife Umm 'Amar (also Umm Wahb or Salmā) of the tribe of Kināna whom he is said to have been tricked into giving away, while intoxicated, by the Jewish Banu 'I-Nadīr (or in their region).

Wiss. zu Göttingen*, xi., Leipzig 1863; *'Urwā bin al-Ward*, *Diwān accomp. du comm. d'Ibn al-Sikkī*, ed. Moh. Ben Cheneb (*Bibl. arabica*), Algiers 1926.

(H. H. BRÄU)

'URWA b. AL-ZUBAIR b. 'Awwām, AL-ASADĪ AL-MADANĪ, one of the earliest and foremost authorities on tradition in Madīna, born between 23 and 29 A.H., died between 91 and 99. His mother was the celebrated Asmā' bint Abī Bakr, his father al-Zubair b. al-'Awwām b. Khawallid was a nephew of Khadija. Some thirty years younger than his brother 'Abd Allāh, 'Urwa did not take part in politics or in the civil wars, but gave himself up entirely to study. When his brother, in 73, was vanquished by al-Hajjāj, 'Urwa abandoned him, like the rest of his family, and fled in haste to Damascus, to carry the news to 'Abd al-Malik and thus win his favour. Thereafter he lived in studious retirement on his property at Madīna, until his death, and there wrote, on 'Abd al-Malik's request, a series of communications on the earliest period of Islām, probably in the form of letters to the Caliph (see al-Tabarī, i. 1180—1182).

It is recorded of him that he used to read one fourth of the Qur'ān every night, and that he suffered his cancerous foot to be amputated without uttering one groan.

'Urwa had assiduously frequented his maternal aunt 'Ā'isha up to three years before her death, and collected a great many important traditions from her, from both his parents, from 'Alī b. Abī Tālib and Abū Haraira. Among those who received traditions from him are Muḥammad b. Maslam al-Zuhri, his own sons: Muḥammad, 'Uthmān, 'Abd Allāh, Yahyā and especially Hishām; Sulaimān b. Yasār and Ibn Abī Mula'ika.

As an authority on tradition 'Urwa ranks very high, and is one of the seven great *fuḥalā*; authors of treatises on *riḍāl* and *'ilm muṣṭalaḥ al-ḥadīth* have no fault to find with him. He had collected an important library, bearing upon many subjects, both historical and juridical. He was the author of a *Kitāb al-Maghāzī*, but his traditions are only to be found incorporated in the works of later historians: Ibn Sa'd, al-Tabarī and Ibn Ishāq. A feature of his traditions is the lack of a regular *isnād*, which was formed after his time.

(V. VACCA)

USĀMA b. MURSHID b. 'ALĪ b. MUḤALLAD b. NAṢR b. MUNKIDH AL-SHAIRĪ AL-KINĀNĪ, an Arab knight (*fāris*), courtier and man of letters, born in 488 (1095) in Shaīzar (the Sirā of the Crusaders, north of Hamā in Syria) which was the seat of his princely family, the Munkidhiya, and died in 584 (1188) in Damascus. Four years after his birth, Jerusalem was taken by the Crusaders and a year before his death it was retaken by Saladin. Throughout his life he was in constant relations with the Franks, sometimes hostile, sometimes friendly. At the age of 15, he took part in the defence of Shaīzar against Tancred's army from Antioch. Following the example of his father, who was not only a warrior and a hunter but also a calligrapher, he devoted himself to war, sport and literature. He spent nine years (1129—1138) in the army of the Atabeg of Mōsul, Zangī; after the death of his father, he had to leave Shaīzar for ever as his uncle who now reigned was jealous for the sake of his own sons of Usāma's military reputation. He spent six years in Damascus (1138—1144) at the court of the Būrids. Peaceful relations and treaties with the kingdom of Jerusalem gave him the opportunity to become better acquainted with the Franks; he made quite a number of friends among the Templars. From Damascus he went to Egypt where the Fātimid dynasty was approaching its end. Here (between 1144—1154) he became involved in political intrigues, conducted a number of enterprises against the Crusaders in Palestine and had to leave Cairo after ten years. On the way he lost his entire library, which contained over 4,000 manuscripts. Settling for a second time in Damascus he undertook many campaigns against the Franks with the celebrated Nur al-Dīn, son of his first patron Zangī (1154—1164). A terrible earthquake in 552 (1157) completely destroyed his home; three years later (555 = 1160), he made the ḥajj to the holy cities. He spent ten

years (1164—1174 in Hīḡn Kaifā with the Ustūḡid Kara Arslān, mainly engaged in his literary work. The fame of Saladin, who was so successfully conducting the war on the Crusaders, attracted him for the third time to Damascus. He died here at a great age in Ramaḡān 584 (Nov. 1188). His tomb on Mount Kāsiyūn was visited a century later by the famous historian Ibn Khallikān.

Usāma, one of a family whose members are frequently mentioned in literature (see e. g. Yāqūt, *Muḡam al-Uḡabb*, ii. 173—197), attained renown as a poet and a man of letters. His *Ḍawān* (in two *ḡus*) still existed in the time of al-Yaḡḡī (d. 768 = 1367) who knew it (see *Mir'āt al-Uḡyān*, iii. 427); Derenbourg collected a number of his poems from the Gotha fragment and several anthologies (*Usāma b. Munḡidh*, i. *La vie d'Usāma*, Paris 1889—1893, p. 336—338, 543—562). Of his prose works we know the names of over a dozen (cf. Derenbourg, *op. cit.*, p. 330—339) but only five are so far known to have survived. The most remarkable and most interesting of his works, the importance of which stretches far beyond the scope of ordinary Arabic literature, is the *Kiṡb al-Fihṡr*, his memoirs, which gives a vivid and lively picture of his time in peace and war. The only MS. so far known was found by H. Derenbourg in the Escorial (see *Comment j'ai découvert en 1880 à l'Escorial le manuscrit arabe contenant l'autobiographie d'Usāma b. Munḡidh*, as introduction to the German translation by G. Schumann, see below) and edited by him. It has been four times completely translated: into French by Derenbourg (Paris 1895), into German by G. Schumann (Innsbruck 1905), into Russian by I. Kratschkovsky (Petrograd 1922) and into English by Hitti (New York 1929). Usāma's other works are still only accessible in manuscript. His treatise on poetics *al-Badr fī 'l-Badr* was described with extracts by Derenbourg from three manuscripts (Berlin, Leyden, Cairo) (*op. cit.*, p. 330—334, 691—722). We may now add the MS. of the Asiatic Museum in Leningrad (see Kratschkovsky, in *Zapiski*, i. 3—4). His anthology *Kiṡb al-'Apī* deals, with many quotations in prose and verse, with the "staffs" known in history and legend (Derenbourg, *op. cit.*, i. 334—336, 499—542); we may now add the MS. in Milan from the Yemen (see Grifflini, in *Z.D.M.G.*, lxi. (1915) 73). Recently a hitherto unknown work of Usāma, the *Kiṡb al-Manāṡil wa 'l-Diyār* (autograph of 568 = 1172, written in Hīḡn Kaifā), was found in the Asiatic Museum in Leningrad. This anthology which was suggested by an earthquake in August 1157, contains all kinds of poetical quotations about *manāṡil*, *diyār*, *waḡḡān*, *asfāl*, *raḡ*, *ḡimān*, *razm*, etc. (description of the MS. with many specimens of the text by Kratschkovsky, in *Zapiski*, i. 4—18). We do not yet have any details of the *Zuḡab al-Adab*, which is in Cairo in a MS. of 598 A.H. in the possession of Yaḡḡib Ṣarrāf (editor of the periodical *al-Muṡṡaf*).

Bibliography: The most important material for the biography and on the works of Usāma has been collected by Derenbourg in his comprehensive work (see above). He also wrote a number of separate articles on him (cf. Brockelmann, *G. A. L.*, i. 320) which are reprinted in his *Opuscula d'un arabisant*, Paris 1905, p. 313—336. These works and later literature and the

more important reviews are listed by Ign. Kratschkovsky in the appendix to the Russian translation of the *Kiṡb al-Fihṡr* by M. Salier (Petrograd 1922, p. 206—207). We may add T. Kowalski, *Pamiętniki arabskie z pierwszego wieku krucjat*, in *Przeglad Warszawski*, 1923, Nr. 18, p. 380—400 and Ign. Kratschkovsky, *Neizvestnye ischineniya avtografy sirijshago imira Usamy*, in *Zapiski*, i. (1925), 1—18.

(IGN. KRATSCHEKOVSKY)

USĀMA b. ZAID b. ḤĀRITHA al-KALBĪ al-HĀSHIMĪ, ABŪ MUḤAMMAD, son of the Abyssinian freedwoman Baraka Umm Aiman and reckoned among the Prophet's freedmen, was born in Mecca in the fourth year of the mission. Tradition records many instances of the Prophet's fondness for him as a child, and gives him the surname of *Hibb al-Hibb Rasūl Allāh*.

He joined the fighters on the way to Uhud, but was sent back before battle on account of his tender age. Questioned by Muḡammad in the case of slander against 'A'isha, he spoke in her favour. After Khaibar he received a pension, and in A.H. 8 rode behind the Prophet into Mecca and entered the Ka'ba with him. He fought gallantly at Hunain.

In A.H. 11 Muḡammad put Usāma in command of an expedition to avenge his father Zaid, fallen at Mu'ta. Notwithstanding criticism, due to Usāma's youth, the Prophet, already in his last illness, insisted on a prompt departure, but the expedition turned back at the news of his death, and Usāma was among those who prepared him for burial.

The newly-elected Caliph ordered the expedition to be resumed, in accordance with the Prophet's wishes, though the tribes were already in revolt. Usāma reached the region of al-Balkā', in Syria, where Zaid had fallen, and raided the village of Uḡna (the modern Khān al-Zait). His victory brought joy to Madīna, depressed by the *riḡla*, thus acquiring an importance out of proportion to its real significance, which caused it to be regarded later as the beginning of a campaign for the conquest of Syria.

In the same year Abū Bakr left Usāma in command at Madīna, while at the battle of Dhu 'l-Kaṡṡa.

In 20 'Umar bestowed on him a pension of 4,000 dirhams, equal to that of the men of Badr, on account of the Prophet's fondness for him and his father.

The election of 'Uthmān to the caliphate took place in the home of Fāṡima bint Ka'is al-Fihriya, Usāma's wife; he probably had a part in the event, and was in favour with the Caliph, receiving from him the grant of a piece of land, and being sent by him to Basra in 34 to report upon the political situation there.

After 'Uthmān's death Usāma refused homage to 'Alī, whose supporters attacked and ill-treated him in the Mosque at Madīna. Thereafter he lived in retirement, first in Wādī 'l-Kura, then in Madīna; he died in al-Djurf, about 54, and was buried in Madīna.

Usāma has a place among transmitters of *ḡadīḡ*. His political career, though not brilliant, appears blameless; we hear nothing of his riches.

In appearance Usāma resembled his mother, being black and flat-nosed. The emphasis laid by tradition on Muḡammad's love for him is partly due to the intention of setting him off against 'Alī's family; it may also have been meant to

show that the Prophet was a true democrat and free from colour prejudice.

Bibliography: Ibn Sa'd, *iv*, 42—51; Balādhurī, p. 273, 451; al-Kharrāḍī, *Khalīfat al-Tadhkhīl*, 1st ed., Cairo 1322, p. 22; Ibn al-Athīr, *Und*, i. 64; al-Taharī, ed. de Goeje, i. 2943, 2952, 3072, 3124; iii. 2344, 2440; Ibn Hishām, ed. USHĀK, a town in Asia Minor, capital of a *kāḍ* in the sanjak of Kütahya in the province of Khudāwendigār, on the edge of a cultivated plain at the foot of the mountains; it had 15,000 inhabitants of whom a third were Armenians and Greeks; the houses are built of brick, with gardens, and the streets are broad. It was rebuilt after a fire in the 16th century. It is celebrated for its manufacture of carpets known as Smyrna carpets because they are exported through this port (150,000 yards per annum). There is a fortress on the site of the ancient acropolis (Eucarpia). Towards the end of the 17th century, the *dar-şeyi* (governor) Hādījī Murād-oghlu declared himself independent but he was besieged by Kara 'Olmān-oghlu of Aidin, taken through treachery and executed. In the district there are asbestos mines and sulphur thermal springs.

Bibliography: Hādījī Khalifa, *Dihān-numā*, p. 633; 'Alī Djevān, *Djezārafiya Lughātī*, p. 548; Texier, *Asie Mineure*, p. 425.

(CL. HUARY)

AL-USHI 'ALĪ b. 'OTHMĀN SIRĀJĪ AL-DĪN AL-FARĠĀNĪ AL-HANAFĪ, of whose life nothing is recorded ('Abd al-Kādir b. Abi 'I-Wafā' al-Kurashī, *al-Djāwābir al-waḥḍā fī Taḥāḍāt al-Hanafiya*, Haidarābād 1332, i. 367 does not even give a date), wrote about the year 569 = 1173 (s. Z. D. *M. G.*, xvi. 685) a confession of faith in rhyme entitled *al-Kāḍi al-Lāmiya fī 'I-Tawhīd*, also called *Ras' al-Amālī* or from the opening words *Kāḍi yaḥyā 'I-'Abd* (*Carmen arabicum Amālī dictum*, ed. P. v. Bohlen, Regensburg 1825; also in *Mawḍi'at al-Muḥimmāt al-Mutak*, Cairo 1273, 1281, 1295, 1323; on the margin of Salim b. Sumair, *Safinat al-Naḍā'*, Singapore 1295, with Hindūstānī paraphrase by Mawlāwī Muhammad Naḍir Ahmad Khān, Dehli 1317). These printed editions show the popularity of the work down to the present time and commentaries have often been written on it. To the commentaries given in *G. A. L.*, i. 429 of which the oldest is by Muhammad b. Abi Bakr al-Rāzī, author of the *Tuhfat al-Mutak* (*G. A. L.*, i. 383, d. according to Hādījī Khalifa, N^o. 733, in 660 = 1261), some more may be added from the Sтамbul and other catalogues. The most celebrated among them is that of al-Kāḍī al-Harawī (d. 1014 = 1605), written in 1010 (1601) in Mecca entitled *Ḍaw' al-Amālī*, pr. Sтамbul 1293, Bombay 1295, Dehli 1884, with Turkish transl. by Husnī Efendi, Sтамbul 1304; anonymous glosses *Tuhfat al-A'ālī*, Cairo 1309 and n.d. There have also been printed two Persian commentaries *Naḡm al-Lā'ālī* by Muhammad Bakhs̄h Rafīqī (lith.), Lucknow 1869 and by Ahmad Darwīza Nangarhārī, Lahore 1891, 1900; a Turkish commentary *Marḥat al-Ma'ālī* by Ahmad 'Asim 'Aināhī, Sтамbul

1304; and a Turkish paraphrase with commentary by Muhammad Shukrī, Sтамbul 1305. Of his collection of traditions *Gharar al-Aḥbār wa-Durar al-Aḥbār*, only a selection, containing 1,000 short traditions in 100 chapters, entitled *Niḡāḥ al-Aḥbār wa-Tadhkhīrat al-Aḥbār* has survived in Berlin (Ahlwardt, *Katalog*, N^o. 1300/1), Munich (note N^o. 162), Cairo (*Fihrist*, i. 444) and a fragment in Mosul (s. Dāwūd, *al-Maḥḥḥafāt al-Mawḥiyya*, p. 24, N^o. 28). His collection of *fatāwā al-Fatāwā al-Sirāfiya*, which according to Hādījī Khalifa, N^o. 8767, he finished on 20th Muḥarram 569 (Aug. 14, 1173) in Ush, was printed in Calcutta 1243 and Lucknow 1223—1225.

Bibliography: given in the article.

(C. BROCKELMANN)

UŠNŪ (Ušnūh, Ušnūya), a district and town in Adharbāidjān. Ušnū lies to the south of Urmiya [q. v.] from which it has usually been administered. The district is watered by the upper course of the river Gādir (Gader) which, after traversing the district of Saldus [q. v.], flows into Lake Urmiya on the S. W. To the south of Ušnū is the district of Lāhidjān which is administered from Sawd-Bulak [q. v.]. The town of Ušnū (710 houses) is situated on the left bank of the Gādir (Com-i-Čilāsh, "river with 40 mills") which rises in the Gīllās valley through which the district communicates with Margāvar [cf. URMİYA].

The population of the district are Kurds. The town and its villages are occupied by the Zarzā tribe, the other twenty-five villages by the tribe of Mamash which also occupies a part of Lāhidjān and of Saldus.

It is possible that in the Khaldic (Vannic) inscriptions the name Ušini corresponds to Ušnū. Rawlinson had identified the village of Singān (three miles S. E. of Ušnū) with the *Zōxas* mentioned by Ptolemy, vi. 2 in Media. The town of Ušnū is mentioned in Arabic sources from the time of Istakhrī (p. 186). This author says that Ušnūh al-Aḥḥarīya formed part of the lands of the Banū Rudāini, which also included Dākharkān and Tabriz (Nizā?), but Ibn Hawkal, p. 240, already notes that this tribe had disappeared. On p. 239, he notes the richness of Ušnūh in grass and fruits. Its produce (honey, almonds, nuts and cattle) was exported to Mawḥil and to al-Djazīra. Its "steppe" (*bādīya* = Lāhidjān?) belonged to the Hadhbānī Kurds who spent the summer there (*yajl/ūna*). The principal fief of these Kurds was at Arbil (cf. above, ii., p. 1200).

We know nothing of the coming of the Zarzā Kurds to Ušnū (they may perhaps be a branch of the old Hadhbānī) but the Zarzā are already mentioned in the *Mawḥik al-Abjār* of Shihāb al-Dīn al-'Umārī, written in Egypt in 1335 (cf. *N. E.*, xlii., 1838, p. 300—329). The author explains its name as *walad al-ghīb* which Quatremère has emended to *walad al-dhahab* "children of gold" (in Kurdish *zār* + *zārū*).

In the *Sharaf-nāma* the section on the Zarzā, mentioned in the preface, is omitted in all the manuscripts. They must have occupied a very considerable area. In a mutilated passage, i. 280, Sharaf al-Dīn seems to say that Lāhidjān was taken from the Zarzā by Pīr Bedak, the first chief of the Bāhān tribe (17th century). He also mentions (i. 278) the defeat inflicted on them by Sulaimān Beg Sohrān (in the time of Murād III, 982—1003).

Ušnū lies on the road between Mawḥil and the

valley of Lake Urmiya (Mawail-Rawānduz-pass of Kela-Shin [c. 10,000 feet]—Ushnu-Urmiya or Marāgha). This road, blocked by snow in winter, is much less convenient than the route from Rawānduz via Rayāt by the pass of Garī-Shinka (south of the Kela-Shin) which does not exceed 7,800 feet. The pass of Kela-Shin (in Kurd "green stele") is celebrated for the stele with a bilingual inscription (Assyrian-Khalidic) erected in 800 B.C. in the time of the Khalidic King Ishpuini and his son Menua. The *Mašallā al-Adār* (transl. Quatremère, p. 315) has a detailed account of the mountain of Harjarsin, i.e. "the Two Stones" (i.e. the Kela-Shin) and the similar stone of Topuzawa, S.W. of Kela-Shin). In the legendary account by Tabari, i. 440, of the campaigns of the King of Yaman (Rā'ish b. Kaïs) in the region of Mawail, we are told that his general Shawr b. al-Attāf had his exploits engraved on "the two stones (*harjarsin*) still known in Adharbāydjān". These two texts have been published by G. Hoffmann, in *Auslässe*, p. 249—250.

The place-names of the district (in Aramaic Ashnukh, Ashna) reflect the former presence of a Christian element which has now disappeared (cf. the names of the villages of Sargis, Dinha and Bemzarta). In 958 already, a Christian of Ushnū founded the church of Sergius and Bacchus near Malatya. In 1271 the Nestorian Catholicos Denha transferred the see of the metropolis of Assyria to Ushnū to be better protected by the Mongol rulers (Assemani, ii. 350, 456). An old Christian church may be concealed by the ruins of Deir-i Shaikh Ibrahim (near Singān), which are venerated by both Muslims and Christians. Rawlinson (p. 17) saw there the tomb of the bishop of Ushnū, Ibrahim, who in 1281 was present at the consecration of the Nestorian Catholicos Yahballāsh III.

On the Kela-Shin see the bibliography in Lehmann-Haupt, *l.c.*, and in detail in Minorsky, *Kela-Shin*, in *Zap.*, 1917, xxiv., p. 146—93.

(V. MINORSKY)

'USHR, the tenth or tithe levied for public assistance, is frequently used in the sense of *zakāta* and *zakāt* (Abū Yūsuf, p. 31; Yahyā b. Adam, p. 79, 83, 121, 123) and indeed there is no very strict line drawn in the Shari'at books between *zakāt* and 'ushr dues (cf. Tormann, p. 318). The term 'ushr is not found in the Kur'an but Sūra vi. 142 is taken to refer to the tithe or half tithe (Abū Yūsuf, p. 32; Yahyā b. Adam, p. 88 *sq.*). Etymologically 'ushr is the same as the Assyrian *ish-ru-u* (E. Schröder, *Keilschriftl. Bibliothek*, iv. 192, 205) which means tribute paid in kind (corn, dates) or in gold, and with the Hebrew *ma'asér* (Gen. xiv. 20; xlix. 20—22), the tenth which the sanctuaries received but which was also levied by kings and which the Moosaic law wished to introduce as compulsory (Lev. xxvii. 30—33; Num. xviii. 21—26). While the prophet Samuel (1 Sam. viii. 15—17) wanted the tenth to go primarily

to the king, later the demand was raised for a general tithe on behalf of the sanctuary of Shinn, and under Persian rule a tenth of everything actually did go to the temple of Jahva (Mal. iii. 8—10). On the other hand, according to Dent. xiv. 28; xvi. 12, the Levites and the poor were to receive the tenth while, according to the code of the priests, the whole tenth was to belong exclusively to the Levites, who had in their turn to hand over a tenth to the priests (Num. xviii. 21 *sq.*). In the case of lapses by Jews to idolatry, they brought the tenth to the temples of the gods (Amos iv. 4; cf. H. Guther, *Kurass Bibelwörterbuch*, Leipzig 1903, p. 743; L. Caetani, *Annali dell' Islam*, iv. 40). It is also significant that the tenth in these cases was usually a tenth of natural products (grape-juice, corn, oil) but it was permitted to offer money instead.

An investigation of the significance of the tenth as a tax among neighbouring peoples is therefore important and necessary because light is thereby thrown on Arab conditions. Of great significance is the fact recorded by Pliny, *Hist. Nat.*, xii. 63 especially for South Arabia (*Arabia felix*) that the tenth part of the frankincense harvest was collected by the priests for the god Sin (MS. SABIN) out of which to meet public expenses and the maintenance of guests. In the inscriptions we find *'ushr* and *'ushr* along with *fr* as a tax and both are taken by N. Rhodokanakis, *Studien zur Lexikographie und Grammatik der Altsüdarabischen*, ii., S. B. Ak. Wien, cxxxv/3, 1917, p. 58 to be taxes on land, which however came under the temple taxes. According to Sūra iv. 137, the pagan Arabs, even the Quraysh, both Bedū and Fellāhū offered a gift from their fruits of the field and animals to Allāh or other gods, which in practice of course went to the guardians of the sanctuary. Muhammad, probably deliberately, deprived the tenth of any connection with worship and, perhaps on the analogy of South Arabian customs, made the tithe a kind of tax. Thus, in his letter to the Khath'am in Bishr (J. Wellhausen, *Skizzen und Vorarbeiten*, iv., Berlin 1889, No. 68, p. 130), it is laid down that a tenth is to be paid on all lands irrigated by running streams and a half tenth on lands artificially irrigated. This also held for the oasis of Dīmat al-Djandal (*ibid.*, No. 119, p. 173) and the Himsar (Yahyā b. Adam, p. 83); in the letter to the latter the tithe is called *zakāta*. For the nomads around Ṣahār for example a tax of one in ten loads of dates is fixed for their palmgroves (J. Wellhausen, *op. cit.*, No. 69, p. 130).

Mecca, Medina, the Hijāz, the Yaman and the Arabian territory were thus regarded as 'ushr land (E. Fagnan, p. 89) from which alone the tenth was to be raised (*op. cit.*, p. 79) and this was contrasted with the *sharīfī* land on which the land tax was levied. (With the gradual expansion of the Islamic empire, the 'ushr land increased considerably in area.) For example at the conquest of al-Rakka (18 A.H.) the lands which the protected people (*ahl al-dhimma*) did not use were given to Muslims on payment of the tithe (*Annali dell' Islam*, iv. 40). The lands acquired by peace treaties, on which no land tax was levied became 'ushr land in so far as they belonged to new converts (Yahyā b. Adam, p. 15). Further all land on which no land tax was levied became 'ushr land on the conversion of its owner, if the cultivator dug a well or an irrigation channel (Fagnan, p. 99).

A considerable increase in 'ushr land also resulted from the transference of land by sale or gift. If for example a Muslim bought land from the Banū Taghlib he paid the tithe, according to others the double *ṣadaqa*; the same held of every member of this tribe or Christians generally who became converts to Islām, since the land thereby became 'ushr land (Yahyā b. Ādam, p. 12, 16, 46 *sq.*). Land in areas acquired by treaties of peace became 'ushr land in so far as it had been acquired by Muslims by purchase, even if the payment of land tax was expressly laid down in the treaty (*op. cit.*, p. 37). The tithe was also to be levied on naturally irrigated *kaṭāʿ* lands in Sawād (Fagnan, p. 79). C. H. Becker, *Islamstudien*, p. 230 *sq.*, has shown how 'ushr land developed in Egypt. Gifts of land to meritorious Muslims and purchase by Muslims from Copt landowners here made the land 'ushr land, which in Egypt certainly developed to a considerable extent out of the old domains. On the other hand, the practice of allowing new converts to pay only the tenth frequently created 'ushr land. Of the rules which were in force regarding the transference of 'ushr land it may be mentioned that allies (*mudāʿid*) who acquired 'ushr land by purchase had to pay *ḥarādī*, which remained a burden on the land if it was sold again to a Muslim. This at any rate is the Hanafī teaching (Yahyā b. Ādam, p. 16). If on the other hand a Christian buys 'ushr land from a Muslim he has to pay the double tithe (*ḥuṣm*), which is regarded as a double *ṣadaqa*. The land is further treated as 'ushr if the owner becomes converted to Islām (*op. cit.*). This had of course great disadvantages for the treasury, as had the sale of *ḥarādī* land to a Muslim and therefore Umar II laid it down that in the latter case the land tax fell upon the new owner, who had also to pay the tithe or half tithe on the produce and agricultural land, as the *ḥarādī* was due upon the soil and the tithe or half tithe was due as *ṣakāt* from the Muslims (Yahyā b. Ādam, p. 10). This regulation was however in contradiction to the principle that (by 'Ikrima) *ḥarādī* and 'ushr could not be levied at the same time, any more than 'ushr and *ṣakāt* or *ḡirya* (poll-tax), and Umar I had already prohibited the collection of the tithe from a Muslim or ally when he paid *ḥarādī* (*ibid.*, p. 10, 32, 46). How far this limitation was actually observed it is impossible to say. In Inv. Ar. Pap. 104 of the Rainer Coll. in Vienna, which deals with taxation but unfortunately is very fragmentary, and contains lists of land-tax, poll-tax, palm-tax, *ṣadaqāt*, *uṣṣūr*, the two last entries are missing so that conclusions cannot be drawn from it. (How greatly the practice varied is clear from Māwardī (p. 104) according to whom an ally who owns 'ushr land has to pay neither 'ushr nor *ḥarādī* according to the Shāfi'is, according to the Hanafis, *ḥarādī*, according to others, *ṣadaqa* while according to Yahyā b. Ādam, p. 15, the ally of the tribe of Taghlib who bought 'ushr land had to pay the double tithe but if he belonged to a tribe which had been adopted into the Islāmic state as an ally, he paid neither 'ushr nor *ḥarādī*. Further it was open to the Imām — in practice the financial administrator of the province and the machinery of collection — to turn *ḥarādī* land into 'ushr land (Fagnan, p. 89) so that in later times the rule as to what land paid *ḥarādī* and what paid 'ushr was treated quite arbitrarily and

at most we can observe a certain tendency to observe principles generally regarded as valid and sanctified by custom. In the letting of lands and *mudāʿa*'s agreements the rule was probably that the cultivator of 'ushr land should pay a tenth or twentieth of the yield, according to the kind of ground (Yahyā b. Ādam, p. 121). If a Muslim takes over the land of an ally to till it he pays a tenth of the yield, the *ḥuṣm* the land-tax, if he has lived untilled land out of the *ḥarādī* land, the landlord pays the *ḥarādī* but the cultivator no tithe (Yahyā b. Ādam, p. 120).

If the untilled land is 'ushr the cultivator has to pay $\frac{1}{10}$ or $\frac{1}{20}$ of the yield as *ṣakāt* (*op. cit.*, p. 116, 123). If a Muslim has leased 'ushr untilled land, he pays the tenth while the landlord pays nothing (*ibid.*, p. 124). The Muslim also pays on rented *ḥarādī* land $\frac{1}{10}$ or $\frac{1}{20}$ of the yield as *ṣakāt*, the landlord the *ḥarādī* (this is the Shāfi' practice) while the Hanafis make the landlord pay tithe (Māwardī, p. 105). The same thing holds if owner and occupier are the same individual (Yahyā b. Ādam, p. 118—120). According to Māwardī, p. 104, however, the Muslim occupier, as having contracted an agreement to cultivate a piece of *ḥarādī* land has to pay tithe and *ḥarādī* (Shāfi'), only the *ḥarādī* according to the Hanafis).

According to Abū Yūsuf (Fagnan, p. 79), the tithe was only to be paid on durable products of the land but not on vegetables, fodder or fuel, according to Yahyā b. Ādam (p. 84, 105) on palms, wheat, barley, grapes, raisins, while (*op. cit.*, p. 79, 101) it is laid down that the tithe is to be levied as *ṣakāt* on all that the earth produces, even if it be only a bundle of green stuff. The latter is according to Yahyā b. Ādam (p. 103) along with walnuts, almonds, and all fruit, only liable to tithe in the form of *ṣakāt* if it is over 200 dirhams in value. For dates the limit of exemption is 5 *waḳ* (Fagnan, p. 80). Umar levied no tax on vines, peaches and pomegranates, while wine and oil are regarded as liable to tithe (*ibid.*, p. 50, 111). According to some, 'ushr is levied on honey, according to others, only when it is produced on 'ushr land (*op. cit.*, p. 17); this also holds of saffron. As a kind of trade-tax, the 'ushr was levied on merchants coming into Islāmic territory and the ally paid a twentieth but a tenth on wine and pigs (*op. cit.*, p. 32—49 *sq.*). Muslims under age are according to some jurists exempt from the tithes, according to others not (*op. cit.*, p. 48).

The half, single, one and a half and double tenth are the rates for the 'ushr; we even have higher ones, for they are fixed quite at the discretion of the Imām (Fagnan, p. 90). It is however a principle and it is in keeping with the old practice that the tenth is levied on all land which is irrigated by running water, brooks and streams or by rain, the half tenth on land which is irrigated by carried water, by water-wheels or water drawn by camels (Yahyā b. Ādam, p. 78, 80—86).

The income from the tithes could be used for other than benevolent purposes. Thus for example, the administrator of the provincial revenues in Egypt, Ubaid Allāh b. Ḥabbāb, gave the Kais who were settled here funds to buy beasts of burden out of the tithes (Makrizī, *Abhandlung*, p. 488). (Echoes of the ancient pre-Islāmic practice have survived in South Arabia where the *ra'iyy* pay 'ushr to the sultan or emir; here it is also called *uṣṣūr* but it is worth noting that it is

mainly levied on the fruits of the field, corn, dates, coffee, indigo etc. Among the Barkān and the people of 'Aryah, the corn is piled up, measured and $\frac{1}{10}$ of the wheat set aside, of which the poor of the sanctuary receive the half and the other half goes to the *ma'ad'is*, a custom which has analogies with the conditions in the Bible and also with those recorded by Pliny).

USHSHAKIZADE, a Turkish patronymic borrowed from the Persian, meaning strictly son or descendant of 'Ushshakī, the latter word being the ethnic from Ushak (arabised into *ushshak*, plur. of *ushshak*), a town in Asia Minor. 'Ushshakizade therefore means a descendant of a man from Ushak.

Two families in Turkey have borne or bear this name:

1. The descendants of 'Ushshakizade 'Abd al-Bāqī, Kādī of Mecca and son-in-law of the *naṣīb al-ahbāb* Seirekizade 'Abd al-Rahmān Efendi. He was the third son of the saint Shaikh Ḥasan Ḥusām al-Dīn said to have come from Bukhārā, who was a pupil of Shaikh Ahmad al-Samarqandī in Erzinjan and who settled in Ushak at first and later in Constantinople in the reign of Sulaimān the Magnificent. He died at Konya in 1003 (1594—1595) and was buried in Constantinople with the shaikhs who succeeded him in the mosque founded by him at the same time as a *tekke* at Kāsim Paṣha. Ḥusām al-Dīn founded the *ṭarīqa* or order of the 'Ushshakīya dervishes, the rules of which are influenced by the Kubrawīya and Nurbakhshīya *ṭarīqas* and which forms a branch of the Ahmadīya who in turn are connected with the Khalwatiya. According to v. Hammer (*Hist. de l'Emp. Ottoman*, vii, 287), the brotherhood of the 'Ushshakīya was founded in the reign of Murād III (1574—1596). The priory of the order did not long remain in the direct line of the founder, owing to failure of male descendants. On the other hand, another branch of the same family, the 'Ushshakizade properly so-called, flourished greatly. 'Ushshakizade 'Abd al-Bāqī, already mentioned, had a son 'Ushshakizade

Ḥasib Ḥashīm Efendi who founded a family and acquired a certain reputation for his historical works (cf. Babinger, *G.O.W.*, p. 258—259; v. Hammer, *op. cit.*, II, 477). 'Abd Allāh Nesib Efendi, another son of 'Abd al-Bāqī, was *Naṣīb al-Aḥbāb* at Constantinople from 1123 to 1130 (*Sijill*, II, 373 sq.; Rif'at, *Dawlat al-Nuṣab*, p. 33 sq.).

2. A family of merchants (carpet, etc.) and notables which was settled in Smyrna at the end of the sixteenth century and to which belong the well-known prose-writer and novelist 'Ushshakizade Khalid Diya (Ḥalim Ziya) [cf. KHALID ZIYA] and his niece Ḥanīm, formerly the wife of Ghāzī Muṣṭafa Kemal Paṣha.

As Halim Ziya has himself pointed out in his memoirs (*Hatıraat arāṣide*, publ. in the *Vakıf* from Jan. 29, 1931, cf. No. 2 of these *Memoirs*), the family as late as 1869 was called Helwādjizade (Helwāzade). The branch which went to Smyrna was known as Ushshakīlar, "those of Ushak", a name which was later replaced by that of 'Ushshakizade, which was thought more elegant.

(Bibliography): (for the first of these two families only): Thureiya [Sareiya] Bey, *Sijill-i 'amālī*, iv, 298; II, 112, 180; Shams al-Dīn Sāmī Bey, *Kāmil al-Aṭām*, iv, 2156; Hammer, *Hist.*, II, 207 (Fr. ed.); Babinger, *G.O.W.*, p. 259 (sources).

On the sect of 'Ushshakīya cf. Ahmad Rif'at, *Lughat-i Tarīkhiyye wa-Lughat-iyye*, iv, 243 (s. v. *ṭarīqa*; cf. also this Encyclopaedia s. v. *ṭarīqa*, p. 705). Details of the different shaikhs will be found in Ḥafiz Ḥusein b. al-Ḥadīdj Ismā'il Atwānserāyī, *Ḥisbat al-Diyānāt*, Constantinople 1281, II, 23—25 (considerably abridged in the translation in Hammer, *Hist.*, p. 69, No. 634). (J. DENY)

OSKOB (Serb. Skoplje), capital of the former Turkish wilāyet of Kōsova (Serb. Kosovo), now the capital of the Vardar banat in the kingdom of Yugoslavia, is situated at a height of 960 feet above sea-level in the centre of a fertile valley surrounded by snow-covered mountains and built on both sides of the Vardar; in 1931 it had 64,807 inhabitants (only 32,249 in 1921) of whom over a third are Muslims. On the left bank of the river are the older quarters of the town (the fortress, the Turkish quarter etc.); on the right are the modern buildings and the railway station. Skoplje has 8,958 houses, 15 mosques, 6 Serbian Orthodox and 1 Roman Catholic churches. Of specifically Muslim buildings we may mention a *Medjlis-i 'Ulamā* (i.e. a college of legal authorities, usually called 'Ulema-medjlis'), a Waḳūf-Me'arīf Council ('Vakufsko-mearifsko vece') (cf. I, p. 760 sq.), a chief Shari'at court and a state high school for Muslims ('Velika medresa knjely Aleksandra I') in which, in addition to the usual subjects, religion, Arabic and a little Turkish are taught. Owing to its splendid geographical situation, Skoplje has become the economic and cultural centre of Southern Serbia.

The town has already played a similar role in the past. Originally an Illyrian colony called Scupi, it was later the capital of the Roman province of Dardania and lay about two miles farther up the river at the present village of Zlokučani (N. W. of the modern Skoplje) but was completely destroyed by an earthquake in the year 518.

According to Sir Arthur Evans, Scupi was rebuilt in the neighbourhood of the ancient town on the

site of the present Skoplye by the Emperor Justinian (527—565) and called Justiniana Prima, but this new name did not survive. On the other hand, W. Tomaschek thinks it more probable that Justiniana Prima was built very much farther north of Skoplye. Professor N. Vulić had also adopted this view (*On the Justiniana Prima*, in *Le Musée Belge*, xxxii. [1928], 65—71) but now he agrees with Evans.

At the end of the seventh century, the town was taken by the Slavs. In the following centuries, Skopla (this is the usual Byzantine name; hence it also appears as Iakubia on Idrisi's map of the world of 1154 [ed. K. Müller, Stuttgart 1928]) belonged mainly to Byzantium, with a few longer and shorter intervals when it was under Bulgar (Jireček, i. 211 and 222) and Serbian (*op. cit.*, i. 201) rule.

Towards 1282 Skoplye finally passed from the Byzantines to the Serbs (*op. cit.*, i. 245) and became the favourite residence of the mediaeval Serbian kings and emperors. It was here that the powerful king Dušan had himself ceremoniously crowned as the first Serbian emperor (1346). This time Serbian rule in Skoplye lasted 110 years (1282—1392) and this epoch may be described as the golden period in the town's history (especially down to 1371).

After the battle on the field of the blackbird (Serb. Kosovo polje) in 1389 Skoplye became of especial importance to the Ottomans and they occupied it in the early years of the reign of Bayazid I. In the older Ottoman chronicles (Urudj b. Adil, p. 26; *Ashikpashazade*, ed. Giese, p. 58 [Stambul edition, p. 64]; Neshri-Nöldeke, ii., in *Z.D.M.G.*, xv. 333; anon. ed. Giese, p. 73 [only in the critic. appar., hence not in the transl.]), Pasha Yigit (Yigit) Beg, "who is the tutor of Ishak Beg (*Ishak beg efendi*) and is like his father", is named as the conqueror of Uskub and its first governor. The exact date of the conquest is not given in any of these historians but preserved in a contemporary Serbian inscription: Jan. 6, 1392 (Lj. Stojanović, *Starigradski zapisi*, i. [Belgrade 1902], p. 56, No. 177). Ewliya Celebi (v. 553) asserts however that Ewrenos Beg took the town. Shams al-Din Sami (*Kamūs al-A'lam*, ii. [1889], 932—933) on the other hand gives Timūr Tash Pasha as the Turkish conqueror of Skoplye in 792 (began Dec. 20, 1389) but without giving his authority. 'Alī Djewād (*Tārīkh wa-Djaghrahīyāt Lughātī*, i. [1311=1895], 87) also gives Timūr Tash Pasha but his authority seems to be the *Kamūs al-A'lam*. Uskub was at once settled with Turkish colonists (Hammer, *G.O.R.*, i. 183) and was for a time the second residence of the Ottomans sultāns next to Adrianople (cf. e.g. Ewliya Celebi, v. 553). Uskub was the base of further Ottoman campaigns northward, and it was from here that their governors controlled their Christian tributaries (Jireček, i. 97). In the course of time a busy trade developed in which the Ragusians played a prominent part. Building activity was also considerable and was mainly devoted to mosques, madrasas, baths etc. The largest and finest mosques date from the xvth century (Sulhūn Murād mosque built in 840=1436—1437; Ishak Beg ["Aladla"] mosque built in 842=1438—1439; 'Isk Beg mosque built about 880=1475—1476; Kodja Mustafa mosque built in 890=1485; Karlozade mosque ["Burmali dšamiya"] built in 900=

1495 [destroyed 1923]) and from the beginning of the xvth century (Yahya Pasha mosque built in 908=1502—1503). Some of the Uskub medreses early acquired a great reputation.

That Uskub in the xvth and xvith century also played a large part in the poetry and scholarship of Turkey is shown by the following celebrated names: 1. Aḡā, poet, d. 930=1523—1524 (Gibb, *H.O.P.*, ii. 191, note 3); 2. Ishak Celebi (Uskubi), lyricist and scholar, d. 949=1542—1543 (Gibb, iii. 40—45); 3. 'Aḡā Ishak Celebi (Pir Muḥammad), biographer of poets and himself a poet, d. 979=1571—1572 (Gibb, iii. 7—8 and 162, note 4; cf. also Ewliya, v. 560); 4. Weṣī (Uwais b. Muḥammad), one of the most brilliant prose writers of his time, died as Kādī of Uskub in 1037=1627—1628 (Gibb, iii. 208—218 and Ewliya, v. 560); 5. (New'izade) 'Aḡā, the famous poet and continuer of the *Shakā'ik al-nu'māniya* of Tashkopszade, whose last judicial post was in Uskub, d. 1044=1634—1635 (Gibb, iii. 242—243; Brislall M. Tahir, *'Oḡmānī Mūellifleri*, iii. 95—96; Babinger, *G.O.W.*, p. 171—172).

Western travellers of the xvth and xvith centuries (e.g. T. Petančić [1502], the anonymous Italian [1559], M. Birzi [1604], Dr. Brown [1669]) describe Skoplye as a large and fine town. The two Turkish accounts of the xvth century agree with this. The one is by Hadjdī Khalifa (c. 1648) who not only describes Uskub, the capital of the sandjak of the same name, as a fine town but says that the tower clock, which dated from the time of the unbelievers, was the largest in all Christendom; the other description by the somewhat later Ewliya Celebi in spite of all its exaggerations is the best of all the accounts of the town. At the time of his visit (1661), Uskub had 70 mahallas, about 10,000 solidly built houses including several famous serays, 2,150 well built shops, 120 large and small mosques (45 Friday mosques), several churches and synagogues, 20 dervish monasteries, 110 fountains etc. Commerce, trade and industry were also all very flourishing. Conditions were so settled that a garrison of only 300 men sufficed.

But towards the end of the century, the Austrian general Piccolomini supported by rebel Serbs advanced across the Danube and the Save into the Vardar district, plundered Uskub and burned it to the ground on October 26 and 27, 1689 (cf. M. Kostić, in *Julska Serbija*, i. [1922], 121—128). In the xvith century, the plague raged in this region and at the end of this century the population had sunk to 6,000.

It was only at the beginning of the sixteenth century that Uskub began to revive again rapidly as a result of the immigration of inhabitants from adjoining regions. The reforms of 'Omar Pasha Latas restored peace and order in the whole region after 1840 and trade flourished once more. From 1873 onwards Muslim emigrants from Serbia and Bosnia considerably increased the population of the town. In 1873 the railway Salonika—Uskub—Mitrovica was opened to traffic and in 1875 the capital of the wilāyet was removed from Pristina to Uskub. The opening of the railway Belgrad—Nish—Skoplye (Salonika) in 1888 connected the town directly with Serbia and Central Europe. At the end of the sixteenth century, Uskub had already 4,474 houses with 32,000 inhabitants (17,000 Muslims, 14,200 Christians and 800 Jews).

The Balkan war (1912) put an end to the 500 years of Turkish rule in Skoplye. Since 1918 when the town definitely passed to Yugo-Slavia the number of inhabitants has doubled and the development of Skoplye has been considerable in all fields (philosophical faculty of the University, Scientific society of Skoplye with its organ *Glasnik skopjskog naučnog društva* [Bulletin de la société scientifique de Skopje], South Serbian Museum, National Theatre, Hygienic Institute etc.).

(FERIK BAJRAKTAREVIĆ)

ÜSKÜDAR, the oldest and largest quarter of the Turkish Constantinople on the Asiatic side of the Bosphorus, lying at the foot of the hill of Bulghurlu, where the Asiatic coast advances farthest to the west, opposite the Tower of Leander (Kız Kalesi). In ancient times the small town of Chrysopolis (already mentioned in Xenophon's *Anabasis*, book vi., ch. vi. 38) existed on this site; it was then a suburb of the still older colony of Chalcedon (now Kâdî Köy). Towards the end of the Byzantine Empire the name Scutari had come into use (cf. Phrantzes, ed. Bonn 1838, p. 111; *Ἰστορία τῆς ἑσπερίας* [ἱστορία τῆς ἑσπερίας]). It is uncertain if this new name is to be derived from the corps of shield-bearers that was located there in the time of the emperor Valens (cf. Cuiet and G. Young, *Constantinople*, London 1926, p. 203). The direct reason may have been that there was, from the time of the Commeni, a palace there called Scutari (Cuiet). The Turkish Üsküdar contains at the same time a popular etymology, as the Persian word *uskudar* (also *arkudar* is given) has the meaning of a post station (Arabic *barid*); by its geographical position, Üsküdar became indeed the main base for all greater and smaller expeditions from the capital to the Asiatic parts of the empire (cf. F. Tarschner, *Das anatolische Wegenetz*, Leipzig 1924 and 1926). Large armies generally

were encamped in the vast plain to the south of the suburb, where now stands the part of the town called Haidar Paşa. Still another explanation of Üsküdar (viz. Eski Dār) is given by Ewliya Celebi.

The historical sources do not mention in what particular way Üsküdar was conquered by the Ottoman Turks, but it certainly was taken under Orkhan's rule, either after the capture of Iznik (1331), together with the other localities of Kōdja Ili [q. v.] (cf. Nicephorus Gregoras, ed. Bonn 1840, iii. 458), or in any case after the death of the emperor Andronikos (1341; cf. Phrantzes, p. 41). The old Ottoman chronicles mention it for the first time during the reign of Muhammad I. The local traditions, as recorded by Ewliya Celebi, connect Üsküdar closely with the different expeditions undertaken against Constantinople by Süleyman Paşa.

In Turkish times Scutari became much more an integral part of the capital than it seems to have been in Byzantine times, though, according to Ewliya Celebi, it became fully populated only in the time of Sulaiman I. One of the reasons was certainly that it became the seat of several derwish congregations and their tekke's, and consequently an important centre of the mystical life of the capital. The best known are the Halvetiye Tekke of Sheikh Mahmud (lived beginning xviii century) and the Rifaiye Tekke. Scutari contains moreover a number of remarkable mosques, the largest of which were all founded by ladies of the imperial court. The most notable mosques are: Mihr u-Mah Djami'i or İskele Djami'i, erected in 954 (1547) opposite the chief landing-place; Eski Walide Djami'i, more to the south, finished in 991 (1583); Çini Djami'i, on the south-eastern point, finished in 1050 (1640); and Yeni Walide Djami'i, finished in 1120 (1708). The Selimiye mosque was founded by Selim III and belongs to the buildings erected by that sultan for his new troops called *nişancı* [q. v.]. Finally this suburb is famous for the large cemetery that extends on its eastern side.

In the judicial hierarchy the Üsküdar Mollas ranked with the mollas of Ghalata and of Eyyub among the lowest class of the highest order of judges (d'Ohsson, *Tableau*, ii. 271). Administratively Scutari has long been a part of the town of Constantinople (Cuiet). In the new administrative division of the Turkish republic it is a *hassa* in the *wilāyet* of Istanbul (*Devlet Salmāri* for 1926, p. 612; on p. 635 of this publication the number of inhabitants is given as 155,092).

(J. H. KRAMERS)

UŞUL (A.), roots, principles, pl. of *uṣl*. Among the various terminological uses of this word, three are prominent as terms for branches of Muslim learning: *uṣl al-dīn*, *uṣl al-faḥḥ* and *uṣl al-fikḥ*. *Uṣl al-dīn* is synonymous with *kalām* [q. v.]; by *uṣl al-faḥḥ* is meant the treatment of the terminology and methods of the science of Tradition (see HADITH); the *uṣl al-fikḥ* (frequently called simply (science of the) *Uṣūl*) are the doctrine of the "principles" of Muslim jurisprudence, *fiqh* [q. v.].

1. In the usual classification of Muslim sciences, the *uṣūl al-fihh* are generally defined as the methodology of Muslim jurisprudence, as the science of the proofs which lead to the establishment of legal standards. Its existence is justified by the consideration that man was not created without a purpose (Sūra xliii, 117) and is not sinlessly left to himself (Sūra lxxv, 36) but all his actions are regulated by legal standards; as there cannot be a special standard for every individual case, one has to depend for their derivation on proofs. These proofs, according to the view which finally prevailed, are of four kinds: *Ḥur'ān*, *sunna*, *'iḍmā'* and *ḥyūs* [q. v.]. In the *uṣūl al-fihh*, therefore, we are not so much concerned with the material sources of Islāmic law as with the formal basis of the individual prescriptions. Thus the four *uṣūl* include in addition to the two material sources, *Ḥur'ān* and *sunna*, which are regarded from the point of view, not of their substance but of their legal force, the general condition of *'iḍmā'* and method of *ḥyūs*, while other historically no less important sources of Muslim law are not recognised. The development of these and other *uṣūl* which did not attain full recognition is somewhat as follows.

2. The logically first and most highly esteemed source of law in Islām is of course the *Ḥur'ān*; there could be no doubt of its conclusive authority and infallibility — in spite of the possibility of attempts to falsify it by the devil (Sūra xxii, 51; cf. Noldeke-Schwally, *Geschichte des Qur'ān*, i, 100), nor could there be any doubt that it has been handed down essentially intact (cf. *ibid.*, i, 261; ii, 93) — in spite of the Prophet's forgetting several verses (Sūra ii, 100; lxxvii, 6 sq.). The fact that the *Ḥur'ān* itself describes several of its sections as abrogated (*mansūkh*); the passage abrogating the older one is called *nāsikh* by later revelations is not in contradiction to this (Sūra ii, 100; xvi, 103 sq.; cf. Noldeke-Schwally, *op. cit.*, ii, 52 sqq.). It was the task of later interpretation to get rid of the numerous contradictions within the *Ḥur'ān*, which reflect the process of development of Muḥammad as a prophet, by harmonising them or in extreme cases to assume that the later revelation abrogated the earlier. It was in no way Muḥammad's intention to create a "system" even in its main outlines, which was to regulate the whole life of his followers; the old Arab customary law, which already included many elements of foreign (Roman provincial, Babylonian, South Arabian) origin, on the contrary remained in force in Islām as a matter of course with its variations adopted to local conditions [Badrin, Mecca (commercial town), Medina (an agricultural centre)]; Muḥammad's legislative activity was confined to correcting isolated points out of considerations of religion — for even the modifications affecting social life have a religious basis — from case to case usually under the stimulus of extraneous happenings. Including the verses dealing with questions of public worship and those of a military or political nature, the total number of verses forming what is known as the *ḥyūs al-ḥudūd* is only about 500–600; but essential parts of the legislation affecting worship, e.g. the ritual of the *ṣalāt*, were not regulated by the *Ḥur'ān*, but simply by the example and guidance of the Prophet, and a number of other prescriptions by Muḥammad are not in the *Ḥur'ān*, usually of minor importance and not of general application, although having prophetic authority (cf. Noldeke-Schwally, *op. cit.*,

i, 260). From the beginning, the prophetic authority of Muḥammad has never been doubted, even on matters not laid down in the *Ḥur'ān*; at the same time, however, his actions as a mere mortal were not considered infallible even in religious matters and on several occasions he was sharply criticised. The abolition of certain customs permitted or practised by Muḥammad very soon after his death points in the same direction. The Prophet himself made no claim to infallibility: the *Ḥur'ān* expressly states (e.g. Sūra xviii, 110; xli, 5) that, although he was the transmitter of revelation, in other respects he was a man "like others" and sometimes even condemns his attitude (e.g. Sūra lxi, 1).

3. With the death of the Prophet, legislative activity through *Ḥur'ānic* revelation and prophetic authority of course came to an end. It was natural that the early caliphs should endeavour to guide the Islāmic community on the lines of its founder, in consultation with the leading Companions of the Prophet. The guiding principles were to be found in the *Ḥur'ān* and in authoritative decisions of the Prophet not in the *Ḥur'ān*. The endeavour to extend these comparatively narrow foundations led very early to their interpretation being broadened beyond the original meaning and probably to the rise of new traditions. At the same time the caliphs, as heads of their state and representatives of the Prophet, were not to be prevented from legislative activity of their own and from sometimes even altering decisions of the Prophet (cf. above). It may be historical that according to tradition Abū Bakr is represented as modelling himself exactly on the Prophet in this connection and 'Umar rather as showing more tendency to interfere and change. The relationship to customary law continued unchanged, even after the latter had been more than ever exposed to foreign influence as a result of the great conquests in the 'Irāk, Syria and Egypt.

4. With the coming of the Umayyads and the transference of the seat of government to Damascus the circles of the devout in Medina, hitherto the centre, lost all actual influence on the business of government. They therefore began to devote themselves with all the more zeal to preparing an ideal picture of things as they ought to be, in contrast to the actual practice. While in reality the customary law continued to exist undisturbed in the various provinces of the caliphate, and developed in combination with the actual administration of justice — for the Umayyad caliphs down to 'Umar II had in general little inclination to interfere and establish standards based on religion — the principles of Muslim law arose first in Medina and later also in the 'Irāk and Syria. The object of these pious men who at first worked without any thought of theory or method, was to correct and adjust the material of the laws they found in existence according to Muslim religious principles and to systematise it. They took their religious points of view from the *Ḥur'ān* and the material of Tradition, which they recognised as binding; the (real and alleged) sayings and actions of the Companions of the Prophet, of whom as a body they were the successors, had also high authority with them. It was of special authority when a majority of the Companions acted in the same way and the same majority principle did a great deal to cause individual views gradually to approximate to one another. The results of these cogitations were for the most part formulated in traditions and put in

the mouth of the Prophet. This considerable increase in the material of Tradition, from other sources also, again introduced into Muslim law numerous new elements, particularly those of Jewish origin. This resulted in establishing already certain characteristic peculiarities of Muslim law: its character as the interpretation and unfolding of the prescriptions, given in essence at least, by Allāh through his Prophet, the denial of the possibility of development and of legislative activity after the death of the Prophet in contrast to the historical development, the recognition of the usage of the Prophet, the *sunna al-nabi*, as the second main standard standing next to the *Qur'an* only in position, not in power and authority. It was just because the teaching was based for a very large part on Muḥammad's (real or fictitious) *sunna* that this was regarded as an infallible norm for the Muslim community, a view which was with difficulty read into the *Qur'an* (e.g. iii. 29; iv. 62; xvi. 46; xxxiii. 21; liii. 3) but was distinctly laid down by tradition. The contradictions, which naturally appeared more frequently in Tradition than in the *Qur'an*, were to be disposed of by the same means as in the latter (cf. above), and also by criticism of the *isnād* [q. v.] behind which criticism of the subject matter had, it is interesting to note, usually to conceal itself. The more or less strongly islamised customary law was still recognised as having an independent basis, especially on points where it aroused no misgivings from the religious point of view. As its Muslim equivalent, the "*sunna* of pious men" is sometimes given particular authority.

5. The first reflections on theory were provoked towards the end of this period, in the beginning of the second (eighth) century, by the coming into existence of a special science of *ḥadīth* alongside of *fiqh*. The representatives of the former reproached the "jurists" with bringing by their use of the intelligence a human element into the law which ought rather to be based exclusively on the *Qur'an* and on *Ḥadīth* as representing the *sunna* of the Prophet. Their opponents replied to this by saying that one's own intelligence (*ra'y*) was absolutely necessary for the deduction of legal precepts and both parties cited traditions to support their views. From the first, the dispute was more concerned with form than matter and frequently was simply a quarrel over words; the result of it was the general recognition in principle of the justification of *ra'y* in the *fiqh*; on the other hand, the various schools laid varying emphasis on *Ḥadīth*; at any rate the results are everywhere the same. As early as the first half of the second (eighth) century three different shades of *fiqh* had developed in the three centres of the Hijāz, the 'Irāq and Syria, in the origin and spread of which geographical conditions had played an essential part, on the one hand through developing life and doctrine uniformly within closed areas and on the other through the original differences of the basic legal material in the different regions; these variants were the precursors of the later *madhāhib* of Mālik, Abū Ḥanīfa and al-Awāzī; the Hijāz school laid most emphasis on Tradition and the 'Irāq school on *ra'y*. In these circumstances the views held by the majority of learned men in Medina (or Mecca and Medina) or in Kūfa or in Bagda carried particular weight. To about the middle of the second (eighth) century belong the first writings of any

length by important representatives of these three schools, especially of the Hijāz and the 'Irāq, which enable us to see their mental attitudes; the following sketch is based on the results of the study of Mālik's *al-Muwatta'*, the only work that has been at all studied among them. Mālik devotes great care to establishing the *ijmā'* of the learned men of Medina; this conception, which originally had simply meant the majority (just as in the science of *Qur'anic* readings which borrowed the term from the *qāṭa*; cf. Noldeke-Bergsträsser, *Geschichte des Qur'an*, iii. 130 sq., 135), has here already become the qualified majority, approaching unanimity. At the same time Mālik recognises as authoritative the *sunna*, i.e. legal use and wont in Medina, which is not at all identical with the *sunna al-nabi* (cf. above). Both *ijmā'* and *sunna* of Medina are to him closely connected; his work represents the degree of islamisation of the customary law attained in his time in Medina and — as is evident from a comparison with the later period — the process was now complete. The great works of al-Shāfi'i were undoubtedly something similar for the 'Irāq.

6. In al-Shāfi'i (d. 204 = 820) we have the founder of Muslim jurisprudence. It is his great achievement that in him legal thought becomes conscious of itself and thus becomes a science, that he argues not only occasionally and ad hoc but throughout and on principle and gives a discussion on the starting points and methods of argumentation in jurisprudence. The important steps in advance which he made in the *uṣūl al-fiqh*, based on the results of previous development, are as follows. He finally defines *sunna* as a source of law as the usage of the Prophet, as the 'Irāq school had already done before him. He further defines the *ijmā'* as the view held by the majority of Muslims and uses it as a secondary source of elucidation on questions which cannot be decided from the *Qur'an* and the *sunna* of the Prophet; he justifies its authority by general considerations and traditions which order adhesion to the community of Muslims and he therefore does not yet know the *ḥadīth* later often quoted: "My community will never agree upon an error". While the islamisation of law had in general been already completed before Mālik, al-Shāfi'i did a great deal to advance its systematisation. To attain this object, he to some extent abandoned the usual path of legal thought, not the first appearance of this tendency, and if he did not invent the process of *qiyās* (analogy), he considerably developed the principle and applied it extensively. It is essentially the old method of *ra'y* which he adopts here under this less ominous name, but a certain limitation of the process is apparent (among the old representatives of the 'Irāq school *qiyās* seems to have been used to dispose of isolated abnormal traditions). Al-Shāfi'i further endeavoured to lay down definite rules for its use; he only succeeded to a very small extent however and even in later times, in spite of limitations in method, *qiyās* still had not overcome the vagueness which causes it to lack cogent power of conviction. In al-Shāfi'i it still appears as synonymous with *istiḥṣān* [q. v.] in the old sense in which the latter as a synonym of *ra'y* means the jurist's use of his intelligence. Among the representatives of the 'Irāq school and also among those of the Hijāz, *istiḥṣān* [q. v.] was used as a variety of *ra'y*. It consisted in

diverging from the result properly to be expected by analogy (*hiyās*) out of considerations of reasonableness or practical considerations etc. Al-Shāfi'i vigorously challenged this process as purely subjective and held that only *hiyās* was valid. Al-Shāfi'i in this way carried through a deliberate Islamisation of the *uṣūl*.

7. The development after al-Shāfi'i in the predominant school resulted in the *Kur'ān*, *sunna*, *ijmā'* and *hiyās* being classed together as the four *uṣūl al-fihh*, which is only intelligible from their history, and in further developments in detail. Among the latter are the settlement of the mutual relations of *Kur'ān* and *sunna*; while al-Shāfi'i taught that the precepts of the *Kur'ān* were given greater precision by the *sunna* but the *Kur'ān* can only be abrogated by the *Kur'ān* and the *sunna* by *sunna*, it was already recognised in part before and certainly generally after him, that it was possible to abrogate the *Kur'ān* by *sunna*, which was thus ranked not only equal to but above the *Kur'ān*; the practical legal results were however hardly affected by this theoretical differentiation. — As to the *ijmā'*, in later times they were not content with the majority of Muslims, but demanded the general agreement of all scholars living at the same time in a certain period, which was to be binding on all futurity, but unanimity in the literal sense was never demanded. The *ijmā'* in this sense did not remain merely supplementary to the *Kur'ān* and *sunna*, but was regarded as confirming them, on the ground of the general conviction of its infallibility, which had developed out of general considerations and found expression in the above quoted *ḥadīth* (*Kur'ānic* passages like iii. 98; iv. 85, 115 are also quoted in support); finally it was even allowed the power of cancelling prescriptions of the *Kur'ān* and *sunna*, as was actually done for example in the case of the worship of saints and the doctrine of the infallibility of the prophets (cf. above § 2). Important sections of Muslim law are based on this *ijmā'* alone, e.g. the caliphate, the recognition of the *sunna* of the Prophet as an obligatory standard, the authorisation of *hiyās* etc.; in the last resort, in this view the whole of Muslim law owes its authority to the infallible *ijmā'*, which guarantees its correctness and agreement with the true meaning of the divine sources. This conception of *ijmā'* is in its essentials already found in Tabari (d. 310 = 923). This is the common orthodox doctrine; only the Mālikis define *ijmā'* as the agreement, firstly of the Companions of the Prophet, then of the two generations following them (the so-called "successors" and "successors of the successors"), and therefore as the *sunna* of Medina, the home of the true *sunna* (cf. above § 5), but grant this *ijmā'* the same authority as the others do. Only some Hanbalis and the Wahhābis, as well as the Zāhiris, to be mentioned below, limit *ijmā'* to the agreement of the Companions of the Prophet, which has resulted in considerable differences in doctrine. The Khāridjīs (Ibādīs) recognised only *ijmā'* within their own community and here they demand unanimity. At the same time, there were various divergent views on *ijmā'* in the early period. — Even after al-Shāfi'i a vigorous opposition to *hiyās* was raised by Dāwūd al-Zāhiri (d. 270 = 883) and his school, who rejected all *hiyās* and *ra'y* and declared for the interpretation of the *Kur'ān* and *sunna*, in the outward

sense (*ṣāḥih*) only; but even they could not get along without making deductions, which they endeavoured to represent as being already inherent in the words of the text (*mafaḥm*). But this school, which survived down to the 10th (15th) century was not destined to have a lasting influence. We also still find other isolated opponents of *hiyās* and *ra'y*, even among the Shāfi'is, e.g. al-Bukhārī (d. 256 = 870) and al-Ghazālī (505 = 1111), who — at least in his mystic period — applies it in practice, but in theory does not recognise it as having equal force with the traditional sources (cf. Goldziher, *Zākiriten*, p. 182 sq.); in the end however, *hiyās* won undisputed recognition and the Hanbalis and Wahhābis as well as the Khāridjīs (Ibādīs) recognise it. The Shāfi'is and with certain limitations also the Hanafis use in *istiḥṣāb* [q. v.] a special variety, surer in method, of the usual *hiyās* which is regarded as an independent *uṣūl*. The Hanafis followed the other *madhāhib* in taking over the term *hiyās* for the old *ra'y* but in contrast to al-Shāfi'i they retained *istiḥṣān*. The Mālikis continue to recognise it, but in general they prefer the process or rather the name *istiḥṣāb* [q. v.], a variety of *hiyās* which decides in favour of what is generally considered best. This *istiḥṣāb* is also found among the Shāfi'is, who following their master vigorously reject *istiḥṣān*. As a matter of fact, the two processes are practically identical. On account of the arbitrariness with which the results of *hiyās* were often simply thrust aside, when it was considered necessary or simply desirable to diverge from the strict demands of theory, both methods are disputed by many and have never been generally included among the *uṣūl* of the *fiqh*.

The Twelver Shī'is (Imāmis) agree with the Sunnis in recognising the *Kur'ān* and *sunna* as *uṣūl* of the *fiqh*; with them however not only the *sunna* of the Prophet is authoritative but also that of the divinely guided twelve imāms, whose infallible authority guarantees the correctness of the law in a similar fashion to the *ijmā'* in the Sunni system. For the documentation of the *sunna* the Shī'is have several works of their own on tradition, which differ materially from those of the Sunnis; in particular all traditions and decisions are rejected which go back to the authority of the first three caliphs before 'Alī or in which 'Alī appears as their representative and successor. Under the guidance of an imām further *uṣūl* are unnecessary; during the concealment of the last imām, however, there are still two others which correspond to the two last Sunni *uṣūl*. But even in this period the school of the Akhbarī regards the *sunna* along with the *Kur'ān* as alone authoritative and seeks to trace back all decisions to traditions of the imāms, limiting as far as possible rational deductions, and even demands for the elucidation of each verse of the *Kur'ān* a tradition relating to it. The school of the Uṣūlī, on the other hand, which enjoys greater prestige as the more widely disseminated, recognises reason (*ʿaql*) as the third of the *uṣūl*, but disputes the right of *hiyās* (this variation from the Sunnis is however limited to terminology). Lastly the fourth among the *uṣūl* is the agreement of the majority of jurists since the beginning of the concealment of the last imām. While the *sunna* can abrogate another *sunna* and even the *Kur'ān*, this *ijmā'* can only dispose of traditions, the correctness of the transmission of which it disputes. At the same time, the Shī'is recognise as secondary *uṣūl*, *istiḥṣāb*, the similar methods of deduction

known as *ḥarā'a* and *iḥtishād* as well as, in the ultimate resort, the choice of the judge between several possible views.

8. Although the *ijmā'* is strongly rooted in customary law and has actually gained official recognition for important elements in practice even against the *Korān* and Tradition (cf. above), its fitness for the further development of Islamic law, the rejection of old prescriptions and the assimilation of new elements must not be overestimated, as it is as likely from its development to prevent, as much as to encourage, innovations; the numerous foreign elements which Muslim law contains had for the most part entered it before *ijmā'* had begun to prevail over *ḥā'a* as a whole. On the other hand, *iḥtishād* and *iḥtishād* afford the possibility of paying consideration to customary law, though to a gradually diminishing extent in course of time. In places the attempt was even made to place 'urf, the general usage, as a fifth *asī* of the *ḥā'a* alongside of the four generally recognised, even as late as the 15th (16th) century; in general it is regarded as meritorious not to let the laws derived from the *Korān* and *sunna* come into conflict with actual practice and to legitimate the latter as far as possible "to escape the danger of sinning" (cf. *Id.*, iv, 213); but a general direct recognition of 'urf, even in a subordinate position, by the *ḥā'a* never came about. The discussions which we find about 'urf 'āmm (general usage) and 'urf khass (local custom or custom observed for a time only), their relation to the *ijmā'* and their legal authority, are purely theoretical; in the cases in which the *ḥarā'a* itself refers to 'urf or 'āda (custom), the reference is hardly ever to legal usages; customary law is not recognised as binding even for the cases for which the *ḥā'a* gives no rule. The view prevailing in the Dutch East Indies for example, of the equality of *ḥarā'a* and 'āda (cf. the article *SHAR'Ī'A* at the end) takes us quite outside of the teaching of the *ḥā'a*, which can leave almost all practice to customary law, but not give it a place at all in its theoretical system. Even the later Mālikī jurists, especially in North Africa, who have made particular efforts to adapt themselves closely to actual practice, make no exception on this question of principle. However important and natural the influence of customary law and of foreign legal elements in general was in the early period of Islamic law, all the more difficult has been its further advance, especially since the theoretical recognition of the *uṣūl* in their final form.

9. As the *ḥā'a* had already developed in all essentials before the theory of the *uṣūl* was established, the elements which led to its origin cannot be given in their correct historical perspective. But even from the point of view of Muslim systematisation, they have for long had a purely theoretical position as regards *ḥā'a*. Only the *muḥtashab* is qualified to apply them, that is to say to derive independently legal regulations from the *uṣūl*, but according to the orthodox *ijmā'*, *iḥtishād* has long ceased and all jurists are obliged to use the lowest stage of *ḥā'a* [q. v.]. Many jurists are therefore content, without going deeper into the study of the *uṣūl*, with the occasional brief notes on them, which most of the *ḥā'a* books add to the discussion of different regulations. There are however numerous special works on the *uṣūl* and these form the subject of one of the traditional Muslim sciences.

The *Sunnat* works on *uṣūl* deal *inter alia*, according to the author's point of view, with *ḥarā'a*, *sunna* and *ijmā'* as regards genuineness and arrangement for the purposes of *ḥā'a*, the rules — usually given very fully — for their interpretation, according to form and legal substance, also the so-called legal categories (cf. the article *SHAR'Ī'A*), the reconciliation of contradictions among the sources by harmonising or assuming abrogation, the use of *ḥā'a*, dispensation etc. and lastly as a rule with *iḥtishād* and *ḥā'a*. The first work of this kind, which however does not yet fall into the scheme given, is al-Shāfi's *Riḥla*. Among especially important and much annotated works of a later period are the following: Imām al-Hammām al-Dhūwānī (d. 478 = 1085), *al-Warā'id fī Uṣūl al-Fiqh*; al-Pardawī (d. 482 = 1089), *Kamāl al-Wujūh ilā Ma'rifat al-Uṣūl*; Sa'id al-Shar'ī al-Thāmī (d. 747 = 1346), *al-Tanẓīh* and *al-Tawḥīd*; al-Suhbī (d. 771 = 1369), *Uṣūl al-Dhūwānī*; Mollā Khosraw (d. 885 = 1480), *Mir'āt al-Wujūh* and *Ma'rāt al-Uṣūl*. — The authority of the *imām* is the foundation of the *Shrī'at* and among the *Shrī'as* it plays a part similar to *ijmā'* among the *Sunnas*; *iḥtishād* also continues to exist here.

Bibliography: The fundamental works for the history of the *uṣūl* are: Goldsther, *Die Jāhīriten*; Snouck Hurgronje, *Verspreide Geschiedenis*, vol. 2; Bergsträsser, *Id.*, xiv, 76 sqq. — Macdonald, *Development of Muslim Theology*, p. 65 sqq. gives an older historical view; concise accounts of the prevailing theory with historical notes are given by Jaynaboll, *Handleiding*, p. 32 sqq. (*Handboek*, p. 39 sqq.) and more fully by Santillana, *Institutionen*, p. 25 sqq.; further literature is also given there. — Lists of the best known Arabic works on *uṣūl* are given in Hājjī Khalifa, ed. Flügel, i, N^o 835 sqq. and in Tāshköprüzade, *Miftāḥ al-Sa'āda*, Hyderabad, 1910, li, 53 sqq.; do. in Turkish, *Ma'rāt al-Uṣūl*, transl. by Kamāl al-Dīn, Constantinople 1313, p. 654 sqq. (JOSEPH SCHMIDT).

'UTARID (A.), the planet Mercury, Pers. *Tir*. It was known from very early times to the ancient civilisations of the east as its conditions of visibility are much more favourable there than in more northern latitudes. Lists of planets of the Assyrian period mention Mercury (*Nabū*) under its Sumerian name Kakkab L. U. B. A. T. G. U. U. D. Among the Egyptians it was called the "star of Apollo", among the Greeks ἡ τῶν Ἑρμοῦ ἀστὴρ and also Στρίλων (cf. Achilles Tatius, *Leucippe*, Ch. 17). Aristotle also calls it ὁ τῶν Ἀρτέμιδος.

The name *al-Kutib* as a synonym for 'Utarid is, according to Nallino (al-Battānī, *Opus Astronomicum*, i, 291), only used among the Arabs in Spain and Northwest Africa and is not to be found in Arabic texts or dictionaries compiled east of the Nile. The name *al-Kutib* is quoted in a later Arabic glossary compiled in Southern Spain in the 11th century (*Glossarium Latino-Arabicum*, ed. C. F. Seybold, Berlin 1900); the two passages in al-Battānī in which Mercury is mentioned as *al-Kutib* (iii, 186 and 222) are undoubtedly apocryphal.

The Arab astronomers reckon the sphere (*faḥḥ*) of Mercury, in agreement with Pythagoras and Ptolemy, as the second innermost. Below it is bounded by the outer surface of the sphere of the moon and above by the inner surface of the sphere of Venus. In perigee (*farḥīḥ*) the distance from the earth's centre is according to al-Farghānī

(*Compositio*, Ch. 21), al-Battānī (Ch. 50) and Ibn Rusta (*Kitāb al-Aʿlāq*, ed. de Goeje, p. 18–20) $64\frac{1}{8}$ times the radius of the earth, according to Alharrāmī bar Hiyyā (*Sphaera mundi*, Ch. 9) 64 times the radius of the earth, in apogee (*afḍiyyān*) according to al-Farghānī 167, according to the three other authors 166 times the earth's radius; al-Battānī takes 115 times the earth's radius as the mean distance. The radius of the earth is here taken as 3,250 (al-Farghānī, al-Battānī and Bar Hiyyā) or 3,818 Arab miles (Ibn Rusta) (one Arab mile = 1,973 metres; cf. Nallino, *Il valore metrico del grado di meridiano*). Figures are also given for dimensions of the body (*ḡirf*) of the star. Al-Kāzwinī (*Kosmographie*, ed. Wästenfeld, l. 22) estimates the circumference (*ḡawra*) of Mercury at 286 *farsakh*s and its diameter (*ḡur*) at 273 miles (1 *farsakh* = 3 miles); according to al-Battānī the diameter of Mercury is to that of the earth as 1:26 $\frac{1}{4}$ (Ch. 50); it is therefore about 250 miles; al-Battānī gives the volume at

$\frac{1}{18,087} \left(\frac{1}{20\frac{1}{2}} \right)^3$. The corresponding Indian figures given by al-Bīrūnī (from the compilation by Ya'qūb b. Ṭarīk of 161 A.H.) differ considerably from the Arab: shortest distance 64,000 *farsakh*, corresponding to 60 $\frac{20}{21}$ times the radius of the earth (1 radius = 1,050 *farsakh*), mean distance 164,000 *farsakh* = 156 $\frac{4}{21}$ earth's radii, greatest distance 264,000 *farsakh* = 251 $\frac{2}{7}$ radii, diameter 5,000 *farsakh* = 4 $\frac{10}{21}$ radii.

A very full theory of the motion of Mercury is given by al-Battānī (Ch. 31 and 45–48, also tables II, p. 24–28 [fol. 168^b–170^b], p. 102–106 [f. 205^a–207^a], p. 132–137 [f. 220^a–223^b], p. 139, 141, 143 [f. 224^b, 225^b, 226^b]). The motion in anomaly (*ḡaḡḡa*) corresponding to the mean synodic motion is 3° 6' 24" in a day, so that Mercury completes its synodic revolution in 115 days 21 hours. These figures agree most accurately with the modern estimates. The values given in al-Battānī's tables for the difference between the mean and true anomaly (*ḡaḡḡa al-ḡaḡḡa wa-l-mawḡa*) of Mercury expressed in terms of the radius of the deferent (*al-falak al-ḡaḡḡa*) are: eccentricity of the equant (*al-falak al-mu'adḡil li-l-mawḡa*) = 0.05 and radius of the epicycle (*falak al-taḡwīr*) in mean distance = 0.375. In expressing the diameter it should be noted (cf. *Almagest*, xiii): The maximum indication of the deferential towards the ecliptic (first inequality, *maḡ al-falak al-ḡaḡḡa*) is 0° 45' south; the maximum inclination of the apsidal line of the epicycle towards the plane of the deferent (second inequality, *maḡ falak al-taḡwīr*) was estimated by observation at 6° 15'.

Uṭrid in astrology. Uṭrid is the ruler (*raḡb*) over the *ḡuḡḡa* al-Adhrā' (Virgo) and al-Djawwā' (Gemini), also might ruler over the 3 *muḡḡal-ḡaḡḡa* (triquetrum) consisting of al-Djawwā', al-Miḡān (Librae) and al-Dalw (Aquarius). It has its *ḡhoraf* (exaltation) in the 15th degree of al-Adhrā', its *ḡuḡḡa* (dejection) in the 15th degree of al-Hār (Pisces). According to Kāzwinī (l. 22), it was called *muḡḡal* "hypocritical" by the astrologers, because in conjunction with a lucky planet it brought good fortune and with an unlucky one ill-luck. It also assumes the quality of the ruler in the *ḡuḡḡa* of other planets; in its own it produces thunder and earthquakes. The Indians according to al-Bīrūnī regard Mercury as a lucky star when it stands alone, while in constellation with another planet

it intensifies its good or evil influences, just as with the Greeks and Arabs. — A detailed account of the part played by Mercury in Arabic astrology, its significance in the zodiacal circle, its conjunctions with the moon and other planets is given by Abū Ma'ḡḡar, to whose work the reader is referred.

AL-UTBĪ, ABŪ NAḡḡ MUḡḡAMMAD b. MUḡḡAMMAD AL-DJABRĪ, the author of the *Kitāb al-Yamīnī*, was born at Raiy about the year 350 (961). He left his home in early youth and came to live in Khurāsān with his maternal uncle Abū Naḡr al-Uṭbī who held an important post under the Sāmānids. After the death of Abū Naḡr, al-Uṭbī served as secretary first to Abū 'Alī Simḡjārī, the commander of the army of Khurāsān from 378 to 383 (988–993), then for a short time to Shams al-Ma'ālī Ḳāḡḡa who was living as an exile in Khurāsān, and finally to Subuktigīn, ruler of Ghazna. He continued to hold this post under Isma'īl b. Subuktigīn whom he claims to have persuaded to surrender Ghazna to Maḡḡmūd.

In 389 (999) Sultān Maḡḡmūd of Ghazna sent al-Uṭbī as a special ambassador to Ghazhistan to persuade the ruler to acknowledge him as his suzerain, and he accomplished this mission successfully. About the year 412 (1021), al-Uṭbī finished his famous work the *Kitāb al-Yamīnī*, presented it to Shams al-Kuḡḡat Ahmad b. ḡasan al-Maimandī, the waḡīr of Sultān Maḡḡmūd, and as a reward was appointed to the important post of *ḡaḡḡi Barīd* (Postmaster) of Kandī Rustāḡ. But al-Uṭbī quarrelled with Abū ḡ-ḡasan al-Baḡḡawī, the governor, and made complaints against him to Ahmad al-Maimandī, the waḡīr. As a result of the enquiries which were instituted into the matter, he was dismissed in 413 (1022). After this he entered the service of Prince Ma'ḡḡd, son of Sultān Maḡḡmūd, and was heard of no more. He died in 427 (1036), or, according to another account, in 431 (1040).

Al-Uṭbī was the author of many works, only one of which, the *Kitāb al-Yamīnī*, has survived. It is a history of the reign of Amīr Subuktigīn, his son Sultān Maḡḡmūd and the contemporary rulers. The style of this work is very ornate and verbose and has always been appreciated in the East. ḡurḡḡi Zaidīn, in his *Ṭaḡḡā ḡadab al-Luḡḡat al-'Arabiya* (II. 322), regards its style as superior to that of al-Tha'ālībī's *Yamīnī* and compares it favourably with ḡilāl al-ḡilāl's *Ṭaḡḡā al-Waḡarī*.

Bibliography: *Kitāb al-Yamīnī* of al-

'Uthi and its commentary *Faṭḥ al-Wakīf*, commonly known as *al-Musalsal* (Cairo 1286); and *Yatimat al-Da'ir* of al-Tha'ālidi.

(M. NASSIR)

AL-UTRUSH AND MUHAMMAD AL-HASAN b. 'ALI b. AL-HASAN b. 'ALI b. 'OMAR AL-AHSAB b. 'ALI ZAIN AL-'ARIDIN (s. 'ALI b. AL-HUSAIN); born about 230 (844) at Medina of a Khurasan slave girl, died in Sha'ban 304 (beginning of 917) at Amal as ruler in Tabaristan, is recognised under the official name of AL-NASIR AL-KASIM as Imām by the Zaidīs, and also by those of Yemen.

Al-Utrush came to Tabaristan in the reign of the 'Alid al-Da'ir al-Kasim b. Hasan b. Zaid (see AL-HASAN b. Zaid b. MUHAMMAD); his brother and successor al-Kasim b. 'Ishāq Muhammad b. Zaid distrusting him, he endeavoured to found a kingdom of his own in the east, at first with the support of the governor of Naisabur Muhammad b. 'Abd Allāh al-Khudjīsi who took Utrush from al-Kasim. But tale-bearers cast suspicion on Utrush and al-Khudjīsi threw him into prison in Naisabur or Khudjīsi and had him scourged, which injured his hearing and to this he owes his epithet 'the deaf'. On his release he returned to al-Kasim Muhammad and in 287 or 288 or (according to Abu 'I-Faraj al-Iṣfahānī, *Muṣṣal al-Talīṣīn*, Tehran 1307, p. 229, 24) not till 289 (900–901) he shared in the latter's defeat at Khudjīsi by Muhammad b. Hārūn, then a partisan of the Sāmānīd [q. v.] Imād 'I b. Ahmad. Al-Kasim died as a result of a wound; Utrush fled and went to Dāmaghān and Ray among other places. On the death of the caliph al-Ma'taqid in 289 (902) he came forward again, especially as Muhammad b. Hārūn, who had quarrelled with the Sāmānīds, supported him. Utrush received a welcome from Djamīn of Dailam (or his son Wahsūdān; cf. Vassier, in *Islamica*, iii, 165, 209). The friendship of the Djamīnīds, which dated from the time they and Utrush were with al-Kasim, was as fickle as their attitude to Islam which their ancestor Marzbān had adopted only a century earlier. Several joint undertakings thus came to nothing; Utrush recognised the necessity of first of all securing a following of his own and through them the followers of the Djamīnīds. He conducted Islamic missions and 'Alid propaganda from Hawsan among the not yet Muhammadan tribes on the coast of the Caspian Sea and in Gilān and also built mosques.

The Sāmānīd Ahmad b. Imād 'I in 298 (910) sent Muhammad b. Sa'īd to Tabaristan with orders to anticipate the foundation of the new state; but a Khurasan army superior in numbers and still more in equipment was completely defeated by the Dailamī under Utrush at Shāfūs in Djamīn I 301 (Dec. 913); many fugitives were driven into the sea; a detachment led by Abu 'I-Wafā' Khalifa b. Nuḥ escaped to the fortress of Shāfūs, surrendered to Utrush on a promise of pardon but was shortly afterwards massacred by his general and son-in-law al-Hasan b. al-Kasim b. al-Hasan b. 'Ali b. 'Abd al-Rahmān b. al-Kasim b. al-Hasan b. Zaid b. al-Hasan b. 'Ali b. Abi Talīb Utrush had in the meanwhile gone to Amal with the rest of the army, sent for by the terrified inhabitants, and had taken up his abode in the former palace of al-Kasim Muhammad. He was able to instal his officials from Shāfūs to Sāriya, unhindered by the Sāmānīds, because just then Ahmad b. Imād 'I was

murdered and his son Nays had first of all to make his position secure against his family and the notables. The Isma'īlī Sharwīn b. Rustam of the house of Bawand, which had been very dangerous to the earlier 'Alids, made peace with Utrush.

In accordance with the usual experience in the foundation of 'Alid states, more difficulty was found in getting the numerous relatives to work together. As Utrush was at least 70 when he entered Amal, and his sons seemed rather incapable, the tension that had formerly existed between al-Kasim Muhammad and Utrush was now repeated between the latter and the already mentioned general al-Hasan b. al-Kasim. The latter broke for a time with Utrush, even took him prisoner on one occasion but had to fly to Dailam in face of the general indignation. But equally general was the pressure brought by the notables upon the dying Utrush to designate this same al-Hasan his successor and they at once paid homage to him after the death of Utrush.

Utrush owed his rise not only to the skillful way in which he took advantage of the political discord on the Caspian Sea but also to his unusual intellectual ability. He was also a poet (cf. Brit. Mus. MS. Suppl. 1259, iv., and specimens in the *Iḥṣān*, see *ibid.*), but he particularly cultivated dogmatics, traditions and law (cf. also Ibn al-Nadīm, *Fihrist*, p. 183, 21, 22). His *ḥikma* has been preserved indirectly (see *ibid.*); he differs from the Yemen practice in the ritual of burial and minor points of the law of inheritance; he also recognised the revocation of a marriage pronounced thrice in succession as three actual divorces, by which he met the rivalry of the Twelver Shī'is which was considerable in the north; one of his sons, Abu 'I-Hasan 'Ali, actually joined the latter; and he himself used their form of washing the feet, of course with the general Shī'a refusal to recognise the rubbing of the covered foot as a substitute for washing; he also showed himself less strict against members of other faiths, which is intelligible in view of his political and missionary aims. A particular Zaidī sect, the Naṣiriya, was called after him, which was only merged in the Kāsimiyya, which had become predominant in the Yemen, by the Imām al-Mahdī Abu 'Abd Allāh Muhammad, son of the above mentioned al-Hasan b. al-Kasim.

The latter, known as al-Da'ir al-Saghir, succeeded Utrush and was able to conquer Naisabur in 305 (920) through Laila b. Nu'mān, an old general of his predecessor, and even to send an army against Fāz. But he was killed in 316 (928) when going from Ray to the relief of Amal, which was occupied by Asfar b. Shīrwāh al-Dailamī and Abu 'I-Raddādī Merdāwīd b. Ziyār. His power had always been limited by the sons of Utrush: Abu 'I-Kasim Dī'far b. al-Utrush had taken Amal in 306 (918) with the help of Muhammad b. Sa'īd, governor of Ray, and again in 312 (925), on each occasion holding it for a short time. In 311 (924) his brother Abu 'I-Hasan Ahmad had entered it; his son Abu 'Ali Husain and his brother and successor Abu Dī'far had also to fight an anti-Imām in Dī'far's son Imād 'I, who however was poisoned in 319 (931). In the meanwhile, another relative of Utrush, Abu Fāḍ Dī'far, had set himself up with the title al-Tha'ir b. 'Ishāq and soon after 320 (932) was able to occupy Amal for a time, aided by his policy of taking sides alternately in the

war between the Ziyārid Waḥmīr with the Bāyids who were now coming to the front, especially as the Firzānīd al-Ḥasan and a certain Ustundār of the Bādīs(e)panīds who had once been conquered by the Dā'ī al-Kabīr al-Ḥasan b. Zaid also intervened.

This little north 'Alid state was continually able to hold its own, although its importance and size constantly changed, among the petty native princes, the Firzānīds, notably Mākan b. Kāh, and Dīstānīds, Ziyārids, Isphahānīs of the house of Ḥawād, Būyids and Sāmānīds, even in spite of domestic troubles. It lasted down to about 520 (1126), the year of the death of Abū Ṭalīb al-Saghīr Yahyā b. al-Ḥusain al-Buḥārī b. al-Mu'ayyad who could not prevail in Daīlam against the Assassins; we can hardly reckon in this line the alleged 'Alid dynasty of Kiya-Ḥusain in Gilān from the end of the viith (xvth) to the end of the ixth century. Abū Ṭalīb was the great-grand-nephew of the Imam al-Nāṣī Abū Ṭalīb (see *Bibl.*) who, born in 340 (951), has given us the most important account of Utrush, based on the stories of eye-witnesses, such as his father,

(R. STROTHMANN)

UWAIS I (Sulṭān Uwais), second king of the dynasty of Dīlā'ir [q. v.] or Ilākān (Ilkan < 'Ilg'ān?) who reigned 756—776 (1355—1374).

Uwais, born about 742 (1341), was the son of Ḥasan Buzurg [q. v.], son of Ḥusain Gurgān (*Kurkhān*, "son-in-law of the Khān"), son of Ak-bughā Noyon, son of Ilākān ('Ilkūn) Noyon (Rashīd al-Dīn *Ilkhā*, 'Ilghāy).

Ḥasan Buzurg's mother was a Mongol princess, daughter of Arghun-Khān. Ḥasan himself married the famous Dīlghād-Khātūn, daughter of Dīmīshk-Khāwāja, son of Copan [cf. *Sulṭ.*], who had previously married Abū Sa'īd Khān and on his death in 762 had married a certain amīr Sulaimān (*Ḥabīb al-Siyar*). Dīlghād-Khātūn was famous for her wit and beauty. The visitors used to consult her in affairs of state (*ibid.*).

Uwais, according to the majority of historians, succeeded his father who died in 756 (1355—1356) but according to Djannabī, the direct successor of

Ḥasan (d. 757) was Sulṭān Ḥusain (d. 760) (a man of charming character and a poet). One should probably allow with Markov that Ḥusain and Uwais had received separate fiefs which were united by Uwais on the death of his brother.

Baghdād was the centre of Uwais's activities.

At this period Tabriz [q. v.] was held by the Khān of Kīpčak Dīlān-beg who had come into Adhar-bīdījān to put an end to the tyranny of Ashraf, grandson of Coban [cf. *Sulṭ.*]. In the spring of 759 (1358) when the news of Dīlān-beg's departure reached him, Uwais marched against Akhūdūk, whom Dīlān-beg (or his son Berdī-beg) had left as his lieutenant at Tabriz. Meeting Uwais near Mount Sisay (?), Minay (?) [probably *Saland], Akhūdūk retreated, first to Tabriz and then to Nakhicawān. Uwais established his headquarters at Tabriz in the Imārat-i Raghdāi. In Ramaḍān (Aug. 1358) the execution of 47 of Ashraf's amīrs (*Ḥabīb al-Siyar*: *amūrā-yi shārḥ*, a palpable error!) alienated the sympathy of their friends who sought out Akhūdūk and went into the Karabāgh with him. Uwais sent against them 'Alī Pīlān who acted with weakness and suffered a reverse. Uwais had to retire to Baghdad. In the spring of 760, the Muzaffarīd Muḥammad of Shīrāz marched against Akhūdūk, drove him from Tabriz and stayed several months there (*Tārīkh-i Ghasidā*, in *G.M.S.*, p. 677—679, 715—717). But he retired without offering resistance when he learned that Uwais had left Baghdad for the north. Uwais reoccupied Tabriz and stayed in the house of Khāwāja Shaikh Kaḍāji (or Kaḍājān) while Akhūdūk sought refuge with his father Sadr al-Dīn Khāḥānī. On the surrender of Akhūdūk, Uwais executed him on the charge of treason.

In 765 (1363), Khāwāja Marjān, governor of Baghdad, rebelled but his resistance was short. He opened the gates of the city and Uwais pardoned him but appointed Shāh-Khānī (*Ḥabīb al-Siyar*) in his place. The Egyptian sources however (Maḥṣīn, *al-Sulūk*, *Bibl. Nat.*, MS. ar. 673, fol. 49, 52) mention in 767 an attempt by Marjān to secure the assistance of the Sulṭān of Egypt Ashraf Shābān by promising to read the *Khawāṣṣ* in his name. The envoy of Uwais, who afterwards came to Cairo to explain that Marjān was simply a rebel was received coldly. But in the meanwhile Uwais had disposed of him. The date 767 given by Maḥṣīn seems in any case to indicate that the rebellion of Marjān had lasted a considerable time. (According to the name source Marjān was blinded).

Uwais stayed eleven months in Baghdad and then marched west. He took Mawsīl from the brother of Bāīram-Khāwāja (Turkoman of the Kara-Koyunlu tribe), then at Mūsā he defeated Bāīram-Khāwāja and plundered his lands. In the meanwhile Mārdīn was taken, the amīr of which had in vain sought Egypt help (cf. Maḥṣīn, *al-Sulūk*, fol. 53).

Uwais returned via Kara-kīlīsiyā (between Erzerum and Bāyazīd) to Tabriz where he heard that the lord of Shīrān Kā'ūs b. Kaikūṣād had twice carried off to Shīrān (north of the Kur) the people of Karabāgh (Arrān) which Uwais had evidently incorporated in his dominion on the disappearance of Akhūdūk. Uwais's general Bāīram Bek besieged Kā'ūs in the fortress of Shīrān. Kā'ūs, brought in chains to Uwais, was exiled to Baghdad but after three months was re-established under the suzerainty

of Uwais (cf. *Djālā'irid* coins struck at Shirwān). In 772 (1370) Amr Wali, successor of Taghā Timūr of Astarābād (cf. *تغیة تیمور*), attacked Uwais but was defeated near Ray. In 773 Uwais himself took the field against Amr Wali but returned on reaching Ujdān. Amr Wali occupied Sāwa. In 776 Uwais was preparing to punish him but died at 'Inširāt-i Rushtī on 2 Djamādā 1776 (Oct. 10, 1374).

According to Dawlat-Shāh (p. 261—265), Uwais was so handsome that the people of Baghdad used to run out in crowds to see him pass. The historians unanimously praise his kindness, justice and courage; he was also a great patron of literature. His chief panegyrist was Salmān Sāwādī from whom we have a series of odes on the principal events of his reign. Uwais himself was a fine calligrapher, draughtsman and poet of merit. He built a great building, the Dawlat-Khāna at Tabriz (*Talbatgana* of Clavijs), probably identical with the Ark of our day (cf. *Tabriz*).

A scion of a completely Iranicised family and connected through his mother with the family of Cōhan whose romantic adventures are celebrated, Uwais seems to have been of an impressionable nature. We learn of his passion for his favourite Bāram Shāh and of the public mourning which he ordered on his death. The death of his brother Zāhid, who fell from a roof in a state of intoxication, sufficed to cancel the expedition of 773 against Amr Wali. Uwais died of phthisis (*shif*) aged about 30. He is said to have had a presentiment of his death and to have ordered his own shroud and coffin.

He had five sons: Hasan, Djālāl al-Dīn Husain, Shāhkh 'Alī, Ghayāth al-Dīn Ahmad, Bāyazīd and a daughter, Tandu. Uwais wished to give Baghdad to his eldest son Hasan and leave the throne to Husain. When the nobles expressed doubts as to whether Hasan would agree, Uwais is reported to have said: "You know (what to do)". Hasan was therefore put to death on the day that Uwais died.

According to the *Muntakhab al-Tawārīkh*, the wazir of Uwais was Amīr 'Zakariyā and his *amir al-amara* 'Adil-agha (cf. *سوتختیا*).

Coins. Markov has given a description of 66 coins struck in name of Uwais at Baghdad, Wāsi, Tabriz, Ardabil, Khoi, Nakhchawān, Shāburīn, Bāku, Gushtāst, Bardān, Sāwa, Wastān (?), Jūstān (Ujdān?), Bārdān (?), Bānd (?) etc. The coin of 758 (Baghdād) bears the title: *al-sulṭān al-ʿālim al-ʿadil*; that of 762 (Baghdād): *al-sulṭān al-ʿālim shāikh Uwais Bahādur*; that of 766 (Baghdād) bears the name in Mongol. Lane-Poole's Catalogue contains descriptions of coins of Uwais struck at Tabriz, Sulṭāniya, Baghdad, Irbil, Shirāz and Isfahān; that by M. Muḥarrak contains the description of coins struck at Baghdad, Bagra, Hilla, Tabriz and Shirāz (the latter dated 766 gives Uwais the title of *al-wāṭiq bi'l-malik al-dāim*).

Bibliography: Mu'īn al-Dīn Naṭānī, *Muntakhab al-Tawārīkh*, Bibl. Nat., Suppl. Pers. 1651, fol. 327v—328r, contains a notice of the dynasty of Hasan Bāzurg and a synoptic table giving information about the successive reigns; *Shahjirāt al-Atrak* [an abridgment of the *Uṭūs-i arbaʿa* of Ulugh Beg], transl. Miles, London 1838, p. 335—338; Khwāndamīr, *Ḥabsh al-Siyar* (who quotes Hāfi Abū, q. v.), Tihān 1271, 111/1, p. 80—81; Ibn Taghribirdī, *al-Manhal al-ṣafī*, Bibl. Mahammad Karwīnī, p. 261—265 etc.; Mūnedsjīm-bāghī, *Safat al-Akhbar*, iii. 10—11; D'Ossun, *Histoire des Mongols*, iv. 742—743; Dorn, *Versuch einer Geschichte d. Schirwanischen, St. Petersburg 1841*, p. 39 (relations between Uwais and Kāʿb); Wüstenfeld, *Die Chroniken d. Stadt Mekka*, iv. (1861), 258, 260, on the chandeliers of gold and silver sent by Uwais to Mecca, as a result of which gift the *ḥajj* of Mecca, 'Adjān b. Kumaitha, for a number of years included Uwais in the *ḥajj*; Howorth, *History of the Mongols*, iii. 654—659; Heyd, *Histoire du commerce du Levant*, Leipzig 1886, p. 129, 131 (on the relations of Uwais with the Venetians and the Genoese); Markov, *Katalog Djala'irikh monet*, St. Petersburg 1897 (based on the Arabic histories of al-'Aim (1360—1451), Djāmālī (d. 1590) etc.); this work is devoted to a description of the great find of 454 Djālā'irid coins near Ordubād in 1858; on another find of coins of Uwais etc. found at Bākū, cf. Pakhomov, *Monetnye klady Azerbaïdjana*, Bākū 1926, p. 59; cf. Lane-Poole, *Cat. of Oriental Coins*, 1881, vi. 207; Lane-Poole, *Additions to the Oriental Collection*, ii. 128, and Muḥammad Muḥarrak, *Catalogue des monnaies djingirides* etc., Constantinople 1901, p. 194; E. G. Browne, *A History of Persian Literature*, iii., index.

2. Uwais II, son of Sulṭān Walad, son of 'Alī, son of Uwais I, the seventh Djālā'irid king, reigned 818—824 over Khūzistān (Shīshīr) as well as over Bagra and Wāsi (cf. Mūnedsjīm-bāghī, iii. 12). He was killed by the Turkoman Shāh Muḥammad (Weil, *Gesch. d. Chalifen*, v. 142). The mother of Uwais II, the able Tandu, was the daughter of Husain b. Uwais I. The author of the *Muntakhab al-Tawārīkh* mentions Uwais II as reigning in his time. He was then 11 years old and his "wazir" was his mother. In spite of Huart, *La fin de la dynastie ilkhānienne*, in *J. A.*, 1876, vii. 344—348, she cannot be identified with Tandu bint Uwais I, who married two Muḥarrakids in succession, Mahṣud and Zayn al-'Abidin (cf. *Uwais* 1).

(V. MINORSKY)

'UZAIR is mentioned once in the *Kurʾān*: "The Jews said: 'Uzair is the son of God; the Christians said: 'Christ is the son of God'" (*Sūra* ix. 30). 'Uzair is generally identified with Erra. But in such a belief among the Jews that Erra was the son of God can hardly be imagined, much less proved to exist. Casanova made the attractive suggestion that 'Uzair is Uzair-Azazel, one of the fallen angels (on him see Heller, in *R. E. J.*, 1910, lx. 201—212; Jung, in *J. Q. R.*, 1925, 1926, N.S., xvi. 202—205, 287 *seq.*), after a short time before Muḥammad Maḍḍī Bey had made the fantastic suggestion that 'Uzair was Osiris. Erra, on the other hand, Casanova recognises in Idris (*Sūra* xix. 57; xxi. 25). But Muslim Tradition unhesitatingly sees Erra in 'Uzair and quotes legends in support of the belief that he was the son of God.

'Uzair is one of the *ahl al-kitāb*, the possessors of the Torah. When they sin, God deprives them of the *tabūt* (sacred ark) and punishes them with a sickness which makes them forget the Torah. 'Uzair mourns. Then a flame from God enters 'Uzair's body so that he is filled with knowledge of the Torah. He teaches his people. God then sends down the sacred ark to Israel again; the Torah is compared with 'Uzair's teaching and they

are found to agree; the Jews therefore believe that 'Uzair must be the son of God.

Alongside of this legend we find a fuller one as early as Tahrī's commentary on the Qur'ān (and frequently later). Israel is oppressed by 'Amālek (the Philistines). The learned men bury the Torah. 'Uzair laments and prays in the mountains. One day he meets at a tomb a woman (in reality she is no earthly woman but Dunyā, the world) who seems to be lamenting him that fed and clothed her. 'Uzair asks her who cared for her before her husband. She replies "Allah!" But, says 'Uzair, Allah still lives. The woman then asks who had taught mankind before Israel. "Allah!", replies 'Uzair. But Allah still lives, says the supernatural woman. At her bidding 'Uzair then consecrates himself and swallows something an old man puts in his mouth namely a glass, like a large coal. 'Uzair now announces that he has the Torah within him. He is branded as a liar. He then ties a pen to each finger and writes the Torah. The 'Ulamā' dig up the Torah and find complete agreement; from this they conclude that 'Uzair must be the son of God.

In *R. E. J.*, 1904, xlix, 209, I have pointed out that an Arabic apocryphon has survived in these legends which corresponds to IV. Ezra where we are told that God had given Israel laws and instruction but when they sinned he took them away. Ezra is given a goblet full of flaming water. Then his breast swells with wisdom, teaching flows from his heart, and for 40 days on end he dictates to five men (in the Muslim legend they are his fingers) the sacred books (IV. Ezra, xiv, 18-49).

Sūra ii, 261 is sometimes explained as referring to Ezra (more often to Jeremiah): "He passed by a city which had been destroyed to its foundations. How shall God quicken this dead city to life? God caused him to die for a hundred years and then raised him to life and asked: how long hast thou stayed here? He answered: probably a day or less. But God replied: thou hast stayed here one hundred years. Look on thy food and drink, it is not corrupted; and look on thy ass; we make thee a wonder unto men; look also on the bones, we raise them and clothe them with flesh."

The following legend is associated with this passage: Nebuchadnezzar slew 40,000 men of learning including 'Uzair's father and grandfather. 'Uzair being a child was spared but already he was advanced in the Torah. When he asks whether the town will arise again, God plunges him into sleep for a hundred years. After a hundred years he awakens, his ass is still alive and his food uncorrupted. He appears as a man of twenty among his children and grandchildren who are now greybeards, proves his identity by making a blind girl see and particularly by restoring the Torah. The original Torah is dug up out of a vineyard and found to agree: 'Uzair must be the son of God.

UZBEK (Ozbek) n. MUHAMMAD FAHLAWAN n. ILDEGIZ (Ildigiz?), fifth and last atabek of Adharbāidjān (607-622 = 1210-1225). According to Vākūfī, Uzbek's *laḥab* was Mujaḥḥar al-Dīn.

His mother and that of his elder brother Abū Bakr were slaves, while the two other sons of Fahlawān, Kaṭlugh-Inanč and Amirtrān, were born of the princess Inanč-Khātūn. Uzbek married Malika-Khātūn, wife of the last Saljuq Sulṭān Taghaff II, by whom he had a son (Taghaff).

Like all the reigns in periods of transition, Uzbek's was a very troubled one. Before his accession to the throne of Adharbāidjān, the centre of his activities was at Hamadhān where he was under fire from his ruling brother Abū Bakr (587-607), the Khwārizmshāh, the caliph and the various ambitious slaves. After his accession he was the object of attacks by the Georgians and the Mongols and finally he was dispossessed by the Khwārizmshāh Djalāl al-Dīn. His neighbours in the west were the Atabek of Irbil (Arbil) and the Aiyūbids of Khilāf (Akhlat).

Before his accession. In 592 (1196) at the time when the Khwārizmshāh Takāsh [q. v.] had invaded Persia, the Atabek Uzbek who had fled from his brother Abū Bakr, Atabek of Adharbāidjān, came to Takāsh who gave him Hamadhān as a fief (*Djahān-guzāsh*, ii, 38). According to the *Rāḥat al-Sudūr*, p. 388, it was Abū Bakr who sent Uzbek to Hamadhān and had sent 'Izz al-Dīn Saimas with him; but soon the Pādishāh Malik Djamāl al-Dīn Ay-ābā (a considerable amir, lord of the fortress of Farrāzin; cf. SULTANABAD and the preface to the Persian translation of 'Uthi's history: *Rien, Catalogue*, i, 158) joined Uzbek and became his atabek, with his sons-in-law as his lieutenants. On 9th Djumādā II, 593 (April 29, 1197) an expedition sent from Baghdad seized Hamadhān. Ay-ābā fled and Uzbek was placed in direct dependence on the caliph (cf. the details in Ibn al-Athīr, ii, 82). Finally the slave Miyaḍjīk, a devoted servant of the Khwārizmshāh (and assassin of Kaṭlugh Inanč), became master of the situation. But in Raddjāb 593 (May-June 1197) Uzbek returned to Hamadhān and Abū Bakr, resuming supreme control, sent him new advisers. The *Rāḥat al-Sudūr* gives Uzbek the title of *malik*. The situation was a troubled one and in 594 Uzbek set out for Kāzwin in order to fight Miyaḍjīk but had to retreat to Zandjān, while his adversary, encouraged by the caliph, occupied Hamadhān and on 20th Raddjāb 594 (May 28, 1198) received investiture from the Khwārizmshāh also. Miyaḍjīk was even trying to obtain the title of sulṭān when Abū Bakr's forces led by Ay-ābā defeated him near Kibā (district of Ray). For a short time the Atabek Abū Bakr occupied Ray but evacuated it after a false alarm. Miyaḍjīk returned to Ray but by his tyranny provoked the dissatisfaction of his Khwārizmī patrons who finally executed him in Khwārizm. Uzbek with his lieutenant Kōkčā massacred the Khwārizmians in the 'Irāq. Abū Bakr was able to occupy Isfahān and divide the country: Malik Uzbek receiving Hamadhān and Kōkčā Ray. The supreme control of affairs was in the hands of Ay-ābā, who was much too tolerant of the misdeeds of his son-in-law Kōkčā. Abū Bakr deprived of all authority (on his weakness cf. Ibn al-Athīr, xii, 120) went to Uzbek but ultimately came back to Adharbāidjān while Persian 'Irāq was plunged into

anarchy (cf. the evidence of contemporaries: *Rūḥat al-Sudūr*, p. 398, and the Persian translation of 'Uṭbi [cf. preface, Teherān edition, 1274, p. 10]; cf. DeFrémery, *op. cit.*).

In 600 (Ibn al-Athīr, xii, 128) Abū Bakr sent Ay-toghmiṣh to dispose of Kōkēš who had in the meanwhile taken Raiy, Hamadḥān and Dīālā (Medin). Kōkēš was killed and Uzbek became *malik*, with Ay-toghmiṣh as adviser and guardian. In 602 Ay-toghmiṣh came to the help of Abū Bakr and enabled him to take Marāgha [q. v.] but in the end only allowed him to have Adharbāidjān and Arrān (*ibid.*, p. 186, 194).

Uzbek-Atābek. Uzbek had probably retired to the north where in 607 (1210) he succeeded Abū Bakr (Ibn al-Athīr says nothing of this).

In 608 another slave Mangli took the place of Ay-toghmiṣh who was finally slain in 610 (*ibid.*, p. 194, 196, 197). Mangli took up an independent attitude to his master Uzbek. The caliph took the side of Uzbek and brought about the intervention of the Atābek of Irbil in his favour. The lands of Mangli were divided and Uzbek gave his share to his slave Aghlamish (in 612; *ibid.*, p. 201). It should however be noted that Aghlamish said the *ḥuṣṣa* in name of the Khwārizmshāh and the latter regarded him as his lieutenant (cf. Nasawi, p. 15).

In 614, the Ismaʿīlians assassinated Aghlamish and the Atābek of Fārs Sa'd occupied Raiy and Uzbek Isfahān. Hearing this the Khwārizmshāh 'Alā' al-Dīn Muḥammad came to Dīālā (Medin) and scattered the allies. Uzbek withdrew to Adharbāidjān while his dignitaries, the prince of Ahar Nuṣrat al-Dīn Bishghān (of Georgian origin) and the vizier Rabūl al-Dīn, were captured. By an arrangement with Uzbek the Khwārizmshāh left him Adharbāidjān and Arrān, but forced him to read the *ḥuṣṣa* and strike coins in his name (cf. Ibn al-Athīr, xii, 207; Nasawi, p. 17).

The Mongols. When in 617 (1220) the Tatars appeared before the walls of Tabriz, Uzbek, who was spending his days and nights in drinking bouts, took the cowardly but prudent plan of paying a ransom for the city to them (*ibid.*, p. 244). The Georgians, beaten a first time by the Tatars, proposed an alliance with Uzbek and the lord of Khilāṭ, but the Tatars reinforced by troops whom a Turkish slave of Uzbek named Akūsh (Aghush) had collected for them, frustrated these plans by a new attack on Tiflis [q. v.] and came in 618 for a second time to Tabriz. Once again Uzbek ransomed the city (*ibid.*, p. 246). When they came to Tabriz for a third time (*ibid.*, p. 250), Uzbek left for Nakhchawān and sent his family to Khoi. "He held all Adharbāidjān and all Arrān and in spite of this was the most helpless creature to protect his country against the enemy" says Ibn al-Athīr (*ibid.*, p. 250).

In 619 the Kipčak, who had penetrated into Transcaucasia via Derbend, stirred up trouble in Arrān and later the Georgians, perhaps enraged at the failure of their new offer of an alliance, sacked Ballāḡān (*ibid.*, p. 266). Towards the end of the year (Oct. 1222), we find Uzbek again inactive at Tabriz but he must have had a certain amount of influence, for an amir of Mawāḥid had put himself under his protection (*ibid.*, p. 268).

In 620 during a quiet period that followed the withdrawal of the Mongols, trouble broke out in Persia between the son of Khwārizmshāh Ghiyāth al-Dīn and his uncle Ighān-tāsi; Uzbek, accom-

panied by his slave Albek al-Shāmī, marched against Ghiyāth al-Dīn but was defeated (Ibn al-Athīr, xii, 270). According to Nasawi, p. 76, Ghiyāth al-Dīn, when he had established himself in the 'irāq, undertook operations against Adharbāidjān (Marāgha, Uḍjān) and Uzbek endeavoured to pacify him by giving him in marriage his sister, the princess of Nakhchawān; on the other hand, Ighān-tāsi twice came and pillaged Adharbāidjān (cf. Ibn al-Athīr, xii, 281).

In 621 new Tatar forces invaded Persia and defeated the Khwārizmians at Raiy. The survivors sought refuge with Uzbek but the Tatars appeared before Tabriz and demanded that they should be handed over. Uzbek killed a number and sent the others to the Tatars. According to Ibn al-Athīr, there were only 5,000 Tatars while the Khwārizmians defeated at Raiy numbered 6,000 and Uzbek's forces were more numerous than either (*ibid.*, p. 273).

In 622 (1225) the Georgians set out from Tiflis against Adharbāidjān. The expedition was destroyed in a defile. The Georgians were preparing to avenge this reverse when suddenly came the news of the arrival of Dīālā al-Dīn at Marāgha and again the Georgians sought an alliance with Uzbek.

Arrival of Dīālā al-Dīn. Before the approach of Dīālā al-Dīn, Uzbek withdrew to Gandja while a Khwārizm commander was admitted into Tabriz. On the 16th Rabi' al-Thani 622 (June 24, 1225), Dīālā al-Dīn occupied the town.

During the absence of Dīālā al-Dīn in Georgia, a plot was hatched at Tabriz to bring back Uzbek, in which so important a man as Shams al-Dīn Tughra'ī took part, but Dīālā al-Dīn arrived in time to check it. The Khwārizmshāh dealt Uzbek a blow, which he felt deeply, by marrying his wife, the daughter of Tughra'ī II. Legal authorities were found to bring grounds for a divorce between Uzbek and the princess, but the scandal was considerable. The princess was afterwards neglected by Dīālā al-Dīn and she finally appealed to the Aytubid Malik Ashraf and the latter in 624 sent an expedition to Adharbāidjān which brought the princess to Khilāṭ (Ibn al-Athīr, p. 307; Nasawi, p. 154).

Gandja also was lost to Uzbek and he spent his last days (622—1225) in the fortress of Alindjā (cf. Minorsky, *Transcaucasia*, in *J.A.*, 1930, July, p. 93) overwhelmed by his misfortune and humiliations (cf. Nasawi, p. 119; Diuwaini, ii, 157). With him ended the rule of the Atābeke descended from Ildegiz (Eldigiz).

Uzbek left one son whose name seems to have been Khālī Arslān (Nasawi, p. 168, contrary to the *Rūḥat al-Sudūr*, p. 393, where he is called Tughra'ī), but he was generally known as Khāmūsh ("the silent") for he was deaf and dumb (cf. Nasawi, p. 129—130; *Dīālān-guḥā*, ii, 248).

Uzbek is very severely judged by the historians. Ibn al-Athīr, departing from his usual judicial calm, returns several times to the charge (xii, 244, 250, 267, 281) and accuses him of being devoted to wine, good living and games of chance (*al-ḥumār il 'i-bāid*, "the game of eggs"). The Atābek led an indolent life and for months never left his home (cf. also Yāqūt, s. v. Urmiya, i, 219). This gloomy picture must have been a contrast to the hopes which at this time Muslims were placing on Dīālā al-Dīn who, however, was by no means free from vice in his private life (Nasawi, p. 186,

245—246). In his youth Uzbek had taken part in several expeditions, but his forces were insufficient to meet the attacks of serious (the Georgians were then at the height of their power; cf. TITSLI) or redoubtable enemies (the Mongols and the great warrior Djālid al-Dīn).

Ibn al-Athīr, *ii*, 281, mentions at Tabriz a kloak built at great expense by Uzbek. The court of the bon vivant Atabek attracted poets and artists. Uzbek's vizier Rāḥib al-Dīn was a great patron of letters (Nasawī, p. 162—163 and the conclusion of the *Marsūdan-nāma*).

UZUN HASAN, a ruler of the Turkoman dynasty of the Ak-Koyunlu (the founder of the dynasty was Bāyandur, prince of Diyār Bakr from 858, and then (872—882) sovereign of a powerful state comprising Armenia, Mesopotamia and Persia. The stature of Hasan Beg b. 'Alt Beg b. Kara 'Othmān (= Kara Ilak 2, reading uncertain), earned him the nickname of Uzun (= "the long").

The reign of Uzun Hasan is very important but not well known.

Rivalries of the Turkoman tribes. The original fief of the chiefs of the house of Bāyandur and of their Turkoman tribe "of the White Sheep" (Ak-Koyunlu) was in Diyār Bakr (from before the period of Timur). From there they spread to the west, north and east. At first the chief rivals of the Ak-Koyunlu were the Kara-Koyunlu Turkomen and this rivalry was accentuated by religious differences, for the Ak-Koyunlu were Sunnis and the Kara-Koyunlu Shi'is (and extremely heterodox).

Kara 'Othmān, an adventurous and energetic individual, died in 838 (1434—1435). His son 'Alt Beg spent his reign fighting with his brother Hamza against whom he sought the support of the Ottoman Sultan Murād II and Sultan Ḥakīm of Egypt. After the death of the two brothers, Djihāngīr, son of 'Alt, resumed the struggle against the Kara-Koyunlu but offended his brother Uzun Hasan, his uncle Kāsim Beg (whom v. Hammer, i, 506 calls Hasan) and the governor of Erzinjān, Kilid Arslān b. Pir 'Alt. In spite of his quarrel with Djihāngīr, Uzun Hasan defeated his two adversaries and then conquered the "greater number" of the begs of Kurdistan. Having learned that Djihāngīr had set out for the summer encampments on the Ala-dagh (this name probably refers to the ancient Masius, a mountain between Diyār Bakr and Mārdin), Hasan penetrated into the fortress of Diyār Bakr (Amid) in disguise while Djihāngīr

was forced to shut himself up in Mārdin (q. v.). This took place in 858 (1454) and soon Hasan occupied Rāhā and laid siege to Mārdin (cf. 'Ashīr-pāshā-zāde, p. 247—249; Mānedjīm-baḥā, *iii*, 157).

The intervention of Hasan's mother, a female diplomat who played a great part in later developments, forced Uzun Hasan to return to Diyār Bakr. He sought to recompense himself by a raid on Kara-Koyunlu territory (Erzerum, Awnik, Balburt) but having failed to take Erzinjān returned to Diyār Bakr.

On resuming the siege of Erzinjān, Uzun Hasan fell from his horse and was seriously injured. Djihāngīr seized the opportunity to sack the environs of Amid but on Hasan's return sought refuge with the Kara-Koyunlu Djihān-Shāh. His mother once more installed Hasan in Diyār Bakr and Djihāngīr in Mārdin. The struggle was very soon resumed on a larger scale. Hasan marched on Erzinjān and Turdīn, from which he drove 'Arab-Shāh, his brother's representative, and then attacked Khurāsān and Karadja-Dagh (S. W. of Diyār Bakr). The Kara-Koyunlu Djihān-Shāh sent his amirs to the help of Djihāngīr but Uzun Hasan defeated them in 861 (May 1457); cf. Ibn Taghribirdī, ed. Popper, *vii*, 485. Djihāngīr gave his son as a hostage, and another brother of Hasan (Uwais of Rūhā) also submitted to him. Uzun Hasan installed the amir Khurshid Beg (perhaps his cousin; cf. Mānedjīm-baḥā, *iii*, 376) in Erzinjān. This fortress was the key to the Armenian plateau. About the same time, Hasan gave shelter to the Kara-Koyunlu Hasan 'Alt who had rebelled against his father Djihān-Shāh, but had soon to expel him on account of his heretical opinions. These events occupied the years 858—861 after which began the rapid rise of Hasan and the extension of his influence over the neighbouring lands.

Operations in Kurdistan. On the Tigris he took Hūn Kaifā from the Kurd maliks descended from the Aiyubids (cf. *Sharaf-nāma*, *ii*, 149—155) and gave this fortress to his son Khalīl. Sirt and Hātham (in Bohtān) were later occupied (cf. also *Sharaf-nāma*, *ii*, 9).

Uzun Hasan between Karamān and Trebizond. In the west, the successes of Uzun Hasan brought him into conflict with the Ottomans who under the leadership of Muḥammad II had just completed the subjection of the feudal principalities of Asia Minor. The princes of Karamān (q. v.), gravely threatened by the Ottomans, endeavoured to enter into an alliance with their eastern neighbour Uzun Hasan. On the other hand, Uzun Hasan became involved in the affairs of the empire of Trebizond, which was then almost at its end. In 1458, the last emperor of Trebizond, David, gave Uzun Hasan the daughter of his brother and predecessor Kalo-loannes, named Catherine, in marriage (in Europe she is more often called by her title Despina; cf. the Venetian travellers). Trebizond was closely linked with Georgia, while Venice and Rome were closely watching events in these two Christian states. The Muslim sources entirely neglect this complex of international political interests (cf. W. Miller, *Trebizond, the Last Greek Empire*, London 1926; Uspensky, *Očerki po istorii Traps. imperii*, Leningrad 1929).

The embassies sent by Uzun Hasan to Constantinople in 1457 and 1460 revealed to the Sultan

his rival's ambitions (cf. v. Hammer, i. 464-466). Very soon passing to deeds, Uzun Hasan took by surprise the fortress of Koyunlu-Hişar (or Koylu-Hişar on the Kilkit-su above Nîkşar) and sacked the suburbs of Tohtat and Amasia (cf. Münedjîm-bağhi, iii. 376).

Having disposed of the Isfendiâr-oghla [q. v.] of Sinope, Muhammad II turned his attention to Trebizond and first of all to Koyunlu-Hişar. Uzun Hasan concentrated his forces near Kemâkh but the detachment sent into the mountains of Munzur (Sa'd al-Dîn, i. 476: *Küh-i Munda?*) was defeated by Ahmad Paşa. Uzun Hasan then sent his mother to negotiate and on her appeal the sultan turned towards Bulghar-dagh (east of Gerdjanis, between the Kilkit-su and the Euphrates). In spite of the renewed appeals of Sâra Khâtûn (the sultan called her "mother") who said that Trebizond belonged to her daughter-in-law, the town was taken in 865 (1461) and the Comnenoi dispossessed and exiled. A portion of the treasures taken in Trebizond was given to Sâra Khâtûn ('Ashk-pâshâ-zade p. 159-160; Sa'd al-Dîn and Münedjîm-bağhi, iii. 376).

The peace was of short duration, for according to Münedjîm-bağhi, iii. 160-161, Uzun Hasan retook Koyunlu-Hişar and advanced as far as the environs of Siwâs but the Ottomans defeated those of his troops who had entered Asia Minor. Uzun Hasan sent to Constantinople Khurshîd Beg to ransom the Turkoman prisoners and ask the Sultân to renounce his claims on Trebizond (?). In view of the circumstances (*ahvâl-i waqf*), the request is said to have been granted (?) and Uzun Hasan returned to Erzinjân and then to Diyar Bakr. (In this part of his story, Münedjîm-bağhi seems to give in somewhat different form the events of 1461).

Death of Djihân-Shâh and of the Timurid Abû Sa'id. Uzun Hasan very soon achieved brilliant successes. In 871 (1466-1467) his rival Djihân-Shâh of the Kara-Koyunlu, who at this time held all Persia, marched on Diyar Bakr (on his plans cf. his letter to Muhammad II, in Feridûn Bey, i. 273). Uzun Hasan collected troops and received reinforcements from Mardin. On 1st Rabi' II, 872, Djihân-Shâh had reached Mûsh and Çapakchûr. Here his advance-guards were defeated by Khalîl, son of Uzun Hasan. Djihân-Shâh, who, on account of the excessive cold, had sent most of his troops home, went back to Kizil, whence he wanted to reach Erzinjân and the valley of Bâk-râd (Kilkit?). On 13th Rabi' II, 872 (Nov. 11, 1467), Uzun Hasan attacked him unexpectedly and Djihân-Shâh lost his life while trying to escape. The field in the east now being open, Uzun Hasan began the conquest of the lands which had been left without a master. He went via Mûsul to Baghdâd, which he besieged for 40 days, but in Adharbâidjân, the son of Djihân-Shâh, Hasan 'Alî, had assembled a large army (*Hasbi al-Siyar*, iii. 234: 180,000 men) and invoked the help of the Timurid Abû Sa'id, who set out from Khurâsân in the month of Shabân 872 (March 1468) and appointed governors for the whole of Persian 'Irâq. As a result of treachery on the part of certain amirs of Hasan 'Alî, his army quartered at Marand broke up and Uzun Hasan seized the opportunity to advance as far as Kara-bâgh [q. v.]. In the meanwhile in spite of the protestations of friendship by Uzun Hasan, who recalled the loyalty of the Ak-Koyunlu to

the Timurids, Abû Sa'id had reached Miyâna but was caught there by the approach of winter. He thought of spending the winter in Kara-bâgh, out of which Uzun Hasan was to be dislodged, but his march to the Araxes was disastrous and at Mahmûd-âbad [cf. MUGAN] he was blockaded by Uzun Hasan. The negotiations conducted by Abû Sa'id's mother, however, came to nothing; he took to flight but was captured on 16th Rajab 873 (Feb. 11, 1469). Two days later Uzun Hasan seated on the throne (to emphasise his accession?) received the prisoner kindly but on Rajab 22 Abû Sa'id was handed over to his rival, the prince Yâdigâr Muhammad b. Sultân Muhammad i. Babanqûr, who put him to death. Abû Sa'id's amirs were put under the command of Yâdigâr who, supported by Uzun Hasan, began the struggle against Hassan Baikara. The latter was temporarily driven from Herât (6 Muharram 875) but the exactions of the sons of Uzun Hasan (Khalîl in Öläng Bâdkân and Zainûl in Kâhistân) provoked a rising against Yâdigâr, who was deposed and put to death by Sultân Hassan Baikara.

After the disappearance of Abû Sa'id, the Timurids of Khurâsân remained a purely local dynasty while Uzun Hasan's deputies occupied the remainder of Persia, including Kirmân, Fârs, Luristân, Khuzistân and Kurdistân (cf. the valuable details on the distribution of the fiefs in the letters of Uzun Hasan to Muhammad II: Feridûn Bey, i. 275 and 276; cf. *Hasbi al-Siyar*, iii. 330). The Kara-Koyunlu Hasan 'Alî had retired to Hamadhân but was surprised there and killed by Uzun Hasan's forces in 873 (1468) (cf. the *History of the Kuth-Shâh*, Bibl. Nat. MS. Pers. N^o 174, fol. 16^b). About the same time Baghdâd also was occupied by the great amir Khalîl-beg, governor of Mûsul (cf. Feridûn Bey, ii. 276).

After these great successes, it became evident that Uzun Hasan alone in Asia was strong enough to bar the Ottoman advance and the enemies of the latter, the rulers of Karamân and the Christians, particularly the Venetians, sought to exploit this new power.

Venetian policy. On Dec. 2, 1463, the Venetian Senate had adopted the plan of an alliance with Uzun Hasan and L. Quirini was sent to Persia with this object. On March 13, 1464, the first ambassador from Uzun Hasan (a certain Mamennasab?) arrived in Venice and spent six months there. In 1465 Kâsim Hasan (?) arrived with a letter from Uzun Hasan. The negotiations were interrupted for some time but the conquest of Euboea (which the Venetians had held for 264 years) by the Ottomans in 1469-1470 threw them into consternation. In Feb. 1471, Quirini returned from Persia with Uzun Hasan's ambassador Mirath (Murâd?) while another Persian representative arrived at the Vatican. It was then that the Venetian senate sent to Persia the noble Caterino Zeno, who through his mother was a nephew of Despina Caterina, wife of Uzun Hasan. On April 20, 1471, Zeno was in Tabriz. In the same year Hâdjî Muhammad (Azimame) came to Venice with a request for arms and munitions. Giosaf Barbaro was then sent to Persia to take to Uzun Hasan six large mortars (*bombards*), 600 arquebuses (*spingarde*), matchlocks (*schoppette*), and munitions; 200 fusiliers with their officers accompanied the consignment. In Barbaro's secret instructions (of Feb. 11, 1473), it was laid down that Venice would never conclude

peace with the Ottomans until they had been forced to renounce in favour of Persia all claims on Asia Minor as far as the Straits. Barbaro was delayed in Cyprus where he took part in the operations of the Venetian fleet (commanded by P. Mocenigo) which on the appeal of the princes of Karaman had occupied Sefidke and two other points on the coast.

In the meanwhile Zeno was active in Persia and according to the European sources (Jorga, II, 164), the nephew of the last Comnenos, who had sought asylum with Uzun Hasan, had invaded the region of Trebizond.

Invasion of Asia Minor. The Karamanians were working alongside of the Venetians to force Uzun Hasan's hand. On the appeal of Pir Ahmad, Ishak's successor, Uzun Hasan equipped an army which was placed under the command of the vizier 'Omar Beg b. Bektaş (the Anarbei Gaisultan Nishanzade of Zeno, p. 16) and Uzun Hasan's cousin, Yusufo-mirza, and which (according to Angiolello, p. 77) numbered 50,000 men (Zeno, p. 16: 100,000?). These troops advanced from Diyar Bakr on Tokat, which they sacked and then on Kaisariya, where, as Sa'd al-Din says, "they revealed their Turkoman character". Caterino Zeno, p. 18-19, was an eye-witness of a part of these operations. (The attempt to take Bira from Egypt is perhaps connected with the same expedition). After some time 'Omar Beg returned to Diyar Bakr while Yusufo-mirza overran Karaman and Hamid again.

Resumption of the war with the Ottomans. Sultan Muhammad II was gravely concerned with these events and with this diplomatic activity of which he was certainly aware (cf. Feridun Bey, p. 285 and Ibn Iyas, II, 145). Uzun Hasan's letters assumed a more and more aggressive tone (cf. Feridun Bey, I, 278 and the humiliating title of *imrat ma'ad* was given to the sultan in them; and p. 278: Muhammad II's reply in which he addresses familiarly the *sar-i-dar-i 'a'lam*). In autumn 877 (1472) the Sultan crossed from Constantinople over to the coast of Asia, but was held up there by the cold season. But by 14th Rabi' I (Aug. 19, 1472) the prince Mustafa and the beglerbegi of Anatolia Idris Pasha, who had a force of 60,000 men under him, destroyed the Turkomans in the district of Kır-eli (west of Konya).

The Sultan set out in the month of Shawwal 877 (March 1473). His army numbered 100,000 men in all (cf. Sa'd al-Din, I, 529 confirmed by Angiolello, p. 79-80, who writes as if he were in the Ottoman army). The famous *ahfi* [q. v.] 'Alr-Mikhal-oghlu [q. v.] sent with the advance-guard sacked Kemakh and took prisoners the Armenians of this region.

Uzun Hasan, who had arrived in the region of Erzingan at the end of July 1473, established himself on the hills on the left bank of the Euphrates and when Khay Murad Pasha rashly crossed the river, he surrounded him and defeated him. Khay Murad was drowned in the Euphrates and the total losses of the Ottomans rose to 12,000 men (Angiolello). Caterino Zeno who was in Uzun Hasan's suite, gives Aug. 1, 1473 as the date of this first encounter. The battlefield was in the district of Terdjān (above Erzingan); the low ground on the Euphrates which Khay Murad (Angiolello) wished to utilise begin at the level of Pakeridj. Sa'd al-Din, I, 535 is not explicit but according to Angiolello (and Zeno), the Ottomans

were ready to abandon the campaign. They left the valley of the Euphrates and leaving Baitur on the right (towards the N.E.), took the road northwards towards Trebizond, evidently with the intention of turning there to the west. But while the Ottoman army was in the canton of Ücaghil (probably to the north of the mountains which separate Erzingan from the valley of the Kilik-su), Uzun Hasan's troops appeared on the heights of Otluk-beli (a mountain which separates the Euphrates valley from the sources of the Çorokh) on the right flank of the Ottomans. The latter accepted battle and on 16th Rabi' I, 878 (Aug. 12, 1473) (according to Zeno 10th Aug. 1473) routed the Ak-Koyunlu. The Sardar of Uzun Hasan, Kafir Ishak (a Christian?; according to Zeno, there were Georgians in the Ak-Koyunlu army), fell on the battlefield as did Uzun Hasan's son Zeinal. Uzun Hasan himself took to flight, but it was not so precipitous as Sa'd al-Din would have it, for Zeno's account of Aug. 18 is dated from the camp of Uzun Hasan, four days from Erzingan. In any case the Ottomans, thanks to their firearms (Zeno), gained a brilliant victory. The artisans and experts captured were taken to Constantinople. The Kara-Koyunlu mobilised by Uzun received their liberty; the remainder of the Turkomans were put to death (*kut-i 'am*) by order of the Sultan. Dürâb Beg, commander of [Shahin-] Kara-Hisar on the Kilik-su above Koyunlu-Hisar, hearing of the defeat of his master, handed over the fortress to the Ottomans. On the advice of the grand vizier Mahmud Pasha, who explained the difficulties of keeping the territories still to be conquered, the Sultan refrained from pursuing Uzun Hasan, but later regretted this decision and the grand vizier lost his office (Sa'd al-Din, I, 521-544).

Uzun Hasan lost no appreciable territory by this defeat, but the moral effect must have been considerable. After the battle, Uzun Hasan wrote to Venice (Berchet, p. 137) that he was going to return to the attack ("cavalcheremo adesso a l'Othoman") and at the same time sent Caterino Zeno on a mission to plead his cause with the European governments. The Polish and Hungarian ambassadors were sent back with Zeno.

The Venetian Senate, which always attached great importance to the alliance, sent to Persia the secretary P. Ognibene. Barbaro, leaving at Rhodes the representatives of the pope and of King Ferdinand of Sicily, then set out and arrived in Tabriz on April 12, 1474. Lastly a new envoy, A. Contarini, left Venice on Feb. 13, 1474, arrived at Tabriz on Aug. 4, 1474 and at I-fahan on Nov. 4, 1474. We also know that at this time the friar Lodovico of Bologna was in Persia, who said he represented the Duke of Burgundy. But on this occasion the ambassadors could obtain nothing definite out of Uzun Hasan.

In the meanwhile Uzun Hasan had gone to Shiraz to put down the rebellion of his son Oghurlu Muhammad. On his return from Tabriz he took leave of Contarini (April 26, 1475) who saw a review of his troops (25,000?) but said that the expedition against the Ottomans was postponed to a later date. In 880 the plague wrought great havoc in Persia and Uzun Hasan's troops had to take the field against his brother Uwais who was defeated and slain at Ruhā (Ibn Iyas, II, 160). Very soon the Venetians recognised the futility of their hopes and less than a year after

the death of Uzun Hasan signed a peace with the Ottomans (Dec. 1478).

Relations with Georgia. According to Müneddjim-başı, Uzun Hasan thrice invaded Georgia, in 871 (1466), in 877 (summer of 1472?) and after his defeat by the Ottomans. According to the *Djihan-nâm* this last expedition took place in 881 (1476-1477). Barbaro (p. 90) who was an eye-witness, took part in the negotiations with the Georgians. The Georgian sources of the xvth century are very confused (Brasset, *Histoire de la Georgie*, ii, 1, p. 12, 249). The King of Kharthlin, Constantine III (1469-1505) seems to have utilised the support of the Ak-Koyunlu against his rivals Bagrat of Imerethia and the Atabeg of Akhal-tsikhe (Kwarkware < Korkora).

Relations with Egypt. The frontier between the original fief of Uzun Hasan (Diyar Bakr) and the lands of the sultans of Egypt lay roughly along the bend of the Euphrates. The Egyptian historians alone (used by Weil, *Gesch. d. Chal.*, v.) tell us of the extensive relations between the Ak-Koyunlu and the Burji Mamlûks. The rivalry with the Ottomans forced Uzun Hasan to deal very tactfully with the ruler of Cairo (we have references to them from 861 = 1456) but on the other hand, he had to seek an exit to the Mediterranean to be in contact with the Venetians. The lands on the right bank of the Euphrates, belonging to the rulers of Egypt and Syria thus formed an impediment to him and Uzun Hasan endeavoured to round off his lands at the expense of the Mamlûks.

In 868 the Kurds who had seized the stronghold of Gargar (on the right bank of the Euphrates S. E. of Malatya) sent its keys to Uzun Hasan who in 869 (1465) restored Gargar to the wall of Aleppo but at the same time recompensed himself by taking Kharpert (then occupied by Amîrân Dulghadir) and by ravaging Abulastain (cf. ALBISTÂN and DHU 'L-KADAK).

In 877 (1471) Kakhîz [q. v.] and Gargar were occupied by Uzun Hasan's troops but the amir Veishbek al-Dawâdîr sent by Kâ'it-bây [q. v.] drove the Ak-Koyunlu out of Bin (cf. Ibn Iyâs, ii, 140-144 and Rebnich, *sub anno* 1783 [1471]). The Ottoman ambassador sent to Cairo stirred up feeling against Uzun Hasan, the ally of the Christians, but Kâ'it-bây acted with prudence. The amir Rustam and the ladi Ahmad b. Wađîn who were leaders of the 'Irâk *hadîdî* in 877 (1473) succeeded in getting the *khutba* read in Medina in the name of *al-malik al-'adil Hasan al-Tawîl khâdim al-haramain*, but the Amir of Mecca, Muhammad b. Barakât (cf. iii, p. 514), arrested Rustam and his companion and sent them to Kâ'it-bây, who a few months later liberated them "to please Uzun Hasan" (Ibn Iyâs, ii, 145-146). In 880 Ogghurli Muhammad fleeing from his father was supported by the Aleppian troops but the latter suffered a severe reverse (*ibid.*, ii, 152). In 882 Kâ'it-bây visited the line of the Euphrates and re-established the situation.

Death of Uzun Hasan. Returning from Tiflis, Uzun Hasan fell ill and at the age of 54 died at Tabriz on the eve of the feast of Ramadân of 882 (night of Jan. 5-6, 1478, which agrees exactly with Barbaro's statement, p. 93: the Eve of Epiphany).

The historians (*Hadîth al-Siyar*, iii, 330; *Djihan-nâm*; Müneddjim-başı, iii, 165) praise his justice

and piety. He created many pious endowments (*khairât wa-hasanât*). On his mosque in Tabriz cf. the article *TABRIZ*. The *Akhlâk-i Djafârî* of Dawlat is dedicated to Uzun Hasan (cf. Rieu, *Catalogue*, p. 443^a). The astronomer 'Alî Khâhî lived at the court of Uzun Hasan and was sent as ambassador to the court of Constantinople (Rieu, *Catalogue*, p. 456^b; Müneddjim-başı, p. 164).

The family. The blood of the Ak-Koyunlu princes was considerably mixed. The mother of Kâim 'Oghmân, to begin with, was the princess Maria of Trebizond (cf. the *Chronicle* of Michael Panaretos, ed. by Fallmerayer).

Despina, whom Uzun Hasan married, when he was thirty-four, was certainly not his first wife and in 1471 when her nephew Caterino Zeno visited her, she was living at Kharpert far from the court. She had remained a Christian and was buried in a church of Diyar Bakr (Barbaro, p. 84). According to Angiolello, p. 73, Uzun Hasan had one son and three daughters by her; the son (Jacobs?) is said to have been strangled by his brothers after the father's death (?). Despina's daughter Martha (whom the *Silâhat al-masâbîh tafawwîya*, Berlin 1843, p. 68 calls Bâgî-Akâ; *Hadîth al-Siyar*; Halima Begî Akâ and Müneddjim-başı: 'Alam-shâh Begim) was given in marriage to Shaikh Haidar of Ardebil and became the mother of the Safawid Shâh Ismâ'îl I (the mother of Shaikh Haidar, Khadîdj-Begum, was the sister of Uzun Hasan).

The oldest son of Uzun Hasan, Muhammad, was the son of a Kurd *wam walad* (cf. Ibn Iyâs, ii, 160; Caterino Zeno, p. 36; Contarini, p. 175). In 879 (1474) after a rising in Shirâz, he took refuge for some time with Sultan Bâyezîd, but was finally killed in Persia by his father's orders (Ibn Iyâs, ii, 59).

Uzun Hasan's principal wife (*mahd 'ulyâ*) was Saldjuk-Shâh-Begum who played a very active part in the government (cf. *Târîkh-i Amînî*, fol. 198^b). Her sons were Sultan Khalîl, Ya'qûb, Yûsuf (and perhaps Masûb). We do not know the name of Zainal's mother.

Uzun Hasan's visitors were Shams al-Dîn Muhammad b. Saiyid Ahmad, Burhân al-Dîn 'Abd al-Hamid Kirmânî and Majîd al-Dîn Shirâzi (*Hadîth al-Siyar*, iii, 330).

Bibliography: According to the *Hadîth al-Siyar*, a contemporary of Uzun Hasan, Mawlânâ Abû Bakr Thirânî, had written his history. This rare work, inaccessible to Khondamîr, may have been used by Müneddjim-başı among whose sources (cf. v. Hammer, *G. O. R.*, i, vii, 549) is a *Târîkh-i Bayanduriya*. The latter may be identical with a *Kitâb-i Divâr-hadrîya* in which, according to the *Târîkh-i Amînî* (fol. 1^b), the ancestors of Uzun Hasan were given in detail.

'Abd al-Razzâk, *Matla' al-Sâdîn*, is still in manuscript; Fadl Allah b. Rûsbihân, *Târîkh-i Amînî*, Bibl. Nat. Paris, MS. Pers. N^o. 101 (history of Ya'qûb b. Usun Hasan, with some notes [fol. 6^b-9^b] on Uzun Hasan to whom the author gives the title of *shâh-bîrânî*); Khondamîr, *Hadîth al-Siyar*, Teheran 1271, iii, 330 (very short paragraph) and p. 233-237, 251, 252 and 389 (the celebrities of the period); Ibn Iyâs, *Târîkh al-Mîr*, ii, Cairo 1311; Ahmad al-Ghaffârî, *Djihan-nâm*, Brit. Mus. MS., Or. 141 (I owe to Muhammad Khân Kâzîmî the use of a copy of this MS.), ff. 187^b-190^b, history of the Ak-Koyunlus with valuable details; the author's grandfather was

the *khāṭi mu‘aḥar* (sic) in the suite of Uzun Hasan in the campaign of 881 in Georgia; ‘*Aḥl-i-paḡā-āide, Tārīkh*, Stambul 1332; Sa‘d al-Dīn, *Tārīkh al-Furūḡ*, Constantinople 1279, l. 476—484 (capture of Trebizond), p. 521—544 (war with Uzun Hasan), a few meagre facts drowned in rhetoric; Djannāh, *Tārīkh*, still in MS. (cf. Bahinger, *G.O.W.*, p. 108), was used by v. Hammer; Mübeddīlīn-baḥā, *Saḥīf al-‘Aḥbār* (Turkish abridgment of the Arabic original), iii. 154—167 (numerous unedited details), cf. also iii. 377 and iii. 387; Ferīdūn Bey, *Munāḥāt al-Salāṭīn*, Stambul 1274, l. 274—288 (very valuable documents and of undoubted authenticity); Chalcocondyles, Bonn 1843, p. 166—168 (very confused data regarding the relations of the *Armenians* = *Ab-Koyunlu* with their neighbours), 461—497 *passim* (the correspondence between Despina and the Comnenoi taken to Constantinople was the pretext for their execution); Ducua, p. 339, details on the embassy of 1457; Behnisch, *Rerum scule XV*, in *Mesopotamia gestarum liber*, Breslau 1838 (curious details).

(V. MINOKSKY)

AL-‘UZZĀ, an old Arabian goddess, whose name means “the Strong, the Powerful”. She was especially associated with the Ghassān (cf. Yāqūt, i. 206) but her principal sanctuary was in the valley of Nakhla on the road from Tāif to Mecca (cf. Yāqūt, iv. 765 *seq.*) to which Hassān b. Thābit (ed. Hirschfeld, xci. 3, where *nakhla* is to be read) refers. It consisted of three *samra* (acacia) trees in one of which the goddess revealed herself. It also included the sacred stone (Wāḥid), transl. Wellhausen, p. 351) and the so-called Ghahghab, a cave into which the blood of animals sacrificed was poured (Ibn Hishām, p. 55, 6). There are also references (e.g. Ibn Hishām, p. 839) to a “house” which Wellhausen takes to be a confusion with another sanctuary of al-‘Uzzā. From these centres her cult spread among a number of Beduin tribes, the Khazā’a, Ghannm, Kinnā, Balī, Thaqīf and especially the Kurashī, among whom she gradually acquired a predominant position. Here she formed with al-Lāt [q.v.] and Manāt [q.v.] a trinity in which she was the youngest but came in time to overshadow the others. The Meccans called the three

“Allah’s daughters”, which produced a vigorous polemic from Muhammad after he had retracted a compromise [see MUHAMMAD]. The way in which Qur’ān, iii. 19 *seq.*, mentions the three suggests that Manāt was subordinate to the other two, and in keeping with this is the fact that al-‘Uzzā and al-Lāt are several times mentioned alone (Tabarī, i. 185; Ibn Hishām, p. 145, 206, 287, 2, where Wadd is also mentioned). When in the year 3, Abū Sufyān set out to attack Muhammad he took the symbols of al-‘Uzzā and al-Lāt with him (Tabarī, i. 1395). That of the two al-‘Uzzā was the more important as the patron deity of Mecca is shown from Abū Sufyān’s war-cry: al-‘Uzzā is for us and not for you (Tabarī, i. 1418; cf. on the other hand: arise Hūbal!; Ibn Hishām, p. 582) and the same thing is seen in Ibn Hishām’s poem, p. 145, where Zaid b. ‘Amr talks of “‘Uzzā and her two daughters”, if by them are meant al-Lāt and Manāt.

Outside of Arabia proper, ‘Uzzā was worshipped especially by the Lakhmids of Hira. Mundhir IV swears by her (*Kitāb al-Aghānī*, ii. 21, 2 from below) and according to *Ḥamāsa*, p. 116, a Lakhmid prince Nu‘mān sent men to her so that she might settle a dispute. Her worship here had a particularly cruel character. Mundhir IV sacrificed to her 400 captured nuns and on another occasion a son of the Djaḥlīd Ḥārith, whom he had taken prisoner.

The name ‘Uzzā is also, although rarely, found among the Syrians. As a rule, they use instead the name *Kawkabā* “the (female) star”, which they, like the Jews, apply especially to the morning star. It agrees very well with this that the Saracens who stormed the Sinai monastery according to Nilus wanted to sacrifice the young Theodoulos to the morning star. The nature of ‘Uzzā could be defined in this way but the question arises whether we would yet have the true Arab conception of her and whether some syncretism had not taken place in the frontier lands. The same question is raised by the identification of ‘Uzzā with the “Queen of the Heavens” (Jes. vii. 18; sliv. 17—19 in Isaac of Antioch, *Opera*, ed. Bickell, l. 210, 220, 244). This name occurs among the Syrians and the sacrifice of the women upon the roofs mentioned by Jeremiah is known among the Arabs according to Isaac, and the baking of cakes in honour of the goddess can also be proved to have existed among the Arabs (see also Wellhausen, *Reste*, p. 41). But this may all be due to foreign influence (just as the word *hawwāntum* used by Jeremiah goes back to the Assyrian *hawwānu* connected with the worship of Ishtar) so that the true Arab significance of al-‘Uzzā still remains uncertain.

After the taking of Mecca, Muhammad sent Khalīd b. al-Walīd to the sanctuary of al-‘Uzzā to destroy it. According to Wāḥidī, the last priest was Aḥlāḥ b. Naṣr al-Shaibānī, according to Ibn al-Kalbī, Dubaiya b. Ḥarma. Her cult disappeared after this as did the numerous proper names, combinations of al-‘Uzzā, while the masculine counterpart ‘Abd al-‘Azīz remained because ‘Azīz was one of the names of Allāh. But Doughty’s statement that the Arabs still seek the help of the three goddesses in cases of illness is therefore very interesting [see AL-LĀT].

V.

VALENCIA, Arabic *Balansiya*, a town in Spain, the third in size as regards population, which is over 250,000, lying on the east of the Peninsula, 3 miles from the Mediterranean and from its port, el Grao. It is connected with Madrid by 340 miles of railway; the distance as the crow flies is however only 188 miles. Valencia is the capital of the province of the same name and the diocese of an archbishop. Its situation is a striking one, in the centre of the fertile Huerta de Valencia which is watered by the Turia or Guadalquivir (Ar. *Wādī 'labyaḡ*, the "White River"). Unlike Cordova or Toledo, the old capital of Valencia has seen its importance grow with the years and it remains the capital of eastern Spain, the *Sharḥ al-Andalus* of the Muslim period. It is still known officially as Valencia del Cid in memory of the part played in its history by the celebrated Castilian hero.

Valencia was founded by the Romans in 138 B.C. After the death of the rebel Viriathus, the consul D. Junius Brutus established a colony there of veterans who had remained faithful to Rome. The inhabitants later took the side of Sertorius and in 75 B.C. Pompey partially destroyed the town which began to return to prosperity under Augustus. It was taken by the Visigoths in 413 and became Muslim in 714, when Ṭīrīk [q. v.] established himself there and at Saguntum, Jativa and Denia.

In the political history of Umayyad Spain, Valencia seems only to have been a place of minor importance. The country of which it was the capital soon became arabised by the settlement of Ḳaṣī colonies; the capital of eastern Spain thus was one of the most active centres of Arab culture throughout the whole period of the Muslim occupation; on the other hand in the mountains along the Valencian littoral there were little islands of people of Berber origin. Valencia at this time was the capital of a province or *lāza*, as we know from the eastern writer al-Maḳḍī and the Spanish al-Rāzī (in Yaḡūr, *Muḡjam al-Bulḍān*, s. v.) and the residence of a governor (*waḡī*) appointed by the caliph of Cordova. It is only from the 11th century, with the break up of the caliphate, that, becoming the capital of an independent Muslim state and very soon one of the principal objectives of the Christian reconquista, Valencia began to occupy a more and more important place in the Spanish and Arabic chronicles of the mediæval history of Spain that have come down to us.

The Muslim kingdom of Valencia was founded in 401 (1010-1011) by two enfranchised 'Amirids, Muḥarrak and Muḡaffar, previously in charge of the irrigation system of the district who declared

themselves independent and shared the power. After a very short reign Muḥarrak died and Muḡaffar was driven from Valencia; the inhabitants of this town then chose another "Slav" (cf. *ṣaḡallīnax*) to rule them, called Labīb, who placed himself under the suzerainty of the Christian count of Barcelona. The principality of Valencia soon passed into the hands of a grandson of al-Manḡūr Ibn Abī 'Amīr [q. v.] 'Abd al-'Azīz b. 'Abd al-Rahmān who, like his grandfather, assumed the *laḡab* of al-Manḡūr; he had previously been a refugee at the court of the Tujībīd Manḡūr b. Yahyā at Saragossa. The reign of 'Abd al-'Azīz, which lasted till his death in 452 (1061) brought an era of peace and prosperity to Valencia. He recognised the authority of the caliph of Cordova, al-Ḳāim b. Hammūd, who gave him the right to bear the titles al-Mu'tamin and Dhū 'l-Sabīḡatāin, and kept on good terms with the Christian kingdoms of Spain. His son 'Abd al-Malik succeeded him and took the title al-Muḡaffar. He was still a youth at his accession and the vizier Ibn 'Abd al-'Azīz acted as regent. Very soon afterwards, Ferdinand I of Castile and Leon attacked Valencia but failed to take the town, after inflicting a severe defeat on the Valencians who made a sortie to attempt to drive off the besiegers. 'Abd al-Malik sought the assistance of the king of Toledo al-Ma'mūn b. Dhū 'l-Nūn [q. v.] but the latter came to Valencia and soon dethroned the young king (457 = 1065). The principality of Valencia was then incorporated in the kingdom of Toledo and al-Ma'mūn left the vizier Abū Bakr b. 'Abd al-'Azīz there to govern it. When al-Ma'mūn died in 467 (1075) he was succeeded by his son Yahyā al-Ḳādir, whose great incapacity soon became apparent. Valencia then gradually recovered its independence; al-Ḳādir sought the help of Alfonso VI, king of Castile, to bring the town under his authority again but he ended by having to surrender his own capital to him in 478 (1085). For the course of events and part played in them by the great Castilian hero Rodrigo Díaz de Vivar, the Cid of history and legend, cf. the article *al-Sīḡ*.

On their arrival in Spain, the Almoravids tried to regain the kingdom of Valencia for Islam but their efforts against the Cid were fruitless. When he died in 492 (1099) his widow Chimena was still able to offer some resistance to the attacks of the Almoravids, led by Maṣlālī. But in the end she abandoned Valencia after first of all setting it on fire and the Muslims entered it on the 15th Rabi'ah 495 (May 5, 1102).

Governors appointed by the Almoravids succeeded

one another at Valencia until the middle of the 12th century when the town gradually began to resume its independence in the troubled period which preceded the coming of the Almohads into Spain, and it linked its fortunes with those of Murcia whose series of ephemeral rulers it recognised. In 542 (1147), Ibn Mardaniyah was proclaimed king of Valencia but four years later his subjects rebelled against him. Under the nominal suzerainty of the Almohads, Valencia continued in the hands of local princes until it finally fell into Christian hands; two years after Cordova, when James I of Aragon took it on Sept. 28, 1238.

Bibliography: All the Arab geographers who have dealt with Muslim Spain devote more or less attention to Valencia: cf. al-Ishrafi, *Sifat al-Andalus*, ed. Dory and de Goeje, text p. 191, transl. p. 132; Vāḡūt, *Muḥjam al-Buldān*, ed. Wüstenfeld, i. 730—732; Abu 'l-Fidā', *Ṭaḡwīn al-Buldān*, ed. VAN. [See WAN.]

VARNA, a Bulgarian town on the Black Sea, the chief harbour of export of the country, capital of the district of the same name, lies at the mouth of the Devna surrounded by gardens and vineyards. The town, which down to 1878 was strongly fortified, is the terminal station of railway from Sofia and Ruzhuk and according to the census of Dec. 31, 1926 has 60,563 inhabitants. The development of the modern harbour has considerably increased trade, commerce and industry. Before the war of 1878, Turks formed more than half the population, and Jireček (*Das Fürstenthum Bulgarien*, p. 331) could say as late as 1891: "Turkish is predominant in the streets and is also spoken by the Armenians and the Gagauz" but linguistic and ethnographical conditions are now completely changed.

In ancient times the site of the modern Varna was occupied by Odessos (later Odysseus, Odysopolis), a Milesian colony founded in 585 B.C. Excavations have shown that the town also flourished in the Roman period. It has borne its present name since the end of the seventh century (679) and was called after the river Devna which was previously called Varna or Varnas. Varna is occasionally mentioned in the middle ages. Idrisi in 548 (1153—1154) mentions "Barnas" as a large town (cf. *Die Weltkarte des Idrisi vom Jahre 1154 n. Chr.*, restored and edited by Konrad Miller, Stuttgart 1928). According to Jireček (*op. cit.*, p. 331), Varna was Bulgarian again from 1201 and much visited by Italian seafarers. "In the

second half of the fourteenth century a Bulgarian dynasty of Kuman origin was established on the coast here" (*ibid.*). In 1366 Varna was besieged by the Crusaders under Amadeus VI of Savoy.

The first Turkish attack on Varna which took place in the time of Murād II in 1388 under the leadership of Ḥandarlī 'Alī Paṣha (cf. on him Taeschner and Wittek, *Die Vorfamilie der Gendarisade*, in *Isl.*, xviii. 86 199), but was unsuccessful. It was only after the fall of Bdyn (Vidin) that the whole of Bulgaria from Varna to the Timok became a Turkish province (1393; cf. Jireček, *Geschichte der Bulgaren*, p. 356). On Nov. 10, 1444, was fought the celebrated battle between Murād II and the Christians under Wladislaw III king of Poland and Hungary, in which the latter lost his life (hence his Polish epithet *Warneńczyk*) and his army suffered a fearful defeat. This victory of the Turks consolidated in great measure their position in Europe and formed a stepping stone to the conquest of Constantinople.

According to Ḥadīdī Khāḥfa, in the xvth century Varna was the capital of a district in the sandjak of Silistria. About this time and later it was repeatedly the scene of battles between Russians and Turks (1610, 1773 and 1810). Ewliyā Celebi in his *Travels* (i. 290) records a defeat of Cossacks at Varna in 1661 (1650—1651); he himself was wounded in another Cossack raid on Varna (v. 84—88). The same traveller mentions the town in several other passages (e.g. iii. 303, 304, 350, 373) and describes it fully in connection with his visit in 1656 (v. 88—92). According to him, the Muslims lived in seven *maḥallas* while the Greeks (*Rūm*), Jews and Armenians occupied five. Varna then contained 4,000 well built houses, 5 large mosques, the names of which Ewliyā gives, and 36 *maḥjida*. The trade of the harbour was very busy. In the neighbourhood there were 10,000 vineyards and many gardens. In this connection Ewliyā tells the amusing story of the Kādī of Varna of the time (called Paḥwāra-Kādī by the people) who in addition to a wicked tongue had so large a nose that he could not perform the prostrations (*sūjd*) with his forehead but only — contrary to the rules — with the right ear. Although the Paḥwāra-Kādī was very strict (*muqallī*), it was continually discussed in the town whether his *paḥl* could be regarded as valid at all.

In the Russo-Turkish war of 1828—1829 Varna had to surrender on Oct. 10, 1828 after a three months' siege and was only restored to the Turks at the peace of Adrianople. In the Crimean war, the French and English joined the Turkish army at Varna by the end of June 1854, built a large camp here and at the beginning of September began the Crimean campaign from here. In the last Russo-Turkish war, Varna was not near the field of action and was handed over without seeing any fighting to the Russians and Bulgarians on the conclusion of peace (1878). At the Congress of Berlin, Varna was definitely allotted to Bulgaria.

The cession of the Dobruđa to Rumania (1913) is said to have affected the commerce of Varna. In the Great War Varna was twice bombarded (27 Oct. 1915 and 16 Jan. 1916) by the Russian fleet.

Bibliography: The battle of Varna is very fully described by the early Ottoman historians, e.g. Urudī b. 'Adil, f. 55—58 (Oxford MS.) and f. 117—120 (Cambridge MS.); Aḥliḥ-paḡha-sāde, Stambul 1332, p. 132—133; Neḡmī,

in *M. O. G.*, i. 118—119; Anonymous, ed. Giese, p. 65—70 (transl. p. 92—94) but it is not neglected by modern Turkish historians (cf. Ahmed Refik, *Türkiye Tarihî*, i/i. [Istanbul 1923], p. 240—242, with a plan of the battlefield). — The Ukrainian orientalist A. Krymski gives in his *History of Turkey* (Little Russia, Kiev 1924; cf. the review in *M. O. G.*, ii. 335—337), p. 47—56 not only an account of the battle but also discusses the reports of eye-witnesses, the sources in the earliest European, Turkish and Byzantine historians as well as European works of the sixteenth and seventeenth centuries including Slav and Rumanian, with occasional critical notes. Krymski came to the conclusion that the works on the subject by Slavs and Rumanians of the sixteenth century are of less value than German works of the sixteenth century. — Also: Hakkî Khalifa, *Rumeli ve Rumeli*, transl. (FERIK BAJKANTAREVIC)

VIDJAYANAGAR, a city of Southern India, now in ruins, situated in 15° 20' N. and 76° 28' E., on the southern bank of the Tungabhadra. It was founded about 1336 A.D., either by Vira Ballala III of Dvāravattipura, or by three Hindû chiefs variously described as being wardens of the northern marches of his kingdom and as officers of the Kakatiya kingdom of Warangal or of Muhammad b. Tughluq [q. v.] of Delhi. Two of these chiefs, Harihara and Bukka, established themselves in Vidjayanagar while the Muslims, of

the Deccan were in rebellion against Muhammad b. Tughluq, and later, while 'Ala' al-Din Bahman Shâh was occupied in founding and consolidating the kingdom of the Deccan, they gradually extended their rule over the Peninsula and founded the great Hindû kingdom of Vidjayanagar, the history of which is largely a record of intermittent warfare with the Muslims on its northern frontier, first with the great kingdom of the Deccan, and later with the Muslim states which rose on its ruins. The wealthy Hindû kingdom was able to maintain an army greatly outnumbering that of the Bahmanids, but the balance of success lay with the more virile Muslims, though for two centuries and a quarter they were unable entirely to subdue the great Hindû state. The ostensible cause of difference was usually the possession of the Râyçûr Dûab, the debatable land lying between the rivers Krishna and Tungabhadra, but the Bahmanids seldom needed a pretext for attacking their Hindû neighbours. About the middle of the sixteenth century, after the dissolution of the Bahmanî kingdom, the Sultans of the independent Muslim kingdoms of Bidjapur, Ahmadnagar, Golkunda, and Bidar foolishly sought the aid of the Râjâs of Vidjayanagar in their internecine disputes, and the Râjâ, more powerful than any one of them, so disgusted all by his assumption of superiority and by the insults which he offered to their religion that they formed a confederacy against him. In December, 1564, the allied Sultans of Bidjapur, Ahmadnagar, Golkunda and Bidar met at Sholâpur, and, marching southward met the army of Vidjayanagar on January 3, 1565, on the south bank of the Krishna, about thirty miles from the small town of Talikota. Râma Râjâ, the regent of Vidjayanagar, was captured and put to death, and at the sight of his head, raised on a spear, the Hindû army broke and fled, and was pursued with great slaughter as far as Vidjayanagar, which the Muslims destroyed, after having occupied the city for six months, reduced some neighbouring strongholds, and laid waste the country. The great kingdom of Vidjayanagar ceased to exist. Some of its northern districts were annexed by the neighbouring Muslim states, and its southern districts passed under the rule of minor Hindû chiefs.

VIZIER. [See WAZIR.]

W

WABĀR, a district and tribe of the earliest period, in the southern half of Arabia. Al-Bakrī, *Muḍam*, p. 835 and Yāqūt, *Muḍam*, iv. 896 give the vocalisation *Wabārī* and compare the form with Ḥaḍhāmī and Kaḥnī.

The Wabār are mentioned by the historians along with the 'Ad, Ṭhamūd and other extinct tribes as one of the original peoples of Arabia, all of whom are included (as *al-'Arab al-ḥadīḥ*) by some genealogists among the "true, original Arabs" (*al-'Arab al-ḥadīḥ* or *al-'Arabi*). Al-Suyūṭī, for example, with whose estimate of the 'Arabī Ibn Duraid in the *Djāmi'ah* and others agree (see E. Frenzel, *Letter IV... sur l'histoire des Arabes*, in *J. A.*, ser. iii, vol. v, 1838, p. 529 sq.; following him Ritter, *Erkenntnis*, Berlin 1846, xii. 57), gives as the true Arabs the 'Ad, Ṭhamūd, Tasm, Qadīs, etc. putting the Wabār in the last (ninth) place and distinguishing from this group the *muta'ar-rīḥ*, the naturalised, "ambitious" Arabs, who also include the descendants of Kaḥnī, who altogether make up the descendants of Iram, son of Shem, and along with them as a special (third) group of peoples, the *muta'ar-rīḥ*, which comprises the descendants of Ismā'il (the Ma'add), while other genealogists with Yemen bias oppose the *muta'ar-rīḥ* or *muta'ar-rīḥ* as one group (the Ismā'ilī) to those extinct tribes and along with them to the Kaḥnī as the 'Arabī. Al-Ḥamdānī (223 A. H.) describes Wabār as the land in which live *al-'Arab al-ḥadīḥ* and Ṭabari also (ed. de Goeje, i. 750) so describes the Banū Wabār (in some MSS. corrupt; in i. 221 we have the form *abār*; Ibn al-Aṭṭar also gives the right form in his *Chronicle*). Similarly al-Mas'ūdī, *Tanbih* (B. G. A., viii. 184) and *Murūf* (Paris 1861 sq., iii. 288 sq.) numbers the Wabār and others among the extinct Arab tribes, at the same time giving the names of their ancestors, as does Ṭabari, i. 221 (on the genealogy, cf. i. 750).

The statements of the Arab geographers and historians about the history of the Wabār are strongly saturated with legend. The stories current among the Arabs are given by Ibn al-Fakḥī (B. G. A., v. 37 sq.) whose statements are combined from several sources, al-Bakrī (*op. cit.*), much more fully Yāqūt (iv. 896 sq.; a brief synopsis in the *Lisām*, still more briefly in the *Kamūs* and a little more fully in the *Tawfīq*, i. v.). Yāqūt quotes various authorities, including Ḥishām b. al-Kalbī, Muḥammad b. Ishāq, Ibn al-Fakḥī, and other direct and indirect sources. His statements (iv. 897) agree almost word for word with those of Ibn al-Fakḥī. Al-Kazwī (*Ajā'ib*, ii. 42, ed. Wüstenfeld, Göttingen 1848) and later writers, except of course the *Marā'if al-ḥadīḥ*, are based on Yāqūt. The same characteristic features are common to the authors and compilers mentioned. These include the purely legendary elements, that the name of the land goes back to an ancestor Wabār, who flourished at the time of the confusion of tongues (so al-Mas'ūdī, *Tanbih*, p. 184; Ṭabari, i. 221, 250), that after the fall of the 'Ad (cf. Ibn Sa'd, *Ṭabaqāt*, i. 20), the

previous inhabitants of Wabār, the Djinn took possession of the land (so also al-Ḥamdānī, *op. cit.*, p. 154, 223; Ṭabari, i. 221), and men lived there no longer but only half men (*nawāṣ*), beings who had only half a head, one eye, one hand, one leg (Yāqūt, ii. 263, tells the same story of Shihir), that no one dared enter this land and its mysterious inhabitants destroyed the crops of the adjoining lands between Shihir and Yaman. A feature which is developed in the legend, on older models, is the story that Wabār was a particularly fertile land, rich in water and fruit-trees and especially in palms (so also al-Mas'ūdī, *Murūf*, iii. 276, 288 sq.; al-Nābigha's mention of palms in the land of Wabār (in Ahiwari, *The Divans* etc., London 1870, p. 112 from Yāqūt) was taken as evidence that the land was fertile and inhabited (cf. al-Bakrī, *loc. cit.*, with Yāqūt, iv. 898). — The mentions of Wabār in the poetry are of course not independent evidence, but repeat as a rule only the conventional notions of the great antiquity and fall of the people and the isolation of their land (cf. also Yāqūt, iv. 897).

What arouses interest in these fables and may be of use are the geographical ideas at the bottom of them. According to some of these statements, the broad land of Wabār stretched from Shihir to San'a, in general to the eastern frontier of Yaman; according to others, it comprised the whole territory between Najrān and Ḥaḍramūt; lastly, according to others, it was the territory between the "sand of Yabrin" (*Riml Yabrin*) and Yaman (see also Djawhari). From these topographical hints, which in spite of their differences together give a rough general picture, it can be deduced that the portion of the South Arabian desert, of the Rub' al-Khālī or Dahnā, north of the Maḥra [q. v.] country, was called Wabār by the Arabs, but this geographical name was also understood in a wider sense and extended to the whole Dahnā. The part called Wabār adjoined in the east the desert area of al-Aḥḥāf (dunes) which lay north and west of Ḥaḍramūt. C. Landberg (*Études sur les dialectes de l'Arabie méridionale*, Leyden 1901, i. 160) says on the authority of information received from natives that in the expression *ahf al-ahf* the place-name, according to South Arabian ideas, refers not only to the district of al-Aḥḥāf (North Ḥaḍramūt, p. 149) but also to caves in which the Arabian troglodytes live (cf. Yāqūt, i. 154, on the different topographical clues for this district).

It is impossible to accept Ritter's (*op. cit.*, xiii. 315) identification of the Wabār with the *Bawāḥ*, who are mentioned by Ptolemy in connection with the Ṭhamūdīs and are to be located in the northern half of the west coast of Arabia (the first component of the name is obviously connected with *Banū*; attempts at identification will be found in Sprenger, *Die Alte Geographie Arabiens*, Bern 1875, p. 30 sq. and in E. Glaser, *Skizze der Geschichte und Geographie Arabiens*, Berlin 1890, ii. 231 sq.). Ritter's comparison (xii. 271, 392) of Wabār in Idriā (ed. Jaubert, i. 156) is also

to be rejected. There never was any cogent reason to dismiss the Wabar into the realm of fable, with Sprenger (*op. cit.*, p. 296) and others, as a people that never existed and to deny any historical or geographical foundation to their mention along with other extinct tribes. Wüstenfeld (*Die Wohnsitze und Wanderungen der arabischen Stämme*, in *Abh. G. W. Gott.*, 1868, xiv, 13) in agreement with the Arab writers described the tribes of 'Ad, Thamūd etc. as the original inhabitants of Arabia, who had partly extinguished one another and partly become mingled with the peoples who succeeded them, so that they are to be regarded as having been extinct many centuries before Islam.

Although the records are clothed in the form of legend, it does not follow that the whole story is a pure invention, but only that we have here the memory of an ancient people, which has become a legend; similar things are to be found in the history of most nations. There is a series of fabulous stories associated with the whole of Southern Arabia between Yaman and 'Omān, a region little known to Arab men of letters. Moritz (*Arabien*, Hanover 1923, p. 28 sq.) also says that the names of those extinct peoples of the early days of Arabia including the "Wabar" (so also on p. 60, 122) are at least historical and that there may be a historical kernel in the stories of the fertility of cultivated areas which later became desert through natural causes, such as continued drought and sandstorms. He quotes similar phenomena in Egypt. The formation of the desert, moreover, must have made some progress since the time of Ptolemy, as his map of Arabia shows towns or villages in regions which have since become desert or only contain ruins; on references in Greek and Roman writers for the historicity of the Thamūd cf. the article *Thamūd* in Pauly-Wissowa's, *Realencykl. der class. Altertumswissenschaft*. — It is also worthy of note that south of Sa'ib, the chief town of the flourishing oasis of Al-ʿAdī, Philby (*The Heart of Arabia*, 1922, ii, 99 sqq.) in 1917 saw, along with other remains of an ancient culture, the ruin of a large building, the Kuṣairat 'Ad, so called, as his companions told him, after the king 'Ad b. Shaddād, who ruled in the remote past over these regions and whose capital was in "Wabar" (*ibid.*, ii, 353), a month's journey to the south in the desert near the frontier of Ḥaḍramūt. The story told by him of this king contains several details found in the well-known traditions of the Prophet Hūd. The ruined site of Kuṣairat 'Ad is marked in Philby's map under 22° 10' N. Lat. and 46° 20' East Long., a position which of course is only calculated approximately. Of Wabar he was also told (p. 221) that the Dinnān, a clan of the Al Murra, included it in their territory. If the geographical conception of Wabar still exists among the Arabs, there is no reason to suppose that the references in literature to this land and people are based on an invention of the genealogists. The old view put forward by Blau (in *Z.D.M.G.*, xlii, 659) and recently championed by Moritz (*op. cit.*, p. 29, 122) that the Wabar "offenbar die *Isaḥāḥ* des Ptolemäus sind (vi, 7, 24)" is certainly not probable (cf. the article *MARATTA* in Pauly-Wissowa; *ibid.* for Landberg's citation of the *Djawān*, which has lately been used again as a basis for further deductions, and also for Glaser's errors). Isolated state-

ments of Arabic authors regarding the countries round Wabar seem to make it possible to define its frontiers approximately. According to Tabari, i, 221, the land of Abār (see above) lay between Yamāna and Shihir; Yāqūt, iii, 591, gives the information that the "Sand of 'Alīdī" (*raml 'Alīdī*) adjoins Wabar; the former is a northern salient of the great South Arabian desert which stretches between Bahrain and Yamāna and is characterized by the fact that trees and plants grow there. As a matter of fact the north-eastern termination of the great desert is an oasis, that of Yabrin, in which the desert region, which some, especially later geographers, understood as the Dahna proper, i.e. a north-easterly continuation of the Rub' al-Khālī, has its southern limit. After this oasis, the most southern part of the district of Yamāna, the adjoining desert is also called "Sand of Yabrin". The frontiers between 'Alīdī and the Dahna fluctuate in the Arab geographers, and sometimes the two regions are even said to be identical. Al-Bakrī interprets the extent of the desert of Yabrin in a wider sense, for according to him it extends from Yamāna to Ḥaḍramūt. For our knowledge of Yabrin, the *Asṣag* of Ptolemy, vi, 7, 35, the statements in Abu 'l-Fidā' are important (see Rommel, *Abdulfedat Arabias descriptio*, Göttingen 1802, p. 84), in Yāqūt (see his several references from the index) and al-Ḥamdānī (p. 105, 157, 149). Burckhardt had already heard from Beduins that the only habitable area in the eastern Dahna was the Wādī Yabrin with date-plants and wells (which the latest reports confirm) but with an unhealthy climate. It is an oasis, rich in water, with settlements and was at one time, as Pelly, who visited the region in 1865 tells us, a fertile well-tilled district with an imposing town, but suffered heavily in the Ḥaramīan wars. Philby obtained some information about the oasis, which belongs to a section of the Al Murra (see *op. cit.*, ii, 216 sqq.). Cheesman's account contained the first more accurate information (in *G. J.*, lxx, 1925, p. 112 sqq.). Using the statements of the Arab authors, we may regard the oasis of Yabrin as the most northerly part of the ancient extensive land of Wabar; this agrees with the stories of Wabar's wealth of palm-trees and with the geographical background of the legends, in so far as they do not, like some geographers, locate Wabar definitely in the adjoining desert of 'Alīdī (cf. Mas'ūdī, *Murūj*, iii, 288). The southern continuation of it is then either the sandy region of Khurān about sixteen days' journey south of Yabrin, a settlement of the Al Murra with some wells and water-pools (Philby, *op. cit.*, ii, 219), or the district about half a degree west of it in the same latitude. The farther continuation to the south goes via al-Ḥakāf to the northern frontier of Ḥaḍramūt, N. W. of Mahra. The sandy region of Yabrin also runs southwards into the desert of al-Djuz' and then into that of al-Ḥakāf. In Stieler, *Handatlas*, 9th ed., map 60, Gotha 1905, Wabar is located about 46°—47° East long. and c. 22° 40' N. Lat. which is rather too high.

Bibliography: The works of the Arab authors and of the modern writers (Ritter, Sprenger, Moritz, Philby, etc.) have been given with references in the article. We need only add F. Wüstenfeld, *Bahrain und Jemāna*, in *Abh. G. W. Gott.*, xix, (1874), 173 sqq.

(J. TKATSCH)

WADAI. Wadai or Waddai, also called Bergu or Borgu and Dār-Sāliḥ, lies to the west of Dār-Fūr from which it is separated by the provinces of Tama, Mara, Masalit and Sila, which have in the past been politically dependent sometimes on Dār-Fūr and sometimes on Wadai according to the fortune of war. The boundaries of Wadai in other directions are not very precise; the kingdom at its greatest extent at the height of its power did not stretch beyond Kuti on the south, Fitri on the west, Ennedi and the mountains of Kappa or Gabga in the north (Gaoga of Leo Africanus and of the Arab geographers, not to be confused with Gāgāso or Gāo on the Niger).

Although lying at the southern limits of the desert regions and receiving a very slight rainfall, the country is comparatively fertile. It is watered by a certain number of seasonal water-courses and two fairly large rivers: the Baḥā which ends in the west in Lake Fitri and the Baḥr al-Salamāt which flows to the south into the Upper Shari.

The population is a very mixed one, consisting for the most part of tribes of negro stock and to a smaller extent of peoples some of which owe their origin to a mixture of black and white stocks, while others are of almost pure white origin. To the first category (tribes of negro stock) belong the Māba, politically and socially the most important, the Kodot, the Mimi, the Kashmere, the Kadjakse, the Kondogo, the Mara or Mararit, the Dadjo, etc., all Muslims, then, in the south, the Biḥa and Rīḥa, among whom Islam has made less progress, all belonging to the same great ethnic group and speaking languages related to one another; these languages are to be classed in the same linguistic group as the Nūba, Kanuri, Tāda etc. We also find in Wadai, especially in the southern provinces, an appreciable number of representatives of tribes who have still remained pagan in part or completely, like the Kōka, Gula, Ndaka etc., speaking dialects related to that of Baghirni. The peoples of mixed stock are first the Hīdeyāt or Anna, the Zaghāwa or Gabga, nomads of the north, all Muslims, speaking negro languages related to that of the Tāda of Tibesti and related also to the dialects of the Māba, Kodot etc., then the Tundjūr, who are said to be of Semitic, pre-Islamic origin, who speak an Arabic dialect that seems to be very archaic and are said only to have adopted Islam in the xviii century; their Islam is even now very superficial. Lastly, the Arab element, in the strict sense, is represented by a few Uḥūd Siltān, nomads who came in 1842 from Fezzān from which they had been driven by the Turks, and by much more numerous Shuwa, some nomads (breeders of camels, sheep and goats), some settled (cattle-raisers), the latter often showing an admixture of negro blood; these Shuwa have been coming in little groups from quite an early period, some from Upper Egypt, others from Cyrenaica and Tripolitania. The principal tribes of the Shuwa are the Salamāt, Khuzām, Dja'adne, Mahāmūd, Dakakire etc. The Uḥūd Siltān and the Shuwa are Muslims and speak Arabic.

The whole population of Wadai proper is estimated at 749,000, which represents a mean density of 26 people to one square mile.

The capital was Kadama, to the S.W. of Abeshe, down to the middle of the xviii century. Then

it was Wam to the N.N.W. of Abeshe, down to the middle of the xix century. It was then transferred to Abeshe (or Abesher), which is a town of about 30,000 inhabitants with houses of clay and huts thatched with straw; the royal quarter, surrounded by a high wall of earth, is distinguished by a castle, three storeys high, of baked brick, built in 1860 in the reign of king 'Alī by two Egyptian or Tripolitanian architects.

According to local tradition, Wadai was at first under the authority of a dynasty of foreign princes, belonging to the tribe of the Tundjūr, who had their capital at Kadama and who were more or less vassals of Dār-Fūr. These princes were not Muslims but several of them whose memory has survived have Arabic names, like the last of them, Dāwūd, called Almerenn. It was only in 1615 that Islam is said to have been introduced among the native peoples of Wadai as a result of the preaching of a legendary individual sometimes called Djāmi and sometimes Sāliḥ, whom some say was of Māba stock, but whom others connect with the Arab tribe of Dja'alta, which has its cradle near Berber on the Nile. In any case, the family which claims descent from Djāmi is undoubtedly of negro stock and regarded as of Māba origin.

About 1635 a son or nephew of Djāmi called 'Abd al-Karīm and also known as Maḥammad al-Sāliḥ gathered around him the Māba and the Kodot recently converted to Islam by his father or his uncle, as well as the Arabs of the district, preached the holy war against the infidel dynasty of the Tundjūr princes, defeated or killed the king Dāwūd, proclaimed himself *ḥakīm* (i.e. sovereign) of Wadai, made his capital at Wam and founded a new dynasty there which retained the throne till 1911.

The *ḥakīm* exercised power with the help of several councillors, including his mother, who had the title of *mama*, and four dignitaries called *ḥamākil*, assisted by lieutenants (*andeker*), squires (*warwag*) and a supervisor (*sinmiliā*). He had around him chamberlains, pages, eunuchs, messengers and tax-collectors as well as a military guard, one section free men and the other slaves. The territorial commands were in the hands of military governors each of whom, called an *agid*, had at his disposal an army raised from the tribes of his district. The most important of these commands were: that of an *agid* who had the title of *ḥijma* under whom were the Kodot, as well as the town of Wam and the western provinces; that of the *agid* Almahāmūd which included the Arabs of the north and the Zaghāwa; that of the *agid* al-Salamāt, who ruled the territories of the south. There were as many as 80 *agid*. Each province or *dār* was administered, under the authority of the *agid*, by a *tanḥak*, and each village had at its head a political chief and an agricultural official.

This organisation however lacked solidarity; the different *agid* were often fighting with one another or with the *ḥakīm* and they had frequently to use force to secure the obedience of those under them. The history of Wadai, so far as we know it, is simply the history of foreign or civil wars and of the cruelties perpetrated by the kings and dignitaries on members of their own families.

The first *ḥakīm*, 'Abd al-Karīm (1635—1655), paid tribute to Dār-Fūr, like the Tundjūr rulers who had preceded him. He succeeded however in giving Wadai a certain amount of independence

and settled its eastern boundaries by agreement with Sulaimān Solong, the king of Dār-Fūr. He contributed to completing the conversion of a considerable section of his subjects to Islam. This work was continued after him by his son Kharit al-Kabir (1655-1678). Kharit (1678-1681) and Ya'qūb 'Arūs (1681-1707) endeavoured to cast off the suzerainty of Dār-Fūr; the second succeeded in defeating the Dār-Fūr army which was commanded by 'Umar Lele and in taking him prisoner. Kharit al-Saghir (1707-1745) engaged in an unsuccessful war with the Baghirmi. Djoda (1745-1795) resumed the struggle against Dār-Fūr, defeated its king 'Abd al-Kāsim and secured the independence of Wadā'ī; he undertook a number of expeditions against the pagans of the south and even succeeded in taking a portion of Kānem from the rule of Bornu. Sālih Derret (1795-1803) was de throne by his son 'Abd al-Karim who assumed the name of Sābūn (1803-1813) and distinguished himself in a war against 'Abd al-Rahmān Gawrang, king of Baghirmi, whose capital Māsenya he took and plundered in 1806. 'Abd al-Rahmān was killed in the course of the campaign and his son and successor Burgumanda had to acknowledge the suzerainty of Wadā'ī. The *halak* Sābūn developed the trade of his lands and established relations with Egypt. He was however of a cruel and blood-thirsty disposition and made enemies in his entourage, who finally assassinated him. His son Yūsuf Kharifein (1814-1829), a debauchee and drunkard, was poisoned as a result of a conspiracy against him. Rāḳib (1829-1830) was placed on the throne at an early age under the regency of his mother but soon died of smallpox. 'Abd al-'Asī, great-grandson of Djoda, was chosen to succeed him after a bloody civil war but he also died of smallpox in 1834.

Famine now desolated the kingdom, and drove the Wadā'ians to plunder the western provinces of Dār-Fūr. Muḥammad Fāḳil, king of this country, sent a punitive expedition which reached Wara and put on the throne a Wadā'ian prisoner named Muḥammad Sharif who recognised the suzerainty of Dār-Fūr and reigned from 1835 to 1858, possessing a prestige and authority and a sense of justice which had been previously unknown. Having cause to complain of the conduct of the powerful Shaikh 'Omar, lord of Bornu, he attacked him and defeated him at Kusri and forced him to pay an indemnity of 8,000 dollars. It was Muḥammad Sharif who moved the capital from Wara to Abeshe. He became blind and had to defend himself against one of his own sons; ultimately he went out of his mind and died in 1858. It was in his reign that Wadā'ī for the first time was visited by a European, the German Vogel, who spent 13 days in Abeshe in 1856 and was murdered on leaving it.

His successor 'Alī (1858-1874) devoted himself to the restoration of order in the state and encouraged trade between Wadā'ī and Tripolitania and Cyrenaica. In 1870 he went to war with Abū Sakkin, lord of Baghirmi, who had attempted to cast off the bonds of vassalage; he besieged him in his palace, which he mined and took by storm, and brought back from Māsenya in 1874 over 20,000 captives, chosen mainly from among the artisans, as a result of which he gave a considerable stimulus to industry in Wadā'ī. It was he who built the royal palace of Abeshe and added to Wadā'ī the

provinces of Rūḥa and Kuti. In 1873 he was visited by the German explorer Nachtigal, whom he treated with great consideration.

Yūsuf (1874-1898) allowed Baghirmi to regain its independence. He entered into friendly relations with al-Mahdi, the head of the Sanḥāya brotherhood. It was in his reign that the adventurer Rabah, who came from Bahr al-Gharīb, invaded Kuti (1879), then Rūḥa, laid waste the southern provinces of Wadā'ī and installed a slave-dealer named Sanḥī as sultan of Kuti and Rūḥa (1890). In 1891 the latter was visited by the French explorer Crampel, who had come from Ubangi; he tried to prevent him from going on to Wadā'ī and being unable to make him abandon his plans, had him assassinated along with his companions. In 1894, Rabah being engaged in conquering Bornu, the *halak* Yūsuf sent an army against Sanḥī and forced him to recognise his suzerainty. A little later, in 1897, the same Sanḥī signed a treaty of friendship with the explorer Gentil, the French commissioner in Ubangi and Shari.

Ibrāhīm (1898-1901) had to put down several risings and died of wounds received in battle. Abū Ghazālī (1901-1902) had to fight against one of his *aghlis* named 'Asīl who raised a considerable section of the people against the *halak* with such success that the *halak* had to abandon his capital. In his place Dūdumra, son of Yūsuf, was proclaimed; he pursued Abū Ghazālī, captured him and put out his eyes, while 'Asīl, who had taken refuge in Fitri, put himself under the protection of the French troops who had established themselves in Yao. Dūdumra reigned from 1902 to 1911. Soon after his accession, 'Asīl left Fitri and made war on the pagans of southern Wadā'ī; arrested by order of Commandant Largeau in 1903, he was for a time interned at the French post of Fort-de-Passel. However, Dūdumra's advisers professed to hold the French responsible for 'Asīl's doings and the *aghl* al-Salamāt set fire to the French custom-house of Gulle to the west of Lake Iro and attacked Lieutenant Dujour at Tomba in April 1904. On June 7, the *gherna* 'Uthmān summoned the commandant of the French fort at Yao to evacuate the district of Fitri; the latter indignantly rejected the ultimatum and his post was attacked in January 1905 by a lieutenant of the *gherna*. The attack was driven off and the Wadā'ian army routed by Captain Rivière. Dūdumra blamed 'Uthmān and had him poisoned in 1906. Various Wadā'ian governors however continued to raid French territory, which gave rise to fighting in 1907 and decided the French to invade the western dependencies of Wadā'ī along with 'Asīl, who, restored to favour with the French, posed as a claimant to the throne. Dūdumra sent against the French an army of 2,800 rifles, led by the *aghl* Almahmūd, who was defeated on March 29, 1908 by the 280 men led by Captain Jérusalem and for a second time on June 16 of the same year by Commandant Julien.

On June 2, 1909, Abeshe was taken by Captain Fiegenschuh and Lieutenant Bourreau and on Aug. 30, 'Asīl had himself proclaimed *halak* in place of Dūdumra, who had fled. But in January 1910, Captain Fiegenschuh, going with a detachment of troops among the Massalit, was attacked and massacred by them at Bir-Jawū, and 'Alī Dīnī, king of Dār-Fūr, seized the opportunity to invade eastern Wadā'ī, while Dūdumra again resumed

the offensive from the north. The latter was driven back across the Gabga by Captain Chauvelat. Then on Nov. 8, 1910, Lt. Col. Moll took Djidjel, the chief town of the Masalit, which Dūdmurra was defending; the latter was wounded and put to flight, but Moll was himself killed at Dorothe along with two lieutenants and five non-commissioned officers. A little later, on Jan. 12, 1911, Captain Modat took at Ndele (Kut) the fortified palace of Sanūs who was killed in the fighting and in October of the same year, the *Asal* Dūdmurra came to make his submission to Colonel Largeau and abdicated. 'Asil became king of Wadā'i under a French protectorate but he reigned only a few months as he had to be deposed on June 5, 1912, on account of his duplicity. Since then Wadā'i has been directly administered by the commandant of the district of Abeshe, which forms a part of the French colony of Tchad.

(MAURICE DELAFOSSE.)

WADĪ ḤALFA or simply *Halfa*, a modern town in the Anglo-Egyptian Sūdān, 21° 55' N. 31° 19' E., on the right bank of the Nile, c. 770 miles south of Cairo and 5 miles north of the Second Cataract, is the chief town of the province or *mudiriya* of that name. It includes the village of Tawfikiya, a new suburb with fine bazaars, and its inhabitants, inclusive of the Nubian villagers of Daharān, number almost 3,000. Besides the Muslim places of worship there are the churches of the Copts, Greeks and English. The Government offices and hospital, and the official residential district lie to the south. The head of King John of Abyssinia is said to be beneath a tree near the hospital. The name of the place is due to the *halfa* grass abounding in this region. In Pharaonic times the district was called Rehen. Opposite the town, on the west bank, are the remains of the old Egyptian fortress of that name established under the Middle Empire. Pa-nebes, the *Pnyx* of Ptolemy, was also in the neighbourhood (Budge, *The Egyptian Sudan*, ii. 83).

It was only towards the end of the nineteenth century that the town developed from a miserable Sūdānese trading village into the important centre it now is on the frontier of Egypt and the Sūdān. During the years 1884—5 it was made a military base of the British troops. Lord Wolseley's expeditionary force passed through it on its way to assist General Gordon at Khartūm. The place grew in importance as a result of the subsequent decision which made it the political frontier, and when a garrison of Egyptian troops was established on the spot it figured again in the campaigns of 1896—98 against the Mahdī. By the Sūdān Convention of 1899 conditions were changed. The modern political boundary is now fixed at 22° N. Lat., a distance of 27 miles north of Wadī Halfa. The government railway to Khartūm, which begins at the town, accounts largely for its present day importance. Nile steamers connect it on the north with Shalāl, a village on the outskirts of Assuān,

the terminus of the Egyptian State Railways.

(J. WALKER)

WADĪ 'I-KURĀ, the valley between el-'Eis' and al-Medīna on the old trading route from South Arabia to Syria, usually called Wadī Deidibīān. It is the dry bed of two wādīs which join in the centre, the Wadī al-Djizel from the north and the Wadī el-Hamd from the south which comes down from near Medīna above the village of Henakiya and runs between the Djebel Hamit or Uhad (Ehad) and the city of the Prophet. Half-way between el-'Eis' and al-Medīna it is joined on the right by the Wadī el-Tubāḡ or Wadī el-Silsila, which connects it with Khaibar.

The most important place in the Wadī 'I-Kurā' is el-'Eis' with rich date-groves and cornfields which owe their existence to warm springs in the valley. At one time Kurā was the most important trading centre of the Wadī 'I-Kurā'. It presumably took the place of the ancient Dedān (Daidān) the ruins of which, now called al-Kharaiba, lie in the northeastern corner of the gardens of el-'Eis'. The oasis of Dedān, which was of importance as an important point on the old trading route from the south to Egypt and Syria, was at one time in the possession of Minaean rulers who had deputies here. Numerous Minaean inscriptions, which were found in el-'Eis', and the mention of the name Dedān (𐩃𐩣𐩪) in ancient South Arabian inscriptions and in the Bible (Gen. x. 7; xxv. 3) are further evidence of the close connections the old South Arabian states had with this place. Yāqūt still knows the old name of this place and records that Daidān was once a large town on the road from al-Belkā' to the Hūdja but was already in ruins in his time. Legend connects the decline of the people of 'Ad and the story of the prophet Hūd with this region. These stories were probably suggested by the rock tombs in the vicinity of Daidān (Kharaiba). At the beginning of Islām the Wadī 'I-Kurā' supported a considerable Jewish population who, like their co-religionists in al-Medīna, were hostile to Islām. When in the year 2 (623—624) the Kaibūk were driven out of al-Medīna and went through the Wadī 'I-Kurā' to Syria, they sheltered them for a month and gave them food and horses for the journey. In the year 5 (626—627) the Jews of the Wadī 'I-Kurā' joined the defensive alliance formed by the Jews of Taimā', Fadak and Khaibar against Muhammad. It was however not till 7 (628) that they came to blows with the Prophet's forces, when after the capture of Khaibar, he marched through the Wadī 'I-Kurā' to al-Medīna. The Jews of the valley, which was defended by towers, offered a vain defence. They were forced to surrender after heavy losses but were allowed to remain in the country; they had to till the soil for their hated enemy, and in this way contributed considerable wealth to the treasury in al-Medīna. Henceforth this important corridor, used

for the victorious campaign of the Muslims under Abū 'Ubayda against Syria, remained in the hands of the lands of al-Medina, although for administrative purposes it continued for a time to belong to Syria and formed the frontier against the Hufāz. The Jews were allowed to remain for some time in the Wādī 'l-Kurā. Whether they were expelled as early as the reign of the caliph 'Umar I is not certain. All we know is that in al-Balādhuri's time there were no longer any Jews in the Wādī and the land had long been divided among the Muslims and belonged to the district of al-Medina.

WADI NÜN, older form WADI NUL. This is not the name of a river but of a great plain in S.W. Morocco between the western Anti-Atlas and its Saharan outliers twenty miles from the sea. The plain is formed by the silt from a number of water-courses, of which the chief are the Wādī Saiyāl and the Wādī Umm al-'Aṣhar, which unite to form the Wādī Asāka; the latter river joins the sea through a defile which has given it its name.

We find in the Wādī Nün a certain number of oases with large villages (Awgelmim or Gleimim, Kṣābi, Tiliwin, Fask, Dubiyan, Tighmart, Asrir, Wa'rūn, Abbūda etc.) which serve as trading centres for the Saharan nomads and contain 3,000—3,500 families. These are Arabo-Berbers belonging for the most part to the Ma'kil and the Lamta (q.v.); a few belong to the Gārfa and to the Sanhaja. They almost all belong to the Tekna, but some to the Ait Ba'amrin and the Akhṣās. There are also a number of shorfa, marabouts, ḥarāfiṣ and Jews.

There is hardly a historian or geographer who has dealt with the Maghrib al-Akṣā who has not mentioned this province. It owes its importance to several things: the Wādī Nün is in Morocco one of the rare groups of oases which throughout the centuries has communicated in the south with the Mauritania Adnir and the Senegal and in the northeast with the bend of the Niger; it is at the exit of the easiest route between the desert and the northern slope of the Atlas, a natural route which runs on as far as Mogaṣor; lastly its proximity to the Ocean has enabled its inhabitants to enter at various periods into commercial relations with Europe and to secure the exportation of the rich produce of the Sūdān.

Historical sketch. The Wādī Nün was, we are told, at one time a great pastoral region; native tradition says that it used to be called Wādī Nūḳ "the river of the she-camels". Its name is sometimes derived from the Hebrew and Nün is said to be a fish-god. Jewish legends make the whale

throw Jonah up on the coast of Sūs and the memory of Joshua son of Nün is said to survive in the name of the tribe of Ait 'Isā.

In the viii century of our era, Lamta Berbers were the owners of the oases and we may imagine that the expedition of 'Ukba b. Nāḥ and the ephemeral rule of 'Abd Allāh b. Idris in Sūs brought them for the first time into contact with Islām. They were probably great nomads; in the tenth century however, they had a town, Nūl Lamta, which seems to have occupied the site of the present village of Asrir. We do not know the date of its foundation but it was undoubtedly much earlier; it was a great market, where shields were made of antelope hide (*lamf*) and from it caravans set out to cross the Sahara for the Sūdān and Mauritania. It was no doubt this commercial activity that at an early date attracted a Jewish colony here.

In the xth century, Nūl Lamta was conquered by the Almoravids who made it one of their bases of operation and established a mint there. The Lamta served this dynasty faithfully; on the other hand, their risings against the Almohads in the following century resulted in bloody reprisals. A little later, in 1218, the invasion of the Ma'kil Arabs reached the Wādī Nün and one of their tribes, the Uhwī Hassān, soon incorporated the Lamta, who ceased henceforth to play an independent part.

Nūl henceforth lost its importance and was replaced as a port for the Sahara by Tagast (the modern Kṣābi); it was under this name that Europe for long knew the Wādī Nün. In the xvth century began the expeditions from the Canaries to the coasts of Africa, the object of which was to procure slaves for the exploitation of the country; these were the celebrated *entradas*, several of which reached the gates of Tagast and resulted in the foundation of a number of Spanish fortresses; one of them, San Miguel de Saza, which however only lasted for a very short time, was quite close to the Wādī Nün, at the mouth of the Asāka. These expeditions were perhaps preceded or accompanied by Christian missions. In 1525, Tagast venerated the relics of a Portuguese of the Order of the Hermits of St. Augustine, who had lived in this region.

The foundation of the Sa'dian dynasty resulted in the expulsion of the Christians and the people of Nün supplied *gizā* contingents to the sovereigns who had liberated Muslim soil. But very soon, it seems, their oases began to lose their position as starting-points for caravans. The Shorfa came from Tūgmādiāt in the upper Dar' and it was by this route naturally that they brought to Marrakech the booty of their conquests on the Niger.

This fact no doubt explains why the people of the Wādī Nün very soon disowned this dynasty, as well as why they were always at more or less open enmity with the Filāls, who for similar reasons favoured the route by Taḥlālt. In the xviii and xviii centuries the Wādī Nün seems to have belonged to the marabout state of Tāzer-wālt, founded by Abū Ḥassān al-Samāli, whose ambition at one time was to conquer the Sūdān. He and his successors in every case maintained very regular commercial relations with the country south of the desert. In their reign European ships frequently came to the coast of Sūs to carry away merchandise brought down by the caravans. This

was a period of prosperity for the Wādī Nūn, which towards the beginning of the xixth century, formed a practically independent state under Shaikh Bairūk the capital of which, Awgelimū, soon supplanted Tagaost.

The sultans however became disturbed at this direct trade between Europe and the southern provinces of the empire; they were losing all the profit from it. In the second half of the xviiith century, Sidi Mahammad b. Abd Allāh closed the southern ports to trading-ships and forced them henceforth to come to Mogador, which he had just founded. Tizerwālt and Wādī Nūn had to send their caravans there and pay heavy taxes on the articles exported. All their efforts and especially those of Bairūk and his sons were in the direction of direct relations with the European governments, to make their country appear an independent state and to lead ships to disobey the sultan's orders by founding on the coast a port where the customs duties were lower than those at Mogador. The way was paved for this policy by the old relations of the Jews of the Wādī Nūn with the European merchants and by the numerous shipwrecks which took place in this district at the end of the xviiith century, which gave Bairūk an opportunity to discuss his plan with Christians. He tried first of all in 1835—1836 to interest England and then France in 1837 to 1853; finally after his death in 1859, his sons began negotiations with Spain which enabled this nation to get, by the treaty of Tetwān, the concession of a fishing station on the coast. So far these attempts had yielded no appreciable result, the authority of the Ulād Bairūk seemed rather precarious and besides the coast of the Wādī Nūn did not afford sufficient shelter for ships. It was only in 1876 that Mackenzie built a factory on Cape Juby, soon followed by Curtis, who settled near Awgelimū in the Wādī Arekksis. These marked the beginning of a series of explorations and experiments which disturbed sultan Mawlay al-Hasan so much that in 1886 he decided upon an expedition to the south. This ended in the submission of Tizerwālt and of the Wādī Nūn and in the departure of the English merchants. The marabout shaikh M^r al-Ainnai [q. v.] whose anti-foreign influence was increasing in the Sahara undertook to put a stop to any Christian enterprise on these coasts. It was not till four years after his death, in 1916, that Spain established herself on Cape Juby and a German submarine landed a mission to seek an alliance with his son Mawlay Ahmad al-Haiba, who was directing the opposition of the tribes in the Anti-Atlas against the French advance; this last effort led to nothing.

Wādī Nūn besides had no longer the same reasons for attracting Europeans: the power of the Bairūk no longer existed, the progress of the French in Southern Algeria and in the sub-tropical zone had gradually lessened the trans-Saharan traffic and Awgelimū had gradually lost all its commercial importance.

Political organisation. Each village of the Wādī Nūn has its own organisation: a chief and an assembly of notables. It is also attached to the organisation of the tribe on which it depends, an organisation which has almost always a tendency to monarchy. The majority are in the system of alliances which among the Tekna divides the tribes of the coast (Ait Djmal) from the tribes of the interior (Ait Athman or Ait Bella).

Economic life. In the Wādī Nūn a few cereals are grown, the vine and tobacco. The latter has a certain reputation in all the western Sūdān. There are also palm-trees, figs, pomegranates, a few arganiers, oranges and Barbary figs. Numerous hives produce an excellent honey. The main wealth of the country is in rearing camels, horses, cattle and particularly sheep and goats.

Industry is rudimentary; there are a few armourers and several Jewish goldsmiths. Fishing is practised by certain tribes of the Tekna.

The markets of Awgelimū and Tighmart are of only local significance. The most notable are the fairs (*māsim*, *awggār*) of Asir, Ksāl and Awgelimū which annually give an opportunity for the settled population and the nomads to exchange commodities. Trans-Saharan trade has practically disappeared completely.

Bibliography: On account of the relations of Wādī Nūn with Europe the bibliography of this province of Morocco is very important; and will be found in the bibliography of the western Sahara publ. by M. Funck Brentano in *Hesperis* (vol. xi., 1930, fasc. i.—ii.). — In addition to the classical historians and geographers of North Africa (al-Bakri, al-Idrisi, Abu 'l-Fida', Ibn Khaldūn, Leo Africanus, Marmol), we only mention the more important here: *Histoire du Naufrage et de la captivité de M. de Brisson*, Geneva 1789; R. Adams, *The Narrative of Robert Adams*, London 1816; J. Riley, *Loss of the American brig Commerce*, London 1817; F. D. B., *Naufrage du brick la Nossa Senhora-da-Conceição*, in Lafont, *Voyages autour du monde et naufrages célèbres*, Paris 1844—1847, vol. viii.; Cochelet, *Naufrage du brick français la Sophie*, Paris 1821; Davidson, *Notes taken during Travels in Africa*, London 1839; Panet, *Relation d'un voyage du Sénégal à Souira*, in *Rev. marit. et colon.*, 1850; Bou el Moghdal, *Voyage par terre entre le Sénégal et le Maroc*, in *Rev. marit. et colon.*, May 1861; El Uad Nun y Tekna segun Gatell, in *Rev. geograph. commercial*, 1865; Jannasch, *Die deutsche Handelsexpedition 1886*, Berlin 1887; Douls, *Voyage d'exploration à travers le Sahara occidental et le Sud marocain*, in *Bull. (F. DE LA CHAPELLE)

WADIA (A.), deposit, custody, is a contract (*'ahd*) by which the depositor (*muḍī'*, *mustawḍi'*) hands over to the depositary (*muḍā'*, *mustawḍā'*) a thing to be kept and returned intact at a later date. Wadia means not only the thing to be kept but also the agreement regarding the transaction. The custody is therefore based on a special agreement and is therefore dealt with in legal works as a branch of the law of contract, while in the case of *amāna* 'entrusted goods' there is no agreement but only a general obligation to keep faith, without a binding agreement; under *amāna* therefore come such things as come into the keeping (*yad*) of any one by chance or without special intention, e.g. a garment blown into the house by the wind or an article found (*luḥṭa*) or a pledge (*rahn*).

1. Wadia is not found as a technical term in the Qur'ān but only *amāna* in the more general

meaning. Muhammad with all emphasis admonishes his followers to keep their contracts and to restore goods and pledges entrusted to their care (Sūra iv. 61; ii. 283) and promises Paradise to those who obey these commands (xxiii. 8 *ayy.*; lxx. 32). These verses show how little and how reluctantly the pagan Arabs fulfilled the obligations and agreements they had entered upon. The later *fuḥaḥ* also quoted Sūra v. 31: "Help one another to do good and to the fear of God" in order to find support for the contract of custody in the Qur'an and represent it as a commendable action (*mustaḥabb*).

2. Traditions also remind that goods entrusted should be restored: "To whom a thing is entrusted, he should return it" or "give the thing entrusted back to him who entrusted it to you". More numerous are the *ḥadīths* which relate to compensation when the thing deposited has been lost or has perished; in these cases there is no liability (Ibn Māḍja, *Ṣaḥīḥ*, bāb 7; *Kam al-Ummūl*, viii., No. 5443, 5444, 5448, 5449, 5450) because the depositary is regarded as a person worthy of confidence (*Kam al-Ummūl*, No. 5444, 5447). In other *ḥadīths* it is asserted that there is a forfeit, because the depositary has not observed the necessary care or has acted illegally, although this is not definitely asserted in the traditions (*Kam al-Ummūl*, No. 5451, 5452).

3. In the Fikḥ books the doctrine and legal position of *wad'ia* are minutely expounded. According to the jurists we have the following rules:

1. Placing in custody is a contract (*uqd*) and an *uqd ḡḡā'ī*, i.e. a revocable contract which can be cancelled at any time simply at the wish of one of the parties. The following conditions (*arkān*) are necessary to secure the validity of the agreement:

a. The two contracting parties must be capable of doing business. Therefore a minor (*ṣagīr*), a lunatic (*maḡḡūn*) and a spendthrift (*rafḥ*, *muḥadḥar*) who has no guardian, can neither put nor take anything in trust, i.e. he can be neither a depositor nor a depositary. If a minor makes a deposit with a person competent to do business, there is no contract but it is binding on the ground of *amāna*.

b. Only such things as are *ḡayr* can be deposited. Therefore impure things (*najis*) for example cannot be deposited.

c. A form (*ṣiḡa*) is requisite and this is offer and acceptance (*alḡāb ma-ḡabūl*), i.e. the declaration by both that they are willing; one must have the will to give the thing into custody and the other to take it. This may be expressed in words or in other form of declaration or may be done silently, e.g. by the depositary at once taking over the thing silently after the depositor has offered it.

II. The depositary's obligation to preserve. He has to keep the thing as such things are kept, "as is the custom in ordinary usage". He has to use the care with which he preserves his own things. In the words of Roman law *diligentia quam in suis*. As to the place of preservation, he can keep the thing deposited where he pleases. But if the depositor has given instructions and directions about the method and place of custody the depositary must observe them strictly.

If he does not do so, he is liable to pay compensation if the goods suffer injury or perish.

III. The right to compensation (*ḡamāl*). The depositary is not liable if the thing deposited is damaged or perishes through no fault of his. Nor is he liable for the acts of a higher power or accident. On the other hand in cases of *tafrīt* and *ta'addī*, the depositary is always liable.

a. It is a case of *tafrīt*, when he does less than he ought to, i.e. omits the necessary care. This occurs:

1. When he does not prevent damage to the thing deposited, e.g. if he neglects to give food and water to a mule left with him or does not keep the moths from clothes deposited with him.

2. If he is neglectful in the usual way of preserving the thing deposited and does not observe the instructions of the depositor.

b. It is a case of *ta'addī*, if he "exceeds the bounds", i.e. proceeds contrary to the law. This occurs:

1. If he deposits the thing with a third person, for the deposit is based on the personal confidence which the depositor has placed in a definite individual known to him. Ibn Abi Laila alone allows the depositary to deposit again. Opinion differs regarding further deposit with members of the family. As members of the family are considered such persons as live with the depositary and belong to his household: wife, children, parents, servants, slaves, *umm walad*. The Shāfi'ī jurists follow *ḡayr* and forbid further depositing, while the Hanafī and Mālikī who follow *istiḡāla* allow it. According to all schools, however, the depositary may deposit again in face of pressure of a higher power in order to save the thing deposited. As cases of this kind the examples are given of shipwreck, fire, inundation, enemy raids.

2. If the depositary uses the thing or derives advantage from it, e.g. if he wears the deposited clothes or rides the mule: unless he is trying thereby to avert damage.

IV. The termination of the contract. The contract of preservation is extinguished by the return of the thing deposited. Both parties have the right to dissolve the agreement when they please. The restoration can therefore be made at any time and at the wish of one party, since this contract is an *uqd ḡḡā'ī*. If one of the two parties dies or becomes insane the agreement is dissolved. The thing remains until its return *amāna* in the hand of the depositary. Here again we have a clear distinction between depositing by agreement and *amāna* with no agreement.

If the depositary refuses the return of the article without reason, the degree of liability increases, if the thing deposited deteriorates. While the depositary is generally not responsible for any casual deterioration, he is now liable for casual deterioration also, since he is delaying restitution.

4. In literature, a thing entrusted to some one's custody sometimes plays an important part in a story. Entrusting with a depositary, especially a faithless or deceitful one, provides well-known motives (cf. *Handwörterbuch des Deutschen Märchens*, ed. L. Mackensen, s.v. *Unredliche Aufbewahrer*). The motif most frequently occurring in Oriental literature is that of the faithless depositary who is in turn outwitted. The *ḡāḡ* is frequently represented as a deceitful depositary. As it would lead us too far to analyse the legal

principles underlying this and the motives, we only mention the more important literature with its parallels: Ibn al-Jawzi, *Kiṣāb al-Adhbiyā*, Cairo 1277, p. 55; al-Wajūz, *Gharar al-Khawāṣṣ*, Bulāq 1284, p. 98; R. Hassel, in *Revue des traditions popu.*, vi. (1891), p. 66—67; Chauvin, ix. 13; Born Jada, ii. 237; *Hikāyat-i Laff*, Lucknow 1912, A. Heyne, No. 10, 23, 30; Lessinski, *Peri. Schuurren*, No. 40; Th. Menzel, *Der Zauberspiegel*, Hanover 1924, p. 89; R. Köhler, *Kl. Schriften*, ii. 491; Zachariae, *Kl. Schriften*, p. 167, 390; S. B. P. A. W., 1883, p. 586; G. Jacob, *Türk. Bibl.*, v. 25; *Zeitschr. d. Vereins f. Volkskunde*, xviii. 69.

Bibliography: O. Spies, *Das Depositum nach islamischem Recht*, in *Zeitschr. f. vergl. Rechtswiss.*, xlv. 241—300 and the *fiqh* works quoted there. Also European works on law: Sachau, *Muk. Recht*, Berlin 1897, p. 667 sqq.; van den Berg, *Principes du droit musulman*, Algiers 1896, p. 107; Halli, *Muṣṭafā a summary of the rights of malchita*, transl. Santillana, Milan 1919, ii. 407 sqq.; Querry, *Droit musulman*, Paris 1871, i. 529 sqq.; N. v. Tornau, *Das muslimische Recht*, Leipzig 1855, p. 109 sqq. — Legal documents relating to deposits are published in: Franc. Codera, *Origenes del Justicia de Aragón* (= *Colectión de estudios árabes*, vol. ii.), Zaragoza 1897, p. 453 sqq.; *Homage to a D. Francisco Codera*, Zaragoza 1904, p. 189 sqq. (OTTO SPIES)

WAFĀ, *SHARAF AL-DIN 'ALI HUSAINI*, a Persian poet of the xviiith century, belonged to a family of sayids of Kumm, who had charge of the mausoleum of Fāṭima, daughter of the Imām Muṣā Kaṣim [cf. KUMM]. He went to India at the end of the reign of Nādir Shāh, stayed there nearly 30 years, returned home in 1180 (1766), made the pilgrimage to Mecca and died in Persia in 1194 (1780). The Asiatic Society of Bengal possesses a short *mathnawī* entitled *Lu'lu'-i manjūm* 'Pearls arranged in Order' by him; his *Diwan* is in the India Office Library.

Other poets have had the same *tahalluṣ*: 1. Wafā' of Ferehān (Mirzā Muḥammad-i Husain), a sayid and mystic, brother of Mirzā 'Isā, called the great Ka'im-maṣūm. He was for a time a minister of the Zand dynasty and on their disappearance rendered great service to the Qājārs. He died at Karwān and has left a *Diwan*; 2. Wafā' of Yazd (Aḥa Muḥammad), a poet of the sixth century; 3. Wafā' Ashrafi (Mirzā Mahdi Kālī), also of the sixth century, was a descendant of a Georgian family that had settled in Persia in the time of the Sāfawīs; he was secretary to Minūshir Khān Muṭamad al-Dawla; he wrote a beautiful hand; 4. Wafā' of Tafrish (Mirzā 'Abd Allāh Khān), a derwish, was for some time in the service of the princes of the imperial family, Zill al-Saltān and Shākh 'Alī Mirzā; he once visited Shirāz.

Bibliography: Ridā Kālī Khān, *Madjma'-i Fupahā*, ii. 527, 528, 566; Lutf 'Alī Beg, *Atiqā Kade* (not paged, towards the end, in the chapter on contemporary poets); A. Sprenger, *Catalogue of Oudā*, Calcutta 1854, i. 584; Ethé, *Cat. Pers. MSS. India Office*, i. No. 1718; W. Ivanow, *Descriptive Catalogue*, Calcutta 1924, p. 398. (CL. HUARY)

WĀFIR, the name of the fourth metre in Arab prosody. It consists in theory of three

muṣ'alatun to the hemistich, but in practice the third foot becomes *muṣ'al* (= *fa'ālun*). It has two 'arūḍ and three *ḍarb*. The first 'arūḍ has one *ḍarb* and the second has two:

1. $\left\{ \begin{array}{l} \text{muṣ'alatun, muṣ'alatun, fa'ālun;} \\ \text{muṣ'alatun, muṣ'alatun, fa'ālun} \end{array} \right.$
2. $\left\{ \begin{array}{l} \text{muṣ'alatun, muṣ'alatun; muṣ'alatun,} \\ \text{muṣ'alatun} \\ \text{muṣ'alatun, muṣ'alatun; muṣ'alatun,} \\ \text{muṣ'ālun.} \end{array} \right.$

The alterations that may be undergone by the feet are as follows: 1. the fairly frequent disappearance of the vowel of the *lām* in *muṣ'alatun* (*muṣ'altun* = *muṣ'ālun*); 2. the rather rare disappearance of the *lām* and its vowel (*muṣ'altun* = *muṣ'ālun*); 3. the excessively rare disappearance of the vowel of the *lām* and of the *nūn* (*muṣ'altu* = *muṣ'ālun*). It sometimes also happens that the first foot of the first line of a poem loses its *mīm* and taken with the above changes, we have *fa'alatun*, *fa'atun* and *fa'altu*.

(MOH. BEN CHENED)

WAFK, plur. *Aufāḥ*, magic square, i.e. a square divided up like a chessboard, each square of which is inscribed with numerals, letters or words; it is worn as a talisman against illness and for all sorts of other purposes, or can be used for all kinds of magic.

The simplest form of a magic square is the nine compartmented square with numbers as shown in fig. 1. Under the name *Ḍ-ḍā*, it is mentioned in Chinese literature: The legendary Emperor Yü (2200 B.C.) is said to have seen it on the back of a turtle which arose out of the Hoang-Ho. In Arabic

4	9	2	15
3	5	7	18
8	1	6	15
12	10	14	

Fig. 1.

literature, the square is first found similarly arranged in the *Kiṭāb al-Mawāḍin* of Djābir b. Haiyān, whose writings we must now date about 900 A.D. There it is ascribed to Bāṭnīs (Apollonius of Tyana) and is said to facilitate child-bearing if written on two unused pieces of linen and tied below the mother's feet. The same amulet with the same use is also described by al-Gharālī (1058—1111) in the *Munḍibā*: it is still in use to-day as 'Gharālī's seal'. The essential point in the arrangement of the numbers is that all lines, vertical, horizontal and diagonal, should yield the total of 15. This is only possible if 5 is put in the middle of the four even numbers in the corners and the remaining (odd) numbers in the middle compartments. Beside that shown in figure 1, seven other arrangements are possible, but they do not differ essentially from the first, as they are easily obtained by revolving or interchanging the lines. In manuscripts of the *Kawā'id* of the Iḥwān al-Safā, the method of filling up the square is described in terms of moves in chess. In the *Sifr ha-Shem* of Abraham ben 'Ezra (1092—1167) the square is connected with the name of God on account of the sum $15 = \overline{\text{p}}$. The corner figures form in the Arabic alphabetic numerals the word *indūḥ* (q.v.) which is considered a particularly powerful charm.

If we may believe the statements of the Arab bibliographers, Thābit b. Qurra (826—901 A. D.) wrote on magic squares. In this case, it is natural to suppose that this mathematician did not confine himself simply to the square with nine compartments, but also showed how to form squares with 16, 25 and 36 and more compartments. It is also not impossible that the connection of the squares with the planets goes back to Thābit, i. e. to the Sabaeans.

According to Suter, *Mathematiker und Astronomen*, p. 93, Ibn al-Haitham (965—1039) also dealt with the subject of magic squares; but it is mainly the mathematicians or students of secret sciences in the XIIIth century whose works on magic squares are recorded. Only the works of al-Būnī (d. 1225), the *Kitāb Shams al-Ma'arif* and the *Kitāb al-Durr al-Manqūm fī 'Ilm al-Awṣāf wa 'l-Nuṣūṣ*, are known in detail. In these we find the use of magic squares developed in all directions which presupposes a long history behind it. A collection of the ways of using them would fill many pages and cannot be given here. In al-Būnī it is a striking fact that squares with the base four predominate, no doubt because these already show a large number of independent forms, which the author makes available for his purposes. Still very frequent, apart from the base 3, is the base 5; squares with the base 6, which are difficult to prepare, do not seem to exist, and squares with still higher basic figures seem to follow simpler rules.

Among the innovations which appear in al-Būnī the first is the increase in the size of the numbers inscribed in the compartments. It is easy to see that the conditions for magic squares will also be fulfilled if each number is raised by the same

36	41	34
35	37	39
40	33	38

Fig. 2.

As the Arabs use two systems of numerals side by side, the two systems are easily mixed. The

40	13	37
27	30	33
23	47	20

Fig. 3.

by their numerical values (fig. 4). The sum of all the numbers in one line or vertical series must give 299 as this is the numerical value of the clue word. But we get this sum only in the vertical rows *e* and *e'*; all the other sums differ

amount or if the numbers form arithmetical series (fig. 2 and 3). That in the MSS. and editions of the *Kitāb Shams al-Ma'arif* many defective squares are found is partly due to the copyists. How the squares can be put right with as little correction as possible has been shown by W. Ahrens in his works.

	a	b	c	d	e	
I	50	1	40	8	200	299
II	38	11	198	38	4	299
III	196	51	2	21	9	299
IV	5	31	7	99	49	199
V	6	29	52	3	37	199
	295	123	299	109	299	

Fig. 4.

more or less. If we put the figures written in the squares in order of magnitude we get the groups

1, 2, 3, 4, 5, 6, 7, 8, 9, 11, 21.
29, 31, 37, 38, 38, 40, 49, 50, 51, 52.
99, 196, 198, 200.

The figures 21, 29, 31, 99 cannot be correct, because they do not fit into the five-lined rows; 38 also occurs twice. If we replace the 38 below 8 by 48, the 21 by 41, we get two new correct lines II and III, and if we write 199 for 99, the vertical row *d* also becomes correct. Now we only

	a	b	c	d	e	
I	50	1	40	8	200	299
II	38	11	198	48	4	299
III	196	51	2	41	9	299
IV	5	39	7	199	49	299
V	10	197	52	3	37	299
	299	299	299	299	299	

Fig. 5.

need to replace 31 by 39 in order to get line IV correct also. For the last wrong numbers 6 and 29 we have to put 10 and 197 in order to have 299 everywhere, including the diagonals (fig. 5). The rows of figures are therefore now

1, 2, 3, 4, 5, 7, 8, 9, 10, 11, 37, 38, 39, 40, 41.
48, 49, 50, 51, 52, 196, 197, 198, 199, 200.

had fulfil the condition that one of the numbers must be in every horizontal and perpendicular row.

Al-Būnī's elaborate arrangements of squares which are filled with letters and whole words cannot be explained here; the squares which are now usually called "Latin" are of no particular interest. Only the large amulets of 7×7 squares which are allotted to the days of the week and therefore to the planets may be mentioned here, because it shows that the idea of allotting the simpler magic squares to the planets and metals was not

yet in general use. What al-Būnī tells us on this subject in the *Shams al-Ma'ārif* is not complete; presumably the second work contains more about it. In any case, the two systems — the one ascending from Saturn to the moon, the other reversed — must have been well-known in the Muslim world by the xiiith or at latest the xivth century. In the west, the first system became widely disseminated through the *Occulta Philosophia* of Agrippa of Nettesheim (1533), the second is taught in the *Practica Arithmetica* of Cardanus. The period when the making of seals of the planets was especially popular was the xvth or xvith century. In the coin cabinets we find complete collections of seals of different metals as follows:

The seal of Saturn with the magic square 3×3 of lead.

The seal of Jupiter with the magic square 4×4 of tin.

The seal of Mars with the magic square 5×5 of iron.

The seal of the Sun with the magic square 6×6 of gold.

The seal of Venus with the magic square 7×7 of copper.

The seal of Mercury with the magic square 8×8 of silver plating.

The seal of the Moon with the magic square 9×9 of silver.

In the east a number of empirical rules seem to have been used for the preparation of magic squares. The "rule of the Indians" was first made known by La Loubère about 1691. Long before this, however, the Byzantine Moschopolus (c. 1400) dealt with the problem in a general form. From the middle of the xvth century onwards, i.e. after the seals of the planets became known in the west, the mathematical side of the problem has been continually studied down to the present day. For the literature of the subject S. Günther's work should be consulted specially.

Bibliography: In addition to the books mentioned in the text, I may mention: Michael Stifel, *Arithmetica integra*, 1544; Bachet de Méziriac, *Problèmes plaisans etc.*, 1624; Ath. Kircher, *Arithmologia*, 1665; De la Hire, *Neuvelles constructions et considérations sur les quarrés magiques*, 1705; Oranam, *Récréations mathématiques et physiques*, 1725; Mollweile, *De quadratis magicis commentatio*, 1816; F. AL-WAFRĀNĪ or **AL-IFRĀNĪ**, ABŪ 'ABD ALLĀH MUHAMMAD b. AL-HĀDĪ MUHAMMAD b. 'ABD ALLĀH, called al-Ṣaḡhīr, a Moroccan biographer and historian, born in Marrākush in 1080 (1669—1670); he belonged to the Berber

tribe of the Ifrān or Ufrān (Wafrañ) which was settled in the south of Morocco in the valley of the Wādī Dar'a. We know very few details of his life. He studied in his native town, then at Fās and spent his life in one or other of the chief towns of Morocco or at the *awāsiya* of the Ṣaḡhāwa (q.v.) of Abū 'I-Ljād (Bujad). Towards the end of his life he was *imām* and preacher (*khatīb*) at the Masjid Yūsuf (or Madrasat Ibn Yūsuf) in Marrākush; he died in 1120 (1727) or 1151.

Al-Wafrañī is best known as the author of the great chronicle of the Sa'dians of Morocco entitled *Nuḥat al-ḥādī bi-Aḥbār Mulūk al-Karn al-ḥādī*, ed. and transl. by O. Houdas, *Nuḥat al-ḥādī, Histoire de la dynastie saadienne au Maroc (1511—1610)*, in *P. E. L. O. V.*, 3rd ser., vol. II., Paris 1888—1889 and lithographed at Fās in 1307 A.H. It is by far the most important source for the history of the first of the Sharifian dynasties of Morocco, for it makes use not only of contemporary chronicles but also to some extent of state documents which the author studied at first hand. It covers the period 917 (1511—1512) to the end of the xth (xviith) century and deals, very unequally however, with the reigns of various Sa'dian princes, the longest and most detailed section naturally being that dealing with the reign of Sulṭān Ahmad al-Manṣūr (q.v.). For a critical study of the matter of the *Nuḥat al-ḥādī*, see E. Lévi-Provençal, *Les Historiens des Chérifs*, Paris 1922, p. 120 sqq.

Besides his history of the Sa'dians, al-Wafrañī wrote other historical, biographical and literary works. These are, in chronological order: 1. *al-Maslak al-sahl fi Sharḥ Tamdhīb Ibn Sahl*, a commentary on a poem by the famous poet of Spain Ibrāhīm b. Sahl, lithographed at Fās in 1324; 2. a monograph on the 'Alawid sultan of Morocco Mawḥy Ismā'īl, *al-Zill al-warīf fi Maṣāḥib Mawḥy Ismā'īl Ibn al-Sharīf*; 3. an unfinished monograph on the "Seven Saints" of Marrākush, *Durar al-ḥidāyāt fi Ma'āthir ṣaḥāb al-Riḡāl*; 4. a historical summary, presumably in the form of an *urjū'at*, *al-Mu'rib fi Aḥbār al-Maḡarīb*; and lastly 5. a biographical collection on Moroccan saints of the xth cent. A.H., *Ṣafwat man intaḥar min Aḥbār Ṣulakh al-Karn al-ḥādī 'aḥbar*. The last work, which has been lithographed in Fās, is an indispensable work of reference for the history of the Sharifian and Marabout movement in Morocco from the end of the middle ages.

Bibliography: al-Kādiri, *Nuḥat al-Maḥāḥi*, Fās 1310, I. 3; al-'Abbās b. Ibrāhīm al-Marrākushī, *Iḥḥār al-Kamāl*, Fās 1334, I. 181—183; Ibn al-Muwakkkit, *al-Safāda al-abadiyya*, Fās 1336, I. 112—115; Brockelmann, *G. A. L.*, II. 457; E. Lévi-Provençal, *Les Historiens des Chérifs, Essai sur la littérature historique et biographique au Maroc du XV^e au XX^e siècle*, Paris 1922, p. 112—131, 306—9.

(E. LÉVI-PROVENÇAL)

AL-WĀH (pl. **AL-WĀHĪT**), the name of a group of oases to the west of Egypt. There are three of them: the first is opposite the Faiyūm and reaches to the level of Aswān; it is the largest of the oases and contains several villages; its palms give the best dates in Egypt. The second is smaller and less populous. The third is the smallest and contains a village named Santaria. This is the information given by Yaḳūt. Maḡrībī makes four oases which he calls outer

and inner; in his time Santaria was a little town of about 600 inhabitants of Herber stock called Stwa who spoke a dialect resembling that of the Zenāta. The soil of the oases produced alum and vitriol; the exportation of 1,000 quintals of alum per annum was imposed on the boilers of the field (*maḥṣa*) by the Aiyūbids of Calro; later this contribution was neglected and finally ceased. There are springs of acid flavour, the water of which is used in place of vinegar, and others of astringent and salt taste; there are about twenty springs of fresh water. Certain illnesses are endemic and fevers common. There are groves of palm-trees, olive-trees, fig-trees and vines. There was said to be an extraordinary citron tree there which yielded 4,000 citrons each year; which may be compared with the examples given by botanists of the fertility of the Auranitaceae. In 339 (950) the oases were ravaged by a Nubian army, which carried off numerous prisoners.

Bibliography: Yāqūt, *Muḥjam*, iv. 873; Maḥṣin, *Kāḥiṣ* (Bulāḥ 1270), i. 234; ed. Wiet, iv. 113 sqq. (*M. I. F. A. O.*, xlix.); Maḥṣin, *Murūj*, iii. 50. (CL. HUAE)

WAHAB B. MUNABBIH, ABU 'ABD ALLĀH, a South Arabian story-teller (*ḥaṣṣi al-ḥikāyat*; Ḥabābi, in *Z. D. M. G.*, xlv. 483) of Persian descent who was born in Ḥimār, two days' journey from San'a in 34 A. H. (no credence need be given to statements that he adopted Islām in 10 A. H.). Wahb is celebrated as an authority on the traditions of the *Ahl al-Kutub* and like his brothers Hammām, Ḥaṣṣān and Maḥṣin is classed among the *ṣāḥibān*. The earliest sources know nothing of the story that before his conversion to Islām he belonged to the *Ahl al-Kutub* (*Fihrist*, p. 22) or more precisely was a Jew (Ibn Khaldūn, ed. Quatremère, ii. 179); he was presumably born a Muslim. Thāḥiṣ (p. 191) records a story of his meeting Muḥwiya, and al-Maḥṣin says that al-Walid sent him an inscription discovered in Damascus to be deciphered. We also learn that he held the office of *ḥaṣṣi* in San'a, and it is related how in the emirate of 'Urwa b. Muḥammad he once beat with the emir's stick to the effusion of blood an official (*ḥaṣṣi*) against whom the people complained. When the saying is attributed to him that by accepting the office of judge, he lost the gift of foreseeing the future in dreams, this is only, as in numerous similar utterances, meant to be a warning against accepting this office (see Wensinck, in *Oriental Studies presented to E. G. Browne*, p. 496 sqq.). Many stories are told of his ascetic mode of life: for forty years no word of abuse of any living creature ever crossed his lips; for forty years he never slept on a carpet and for twenty years never performed a *waḥṣ* between the night and morning prayer (i.e. lived a life of continence). In keeping with this ascetic mode of life is the utterance he made after being thrown into prison: *ahdathā 'ilāhī lannā 'l-ḥabīb fa-ahdathnā lannā ziyādāt 'isādāt* (Ḥabābi, *op. cit.*, p. 492), an Islāmic counterpart to Job i. 21. Warnings against quarrelsomeness are also attributed to him and the advice not to avoid the society of men but rather to meet them with caution: to be deaf when listening, blind when seeing or dumb when speaking. Wahb is said originally to have professed *ḥudā*, but later rejected this teaching as in contradiction to all revealed scriptures. In what period of his life the already mentioned

imprisonment fell, is not recorded; probably not till his last years for he died as a result of a flogging to which he was sentenced by the governor of the Yaman, Yūsuf b. 'Umar al-Thaḥāfi, in 110 or 114 A. H.

Wahb's intimacy with the traditions of the *Ahl al-Kutub* is attributed to the fact that he had read 70, 72, 73 or even 92 of their holy scriptures, statements which, as the lists of his writings show, are pure inventions; his knowledge apparently came from intercourse with learned Jews and Christians in his native district. His statements which are sometimes in complete agreement with Jewish and Christian sources and sometimes are variants adapted to Muslim tradition cover the field of *Aḥādith al-Anbiyā'* wa-*l-Uḥūd wa-^{al}-Aḥādith Bani Isrā'il* (Ibn Sa'd, vii. 97), and were handed down to posterity by his pupils among whom several members of his own family were prominent. 'Abd al-Mun'im b. Idris (d. 229 A. H.), the son of his daughter, in particular distinguished himself in preserving his grandfather's writings. Wahb's *Kutub al-Mubtada'*, which Thāḥiṣ used in the redaction of 'Abd al-Mun'im, is ascribed in the *Fihrist*, p. 94, to the latter and quoted by al-Maḥṣin as *Kutub al-Mubtada'* wa-*l-Siyar*; *al-Mubtada'* in this title is to be interpreted as *Mubtada'* *al-Khalq* (cf. Ibn Kṭāibā, *Maḥṣin*, p. 4) and *al-Siyar* perhaps means not only the *Ḥiṣṣat al-Anbiyā'* but also the *Ḥiṣṣat al-Aḥyār* (Ḥāḍiṣi Khālifa, N° 9436) where the *Aḥyār* correspond to the *Uḥūd* of Ibn Sa'd. Ḥāḍiṣi Khālifa (N° 9826) also ascribes to Wahb a *Kutub al-Isrā'iliyyāt*, which does not seem to have been known under this name at an earlier date. Yāqūt, *Uḍḍat*, vii. 232, says of Wahb that he was *ḥaṣṣi 'l-naḥṣ min al-kutub al-ḥadīth al-ma'rūfa bi-l-Isrā'iliyyāt*, i. e. he uses *al-Isrā'iliyyāt* for the writings of "Israelitish" origin, which Wahb used as sources. In later writers we frequently find quotations from Wahb's *Isrā'iliyyāt* but such passages are neither sufficiently reliable nor ample enough to reconstruct Wahb's supposed work, as Chanvin tried to do. It is certain that Wahb took account of Jewish as well as Christian tradition; this is proved by the numerous quotations which survive in Ibn Kṭāibā, Thāḥiṣ, Maḥṣin, etc. Statements attributed to him even in these older sources are frequently contradictory and have apparently undergone all kinds of alterations in the various compilations to which they are to be traced. At a later period, stories of doubtful origin were readily given the authority of his name; in particular, what is credited to him in works like al-Kaṣṣa's *Ḥiṣṣat* clearly bears the stamp of later invention. In a separate work, the *Kutub al-Muṣṣiḥ al-mutaḥawwaj min Ḥimyar wa-^{al}-Aḥbār al-ḥimyar wa-^{al}-Ḥiṣṣat al-ḥimyar wa-^{al}-Aḥbār al-ḥimyar*, Wahb dealt with the early legendary history of his native land. This work has not survived but it was presumably from it that Ibn Hishām borrowed the introduction to his *Kutub al-Tiḡān*; Ibn Hishām does not mention the name of the book but takes Wahb's statements from the transmission of his grandson. In the work used by Ibn Hishām, Wahb follows Biblical sources completely in his account of early history and gives in it — in contrast to the plan followed in the *Mubtada'* — the names and figures of the Biblical text exactly; he even regularly gives alongside of the Hebrew forms of names, those of the Syriac translation. — Ibn Isḥāq took over

Wahb's account of the beginnings of Christianity in South Arabia (Ibn Hishām, p. 20), and Tabari frequently quotes from Ibn Ishāq the stories he had taken from Wahb. For the biography of Muhammad, on the other hand, Ibn Ishāq never quotes Wahb as a source nor does Wāḳidī, Ibn Sa'd or Tabari. Hādījī Khalifa, No. 12,464 however, says of Wahb that he collected *maghāzī* and among the papyri of the Schott-Reinhardt collection, C. H. Becker discovered a fasciculus of a biography of the Prophet by Wahb which deals with events before the Hijra, and even includes the expedition against the Khath'am. Wahb therefore did deal with *maghāzī* proper. The same grandson of Wahb, 'Abd al-Man'im, as transmitted the *Mukadda*, also appears in the *imād* of the Heidelberg papyrus written in 228 A. H. The latter confirms what was already to be deduced from the quotations in Tabari and others that Wahb himself did not know of the use of the *imād*; it also shows that Wahb, like Ibn Ishāq, used to intersperse his stories with inserted poetry. Ibn Sa'd (vii/ii. 97) mentions that Wahb's grandson used to read his *ḥikma* as well as his books, and a *ḥikmat Wahb* in four parts is quoted by Abū Bakr Muhammad b. Khair (d. 575 A. H.) in his *Fihrist* (see *Bibl. Ar. Hist.*, ix. 29) with a complete *imād* going back to Wahb's nephew. This *ḥikma* may be supposed to have been a collection of wise sayings taken, some from Jewish and Christian tradition and some wrongly ascribed to it; according to Ibn Kūṭayba, Wahb read over 10,000 chapters in the *ḥikmat Luḥmān*. The *Mawāṣiṭ* must have been of similar content, which the same Abū Bakr in his *Fihrist* (op. cit., p. 294) ascribes to Wahb and traces back to Abū 'l-Yās, the pupil of Wahb also mentioned in the Heidelberg papyrus. Finally he also attributes to Wahb a translation of the Psalms (op. cit., p. 294): *Kitāb Zabūr Dāwūd Tarjūmat Wahb Ibn Munabbih*; it is perhaps identical with the *Kitāb al-Mawāṣiṭ Tarjūmat al-Zabūr* which still exists, which however is not attributed to a particular author but is said to be by the 'Ulamā' al-ṣif in general (cf. *zanūb*). For the sake of completeness we may also mention the *Kitāb al-Kadar*, which Wahb composed but he later regretted having done so (see *Vāḳat*, op. cit., p. 232) as well as the *Futūḥ*, which Hādījī Khalifa (No. 8932) quotes but which seem to be otherwise quite unknown.

Much has undoubtedly been attributed to Wahb for which he is not responsible. That he pursued serious studies can hardly be denied in view of the exact reproduction of Biblical matter preserved by Ibn Hishām in his *Kitāb al-Tarjūmān*; when on the other hand even Ibn Kūṭayba points out the contradictions between Wahb's statements and the text of Genesis, the only explanation must be that either the information collected by Wahb was very early remodelled by those who transmitted it, in the manner of the popular story-tellers (*ḥuffā*), or that Wahb himself adapted it to popular taste.

WAHĪB, a Turkish poet, usually called Saiyid Wahb to distinguish him from Sünbülzāde Wahb [q. v.]. He was a contemporary of Nedim and like him a native of Stambul. His father Hādījī Ahmed, the *ḫāya* of Imāmzāde, Kaḍi of Yenışehir, claimed to be descended from the Prophet through a certain Husām al-Dīn. After the latter, his son Husām, our poet, was at first given the *nisba* Husām but then, on the suggestion of Ahmed Nālī, the man of letters, given instead the *nisba* Wahbī, since it was a gift of God (*wahb*) that he combined in himself descent from the Prophet (*saiyidullāh*) with the gift of poetry (*ḥafīzullāh*).

Wahbī chose a judicial career and became mollā in Aleppo. When a son was born to his *wā'il* there, the latter was also called Wahbī after him; this boy later became the poet Sünbülzāde Wahbī. Saiyid Wahbī was present at the reception of the Persian ambassador Murtaḍā Kūli Khān in Stambul in 1134 (1721). At the inspection of the Arsenal on this occasion he is said to have jokingly asked the ambassador to crawl into a huge cannon in order to be able to report this in Isfahān as proof of its size, which, to the amusement of those present, the ambassador took seriously. The poet also took part in the reception to the ambassador 'Abd al-'Azīz Khān in 1138 (1726). After Saiyid Wahbī had made the pilgrimage to Mecca and returned again to Stambul he died in 1149 (1736). He is buried in the cemetery of the monastery of the rope-dancers (*Dizdārīyā Tekkesi* or *Mirdīdī*) near the mosque of Dīrārā Pasha. His tombstone bears a *wā'iz* by Aliyābī Nedjīb Efendi. A son of Saiyid Wahbī was the müdarris Munif Efendi, who had also the reputation of being a poet and died as kaḍi of Munif in 1153.

Saiyid Wahbī is reckoned with Nedim, Beligh and Newres as one of the most important representatives of the romantic group in the reign of Ahmed III. He is, like them, mainly a court poet singing the praises of his Sultān. His works have not yet been printed. There is a manuscript in Vienna of the *Kulliyā* (Flügel, No. 725). A *ḥafida* of his is famous in which he celebrates the completion of a well in front of the Bāb-i Hamāyūn, and it is still to be read in letters of gold on the building. According to tradition, the Sultān himself had endeavoured to make a chronogram (*ta'wīḥ*) for it but could not work in the necessary values. The poet succeeded and then added a whole rhyming *ḥafida*. Of other works, Wahbī left a *ḥimn*, also a few isolated poems. He also completed a romantic *methnawī* begun by Kāfzāde Fa'iz (d. 1031 = 1621) entitled *Laila wa-Majnun*. Of importance for social history is his book of festivals (*Sürnām*, MS. in Vienna: Flügel, No. 1092) in which he describes the ceremonial at the court of Ahmed III in connection with the circumcision of four princes and the marriage of five princesses in 1132 (1720) in vivid and attractive fashion. There is also a *ḥafidat* by him on a ghazel of Nedim, which endeavours to imitate

the latter; in other works however, in spite of the fact that he is of the school of Nefim, he strikes an individual note.

Ottoman critics are not quite agreed in their estimate of Wahbi. Ziyā Paşa praises his fine language but finds his other work long-winded and faulty so that not twelve of his ghazels are worth picking out. Kemāl and Nāḍī esteem him highly and would put him at least among the best poets of the second rank and above (Nāḍī: below) Sümbülzade Wehbi.

WAHHABIYA, Islamic community founded by Muḥammad b. 'Abd al-Wahhāb (1115—1201 = 1703—1787). This name was given to the community by its opponents in the founder's lifetime, and is used by Europeans; it is not used by its members in Arabia, who call themselves *Muwaḥḥidūn* "unitarians" and their system (*ṭarīqa*) "Muḥammadan"; they regard themselves as Sunnīs, following the school of Ibn Hanbal, as interpreted by Ibn Taimiyya, who attacked the cult of saints in many of his writings, especially in a *Risāla* condemning the visitation of tombs (in his *Risāla*, Cairo 1323).

§ 1. Life of the Founder. He was of the Banū Sīnān, a branch of Tamīm and was born at 'Uyaina (written by travellers *Ayaynah*, *al-Ayaynah*, *al-Ajina*, *Ayana*), a place now in ruins, but which (according to L. P. Dames, in *M.W.*, xix. 356) "at one time must have had a population of nearly 25,000". He studied at Medina under Sulaimān al-Kurḍī and Muḥammad Ḥayāt al-Sindī, both of whom (according to Dahlān) detected in him signs of heresy (*iḥṣād*). Many years of his life seem to have been spent in travel; according to the *Lam'*, he lived four years in Bayra, where he was tutor in the house of a ḥādī Husain; five years in Baghdād, where he married a wealthy woman, who died leaving him "2,000 dinārs"; a year in Kurdistān, two years in Hamadhān, after which he went to Isfahān at the commencement of Nāḍir Shāh's reign (1148 = 1736); here he is said to have studied for four years peripatetic philosophy, the Ishrāḥīya and the Sūfī systems; for a year he attracted students as an exponent of Sūfism, then went to Kum, after which he became an advocate of Ibn Hanbal's school. Returning to 'Uyaina, where he had property, he spent eight months in retirement, and then publicly preached his doctrines, as set forth in his *Kitāb al-Tawḥīd*. He met with some success, but also with much opposition, and indeed from his own relations, such as his brother Sulaimān, who wrote a tract against him, and his cousin 'Abd Allāh b. Husain. It appears from his correspondence that his views attracted attention outside 'Uyaina before he left the place. Different reasons are assigned for his expulsion; according to the *Lam'*, his dispute with

his cousin led to bloodshed between the Tamīm clans of Yamāma, in consequence of which Sulaimān b. Shāmis, al-Anāzi, prince of Hasā, wrote to the governor of the place demanding that he be expelled. He departed with his family and property, said to be considerable, and was received at Dar'ya (at the time a village of 70 houses) where the chieftain Muḥammad b. Sa'ūd accepted his doctrine and undertook its defence and propagation. Possibly later events originated the statement that the two came to an arrangement whereby, should they succeed in enforcing their system on their neighbours, the sovereignty should rest with Ibn Sa'ūd, whereas the religious headship should belong to Muḥammad b. 'Abd al-Wahhāb; this in any case represents the relations between the two. The founder's subsequent history belongs to that of the fortunes of the community.

§ 2. Doctrines of Muḥammad b. 'Abd al-Wahhāb. His general aim was to do away with all innovations (*bid'at*) which were later than the third century of Islām; thus the community are able to acknowledge the authority of the four *sunnī* law-schools, and the six books of tradition. His written polemic and that of his followers is almost entirely aimed at the cult of saints, as exhibited in the building of mausoleums, their employment as mosques, and their visitation. The following list which is taken from the *Lam'* seems to agree with what is known of Wahhābī practice.

1. All objects of worship other than Allāh are false, and all who worship such are deserving of death.
2. The bulk of mankind are not monotheists, since they endeavour to win God's favour by visiting the tombs of saints; their practice therefore resembles what is recorded in the *Kur'ān* of the Meccan *muḥṣirīn*.
3. It is polytheism (*shirk*) to introduce the name of a prophet, saint, or angel, into a prayer.
4. It is *shirk* to seek intercession from any but Allāh.
5. It is *shirk* to make vows to any other being.
6. It involves unbelief (*kūfr*) to profess knowledge not based on the *Kur'ān*, the *Sunna*, or the necessary inferences of the reason.
7. It involves unbelief and heresy (*ilḥād*) to deny *ḥadā* in all acts.
8. It involves unbelief to interpret the *Kur'ān* by a *ta'wīl*.

His system is said to have departed from that of Ibn Hanbal in the following matters:

1. Attendance at public *ṣalāt* is obligatory.
2. Smoking of tobacco is forbidden and punished with stripes not exceeding forty; the shaving of the beard and the use of abusive language are to be punished at the ḥādī's discretion.
3. Alms (*ṣaddat*) are to be paid on secret profits, such as those of trading, whereas Ibn Hanbal exacted them only from manifest produce.
4. The mere utterance of the Islamic creed is not sufficient to make a man a believer, so that animals slaughtered by him are fit for food. Further inquiry must be made into his character.

The list given by S. Zwemer in *The Mohammedan World of to-day* (New York 1906, p. 106) does not differ materially from the above, but contains the following item which may be noticed:

They forbid the use of the rosary, and count the names of God and their prayers on the knuckles of the hand instead.

Wahhābī mosques are built with the greatest simplicity, and no minarets nor ornaments are allowed.

The *Naṣṣat al-Aḥkām* devotes a long section to a list of the practices savouring of paganism current in Arabia in Muhammad b. 'Abd al-Wahhāb's time; besides the visitation of tombs, reverence was paid to sacred trees and gifts of food were placed on graves. It is clear that the two latter were not "innovations", but survivals of pre-Islamic usage. Charges brought against him of burning theological works on a great scale are treated both by himself and his followers as calumnies; the latter admit the burning of the work *Ramṣ al-Rayāṣ*, but not (apparently) that of the *Dalā'il al-Khawāṣṣ*. The charge of rejecting the Sunna altogether (repeated by Nolde) is certainly erroneous. On the other hand, the destruction of tombs on a great scale was practised both by Muhammad b. 'Abd al-Wahhāb and his followers. The former destroyed that of Zaid b. al-Khaṭṭāb at Djebaila, and it has recently been carried on on a great scale at al-Rakf of Medina, as a comparison of the photographs in Rif'at Pasha's *Mir'at al-Haramain* (1925) with Eldon Rutter's *Holy Cities of Arabia* (1928) shows.

Various minor points of ritual, in which they claim to have abolished innovations are enumerated in *al-Hadiya al-Sunniya*, p. 47-49; such as: raising the voice in places of *ṣalāt* with matter other than the *ṣalāt*; reciting the Tradition of Abū Huraira before the Friday sermon; special gatherings to hear the *Sirat al-Nabi* recited, etc.

It would appear that under the Banū Rashid the founder's precepts were followed less rigorously than under the Banū Sa'ūd; yet Philby in confining the name Wahhābī to the followers of the latter differs from the other travellers, who regarded Ha'il as for a time the metropolis of the community. As has been seen, the community does not itself recognise the appellation.

§ 3. Early history of the movement. It is asserted that within a year of Muhammad b. 'Abd al-Wahhāb's arrival at Dar'ya he had won the assent of all the inhabitants except four, who left the place; he proceeded to build a mosque with a floor of uncarpeted gravel; there he gave instruction in his *Kitāb al-Tawḥīd*, punishing those who failed to attend. But he also gave instruction in the use of fire-arms. The new sect soon became involved in war with the *ṣaḥāb* of Riṣḍ, Dahhām b. Dawwās, which, commencing in 1160 (1747), lasted 28 years. During this period Ibn Sa'ūd and his son 'Abd al-'Azīz, who proved a capable general, were steadily winning ground, with occasional reverses; it became the practice of Ibn Sa'ūd and his son, when they captured a place to build a fort at some distance from the original citadel, with a moat round it, if the soil were suitable. These forts were garrisoned with men called *ṭumūd*, who were well paid. In the larger places a *ḥādi* and a mufti were installed, in the smaller only a *ḥādi*. The series of raids whereby the power of Ibn Sa'ūd gradually grew is sketched by Philby, and need not be reproduced. In 1178 (1765) Ibn Sa'ūd died, and was succeeded by 'Abd al-'Azīz, who retained Muhammad b. 'Abd al-Wahhāb as his religious guide. In the following year a deputation was sent to Mecca, which was honourably entertained by the Sharif, and satisfied the theologians appointed to discuss matters with it, that the Wahhābī doctrine accorded with the system of Imn Ḥanbal. In 1187

(1773) the most stubborn opponent of the sect, Dahhām, fled from Riyāḍ, which was occupied by 'Abd al-'Azīz, who was now master of "the whole of Najd from Qaṣim in the north to Kharij in the south" (Philby). The son of 'Abd al-'Azīz, Sa'ūd, also displayed some military capacity, and was employed by his father in various expeditions. Meanwhile relations had become strained with the new Sharif of Mecca, Surūr, who forbade the Wahhābīs access to the city as pilgrims: but owing to the difficulties which resulted to pilgrims from Iraq and Persia, this prohibition was withdrawn in 1199 (1785).

In 1792 Muhammad b. 'Abd al-Wahhāb died, at the age of 89; in the years that followed (1792-1795) the Wahhābīs advanced eastwards, subduing the Banū Khālīd in Haṣā; but even before 1790 they had made casual raids into the grazing grounds of the Muntafik and other tribes on the borders of Iraq; and representations having been made to the Porte of the danger from the new power that was arising in Arabia, the Pasha of Baghdad received instructions to deal with it. In 1797, Thuwaim, chief of the Muntafik, who had for a time been exiled, but was now officially in control of Basra, collected a force with the view of crushing the Wahhābīs, but was assassinated by a negro slave at Shībān on July 1, 1797, in consequence of which the force dispersed. Meanwhile the new Sharif of Mecca, Ghālib, after some attempts at compromise, had been attacking the Wahhābī communities from the west, with very little success. In 1798 a fresh expedition was organized from Baghdad on a great scale, but this also proved abortive, and in the following year a treaty between the opponents was ratified in Baghdad. It had little effect, as the Wahhābī tribes continued to raid, and in 1801 invaded and sacked Kerbelā, and massacred the inhabitants. In 1803 Ghālib found it necessary to evacuate Mecca, which was entered by Sa'ūd, who proceeded to purge the city of all that in Wahhābī opinion savoured of idolatry, and to execute persons suspected of favouring such practices. His attempts on Djidda and Medina failed, and in the same year he left the Hijāz, where the garrison which he had established in Mecca was massacred by the inhabitants. On Nov. 4 of this year (1803), the Wahhābī Imām, 'Abd al-'Azīz I, was assassinated at Dar'ya by a Shi'ite from Kerbelā, who had come to the capital as a pretended convert to Wahhābism; Sa'ūd, who had previously been declared heir-apparent, succeeded him without opposition, and employed his son 'Abd Allāh as commander of the army. A fresh attack on the Wahhābīs was organized from Baghdad, but petered out, as the previous expeditions had done; Sa'ūd was thus left free to renew his invasion of the Hijāz, where Medina capitulated in 1804, Mecca in February 1806, and Djidda somewhat later. In the following years his raiders advanced beyond the bounds of Arabia, attacking Najaf, and Damascus, which successfully resisted. "The Wahhābī empire extended in 1811 from Aleppo in the north to the Indian Ocean (?) and from the Persian Gulf and the Iraq frontier in the east to the Red Sea" (Philby). The alarm felt by the Ottoman government was now so serious that Muhammad 'Alī Pasha, ruler of Egypt, was authorized to deal with it. This he proceeded to do with his usual energy, and although his army, commanded by his son Tāḥsin,

suffered an initial defeat, it was after reinforcement able to take Medina in 1812, and recover Mecca in the following year. Muḥammad 'Alī himself took the command in the latter half of 1813, and suffered a serious defeat, but the death of Sa'ūd on May 1, 1814, was a blow to the Wahhābi cause, since 'Abd Allāh, who succeeded him, was far less capable. Thānī, whom Muḥammad 'Alī left in command, found it necessary to make a treaty with 'Abd Allāh, who was to acknowledge the suzerainty of the Ottoman Sultān, while the Egyptians were to evacuate Najd; but this treaty was denounced by Muḥammad 'Alī, who in 1816 organised a fresh expedition under the command of the able Ibrāhīm Pasha. (Since Philby has repeated the story told by Palgrave about the carpet of vast proportions with an apple set in the midst, which Ibrāhīm succeeded in reaching without treading on the carpet, by rolling the latter up, it may be observed that this story comes from Ibn al-Athīr, who records it in connexion with an event of the year 442.) Ibrāhīm fought with varied fortunes, but on April 6, 1818 reached Darīya, and on Sep. 9 took the capital. 'Abd Allāh himself surrendered and was sent to Constantinople, where he was beheaded. This terminated the first Wahhābi empire.

§ 4. Restoration of the Wahhābi state after Ibrāhīm Pasha's departure. While the Hijāz after the conquest was securely garrisoned by Turkish troops, less importance was attached to the security of Najd, where a revolt was organised by Turki, a cousin of Sa'ūd, who chose Rīyāḍ for the capital of the reviving community, and established himself there in 1821. "By 1833 the whole coast of the Persian Gulf acknowledged Wahhābi rule and paid tribute" (Sir A. Wilson), and several of the inland provinces which had formerly been held by Sa'ūd were recovered. During the absence of Turki's son Faṣāl at the head of his army the former was assassinated in 1834 by a pretender of the royal family, who shortly afterwards met the same fate at the hands of Faṣāl, aided by a Shammar chieftain, 'Abd Allāh b. Rashīd, who was rewarded for his service by the governorship of Ḥa'il.

§ 5. The Rashīd dynasty of Ḥa'il. 'Abd Allāh b. Rashīd, a capable ruler, contrived to maintain amicable relations with both the Egyptian overlord and the Wahhābi ruler of Rīyāḍ till his death in 1847, when he was succeeded by his son Talāl, known to Europeans from Palgrave's travels, who calls him "a warrior even more energetic than his father, and infinitely his superior in the arts of statesmanship". His military skill was displayed in his conquest of the Djawf, of Khāibar, and of Taimā; the province of Ḥaṣm, which belonged to the sovereign of Rīyāḍ, voluntarily transferred its allegiance to Talāl; and steps were taken to pacify the Bedouin raiders on all sides. "Henceforth no Bedouin in Jebel Shammar, or throughout the whole kingdom, could dare to molest traveller or peasant" (Palgrave). Talāl further encouraged the presence of traders in Ḥa'il by offering liberal terms and security to members of different religious communities. In 1868 this ruler took his own life, through fear of losing his reason; he was followed by his brother Miṭ'ab, shortly afterwards murdered by Talāl's sons Badr and Bandar, of whom the latter assumed the sovereignty; he was shortly afterwards slain by another brother of Talāl, Ma-

hammad, who inaugurated his rule with a massacre, described by Doughty (ii. 16). Doughty's statistical computation of the populations under the rule of Ibn Rashīd at this time at 30,000 and of his revenue at £ 30,000 and expenditure at 13,000, is criticized by Philby as an understatement. About the same time Faṣāl died at Rīyāḍ (Dec. 25, 1869) and was succeeded by his son 'Abd Allāh, who had endeavoured to obtain poison from Palgrave for his brother Sa'ūd. The latter obtained allies who helped him to dethrone his brother in 1870; his reign was marked by the loss of Ḥa'il to the Turks, and other losses on the west; and on his death in 1877 'Abd Allāh returned to Rīyāḍ as ruler, it is said through the influence of Muḥammad b. Rashīd. Relations between the two soon became strained, and in 1883 a pitched battle took place between the forces of the two, wherein Ibn Rashīd won a complete victory; peace was made but a revolt of Sa'ūd's sons in 1884 gave Ibn Rashīd the opportunity to invade Rīyāḍ, despatch 'Abd Allāh to Ḥa'il, and place a governor of his own in Rīyāḍ. "Ultimately in the spring of 1891 events occurred which seemed to settle the fate of Najd for a long time" (E. Nolde, *Reise in Innerarabien*, 1895, p. 69); a great alliance was formed against the too powerful Emir of Ḥa'il, consisting of 1. Unalza under its warlike chieftain Zamil; 2. the whole royal family of Rīyāḍ; 3. the towns Buraida, Ra's and Shaḡra; 4. the united tribes 'Utāiba and Muta'ir. According to Nolde, who gives the most detailed account of this campaign, the forces on either side numbered about 30,000; in the struggle, which lasted a whole month, the initial results were in favour of the allies; but at the end of the month (March) Ibn Rashīd succeeded by a mass attack of 20,000 camels in spreading panic among the allies' infantry, and won a complete victory (battle of Mulaida). Rīyāḍ had been during this rising governed by 'Abd al-Rahmān, another son of Faṣāl; after the defeat of the allies he sought refuge in various places and finally received protection in Kuwait. Muḥammad b. Rashīd was ruler of desert Arabia till his death in 1897.

§ 6. Restoration of the Sa'ūd dynasty. Muḥammad was succeeded by his nephew 'Abd al-'Azīz son of Miṭ'ab, and ere long this ruler was involved in a struggle with the Shaikh of Kuwait, who was harbouring 'Abd al-Rahmān b. Sa'ūd and his family. In January of 1901 'Abd al-'Azīz, son of 'Abd al-Rahmān, at the head of a small force succeeded in entering Rīyāḍ, and reestablishing the old dynasty there, after an interval of eleven years spent in exile. The succeeding years were spent by him in recovering provinces which had belonged to the old Wahhābi empire, and by 1904 "he was master of all that his grandfather had ruled affectively in Najd" (Philby). The campaigns which he conducted in the following years against Ibn Rashīd, the Turks, disaffected tribes, pretenders of his own family, and finally the rulers of the Hijāz, are recorded in detail by Philby, but only a few events of importance need be mentioned here. On Nov. 2, 1921 Ibn Sa'ūd obtained possession of Ḥa'il, and put an end to the Rashīd dynasty. In October 1924 his forces occupied Mecca; on Dec. 5, 1925 they obtained possession of Medina, and on Dec. 23 of Djidda. Thus the whole of the Hijāz was added to Ibn Sa'ūd's realm.

§ 7. Institution of the Ikhwān. In 1912

Ibn Sa'ad commenced the foundation of agricultural colonies, whose residents were to be devotees, who took the title *ṣāḥib* "brethren", indicating that the religious tie had superseded that of the tribe. The first of these colonies was Attawīya (so called by Philby, but by Rihani Attawīya) in the Najm, and its inhabitants were mainly drawn from the Maṣfir tribe. The able-bodied were provided with arms to be used to the *ḡiḥād*, but they were also told to cultivate the land, which in each case was near a source of water, and the accumulation of wealth was encouraged. Mud huts were built to serve the Bedouin in lieu of their tents, and they were told to sell their camels. About seventy *ḥiḡḡas* (the name for these colonies) with a population of from 2,000 to 10,000 each sprung up after the Wahhābī revival in about ten years" writes Ameen Rihani, who adds that the population of a *ḥiḡḡa* consists of three classes: Bedu who have become farmers, missionaries called *muḡawwif*, and the merchant class; but for military purposes the division is into those who are at all times ready to respond to the call to the *ḡiḥād*; the reserves, who in time of peace are herdsmen and journeymen; while the third class are those who remain in the colonies to keep up trade and agriculture, though not exempt from military service if necessary. The first two classes can be called out by the sultan, but the *maṣfir*, or calling out of the civil population requires an announcement by the *ulama* that this is necessary. A list of the *ḥiḡḡas* with their population and the tribes represented is given by him (*Ibn Sa'ad of Arabia*, 1928, p. 198). Dame (l.c.) declared that the agriculture of these *ḥiḡḡas* was exceedingly primitive, and that the movement was on the wane.

§ 8. Wahhābism in India. Wahhābī doctrine was introduced into India by one Saiyid Aḡmad, a native of the British District of Rai Bareilly, born 1786; having already adopted puritan views, during his pilgrimage to Mecca in 1822—1823 he incurred the hostility of the authorities by the similarity of his doctrines to those of the Wahhābis, and having been expelled from the holy city, became an adherent of the Wahhābī system. He had already acquired a large following in India, and established a permanent centre in Patna, where he appointed four *ḥaḡḡifas*, and an *imām*; visits to Bombay and Calcutta swelled the numbers of his followers, and in 1824 he was at the head of an army at the Peshawar frontier, preaching a *ḡiḥād* against the Sikh cities of the Panjāb. Uḡmād II, 1242 (Dec. 21, 1826) was fixed as the date for the commencement of the war, which all Muslims were called upon to join, in a proclamation called *ṣaḡḡiḡ al-ḡiḥād*; and though the Sikhs put up a fierce resistance, Saiyid Aḡmad's army took Peshawar towards the end of 1830. He proceeded to take the title *Khālifa* and to strike coins in his own name. His reign was ephemeral, as he was killed by a Sikh army in the following year. His adherents however found a refuge at Sitana in the mountains beyond the Indus, whither those Muslims who were unwilling to live under non-Muslim rule flocked, and two of his *ḥaḡḡifas* from Patna circulated the doctrine that Saiyid Aḡmad was not dead, but was merely hiding with a view to reappearance at a suitable time. They extended the *ḡiḥād* to Hindus and British, and started an insurrection in Lower Bengal, under a disciple of Saiyid Aḡmad, Titu Miya, who after some successes was defeated and

killed by government forces (Nov. 17, 1831). In spite of these defeats the *ḥaḡḡifas* continued energetic propaganda among the Muslim population of India, and while maintaining the puritan doctrines of the Wahhābīs of Arabia concentrated attention on the duty of the *ḡiḥād*. The Wahhābī movement thus became a constant source of trouble to the government of India, since a system was devised whereby funds were collected and men selected and trained to be sent first to the headquarters of the community at Patna, and thence to the frontier camp of Sitana, and thereafter employed in fighting against the non-Muslim rulers of India. After a great deal of trouble, destruction of property, and bloodshed had been caused by their efforts, and a series of trials had revealed the ramifications of the conspiracy, the older Muslim communities of India, both Shī'a and Sunna, in 1870 and 1871 issued official declarations dissociating themselves from the Wahhābī doctrine of *ḡiḥād*. Since that time, the sect, though it still exists in India, has attracted little attention and indeed one portion of it is said to have abandoned the doctrine of *ḡiḥād*. As late, however, as 1890, according to E. A. Oliver (*Across the Border*, p. 29), it had not ceased to be formidable.

§ 9. Wahhābism in other countries. Schuyler in his *Turkistan* (London 1876, ii. 254) mentions the presence of Wahhābī preachers in Khokand; in 1871 an attack was made on the Russian station Karasu, on the high road between Tashkent and Hodjent, led by Ishaq Ish Muhammad Kul, disciple of a Khokandian Wahhābī preacher, Ṣāḡī Badal. Here then, as in India, the aim of the community was to throw off non-Muslim authority, but the forces collected were too exiguous to accomplish anything of consequence. The presence of the community in Afghanistan was connected with their aim in India.

§ 10. Wahhābī Literature. Prior to Ibn Sa'ad's recent conquest of the Ḥiḡḡā there appears to have been no printing office in Wahhābī territory; the works of Muḡammad b. 'Abd al-Wahhāb circulated in MS. Those contained in the British Museum (MS. Or. 4529) are *Muḡḡaḡḡar al-Sira*, *Kitaḡ al-Tawḡīd*, *Kitaḡ al-Kaḡḡir*; the autographs are said to be preserved in the Landberg collection at Leyden. The *Raḡḡfat al-Aḡḡar* contains a number of his *Raḡḡḡ* and *Fatāwā*. A collection of Wahhābī tracts of different dates was published in Cairo by order of the king of the Ḥiḡḡā and edited by Sulaimān b. Ṣaḡmān (2nd edition, 1344); they are by 'Abd al-'Azīz I, 'Abd Allāh son of Muḡammad b. 'Abd al-Wahhāb, Aḡmad b. Naṡīr b. Mu'annar, 'Abd al-Laṡṡif of the family of the founder, and his son Muḡammad. The title of the collection is *al-Ḥaḡḡiya al-Sunniyya wa'l-Tuḡḡa al-Wahhābiyya al-Naḡḡdiyya*. The content of all these is doctrinal, as is that of an anonymous *Riḡāla* inserted by 'Abd al-Laṡṡif al-Faḡḡūrī in his *Tuḡḡat al-Anām* (Cairo 1347; reproduced in the *Manār*, xii. 390 and xxi. 336).

Numerous tracts have been written against the Wahhābīs; three preserved in the Berlin Library belong, according to Ahlwardt, to the commencement of the founder's activities (see his Catalogue, No. 2156, 2157, 2158). Dahlén mentions one by the founder's brother Sulaimān, one by Muḡammad b. 'Abd al-Raḡmān b. 'Atāḡīk (*Taḡḡakḡum al-Muḡallidīn Ḥamas liddā Taḡḡīd al-Dīn*), and one by 'Alī b. 'Abd Allāh al-Baḡḡādī (*al-Miḡḡḡat*

al-Muffa). Some belonging to the middle of the sixteenth century are preserved in Cambridge University Library (see Browne's Handlists). Two which have attracted especial attention are *al-Durar al-ranīya* by Ahmad b. Zaynī Dahhān (about 1800; printed in Bairūt about 1900), and a tract by Qasim al-Zahāwī of Baghdād (recent).

The biography of the founder which has been excerpted above (*Lam' al-Shihāb fī Sirat Muḥammad A. 'Alī al-Wahhābī*, Brit. Museum MS.) is somewhat, but not excessively hostile. Philby mentions as Wahhābī historians Ḥusayn b. Ghannam al-Nahdī "who died more than a century ago", and 'Uṭmān b. 'Abd Allāh b. Bishr al-Hanbalī of the fifth decade of the sixteenth century. A British Museum MS. (Add. 19, 799) without name of author, called *Rawḍat al-Aḥkār wa 'l-Aḥām li-Murtād Ḥaf al-Imām wa-Ta'dād Ghawwat al-Hawā' 'l-Isām* is in two volumes, of which the second is a chronicle of Wahhābī campaigns ending with the year 1212, whereas the first contains chapters dealing with various aspects of the founder's mission and activities.

Several members of the ruling families are credited with skill in versification; specimens of Wahhābī poetry are given in an appendix to *al-Hadiya al-Sunniya*.

The Wahhābīs of India appear to have employed the printing or lithographic press on a considerable scale. Hunter, p. 66, enumerates 13 works in Arabic, Persian, and Urdu by Wahhābī authors of this country, and adds that "even the briefest epitome of the Wahhābī treatises in prose and verse on the duty to wage war against the English would fill a volume". A work by Muḥammad Ismā'īl, nephew of Sayyid Ahmad, *al-Sirāt al-mustakīm*, is said to be "the Qur'ān of the Wahhābīs of India".

(D. S. MARGOLIOU)

WAHHĪDĪ, the name of a dynasty in South Arabia, which rules over three sultanates, those of Bir 'Alī 'Amāqīn, Bāḥ Ḥaf 'Isān and Ḥabbān. H. v. Maltzan (p. 222) after investigation divided the whole territory belonging to this ruling house into two groups: Lower Wahhīd on the coast from 48° to 48° 30' East Long. (Greenwich) in the 14° N. Lat. reaching barely two hours journey into the interior, and Upper Wahhīd from 47° to 47° 40' East Long. (Greenwich) and from 14° 20' to 14° 58' N. Lat. C. v. Landberg (p. 180) gives Rās al-Kusām in the west and al-Ḥuḡa al-Ḥamrā in the east as the boundaries of the coast territory. The lands of the Wahhīd dynasty therefore lie between those of the 'Awālīk and Ku'ayl. The most important area in the lower Wahhīd territory

is the Wādī Maifa, which reaches the sea on the east of Rās al-Kusām and is the lower course of the Wādī Ḥaḡḡ; its most important place is 1201 al-Shihā. The coast territory is so divided between the sultans of Bir 'Alī 'Amāqīn and Bāḥ Ḥaf 'Isān that the former rules the land between Ḥuḡa al-Ḥamrā and the promontory of Rās al-Kaḡl while the latter rules from here to Rās al-Kusām. Wādī Maifa belongs to the sultan of Bāḥ Ḥaf, who lives in the summer at 'Isān, but the sultan of Bir 'Alī also has land there. The two most important harbours are Bir 'Alī which is used in summer and Maḡḡḡa which is used in winter.

To the Upper Wahhīd territory belong the Wādī 'Amāqīn with al-Ḥawḡa, which is independent, Wādī Tharr, al-Shu'āib, al-Ḥanaka, Salimūn, Ḥadā and Ḥabbān, with the most important place which bears the same name. The Beduin tribes of Nu'mān, Sa'd and Namara as well as the Ḥimyar tribe of Bā 'Awḡa, 'Alī 'Aḥmad, 'Alī Bā Serda, al-Kumūsh and al-Ḥibhān are distributed over the Wahhīd territory. The wādīs are particularly rich and fertile and produce cereals and dates, as well as tobacco, indigo and cotton. Textiles are manufactured, notably in al-Ḥanḡa, while carpentry flourishes in al-Ḥabbān. Ḥuḡa al-Ghurāb and Naḡab al-Ḥaḡḡ are important ruins of the Sabæan period.

In 1870 negotiations took place with Sultan Ḥadī regarding the cession of the two ports of Bir 'Alī and Maḡḡḡa to the Turks who wished to build quarantine stations here. This plan fell through however, owing to English opposition, as did a second attempt by Turkey, then very active in South Arabia, through 'Iszret Paḡha in 1882 to gain over the lords of Bir 'Alī and Bāḥ Ḥaf for Turkey, on which occasion the sultan of the latter port was given a Turkish flag. The Turkish sultan was mentioned in the *ḡuḡḡa* it is true, but dependence was not expressed in any form indicating submissions. To avert all eventualities, England on April 30, 1888 concluded treaties of protection with the sultans of Bāḥ Ḥaf and Bir 'Alī in which the latter in return for an annual payment bound themselves to enter into no relations with foreign powers without English approval. These treaties were renewed on March 15, 1895, and June 1, 1896 and at the present day the whole territory belongs to the British sphere of influence of the 'Aden hinterland.

(A. GROHMANN)

WAHSHĪ BĀFKĪ, a Persian poet, born at Bāfk, in Kirmān, died in 991 (1583) or 992 (1584) and spent most of his life in Yazd. He wrote panegyrics in honour of Shāh Tahmāsp I and his court, began a poem (*Farḡad u-Shirīn*) which he did not complete; it was finished long afterwards by Wīṣāl in 1265 (1848-1849). He wrote two other poems, *Khuld-i Barīn* and *Nāḡī*

u-Mamūr, Ghazāl's and Ḥafṣ's. *Ḥikmah u-Sātrān* has been lithographed in Persia and several times in India.

WAḤY (A.), revelation [cf. also ḠORĀN, MUḤAMMAD]. As to the etymology of the word, cf. Jewish-Aramaic **וַחַי** "to hasten", Ethiopic **ወሐሃ** "to go round, to recognise", and the non-religious meaning *ilāhām ḥi-sū'a*, given by the *Dictionary of Technical Terms*; on the use of the verb by the poets, cf. *Lisān*, s. v. As a religious technical term it is distinguished from inspiration (*ilāhām*, q. v.) of saints, artists and others, from *tanẓīl*, which chiefly denotes the object of revelation and from *inẓāl* which denotes the sending down of revelation from heaven and from its heavenly archetype [see UMM AL-KITĀB], in so far as it denotes revelation as transmitted to the prophets.

Use in the *Qur'ān*. a. In the early passage *sūra* xcix. 5 the earth is the object of divine revelation: On that day shall she (the earth) tell out her tidings, because thy Lord hath inspired her. In *sūra* xxviii. 6 the object of revelation is the mother of Moses; here al-Balḳāwī explains the term by inspiration or vision, in order to distinguish it from *waḥy* proper. Likewise in *sūra* xix. 12 the subject of *awḥā* is Zakariyā and its object his people; here it is explained by *awḥā*. In a peculiar way the term is used in *sūra* vi. 112: Even thus have We given an enemy to every prophet, Satans among men and among djinn: tinsel discourses do they suggest (*yafḥu*) the one to the other, in order to deceive.

The technical term for daemonic inspiration is *wiswās*. The means of communication between God and man is *waḥy*, either directly, or indirectly through the intermediary of the angels: It is not for man that God should speak with him but by revelation, or from behind a veil, or He sendeth a messenger to reveal by Him, or he sendeth a messenger to reveal by His permission, what He will (*sūra* xlii. 50 *sq.*). — Allah's communications to the angels are also called *waḥy*, *sūra* viii. 12: When the Lord revealed unto the angels: I will be with you etc.

b. In many passages *waḥy* and the verb *awḥā* refer to the prophets before Muhammad: Nūḥ (*sūra* xxiii. 27), Mūsā (*sūra* xx. 13 etc.; xli. 7; vii. 160), Yūsuf (*sūra* xii. 13) etc. — All those who were sent before Muhammad, were men to whom We granted revelations (*sūra* xxi. 7).

c. The chief object of revelation in the *Qur'ān* is Muhammad, *sūra* xlii. 29: Thus have We sent thee to a people whom other peoples have preceded, that thou mightest rehearse to them our revelations: It is of my Lord's revealing. Muhammad's contemporaries are astonished at his receiving revelations: A matter of astonishment to the men (of Mecca) that to a man among themselves We revealed etc. (*sūra* x. 2). But he says: I say not to you, "In my possession are the treasures of God"; nor "I know things secret"; neither do I say to you, "Verily, I am an angel": only what

is revealed to me do I follow (*sūra* vi. 50). — The words of Allah thus revealed to him may not be changed: And publish what hath been revealed to thee of the book of the Lord, none may change his words (*sūra* xviii. 26).

The divine character of Muhammad's revelations is emphasized in *sūra* liii. 4: Verily, it is no other than a revelation revealed; his honesty in *sūra* vi. 93: But is any more wicked than he who devieth a lie of God, or saith, "I have had a revelation", when nothing was revealed to him. — Muhammad therefore is ordered to follow nothing but what was revealed to him by his Lord (*sūra* xxx. 2; xliii. 42). He does not forbid any food, because he does not find such a prohibition among his revelations (*sūra* vi. 146).

d. The contents and the aim of revelation are described in various ways [see also MUḤAMMAD]. The story of the *Al 'Imrān* is interrupted by the verse (*sūra* lii. 39): This is one of the announcement of things by thee unseen: To thee do we reveal it. — The story of Yūsuf is introduced to him with the verse: In revealing to thee this *Qur'ān*, one of the most beautiful narratives will We relate to thee, of which thou hast verily aforetime been regardless (*sūra* xii. 3). — Muhammad's following "the religion of Ibrāhīm" is ascribed to divine inspiration (*sūra* vii. 124); likewise his knowledge about the djinn listening to the recitation of the *Qur'ān* (*sūra* lxxii. 1), as well as about the disputations of the angels at the creation of man is due to *waḥy* (*sūra* xxxviii. 69 *sq.*).

The aim of the revelation of the *Qur'ān* is mentioned in *sūra* vi. 19: And this *Qur'ān* hath been revealed to me, that I should warn you by it and all whom it shall reach.

Various terms are used in the *Qur'ān* in order to denote the contents of revelation. *Sūra* v. 52: And to thee We have sent down the book with truth (cf. *sūra* xxxix. 2, 42; xxxii. 2; xxxiii. 72; xvii. 106, etc.), confirmatory of previous scripture and its safe-guard (cf. vi. 92). — *Sūra* xxxi. 1 *sq.*: These are the signs of the wise book, a guidance and a mercy to the righteous. — *Sūra* xxvii. 2: These are the signs of the *Qur'ān* and of the lucid book; guidance and glad tidings to the believers. — *Sūra* vii. 50: And now We have brought them the book: with knowledge have we explained it: a guidance and mercy to them that believe. — *Sūra* xlii. 52: And thus we have sent the spirit to thee with a revelation by our command. Thou knewest not, ere this, what the book was, or what the faith. But we have ordained it for a light. — Further the contents of revelation are called knowledge (*ilm*: *sūra* lii. 54; li. 114, 140), wisdom (*sūra* xvii. 41), guidance (*sūra* xlv. 10; vii. 50 etc.), healing (*sūra* xli. 44), light (*sūra* iv. 174; xlii. 52).

Regarding the forms of revelation recorded in the biographies of Muhammad the following may be said. The beginning of revelation consisted in dreams anticipating real events (Ibn Hishām, p. 151; Tabarī, *Tafsīr*, xxx. 138; Ibn Sa'd, i/i. 129). Also afterwards such dream visions are said to have occurred. When 'Aḥṣā was under suspicion, she hoped that Allah would reveal her innocence to Muhammad in a dream vision (Ahmad b. Hanbal, vi. 197; Bukhārī, *Tafsīr*, *sūra* 24, bāb 6).

The first revelation in which Jibrīl appeared to Muhammad took place on mount Hira, when

the angel said to him: I am Djibril. Thereupon Muhammad hastened to Khadija, crying: Wrap me up (*sūra lxxii. 1* or *lxxiv. 1*).

The first portion of the *Qur'an* revealed was *sūra xvi.*, when the angel, in the month of Ramaḍān, during his retreat, showed him a piece of cloth, on which this *sūra* was written, saying: recite! When Muhammad protested that he could not write, the angel pressed him so strongly that he was nearly suffocated. At the third repetition the angel pronounced the verses which Muhammad retained.

After this there came a pause (*fatra*) in revelation. During this time Muhammad was in such depression that the thought of suicide came upon him (Tabari, ed. de Goeje, i. 1150; Ibn Hišām, p. 156, 166; Ibn Sa'd, *vi.* 131). The pause ended with the revelation of *sūra lxxiv* or *xciii*.

The angel who transmitted revelation was visible to Muhammad and to others (Bukhārī, *Faḡḡ'il al-Kur'an*, lib 1; Ibn Hišām, p. 154, cf. 156; Abū Na'im, p. 69). To some extent the ascension (cf. *mr'āṭy*) and the night journey may also be reckoned as revelations. Visions are also mentioned in the *Qur'an*. *Sūra liii. 3* *sq.*: Verily, it is no other than a revelation revealed: one terrible in power taught it him, endued with understanding. With even balance stood he: And he was in the highest point of the horizon. Then came he nearer and approached closely, and was at the distance of two bows and even closer. And he revealed to his servant what he revealed, his heart falsified not what he saw. Will ye then dispute with him what he saw? And he saw him once again, near the *sidra*-tree, which marks the boundary... His gaze turned not aside, nor did it wander, for he saw the greatest of the signs of the Lord.

Sūra lxxxi. 19 *sq.*: Verily this is the word of an illustrious messenger, powerful with the Lord of the throne, of established rank... faithful also to his trust. And your compatriot is not one possessed by *ḡinn*; for he saw him in a clear horizon.

In other *sūras*, however, revelation is said to have taken place by audition. *Sūra lxxv. 18*: Move not thy tongue that thou mayest hurry over the revelation; we verily will see to the collecting and the recital of it; when therefore we recite, then follow thou the recital. Afterwards, verily it shall be Ours to make it clear. — Moreover the whole form of the *Qur'an* with its often repeated *had* "say" on the part of Allāh, supposes revelation by the way of audition.

Particulars regarding Muhammad's auditive revelations are to be found in the *sūra* and chiefly in *badth*.

a. How they were perceived by Muhammad. 1. "Sometimes it comes as the ringing of a bell; this kind is the most painful. When it ceases I retain what was said. Sometimes it is an angel who speaks to me as a man, and I retain what he says" (Bukhārī, *Bad' al-Wahy*, lib 2; *Bad' al-Kur'an*, b. 6; Muslim, *Faḡḡ'il*, trad. 87; Tirmidhī, *Manāḡid*, b. 7; Nasā'i, *Istisāḡ*, b. 37; Malik, *Muwatta'*, chap. *al-Wuḡū' li-man māsi al-Kur'an*, trad. 7; Ahmad b. Hanbal, ii. 222; vi. 158, 163, 256 *sq.*).

2. In a different form of this tradition Muhammad says: Sometimes it approaches me in the form of a young man (*al-Jaṭā*) who hands it down to me (Nasā'i, *Istisāḡ*, lib 37).

3. The Apostle of Allāh heard a sound like the humming of bees near his face; thereupon *sūra xlii. 1* *sq.* was revealed to him (Tirmidhī, *Tafsir*, *sūra 23*, trad. 11; Ahmad b. Hanbal, i. 34).

4. The Apostle of Allāh used to move his lips from pain, as soon as revelation began. After the revelation of *sūra lxxv. 16*, however, he listened till Djibril had withdrawn; thereupon he recited what he had heard (Bukhārī, *Tamḡid*, b. 43; al-Nasā'i, *Istisāḡ*, b. 37; Tirmidhī, No. 2628).

5. "... on the authority of 'Abd Allāh b. 'Umar: I asked the Prophet: Do you perceive the revelation? He answered: Yes, I hear sounds like metal being beaten (cf. above, under 1). Then I listen, and often I think to die (from pain) (Ahmad b. Hanbal, ii. 222).

A. How they were perceived by others. 1. Even on cold days sweat appeared on his forehead (Bukhārī, *Bad' al-Wahy*, b. 2; *Tafsir*, *sūra 24*, b. 6; Muslim, *Faḡḡ'il*, trad. 86; Ahmad b. Hanbal, vi. 58, 103, 197, 202, 256 *sq.*; cf. iii. 21; cf. further above under a. 1.).

2. Muhammad covers his head, his colour grows red, he snores as one asleep, or rattles like a young camel; after some time he recovers (*surriya anhu*) (Bukhārī, *Hadith*, b. 17; *Uṣra*, b. 10; *Faḡḡ'il al-Kur'an*, b. 2; Muslim, *Hadith*, trad. 6; Ahmad b. Hanbal, iv. 222, 224).

3. Muhammad's colour grows livid (*tarabbada lahu waḡḡuhū*: Muslim, *Hadith*, trad. 13, 14; *Faḡḡ'il*, trad. 88; Ahmad b. Hanbal, v. 317, 318, 320 *sq.*, 327; *mutarabbidun*: Tabari, *Tafsir*, xviii. 4; *tarabbada*: *ḡilāḡi*: Ahmad b. Hanbal, i. 238 *sq.*; *tarabbada li-ḡilāḡi*: *ḡawāḡi* *wa-waḡḡuhū*: Tirmidhī, No. 2667).

4. He falls into a lethargy or a trance (*inḡaf*: Ahmad b. Hanbal, vi. 103).

5. "Thereupon the Apostle of Allāh sat down, turning towards him ('Uthmān b. Ma'ṣūn). When they talked, the Apostle of Allāh let his gaze swerve towards heaven; after a while he looked down to his right side and turned away from his companion, following his gaze and began to shake his head as if he tried to understand what was said to him, while 'Uthmān sat looking on. When Muhammad had reached his aim, his gaze turned anew towards heaven, etc." (Ahmad b. Hanbal, i. 318).

6. "When Muhammad received a revelation... this caused him much pain, so that we perceived it. That time he separated himself from his companions and remained behind. Thereupon he began to cover his head with his shirt, suffering intensely, etc." (Ahmad b. Hanbal, i. 464).

"When the Apostle of Allāh received a revelation, he began to cover his face with his shirt. When he had swooned, we took it away, while etc." (Ahmad b. Hanbal, vi. 34; cf. above 5. 2.).

7. Zaid b. Ḥabīb said: "I was at Muhammad's side, when the *zakāna* (y. v.) came upon him. His thigh fell upon mine so heavily, that I feared it would break. When he recovered, he said to me: Write down, and I wrote down *sūra iv. 97*" (Ahmad b. Hanbal, v. 184, 190 *sq.*; Abū Dāwūd, *Liḡlād*, b. 19).

8. 'Abd Allāh b. 'Amr said: "The *sūra al-Mā'idā* was revealed to the Apostle of Allāh, while he was riding on his camel. The beast could not bear him any longer, so that he had to descend from it" (Ahmad b. Hanbal, ii. 176). A similar tradition on the authority of Asmā' bint Yazīd:

Ahmad b. Hanbal, vi. 455, 458; another tradition of the same type: Ibn Sa'd, i. 131.

c. The circumstances under which revelation came upon Muhammad. i. Muhammad is directly or indirectly asked for his opinion or decision, when the answer is revealed to him, e.g. concerning the use of perfumes during the 'umra (Bokhārī, *Ḥaḍīṭ*, b. 17; see above A. 2.); concerning excuses for staying at home during an expedition (Abū Dawūd, *Ḍiḥād*, b. 10; Ahmad b. Hanbal, v. 184); concerning the question whether evil may proceed from good (Ahmad b. Hanbal, iii. 21; Tayālīst, No. 2180); concerning the question whether his wives were allowed to relieve a want near town (Ahmad b. Hanbal, vi. 56); concerning 'Aḥṣā's being or not being guilty (Bokhārī, *Taḥṣīr*, sūra 24, b. 6; Ahmad b. Hanbal, vi. 103, 197); concerning divorce in case of adultery witnessed by one witness (Tayālīst, No. 2667); concerning *ṣāḥ* (Tabarī, *Taḥṣīr*, xviii. 2).

2. Revelation comes upon Muhammad while he is riding (above, A. 8.; Tabarī, *Taḥṣīr*, xvi. 39), while his head is being washed (Tabarī, *Taḥṣīr*, xviii. 2), while he is at table, holding a bone in his hand (Ahmad b. Hanbal, vi. 56), while he is on the pulpit (Ahmad b. Hanbal, iii. 21).

d. The contents of these revelations are not always communicated, and, if so, they are not always parts of the *Kur'ān* (cf. Noldeke-Schwally, *Geschichte des Qur'ān*, i. 256—261), e.g. Muhammad's answer to the question whether evil may proceed from good (Ahmad b. Hanbal, iii. 21; Tayālīst, No. 2180); the permission granted to his wives to leave the town (Ahmad b. Hanbal, vi. 56), the punishment of fornication (Ahmad b. Hanbal, v. 317, 318, 320 sq., 327, not the *ḥudūd al-rāḍiyya*), the permission of *ḥudūd* (Tayālīst, No. 2667).

As far as I can see, the idea of revelation has not called forth discussions of importance. Al-Idrī and his commentator al-Djurdjānī combat the views of philosophers according to whom it is a charisma peculiar to the prophets that "they see the angels in their corporeal forms and hear their speech by revelation; it is not to be rejected that they being awake see what common people see when asleep, i.e. that they see persons who speak to them poetical words, which point to ideas corresponding to what really happens, since their soul is free from bodily occupations and can easily come into contact with the divine world (*ʿālam al-ʿulūd*). Often this peculiarity becomes in them a settled faculty which is easily set working". This theory of revelation is, according to al-Idrī, misleading, not being in harmony with the views of the philosophers themselves, according to whom the angels cannot be seen, being merely psychic beings, who do not produce audible speech, which belongs especially to corporeal beings. So the theory of philosophers explains revelation as the imagining of what has no basis in reality, as little as what comes from the lips of ailing and lunatic people. Yet if any of us should command and prohibit on his own authority what is salutary and sensible, he would not on account thereof be a prophet. How much the less then would be a prophetic utterance what is based upon imaginations which have no foundation and often are contrary to reason (*Manāẓīf*, p. 172 sq.).

(A. J. WENSINCK)

WAISI, properly UWAIṢ b. MEHMET, known under his *mashhūr* of Waist, a famous Ottoman scholar and poet. Born in 969 (1561—62) in Mashehr, the son of a *kādī* named Mehmed Efendi, he also adopted a legal career. After completing his training in Constantinople with the *ulemā* Şāliḥ Efendi and Ahmed Efendi, he filled a series of important posts in all parts of the Ottoman empire (in Rosetta, Cairo, Ak Hissar, Tire, Alaghehir, Seres, Rodosto, Üsküb, Gümüldjina) and died in 1037 (1628) in Üsküb, where he filled the office of *kādī* seven times, after his dismissal at the age of 68. Waist who was on his mother's side a nephew of the poet Makālī was likewise a successful poet. He was also one of the finest prose writers of his time and wrote in a particularly fine persianising style. After the death of Baki, he was regarded as the greatest master of his time in prose and verse. His language is laden with a foreign vocabulary and not easy to understand; his diction nevertheless is clever, intellectual and attractive. 'Aḥṣā' says of him (*Shāhīdī-nu'māniye*, i. 715) that his poetry is better than his learning, his prose-style more distinguished than his poetry, his gift of entertaining finer than his prose and the beauty of his face and figure more striking than his gift of entertaining.

Waist left a considerable number of writings in all fields. Some of his works still have their admirers, particularly his two chief works: *Sirat al-Nabi* and *Kāsh-nāme*. The former, the *Sīyar-i Waist* or to give it its full title: *Durrat al-Tāḍī fī Sirat Şāhib al-Mir'āḍ*, is best known although he did not quite finish it. It only comes down to the battle of Badr. The holograph is in the Serai library. The book was continued by Nāhl and after his death by Naḡm-i-sade-i Baghdādī. Waist's text with Nāhl's continuation was printed in 1245 in Bulak and in 1286 in Stambul in his collected works. No less celebrated is his *Kāsh-nāme*, a vision. It is a conversation between Ahmad I and Alexander the Great in a dream written in simple, clear Turkish.

According to 'Abd al-Hakīm Hāmid, the modern school was founded by Shīnās under the influence of poems in the style of this vision. This *Kāsh-nāme*, which is also called *Waf'a-nāme* (Mehmed

Tāhīr wrongly thinks there are two different works) and which contains a criticism of his times, has often been reprinted (Būllak 1252, Istanbul 1263, 1293, and in the collected works in 1286).

His *Shahādāt-nāme* or *Dustūr al-'Aṣnā* (Istanbul 1283 and 1286) which is of a religious nature has often been printed as has his *Mumtazāt* (collection of letters; collected works 1286).

His other works, of which Mehmed Tāhīr gives the fullest list, are still unprinted, e. g. his complete *Divān* of which only a few copies exist; a *Tawhīd-nāme* which deals with a saying of Zāin al-Dīn Khāfī, Pir of the Zāniye order; the incomplete history of the conquest of Egypt: *Futūḥ al-Miṣr*; a reply to the attacks of the *Kāwūs* on the *Ṣaḥāb* of Qajwārī (holograph in the Rāghib Pasha library); lastly two essays: *Ghurrat al-Aṣr fī Taṣīr Sūrat al-Naṣr* and *Ḥadiyāt al-Muḥlisīn wa-Taḥkīr al-Muḥsinīn*.

WAKĀ NUWĪS, WAKĀT NUWĪS.

Wakāf nuwīs is the officially appointed Ottoman historian while *wakā nuwīs* means keeper of records; the distinction between the two terms was already pointed out by von Hammer, *G. O. R.*, vii. 465. The first official historian of the Ottomans is usually said to have been 'Abd al-Rahmān 'Abdī Pasha (cf. F. Babinger, *G. O. W.*, p. 227 sq.). The list of official Ottoman historians is not yet complete and accurate. There are gaps and errors in the list given by J. v. Hammer, *G. O. R.*, viii. 591 sq. (cf. thereon P. Wittek in *M. O. G.*, i. 152 and 243 sq. and also F. Babinger, *G. O. W.*, p. 227, note 3 and p. 285, note 1). It seems that a keeper of records (*wakā nuwīs*) is occasionally given as official historian (*wakāf nuwīs*), for example the poet Nerkesi (cf. F. Babinger, *G. O. W.*, p. 173) while the case of Muṣṭafā Rahmī (cf. F. Babinger, *G. O. W.*, p. 285) who is said to have been given the title of an official historian still wants elucidation. The office of Ottoman official historian is in any case a continuation of that of *Shāh-nāme* who was appointed and paid by the court. The last *wakāf nuwīs* of the Ottoman empire was Wāṣif Efendi [q. v.].

Bibliography: Cf. F. Babinger, *G. O. W.*, p. 227, note 3 and p. 285, note 1 and the works there quoted. (FRANK BABINGER.)

WAKĀLA (also WIKĀLA), mandate, authorisation, is a contract (*ʿaḥd*) by which one contracting party, the *muwakkil*, commissions the other, the mandatary (*wakil*), to perform some service for him.

I. In the *Kurʿān* we find forms derived from *wakala* in the meaning of 'to rely upon, to trust in Allāh' (fifth form) or associated with the idea that Allāh, is the *wakil*, one of the 99 names of Allāh, which according to the commentators

has the meaning of *ḥafiz* (Sūra xii. 66; ix. 52; lxxiii. 9; xxviii. 28). The word is therefore not found as a technical term. Nevertheless at the basis of Sūra xxxii. 11 we have the idea which belongs rather to the field of law, that the angel of death is regarded as the authorised agent of Allāh. But this passage is not quoted as evidence that the conception of *wakāla* is found in the *Kurʿān*. The *Ṣaḥāb* quote as authority for *wakāla* Sūra xviii. 18: "Send one of your number with this your money to the city". This was an authorisation and therefore according to them *Kurʿān* authority for *wakāla*. Sūra iv. 39 is also quoted: — "then send an arbitrator (= negotiator) from your family and an arbitrator from his family".

II. *Ḥadīṭs* are numerous about mandates and the mandatary, some of which may be quoted here. The Prophet authorised Ḥakīm b. Ḥazīm to purchase a sacrificial lamb (al-Sarakhsī, xix. 2) and on another occasion he appointed 'Amr b. Umāyia al-Damṭī as his *wakil* at his marriage with Umm Ḥabība. According to Bukhārī, *Wakāla*, Bāb 3, a shepherd may kill an animal that is near to death and the mandatary may repair the thing that is deteriorating. There are also *ḥadīṭs* regarding the mandate in criminal cases. The Prophet for example gave authority for a woman to be stoned and a drunkard to be beaten (Bukhārī, *Wakāla*, Bāb 13). Other *ḥadīṭs* mention the agent who demands debts in names of a third person (Bukhārī, *Wakāla*, Bāb 4). From this it is evident that the debtor satisfied the creditor by paying his agent. Here the representation had further effects, for legal relations arose through the act of his agent between the principal and a third person.

III. *Iḍmāʿ* finally sanctioned the legality of representation (*maḥṣūʿiyat al-wakāla*). The Muhammadans have from the earliest times to the present day used *wakāla*, without the slightest disapproval being shown, in the settlement of their affairs with one another. For *wakāla* is an urgent necessity for man, since a man is sometimes not in a position to administer his own property when on a journey or on the pilgrimage, or to manage his estate on account of his lack of ability, or pressure of business or his great wealth. By *wakāla* he can appoint a deputy. The verse v. 3: "Help one another to good deeds and to the fear of God" particularly urges this mutual help. — More particularly people of high rank or office usually do not attend to their affairs personally but through authorised agents.

IV. According to the teaching of the jurists, the *wakāla* is a contract and a revocable one (*ʿaḥd ḥafīf*).

1. For the validity (*ṣiḥḥa*) of the mandate we have the following four requirements (*arḥān*): a. the *muwakkil*.

b. the *wakil*. Both persons must be able to dispose of their property (*iṣṭāḥ al-taḥarruf*). A minor (*ṣabī*), a lunatic (*maḥṣūn*), a slave (*ʿabd*) or any one who is *maḥḥūr* [q. v.] cannot be either principal or agent. For validity are also required the conditions demanded for other contracts. In particular we should add that in marriage and divorce only a person of irreproachable character in the eyes of the law (*ʿādil*) can be a *wakil*, while in all other cases this is not demanded. If then a woman chooses a man who is not of blameless character for her *wakil* at a marriage, the marriage is invalid. According to the Mālikīs, a Muslim and a *dhimmi* cannot be *wakil* for one

another; but the ḥadīth in Bukhārī, *Wakāla*, Bāb 2 is not so strict.

2. The object (*muwakkalat fiki*) must be the property of the principal, definite, legal and capable of representation. Representation under a condition to come into operation in the future is not permissible. The principal therefore cannot for example appoint a *wakīl* in order to divorce a wife whom he is only going to marry at a later date or to sell a slave whom he is going to buy in the future.

Views differ on the question whether representation by a deputy is possible in the case of acquiring *malakāt*, e.g. water, wood, or game.

In general one can appoint a mandatary for all actions which one can carry out oneself. Thus we have proxies in all contracts, marriage and divorce, law-suits, payment of blood-money etc. According to Abū Ḥanīfa's teaching however, a representative in a law-suit could only be appointed with the approval of the other side; his successors however did not think this necessary. According to the unanimous teaching of all the madhāhib, an oath cannot be transferred to a proxy. A list of the commonest cases is given by al-Sarakhsī, xix. 190.

As regards one's personal duties towards Allāh and actions belonging to the sphere of the *ʿibādāt*, one cannot of course appoint a deputy because they are obligations of a purely personal nature, with the exception of the *ḥajj* and the distribution of *zakāt* (*tafrīḥat* [or *adāʾ*] *al-zakāt*). A proxy cannot be appointed to commit crimes like murder or theft on account of the illegality of the action.

3. The form (*ṣiḡa*) is that of offer and acceptance (*al-ḥukm wa-l-ḥukm*). Both parties must be willing for this legal transaction to take place and give their approval to it. This is done by offer and acceptance. Acceptance may be given in silence or by an act which clearly shows the approval of the mandatary. Representation is purely a matter of mutual agreement.

2. The authorisation may be definite or general according as the proxy has to carry out a particular piece of business or all the business of his principal in the way he thinks fit. The first kind of proxy is called *wakīl muʿayyan*, the latter *wakīl muṣṭafā*. The Shāfiʿis reject the general authorisation as they demand that the mandate must define accurately the nature of the business.

3. The proxy does his work without a fee; but some recompense may be made by arrangement. The proxy has in any case the right to be compensated for all expenses or losses that he has incurred. This does not affect the mandate as such. There is a difference of opinion among the jurists on the question where and when an agreement of this kind passes into hired service (*ijāra*).

4. As to the liability (*ḍamān*) it has to be remembered that the *wakīl* is a person of trust. His statement on oath is therefore valid without proof but only as far as the loan, deterioration and return of the *res mandata* is concerned. His statement regarding the return of the thing to another person than his principal is only to be accepted with proof.

The proxy must adhere to the orders given him and is responsible for all mistakes in the transaction; he is thus responsible, a. in *tafrīḥ*, i.e. *culpa in omittendo*, if he does less than he ought strictly to do, and b. in *taʿaddī*, if he does more than he ought, i.e. exceeds his commission.

5. Termination. As the mandate is an *ʿadd ʿadā*, both parties can dissolve the contract when they please. The contract is dissolved like other contracts through death, insanity or the legal incompetence of one of the parties, since the mandatary like the depositary [cf. *waḍʿa*] is regarded as *amin*.

V. Here we cannot go into the later development. The *Code Civil Ottoman*, Art. 1449—1530 contains, broadly speaking, the doctrines of the Hanafis. In the *ʿAḥwāl al-Miṣriya*, *wakāla* is dealt with in §§ 512—531 and in the *Sharḥ al-ʿAḥwāl*, p. 292—300.

(OTTO SPIES).

WAKĀR, MIRẖ AHMAD SIFĀʿI with the *taḥalluṣ* Wakār (Browne vocalises it Wiḳār), a Persian poet, the eldest of the six sons of the poet Wiḳāl. His five brothers also attained fame as poets. Specimens of the poetry of the father Wiḳāl are given in the *Madfūnāt al-Fuṣṭāḥ* of Riḍā Kulī Khān, ii. 528 sqq. and in Browne, *Persian Literature in Modern Times*, p. 318; in the last named work on p. 301, 319 sqq. and 323 sqq. are also specimens of the work of Dāwār and Farhang, two brothers of Wakār. In the *Madfūnāt*, ii. 103 sqq. are two further poems of Wiḳāl's second son Maḥmūd Ḥakīm and in ii. 384, poems by Farhang. Six *ḥafidas* on Nāṣir al-Dīn Shāh composed by Wakār and his five brothers are given in the British Museum manuscript, No. 370 of Rieu's *Supplement*. Riḍā Kulī Khān, *op. cit.*, ii. 82 sqq., gives a few poems by Tawhīd (Mirẖ Ismāʿīl Shirāzī), another of Wiḳāl's sons.

Wakār must have been born about 1232 (1817) (cf. Rieu, *Supplement*, p. 230; Browne, *op. cit.*, p. 300). A few years after his father's death (in 1262 = 1846), Wakār travelled to India along with his brother Maḥmūd. He stayed there from about 1266 (1849) to 1268 (1851) in Bombay until a letter from the *amir* Nusrat al-Dawla Firūz Mirẖ induced him to return to Shirāz. Riḍā Kulī Khān says that Wakār was very highly honoured in Bombay, but the poet seems to have suffered from home-sickness there. The verses in *Madfūnāt*, ii. 552 refer to his sojourn in India.

In 1274 (1857—58) Wakār was in Teherān where he was presented to the Shāh Nāṣir al-Dīn and honoured by him with a *khilʿa* and a pension. The date of the poet's death does not seem to be exactly recorded. He was not only a good Arabic scholar but also a fine calligrapher. Riḍā Kulī Khān mentions a copy of Rūmī's *Mathnawī*, which he had copied in India.

Works: *Bakrūm u-Bikrūn*, a *mathnawī*. On this work and its contents cf. Rieu, *Supplement*, p. 229

eg.: *Andjuman-i Diniyā*, a collection of anecdotes and short stories in the style of Sa'di's *Gulistan*. According to Rieu (*op. cit.*, p. 230), a lithographed edition appeared in 1289 in Teherān, and it was completed by the poet in 1281 (1864-1865).

More accessible are the extracts from Waḳār's lyric poetry, which are printed in the *Maḥṣūn al-Furqān*, li. 548-599. The poems are composed on the old traditional models of the pre-Mongol period, as is to be expected with a poet of the first half of the Ḳāḍīr epoch (cf. Browne, *op. cit.*, p. 299). In Waḳār we find *ḡazals*, *ḡifas* etc., also *muḥammās*, a kind of poem, which was revived in the Ḳāḍīr period after having dropped out of fashion even before the beginning of the Mongol period (Browne, *op. cit.*, p. 163).

In addition to panegyrics on Nāṣir al-Dīn Shāh, Waḳār also wrote them on Tahmāsp Mirzā Mu'ayyid al-Dawla and on Nūr al-Dawla Firūz among others. It is particularly in the panegyrics that we frequently find passages which quite recall the mediæval court poets (e.g. *Maḥṣūn*, li. 550).

An example of a very elaborate simile quite in the classical vein is to be found in one of his *ḡazals*: a snowcloud is compared to a camel with foam at its mouth and a broken headstall (*maḥḍar*). It is laden with pearls from 'Aden, but the packing has burst and the pearls are being scattered in all directions (*Maḥṣūn*, li. 552). Pictures familiar to Persian panegyrics but which strike the western as peculiar are also found e.g. in the *ḡazals* on Nūr al-Dawla Firūz (*Maḥṣūn*, li. 553).

The artifices of the classical period are of course also found; we may mention for example the *taḍnīs* between the words *ḡhalīb-i ḡalībward* and *ḡhalīb-i ḡalībward* (*Maḥṣūn*, li. 550). Waḳār sometimes uses internal rhyme, e.g. *Maḥṣūn*, li. 551, 555. The *ḡazals* are descriptive of nature in the old style or they have an erotic subject. Among the latter is a piece (*Maḥṣūn*, li. 549) which shows some similarity with the pretty *muḥammās* by Waḳār's brother Dāwlat printed in Browne, *op. cit.*, p. 319-320.

The matter of Waḳār's lyrics is for the rest of little interest. He moves mainly in the circle of ideas of the mediæval poetry. In addition to regular panegyrics we also have poems of religious and moral content (these are not his best), a letter in poetry to his father Wazīl, verses on an earthquake in Shīrāz; indeed he even wrote a poem on an attack of fever.

Bibliography: In addition to the works already quoted cf. also: *Grundriss der Iran. Philologie*, li. 314. (C. F. BÜCHNER)

WAḲF or **HABES** (A.) is properly an Arabic *muḥdar* meaning "to prevent, restrain". In Muslim legal terminology it means primarily "to protect a thing, to prevent it from becoming the property of a third person (*amlik*)" (Sarakhṣī, *Mabṣūṭ*, xii. 27). By it is meant 1. state land, which on being conquered passed to the Muslim community either by force or by treaty and remained in possession of the previous owners on payment of the *ḡharāḍī* and could neither be sold nor pledged by them (cf. e.g. Mawardi, *Aḥḍām*, ed. Enger, p. 237-240) and 2. commonly a pious endowment, which is defined in various ways in the Shari'a according to the school. Following up these definitions we may say that by *waḳf* (plur. *awḳāf*) is meant a thing which while retaining its sub-

stance yields a usufruct and of which the owner has surrendered his power of disposal with the stipulation that the yield is used for permitted good purposes. *Waḳf* really means however the legal process by which one creates such an endowment (synonymous with *ḡabḥ*, *ḡabḥ* or *ḡabḥ*) and in popular speech became transferred to the endowment itself, which is properly called *manḡf*, *manḡf*, *muḡabbar* or *ḡabḥ*. Among the Mālikīs and therefore in Morocco, Algiers and Tunis the name *ḡabḥ* (plur. of *ḡabḥ*) or the syncopated form *ḡabḥ* (pl. *ḡabḥ*) predominates (hence in French legal language: *habous*).

1. The main principles of Fiqh

1. The founder (*ḡabḥ*) must have full right of disposal over his property; he must therefore be in full possession of his physical and mental faculties, be of age and a free man (*ḡabḥ*, *ḡabḥ*, *ḡabḥ*). He must further have unrestricted ownership in the subject of the endowment. Endowments by non-Muslims are therefore only valid if they are intended for a purpose not incompatible with Islām (e.g. they must not be intended for Christian churches or monasteries).

2. The object of the endowment (*manḡf*) must be of a permanent nature and yield a usufruct (*manḡf*), so that it is primarily real estate. There is a difference of opinion about movables. One section of the Hanafīs regards the granting of movables in an endowment as inadmissible but the majority, like the Shāfi'īs and Mālikīs, grant the principle, when it is a case of things which can be the subject of an agreement legal in the Shari'a, e.g. animals for their milk and wool, trees for their fruits, slaves for their labour, books for study. There are however here also differences of opinion on points of detail (thus Shīrāzī does not permit a slave to be made a *waḳf*). Provisions, money (prohibition of usury!) etc. are in general not admitted as their substance is consumed; they can only be the object of a *ḡabḥ*. Among the Mālikīs a *manḡf* can also be made a *waḳf*, e.g. the yield of a piece of ground which is let for the period of the lease (*ḡabḥ*, li. 553).

3. The purpose of the endowment must be a work pleasing to God (*ḡarba*) although this is not always apparent on the surface. Two kinds are distinguished: *waḳf ḡharī*, endowments of a definitely religious or public nature (mosques, madrasas, hospitals, bridges, waterworks), and *waḳf ḡḥī* or *ḡharī*, family endowments, for example for children or grand-children or other relations, or for other persons; the ultimate purpose of such a foundation must however always be *ḡarba*, for the poor for example.

An endowment for oneself is however invalid (except in Abū Yūsuf). The Shāfi'īs give a subterfuge (*ḡila*) to evade this condition: the thing which is to be the subject of the endowment is to be presented or sold at a low price to a third person; the latter can then create an endowment in favour of the original owner. Ibn Ḥajar mentions a further subterfuge which is rejected by others: a *waḳf* is created in favour of the children of the benefactor's father and in the deed he himself is exactly described (Ardabīlī, *Amḡar*, i. 433). On two other subterfuges see Kaẓwīnī, *Kīlāb al-ḡiyāl*, ed. Schacht, iv. 45.

Vol. 1:

al-Ash'ari, Abū l-Hasan 'Alī b. Ismā'il,

Maqālāt al-islāmiyīn wa-khtilāf al-muṣallīn

Die dogmatischen Lehren der Anhänger des Islam. Herausgegeben von H. Ritter. Teil I 1929. Teil II 1930. XXXII + 615 Seiten. Preis RM. 30.—

The Dogmatic Teachings of the followers of Islam, Arabic text edited by H. Ritter. Two parts. 27 + 615 pages. 1929—30. RM. 30.—

Das älteste, ausführlichste und wichtigste Werk über die islamischen Sekten, das uns erhalten ist, verfaßt von dem berühmten Begründer der islamischen Orthodoxie, Abū l-Hasan al Aš'arī (gest. 324/936). Es bildet die unentbehrliche Hauptquelle für das Studium der islamischen Dogmengeschichte. Die den Text enthaltenden beiden bisher erschienenen Bände werden durch einen Indexband ergänzt werden, der auch biographische Quellenangaben enthalten wird und sich im Druck befindet.

This is the oldest, most detailed and most important work on the Islamic Sects and was compiled by the celebrated founder of Islamic Orthodoxy, Abū l-Hasan al-Ash'arī (died 324/936). It is the main source for the study of the history of Islamic Creeds. The two parts contain the Text. A third part, containing the Index and sources of biographical information, is in the press.

Band 2:

Vol. 2:

ad-Dānī, Abū 'Amr 'Uṭmān b. Sa'īd,

Kitab at-Taisīr fī l-qirā'at as-sab'

Das Lehrbuch der sieben Koranlesungen. Herausgegeben von O. Pretzl. 1930, XV + 228 Seiten. Preis RM. 12.—

A Manual of the Seven Authoritative Readings of the Koran, edited by O. Pretzl. 15 + 228 pages. RM. 12.—

Nachdem anerkannt ist, daß eine wissenschaftliche Beschäftigung mit dem Koran auf Grund der üblichen Drucke ohne Heranziehung der Lesarten nicht möglich ist, gehört das klassische Handbuch der Koranlesungen von ad-Dānī zum unentbehrlichen Rüstzeug jedes Arabisten, der mit dem Koran zu arbeiten hat.

It has now been established that no scientific study of the Koran is possible on the basis of the usual text without reference to the different readings. Therefore the classical manual of the different readings of the Koran by ad-Dānī will be required for the study the Holy Book of the Muslims.

ad-Dānī, Abū 'Amr 'Uḥmān b. Sa'īd,

**Kitāb al-Muqni' fi ma'rifat khatt masāḥif al-amṣār,
ma'a kitāb an-Naqt**

Die Orthographie und Punktierung des Koran. Herausgegeben, mit deutscher Einleitung und Anmerkungen versehen, von O. Pretzl. III, 238 + 33 Seiten. 1932. Preis RM. 12.—.

Die beiden Schriften des Dānī über Orthographie und Punktierung der Koranhandschriften sind von schlechthin grundlegender Bedeutung für die Geschichte der schriftlichen Aufzeichnung von Muhammeds Offenbarungen, die das älteste Schrift-denkmal des Islam bilden, darüber hinaus für die Geschichte der arabischen Schrift überhaupt, für die Einsicht in die Schwierigkeiten, mit denen die arabische Sprache gekämpft hat, um sich ein fremdes Schriftsystem zu eignen zu machen, endlich für das Verständnis der Koranlesarten und ihrer Entstehung. Sie bilden zugleich den Schlüssel für die Beurteilung der kufischen Koranhandschriften. Der Band enthält außer den Texten eine ausführliche deutsche Einleitung und die Indices für Band 2 und 3 der Bibliotheca Islamica. In den Anmerkungen ist das gesamte heute erreichbare Material zur Koran-orthographie auch aus ungedruckten Quellen herangezogen worden.

The Orthography and Punctuation of the Koran. Edited with a German Introduction and notes by O. Pretzl. III + 238 + 33 pages. 1932. RM. 12.—.

The two works of ad-Dānī on the Orthography and Punctuation of the Koran are clearly of fundamental importance for the history of the writing down of Mohammed's revelation as they form the oldest written documents of Islam. They are essential for the history of Arabic writing as a whole and for an examination of the difficulties with which the Arabic language had to contend in order to adapt a strange system of writing. They are important for the understanding of the readings of the Koran and their origin. They also are the key for forming a judgement upon the Cufic Koran Manuscripts. Besides the Text these volumes contain a detailed introduction in German and the indices for Volumes 2 and 3 of the Bibliotheca Islamica. The notes contain full indications of all the material, printed and unprinted, required for the study of the orthography of the Koran as far as it is accessible to-day.

an-Naubakhti, Abū Muḥammed al-Ḥasan b. Mūsā,

**Kitāb fīhi madhāhib firaq ahl al-imāma
wa-asmā'uhā**

Die Sekten der Schi'a. Herausgegeben
von H. Ritter. 1931. XXX + 115
Seiten. RM. 10.—

Das einzige Werk, das uns von der reichen schriftstellerischen Tätigkeit des schiitischen Gelehrten Naubakhti (um 300 H) erhalten ist. Es enthält die älteste Darstellung der Parteilungen innerhalb der Schia, von einem Schiiten geschrieben, und darf daher das größte Interesse aller Gelehrten, die sich mit der politischen und religiösen Geschichte des Islam befassen, beanspruchen. Die Einleitung enthält eine eingehende Darstellung des Lebens und der Schriften des Autors aus der Feder des Bagdader Gelehrten Sejjid Hibeteddin as-Sahraṣṭānī, sowie eine Zusammenstellung aller Fragmente aus den verlorenen Schriften Naubakhti's, die sich bis jetzt haben nachweisen lassen. Der Namenindex enthält zugleich biographische Quellenangaben, die auch über den Rahmen des edierten Werkes hinaus von Nutzen sind.

The Sects of the Shi'ah, Arabic text,
edited by H. Ritter. 1931. 30 + 115
pages. RM. 10.—

This is the only work which has been handed down out of the extensive literary activities of the Shi'ah Scholar Naubakhti (c. 300 H). It is written by a Shi'i and contains the oldest exposition of the formation of the groups within the Shi'a, and can lay claim to be of the greatest interest to all scholars who are concerned with the political and religious history of Islam. The introduction contains a detailed account of the life and writings of the author by the Baghdad Scholar Sejjid Hibeteddin as-Sahraṣṭānī. It is a combination of all the fragments of the lost Naubakhtian writings which have up to now been discovered. The index of names also contains biographical information which is not confined to the present book but is of general interest to students of the Shi'ah sect.

Dieser Band der bekannten Chronik des Ibn Iyās behandelt die Zeit unmittelbar vor der türkischen Eroberung Ägyptens und ergänzt die Lücke der Bulaq Ausgabe zwischen den Jahren 906—921=1501—1515. Die Chronik bietet den ausführlichsten und interessantesten Bericht über die ägyptische Kultur der Mamlukenzeit. In der von Paul Kahle verfaßten Einleitung werden die Handschriften und die verschiedenen Rezensionen, in denen der Text überliefert ist, behandelt und der Bulaq Druck kritisch betrachtet.

This volume of the well-known Chronicle of Ibn Iyās fills the gap in the Bulaq edition between the years 906—921=1501—1515, the time just preceding the Turkish Conquest of Egypt. The Chronicle is known as the most detailed and most interesting account of the civilisation of Egypt at the time of the Mamluks. There is an introduction to the Text by Paul Kahle dealing with the known MSS of the work and the different forms in which the text has been handed down to us, and given also a criticism of the Bulaq Print.

Vol. 5e:

Ibn Iyās, al-Ḥanafī Muḥammed b. Aḥmed,
Badā'i' az-zuhūr fī waqā'i' ad-duhūr

Die Chronik von Ägypten. 5. Teil: 922—928=1515—1521. In Gemeinschaft mit M. Sobernheim herausgegeben v. P. Kahle u. M. Muṣṭafā. 1933. 16+490 Seiten. RM. 30.—.

The Chronicle of Egypt, Fifth Part: 922—928=1515—1521. Ed. together with M. Sobernheim by P. Kahle and M. Muṣṭafā. 1933. 16+490 pages. RM. 30.—.

Nach der Auffindung von 4 Bänden des Werkes in der Handschrift des Autors Ibn Iyās selbst und nach ihrem Vergleich mit der Bulaq Ausgabe stellte sich heraus, daß ein großer Teil dieser Ausgabe eine lückenhafte und fehlerhafte Zusammenfassung des Originals darstellte. Daher wurde es notwendig, den ursprünglichen Text, der in halbvolgärem Arabisch geschrieben ist, auf Grund dieser neu entdeckten Hss. herauszugeben. Der vorliegende Band umfaßt die Jahre 922—928=1515—1521, behandelt also eine der bedeutendsten Perioden der ägyptischen Geschichte: die Eroberung durch die Türken.

After the discovery of 4 Volumes written by the author, Ibn Iyās, himself and their comparison with the Bulaq edition, a great part of the latter was found to be a very defective and faulty summary of the original. It became therefore necessary to re-edit the original text, written in half colloquial Arabic, on the basis of these newly discovered MSS. The published Volume comprises the years 922—928 (1515—1521) and consequently deals with one of the most important periods of the history of Egypt—the Conquest by the Turks.

Das Biographische Lexikon. Teil I.
Herausgegeben von H. Ritter. 1931.
VIII+385 Seiten, 7 Lichtdrucktafeln.
RM. 25.—

Das 29 Bände umfassende biographische Lexikon des Ṣafadī (764/1363) ist das größte und umfassendste biographische Nachschlagewerk, das die arabische Literatur aufzuweisen hat. Es wird hier der 1. Band des Riesenswerkes, auf Grund der ältesten Hss., z. T. sogar des Autographs ediert, vorgelegt. Eine Menge von Leuten werden darin behandelt, über die man sonst nirgends etwas findet. Die besonders ausführlich gehaltenen Biographien von Zeitgenossen Ṣafadī's lassen das Werk über den Rahmen einer Kompilation hinauswachsen.

The Biographical Dictionary, Part I.
Edited by H. Ritter. 1931. VIII+385 pages and 7 plates. RM. 25.—

The biographical dictionary of aṣ-Ṣafadī (died 764/1363) comprising 29 Vols. forms the largest and most comprehensive work of reference which exists in Arabic literature. The first volume of this enormous work is published on the basis of the oldest MSS partly written by the author himself. The lives of a great number of men are described in it, about whom information cannot be found anywhere else. As the work contains also extensive biographies of contemporaries of the author, the book is much more than a mere compilation of other works.

Othman'sche Konsonantentext einst durchaus nicht allgemein anerkannt war und wie sein Buchstabenbild viel freier und mannigfacher gedeutet wurde, als die offiziell anerkannten Lesarten erkennen lassen; sie beweisen, daß auch auf dem Gebiet der Überlieferung des Koran die geistige Entwicklung im Islam von Reichtum und Fülle auf dem Wege der ausschließlichen Anerkennung einiger bedeutender Schulen konvergierend zu relativer Einförmigkeit verlaufen ist. Die Sammlung solcher Lesarten von dem alten Grammatiker Ibn Khälawaih (gest. 370 d.H. = 980/81 n. Chr.), die ein Späterer aus einem seiner Werke ausgehoben hat, ist die einzige uns vollständig erhaltene; sie faßt nicht nur das verstreute Material zu einem sehr großen Teil zusammen, sondern bietet auch viel noch ganz Unbekanntes. Zusammen mit der Edition wichtiger Werke ad-Dānī's (Nr. 2 und 3 der Bibliotheca Islamica) leitet die Herangabe dieser Sammlung eine neue Epoche in der wissenschaftlichen Erforschung des heiligen Buches der Muslime ein.

the consonant text of Othmān was not generally accepted, and how its characters were much more freely and more variedly interpreted than the official readings let appear; also they prove that in the transmission of the Koran as well as in other spheres the mental development of Islam by exclusively following a few important schools gradually converged from fullness and diversity to relative monotony. The collection of such readings by the ancient grammarian Ibn Khälawaih (died 370/980), taken from one of his works by a later author, is the only complete one which has been handed down to us; it not only brings a large part of the otherwise scattered material together, but adds much that was unknown. Together with the appearance of ad-Dānī's important works (Vols. 2 and 3 of the Bibliotheca Islamica) the publication of this collection inaugurates a new epoch in the scholarly examination of the Holy Book of the Muslims.

Name: _____

Address and Date: _____

though this is usually the case. The founder must clearly express his wishes either by *wakafu*, *habafu*, *rabafu* or if he uses other formulas by an addition that "it must neither be sold nor given away nor bequeathed" (a phrase always occurring in wakf documents, cf. the tradition quoted below and the wakf document of Shāfi'i, *Umm*, iii. 281-83; otherwise it would only be a *zadda*). The founder must further describe the object accurately and state exactly for what purpose and in whose favour the endowment is made. The fifth works deal very fully with the interpretation of the separate expressions describing those for whom the foundation is intended.

5. The following conditions are further necessary for the completion of a valid wakf:

a. It must be made in perpetuity (*was'adad*), which in the case of foundations for definite individuals is managed by allotting the proceeds after their death to the poor. It is therefore also inalienable.

b. It must come into force at once and there must be no provision for postponing it (*mu'ajjalat*), except the death of the founder; but in this case as in the case of a will the founder can only make one third of his property wakf.

c. It is an irrevocable legal transaction (*qabul* *la'im*); but according to Abū Hanifa (not however his pupils and the later Hanafis), the foundation may be revoked except when it is connected with the death of the founder (Sarakhsi, *Mabāḥiṣ*, xii. 27). The Hanafi founder therefore always brings a formal suit against the administrator for the restoration of his property; the judge, who then has the choice between the teaching of Abū Hanifa and that of Abū Yūsuf, decides according to Abū Yūsuf, since the latter teaches irrevocability, and confirms the wakf by rejecting the petition.

d. Among the Hanafis (also in Ibn Abī Laila; Sarakhsi, xii. 35) and the Imāmits there is further required the conveyance (*taṣlim*) of the endowment to those for whom it is intended or rather to the administrator; on the other hand not in Abū Yūsuf, since according to him, as in the other schools, the endowment is already complete by the declaration of the founder's wishes (*hawf*). In the case of a foundation for the common good (mosque or cemetery) the conveyance is completed by its being used, even if only by one person.

Among the Mālikis on the other hand, the points mentioned here are not essential, e.g. it can be revoked not only by the founder but also by his heirs (Khalil, transl. Santillana, ii. 560-61).

6. As Muslim law does not know the conception of the legal person, opinions differed regarding the position of the wakf in the law of the property. According to one view (Shāfi'i, Abū Yūsuf and the later Hanafis; Shāfi'i and his school), the founder's right of ownership ceases; this is usually said that it passes to Allah; this however only denies the right of ownership of the founder and that of all other mortals. According to a second view (Abū Hanifa [cf. thereon also Shāfi'i, *Umm*, iii. 275 sq.] and the Mālikis) the founder and his heirs retain the right of ownership; he is however prevented from exercising it. According to the followers of this school, in the case of a mosque, the right of ownership of the founder ceases as soon as a single person has performed his *ṣalat* in it. According to a third view (some Shāfi'is, Ahmad b. Hanbal), the ownership passes to the beneficiaries (*muṣṭafī* *'alaik*)

(cf. e.g. Shāfi'i, *Tanbīh*, ed. Juynboll, p. 164, 2). The ownership in the yield (*manfa'a*) belongs however, according to all jurists, to the *muṣṭafī* *'alaik*.

7. The administration of the wakf is in the hands of a *nāṣir*, *ḥāzim* or *mutawallī* who receives a salary for his services. The first administrator is usually appointed by the founder; frequently he is the founder himself (among the Mālikis this invalidates the foundation). The *ḥāzim* has a right of supervision; he appoints the administrators and if necessary dismisses them (e.g. for neglect of duty). The form of the administration and the use to which the revenues are put depend on the conditions laid down by the founder. The revenues must however be used primarily for the maintenance of the buildings etc.; only the surplus goes to the beneficiaries. Agreements to lease the lands and buildings can only be made for three years as a maximum.

8. Extinction of the wakf. If the founder secedes from Islam, the foundation becomes invalid and passes to his heirs. Endowments which have lost their object fail, according to the view held of the position with regard to the law of property, to the legitimate heirs (among the Mālikis only if they are poor) or they must be used for the poor or for the common good; in no case may they be confiscated by the temporal authorities.

II. Origin, history and significance

According to the general opinion of the Muslims there were no wakfs in Arabia before Islam, neither in houses or lands (cf. Shāfi'i, *Umm*, iii. 275, 280). The *fuḥafā'* trace the institution to the Prophet although there is no evidence of this in the *Kur'ān*. In comparison with other things the support for this institution in tradition is very slight although it is always said by the legists that the companions of the Prophet and the first caliphs used to make wakfs. In a tradition of Anas b. Mālik it is said that the Prophet wished to purchase gardens from the Banu 'l-Nadījar in order to build a mosque; they refused to take the purchase money however and gave the land for the sake of God (Bukhārī, *Waṣāyā*, bāb 28, 31, 35). According to a tradition of Ibn 'Umar, on which the legists lay chief stress, 'Umar, later caliph, at the partition of Khaibar acquired lands (*arṣ*) which were very valuable to him and asked the Prophet whether he should give them away as *ṣadaqa*. The Prophet replied: "Retain the thing itself and devote its fruits to pious purposes" (*ḥabibi aṣlahā wa-rahibi ṭhamaratahā*). 'Umar did this with the provision that the land should neither be sold nor bequeathed; he gave it as *ṣadaqa* for the poor, (needy) relatives, slaves, wanderers, guests and for the propagation of the faith (*fi sabil Allāh*); it is not to be a sin for the administrator to eat of it in moderation or feed a friend if he does not enrich himself from it (Bukhārī, *Shurūṣ*, bāb 19; *Waṣāyā*, bāb 29, cf. 33; Muslim, *Waṣāyā*, tr. 15, 16; Ibn Mādjā, *Ṣaḥīḥ*, bāb 4; Ibn Hanbal, ii. 12, 55; Ibn Sa'd, *Tabaqāt*, iii/1, 260; cf. Naṣā'ī, *Iḥṣān*, bāb 2, 3). In another version the reference is to a palm-garden called Thamgh (Bukhārī, *Waṣāyā*, bāb 23; Naṣā'ī, *Iḥṣān*, bāb 3; Ibn Hanbal, ii. 114) which he acquired from the Jews of the Banu Hāritha (Ibn Hanbal, ii. 125). In both cases however, the reference is to one and the same piece of ground in Khaibar which was called Thamgh (cf. Nuwawī,

Shurh Maṣābiḥ; *Sarakhsat, Maṣābiḥ*, xii, 31; Mujarriz, *Muḥarrir*, s. v.; according to Ibn al-Athir, *Nakḥḥ*, s. v., however, Ṭaḥḥ was a quite well known estate of 'Umar's in Medina. A third tradition of Amas b. Malik concerns a family endowment. In keeping with the pronouncement in *Shura* iii, 86, Abū Ṭaḥḥ gave the Prophet his favourite piece of ground, the Bahrān garden (in Medina, where Mu'awīya afterwards built the Kayr Bahr Ḥudalla; cf. Yāqūt, i, 783) where the Prophet used to go to to enjoy the shade and drink the water. The Prophet however gave it back to him with the observation that he should make it an endowment for his relatives. Abū Ṭaḥḥ thereupon gave the garden as a *ṣadaka* for Ubayy and Basīn (Bukhārī, *Waṣāyā*, bāb 17; cf. Naṣīr, *Ḥikā*, bāb 2). In other traditions quoted by Bukhārī (*Waṣāyā*, bāb 12: about a sacrificial animal; *Waṣāyā*, bāb 32: a riding camel) and others regarding the making of *wakf* of movables it is only a case of simple *ṣadaka*. The case of the palm-garden (*ḥāṭṭ*) in Bukhārī, *Waṣāyā*, bāb 20 is similar.

The legists seek to trace the institution of *wakf* back to the Prophet through these traditions. It is remarkable however that the oldest legists are not agreed on essential points of the *wakf*. In this connection Shāfi'i's polemics against unnamed opponents, certainly including Abū Ḥanīfa, are interesting (*Umm*, iii, 275-277, 280). There the view of Shurāḥ (d. 82=701) is refuted, which challenges the admissibility of *wakf* at all by quoting a saying of the Prophet not found in the canonical collections: "No withholding from the quotas obtained by God" (*lā ḥadā 'an farḍi 'Allāh*). Shāfi'i attacks the view that the *wakf* remains the property of the founder and his heirs. The inalienability of the *wakf* was disputed by Shurāḥ as the Prophet was said to have said things which had been made *wakf* (*ḥadīṭ*) (*Kisāḥ, Ḥadīṭ al-San'ī*, vi, 219). An illustration of this is given in a note in the above-quoted third tradition in Bukhārī; according to this, Ḥanīfa said his share to Mu'awīya. Ḥanīfa however was attacked for this. Shāfi'i seems to have contributed to the success of the views on *wakf*, which later became predominant. Abū Yūsuf is said to have first declared for the irrevocability of the *wakf*, when on a pilgrimage he saw in Medina the numerous *wakfs* of the Muslims (*Sarakhsat, Maṣābiḥ*, xii, 28). All this suggests that the institution of the *wakf* arose only after the death of the Prophet in the course of the first century A.H. and only assumed rigid legal forms in the second century. Its origin is to be sought in the strongly marked impulse to charitable deeds which is characteristic of Islam; thus we find it associated in a tradition (see above) with an appropriate verse of the Kor'an, and Shāfi'i (*Umm*, iii, 275) calls it a *ṣadaka makarrama*. In addition there was the fact that the Arabs found in the conquered lands foundations for the public benefit for churches, monasteries, orphanages and poorhouses (*pieux censeaux*) and may have adopted this form for the practice of the charity recommended by their religion. These endowments of the Byzantine period were inalienable, and managed by administrators and were under the supervision of the bishops (cf. especially Justinian, *Novelle* 131; Sarrailh, *Les Pieux Censeaux dans le droit de l'Justinien*, in *Mélanges Girardin*, Paris 1907, v, 313-314). C. H. Becker (*ibid.*, ii, 404) had already come to the same conclusion when

he showed that in Egypt the custom of making sites in the towns (*ribā'*) *wakf* and not agricultural land (*arḥāl*) which existed down to the Tūlanid period, goes back to a Greek original. But already in this early period agricultural land must elsewhere have been made *wakf*; Shāfi'i already speaks of this and Bukhārī (*Waṣāyā*, bāb 27) has a chapter: "If anyone makes agricultural land (*arḥāl*) *wakf* and does not give the boundaries". This was not unknown to the Byzantines also; Justinian (*Novelle* 65) exceptionally allows the Mosaic church to sell lands and vineyards, which had been given as endowments for the ransom of prisoners and to be used for the poor and brought in no yield worth mentioning.

On the further history of the *wakf* in Egypt Makrīzī (*Khitaṭ*, ii, 295-296) gives interesting notes. Abū Bakr Muḥammad b. 'Alī al-Maḥarrī (this is the right reading, d. 345=956) was the first to make agricultural land *wakf* for the holy cities and other purposes. The Fātimids however at once forbade the making of country estates and entrusted the Kādī 'I-Kudāt with the supervision, assisted by a *dimḥ* al-*shāḥ*. In 363 (974) al-Ma'īz ordered the property of the endowments and the *wakf* documents (*sharā'if*) to be handed over to the state treasury (*hauṣ al-māl*); the revenues from the *wakfs* were then farmed out for 1,500,000 dirhams annually; out of this sum the beneficiaries were paid while the rest went to the treasury. As a result of this system of farming them out, the *wakf* possessions had so much in value by the time of al-Ḥākim that the revenues in the case of many mosques no longer sufficed for their maintenance. In 405 (1014) he therefore created a large new foundation and had the condition of the mosques regularly examined.

In the Mamlūk period the foundations were divided into three groups: 1. *Ḥāḥ*. These were under the supervision of the *dimḥ al-sulṭān* and were administered by a *shāḥ* with a special *dimḥ*; they comprised extensive estates (in 740 [1339]: 130,000 *faddan*) in the provinces of Egypt and were used to keep up mosques and *zāwiyas*. Makrīzī (d. 845=1442) complains bitterly about the abuse and neglect of these endowments; they had come through corrupt practices into the hands of the emirs; the beneficiaries, who were called *ṣafā* or *ḥafā* but knew nothing of *ḥāḥ* or of preaching, were registered in the name of some ruined mosque. 2. *Amḥ al-hukmān*. These consisted of town lands in Miṣr and Kahira; their revenues were earmarked for the two holy cities as well as for charities of all kinds. They were under the control of the Kādī 'I-Kudāt and were administered by a *shāḥ* (sometimes by two, one for each part of the city); there was a special *dimḥ* for each part of the town. In this connection Makrīzī again makes a touching complaint about the conditions which were becoming worse and worse; from the time of al-Malik al-Nāṣir Farajī (801-845=1398-1412) the *wakf* estates had become poorer and poorer as a result of maladministration. The *ḥafā* in return for bribes allowed sales, without another piece of ground being purchased in place of that sold; it was only necessary to produce witnesses who alleged that this or that building was dangerous to the neighbours and the passers-by. 3. *Amḥ al-ḥāḥ*, family endowments, each of which had their own administrator. These were monasteries (*ḥāḥ al-ḥāḥ*).

madrasas, mosques, türbas, which owned extensive estates in Egypt and Syria, some of which were originally state lands, which had been acquired and made wakf. The emir Barkūk (784-801 = 1382-1398) had already tried to confiscate these estates but his scheme failed against the protest of the fuḥḥā. They were however confiscated under his successors.

Conditions in other lands must have been similar to those in Egypt. A hundred years before Maḥmūd we find the Ḥanṣī Šadr al-Šarīf al-Thānī (d. 747 = 1346) in Transoxania complaining that the kādī made the wakfs void by a *ḥilla* (Sannick Ilirgroeje, *Vergr. Geschriften*, II, 163).

The wakf inscriptions (usually only extracts from the wakf documents [*wakfiya*] which were placed on mosques, madrasas etc. the better to prevent the endowment falling into oblivion) afford many valuable details. According to numbers, business premises were most frequently made wakf, usually small shops (*ḥawār*) which often belonged in scores to a wakf, but also warehouses (*khān, funduk*) and stables (*rasmā*) in Fās of the year 756 [1355]: *J. A.*, ser. II, xii, 363; then there were tenements (*ḥār*) or even smaller dwellings. Alongside of these we have various industrial premises: baths, mills, bakeries, oil and sugar presses, soap works, paper works (*ṣarāḥ*: *C. I. A.*, Jerusalem, No. 70 of 695 = 1295), looms (*ṭirār* in Fās of the year 725 [1325]: *J. A.*, loc. cit., p. 195), post-houses (*yam*, in Bagdad of 760 [1359]: Sarro-Hersfeld, *Archäol. Reise*, II, 188). In the third place are agricultural establishments, most frequently gardens, but also farms and even whole villages (*ḥarya*, in Morocco *madīkar*; first found in 666 [1267] in Ḥam; of Salīḥa Bāḥar: Oppenheim, *Schriften aus Syrien*, No. 3 and 721 [1321] in Fās of the Marīnid Abū Sa'īd: *J. A.*, ser. II, x, 158).

The use to which the produce, sometimes in money and sometimes in kind, was to be put was minutely prescribed in the foundation document. In addition to benefiting the poor the revenues were primarily used to pay the staffs of mosques, madrasas, Kūrān schools, hospitals or to be used for the benefit of the inmates of a monastery etc. (cf. for details C. H. Becker, *Islamstudien*, I, 264 ff. from which the statements here without a reference are taken), for mosques and madrasas cf. vol. III, p. 368-369, for libraries etc. cf. *KIRKAKHNA*). The income was also used in some way for the two holy cities. Kāṭibay in 885 (1480) for example ordered that from the revenues corn should be bought to provide *ḥaḥīḥa* for the inhabitants of and visitors to Medina (*C. I. A.*, Egypt, No. 324), or the revenues, as in Tripolis in the case of the wakf *al-sharīf* which dates from the middle ages, were earmarked for the maintenance of the city walls (Califfana, p. 127; now used for other pious purposes). Very frequently we find the provision that only what is left over, after paying wages etc. is to be used for the maintenance of the etc. (cf. *C. I. A.*, Jerusalem, No. 39 of 595 [1298]; Egypt, No. 338 of 710 [1310]; Bel, *Inschr. arabes*, à *En*, in *J. A.*, ser. II, x, 119 of 810 = 1408).

The inscriptions are also eloquent about abuses, embezzlements, and exploitation of the wakfs. Thus we frequently find edicts which free the wakfs from unjust burdens and taxes (cf. e.g. Sobernheim, in *Baalbek, Ergebnisse der Ausgrabungen u. Untersuchungen*, III, [1922], No. 36 and 38). The

founders themselves endeavoured to prevent embezzlement etc. by dividing the lands among a number of endowments in small portions so that the several administrators could keep a check on one another, or the supervision is put by the founder in the hands of an administrative commission, to which the kādī, the khaṭīb and the prominent citizens of the town belong (e.g. in Mostaganem of the year 742 [1340] in *J. A.*, ser. II, xiii, 81). We have very early evidence of a central wakf administration like that of Egypt, e.g. under the Umayyads in Cordova there was a central treasury for the wakf (*ḥiṣn al-wakf*) in contrast to the state treasury: *ḥiṣn al-māl* under the supervision of the Kādī l-Kuṣṣāṭ (Lévi-Provençal, *L'Espagne musulmane*, Paris 1932, p. 71, 85) and in Fās in the time of the Marīnids there was an official who had to administer all the wakfs of the town (*J. A.*, ser. II, xii, 370). But all this could not permanently prevent embezzlement and frittering away of the wakf estates.

The wakf system in the east was very beneficial in ameliorating poverty and misery and in furthering learning, but it had its shady side morally as well as economically. On the one hand, considerable sections of the populace were taken from industry by the continual creation of new simulates and supported at the expense of the country; on the other hand, the capital for these great endowments had to be supplied by the wealthy and this was acquired not by productive labour but by extortion and unprecedented exploitation of the people (cf. C. H. Becker, *op. cit.*). The immense accumulation of landed property in the possession of the Dead Hand further was economically injurious, although from time to time confiscations by the state and illegal disposal by the administrators had a regulating effect. One consequence of this accumulation very frequently was that the soil was not used to the best advantage; these great *latifundia* are even often an impediment to the introduction of modern agricultural methods. They often deteriorated to such that the yields were not even sufficient for the necessary upkeep and improvements. To avert this evil and to arouse the personal interest of the tenants perpetual leases have been granted, apparently since the xvth century, which differ somewhat in the different countries but are the same in their main lines. Originally only used in case of lands that had gone out of cultivation, they gradually came into use for other wakf estates also.

The most widely distributed type of agreement of this kind (throughout the whole of the former Turkish empire including Egypt and Tripolis) is the *ijāra waḥida* (in contrast to this the short term lease is called *ijāra mawālida*) = called from the two sums in it: the tenant pays a lump sum down according to the value of the land on the conclusion of the agreement (*ijāra mu'adḍala*) and an annual fixed rent (*ijāra mu'adḍala*) so that the right of ownership in the endowment may not lapse. He is bound to keep the land in order and make it productive. He can bequeath it (originally only to his children, since 1867 however, to other heirs named by statute) and sell his rights in the land with the approval of the administrator of the endowment. If the tenant dies or the tenant following him without leaving heirs the land as *wakf* goes back to the endowment. New buildings are regarded as increment.

Another kind of agreement usual in Syria and Egypt is the *ikr* which corresponds to the *birār* in Tripolis and Tunis but has a rent which rises or falls with alterations in the value of the piece of ground. The tenant can only bequeath it, but has unrestricted rights in his new buildings and new plantations. The agreement only becomes void on non-payment of rent. In Turkey the *wakf* is similar and in Tunis the *enaf* (*enaf*) agreement, but with a fixed annual rent and in Algiers down to the French occupation the *ana* (*ana*) agreement and in Morocco the *guelas* (*guelas*) in the case of business houses and factories) and *gaa* (*gaa*) in case of agricultural lands) (cf. Michaux-Bellière, in *R.M.M.*, xlii. [1911], 197-248), as well as throughout the Maghrib the *shah* or *shah* *al-istifā*. In all these agreements it is a question of the usufruct (*shah* *al-manaf*). The thing itself (*raha*) remains the property of the endowment, which is recognised by the payment of rent; while the *manfa* becomes the property of the lessee. As a result the legists, who at first regarded these agreements in accordance with the customary law as an unpermitted innovation, in the end came to tolerate them since the inalienability of the *wakf* remained secure.

These varieties of agreement were not however created specially for the letting of *wakf* estates but were rather older forms of lease adapted to the *wakf*. They probably originated in cases in which a piece of land had been made *wakf* with similar formulae. Thus the *guelas* is already found in the Marinid period in a *wakf* document for the medrese al-Sahrī in Fez of the year 723 (1323) in which such *guelas* plots of ground are made *wakf* (7. A. ser. 11, x. 222); similarly in Egyptian *wakf* documents of the year 691 (1292) *ikr* lands are made *wakf* (Moberg, in *M.O.*, xii. [1918], 10, N. 8). According to Makrīf (*Khatib*, ii. 114), it is a question of "lands the development of which undertaken by a third person is prevented". They were originally state lands, which however on payment of ground rent (*ad*) could be built upon or used for planting gardens. Later however, they became completely *wakf* (Makrīf, *el. Wist.*, ii. 107). According to a *fatwa* of al-Farūqī (d. 1061 = 1670), the *ikr* agreement is a form of lease by which land is given in perpetuity when built upon or cultivated. Similarly the *birār*, a word which must be of Persian origin, is found as early as a *fatwa* of al-Bazzālī (d. 877 = 1424). In both cases we have the question whether such a piece of ground can be made *wakf* (in Ibn 'Abidin, *Radd al-Mukhtār*, Mir 1327, iii. 428). These agreements probably deal with forms of lease which were originally used in the state domains and are ultimately a survival of the ancient emphyteusis, which was already usual in the Byzantine period for churches and monasteries and their lands (Mitteis and Wilcken, *Grundzüge und Chrest. der Papyruskunde*, i/l., p. 313).

Family endowments are almost as old as those for the public good. The earliest example is the *wakf* document in which Shāfi' makes his house in Fustāt with everything belonging to it *wakf* for his descendants (*Umm*, iii. 281-283). Such foundations while being a charitable object in keeping with religion, primarily secure the descendants an income for all emergencies and in particular protect the property in times of inse-

curity from unscrupulous rulers, although in practice they did not always have the desired result (cf. above). In addition it was a legal means of evading the Kur'anic law of inheritance, whether in order to exclude particular heirs or to include those not entitled to inherit or in order to keep the estate intact, when it would be broken up by the application of the law of inheritance. The institution of the family endowment was also abused for other purposes: a man would make his property *wakf* for his descendants in order to put it out of reach of his creditors, which however is forbidden in a *fatwa* of Abū 'I-Sa'ūd (d. 928 = 1474; cf. *Brit. Mus. Add. MS.* N. 7.834, fol. 131^b). Family endowments in the east are very numerous and economically harmful from their great extent. In Egypt for example, the income from these endowments in 1928-1929 was higher than that from all the other *wakfs* together (over £ 1,000,000, cf. *R. E. Isl.*, iii. 295).

III. Modern Conditions

The estates of the Dead Hand in the former Turkish empire were estimated at three quarters of the whole arable land and in modern Turkey they have recently been calculated as £ 30,000,000 in value (*O. M.*, v. [1925], 8; in the Budget for 1928 the revenues are entered as £ 3,489,000). Towards the middle of the sixteenth century, they comprised in Algiers the half, in 1885 in Tunis $\frac{1}{2}$ and in 1927 in Egypt $\frac{1}{3}$ of the cultivated soil. The accumulation of such extensive possessions in the Dead Hand meant a serious injury to the economic life of the country; but apart from anything else a piece of ground that is *wakf* cannot be burdened by a mortgage. In addition there were everywhere abuses in the management of these estates and frequently there was an uncertainty in law regarding the question of ownership. The *wakf* system thus everywhere became a problem in the course of the last century. The European Powers (France) were the first to see in it an impediment to the economic development of their Muslim colonies but Muslims themselves (Turkey, Egypt) are now no longer blind to this point of view.

France was the first to try to tackle the problem in Algiers and in not very skilful fashion. As early as 1830 it was laid down that all public *habous* should pass into the possession of and be administered by the French government which aroused particular indignation among the Muslims on account of the endowments for the holy cities. The inalienability of the *habous* was then overcome indirectly: in 1844 the permanent rent was declared redeemable and in 1858 the *ana*-contract became a simple contract of sale, in which the rent was regarded as the interest on the purchase price. It was further ordained that the argument of inalienability should not be used as a ground of a charge against either French or natives. The sale of the *habous* was thus protected. Finally by the law of July 26, 1873, the legal position of land was brought completely under French law and all conditions contradictory to it were abolished. The sale of the *habous* was thus recognised in practice, but in order not to interfere further with the religious sentiments of the Muslims or with their family life, the institution was left in existence as a means to circumvent the Muslim law of inheritance, although in this mutilated form. Since 1873 the French courts have adopted this standpoint, which does not follow

with absolute certainty from the ordinance. The tenants of the wakf are now no longer guaranteed the peaceful enjoyment of the endowment, since one of the partners can sell the *habous* and the others in such a case have to make their claims against him. The Muslim population however avoided a sale as far as possible or again invested the proceeds in another piece of ground to take the place of the first.

France went to work more cautiously in Tunis and Morocco. Khair al-Din had already in 1874 created a central office for the administration (*jam'iyat*) of the public *habous* in Tunis and in 1885 the *mel*-agreement was legalised in the sense of the customs previously in vogue. In 1898 it was then arranged that the *habous* could either be exchanged in kind or for money (in the latter case another piece of ground must be purchased to replace it, in keeping with the Shari'a) and that it could be let out on a simple lease for a period of years (as long as ten with the possibility of extension). Here again however, they went a step further to break up the estates of the Dead Hand. By the decree of Jan. 22, 1905 the *mel*-rent was declared redeemable in 30 annuities. Later however another plan was adopted, less offensive to religious sentiment, to create small holdings on a state assisted basis. By the decree of April 12, 1913, natives could get their lands as *mel* without public competition, if they had for a long period passed from father to son. These endeavours were concluded for the present by the decree of July 17, 1926; by this in the case of landed estate the Tunisian Muslim who lives on the piece of ground in question and tills it himself, or his ancestors have for at least 35 years, becomes the permanent possessor on payment of a yearly rent; the plot of land can however only be inherited in the male line. This measure met with opposition from occupiers of family foundations (cf. the party's item in the programme for the elections in the native section of the Grand Council in 1928: "to protect private wakfs"; *O. M.*, viii [1928], 322). For the administration there has been since 1908 alongside of the *jam'iyat* also a *Conseil Supérieur des Habous*. The *habous* of the Zawiya, which are administered by Wakils (usually identical with the Shaikhs), are also under state control; in the case of the family endowments which are under the supervision of the *kāfī*, the government interferes only under certain conditions — e.g. if the ownership of the endowment is threatened.

In Morocco in 1912 a *Direction des Habous* was created which also has to supervise family endowments and by a *dahir* of July 21, 1913 the leasing of the *habous* was regulated anew; in the first place the long lease of untitled lands was restricted to ten years and an exchange for money made possible with the obligation to buy another piece of ground instead. It was further ordained by *dahir* of Feb. 27, 1914, that the rents, hitherto very small, should be raised in keeping with the value of the estates. A *dahir* of July 8, 1916 then gave permission for the redemption of *marfa'a* privileges (*gza*, *guelas* etc.) so that the wakf land privileges became the property of the occupier. In these cases, however, the sums received had to be invested in another piece of ground. France thus sought to avoid a conflict with the Shari'a and to use the legal possibilities of the Shari'a to improve the economic situation.

In Tripoli and Cyrenaica the central administration of the wakf which existed under the Turks was taken over by the Italians and reformed. The institution itself was not disturbed in the slightest. But under Italian jurisdiction disputes are settled, not by the Shari'a courts but by the ordinary courts of law as the wakf is regarded as coming under the land laws. Another regulation introduced in Cyrenaica by the decree of Aug. 23, 1923 was soon afterwards repealed. By the decree of July 3, 1921 (No. 1207) new land registers were introduced, including a special register for the wakf and for the wakf disposed of by *iffaratain* agreements. The first interference with private wakfs originated on political grounds and resulted in the confiscation of all the property of the Senûsî by the state; only the mosques and cemeteries retained their wakf character and passed under the administration of the public wakfs (decree of Dec. 22, 1930; cf. *O. M.*, xi 324).

For Palestine, Syria and the 'Irāk, it is provided in the mandate of 1921 that the wakfs should be administered by the mandatory power in keeping with the Shari'a and the conditions laid down by the founder. In Palestine, England was content with a theoretical right of control by decree of Dec. 20, 1921; she created a *Supreme Muslim Sharia Council* (altered regarding the method of election and several other points in 1926 and 1929), of 5 members indirectly elected, which controlled the affairs of the wakfs along with other matters (*O. M.*, i [1921], 594–596; ix [1929], 311–313). — France on the other hand in her mandated areas in Syria placed the wakfs under direct supervision of the mandatory power. By an edict of the High Commissioner of March 2, 1921, three bodies for the administration of the Muslim wakfs in the whole Syrian mandated territory were created: a *Conseil Supérieur des Wakfs*, a *Commission générale des Wakfs musulmans*, and a *Contrôleur général des Wakfs musulmans*, who is the official directing the two other offices and at the same time the general controller. The controller is appointed by the commissioner and is responsible to him (Rabbath, *L'Évolution politique de la Syrie sous mandat*, Paris 1928, p. 207 sq.). In 1926 *wakfa'a* and *hikr* agreements were forbidden by the High Commissioner and replaced by *muhdala*. — In the 'Irāk by the constitution of July 10, 1924, the wakfs were put under a Wakf Ministry, the duties and powers of which are to be regulated by a special law (not yet formulated); disputes on points of law are dealt with by the Shari'a tribunal, which decides according to the *madhhab* to which the foundation belongs (*O. M.*, z [1930], 540 sq.).

In Turkey as early as the beginning of the sixteenth century, a central administration of the wakfs was created and made a Ministry in 1840. A distinction is made between regular *Ewkaif* (*wakfa-i nāzil*) in *mulk* lands and irregular *Ewkaif* (*wakfa-i ghairi nāzil*) in *mirtze* or state lands, or according to the method of administration, between *wakfa-i mawdu'a*, which are in the possession of and administered by the *Ewkaif* Ministry, *wakfa-i müstahak*, which are only under the supervision of the Ministry, and *wakfa-i müstathana*, which are completely independent (e.g. Christian foundations). While the complete abolition of the wakfs had already been considered in the Tanzimat period (1867), it was the Turkish Republic which took

(the final step, the first Muslim state to do so. By one of the secularising laws of March 3, 1924 (Nº. 429), the *Evkâf* Ministry was abolished and wakf affairs transferred to a general directorate (*mudiriyyet-i 'umûmiye*) subordinate to the Premier in order "to solve the problem in a manner really advantageous to the nation" (Art. 7). [The more rigorous formulation given by Pritsch, in *M. S. O. S. At.*, xxvi. 196, from the previously published scheme, did not become law]. The tendency then was towards nationalising the wakfs but the question is so far not quite settled. According to the law of Feb. 22, 1926 (Nº. 748), wakf estates (*wakf-i mabûf*) must be sold to the communes and other undertakings for the public good (e.g. factories). By the law of 1930 relating to communes, numerous buildings like mosques, cemeteries, waterworks have passed to the communes so that only one third of its work is left to the wakf administration. It is now intended to replace it by an *evkaf bankası* (O. M., x. [1930], 551). The endeavour is therefore being made to break up the estates of the Dead Hand and to put them to more useful purposes but no one has yet dared to abolish the wakf system altogether. It was permitted by the Budget of the *Evkâf* Directorate for 1926 (Nº. 850, 1276, Art. 6, which was prolonged from year to year) to exchange or sell certain pieces of wakf ground, but the money received could only be used for the purchase of land or the erection of buildings.

In Egypt, the attempts at reform go back to Muhammad 'Ali who confiscated all wakf agricultural land (*ruq'a*) and compensated the beneficiaries; he only left in existence wakfs which consisted of houses and gardens (Clot-Bey, *Aperçu général sur l'Égypte*, Paris 1840, II. 195; cf. also Lane, *Manners and Customs*, chap. iv., at the end). In 1851 a central administration was created which after various transformations was raised to a Ministry in 1913. The decree of July 13, 1895 regulated the administration of the wakfs anew and put under the central administration all wakfs for the common good, as well as those family endowments the administration of which for any reason became transferred to the central authority by legal decision or arrangement. Since 1924 the Wakf Ministry has been under the control of Parliament, with the result that the condition and revenues of the wakfs have been considerably improved. Stimulated by what had been done in Turkey the indefensible conditions of the family foundations provoked on the consideration of the budget of the ministry for 1926/1927 a discussion of the question whether family foundations should be retained at all. Two bills were laid before Parliament by deputies in this connection. The one only considered reform; the family endowments were to exist for at most 30 years after the death of the founder and then become the property of the beneficiaries; the existing foundations were not to be dissolved but treated in this spirit. The second proposal was for the immediate abolition of family endowments and their transfer to the private ownership of the beneficiaries. Both proposals were referred to a committee, but the decision was deferred by the dissolution of Parliament in July 1928. These proposals naturally aroused the opposition of the orthodox; the Egyptian modernists, it is interesting to note, are careful not to propose to abolish wakfs simply on economic and moral grounds but

endeavour to support their proposals, like their opponents, by traditional views and to show that the family endowment is not a religious institution.

Czarist Russia had already administered the wakfs in the Crimea through Russian officials for its own advantage and had confiscated numerous wakf lands in Turkestan and given them to Russian emigrants, and under Bolshevik rule in the war against all that is connected with religion the wakf buildings and mosques were also declared state property and let out. Cf. on this the statements by 'Iyâ'î Ishâkî at the Islamic Congress in Jerusalem in Dec. 1931 (O. M., xii. [1932], 133-134).

Various Islamic congresses have dealt with the problem of wakfs but always on traditional lines. Thus the second pilgrimage congress at Mecca (1924) protested against governments dealing with wakfs in any way not in keeping with the stipulations made by the founders and demanded that they should be administered by the standards of the *Shari'a* (O. M., iv. 602). The Islamic Congress at Mecca in 1926 as well as the National Congress of the Hijaz in 1931 demanded of the government that care should be taken to see that revenues from wakfs in favour of the holy cities outside of the Hijaz were collected (O. M., vi. 344; xi. 454). Similarly the Muslim Congress at Jerusalem in 1931 demanded the return of the Hijaz railway with all its rolling stock, because, before it was built, it had been declared a wakf by the Ottoman Sultan.

Bibliography: In addition to the well known collections of traditions and the Fiqh books there are numerous special works of which the following have been printed: al-Khatîrî (d. 261 = 875), *Ahkâm al-Wakf*, Cairo 1904; Ibrahim b. Mûsâ al-Tarâbulusî (d. 922 = 1516), *al-Usûl fi Ahkâm al-Wakf*, Cairo 1292; Ibrâhîl B. Adla and E. D. Ghalloungui as *Le Wakf*, Alexandria 1893. — Of the extensive literature only the more important need be mentioned: Toruauw, *Das muslim. Recht*, Leipzig 1885, p. 155 ff.; Th. W. Juybolli, *Handbuch des islam. Gesetzes*, Leyden 1910, § 60; 3rd (Dutch) ed. 1925, § 62; Kresmarik, *Das Wakfrecht vom Standpunkte des Schariatrechtes nach der Hanafî-Schule*, in Z. D. M. G., xlv. WAKHĀN (in Arabic Wakhkhān), a district to the south of the Pāmīr (q.v.). Wakhān is a long and narrow valley which runs from east to west and is watered by the upper course of the Oxus (Pandja) and by the river Wakhān-daryā, which is the most southern source of the Oxus (cf. AMU-DARYĀ). The length of Wakhān along the Oxus is 67 miles and of the Wakhān-daryā (from Langar-kish to the Wakhājir pass) 113 miles. Afghan sources put the distance from Ishkashim to Sarhadd at 66 *barsā* = 22 *farsakh*.

To the south of Wakhān rises the wall of the Hindu-Kush through which several passes lead to the lands of the upper Indus. The main pass (12,460 feet) of Baroghil leads into Citral. The northern wall of Wakhān is the Wakhān (Nicolas II) range the peaks of which reach a height of 25,000 feet. In the west Wakhān stretches to the bend of the Oxus, where the river entering the boundaries of Shughnān (q.v.) turns northwards. In the east Wakhān (through the high valley of Wakhājir) is adjoined by Chinese possessions and lake Čakmak-thng.

Wakhān lies as a barrier between Russian lands in the north and British in the south so that nowhere are they in direct contact. By the Russo-Afghan agreement of March 4, 1895 defining the frontier, it runs a. in the lower part of Wakhān up the course of the Oxus as far as Langar-kish where the two sources of the Oxus meet: the river Wakhān from S.E. (from the Little Pāmīr) and the river Pāmīr from the N.E. (from the Great Pāmīr); b. from Langar-kish the frontier follows the course of the Pāmīr river to its source (lake Zor-kul or Victoria); c. more to the east again, the frontier runs by a zigzag line towards the south to China (near the Beylik pass). Afghan territory therefore comprises the left bank of the Oxus, all the valley of the Wakhān-daryā, the land on the left bank of the Pāmīr river and a small part of the upper course of the Ak-su (including lake Čakmak-kul).

The Afghan part of Wakhān contains seven districts, namely from west to east: Warg, Urgand, Khandud, Kāl'a-yi Pandis, Babā-Tangī, Nirs-wa-Shalak and Sarhadd (this last named village is at the foot of the Baroghil pass at a height of 11,350 feet), as well as the thinly populated territory of the Little Pāmīr (watered by the Wakhān-daryā).

On the Afghan side there are in Wakhān 64 villages with 3,500 inhabitants and on the Russian

27 with 2,000 inhabitants. The population (Wakhān) belongs to the race of Iranian mountaineers (*Qhānā*) very often with blue eyes, a feature which had struck the Chinese as early as the sixth century. The Wakhān language is an unusual variety of an Iranian dialect (*Qhāfā*). At the present day the Wakhān on the Russian side form part of the autonomous republic of Tadzhikistan.

In his monumental works Sir Aurel Stein supports the thesis according to which the Wakhān corridor ("the most direct thoroughfare") has been used from very early times for communication between the settled areas of northern Afghanistan (Balkh) and those of the modern Chinese Turkestan.

From the seventh century, Wakhān is continually mentioned in the early Chinese sources under the names of Hu-mi, Fo-ho etc. (cf. Marquart, *Erdenach*, p. 243, and Chavannes, *Documents sur les Tou-tou occidentaux*, Index). Hsien Tsang mentions the greenish eyes of the people of Ts-mo-si-t'ie-ti (a form not yet satisfactorily explained) and its capital Hun-t'o-to (= Khandud) with its great Buddhist stūpa. In 747 Wakhān had become the theatre of the operations of the famous Chinese general Kao-sien-č'e against the Tibetans (cf. Chavannes, p. 152—153). Among Arab authors, Isfakhri (< Balkh) several times mentions Wakhān as a land of infidels, as the place from which musk comes and where the Oxus rises (cf. Isfakhri, p. 279, 280, 296; Ibn Rusta, p. 91). Mas'ūdi, *Murūdj*, i. 213; *Tamhīd*, p. 64, applies the term "Türk" to all the inhabitants of the upper Oxus: the Awkhān (اوخان, read: وخوان), Tubbat (Tibetans) and Ayghān (?). As to the Iranian Wakhān the term "Türk" can only refer to their dynasty (cf. Marquart, *Wahrsat und Arang* [still unpublished], p. 101—102). More detailed information is supplied by the Persian geographical work *Huṣūd al-'Alam* (372 = 982, ed. Barthold, 1930, fol. 25b) which calls Wakhān the residence of the king and capital of the land (*shahr*) of Sīkashim (it ought probably to be emended to "Ishkashim, the capital of Wakhān"). At Kh-mādāh (= Khundūd) are the temples (*sur-khāna*) of the Wakhān and "to its left" was a fortress occupied by the Tibetans. Samarqandāq is regarded as the remotest frontier of the dependencies of Transoxiana; it had Hindu, Tibetan and Wakhān inhabitants (probably the Sarhadd of the present day).

AL-WĀQĪ'A (A.), the name of Sūra 181. The title "the befalling, suddenly happening" which is the subject of the first verse is generally taken to refer to the *ḥijāma* (q. v. where the word is translated "the event") or *ḥā'a*, both periphrases for the Day of Judgment. The content of the Sūra is in keeping with this. Opinions differ as to the date of its origin. Noldeke and Schwally put it in the first Meccan period but add that Ḥasan al-Baṣrī regards it as Medinese. That some verses are Medinese seems to be generally acknowledged in tradition while Noldeke-Schwally think the Sūra was composed at one time. In contrast to the verses there quoted as traditional Medinese, the *Tafsīr al-Diyālūn* for example allots verses 80 and 13 (equal 38 in Flügel's notation) to the Medina period, while the official Egyptian *Qur'ān* (cf. Bergsträsser, in *Jal.*, 22, 2 299.) allots verses 81 and 82 (Flügel 80 and 81) to Medina. The same *Qur'ān* describes the Sūra as revealed after Sūra 22, which according to Noldeke and Schwally belongs to the second Meccan period.

(M. PLESSNER)

AL-WĀQIDĪ, ABU 'ABD ALLĀH MUHAMMAD B. 'UMAR, an Arab historian born in 130 in Medina; according to *Aghāni*, vii. 189, his mother was a great-grand-daughter of Sa'ib who introduced music into Medina. Al-Wāqidī was so called after his grandfather al-Wāqid, al-Aslamī as a mawlā of 'Abd Allāh b. Buraiza who belonged to the Medinese family of Aslam. On the occasion of Ḥārūn's pilgrimage in 170 (see *Tabari*, iii. 605) he was recommended to him as the best authority on the holy places of his native town and acted as guide to the caliph and his vizier Yahyā when they visited the sacred places. He used the connections he had then formed with the court in 180 (see Ibn Sa'd, vii/ii. 77) when he met with financial difficulties and went to Baghdad and thence to Raḡḡa where Ḥārūn was then holding his court (see *Tabari*, iii. 645). He was kindly received by Yahyā and presented to the caliph who recalled with pleasure his visit to Medina and gave him rich gifts. He himself left a full account of his journey to Ḥārūn's court and the reception he found there, which is given in Ibn Sa'd, v. 314 299. The older sources make no reference to his receiving from Ḥārūn the office of *kaḍī* of the eastern quarter of Baghdad; the story first appears in Yāqūt, *Udaba'*, vii. 56, without a source being given. On the other hand it is certain that Ma'mūn after entering Baghdad in the beginning of 204 (see *Tabari*, iii. 1037) appointed him *kaḍī* of 'Askar al-Mahdī in Ruḡḡa (Ibn Khallikān, Cairo, l. 641, wrongly ascribes to Ibn Kūtaiba the statement that Wāqidī was *kaḍī* of the western side of Baghdad; Ibn Kūtaiba only says in agreement with Ibn Sa'd that the *kaḍī* of the western side conducted Wāqidī's funeral service). Wāqidī was on intimate terms with al-Ma'mūn and appointed the caliph his executor, and al-Ma'mūn carried out the duties in person (see Ibn Sa'd, v. 321) when Wāqidī died at the end of 207 (see Ibn Sa'd, v. 321, vii/ii. 77; Ibn Kūtaiba, *Ma'ārif*, p. 258; Sam'ānī, fol. 577^b; Yāqūt, *Udaba'*, vii. 56). Wāqidī made no secret of his gratitude to Yahyā even after the fall of the Barmecides; the vizier had several times relieved him of the financial difficulties in which Wāqidī was constantly involving himself. Wāqidī himself (Ibn Sa'd, v. 319 299.) gives an

example which has become celebrated of the vizier's generosity, which occurs again in al-Mas'ūdī, *Murūj* (Cairo), i. 237 299.; Yāqūt, *Udaba'*, vii. 57; Ibn Khallikān, l. 641 in a slightly different form. — A list of Wāqidī's writings is given in the *Fihrist*, p. 98 29. and Yāqūt has one that is almost exactly the same (*Udaba'*, vii. 56). The great majority of these works are of an historical nature, some relate to the *Qur'ān*, Fiqh and Hadīth. To the first group belong: 1. *al-Ta'riḡ wa 'l-Maḡāzī wa 'l-Ma'āthir*, 2. *Akhḡār Maḡāzī*, 3. *al-Tabaqāt*, 4. *Futūḡ al-Sha'm*, 5. *Futūḡ al-'Irāq*, 6. *al-Diyālūn*, 7. *Majma' al-Humayn*, 8. *al-Sira*, 9. *Asmā' al-Nabī*, 10. *al-Ridda wa 'l-Dār*, 11. *Harb al-Awam*, 12. *al-Kharā'ij*, 13. *Sifāt*, 14. *Wafāt al-Nabī*, 15. *Amr al-Habash wa 'l-Fil*, 16. *al-Sakifa wa-Ba'at Abi Bakr*, 17. *Sirat Abi Bakr wa-Wafāt*, 18. *Marā' al-Kharā'ij wa 'l-Anḡār*, 19. *al-Katā'if wa-Wafāt 'Umar al-Dawānir wa-Taḡrīf al-Katā'if wa-Marā' al-Humayn*, 20. *Mawlid al-Ḥarām wa 'l-Humayn*, 21. *Dar al-Dawānir wa 'l-Darā'ib*, 22. *Ta'riḡ al-Fuḡāḡ*, 23. *al-Ta'riḡ al-kawr*.

Wāqidī's historical interest covered the early history of Mecca and Medina as well as the Muslim period. Only the *Kitāb al-Maḡāzī* has survived as an independent work out of all his writings; the *Tabaqāt*, which comes down to events of the year 186, is the foundation of the *Tabaqāt* of Ibn Sa'd (q. v., v. 314, 17) who also made considerable use of the *Sira* (cf. also *Bibl. Arab. Hist.*, ix. 231), *Ma'āthir* and *Asmā' al-Nabī*; in all parts of his work that cover the same field, Wāqidī is his main authority and also in the *Majma' al-Humayn*. *Tabari* frequently quotes the *Ta'riḡ al-kawr*, which must have come down to the year 179 (see *Tabari*, iii. 639) and Ibn Huthayb (d. 584) has preserved numerous fragments of the *Kitāb al-Ridda wa 'l-Dār* [*al-Dār* (*Yasum al-Dār*) i.e. the assassination of 'Uthmān (see Caetani, *Annali*, ii. index, v. v. Wāqidī; cf. also *Bibl. Arab. Hist.*, ix. 237)]. The *Futūḡ al-Sha'm* and *al-'Irāq* are not preserved; the books which go under these names belong to a later date and have been credited to Wāqidī. Wāqidī prefixes a list of his most important authorities to his *Majma' al-Humayn*, a third of which was published by H. von Kremer (*History of Mohammed's Campaigns*, in *Bibl. Ind.*, Calcutta 1856) and of which Wellhausen has given a synopsis in German (*Mohammed in Medina*, Berlin 1882); the list is repeated in Ibn Sa'd, ii/1. 1, 3-10 and iii/1. 1 (cf. also vii/ii. 77) and has been fully discussed by Siebman in *M. S. O. S. A.*, vii. 11 299., 21 299. The list consists entirely of the names of learned men, either born or settled in Medina, who had given information to Wāqidī, and went back to authorities like al-Zuhri, 'Aḡim b. 'Umar, Yand b. Rūmān etc. Many of the authorities quoted by Wāqidī, like Abū Ma'āhar, Ma'mar b. Rāḡid, Mūsā b. 'Uḡba had themselves written books on the *Maghāzī*; on the other hand, Wāqidī never mentions by name his most celebrated predecessor in the field of the biography of the Prophet, Muḥammad b. Isḡāk. This is all the more remarkable as he not only (in *Tabari*, iii. 2512) passes a very favourable verdict on him but undoubtedly made very great use of his book and obviously follows him in the arrangement of the material (see Wellhausen, *op. cit.*, p. 11 299.; J. Horowitz, *De Wāqidī libere*, p. 9 299.); he possibly wished to conceal his indebtedness by not mentioning the name of Ibn Isḡāk. In the *Kitāb al-Maḡāzī*

Wakīdī's strong interest in Hadīth and Fiqh which is shown by his own writings on them finds expression in the fact that a very considerable portion of the new material contributed by him deals not with history proper but with theology and law. In Wakīdī also the traditions either separately or digested into one record follow one another without being linked up just as in works on Hadīth, but quite contrary to the method of Ibn Ishāq who gives them greater cohesion by adding a connecting text. Wakīdī's merit lies mainly in his transmission of a very large amount of material and in fixing its chronology. Muslim scholars also recognise him as an authority in the field of history (and also of Fiqh, cf. Yāqūt, *Udabā'* vii. 55) while they reject him for Hadīth proper (see the verdicts in Ibn Hajar, *Tahdhīb*, ix. 363 199; Uḥḥābi, in Fischer, in *Z. D. M. G.*, xlv. 421 199; j. Fack, *Muhammad Ibn Ishāq*, p. 14). In the *Fihrist*, Wakīdī is described as a Shī'ī of the moderate school (*kāna yataḥḥizūn al-ḥanafiyya*) and it is added that he transmitted the statement that 'Alī was one of the miraculous signs of the Prophet, like the cod of Mūsā and the revival of the dead by 'Isā. When we are further told in the *Fihrist* that Wakīdī also studied *taḥḥiz* (*yulḥannu 'l-taḥḥiz*) this is in keeping with his point of view in the *Kisāb al-Maghāzī*; for there 'Alī's name is not mentioned in several accounts of events in which Ibn Ishāq expressly mentions his participation and Wakīdī did not suppress traditions hostile to 'Alī (see J. Horowitz, *loc. cit.*, p. 43 19; do., in Ibn Sa'd ii/i. 127, 22; Noldeke, in *Z. D. M. G.*, lii. 31; W. Sarasin, *Das Bild Alis*, p. 21 199). On the other hand, the very title of the monograph *Mawlid al-Ḥasan wa 'l-Ḥusain* (see above) reveals a Shī'ī attitude — a non-Shī'ī would hardly have dealt with this subject — and the zeal for 'Alī is also seen in the fact that Wakīdī collects a great deal of evidence of Muḥammad's having died in 'Alī's bosom (see Ibn Sa'd, ii/i. 50; cf. also p. 51, 21, 61, 19, 63, 22, 76, 19 199, 86, 19 199). The story in the *Fihrist* seems however to be isolated and the Shī'ī *riḍā* books do not quote Wakīdī. In view of his close connection with the 'Abbāsids, it is not surprising that he puts the part played by 'Abbās in the most favourable light possible. If he does not mention 'Abbās in the *Maghāzī* among the prisoners of Badr (see Horowitz, *op. cit.*, p. 44 19; Noldeke, *op. cit.*, p. 21 199; Caetani, *Annali*, ii. 89, note, where however the fact is overlooked that, as Tabari, p. 1341 shows, Ibn Ishāq records his capture), it is clear from Ibn Sa'd, iv/i. 6, 23 199, that Wakīdī admitted the fact of his capture but represented it as the act of an angel. In Ibn Sa'd, iv. 20, Wakīdī is also given as authority for the statement that 'Abbās adopted Ismā' before the Hīdīra and on p. 21, 8 199, for the story that 'Umar entered his claims in the first place in his *Diwān* (cf. also Caetani, *Annali*, under year 10, § 264, 266, 341).

Ferrand's *Relations de voyages et textes géographiques arabes, persans et turks* (cf. the *Bibliography*).

I. WAKWAK OF THE SOUTH OR WAKWAK OF AFRICA

The islands of Wakwāk are situated in the Lārwi sea which washes the western coast of India and the lands inhabited by the Zandj (Yāqūt, p. 49). The Wakwāk of the south is different from that of China (Ibn al-Fakih, p. 55). The lands of Sofala and of Wakwāk are situated at the extremity of the sea of the Zandj (Mas'ūdī, p. 108). The land of Wakwāk is contiguous to that of Sofala; there are two towns in it, Darū and Nabhana, miserable and sparsely populated (Idrisi, p. 183). The town of Daghdagha, inhabited by hideous and deformed negroes, is next to the land and island of Wakwāk (Idrisi, p. 184). Wakwāk is situated in the land of the Zandj (Ibn al-Wardī, p. 425), to the east [= south] of Sofala, on the same southern [= western] shore of the Indian ocean which extends without interruption to the end of the tenth section of the first climate, at the place where the Indian ocean flows out of the Surrounding Sea (Ibn Khaldūn, p. 460). The islands of Wakwāk are near the last of the islands of Dībadjāt al-Dum [= Laccadives and Maldives] (*Merveilles de l'Inde*, p. 586).

The Wakwāk of the land of the Zandj is vast, fertile and prosperous (Ibn al-Wardī, p. 425).

The gold of Wakwāk of the south is of inferior quality compared with that of the Wakwāk of China (Ibn al-Fakih, p. 55). There is much gold in the Wakwāk of the land of the Zandj (Mas'ūdī, p. 108; Ibn al-Wardī, p. 425).

The natives of the Wakwāk of the land of the Zandj have no ships, but the merchants of 'Omān come to trade with them and get slaves in exchange for dates (Ibn al-Wardī, p. 425; cf. also Idrisi, p. 183). They know neither cold nor rain (Ibn al-Wardī, p. 425).

II. WAKWAK OF THE EAST OR WAKWAK OF CHINA

Wakwāk lies to the east of China (Ibn Khur-dādhbih, p. 30), behind China (Ibn al-Fakih, p. 55), to the south of the 'Irāk (*Abrégé des merveilles*, p. 140). The Wakwāk of China differs from the Wakwāk of the south in the superior quality of its gold (Ibn al-Fakih, p. 55). Kankdis is the remotest town in the east; it is situated at the extremity of China and of Wakwāk (*Mafatīḥ al-'Ulūm*, ed. G. van Vloten, p. 217). The island of Wakwāk is situated to the north-east of the Greater Sea (al-Bīrūnī, *Ḥanūn al-Ma'ādī*, p. 598). The island of Wakwāk forms part of the group of islands of Khmer (al-Bīrūnī, p. 163). The islands of Wakwāk are situated in the southern part of the Sea of Darkness (Idrisi, p. 190); they adjoin the islands of Mūdja and those of the Clouds and of places consisting of islets and inaccessible mountains (Idrisi, p. 192—193). It is a land situated above [i.e. south] of China (Yāqūt, p. 231—232). The islands of Wakwāk situated in the Chinese

Sea, are close to the islands of Zābag [= Sumatra] (Kazwini, p. 300, 303, 311); they are situated in the extreme east (Ibn Sa'īd, p. 334); beyond the Utiqūn range, quite close to the coast; they are reached by the Chinese Sea (Dimashqī, p. 375), beyond the ocean of Darkness (*ibid.*, p. 391). They are the most famous islands of the China Sea and number over a hundred (*Nuḥat al-Kulūb*, transl. G. Le Strange, p. 222). The islands of Wāk-wāk are situated to the south of the island of Kōmr and to the west of the islands of Silt [= Corea] (Ibn Khaldūn, p. 461); in the China Sea and near the islands of Zābag, they are said to number 1,600 (Bākuwī, p. 463); to the south of the islands of Timor, Banda and the Moluccas (Sidi 'Alī, p. 513); opposite China, a year's journey from the east coast of Africa (*Merveilles de l'Inde*, p. 588). Wāk-wāk is 4,500 parasangs from Suez (Ibn Khurdādhbih, p. 32).

The island of Nias on the west coast of Sumatra, which adjoins Zābag, forms part of the archipelago of Wāk-wāk (Ibn al-Wardī, p. 414-415). An island situated 50 *zām* [= 150 hours' sailing] from Sribusa [= Palembang, S. E. of Sumatra] on the way from Sribusa to China, and 15 *zām* [= 45 hours' sailing] from Campa [= modern Annam], forms part of Wāk-wāk (*Merveilles de l'Inde*, p. 589).

The route to Wāk-wāk is from the Coromandel coast (Dimashqī, p. 391); one comes there by steering by the stars (Kazwini, p. 300 and 311; Ibn al-Wardī, p. 413; Bākuwī, p. 463).

It is a large island (Ibn al-Wardī, p. 415). The islands of Wāk-wāk number 1,700 (Kazwini, p. 300; Ibn al-Wardī, p. 415); 1,600 (Kazwini, p. 311; Bākuwī, p. 463). They are inhabited and cultivated (Ibn al-Wardī, p. 415); they contain large towns (*Merveilles de l'Inde*, p. 587).

The ruler of the islands of Wāk-wāk is a woman. She sits nude on a throne, a crown of gold on her head, surrounded by four thousand young slaves also nude (Kazwini, p. 300; Ibn al-Wardī, p. 415). This queen is called Dambara, wears a robe woven of gold and shoes of gold (Ibn al-Wardī, p. 415; cf. Idrisi, p. 177).

Some inhabitants of Wāk-wāk are black (al-Bīrūnī, p. 164). They resemble the Turks; they are numerous, very industrious, active and intelligent, but treacherous, lying and cunning (*Merveilles de l'Inde*, p. 587). They weave tunics with sleeves in a single piece; they build large ships and floating houses (Ibn al-Wardī, p. 415).

In 334 (945) of our era, a fleet of 1,000 ships from Wāk-wāk came to plunder some islands of East Africa and certain towns of Sofala of the Zandj. The Wāk-wāk used to come there to get the merchandise necessary for their country and China, like ivory, tortoise shell, panther-skins, amber and Zandj slaves. The voyage lasted a year (*Merveilles de l'Inde*, p. 587-588). The men there are finer than the women (al-Bīrūnī, p. 164).

The Chinese sometimes land there (Idrisi, p. 193); merchants go with them to look for gold (*ibid.*, p. 194). One cannot land there (Ibn Sa'īd, p. 335).

Gold is abundant (Ibn Khurdādhbih, p. 31; Ibn al-Fakih, p. 55; Idrisi, p. 194; Kazwini, p. 300; Ibn Sa'īd, p. 334; Ibn al-Wardī, p. 415; Bākuwī, p. 463). The chains and collars of dogs, monkeys and other tame animals are of gold (Ibn Khurdādhbih, p. 31; Kazwini, p. 300; Dimashqī, p. 391; Ibn al-Wardī, p. 414; Bākuwī, p. 463). The chiefs have trunks made of gold with which they

build fortresses and houses (Ibn al-Wardī, p. 414; cf. Abū Zaid Hasan, p. 84). Tunics woven in gold are sold there (Ibn Khurdādhbih, p. 31 and 674; Kazwini, p. 300-301). The gold is exported in ingots and as dust (Idrisi, p. 194). The gold mines of the islands of Wāk-wāk is of such productivity that official ordinances are engraved on plates of gold (*Nuḥat al-Kulūb*, transl. G. Le Strange, p. 192).

There is no iron so that it is valued as gold is in other countries (Dimashqī, p. 391).

Flora: ebony of excellent quality (Ibn Khurdādhbih, p. 31; Idrisi, p. 194); ebony (al-Bīrūnī, p. 164; Kazwini, p. 301).

Fauna: elephants, many birds (Idrisi, p. 193); elephants of great size (Ibn al-Wardī, p. 416); many monkeys which are trained to sweep the houses, and to look for wood in the forests and to do other work (*Burhān ḡayy*, p. 563).

Fabulous Fauna: fish 200 cubits long, sometimes 20 cubits round (Kazwini, p. 303); flying scorpions (*Merveilles de l'Inde*, p. 580); the *ramonid* bird which enters fire without injury; a kind of hare which changes its sex (*ibid.*, p. 587).

III. Wāk or Wāk

In Arabic orthography الواق, الوقي.

The island of Wāk lies to the south of the 'Irāq (*Abriḡ des merveilles*, p. 140), in the neighbourhood of the island of Kōmr, behind the mountain of Utiqūn, in the centre of the Southern Sea (Abahīhī, p. 470). One goes from the sea of Campa to the land of Wāk (*Abriḡ des merveilles*, p. 144). The sea of Campa, which comes before the China Sea, adjoins Wāk (*ibid.*, p. 145). The land of Wāk with its islands lies to the east of China (*ibid.*, p. 153). The land of Wāk lies south of the equator between China and Sofala of the Zandj, on the south coast of the Indian Sea (Nuḥairi, p. 394).

Wāk is 4,500 parasangs from Suez (*Miḥl et une nuit*, p. 506).

The mahārājā, king of the islands, lives in the land of Wāk (*Abriḡ des merveilles*, p. 153; Abahīhī, p. 144). Marvellous statues are made there (*ibid.*, p. 153).

Much gold is found there (*Abriḡ des merveilles*, p. 153; Abahīhī, p. 471). The bits for horses, chains and collars of dogs are of gold (*Abriḡ des merveilles*, p. 153; Abahīhī, p. 471). The people make shirts woven of gold (*Abriḡ des merveilles*, p. 153 and 678).

The queen sits on a throne with a crown of gold on her head, surrounded by 400 young virgins (Abahīhī, p. 470).

The exports are aloes, musk, ebony, cinnamon and all kinds of merchandise (*Abriḡ des merveilles*, p. 153).

IV. THE WONDERFUL TREE OF Wāk-wāk AND OF Wāk

The earliest mention of the story of the fruits in the shape of human beings is given us by a Chinese text: the 通典 *T'ong Tien* of Tou Yeou, a book which was written between 766 and 801 of our era. Tou Yeou frequently quotes his relative Tou Huanan, who in all probability was taken prisoner at the battle of Talas in 751, was in Arab lands from 751 to 762 and put what he

had learned in foreign lands into a book, the

經行紀 *King Hing Ki*, which is now lost.

It was therefore apparently Tou Houan, who, during his forced sojourn among the Arabs, picked up the legend which Tou Yeou relates as follows (*T'oung Tien*, ch. CXCVIII, p. 239):

"The king of the *Ta-shih* (Arabs) had despatched men who boarded a ship, taking with them clothes and food and went to sea. They sailed for eight years without coming to the far shore of the Ocean. In the middle of the sea, they saw a square rock; on this rock was a tree with red branches and green leaves. On the tree had grown a large number of little children; they were six or seven thumbs' length. When they saw the men, they did not speak, but they could all laugh and move. Their hands, feet and heads were fixed to the branches of the trees. When the men detached them and held them, as soon as they were in their hands, they dried up and became black. The messengers returned with a branch of this tree which is still in the palace of the king of the *Ta-shih* (Arabs)" (*T'oung-Pao*, Oct. 1904, transl. by E. Chavannes, p. 484-487).

This text was reproduced in the encyclopaedia of Ma Twan-lin (Ch. cccxxix) who wrote in 1319. Schlegel, who translated it for de Goeje and did not trouble to find out whence Ma Twan-lin had taken it, inserts before the penultimate phrase the words: "The name of this tree was *ie-nie*". "I do not know," says Chavannes, where he got this note which is not in the text of Tou Yeou nor in that of Ma Twan-lin". On Tou Yeou cf. also Paul Pelliot, *Des artisans chinois à la capitale abbasside en 751-762* in *T'oung-Pao*, 1928 (xxvi), p. 110-112.

Trees called *wāḥwāḥ* are also found in India, the fruit of which looks like human beings (Mu-tahhar, p. 117) or like women (Ibn Tufail, p. 200).

This island of *Wāḥwāḥ* is not so called after a tree the fruit of which is said to be in the shape of human heads crying: *wāḥ, wāḥ* (al-Bīrūnī, p. 163). The island or land of *Wāḥwāḥ* is on the contrary called after this wonderful tree (Kazwini, p. 300; Ibn Sa'id, p. 334; Dimashki, p. 375; Ibn al-Wardi, p. 416; Bakawi, p. 463; Ibn Iyās, p. 483; Sidi 'Ali, p. 513; *Burhān al-ʿUlūm*, p. 563; *Mille et une nuits*, p. 568-569; *Merveilles de l'Inde*, p. 580; *Nuḥat al-Ḳulūb*, transl. G. Le Strange, p. 222).

There is in *Wāḥ* a tree like the nut-tree and cassia tree the fruit of which looks like a man. When the fruit is ripe, it utters distinctly the words: *wāḥ wāḥ*, then falls (Dimashki, p. 375; Abūhi, p. 470-471).

The *Kitāb al-Diyūgrafiya* of the anonymous geographer of Almeria (xith cent. A. D.) contains the following interesting description: "In the part of the land of China which is in the sea, there are many islands; among them, those which are famous and well known number eight. The largest and most important is the island of *Wāḥwāḥ*. It is so called because there are great, tall trees there, the numerous leaves of which are like those of the fig-tree, except that they are larger than the leaves of the fig-tree. This tree bears fruit in the month of *Adār*, i.e. the month of March, and they are fruits like the fruits of the palm-tree. These fruits end in the feet of young girls which project from them; on the second

day of the month the two legs protrude, and on the third day the two legs and thighs. This continues so that a little more protrudes each day until they have completely emerged on the last day of the month of *Nisān*, i.e. April. In the month of May their head comes out and the whole figure is complete. They are suspended by their hair. Their form and stature are most beautiful and admirable. At the beginning of the month of June, they begin to fall from these trees and by the middle of the month there is not one left on the trees. At the moment of falling to the ground, they utter two cries: *wāḥ, wāḥ*. It is also said that they utter three cries. When they have fallen to the ground, flesh without bones is found. They are more beautiful than words can describe but are without life or soul. They are buried in the earth. If they were not buried but left lying no one would be able to approach them on account of the stench. This is a wonder of the land of China. The island is at the end of the inhabited world in this sea. It is in the east of the section of the coast where it touches the Greater Sea" (MS. 770 of the Bibliothèque du Protectorat Français au Maroc, in Rabat, fol. 5^b, supplemented by a manuscript of the same work in the René Basset library).

V. THE ANIMAL-VEGETABLE WAKWAK

The *Wāḥwāḥ* are according to the *Kitāb al-Haiyawan* of al-Djāhiz (d. in 255 = 869) the product of plants and animals (in *Hayāt al-Haiyawan al-kubrā* of al-Damiri, Cairo 1330, ii. 177 and 38). The *Wāḥwāḥ* are beings closely resembling the human species. They are the fruit of great trees from which they hang by the hair. They have breasts and sexual organs like those of women. They are coloured and never cease crying *wāḥ, wāḥ*. When one of these creatures is captured, it becomes silent and falls dead (*Abrégé des merveilles*, p. 138 and 677-678). The *Wāḥwāḥ* are like palm and coconut trees, intermediate between the animal and vegetable kingdoms (Dimashki, p. 367).

VI. THE KING OF THE ISLANDS OF WAKWAK

The king of the islands of *Wāḥwāḥ* is known as *Kashmir* (var. *Qashmir*, *Nuḥat al-Ḳulūb*, Pers. text, p. 239; Engl. transl. by G. Le Strange, p. 222). Mr. Jadunath Sarkar has kindly examined the MSS. of the *Nuḥat al-Ḳulūb*, accessible to him. In that of the Oriental Public Library (Khuda Bakhsh Library) of Patna, the name of the king is blank. The Imperial Library of Calcutta (Bohar Collection) has two MSS. of the text: N^o. 99 has *کشمیر* and N^o. 98 *کشمیر*. These readings unfortunately do not recall any possible known name.

VII. PROPOSED IDENTIFICATIONS

In an appendix to the *Lièvre des merveilles de l'Inde* (p. 295-307) de Goeje published a French translation, reviewed and corrected, of his *Arabische berichten over Japan* under the title *Le Japon connu des Arabes*. He naturally knew and quoted most of the Arabic texts above mentioned. In the course of his researches, he found that the Chinese name for Japan in the Canton dialect is *Wo-ko-wok*, of which *Wāḥwāḥ* is a perfect Arabic transcription and the identification of *Wāḥwāḥ* therefore seemed certain to him.

The old Chinese name for Japan is 倭國 *Wa-koku*, once pronounced **Wa-kwaik*, "land or kingdom of Wa", in Japanese *Wa-ko-ko*, with a barely perceptible final *u*. *Wa-kwaik* would be rendered in Arabic by *واقواق* or *واقواق* which corresponds exactly to the forms given by the Arab and Persian geographers. This reasoning is then by no means worthless but it does not supply decisive proof. It remains to be seen if other evidence can be found to support this agreement.

De Goeje's thesis calls for several observations. In the first place, according to certain geographers, there are two *Wakwāk*: *Wakwāk* of China and *Wakwāk* of the south. Ibn al-Falāḥ expressly says so (cf. above, i.). Mas'ūdī, Idriṣī, Ibn Khaldūn and Ibn al-Wardī locate the African *Wakwāk* beside Sofala of the Zandj on the east coast of Africa; Ya'qūbī in the Lārwi sea, west of India. Now according to certain modern works of Africanists like G. MacTheal and R. N. Hall, *wakwāk* is a name given to the Bushmen by the Bantus of the country, who regard them as a kind of lubbock. This explains the statements made by Mas'ūdī and the Arab geographers who follow him.

On the other hand, *Wakwāk* is represented in Malgasy by *vakwā* + vowel which corresponds phonetically to an old **wakwāk* and means "the people, the subjects, a nation, tribe or clan as a whole". Madagascar might therefore be the island *Wakwāk* of Ya'qūbī. This identification is made certain by the following fact: in the great African island a *pandanus* called *vakwā* grows in great profusion; its fruit is a voluminous syncarp. It is known to the French as *vagouit*. Its shape and characteristics might well have given rise to the story of trees producing human beings (cf. above, iv.). Madagascar thus corresponds as exactly as possible with the description of *Wakwāk* of the south. The *vagouit* of which the *Liure des merveilles de l'Inde* speaks cannot in any case take the place of this wonderful tree, as de Goeje thought.

The other information supplied by the Oriental geographers is as a rule of little use on account of its fantastic nature or its inaccuracy. One note in the *Kitāb 'Adjīb al-Hind* may be mentioned: a famous sailor of the lands of gold, Ibn Lākta, reports that in 334 (945) the *Wakwāk* came with 1,000 ships to the east coast of Africa to procure merchandise and Zandj slaves. The voyage lasted a year. De Goeje, who identifies these *Wakwāk* with the Japanese, acknowledges that the history of Japan makes no mention of this remarkable fact and concludes that it must have been a private enterprise of Japanese merchants and daimyos. E. Chavannes says that such an expedition could not have taken place (*T'oung-Pao*, Oct. 1904, p. 485). M. Maurice Courant, whom I have consulted, is also of this opinion and Mr. Basil Hall Chamberlain, the eminent master of Japanese studies, has written to me to the same effect: It was impossible for the Japanese of the tenth century to undertake an expedition by sea to the islands and coast of East Africa. The *Wakwāk* of China or eastern *Wakwāk* are therefore not the Japanese.

The Arabic and Persian documents which seemed to de Goeje decisive in favour of his thesis, are far from being as conclusive as the illustrious Leyden orientalist believed. Indeed some are definitely against the Japanese theory of *Wakwāk*,

which is really untenable. The existence of two *Wakwāk* is indisputable. The identification of *Wakwāk* of the south with Madagascar and East Africa south of Sofala is equally certain. It only remains to locate *Wakwāk* of China. The most valuable hint for its identification is the statement that the Mahārāja, king of the islands, lives in it. Now we know from other sources that this is the title of the ruler of Zābag, i.e. Sumatra, the land of gold. The Sumatrans were acquainted with the islands and coasts of the western Indian ocean. They peopled Madagascar at an early period and Malgasy is a descendant of a Malay dialect. Idriṣī gives valuable information on this point: "The people of Kōmā (= Madagascar) and the merchants of the land of the Mahārāja (= Sumatra) visit them (the natives of the west coast of Africa) and are well received and trade with them" (MS. 2221 of the Bibliothèque Nationale, fol. 37^a, l. 7-8). A few pages earlier he says: "The people of the islands of Zābag come to the land of the Zandj (here: Madagascar) in large and small ships and they export merchandise from it since they understand one another's language" (*ibid.*, fol. 29^a, l. 15).

The name of the port of Baros on the west coast of Sumatra, the *Bālūs* of the Arab geographers, the *P'o-lou-ke* of the Chinese, is mentioned for the first time by Ptolemy ("Bapōra: vōra, the five Baros islands, inhabited, it is said, by the anthropophagi"), in L. Renou, *La Géographie de Ptolémée*, Hist. 1-4, p. 59; then, by the *Leang Sāu* or *History of the Liang* (502-556) in the form *P'o-lu* and at the end of the viii century by Yi-Tsing who has *P'o-lou-ke*. The Arabs call it sometimes *Bālūs* and sometimes Fanūr < Malay *Pauṇur*. One or other form is found in the oldest texts and recurs in the later ones. It is the famous port of Pakpakland or land of the Pakpak from which used to come the most esteemed camphor.

The tribal name *Pakpak* goes into Arabic as *Fakfak*, which is phonetically so close to *Wakwāk*, that one need not hesitate to identify the two. In Sumatra, as in Madagascar, the *pandanus* flourishes in a wild state and its Batak name *bakkuwā* = Malgasy *vakwā*. There are remarkable agreements in the tribal names and in the flora of the two islands: in Sumatra a Batak tribe called *Pakpak* > Arabic form *Fakfak* and the *pandanus*: *bakkuwā*, in Madagascar the *vakwā* < older **Wakwāk* and the *pandanus*: *vakwā*. It is an historical fact that the Sumatrans only have on several occasions come into the western Indian ocean. The Japanese theory of *Wakwāk* is therefore to be abandoned.

This article is only a synopsis of a memoir now being printed, which will appear in the *Journal Asiatique* under the title: *Le Wakwāk est-il le Japon?* In the limited space available here, the main arguments in favour of this new identification have been given.

WALI (A.) 1. From the Arabic root *wala*, to be near, and *waliya*, to govern, to rule, to protect someone. In ordinary use this word means protector, benefactor, companion, friend and is applied also to near relatives, especially in Turkish [cf. the art. *ʿASABAN WULĀYA*].

When used in a religious connection wali corresponds very much to our title "saint"; but the idea behind it has given rise to a regular theory and in practice has attained sufficient importance for it to be necessary to explain the use of the term. In the Kur'an this theory does not yet exist; the term *wali* is found there with several meanings: that of near relative, whose murder demands vengeance (xvii. 59), that of friend of God (x. 63) or ally of God; it is also applied to God himself: ii. 258: "God is the friend of those who believe". The same title was given to the Prophet and it is one of the names of God in the Muslim rosary.

2. According to Djurdānī, *Ta'rifāt*, the term wali is equivalent to that of *ʿarif bi'llāh* "he who possesses mystic knowledge", "he who knows God". The Muslim saint who is important enough to merit this title is believed to possess several privileges. Not only is he delivered from the 'yoke of the passions' as Ḥudjwiri says, not only has he influence with God, he can 'bind and loosen'; but he also has the gift of miracles (*karāmāt*): he is a miracle-worker. He can transform himself, transport himself to a distance, speak diverse tongues, revive the dead; he can produce various phenomena, often mentioned to-day in psychic studies: thought-reading, telepathy, prophecy; he can raise himself from the ground (levitation) or summon objects from a distance. He can make a dry stick put forth leaves, check a flood, control rains and springs etc. Ḥudjwiri goes even farther and attributes to the saints 'the government of the universe'. It is by their blessing, he says (their *baraka*) that the rain falls and by their purity that plants come up again in the spring. Their spiritual influence makes battles won.

This conception resembles that of Indian poems telling of the great ascetics of Brahmanism who by power of penance succeeded in gaining complete power over nature; but in Islam, this power is rather the result of a gift from God than the result of the personal merit or ascetic practices of the saints. Popular belief has however not extended the power of the saints in this way: it has rather inclined to specialise it, each of them having in the eyes of the multitude the power of performing a special miracle, like curing a particular disease, bringing success in a particular kind of business, guiding travellers, discovering secrets etc. These miracles of saints (*karāmāt*) are distinguished from the miracles of the prophet, which are called *mu'jizat* and are besides few in number, and the theologians discuss in an interesting fashion their evidential value. It is not absolute, whereas the miracles of the prophet count as proofs of religion. — The Mu'tazilis denied that there were men like this having special gifts; they reject the privileges and miracles of the saints and teach that every faithful Muslim who obeys God is a 'friend of God, wali'.

3. The saints have been classed in a hierarchy according to a system which is found in much the same form in different authors. There are always saints on the earth; but their sanctity is not always apparent; they are not all not always visible. It is sufficient that their hierarchy goes on and that they are replaced on their death so that their number is always complete. 4,000 live hidden in the world and are themselves unconscious of their state. Others know one another and act together. These are in ascending order of merit: the *shaykh* to the number of 300; the *abdāl*, 40; the *abrār*, 7; the *awṣiā*, 4; the *nuḥabā*, 3 and the Pole who is unique, *ḥuṣṣ* or *ḡhawṣ*. A number of mystics have actually been given the title of Pole. Djunaid for example was the Pole of his time; Ibn Masrūk was one of the 'pillars' (*awṣiā*). Every night the *awṣiā* traverse the universe in thought and inform the Pole of any defects in order that he may remedy them.

Another variant of this theory is given by Doughty from Algeria. The hierarchy consists of 7 degrees. In the lowest there are the *nuḥabā* to the number of 300, each of whom is at the head of a group of saints without special titles. Next come the *nuḥabā*; then the *abdāl*, from 40 to 70 in number; the *shaykh*, the chosen, 7, who continually move about and spread the Muslim faith in the world; the *awṣiā*, pillars, 4, living at the four cardinal points of the compass with reference to Mecca; the *ḥuṣṣ*, the Pole, the greatest saint of his time, and quite at the top the *ḡhawṣ*, here distinct from the Pole, capable of taking upon his shoulders a portion of the sins of the believers.

D'Oshson gives the following theory for Turkey; here also there are 7 degrees. There are always 356 saints living on the earth. The first is the *ḡhawṣ* *ʿaṣam* or 'great refuge'; the second, his vizier, the Pole, *ḥuṣṣ*. Then come the 4 *awṣiā*, the pillars. The rest are known by their numbers: *uṭṭar*, the 3; *yadīlir*, the 7; *kirkler*, the 40 and *uṣyadīlir*, the 300.

These seven classes correspond to the 7 degrees of beatitude in Paradise. The saints of the first three classes are present invisibly in Mecca at the hours of prayer. When the *ḡhawṣ* dies, the *ḥuṣṣ* replaces him and there is a moving up all through

the series, the purest soul of each class rising to the next degree.

This classification of the walls was made according to Hudjwiri by Abū 'Abd Allāh Muḥammad al-Tirmidhī, who lived shortly before him (10th = 11th century). This individual, also called Muḥammad al-Hakīm, wrote a work entitled *Kāshān al-Hudūd*, the "seal of sanctity", and founded a sect called the *Hakīm*. One of his disciples, Abū Bakr Warāq, was surnamed the "instructor of the saints", *mu'addib al-awliyā'*.

Some difficulty may be found in reconciling this system with the pure spirit of orthodox Islam; it was admitted by the theologians only with the express reservation that however great the saints, the walls, may be, they are always inferior in rank to Muḥammad and the prophets.

4. The worship of saints is not Kur'anic. Without being expressly prohibited by the Kur'an it is sufficiently contrary to its spirit, Muḥammad having forbidden the worship of standing stones, tombs and every kind of superstition. But Islam had to yield on this point to the pressure of popular sentiment, which by its traditions, its tendency to the marvellous and other psychological factors, is strongly inclined to this way of expressing its religious feelings. Numerous saints, differing in different areas, are held in honour in Muslim lands, Sūnī and Shī'ī. These saints are of different origins. Some are great mystics, often founders of orders or of religious brotherhoods; others are ancestors or chiefs of tribes, princes and founders of dynasties. Some are of humbler origin, *illuminati*, half-déranged persons, *majdūhūn*, whose peculiar or incoherent utterances are often regarded as inspired, or even the simple-minded, *bahūl*. Other saints are transformations or survivals of ancient cults, heroes of old days, gods of woods and springs; we find such among the Beduins. As in the Roman Catholic worship, saints are patrons of towns, villages, trades and corporations.

In the Turkey of the sultans, each province had its saint. The most venerated were: Shaikh 'Uḥayd Allāh in Samarḳand; Mawlānā Dīwānī, the great poet, in Bukhārā; Khwāja Ahmad Veswī in Turkestan; Mawlānā Djalāl al-Dīn Rūmī, the famous author of the *Methnawī* and founder of the Mawlawī order (dancing dervishes) in Konya; Shaikh Ṣadr al-Dīn Kōnawī in the same town; Pīr Nakshabandī, founder of an order, in Kāse; 'Arifān in Persia, also venerated in Egypt and Turkey; Shaikh Ahmad Rifā'ī, founder of the order of "howling" dervishes, in Asia Minor; Aḳ Shams al-Dīn, Aḳ Biyik Dede, Shaikh Abū 'I-Wafā', Saiyid Ahmad Bukhārī, Hādījī Bektāsh, founder of the Bektāshī, Hādījī Bāzīm Walī in Aḳ Serāi in Anatolia.

Baghdād has been called the "city of saints" on account of the great number of saints who have lived in the town or whose tombs are there. The most famous is Sidi 'Abd al-Qādir Dīlānī, whose prestige is very great throughout the whole Muslim world. Dīnāid is also an illustrious saint of Baghdad, as is Shihāb al-Dīn Suhrawardī who has a magnificent mausoleum in the centre of the town. Near Damascus is the tomb of Ibn 'Arabī, the famous mystic and prolific writer, who is honoured in Syria and elsewhere. The greatest saint of Constantinople and its patron is Abū Ayyūb al-Anṣārī, the standard-bearer of the Prophet, who fell as a "martyr" (*shāhid*) at the foot of the Golden Horn and was buried on the spot where the famous

mosque that bears his name stands. A son-in-law of Bāyezīd I, Emir Sultān, was regarded as a saint. Several Ottoman sultans are also venerated but the title of wali has actually only been given to Bāyezīd II, on account of his piety. Other princes of the Imperial house have been regarded as saints and miracles attributed to them. Among the Arabs the only caliph who is reputed a saint — excepting of course the first four who occupy a special position — is the Umayyad 'Umar b. 'Abd al-'Azīz, a very pious ruler.

In Egypt the most popular saints are Ibrāhīm al-Dawūdī and Shaikh Ahmad al-Badawī whose tombs are at Tanja. To these we may add Sidi Shādhīlī who died at Humaitūra in the mountains of Upper Egypt; his tomb is much visited. The festival of Saiyid Masrūḳ al-Aḥmadī in Cairo is the cause of one of the most picturesque processions. A very popular saint in Egypt is Sidi Nafīz.

In Arabia various individuals are honoured in the holy cities and their tombs visited, in addition to the usual rites of the pilgrimage. At Medina in the cemetery of Bakī are the tombs of several imāms, that of the caliph 'Uthmān and that of the amīr Ḥunayn, uncle of the Prophet. The "tomb of Eve" recently destroyed by the Wahhābīs, as well as many others, was a few minutes from Djidda and much visited. The tomb had the peculiarity of being in several parts: the head, the navel and the feet were separated by a short distance from each other. In Mecca, in the cemetery of al-Mu'allā, the pilgrims used to visit the tombs of Āmina and Khadija, the mother and wife of the Prophet.

In North Africa the worship of saints and marabouts is highly developed. The road to Tripoli along the sea and the vicinity of the town are fringed with numerous tombs of marabouts, elegant in style, shaded by palm-trees, decorated with gaily coloured cloths and ex-votos placed there by the devout. In the desert at Djerbūb is the tomb of Shaikh Sanūsi, founder of a well known order.

The patron saint of Tunis is Sidi Makhlās and its other saints are Sidi Ben 'Arūs, Sidi Ben Kāsim, Sidi Bū Sa'īd. The Tunisians hold in reverence the caves to which these pious men retired. This region includes the sacred city of Kairuān which has many tombs and the famous mosque of Sidi 'Okba and that called "of the Barber" in which the barber of the Prophet is said to be buried. — In Algeria in the first rank we have Sidi Abū Madyān, a great miracle-worker whose mausoleum near Tlemcen is still much visited. No less important is Sidi 'Abd al-Qādir Dīlānī, the saint of Baghdad to whom are dedicated a vast number of mosques, chapels, and cemeteries in Algeria. Over 200 *ḥabūs* are dedicated to him in the province of Oran alone. Next come Sidi Ben Mughīsh, successor to Sidi Abū Madyān of the tribe of the Beni 'Arūs, assassinated in 625 A. H. whose tomb is in the Djebel 'Alem near Tetwān; Mawlay al-'Arūs al-Durkāsī of Fās, a modern saint who died not long after 1822, and was buried in his *ḥabūs* near Fās; Shaikh Tiddjint, founder of the order, died in 1230 (1815) and also buried in his *ḥabūs* near Fās. In Morocco the principal patron saints are Mawlay Idriis, the founder of the dynasty, venerated at Volubilis, and the shārif of Wazzān, even during their lifetime,

on account of the blessing they bring (their *baraka*) which is much esteemed by the people; even their women are believed to possess this virtue. Several women in Morocco like Lalla Marnia, and Umm 'Abd Allāh have been given, like Sitt Nafisa, the title of saint (*waliya*). Marrākush has seven patron saints called "the 7 men", *sab'at al-rigāl*; among them are Sidi bel 'Abbās and Sidi Slimān al-Djazzili, author of a wide-spread book on prayers. In Tangiers there is Sidi Bū al-Rakya, a miracle-worker of the xviiith century whose festival (*meussem*) is celebrated on the seventh day of the Prophet's *mawlid*; at Meknes, Muḥammad b. 'Isā, founder of the 'Isāwa. In this town a strange story is recorded of a living saint who kept standing leaning against a wall; pious people had a pent-house built above him, then a *qubba* without disturbing him. — In Timbuktu Sidi Yahyā, a miracle-worker of the xvth century, and Sidi Ben Sāst are held in honour.

Bibliography: Oriental works: al-Hudjwiri, *Kashf al-Mahjūb*, transl. R. A. Nicholson, in *G. M. S.*, London 1911; Farid al-Dīn 'Aḥḥar, *Tadhkirat Awliya*, transl. Pavet de Courteille, Paris 1889. This book gives the biographies of 97 shaiḥs. A similar work by Djāmī, *Nafahāt al-Umī*, "The breathings of the esoteric life", contains 600 biographies. Muḥammad 'Alī 'Aini, *Ḥaḍiḡi Beirūn Walī*, Constantinople 1343. — A work on saints by Sidi 'Abd al-'Azīz al-Dabbūgh is very appreciated among Muslims. The various brotherhoods also have books which tell of the lives and miracles of their saints.

Western works: M. d'Ohason, *Tableau général de l'Empire Othoman*, Paris 1788, i. 306 199.; Kremer, *Geschichte der herrschenden Ideen des Islams*; Trumelot, *Les Saints de l'Islam*, Paris 1881; L. Rinn, *Marabouts et Khawān*, Algiers 1884; Goldziher, *Muhammedanische Studien*, Halle 1888, ii. 275—378; Baigès, *Vie du célèbre Marabout Gadi Abou-Médien*, Paris 1884; Doute, *L'Islam Algérien en l'an 1900*, Algiers 1900; do., *Les Marabouts*, Paris 1900; Asin Palacios, *El Mistico Murciano Abenarabi*, ii., Madrid 1926; P. Ricard, *Le Maroc*, in the collection of the *Guides bleus*, Paris 1930; and various books by travellers.

(B. CARA DE VAUX)

AL-WALID R. 'ABD AL-MALIK, Umayyad Caliph (88—98 = 705—715). On the death of his father, the caliph 'Abd al-Malik (Oct. 705), al-Walid, his successor, was over 30. A prince of all average culture, he brought to the throne an aristocratic outlook and a display of religious fervour unknown among his predecessors. In the history of the Umayyads he ranks as the great builder of the dynasty. One of his first cares was to give his capital Damascus a magnificent mosque. Walid cast his eyes on the basilica of St. John the Baptist, once a temple of Jupiter Damascenus. Of this edifice, tradition says that it was divided in two between its old owners and the Muslims after the Arab conquest. Against this we have the explicit testimony of the pilgrim Arculf who visited Damascus in the reign of Mu'awiya I. He says "in honorem sancti Johannis baptiste grandis fundata ecclesia est. Quoniam etiam Saraceni ecclesia incedulorum et ipsi in eadem civitate, quam ipsi frequentant, fabricata est". If this may be believed, then under Mu'awiya, the Arabs in

Damascus were content with a single mosque, a modest (*guardum*) erection built for them and not obtained at the expense of the basilica which was still in Christian ownership in the time of the Sufyānid caliphs. The upholders of the Muslim tradition say that Arculf made a mistake. He did not notice that mosque and church formed a single building.

The caliphs Mu'awiya and 'Abd al-Malik had vainly negotiated with the Christians for the cession of the whole basilica. The autocratic Walid decided to confiscate it without any more ado. He did not take down the building; he only abolished the eastern apse; he built the *Qubbat al-Narr*, the "Dome of the Eagle", above the transept and to the north of the mosque pavement the "Minaret of the Fiancée"; the two other minarets were built upon older towers. Walid's activity was fully displayed in remodelling the interior of the basilica in which he gave rein to all his taste for magnificence and to the suggestions of Syrian decorators. He mobilised a regular army of marble workers. The capitals were covered with gold and the walls with mosaics. An inscription "in letters of gold on a ground of lapis-lazuli" (Mas'ūdi) bore the name of Walid with the date (Nov. 706) marking the beginning of the work, a year after the accession of the Caliph. Along with this great undertaking, Walid directed the building of the great mosques of Medina and Mecca, which he also entrusted to Christian architects.

The arabicisation of the administration is another striking feature of his reign. The great government offices were taken from the Christians, the control of the finances from a Damascus family, the descendants of Ibn Sarrājūn. Finally we may mention the progress of foreign conquests. By a process of expansion which was almost automatic, the Arab empire in this reign attained its greatest extent from Transoxania to Spain, where the Arabs now succeeded in gaining a footing. Walid was a continually fortunate sovereign. Everything succeeded with him, even his autocratic manner, which found expression in a diminution in the tolerance shown to the *dhimmis*. In Syria he enjoyed undisputed popularity. People admired his great buildings, his charitable undertakings and public works and the great conquests of his reign. In keeping with the will of 'Abd al-Malik, his brother Sulaimān was to succeed him. Walid was thinking of substituting his son 'Abd al-'Azīz in his place when death overtook him at Dair Murrān, near Damascus on Feb. 23, 715 at the age of about 45.

AL-WALID B. AL-MUGHIRA R. 'ABD ALLAH B. 'OMAR B. MAḤZUM, an opponent of Muḥammad. Little is known of his life but it is certain that he was one of the most powerful men in Mecca and one of the most ardent opponents of

he Prophet. As head of the numerous and prominent family of the Makhūm he naturally represented the aristocratic interests in the city of Muhammad's birth and that he was himself very prosperous is evident from the fact that, according to traditionists, he owned a garden in Ta'if which he planted for pleasure only and never pulled the fruit in it (Sprenger, I, 359). According to the commentators, there are references to him in several passages in the Qur'ān, e.g. Sūra vi. 10; alii. 30; lxxiv. 11 199; lxxx. 1 199, although his name is never expressly mentioned. One cannot of course place implicit confidence on such statements, which are sometimes based on later deductions. Muslim historians frequently mention al-Walid among those Quraysh who vigorously persecuted Muhammad and endeavoured to silence him. Thus he is said to have been a member of a deputation which went to Abū Tālib [q. v.] and protested to him but without success at the Prophet's conduct. It is also related that Muhammad's enemies had on one occasion, on the approach of the pilgrimage discussed the best means to set strange visitors against Muhammad and proposed in turn the epithets *ḥānīn* 'sooth-sayer', *maḥnūn* 'possessed' and *shā'ir* 'poet' but al-Walid rejected them all until those present finally agreed to his proposal to call Muhammad a *shā'ir* 'magician', who would separate a man from his father, brother, wife and whole family, and to warn the pilgrims seriously against the alleged magician. When 'Othmān b. Ma'ūn, a relative of al-Walid, who had adopted Islam and taken part in the emigration to Abyssinia, but was still under al-Walid's protection, wished to break off this relationship, the latter endeavoured to dissuade him, but in vain. After al-Walid had therefore released himself from all obligations to his relative 'Othmān was severely wounded in a squabble, whereupon al-Walid again offered him his protection but 'Othmān rejected this kindly meant offer. Al-Walid died in Mecca in the year 1 and three of his seven sons adopted Islam. In keeping with his aristocratic descent and social position, his actions were frequently characterised by a certain magnanimity and dignity, and Sprenger (ii. 111) describes him as follows, probably with justice: "He was one of the earliest and most decided enemies of Islam, but at the same time chivalrous and not without culture. He therefore laid more emphasis on dissuading his fellow citizens from the new religion than on snipping it in the bud by attacking the personal rights of the Muslims. Instead of using physical force, he gathered round him men of talent, knowledge and experience like Umayya b. Abi 'l-Ṣalt and Naḍr b. Ḥārith and endeavoured to expose Muhammad's contradictions and deceptions and to make him ludicrous and despicable in the eyes of intelligent people, while he silenced the common people by his prestige and material advantages".

(K. V. ZETTERSTERN)

AL-WALID b. YA'ZID, Umayyad Caliph. He was about 35 (Feb. 743) when he succeeded his uncle, the Caliph Hishām b. 'Abd al-Malik. "If only for his personal courage, liberality, love of letters and patronage and practice of poetry, Walid was bound to shine in the first rank among the Umayyads". Such is the judgment of the *Kutub al-Aghani* (vi. 101) the author of which could not be suspected of partiality for the Umayyads. An artistic and remarkably cultivated young man, which none of his predecessors had been, the son of the hysterical caliph Yazid II, he was certainly also the most libertine. After a brief appearance in Damascus for the enthronement (*hal'a*) the new caliph hastened to resume in the desert the free life, void of all constraint, that he had led as a prince without worrying about affairs of state or the interdictions of the Qur'ān. We need not however believe all the stories of his eccentricities given in the *Kutub al-Aghani*. He spent his time in merry company surrounded by poets, parasites, musicians of both sexes, he himself being justly esteemed as a musician.

His cruelty towards the faithful Khālīd al-Qasri [q. v.] whom he put to death soon raised against him the Yeménis in Syria. Fond of field sports, the caliph had in the lifetime of his uncle built in the middle of the desert a hunting lodge, Ḥasair 'Amra [cf. AMRA]. When he became caliph he proposed to build in the solitude a grand palace and transfer there all the refinements of civilization. Such was the origin of the fantastic castle of Mshatta [q. v.]. A virtuoso in music and poetry, this bizarre and biased character dreamed of eclipsing the architectural glories of 'Abd al-Malik [q. v.] and of Walid I [q. v.].

With its unusual proportions, its façade, carved with delicate tracery like lacework, the building of al-Mshatta "has fascinated the whole world and caused more ink to flow than any other in Syria" (van Berchem). Archaeologists have attributed it successively to the Romans, Byzantines, Ghassanids and Persians. They have neglected the Umayyads, who were great builders from 'Abd al-Malik onwards, and all fond of a *ṣūfiya* or a holiday in the desert. For the builder of Mshatta, we had hesitated at first between Yazid II and his son, both of whom lived in the region of Moab (Lamenns, *La Balaie et la Hira sous les Omayyades*, p. 110 19). A passage in Severus Ibn Ma'qarī (p. 163—164) settles the question in favour of our Walid.

Rebellion was stirring in the provinces and soon spread to Syria. For the first time since Mu'awiya, the harmony between this country and the Umayyads which had given them strength to face the most violent storms, was broken. The discontented Yeménis — they formed the great majority of the Arabs in Syria — were joined by the Qadaria, who also had been ill-treated by Walid II. The numbers of the Qadaria had grown and they were led by a Marwānīd, Yazid, son of Walid I. The majority of the Marwānīds whom he had alienated by his caprices joined the conspiracy. The rebels left Damascus to surprise the caliph who was hunting. In his flight northwards he was overtaken and killed in the little fort of Bakhrā south of Palmyra (April 17, 744).

(H. LAMMENS)

WÄLİDE SULTÂN (A.) Turkish pronunciation *walide* or *walide sultân*; the two words are in apposition, according to Turkish syntax, "the sultân Walide" or "sultânna mother", a title borne in the old Ottoman empire by the mother of the reigning sultân and only for the duration of her son's reign.

The political history of the Wälide Sultân is fairly well known from the Turkish historians, at least as far as those are concerned who took part openly in the government of the country, for example Nûr Bânû, Şafiye, Mâh-Feiker Kösem and Türkhan Khadije.

We are by no means so well informed about the conditions of their life in the sultân's harem. The organisation of the harem only began to be unveiled at the period when the institution itself was beginning to disappear. Influenced no doubt by a feeling of discretion or of modesty, the Turkish historians do not touch on the subject. Western writers, in spite of a lively curiosity, never succeeded in piercing the mystery and frequently give rein to their imagination to complete their notes. The oldest travellers passed over the subject in silence. It is however in western sources that we find valuable information if it is used with care. It is only in modern times however that criticism has dealt with certain fables long believed, such as, for example, the story of the handkerchief thrown by the sultân to his favourites (cf. v. Hammer, xiv. 71—72).

As Na'imâ says (iv. 250, s. 19) the Ottoman sultâns "according to the sultânian *kânûn* did not live in a state of marriage but of concubinage (*isterrâ*)". The word *kânûn* is to be taken here in the sense of "traditional usage" and not of written law. The chief of the customs (*kumrûk nâşîr*) and later the official slave dealers (*yeterdji kâşâ*) and private individuals by gifts supplied the sultân's harem with slaves of the most varied origins: Europe, Asia and Africa.

The custom of concubinage — which we also find in Persia (Chardin, vi. 235) down to the reign of Muḥammad 'Alî Shâh (1907—1909) — must have become established in Turkey gradually. In the early period the Ottoman sultâns chose their wives from the daughters of the Turkish rulers of Anatolia or Byzantine princesses. It is difficult to say what was the social status of these wives or to know in what way they differed from the concubines of these princes. We see clearly from 'Ashk-pasha-zâde's history (ed. Giese, p. 109—110) that Murâd I regarded the Serbian princess whom he married simply as a *qizariye* or "slave" but the preparations for certain other unions were made with a solemnity which suggests that great importance was attributed to them.

After the taking of Constantinople, official marriages of the sultâns became quite the exception. We may mention Sulaimân the Magnificent and 'Othmân II and lastly Ibrâhîm who was the last to conclude a matrimonial alliance with one

of his harem Tellî-Khâssekt or Shâh-Sultân in 1647 (d'Ohsson, vii. 62; Na'imâ, *loc. cit.*). The sultân was however represented in this ceremony by the Grand Vizier.

The principles of Ottoman policy were themselves against these marriages. The relatives of a slave seemed less to be feared and indeed were officially put into seclusion. It is hardly necessary to add that this prohibition only partially palliated the evil it was intended to avoid. As is seen from the bloody story of the Jewess Kera, a contemporary of the Wälide Sultân Şafiye (Baffa), harem intrigues played a great part under some sultâns. In Turkey as in Persia (Chardin, vi. 228), the sultân's mother had to be reckoned with. It was therefore natural for a politician to endeavour to get into the serây as a gift to the sultân a woman devoted to his interests. The Circassians in particular were very skilful in deriving advantage from the secret influence of such connections. It may also be noted that some sultâns such for example as Muṣṭafâ III and 'Abd al-Hamid I married slaves formally or rather from conscientious scruples. "Religious law", says d'Ohsson, "not permitting a person born free and a Muslim to be reduced to slavery, the intercourse of a master with a female slave can only be legitimate when it is certain that she was not born a Muslim and free. If he has not proof of this, and wishes nevertheless to live with her, he ought for the peace of his conscience to free her and marry her. The sultân then marries his manumitted slave without the slightest display in the presence of the Moukhti".

From all this then it is clear that the Wälide Sultâns were always former slaves. Von Hammer (viii. 288) is therefore right when he says that the sultân was bound to be the "son of a slave". Ubcini (*La Turquie actuelle*, Paris 1855, p. 122) also adds that the people never mention him except by this name, but we do not know to what Turkish term he refers.

From her former position there survived to the Wälide Sultân a picturesque name which was popularly believed to be taken from the Persian and to which was sometimes added an ordinary Muslim name (cf. the list of Wälide Sultâns, below). The mere fact that she had given birth to a prince had early earned her the title of *hâdîr* or *hâdîrî* (*hâdîrî*) but nothing could equal the prestige which the accession of her son brought her and which, unlike dowager queens of other countries, she had not to share, officially at least, with a queen consort. Under the name of Wälide Sultân she became henceforth the first woman in Turkey, simply as a result of the respect due to her quality of mother. This respect is so deeply rooted among the Turks that the influence of İlmâm (cf. the *hadîth*: "Paradise is at the feet of the mothers") is not sufficient to explain it. The sultâns used to set an example of filial piety and the Wälide Sultân sometimes exercised a very considerable influence over her son whom she called in Turkish fashion *aslanım* 'my lion' or *kaplanım* 'my tiger' (we know that 'Alî's mother called her son Asad, 'lion', but this had been her own father's name).

The installation of the Wälide Sultân was a solemn ceremony, especially if she had been relegated to the old serây (*eski serây* or *serây-i atîk*), a building erected by Mehmed II, later the Seraskerat and now the University. This relegation

took place regularly when, after the death of the sultân, her husband, the throne passed to an heir who was not her son. A week or two after the accession of her son, the new sultân's mother was brought in procession (*wâlîde alayî*) to the new serây (*top-kapı* or *top-kapı sarayı*) wrongly called the "old serây" by western writers) where the sultân lived (cf. the examples of *wâlîde alayî* in Wâsîf, I. 28; Djewdet, IV. 1275, 243; Mustafa Nedîb, p. 112). The chief black eunuch (*dâr-ı-mâlet üşşîrîfe aşkârî*), the *wâlîde kehyaşî* (cf. below) and the officers of the imperial harem figured in this procession. The Wâlîde Sultân was borne on a litter (*takhtewân*), later in an open carriage, surrounded by *peşk* and *solâk* [q. v.]. According to Andréossy, the Wâlîde Sultân, as a remarkable privilege, showed herself to the people without a veil (*yazmaş*). The sultân went to meet his mother at the Bâb-ı Sa'âde gate of the serây. She was settled in her suite (*wâlîde sultân yeri*) which can still be seen to-day, although in comparatively modern form, for it was destroyed by fire on 10th Muharram 1076 (July 23, 1665) (*Silahatâr Tarihî*, I. 384; Hâilî Ethem [Khalîl Edhem], *Le Palais de Topkapı* [in French] Istanbul 1931, p. 58 and picture on p. 50; cf. also a description of this suite in Pouqueville, *Voyage en Morie, à Constantinople* etc., Paris 1805, II. 256-257). Her removal to her new abode was announced next day to the Sublime Porte in an official document called *şükûm-nâme* (Ahmed Râsim, *Osmanlı Tarihî*, p. 1082).

The new Wâlîde Sultân sent to the Grand Vizier a dagger (*khanter*) studded with jewels. The Grand Vizier and the Shaikh al-Islâm also each received a cloak of sable (*samir*).

The Wâlîde was supreme mistress of the female personnel of the imperial harem, the discipline of which she supervised. Every favour or permit to go out had to be submitted to her. The deference shown to her found expression in a special etiquette. She could not be approached unless a formal request for an audience had been made. It was forbidden to address her without being invited to speak or to sit down in her presence. One stood in front of her in the respectful attitude called *diwân durmaş* or *el peşî durmaş*. Ladies, even the greatest favourites, never appeared before her except in the *entari*, the name in the language of the palace for a kind of ceremonial robe. When the Wâlîde Sultân went out she was escorted by an imposing suite and all the guards saluted her (P. de Régla, *La Turquie officielle*, 1891, p. 264-265).

The Wâlîde Sultân was so used to these honours that the adopted mother of 'Abd al-Hamid II is said to have been offended when the German Empress did not kiss her hand (G. Rızas, *Les Mystères de Yildiz*, Constantinople 1909, p. 64-65). As to the incident of the salute paid to the Wâlîde Sultân by ships of the Marquis de Nointel, the French ambassador, it was exaggerated if we may rely on what the Marquis de Bonnac says; according to him, his predecessor made excuses (cf. Vandal, *Les Voyages du Marquis de Nointel*, p. 53; Le Marquis de Bonnac, *Mém. hist. sur l'Ambassade de France à Constantinople*, ed. Schefer, 1894, p. 25).

On the death of the Wâlîde Sultân, the sultân accompanied her remains as far as the gate at which he went to meet her on his accession. The cortege then went on to the place of burial led by the Grand Vizier and the Shaikh al-Islâm

(Wâsîf, I. 50). Forty days of mourning followed, during which the ministers visited the tomb and the *Qur'ân* was read (*Tarih-i Sultânî*, 1281, p. 173).

If on the other hand the sultân died before his mother, she returned to the old serây to rejoin the women retired or disgraced from the harem (Ahmed Râsik, *Yeni Medîmûsâ*, N° 10, p. 190).

We can only quote two cases of the Wâlîde Sultân retaining the title in the reigns of two sons: Mâh-Peiker Kosem Sultân, mother of Murâd IV and of Ibrahim, and Gül-Nûsh Emet-Üllah Sultân, mother of Mustafa II and of Ahmed III. In one case there were two Wâlîde Sultâns simultaneously: Mâh-Peiker Kosem Sultân already mentioned, grandmother (*büyük wâlîde*), and Tarkhan Khadija (*Turhan Hatice*) Sultân, mother of Mehmed IV. This was however terminated by the violent death of the former.

When a prince imperial became sultân after the death of his mother, the title of Wâlîde Sultân was given to his foster-mother or nurse (*çit wâlîde*, *naye padîş*; older formula: *dâyê khatun*), foster-relationships being held in high regard in Turkey. In default of either, the name of *wâlîde* was given by the sultân to the Kharnadâr-Usta or Grand Mistress of the Treasury.

In the reign of 'Abd al-Hamid II, who had lost his mother at an early age, the rank of Wâlîde Sultân was given to his adopted mother Peristo Hanım, formerly fourth *padîş* of 'Abd al-Medjid (Rızas, *op. cit.*, p. 109; Dorys, *Abd al-Hamid intime*, 1907, p. 6 *sup.*).

The position of the Wâlîde Sultân was very important during minorities. They acted practically as regents.

Titles of the Wâlîde Sultân. The word *wâlîde* "she who gives birth" is not in itself of any honorific significance. It is a synonym of the word *ana* "mother" but with the implication of greater respect. The Wâlîde Sultân very frequently has additional epithets like *mâşîde* "glorious" or *muhtereme* "honoured": *wâlîde-i mâşîde* (*muhtereme*), the (deceased) father of a reigning sultân was called *wâlîde-i mâşîd*. (The popular pronunciation is due to the loss of the narrow vowel in the second syllable, a phenomenon fairly common in Turkish which even affects foreign words, when the accent is displaced to the last syllable: *khatife* > *hâssa*; *khazîne* > *khazma*. Cf. also in Arabic Wâlîda Basha; see below).

The title of sultân "sultana" on the other hand was the peculiar prerogative of the mother of the reigning sovereign. It was not given by marriage and she was the only woman who could bear it "without birth" as Baron de Tott says. It is moreover used here as an honorific affix or more accurately in post-position (cf. the article SULTÂN) like other titles of this kind (*paşa*, *bey*, *efendi*, etc.), and it is a mistake to explain it, as is sometimes done, by the Arabic *wâlîde sultân* (!) which is said to mean "mother of the sultân". "Mother of the sultân" would be in Arabic in the construct state *wâlîdet as-sultân*. And we actually find this in the Arabic epitaph of Kh'wand-khatun or Mahperi, mother of a Saldjuk sultân, at Pazar Nahiyesi (4 hours from Tokat; cf. the text in İsmâ'il Hakki, *Kütübîler*, Istanbul 1345 [1927], p. 77-78). Nor is there any question of a haplogly in the Persian construction **wâlîde-i sultân*.

Besides the Wâlide Sultân, the only women entitled to the affixed title of Sultân — like *begum* in Persia (Chardin, vi. 223) — were princesses, daughters of a sovereign or a prince imperial, the daughter of a sultân having the right only to the title *khatun-sultân*.

Numerous authors, such as Cantimir and Guer who followed him, are therefore wrong in lavishing the title sultana on the wives of the sultâns. De Tott — who got his information from his wife who was born in Turkey and on terms of intimacy with Turkish princesses — long ago protested against this misuse of the term (i. 42). It seems however that we must not go to the other extreme. Thornton (*Present State of Turkey*, London 1812, ii. 411) seems to be right when he says that the title of sultân was given "by courtesy" to all *kâzîs*, and according to d'Ohsson (vii. 88), it is only since Mehmed IV (1648—1687) that it was given only to daughters of sovereigns. The dates would have to be brought down a little, if we remember that the same author (vii. 65) says that down to the reign of Ahmad III (1703—1730) the *şadın* who gave birth to a prince was given only the title of *kâzîs-sultân*. (If we believe the Marquis de St. Maurice, this title was given only to the mother of the male firstborn; cf. *La Cour ottomane ou l'Interprète de la Perse*, Paris 1673, p. 94 and, with the necessary modifications, p. 185). These customs were sufficiently well known in the west for Racine, who was nothing of an orientalist, to allude to them in these lines of his *Bajazet* (Act. I, Sc. i.): "Et même il (Sultân Amurat) a voulu que l'heureuse Roxane, Avant qu'elle eût un fils, prît le nom de Sultane".

It is clear from the above that from the beginning of the xviiith century at latest the title of sultana had ceased to be given to certain concubines of the sultân but we do not know at what period it was given to the latter's mother.

Among the Saldjûks, the predecessors of the Ottomans, the sultân's mother had the title *khatun* [q. v.] (arabised plural: *khawâtin*) "empress", "queen", as in the already quoted epitaph of Khwand-khatun.

The mothers of the early Ottoman princes bore the same title of *khatun* which under the form of *şadın* was to remain until the end of the imperial régime as the title of the sultân's principal favourites and in ordinary usage to lose its honorific significance to the extent of becoming inferior to *khanım* "lady" and meaning simply "woman". This is how we find the mother of the Sultân Çelebi Mehmed I called *şadât-khatun* in the epitaph of 816 preserved at Brusa (cf. *T. O. E. M.*, p. 509—510; corrected in *M. T. M.*, ii. 177, l. 4 199). The mosque founded at Tokat by Bayazîd II in honour of his mother is called *Khatuniye* (Ismâ'il Hakki, *op. cit.*, p. 29—30). It is probable that in the following reign the practice became established of calling the sultân's mother Wâlide Sultân.

We have not space here to enumerate the other titles, administrative, literary or poetic, given to the Wâlide Sultân. The most common was that of *meşâd-i âlâ* found as early as the Mongols of Persia (Mirghond).

Allowances and house of the Wâlide Sultân. The allowances to the Wâlide Sultân like those of the *kâzîs* and also sometimes those of the judges (Ewliya Çelebi, ii. 6) were in general called *başmağlık* or *paşmağlık*, pro-

perly 'for sandals' (v. Hammer, vi. 318; z. 75, 188). They were not fixed and consisted sometimes of money and sometimes of land. Sultân Ibrahim distributed whole provinces among his *kâzîs* as *başmağlık* (Na'imâ, iv. 243).

In normal times the Wâlide Sultân enjoyed a much larger income than the sultanas (relations or sisters of the sultân; cf. d'Ohsson, vii. 95). According to Cantimir, it amounted to over 1,000 purses. The Turks, says the same author, never take a town without setting aside a street in it for the *başmağlık* of the Wâlide Sultân (cf. also Bianchi's dictionary under the word *başmağlık*). The town of Smyrna formed part of her appanage and she maintained a *muhtesim* there (Tancoigne, *Voyage à Smyrne*, Paris 1817, l. 29—30. On the appanage of Çete, cf. Savary, *Lettres sur la Grèce*, 1788, p. 247). The mother of the Sultân was sometimes rich enough to build mosques or, like Ahmed III's mother, to raise troops.

In more modern language, the word *başmağlık* was replaced by *taahhüt* (-i *himâyün*) "civil list" (Khlörös). In 1850 the civil list of the sultân's mother and of the married sisters of the sultân amounted to 8,400,000 piastres, the piastre at this time being worth 23 gold centimes (*De la réforme en Turquie au point de vue financier et administratif*, Paris 1851, p. 12, a brochure of 84 pp. 8°, of which a résumé was given in the *Revue des Deux Mondes* of Sept. 1st 1850 in 10 pp.; p. 938—948).

Like all the sultanas, the mother of the Ottoman sovereign had a *kâyâ* (*kethüdâ*) or "superintendent, comptroller of her finances" (cf. the expression *ulâstân kethüdâları* "comptrollers of the sultanas" in *Silahat Tarihi*, i. 646 below) but that of the Wâlide Sultân was by far the most important in view of the considerable financial interests which he controlled and the influence which he himself could exert with the Wâlide Sultân. He sometimes exerted enormous influence although it was frequently hidden. Foreign ambassadors were well aware of this and as a rule did not fail to win these officials' good graces by every means in their power (Beauvoisin, p. 12; *Tarih-i Dîvânî*, 1288, viii. 252—256).

It has been said that the wâlide *kâyâ* combined this office with that of Master of the Mint (*darhâkime-i 'amir nâsirî*) and this was indeed frequently the case (e.g. al-Hâdîdî Mehmed Efendi later Pasha and his successor, in 1127, Atınallî 'Osman Efendi; cf. *Siddill-i şîmâ*, iv. 219; iii. 425; Râşid, i. fol. 105, 105^b—106) but there were very many exceptions; cf. Agha-babâi Ibrâhîm Agha appointed wâlide *kâyâ* in 1605 (Wâsîf, p. 30 etc.; cf. also Abdûlbaki, *Meâmilâ*, 1931, p. 180, note 1).

The rank of *rûbâ-i âlâ şîmâ* *erweli* created on Monday 19th Rabi' II 1253 (July 24, 1837) was given to the wâlide *şîmâ* *kâyâ* and to the Master of the Mint (*Sâlnâme-i neşret-i kâzîs*, 1302, p. 199). When the rank of *âlâ* was instituted in 1262 (1845—1846), the wâlide *kâyâ* Husein Bey was one of the two officials who first received it (J. Deny, *Sommaire des archives turques du Caire*, p. 359, below).

The Wâlide Sultân, like all the important ladies of the seray, had at their command a first (*baş-âgha*) and second eunuch (Leila Hanoum, *Le Harem Impérial*, 1925, p. 113). Details of the organisation of their household, which resembled those of other sultanas, except that it was more

magnificent, are given in Osman-Bey, *Les Femmes en Turquie*, p. 268.

List of Sultana mothers. The list of mothers of the rulers of Turkey is here given from the *Sidill-i 'ahmânî* of Thüreyyâ (Süreyyâ) Bey with a few modifications.

The princesses figuring at the head of this list were not, as we have seen above, properly Walide Sultans since this title did not yet exist in their time. This title was nevertheless and like that of the sultans themselves often wrongly put back to the beginning of Ottoman history. The title was even given to the mother of Ertoghul Ghâzi, a legendary figure known as Khîyme Ana "mother tent" whose tomb was discovered in the reign of 'Abd al-Hamid II at the village of Çeharshembe (Çarşamba) in the nahiye of Dumanic, in the district of Ioe-Göl (*Sidill*, i. 86). We do not know if this discovery is due to the zeal of an inventor devoted to the old dynasty or to the persistence of a local tradition which cannot be substantiated. The very name Khîyme Ana is suspicious.

In Süreyyâ Bey's list, the title of "sultana" first appears in the case of Gülbehâr, mother of Bâyezîd II, which in itself is not impossible but we have already seen that she had the title of *khatun*.

The following is this list with a few changes and a list of the buildings erected by the Walide Sultans interested in building (Nos. 7, 8, 11, 13, 15, 16, 21 and 22). The references refer only to these buildings. Abbreviations: m. = mother; s. = sultân; *Had. Djaw.* = *Hâfi Hüseini b. al-Hadîdî Isma'il Aivanserayi, Hadikat al-Djawnâni*, Constantinople, Ramadan 1281, 2 vols. (transl. by Hammer, *Histoire de l'Empire Ottoman*, vol. xviii.); Cuinet = Vital Cuinet, *La Turquie d'Asie*, 1892, 4 vols. in-4°.

1. Malkhûn Râbi'a Khatun (or Malkhatun), daughter of Shaikh Edeball, m. of Orkân-Bey (and of the vizier 'Ala ed-Din); † 726 (1325—1326).

2. Nilüfer, daughter of *tehfâr* of Yâr-Ilûsâr, m. of Murâd I.

3. Dewlet Khatun (Süreyyâ: Sultân Khatun), daughter of Germyan Oghlu, m. of Mehmed I.

4. N., daughter of Isfendi-yâr, m. of Mehmed II (cf. however ISFENDIYAR where Halima, daughter of Muhâris al-Din Isfendi-yâr and wife of Murâd II, is given as mother of Hûsan, killed in 855).

5. Gülbehâr, m. of Bâyezîd II.

6. 'A'îshe s., m. of Sulaimân the Magnificent; † 4th Ramadan 940 (March 19, 1534).

7. Nûr Bânû s., m. of Murâd III; † 21st Dhu 'l-Ka'da 991 (December 6, 1583; according to *Silahtar Tarihi*: December 7).

Buildings: In Scutari in Aala (Top-taht quarter): mosque called *Walide (s) 'atîf djâmî (s)*, with *medrese*, primary school (*mekteb-i rûbyân*), *imâret*, hospital (*dâr-ı ihkâf*) with *medjid*, school of Tradition (*dâr-ı âl-hadîth*), school for reading the Kur'an (*dâr-ı al-kurra*), a hostel (*misâfir-khâne*; cf. *Had. Djaw.*, ii. 182—184 and 218—219; Hammer, xviii., 89, No. 749; p. 94, No. 781; p. 114, No. 54; Cuinet, iv. 639—640).

8. Safiye s., of Venetian origin (sultana Baffa), m. of Mehmed III; † 28th Djumâdâ II 1014 (Nov. 10, 1605).

Buildings: in Constantinople (?): *medress* built in 1006 (Süreyyâ, p. 48). Began in 1006 the *Yeni*

djâmî continued by Turkhan Khadije (No. 13). In Cairo: a mosque there bears her name: Malika Safiye (R. L. Devonshire, *L'Egypte musulmane et les fondateurs de ses monuments*, Paris 1926, p. 123 sq.).

9. Khendân s., m. of Ahmad I; † 15th Rajab 1014 (November 26, 1605).

10. Mâh-Firûs(e) s., m. of 'Othmân III.

11. Mâh-Pelker Kösüm s., m. of Murâd IV and of Ibrahim I (and also of Kâim); † Saturday 16th Ramadan 1061 (Sept. 2, 1651).

Buildings: in Scutari in Asia (*Yeni mahalle* quarter): mosque called *Enilî djâmî* and *medrese*; in Constantinople: *wâlîde khânî*, with a little mosque and *medrese*, in Amadulu Kawağ: mosque; in the Dardanelles: began the citadel continued by Turkhan Khadije (No. 13); numerous *wahf* (*Had. Djaw.*, i. 215 below, 218; ii. 184—186, p. 144, No. 1; Hammer, xviii. 91, No. 732; p. 144, No. 55; Cuinet, iv. 640—642 [Kouloum Mâh-pelker and other errors p. 641, lines 20 to 24]; Ahmed Refik, *Yeni mecmû'a*, No. 3, p. 49—50; cf. also the picture in Cornelius Gurlitt, *Konstantinopel*, Berlin n.d., p. 86—87; cf. *Journal d'Antoine Galland*, i. 176; v. Hammer, x. 286; d'Arvieux, 1735, iv. 484).

12. N., m. of Mustafa I.

13. Turkhan Khadije (*Turhan Hatice*) s., of Russian origin, m. of Mehmed IV; † Tuesday Sha'bân 10, 1094 (Aug. 4, 1683; according to the *Silahtar Tarihi*, ii. 116 sq., date confirmed by the *Relatione* of Donado; cf. the *Bibliography*; otherwise, Süreyyâ Bey, Ahmed Refik in *Turhan Valide*, p. 424: 10th Rajab).

Buildings: in Stambul (Emin Onu quarter, Baghçe-kapisi, dominating the well known bridge of Karaköy or Galata): the famous mosque *Yeni djâmî* or *Yeni wâlîde djâmî (s)*, begun by Safiye s. (No. 8) and finished in 1074 (inscription); on the Dardanelles: completed the building (inscription of 1070) of the citadel begun by Mâh-Pelker Kösüm, No. 11; cf. *Had. Djaw.*, ii. 144, No. 3; v. Hammer, xviii. 89, No. 748; Pitton de Tournefort, *Relation d'un voyage du Levant*, Lyon 1717, ii. 196; Charles Pertusier, *Promenades pittoresques dans Constantinople et sur les rives du Bosphore*, Paris 1815, p. 185—189; Gabriel, *Les Mosques de Constantinople*, in Syria, 1926; Ahmed Refik, *Wâlîde Djâmî'leri, Yeni Djâmî*, in *Yeni Mecmû'a*, No. 10, p. 189—192 (according to the *Silahtar Tarihi*, i. 218 and 390, the building of the mosque was resumed in 1071 and finished on Friday 20th Rabî' II 1076 (October 30, 1665)); cf. also *Journal* of Antoine Galland, i. 79; Grelot, *Relation*, ... p. 281—282; Diehl, *Constantinople*, 1924, p. 115—117, 138—140; Arménag Bey Sakisian, *Syria*, 1931; Djelal Ebad, Paris 1909, p. 211—214.

14. Sâlihe Dîl-Ashûb s., m. of Süleimân II; † 22nd Muharram 1101 (according to the *Silahtar Tarihi*, ii. 484, Sunday 22nd Şafar 1101 [December 4, 1689]).

15. Gülnûş (or Gâlnûş) Emet-allâh s. (often wrongly called Ummet-allâh), of Cretan origin from Retimo (of the Versizi family, according to Donado), m. of Mustafa II and of Ahmed III; † 9th Dhu 'l-Ka'da 1127 (November 6, 1715; according to *Had. Djaw.*, ii. 188: Tuesday 8th Dhu 'l-Ka'da = November 5).

Buildings: in Mecca: Khâşşekiye 'Imâret, fountains and wells on the pilgrims' road; at Galata: *Yeni*

ḡāmī or *Wālide-i ḡādīd ḡāmī*), with 2 minarets, with fountain (*ḡāḡmī*), *ḡāḡl*, *ḡāḡret* and *ḡāḡḡ-i ḡāḡḡān*; *ḡāḡḡret*; at Scutari in Asia: mosque (*ḡādīd ḡāḡmī*), il. 187-188, p. 34; v. Hammer, xviii, p. 71, No. 637, p. 90, No. 750, p. 126, No. 242; Coignet, iv. 636-637).

16. *Sāḡḡḡe* s., m. of Maḡmūd I; † in 1150 (1737-1738). Buildings: fountain near 'Azab Kāḡḡal (*Sāḡḡḡ-i ḡāḡḡmī*, p. 27); aqueduct (v. Hammer, xiv. 279; Mambourg, p. 137 and 148).

17. *Sheḡḡḡwār* s., m. of 'Osmān III; † 27th Rāḡḡab 1169 (April 27, 1756).

18. *Miḡr-i Shāḡ* s., of Georgian origin, m. of Selīm III; † Wednesday 22th Rāḡḡab 1220 (October 16, 1805).

19. *'Aḡḡḡe* Sineperwer s., m. of Muḡḡāḡ IV; † 3rd *Djumaḡā* II 1244 (December 11, 1828).

20. *Nāḡḡḡ-i Dil* s., m. of Maḡmūd II; † in the middle of Shawwāl 1232 (about Aug. 22, 1817); according to *Sūreyyā*, p. 85 and *Djewdet Paḡḡā*, x. (1309), 214; according to the *Moniteur Universel* of Oct. 14, 1817, about September 8.

21. *Beḡm-i 'Aleḡ*, m. of 'Abd al-Medjīd; † 23rd Rāḡḡab 1269 (May 2, 1853).

Buildings: mosque at Doḡma-Baḡḡe; hospital at Yeḡi Baḡḡe; *dār al-meḡārif* near the *tūrḡe* of her husband; fountains (*Sāḡḡḡ-i ḡāḡḡmī*, p. 26).

22. *Petteḡ-Niyāl* s., m. of 'Abd al-'Azīz; † 27th Rāḡḡab I 1300 (Feb. 5, 1883).

Buildings: added two minarets to the *K'āḡḡḡ ḡāmī* mosque in Aḡsaray; library, fountain and school (*Sāḡḡḡ-i ḡāḡḡmī*, p. 27; Barth, *Constantinople*, 1906, p. 148).

The mothers of the other sultāns died before the accession of their sons. In *Sūreyyā Bey's* list after our No. 14, comes *Khādīḡe* Sultān, m. of Aḡmad II, but according to the *Silāḡḡḡ Tarīḡḡ*, ii. 273, the mother of this prince died on Thursday 5th *Dhu 'l-Kāḡḡā* 1098, i.e. before the accession of her son.

The nationality of the *Wālide Sultān* cannot be ascertained in most cases. At first they were Turkish and Greek princesses but from the time when they were always former slaves the latter must themselves have been often ignorant of their origin. All that we can say is that on the one hand the import of Turkish blood must have ceased at this time since in principle there were no slaves of Turkish origin and on the other the lands of the extreme west (including Germany but not Italy) counted for nothing or for very little in the genealogy of the sultāns. It is in vain that several attempts have been made to establish the contrary, in the case of France.

First of all a story was put into circulation which made Meḡmed II the son of a royal princess of France captured by the Turks (cf. e.g. *Ubićini*, *op. cit.*, p. 122 and with more detail, de La Jonquière, *Hist. de l'Empire Ottoman*, 1914, i. 175). This fiction which de La Jonquière called "absurd" was accepted by well known Turkish historians like *Peḡewī*, *Selāḡḡḡ* and 'Alī; it is also found in the *Tarīḡḡ-i Djewrī Cāḡḡī*, 1291, ii. 2. The sultāns themselves in their negotiations prided themselves on their "relationship" to the kings of France (cf. Louis de Bonneville de Marsagny, *Le Chevalier de Vergennes, son ambassade à Constantinople*, Paris 1894, ii. 86-87; in this version the reference is to the harem of Sultān Selīm). Western historians, following the more reasonable tradition of the Turkish historians,

make Meḡmed II's mother the daughter of Isfendiyār (cf. de Salaberry, *Hist. de l'Emp. Ottoman*, Paris, i. 148; cf. No. 4, above, in the list of the *Wālide Sultāns*). The very interesting but always credulous and often mendacious *Evliya Çelebi* admits in spite of everything (i. 106 *ayy.*) that Meḡmed II was the son of Isfendiyār's daughter "*Aḡḡḡe Khanum*" (it may be noted that this is the name given to the alleged French princess) but to arrange matters he makes the king of France's daughter the concubine of Meḡmed II and the mother of Bāyazīd II. He also says that his father had known a certain *Sukemerli Muḡḡāḡā*, *baḡḡ-ḡāḡḡ* of Janissaries, who was related to this princess and on this account used to receive presents from France. On the other hand, *Canḡḡir* (1743, ii. 410) records, without however believing it, another version of the story in which a granddaughter of a king of France enters the harem of Sulaimān the Magnificent. It was obviously the Turks themselves who invented these fables, to explain the favoured treatment accorded the "*pādīḡḡāḡ*" of France in Turkey.

More recently the French and Turkish governments have had to deal from time to time with people desirous of having their relationship with the old Ottoman dynasty recognised. Maḡmūd II was, it was said, the son of Aimée du Buc de Rivery, a Creole of Martinique and a relative of the Empress Josephine (see *Bibl.*). The impossibility of this has been proved from official documents: Sultān Maḡmūd II was born in 1785 (July 20) and M^{lle} de Rivery was still in Nantes in 1788, when she was a witness to and signed a marriage contract which is still in existence. The thesis was however not abandoned on this account; it was simply modified. Aimée du Buc de Rivery — whose admission to the harem of Selīm III one is obliged to postulate, since she arrived in Constantinople after the death of 'Abd al-ḡāḡḡ I — is said to have been chosen to act as adopted mother of the future Maḡmūd II, son of 'Abd al-ḡāḡḡ. This is a hypothesis which has little chance of ever being proved. We know actually that at the accession of Maḡmūd II his mother *Nāḡḡḡ-i Dil* was brought in solemn procession from the old seray to the new (*Djewdet Paḡḡā*, viii. [1288], 424; *Muḡḡāḡ Nedjib*, p. 122). It is unlikely that the honours of the *wālide alay* were ever accorded to what might be called honorary *wālide*s, like the nurses or adoptive mothers of the sultāns. Moreover, according to the *Moniteur Universel*, in 1817 she was about 50 years old; at that time A. de R. must have had an age of 41 years.

The *Wālide (wālide)* Pasha of Egypt. The customs of the harem of the Khedives were almost exactly copied from those of Constantinople. As in the Ottoman seraglio, the viceroy's concubines were numbered and called *birinḡḡi*, *ikḡḡḡi* (*ḡāḡḡn*) or according to the Arabic pronunciation *birinḡḡi*, *ikḡḡḡi* etc. "first, second", etc. The title of "mother of the Khedive", or as they say in the official French of Cairo the "*Khédīva Mère*" (in Turkish also *wālide-i khédīḡ*), was modelled on that of mother of the sultān with the substitution of *pāḡḡā* for *sultān*. It was also the only case in which the title *pāḡḡā* was borne by a woman, for it is a case of an honorific epithet and not of an expression meaning "mother of the pasha", which would be in Arabic *Wālideḡ el-Baḡḡā* and not *Wālide Baḡḡā*.

In the wealthy Khedivial family of Egypt, the Walida Pasha was no less rich and her *dâ'ira* 'offices for the administration of estates' was very important. Two streets in Cairo bear the name Walida or Walida Bagha. On one of them stood the palace of the last 'Khediva Mère', Eminé Khanim, mother of 'Abbās Hîmî II, daughter of Hîmî Pasha and grand-daughter of the viceroy 'Abbās I, she died in her country house at Bebek near Istanbul on 18th June 1931.

The present king has broken with the Turkish custom by acknowledging his one wife as the queen of Egypt. This is a consecration of the principle of monogamy and of association on the throne. The widow of the Sultan Husain enjoys an analogous position by right of survival.

Bibliography: (for the more famous Walide Sultans see the general histories of the Ottoman Empire. We have been content here to give a few isolated bibliographical references to supplement those in the text of the article): Michel Baudier, *Histoire Générale du Serrail, et de la cour du Grand Seigneur Empereur des Turcs*, Lyons 1659, p. 84 (book I., chap. xi.), p. 95 (chap. xii.), p. 101 (*ibid.*, in fine); Ricaut, *History of the present state of the Ottoman Empire*, chap. iv. Ottoman*, Fr. transl. de Jouquières, Paris 1743, il. 228, p. 450 sqq.; Beauvoisine, *Notice sur la Cour du Grand-Seigneur*, Paris 1809, p. 11 sqq. (relating to Mîrî Shâh s., No. 18 of our list); Adam Neale, *Voyage en Allemagne, en Pologne et en Turquie*, transl. from the English, Paris 1818, il. 169 to 185 (the same sultana); Mouradgée d'Ohsson, *Tableau de l'Emp. Ottoman*, ril. (1824), p. 86 sqq., p. 62, 64, 69; M-me Kibrili-Mehemet-Pacha, *Trente ans dans les harems d'Orient, souvenirs de Melik-Hanum, femme de S. A. le Grand-Vizir, K-M-P.*, 1840—1870, Paris 1875, p. 130, 271 sqq. (relating to Bezm-i 'Aleam s., No. 21 of our list); Osman-Bey, alias Major Vladimir Andrejevitch (= Decour-demanche, son of M-me Kibrili-Mehemet-Pacha), *Les Femmes en Turquie*, Paris 1878, p. 267 to 275; Paul de Rêgle, *La Turquie officielle*, 1891, p. 264—265, 269, 282; Ahmed Refik (Ahmet Refik), *Kâğıtlar Sâhânı*, 4 vols. in-12: i. (years 699 to 1027), il. (1027 to 1049) — Istanbul 1332; il. (1049 to 1058), iv. (1058 to 1094) — *ibid.*, 1924; by the same, *Turhan valide* (in Latin characters), Istanbul 1931, 424 pages in-12; Mehmed Zihni (Zihni), *Mechâhîr ü-Nisâ*; Lucy M. J. Garnett, *The women of Turkey*, il. 393—397.

The quotations from Na'imâ's history are taken from the 4th ed. (cf. Babinger, *G. O. W.*, p. 246); those from Râşid, from the edition by Ibrahim Mûsâfirîka, of 1153; those from Wâsil, from the new edition of Bîlîk, 1246 (cf. Babinger, *G. O. W.*, p. 337); those from the *Silahtar Tarîhi*

from the edition of T. F. E., in 2 vols., 1928.

We shall not give here the abundant literature relating to the 'French sultana' (Aimée du Buc de Rivery). It will be sufficient to mention those who have written on the subject, Xavier Eyma, Jony, Sidney Daney, Dr. Cabanès, Benjamin Morton, author of *The Veiled Empress*, New York 1923, Marc Héliys. The majority of these writers reveal a remarkable credulity. We find more criticism displayed in the lengthy articles by M. René Puaux in *Le Temps* of Oct. 7 and Nov. 10, 1923. A résumé of the subject was given by M. Almeric Cahuet in *L'Illustration* of Nov. 21, 1931, p. 382—383. The theory by which Naksh-i Dil was the adopted mother of Sultan Mahmûd II is defended in the recent work of M. A.-M. Martin du Theil, *Silhouettes et documents du XVIII^e siècle* (Martinique, Périgord, Lyonnais, Ile-de-France), Périgueux 1932, 138 pp. in-4° with illustrations (p. 7 to 46: Aimée du Buc de Rivery—Sa mystérieuse destinée).

The Walide Sultana could also, it seems, be studied in the novel: V. Smirnow quotes in *Vostoknaya sametki*, p. 56, *Beglyt venghat na nastoyashchey i proshlyy erray*, note 1, a novel by Çistakov, in *Zurnal dlia detey*, 1864, No. 5 and 6; cf. also the novel by Nizameddin Nasif, *Azizinin defnesi*, publ. in the feuilleton to *Vakit*, beginning November 11, 1931. (J. DREV)

WALIHİ, the name of two Ottoman poets of the xth (xvth) century:

1. **WALIHİ KURBAN-ZÂDE** of Adrianople (an alleged Walihî from Giar Erkene or Ergene Köprü is the same man). On the conclusion of his studies he came as a kâdi to Cairo and was admitted into the Gülshân order by Saiyid Khayâlî, the son of Ibrahim Gülshân, the founder of the order. Returning to Adrianople, he worked there as a Sûfi preacher, celebrated for his eloquence and command of language. He was given to drinking. He died in 994 (1586) in Adrianople where he is buried in the *Shakh Shodja* on the bank of the Tandja. He left a complete *Divân* which is still unprinted.

2. **WALIHİ AHMAD** of Üsküb who was also for a time *müderris* in Adrianople. He died in 1008.

Bibliography: Thuriyâ, *Sijill-i 'ethnâm*, iv. 602; Brusaî M. Tâhir, *'Othmanîl Mâ'el-Hîrî*, il. 476; Sâmi, *Kâmus al-'Alâm*, vi. 4671; Saiyid Rîza, *Tuhtâr*, Istanbul 1316, p. 102. (TH. MENZEL)

WALİMA. [See 'Uks.]

WAMIK WA-ADHRA, a Persian romance alleged to come from a Pahlavi original. It is said to have been presented in Nîshâpûr to the emir 'Abd Allâh b. Tâhir (d. in 230 = 844) in the form of an old book dedicated to Khuraw I Anûsharwân (531—579 A.D.) and the governor is said to have ordered it to be destroyed, because it had been written by Zoroastrians. In any case, it was put into verse by 'Unqurt [q. v.] and again by Faghi of Djandân in 441 (1049). In addition to 'Unqurt's version, Ethé (*Grundriss d. iran. Philol.*, il. 240) mentions no less than six versions which are all lost. At the end of the xth (xviiith) century, Mirzâ Muhammad Şadiq wrote, under the pseudonym of Nâmi, a romance in verse with the same title (Luî 'Alt Beg, *Atesh Kade*, Bombay 1277, section on contemporaries, s. v. Nâmi; Ridâ Kuli Khân, *Muqimâ' al-Fayakâ*, il. 523; E. G. Browne, *Literary Hist. of Persia*, iv. 283).

The subject was also taken up in Ottoman Turkish by Bihāḡī (a contemporary of Bāyazīd II; mistake in Gibb) who put it in his *Ḥamam* and and probably prepared it from the versions of 'Unṣuri and Faṣṭhī, and by Lāmī (d. 937 = 1530 or 938 = 1531), also probably from 'Unṣuri. Gibb (*H.O.P.*, iii. 357 *seq.*) has given an analysis of the latter poem: Wāmiḡ, son of the emperor of China, falls in love with 'Adhrā, daughter of a king and sets out to find her again through all kinds of difficulties which he overcomes with the help of fairies. He finds his beloved princess then, is taken prisoner by the enemy, taken to India where the natives try to burn him; the flames do not touch Wāmiḡ, whom the Indians worship as a god. The hero escapes, finds 'Adhrā again and marries her.

WĀN, a town in Turkey on the Armenian plateau on the eastern shore of Lake Wān.

The name Wān is not found in the Arabic sources which deal with the Muslim conquest. Lake Wān is usually named by the Arabs after the towns on the northern shore, Ardjīsh and Akhlāṭ.

Ibn Hawḡal alone (p. 250) mentions the Artsrunid Ibn Dairānī, lord of Zawāṣān, of Wān and Wostān. Yāqūt, iv. 895, mentions a fortress of Wān but makes it a dependency of Erzerum and locates it between Akhlāṭ and Tiflis (?).

For the Muslim conquest of Armenia see that article. The important fact is the campaign of Bugha al-Kabir who in 238 (852) overran the whole of Armenia including Albāḡ (at the source of the Great Zab) from which he carried off the Artsrunid prince Ashot Artsruni.

In 885 the Bagratid Ashot was recognised as king of Armenia by the caliph and later by the Byzantine emperor and the princes of Waspurakan became his vassals. Of these the principal were the Artsrunis whose hereditary fief was Hadamakert in Albāḡ.

In the ninth century colonies of Arabs had settled in Armenia, like the Amirs of Manāzkert (Malāzger) whom the Armenians call Kaisikkā (< Kās) and who ruled on the northern shore of lake Wān (Apahunik, in Arabic *ياحنيس* for *ياحنيس*), and the 'Othmānids (in Armenian: Utmanikkā) on the northeast shore of the lake, at Betgri and Amiuk. Towards the east, Waspurakan was exposed to the attacks of the Arab governors of Adharbāidjān. The Sājjid [q. v.] Afshin occupied Wān and Wostān and appointed eunuchs as governors there (cf. Thomas Artsruni, transl. Brosset, p. 221).

In 916 the Sājjid Yūsuf executed the Bagratid king Smbat in Dwin (cf. Stephen Asoljik, *History*, iii., chap. iv.—v., transl. Macler, p. 18—24). Before this catastrophe, the Artsrunid prince Gagik (through his mother a nephew of Smbat) had enrolled himself in Yūsuf's suite and by this manoeuvre was able to assert the independence of Waspurakan against Smbat's successors (kings of Ḳars and Ani). The Artsrunid kings were overlords of the

principalities of Mokk (now: Makus) and Andrevatsik (cf. Markwart, *Südarmanien*, p. 359—382).

The Artsrunid princes are several times mentioned in Ibn Miskawaih's *Chronicle*. In 326 (937), the troops of the Dailami chief Lashkari were defeated near 'Akabat al-Tinnin by Atom b. Djurdjin (= Gurgan), lord of Zawāṣān (Ibn Miskawaih, i. 402; Ibn al-Athīr, viii. 262). This Atom belonged to the elder line of the Artsrunids which was eclipsed by that of Hadamakert. In 330 (940; *ibid.*, ii. 33), Daisam, prince of Adharbāidjān, took refuge with Djadjik b. al-Dairānī (Gagik b. Deranik). In 342 (953; *ibid.*, ii. 151), Ibn Dairānī and (?) Ibn Djadjik (probably "Deranik b. Gagik") surrendered Daisam to the Muṣaffarid Marzubān.

In 1004, the Artsrunid Senekherim being pressed on all sides ceded Waspurakan to the emperor Basil II who gave him in exchange Siwās to which 40,000 Armenian families followed their king. Byzantine domination was of short duration: the battle of Melikgirt in 463 (1071) lost the Byzantines the last of their possessions in Armenia (cf. a brief account in Lynch, *Armenia*, i. 334—367).

The name of Wān is briefly mentioned among the towns of "the province of Akhlāṭ" which the Khwarizmshāh Djālāl al-Dīn besieged after the capture of Akhlāṭ in 626 (1229) (Bargri, Manāzgird, Birlis, Walashdjird, Wān, Wostān).

In the Mongol period (after Arghun Khān, 1284—1291), the region of Wān was close to the summer encampments of the Mongol Ilkhāns (on the mountain of Ala-Tagh, the ancient *Ναῖαρος*, Tendürek, to the N.E. of Lake Wān) but the local authority of Wān must have been in the hands of the Kurd chiefs of Hakkāri (cf. below).

The *Nushat al-Kulūb*, p. 102, says that "Wān is a fortress while Wostān (Ostan) has been a large town but now is a medium sized one". "Its climate and its fruits are good, its water comes from a mountain; its taxes amount to 53,400 dinārs (Urmiya 74,999 dinārs and Ardabil 85,000 dinārs)".

Towards the end of the viiith (xvth) century, the rule of the Ḳara-Ḳoyunlu Turkomans whose hereditary centre was at Ardjīsh, was extended over Wān but the direct administration remained in the hands of a family of Kurdish begs. When in 789 (1387) Timūr had plundered the Ḳara-Ḳoyunlu encampments of Ala-Tagh, he ordered the destruction of the fortress but "this building of the time of Shaddād" resisted his efforts. Timūr made 'Izz al-Dīn, lord of the fortress, governor of the 'wilāyat of Kurdistan' (*Zafar-nāma*, i. 421—424). The 'Izz al-Dīn, here referred to in the *Zafar-nāma*, was an important figure and took part in many of the events of his time (cf. *Maple's al-Sa'dain*, transl. Quatremère, in *N. E.*, xiv. 110, 153 180). The son of 'Izz al-Dīn Muḥammad was well received by Shāh Rūkh in 824. Under Uzun Hasan [q. v.] the Ak-Ḳoyunlu troops conquered Hakkāri and placed it under the Damboli tribe but the Nestorian Christians restored the power to a scion of the old family.

After the coming of the Safawids, prince Zāhid b. 'Izz al-Dīn II entertained friendly relations with Shāh Ismā'īl.

In view of the rival propaganda of the Safawids the Ottoman empire must have endeavoured to strengthen the very loose organisation given to Kurdistan by Idris, but the incorporation of the distant frontier district of Wān, filled with foreign elements, was full of incidents.

In 1534, during the offensive of the grand vizier İbrâhîm Paşa against Tabriz, delegates from Wan gave him the keys of the fortress. But as soon as the cold weather forced Sulaimân's army to withdraw, the Persians advanced to Wan and soon afterwards occupied this town and Ardjîsh (*Âlam-Şerâ*, p. 51 [according to Ewliya Çelebi, iv, 174 the Persians retook Wan in 953=1546]). The situation during the 14 years from 1534-1548 is not very clear but when, at the instigation of the Persian prince Alkâs Mirzâ, Sulaimân again marched on Tabriz, he laid siege to Wan in 955 (Aug. 1548). The town surrendered through the mediation of Alkâs Mirzâ and the *defterdar* Çerkes İskender Paşa was appointed governor (cf. v. Hammer, ii, 209; cf. Ewliya Çelebi, ii, 174). From this period date the baths of Rustam Paşa at Wan and a mosque of 975; cf. *Djibân-namâ*. [The dated inscriptions of the fine Ulu-Djami (cf. Lynch, ii, fig. 131-132, and Bachmann) have now disappeared].

With the appearance of the Ottoman *mir-i mirân* at Wan, the Kurd chiefs retired to their fiefs of Djûlamerk and Wostân. On the intervention of the *mir-i mirân* in their affairs, cf. *Şehar-nâma*, i, 99.

In 1013 (1604) Çiğhâla-Zâde, appointed commander-in-chief against Persia, established his headquarters at Wan (of which he had previously been wali in 1585; cf. v. Hammer, ii, 552). He was besieged there by the Persian troops under the command of Allâh Verdi Khân and escaped from the fortress by boat. Very soon he undertook a new campaign against Tabriz but it ended in a complete debacle in the autumn of 1605; cf. *Âlam-Şerâ*, p. 474-476, and the article TARKIZ; Hammer, *G. O. R.*, ii, 678, 660; Gorvea, *Relation des grandes guerres*, French transl., Rouen 1649, book ii, ch. xvi-xviii, p. 268-286; Arakel de Tauris, *Livre d'histoire*, transl. Brasset, St-Petersburg 1874, ch. vi, p. 303-307.

About 1600 the administrative organisation of Wan was described by Kodja Nishandji (1528-1567) who in his *Tabaqât* quoted by Hâdjdî Khalîfa included in this *eyâlet* some places now belonging to Persia (e.g. Salmâs), and by 'Alî-l 'Alî (cf. Tischendorf, *Das Lehnenen in d. moslem. Staaten*, Leipzig 1872, p. 72) who numbers in Wan 13 *sandjaks* and 1 *hükümet*, including in all 1,115 large and small individual fiefs (*hâlî*).

Ewliya Çelebi, who in 1065 (1655) accompanied his uncle Ahmed Melek, who had been appointed Wali of Wan, has given us a very full description of the *eyâlet* of Wan (iv, 130-190). It is curious that the text is silent about the Christian population unless this information was suppressed by the censorship under 'Abd al-Hamid.

Ewliya Çelebi gives 37 feudal *sandjaks* in Wan of different dimensions and with different privileges. The most important were the *hükümet* of Hakkârî (with an army of 47,000, including 10,000 with guns), of Bidla, Mahmûdî and Pinyalish.

The description in the *Djibân-namâ*, loc. cit. p. 110 (Ermeniyé) is much shorter.

In the autumn of 1236 (1821) the heir to the Persian throne, 'Abbâs Mirzâ, took advantage of some complications with the Ottomans to invade the Turkish territory of Bâyzîd as far as Bidla. Diplomatic complications and more particularly the epidemic of cholera arrested the Persian operations

and the *status quo* was re-established (cf. Mirzâ Taht Sipîr, *Târîkh-i Şâhîr*, Tehertn, i, under the years 1286-1287; cf. Watson, *A History of Persia... to 1858*, London 1866, p. 197-221). After the Russo-Japanese war the Ottomans in their turn advanced claims to the "unredeemed" territories and in July 1907 Vîlver-Pâshâ occupied many districts of the region of Salmâs [q. v.]. The *status quo* was however re-established after the Balkan War (Ottoman note of Oct. 12, 1912) and given legal sanction after the delimitation of 1913-1914 (on the basis of the Final Protocol of Nov. 17, 1913).

As a result of the Armenian movement which had broken out at the end of 1895 in many areas inhabited by Armenians, trouble broke out on a large scale at Wan between June 3 and 11, 1896 which cost the lives of 500 Armenians and 250 Muslims (cf. *Blue Book*, 1896, No. 8).

During the Great War, Russian troops occupied Wan on May 20, 1915. On Aug. 4, the Turkish counter-attack forced them to evacuate the town, but at the end of the month they returned, to remain there till the armistice of Dec. 18, 1917.

Statistics. It was only at the beginning of the sixteenth century that the first European travellers penetrated into the region of Wan. Scholz, who visited Wan in 1820 estimated that it contained 10,000-12,000 houses. In 1889 Mayevsky counted 4,953 houses in the town of which 2,012 were Turkish and 2,887 Armenian.

Cuinet, *La Turquie d'Asie*, ii, 1891, p. 629-760 for the wilâyet of Wan gives the following figures (from the Turkish *silbâname*):

Sandjak of Wan Sandjak of Hakkârî	
area	11,530 sq. km. 10,000 sq. km.
number of <i>şahîr</i>	8 11
number of villages	724 1,555

The number of inhabitants in the wilâyet was: Turks 30,000, Kurds 210,000, Armenians 79,000, Nestorians 92,000 etc.; total 430,000.

Mayevsky (about 1900) is probably more accurate: the wilâyet of Wan had an area of 62,820 sq. km. in two sandjaks: that of Wan (in the west near Lake Wan) and that of Hakkârî (in the east along the Turko-Persian frontier).

The vicissitudes of the Great War, the deportations of the Armenians, the expatriation of all the Nestorian population to Persia and later to Mesopotamia and the trials to which the Kurds were exposed from the Christian militia in the Russian army left the wilâyet of Wan in ruins, and we are still (1932) very ill informed regarding present conditions there. After the reorganisation of the wilâyets, the old sandjaks of Wan and Hakkârî were made into separate wilâyets.

The Turkish official annuals of the years 1921-1926, 1926-1927, 1927-1928 (*Türkiye Djûm-hûriyeti Devlet Salmâmesi* [Nisbâh]) reflect the changes in the administrative system. According to that of 1927-1928 (with numerous mistakes in the Roman transcription), the wilâyet of Wan has an area of 21,905 sq. km. and 75,437 inhabitants. Its *kâdîs* are: Wan, Ardjîsh (Erdjîsh), Bâsh-Kal'a, Shatak, Klawash, Mûradîye, Sarây (Mahmûd).

The wilâyet of Hekkârî has an area of 15,505 sq. km. and 25,216 inhabitants. Its *kâdîs* are: Hekkârî, with the chief town Djûlamerk (Çûlamerk), Beyti-Shebab (capital Elki), Shemdinân, Gawar (Gawer).

It should be noted that the two wilâyets do

not coincide with the old *sundjaks*. The old boundary between them followed the meridian while the new follows the parallel. The wilāyet of Wān (which includes Bash-Kal'a) is situated in the north and the wilāyet of Hek'ari (Hakk'ari) in the south on the frontier of that part of Kurdistan which belongs to the 'Irāk.

Bibliography: Cf. the art. ARMENIA and the very full bibliography in Lynch, *Armenia*, II, 1901. The early travellers are fully used in Ritter, *Erdbunde*, ix (1840), 972—1009: 639—687 (Hakk'ari); x. (1843), 285—356; Lehmann-Haupt, *Armenien einst und jetzt*, II, 1926 (very full study of the antiquities); on the excavations at Wān during the Great War: Marr and Orbeli, *Archéologičeskaja ekspeditsiya 1916 v Wān*, Petrograd 1922. Marquart, *Streifzüge*, and Markwart (Marquart), *Südarmenien und die Tigrisquellen*, Vienna 1930, contain many topographical and genealogical details on the Kaisikkē, Uthmanikkē etc. The most detailed description of the wilāyet of Wān is by V. T. Mayevsky, *Voenno-statisticheskiye opisanije Wānskago i Bilitskago wilāyetov*, Tiflis 1904. (V. MINORSKY)

WĀNĀQULI, MUHAMMAD B. MUṢṬAFĀ AL-WĀNĪ, a famous Ottoman jurist in the time of Murād III (982—1003 = 1574—1595) who especially distinguished himself in the field of *fiqh*, lexicography and literature. Born in Wān, he acted in a number of towns (Constantinople, Rhodes, Manissa, Salonika, Amasia, Kutahia, Yenisehir) as müderris, kādī and mollā and died in 1000 (1591—1592) as mollā of Medina, to which he had come in 998 (1590) in succession to Sa'ūdī. In his long period of 30 years' service, he displayed great activity in writing and translating. His principal work is the translation of the *Şaḫāḫ* or *Şiḫāḫ* of Dīhawārī [q. v.] which is regarded as the most correct Arabic lexicon and is more esteemed by many than the *Kāmus* of Firuzbādī. This work, which is briefly called *Wān-ḫūlī*, brought him the most enduring fame. It was printed in 1141 by Ibrāhīm Mustafarrika, as one of the first books printed in Turkey. A new edition appeared in 1168. His translation of Ghazālī's *Kīmīya al-Sa'āda* (which according to M. Tāhir is also attributed by many to Nawālī) is celebrated. In addition to a few brochures like his *Tarāḫīḫ-i Baiyāt wa-Tarīḫ-i Şeyḫāt*, he wrote commentaries on the *Durr-i Ḥāṣer* entitled *Naḥḍ al-Durr* and on the *Furūḳ-i Saiyidī*; also one on the *Weṣṭe* entitled *Miftāḥ al-Naḫḫ*.

Bibliography: *Manāḫib-i Wān-ḫūlī*, in vol. I. of the edition of 1141; *Şaḫāḫ-i nū-māniya*, Dhail of 'Aḫḫ, p. 316—317; Thuriyā, *Şiḫāḫ-i ṣāḫmānī*, iv. 130; Brusālī M. Tāhir, *Öḫmānīl Mu'allaḫāt*, II. 48; Sāmī, *Kāmus al-Atām*, vi. 4678; v. Hammer, *G. O. R.*, II. 575. — The Turkish translation of the *Şaḫāḫ* should be added in Brockelmann, *G. A. L.*, i. 128. (TH. MENZEL)

AL-WANSHARISĪ, *nisba* from the land of Wansharis, a mountainous area in western Algeria to the south of the Wādī Shalaf (Chélif) known to modern geographers in the corrupt transcription Ouansenis.

1. ABU 'L-ABRĀS AHMAD B. YAḤYĀ B. MUḤAMMAD B. 'ABD AL-WĀḤID B. 'ALĪ AL-TILIMSĀNĪ AL-WANSHARISĪ, a famous Maliki jurist of the Maghrib, born at Tlemcen, studied under celebrated teachers, like Ibn Marḫūḫ al-Kāfī and Abū 'L-Faḍl

Kāsim al-'Uḫbānī. In 874 (1469) after some trouble with the government of Tlemcen of which we do not know the details, he left his native town to settle in Fās where he devoted himself to teaching and gave lectures to numerous pupils. It was in the northern Moroccan capital where he spent most of his life that he died at the age of 80 in 914 (1508).

The most important work of Ahmad al-Wansharisī is a voluminous collection of legal opinions (*fatāwā*; q. v.) entitled *Kitāb al-Mīyār al-muḫḫir* wa-'L-Djāmī al-muḫḫir 'ammā taḫammamahu Fatāwā 'Ulamā Ifriḫiya wa-'L-Andalus wa-'L-Maghrib. This work which is a regular corpus of the *awāḍ* of the jurists of North Africa and Muslim Spain contains a mass of material of considerable value from the legal as well as sociological point of view. It has been lithographed at Fās in 12 vols. (1315 A. H.); a partial translation was published by E. Amar, *Consultations juridiques des fakihis du Maghrib*, in *A. M.*, vol. xii, Paris 1908. The biographers of Ahmad al-Wansharisī also mention among his works: 1. *Kitāb al-Fāḫ ḫi 'L-Waḥḫīḫ*; 2. *Iḫḫ al-Maḫḫil ilā Kawāḫid al-Imām Mālik*; 3. a supplement (*ta'ḫīḫ*) in three volumes to the *Muḫḫḫar* of Ibn al-Hāḫḫib [cf. the article]; 4. a commentary on the *Waḫḫīḫ* of al-Fiḫḫālī; 5. a biographical list of his teachers (*fahrawā*).

Bibliography: Ahmad Bābā, *Nail al-Iḫḫḫ*, Fās, p. 74; Ibn al-Kāḫī, *Djādḫwat al-Iḫḫḫ*, Fās, p. 80; Ibn 'Askar, *Dawḫat al-Nāḫḫir*, Fās, p. 37; Iḫḫ Maryam, *al-Buḫḫān*, Algiers, p. 53, transl. Provençal (Algiers 1910), p. 57; Muḫammad b. Dja'far al-Kattānī, *Salwat al-Anḫār*, Fās, II. 153; Brockelmann, *G. A. L.*, II. 248; M. Bencheb, *Etudes sur les personnalités mentionnées dans l'Idjāz du cheikh Abd al-Kader al-Fary*, § 71; E. Lévi-Provençal, *Les Manuscrits arabes de Rabat*, Paris 1921, p. 70, N. 217. II. ABU MUḤAMMAD 'ABD AL-WĀḤID B. AHMAD

B. YAḤYĀ B. 'ALĪ AL-WANSHARISĪ AL-ZANĀTĪ AL-FĀSĪ, son of the preceding, a learned legist of Fās, where he held the office of *ḫāḫī* along with that of *muḫḫī* and a teaching post. He had been a pupil of his father and of the principal teachers of the Moroccan capital. He was celebrated for his independence of character; for example, having to preside at the *salāt* in the open air on the occasion of one of the canonical feasts and the Marinid sultan being late, he was not afraid to begin the solemn service before the sovereign arrived. In the course of the troubled period which immediately preceded the occupation of the capital by the Sa'dians, when brigandage was practised in it with impunity, he was assassinated on the threshold of one of the doors of the mosque of the Kaḫrawānis (Qūmī al-Kārawīn) at the end of Dhū 'L-Hiḫḫa 953 (1540). He was about 70. He left a number of works of a legal nature.

Dja'far al-Kattānī, *Salwat al-Anḫār*, II. 146; Bencheb, *Idjāz*, § 292; E. Lévi-Provençal, *Les Historiens des Chérifs*, Paris 1922, p. 89. (E. LÉVI-PROVENÇAL)

WARAKA B. NAWFAL B. ASAD AL-KURASHĪ, a cousin of Khadīdja, who encouraged and possibly influenced Muḫammad in the first years of his mission.

All we know concerning him has the colour of legend: he is classed with the (artificial?) group of Meccans known to tradition as the *ḥawāṣṣ*, who, abandoning paganism, resolved to seek for the true religion of Abraham. Warāka became a Christian; he was abstemious, knew Hebrew, studied the Bible, and had written down the Gospels in Hebrew (in the Hebrew alphabet?).

In his relations with Muhammad he is endowed with supernatural powers, like the hermit Bahira. The fictitious woman who offered herself to 'Abd Allāh in order to become the future prophet's mother, is described as a sister of Warāka, who had seen on 'Abd Allāh's forehead the sign of his son's mission. It was Warāka who found the infant Muhammad when he strayed from his nurse. Khadija consulted him on her marriage, of which Warāka warmly approved. One of the earliest confidants of the first revelation, he told Muhammad that Jesus had predicted his mission, that he had been visited by the *Nāṣūt* who came to Moses, and foretold his career and final triumph. It was also Warāka who consoled Hīlāl, tormented by his pagan master.

Tradition however admits that Warāka was never converted; this is rather feebly explained by making him die in the second or third year of the mission, before Muhammad had been ordered to preach and make converts. He was probably an independent religious thinker, unlikely to follow a younger and less learned enthusiast. In the last years of his life Warāka became blind. After his death Muhammad had a dream of him in white robes, meaning that he was in heaven.

Warāka died too early to transmit any traditions: Muslim authors on *ḥadīth* denounce as apocryphal the brief account of Gabriel's appearance which Ibn 'Abbās claimed to have heard from him.

(V. VACCA)

WARĀMIN (or WARĀM, cf. Vāḡūr, *Muḥṣan*, iv. 918), a town about 40 miles (Yāḡūr, c. 30 *mil*) S.S.W. of Teherān, now the capital of the district of Khwār-wa-Warāmin. The plain of Warāmin watered by canals from the Dīshkārūd is regarded as the granary of Teherān. The town lies to the south of the great road from Ray to Khurāsān passing via Khwār (near Kishlak?) and Simnān (cf. Ibn Khurdādhbih, p. 22; only in the Mongol period did the road from Sulṭāniya to Khurāsān run via Ray-Warāmin-Khwār: *Nuḥṣat al-Kulūb*, p. 173). On the other hand in the ninth and tenth centuries, Ray was connected with Isfahān and Karāj (cf. SULṬĀNKHĀD) by Warāmin (Vāḡūr, iv. 918, also puts Warāmin on the route taken by couriers from Ray to Isfahān). The route took this detour to the east apparently to avoid the low lying Hawāḍi Sulṭān which before becoming a brackish lake was probably a salt-impregnated desert. Isfahān, p. 209, mentions the little town of Warāmin as a dependency of Ray but does

not explicitly say that it is on the Isfahān road. The Ouseley MS. (*H.G.A.*, iv. 414) alone contains a later addition saying that Warāmin had a large market; from Ray to Warāmin it was one *marṣala* through cultivated country (except for a stretch of 2 *ṣaḥāḥs*) and from Warāmin to Dair al-Djīs (according to Tomashchek to the south of the Kūh-i gač), a *marṣala* through the desert which faces the Kargaskūh; (from there the road went to Kārdj and Kūm) [cf. also the statements regarding the journey of the celebrated Būyid vizier Ibn 'Abbād who on the way from Ray to Isfahān passed through Warāmin ('a village like a town') and then through a village called Numbāh; Vāḡūr, iv. 817]. Mukaddas, p. 401, places Warāmin 2 *marṣala* from Ray (via Kārdj) and 6 *marṣala* from Karāj (via Awa; cf. the article KĀWA). Cf. particularly Tomashchek, *Die Wege durch die persische Wüste*, in *Sitzungsber. Wien. Akad.*, phil. hist. Klasse 1885, cviii., p. 125—128.

Warāmin does not appear to be specially mentioned in ancient times but situated between the great city of Ray [q.v.] and Khwār (the ancient *Xapara*, *Χαπαρά*; cf. Markwart, *Südarmenien*, Vienna 1930, p. 410) it must have lain within the settled and civilized area.

Lt. G. Pézard to whom we owe a detailed map of the region found no traces of a large town having disappeared, but excavations made to a depth of 10—15 feet brought to light Sassanid ruins (at Tapa-Mil). "There is no doubt that there are in deeper strata... between Teherān and Warāmin much older remains". It seems that the site of Tapa-Mil shown on the map by Pézard to the north of Āsiyābād is the same as Motosov has recently described as "palace of Afrāsiyāb" to the south of Kā'a-yi nau and 15 miles from Teherān; cf. *Revue des arts asiatiques*, Paris 1931, p. 20—22.

Warāmin had a period of fame in the Seldjūk, Mongol and Timūrid periods. We have no exact information about the inhabited and administrative centres of the region of Ray but the many monuments of Warāmin show that even when Ray was at the height of its glory important buildings were being erected at Warāmin. The destruction of Ray by the Mongols must have contributed to improve the position of Warāmin which was less affected by events. It was a long time before Tihirān [q.v.] finally triumphed over Warāmin as the successor to Ray. In the *Nuḥṣat al-Kulūb* (740 = 1340) Warāmin is called "the capital of the *tuman* of Ray... Its climate is better than that of Ray and Warāmin produces cotton, wheat and fruit just like Ray... The inhabitants are Twelve Shi'ites very arrogant in their dealings". In 1403 Clavijo (transl. le Strange, p. 306) describes Warāmin ("Vatami") as a large town without walls and considerably depopulated. We may regard as an echo of the Shi'a tendencies of the people of Warāmin the fact that we have in its neighbourhood to this day Turkish tribes who follow 'Alī-Allāhi teaching (Ahl-i Haqq); cf. Minorshy, *Notes sur les Ahl-i Haqq*, in *R. M. M.*, xl, 1920, p. 48, 63.

The architectural features. Pézard mentions 18 ancient buildings in the neighbourhood of Warāmin. Among them is the great square citadel of Kā'a-yi Gabr, to which Pézard ascribes "great antiquity" (Sarre: to the xth century). Then there are the great sepulchral towers called after the

imām-āde 'Abd Allāh, Sa'īd 'Aṭm, Yahyā and 'Alī; Sarre connects the style of the *imām-āde* Yahyā with that of the tower of Nakhīdewān dated 557 (1162) although the decoration of the interior dates from 661 (1262). The most remarkable monument is the cathedral mosque which is worthy to rank with the mausoleum at Sultāniya [q. v.]. The mosque was built under the Ilkhān Abū Sa'īd in 722 (1322) by [Hassan b.] Muḥammad b. Muḥammad b. Maṣṣūr 'al-Kāhādī. To judge by an inscription of 726 (1326) the work lasted at least four years. Some of the formulae of the inscriptions are Shi'i, which according to Madame Kratchkovskaya, "reflected the beliefs and desires of the people rather than of the sovereign" for Abū Sa'īd was a Sunni. Under Shāh Rukh in 821 (1418) the mosque was rebuilt and enlarged by the amir Ghiyāth al-Dīn Yūsuf Khwādja. Recently the building has been studied very minutely by the architect V. M. Morosov but only a very small section of his work has been published or exhibited (London 1930 and Paris 1932).

WARGLA (OUAKOLA), an oasis in the Algerian Sahara 100 miles S. of Taggurt in 31° 58' N. lat. and 5° 30' East Long. (Greenw.) at a height of 320 feet above sea-level. Wargla occupies a depression above a sheet of underground water fed by the subterranean course of the wadi Myia which can easily be reached by sinking wells 60 to 150 feet deep. This has enabled palmgroves to be planted there, numbering 500,000 trees all in full productivity and an almost equal number of trees which are dying but might be revived by irrigation works. The stagnation of the waters, which cannot run away, has however the inconvenience that it makes the country unhealthy and produces a dreaded fever (the *tehem*) in spring and summer. The town itself is built on a limestone terrace 10 to 15 feet above the level of the palmgroves, surrounded by walls, traversed by narrow alleys, intersected by vaulted passages, with houses built of coarse rubble or roughcast; it is divided into three quarters called after the sects that inhabit them: Beni Sissin, Beni Wagguin, Beni Ibrāhīm. Other villages have been built in the neighbourhood, Sidi Khallid in the N.E.,

Shott and Adjadja to the E., and Roussat, the most important is the S.E. The settled population once proprietors of the palmgroves now usually cultivate them as *ghummers* (paying a rent of a fifth) on behalf of merchants of the Māzāb and particularly the Shambas Arabs who lead a nomadic life in this part of the desert. Of Berber origin and still speaking a Zenāta dialect, the original purity of their stock has been much affected by intermarriage with negroes. The *Wargla* as they are called have retained certain ancient customs, particularly in connexion with marriage and a kind of carnival (*ghat al-'āghurā*) corresponding to the first fortnight of the month of Muharran. Alongside of these are negroes, Māzābs and a few Jews. The population of Wargla and of the *ghūr* amounts to 5,149.

History. We have no information about Wargla before the Arab conquest. At that time the land was occupied by Zenāta tribes. According to Ibn Khaldūn, the Beni Wargla (Berber Bent Urdjelan) came from the N.W. along with other Berber elements (ifren Maghrāwa) and founded several little towns in these regions which combined to form the town of Wargla. The people adopted Ibādī doctrines so thoroughly that after the destruction of the Rustamid kingdom of Tāret by the Fātimids at the beginning of the tenth century A.D. many Khāridjīs came to settle in Wargla and founded the town of Sedrata, the ruins of which still exist buried under the sands half a day's journey to the S.W. At the same time Abū Yūsuf, the "man with the ass", who had rebelled against the Fātimids recruited many followers in this region. The Ibādīs had nevertheless in the xiith century, as a result of conflicts with the orthodox and perhaps under the pressure of Arab elements, to abandon the region of Wargla and migrate to the Tadmayt, where they finally settled and created the oases of the Māzāb [q. v.]. Ibādism, however continued to survive at Wargla, where in the xviiith century it still had a few representatives.

During this period, Wargla, which according to the traveller al-Aṣṣāḥl was ruled by the Beni Tudjin dynasty, seems to have been a prosperous city enriched by trade with the Sūdān (Idmā, transl. de Goeje, p. 441). The Hilālī invasion marked the beginning of a troubled era. In the course of the wars between the Hammādi and the Athbādī, with whom the people of Wargla had contracted an alliance, the dynasty of the Beni Tudjin was overthrown and the town destroyed. Rebuilt a short distance from the original site it suffered later in the wars between the Almohads and the Beni Ghaniya. In the xvth century, although under the suzerainty of the Beni Mozi, representatives of the Hafsids in the Zab, Wargla was practically independent under the rule of sultāns belonging to the family of the Beni Abi Ghābul, of the fraction of the Beni Wagguin (Ibn Khaldūn, *Histoire des Berbères*, transl. de Slane, iii, 286). At the end of the xvth century, these sultāns were extremely wealthy but according to Leo Africanus (ed. Schafer, book vi., vol. iii., p. 146) they had to pay heavily for the protection of the nomad Arabs. Wargla at this time still preserved the commercial importance which it owed to its situation as a "port of the desert", to use Ibn Khaldūn's phrase (*loc. cit.*). It was a market where the produce and slaves of the Sūdān were exchanged for the merchandise bought from Tunis

and Constantine. Leo Africanus remarks on the beauty of the houses, the number of artisans and the wealth of the merchants. This opulence attracted the attention of the Turks to Wargla. In 1552 Ṣāḥib Re'is at the head of an army of Turks and Kabyls advanced as far as Wargla, the inhabitants of which offered no resistance and he returned after plundering the town and imposing on the sultan an annual tribute of 30 negroes.

The expedition of Ṣāḥib Re'is was followed by a new period of trouble which was ended, it seems, at the beginning of the xviiith century by the proclamation of a new sultan Allāham, to whom local tradition attributes a Sharrifian origin; his descendants held power down to the middle of the xixth century. But the real masters of the country were the nomad Sharrifas, Beni Tur, and Sāid Ōtha, whose continual interference in the quarrels of the two *jeffs* into which the settled population was divided kept up the disorder and made the authority of the sultans illusory. The latter had even to recognise the supremacy of the Beni Babia, hereditary chiefs of the oasis of Ngusa, which they did not cast off till 1841. But ten years later, a new cause of trouble arose. Muhammad b. 'Abd Allāh (the sharif of Wargla) raised the tribes of the Sahara against the French who entrusted the task of reducing the rebels to the Shaikh of the Uld Sidi Shaikh, Si Hamza. The latter occupied the town in the name of France in 1853 and was given supreme command of the Sahara tribes. But the participation of the people of Wargla in the rising of the Uld Sidi Shaikh in 1854 forced French columns to intervene on several occasions in the region. Another rebel, Ben Shusha, nevertheless succeeded in establishing himself in Wargla in 1871. The suppression of this rebellion resulted in the final establishment of French authority in 1872.

WĀRITH. [See MĀRĪTH.]

AL-WARKĀ', a ruined site in southern Iraq, in 45° 25' N. Lat. and 31° 19' East Long. (Greenw.). Yāqūt (*Muḍjam*, ed. Wüstenfeld, iv. 922) knows al-Warkā' as a place which belonged to the district of Kaskar and the circle of Zawāit in the area of the two south Babylonian Euphrates canals called Zāh (cf. Streck, *Babylonien nach den arab. Geograph.*, L. Leyden 1900, p. 32; G. Le

Strange, *The Limits of the Eastern Caliphate*, Cambridge 1905, p. 37, 73). According to a Muslim tradition, Ibrāhīm, the Abraham of the Bible, was born in al-Warkā' (see Yāqūt, iv. 922, 14 *sq.* and cf. also Loftus, *op. cit.*, p. 161 *sq.*). At the same time however, a whole series of other places are mentioned as Ibrāhīm's native place. As Sāli b. 'Umar records in his *Kutub al-Futūḥ* (see Yāqūt, iv. 922, 13 *sq.*) the first encounter between Arabs and Persians at the beginning of the Muslim campaigns against the Sāsānian empire took place at al-Warkā'.

Warkā' is the largest of all the groups of ruins in Southern Babylonia. It marks the site of the town of Uruk (Sumerian Urukki) of the cuneiform inscriptions, which, with Nippur, Ur, Eridu and Lagash, was one of the oldest towns in the country and played a prominent part in the religious life of the Babylonians from the most primitive times to the Parthian period. Alongside of Uruk we sometimes find the form Arkū for the name in inscriptions (cf. the ethnic Arkwāys in Ezra iv. 9). Besides this reference, Uruk occurs only once in the Bible in the form Erech where it is mentioned with three other towns as a part of the dominions of Nimrod (Gen. x. 10).

Of the epoch of Babylonian history before Hammurapi, we know five dynasties of Uruk, of which however the first, to which belongs Gilgamesh, the hero of the famous epic which bears his name, is mythical. The end of the fifth dynasty of Uruk is to be dated about 2300 B.C. Uruk remained an important town under the rule of the Persians, Seleucids and Arsakids; many cuneiform documents of this late period have been found here. Pliny, *Nat. Hist.*, xvi. 123, 130 and Strabo, xvi. 739, knew Orchos, 'Ὀρχος (ethn. Orcheni, Ὀρχηνι) as a great centre of Chaldaean astrology (cf. also the reference in Ptolemy, v. 20, 2; vii. 20, 19).

Uruk was not a Hellenistic town like Babylon; but it is very possible that it had a considerable Greek community within its walls. Even in the later Parthian period only a small portion of the extensive site of the old town was still inhabited; under the Sāsānians the town must have become more and more ruined. By the time of the Muslim invasion, it was presumably completely deserted and abandoned.

The first exact examination and description of the ruins we owe to W. K. Loftus (see *Bibl.*). He was three times in Warkā' in 1850 and 1854; on his second and third stays there he conducted excavations for three weeks and three months respectively. Of further visitors we may especially mention: W. H. Ward (1885); see J. P. Peters, *Nippur or Explorations and Adventures on the Euphrates*, i. (New York 1898), p. 349–356 (Peters himself also visited Warkā'; see *op. cit.*, ii. 98–99); also E. Sachau (1895); F. Anastase Carme (1900), see *Bibl.* The examination of the ruins of Warkā' entered into a new phase with the scientific expeditions of the Deutsche Orientgesellschaft.

Loftus gave an excellent account of the topography of Warkā' (see his plan, *op. cit.*, p. 160; repeated e.g. by Hommel in his *Gesch. Babylonien und Assyrien*, p. 208 and in Zehnpfund, *op. cit.*, p. 70). Andrae prepared a later plan. The new plan made in the winter of 1912–1913 by the Deutsche Orientgesellschaft's expedition is still more accurate and shows even more details; see

it in Jordans, *Uruk-Warka*, 1928 (p. 7 sq.) and cf. also *Mittell. d. Deutsch. Orientges.*, No. 66 (1928), p. 4.

Uruk must have been a very populous town at its zenith when it extended for a period beyond the walls around it, which can still be recognised to-day, as is shown by the mounds of ruins and other traces of habitation outside them; cf. Loftus, *op. cit.*, p. 165; Sachau, *op. cit.*, p. 64.

In Babylonian antiquity, either the Euphrates itself flowed past Uruk or else an arm of it, which might be identified with the now entirely silted up river-bed of the *Shatt al-Kār* (in the N.W. of Warkā'), supplied the town with its water by a canal. Jordan thinks the latter can be identified with remains of the *Shatt al-Nil* which comes from the north and runs along the N.E. city wall. The modern Euphrates flows south of Warkā' at a distance of over 4 miles, reckoning from the nearest point on the bank. The easiest road to the ruins is now from al-Khīr on the north bank of the river, a station on the Baghdad-Basra railway. The ruins lie in a completely deserted region which is only occasionally visited by Beduina pasturing their flocks.

The expedition of the Deutsche Orientgesellschaft in the winter of 1912-1913 found a considerable number of lead bullae and seal impressions which throw an instructive light on the style of the mixed Babylonian and Hellenistic culture; they also obtained ceramics of the late period (especially clay figures, terracotta animals), and among other things a hoard of 196 coins of the Parthian king Gotarzes (40-51 A.D.); the number of cuneiform documents was particularly large but they came mainly from the Seleucid period (cf. Jordan, *Uruk-Warka*, p. 39; 57-70 and in the *Mittell. d. Deutsch. Orient-Gesell.*, No. 66, p. 12-17). In 1929-1931 were found numerous clay tablets with pictographs.

Besides these things found as the result of official excavations, we have a considerable number of objects (mainly inscriptions but also sculptures) which have been brought to light through the plundering by the Arabs, tempted by the gold of the dealers in antiquities. This systematic pillaging began before the excavations by the Deutsche Orientgesellschaft (1912) and was continued before the Society could resume their work in 1928; through the market these finds of Arab burrowings found their way into various European and American museums and private collections, in Paris, London, Brussels, Berlin, Newhaven (Vale Babylonian Collection), Baltimore (Goucher College), Pierpont-Morgan Library, Nies Collection etc. On a number of especially remarkable objects found cf. Unger, *op. cit.*, p. 36.

In the last two decades, numerous cuneiform texts from Warkā', among which documents of the late period (late Babylonian to Parthian) predominate, have been published in specialist periodicals and in separate works.

WARRĀK, ABŪ 'ISĀ MUHAMMAD B. HĀRŪN, an independent thinker, who finally was accused of *sandāḥa*, was like his friend and pupil, Ibn al-Rāwandī (cf. AL-RAWANDI), at one time a theologian of the Mu'tazila school. Victims of the same persecution, both died in exile in Ahwāz in 297 (909).

His theological vocabulary only makes mild concessions to Hellenistic philosophy, but his dialectic is powerful; and his documentation of an objectivity and exactness unknown in this period enabled him to write a manual of the history of religions, the *Kitāb al-Maḥṣūlāt*, the only source (unfortunately lost) of al-Bīrūnī and al-Shahrastānī for certain Iranian heresies and Jewish sects. His critical examination of the three branches of the Christianity of his time, a little book of great accuracy, has survived under the title *Kitāb fī 'l-Radd 'ala 'l-Firaq al-thalāth*, the methodical refutation of which was attempted by the Jacobite philosopher Yahyā b. 'Adī (Bibl. Nat. Paris, MS. Arabe, No. 167). His *Kitāb al-Maḥṣūlāt* is lost.

(LOUIS MASSIGNON)

WASHMĠR B. ZIYĀR, ABŪ TALIB (and according to his coins ZAHIR AL-DAWLA) or better WASHMŪK, if the name means 'catcher of quails' (cf. al-Mas'ūdī, *Murūj*, ix, 30, note), second ruler of the Ziyārid dynasty, reigned 935-965. He only left his native land Dīlān, after his brother Mardāwīd [q. v.] had come to power, and had lived until that time the primitive mountaineer life of his people (Ibn al-Athīr, viii, 182). Under Mardāwīd he conquered Isfahān and drove from there 'Alī b. Būyī, who had taken that town when he was in Mardāwīd's service. After Mardāwīd had died in Isfahān (323 = 935), Washmġr went to Raiy, where his brother was buried with great solemnity; there he was proclaimed Mardāwīd's successor by the population

and by the Dailamite army that had been previously sent to Khurāsān in order to march on Baghdad. Until about 328 (940) Washmġr was able to keep together the territory conquered by his brother; he corresponded with the vizier Ibn Muġla about an advance to Baghdad in order to drive out Ibn Rā'ik, and tried to extend his influence to the west by supporting the Kurd Daisam b. Shādhillīyē in his endeavour to reconquer Ādharbāydjān. In the year mentioned, however, Washmġr came in conflict with the Sāmānids in consequence of his alliance with Mākn b. Kākī [q. v.], who at that time had made submission to the Sāmānids but had received in 936 from Washmġr the government of Djurdjān and also of the country round Sāriya (Sāri) on account of previous good relations. Mākn then renounced his allegiance to the Sāmānids and the Sāmānid ruler sent against them his general Abū 'Alī Ibn al-Muġtādī. The latter invaded Djurdjān and at the same time the Buyid brothers 'Alī and Hasan ('Imād al-Dawla and Rukn al-Dawla) took the opportunity to seize Isfahān and even Ray. Washmġr and Mākn mobilised in Sāriya an army composed exclusively of Dailamites and Djlīs to meet the Sāmānid army. In the battle of Isfahān near Dāmghān, however, Mākn was killed (Dec. 25, 940) and Washmġr retired to Āmul, leaving Ibn al-Muġtādī to take Ray in his turn.

In the following years Washmġr got into difficulties through Mākn's nephew Hasan b. Fāruzān, who at first had taken the Sāmānid side in order to recover his uncle's possessions, then made an attack on Ibn al-Muġtādī's already retiring troops, so that he was able to make himself master of Djurdjān, while Washmġr recovered Ray for the last time. But soon Hasan turned against him, while the Buyid Rukn al-Dawla seized Ray again. Washmġr had to fly for protection to the Sāmānid ruler Nūḥ b. Naṣr in Khurāsān and so lost his political independence. The protection sought for was readily given and until Washmġr's death Nūḥ was constantly helping him with reinforcements against Hasan b. Fāruzān and Rukn al-Dawla; in this way Tabaristān became a useful buffer state between Sāmānids and Buyids. Washmġr all the time remained a loyal ally of the former dynasty, Hasan being the candidate of the Buyids. About 950 he was attacked by Rukn al-Dawla in Tabaristān and had to retire; in 954 a last endeavour was made to recapture Ray, together with Ibn al-Muġtādī. After the failure of this expedition he was again driven back to Khurāsān, but soon reinstated by a Sāmānid army. In 962 the same thing happened again; Washmġr had to leave Sāriya and withdrew to Djurdjān. At last, in 967, great military preparations were made by the Sāmānid Mansūr b. Nūḥ to attack Rukn al-Dawla; the Sāmānid general Muhammad b. Ibrāhīm Sinūdjīr joined Washmġr in Djurdjān. Washmġr was to be chief commander of the expedition, but before it came to an end Washmġr was killed by a wild boar in Muharram 357 (according to Miskawah on 1st Muharram = December 7, 967). He was succeeded by his son Kābūs b. Washmġr [q. v.]. Washmġr had won the reputation of an able and good ruler and the Ziyārid dynasty is not seldom called after him the dynasty of Washmġr. As his biography shows, he did not excel in the arts of war, which accounts for the dwindling down of the large territory originally

conquered by Mardāwīz. At times, however, he was undisputed ruler of Tabaristān and Djurdjān, although, as Ibn Hawkal (p. 274) points out, there remained strongholds which he never had been able to subdue.

AL-WASHSHĪH, ABU 'L-TAYYIB MUHAMMAD b. AHMAD b. ISḤĀQ b. YAHYĀ, Arabic philologist and bel esprit, pupil of Muḥarrar and of Thā'ib, who earned his living as a teacher in an elementary school, but in the most important of his works that has survived to us, the *Kitāb al-Munawwih* (ed. R. E. Brünnow, Leyden 1886, reprinted as *Kitāb al-Zarf wa 'l-Zurafā'*, Cairo 1324), prepared a handbook of rules of good society for the aristocrats of Baghdad. In addition there survives by him a letter-writer: *Tafriḍ al-Muḥādḍ wa-Sahab al-Waḥḍ ila 'l-Farādī* or *Surūr al-Muḥādḍ wa 'l-Allāb fī Ruḍ' al-Aḥbāb* in the Berlin MS., *Aktawrd Vers.*, No. 8638. He was probably also the author of the *Kitāb Waḥḍ al-Muḥādḍ fī 'l-Djāhiliyya*, the first part of which was printed in Baghdad in 1332, although Yahyā al-Washshīh is named in it.

WĀSĪ [See WĀṢIYĀ.]

WĀSĪ 'ALĪSĪ or 'ALĪ, an Ottoman author, scholar and poet, stylist and calligrapher of Philippopolis. His full name is: 'Alī al-Dīn 'Alī Çelebi b. Sālih or Sālih-ade al-Rūmī, known as 'Abd al-Wāṣī 'Alīsī or Wāṣī 'Alīsī (from the *maderris* Mawlānā 'Abd al-Wāṣī whose assistant [*mūlāsīm*] he had been). He was *maderris* in various medreses in Brusa, Adrianople and Constantinople, then *ḫāṭṭ*. He died in Brusa in 950. His fame is mainly based on the elegant and pompous translation, surpassing even the Persian original, of the *Anwār-i Suhaili* of Husain Wāṣī Kāshifī [cf. XXXIII] which in turn is a translation from the Arabic version of the *Kaṭīla wa-Dimna* of 'Abd Allāh b. al-Muḥallā being based on the *Pantatantra*. On the complicated problem of the *Kaṭīla wa-Dimna* see that article. The manuscript of a version of the *Kaṭīla wa-Dimna* done directly from the Arabic is No. 1897 in the Laleli Library in Istanbul. The Turkish translation by Wāṣī 'Alīsī called *Humāyūn-nāme* with its pompous and elegant style and the interspersed verses was regarded as one of the most important prose-works of the old school, a masterpiece which could not be equalled and a model of tasteful

style and composition. While the grand vizier Lâ'ifi Paşa (945—947) accepted the dedication of the work to which Wäsi' had devoted his whole life with the reproachful remark that he would have done better to have devoted his time to legal treatises, Sültân Salaimân, whose attention was called to it by the historian Ramazân-âide at once recognised its importance and the very next day appointed the author to the important office of kâzî of Brussa. He died there only a year later. The *Humâyûn-nâme* was printed in Bulâk in 1251 (1835). One of the two synopses made by Othmân-âide Ahmed Tâ'ib (d. 1136 = 1723) appeared in 1256 under the title *Thamâr al-Aẓhar*. Another synopsis was made by Mufti Yahyâ Efendi.

WÄSİF, AHMAH, official historian of the Ottoman empire, belonged to Baghdād, early entered the service of high Ottoman dignitaries, for example Kel Ahmad Paşa and Abâza Mehmed Paşa, for whom he acted as librarian. He was captured by the Russians and his fortune was made when he was sent with letters from Catherine the Great to the grand vizier. He finally acted as secretary (*wak'f munis*; q. v.) at the peace of Bucharest (1772). In Dhû 'l-Hijjâ 1197 (Oct. 1783) he was appointed imperial historian (*wak'f munis*; q. v.) in place of Enwerî [q. v.] Efendi. Five years later he was sent on an extraordinary mission to Madrid, which is fully described by him. As the Russo-Turkish war had broken out in the meanwhile Enwerî was again appointed official historian during his absence in Spain and Edib his deputy. Wäsi' on his return had therefore to be content with an office in the Porte until in 1205 (1791) he was able to take a very active part in the peace negotiations, for which he was granted the important post of *Anadolû müfettiş-i mülkî*. Later we find him leading a lonely and wretched life in Stambul, maintaining a constant fight with poverty. He was then banished to Mytilene but recalled on a change of government and again given the post of imperial historian (1213 = 1798). In Jumādâ 1220 (July 1805) he was even promoted to be *re'îs efendi*. Sickness and bad health crippled him however and he died on 7th Rabi' 1221 (May 24, 1806). He was not an attractive character because he was greedy, envious and malicious to a degree but rightly enjoyed a great reputation as an historian. As he had taken an active part himself in important events, his accounts are of peculiar historical value. His style is noble and sonorous and was regarded by his contemporaries as a model of impressive writing. From his pen we have four state chronicles known as *dünyûl*, appendices, because they follow on to 'Isâ's work [q. v.]. The history, printed under the title *Makâm al-Aẓhar wa-Hakâ'ik al-Aẓhar* (on the various editions cf. Babinger, *G.O.W.*, p. 337), runs from 1166 (beg. Nov. 8, 1752) to 1st Rabi' 1188 (Sept. 7, 1774) but the greater part of the second volume (1183—1188) is from

the pen of Enwerî. As to the appendices themselves, the first which follows on to Enwerî's fourth part deals with the concluding events of the year 1197 (end of 1783) and ends with the month of Sha'bân 1201 (June 1787). The second appendix begins with Selim's III's accession (Rabi' 1203 = April 1789) and ends with the beginning of the year 1209 (beg. July 29, 1794). The third appendix covered the period for 1213 (beg. June 15, 1798) to 1217 (beg. May 4, 1802); it seems to have completely disappeared. The fourth and last appendix runs from Rabi' 1217 (July 1802) to the end of Shawwâl 1219 (Jan. 1805). In conclusion Wäsi' wrote a brief account of Napoleon's invasion of Egypt. It is one-sided and therefore of no value as history. Wäsi' also prepared translations from the Arabic, for example, he translated Zamakhsharî's [q. v.] *Nawâ'id al-Kalim* into Turkish.

Bibliography: v. Schlechts-Wescher, *Die osmanischen Geschichtsschreiber der neueren Zeit* (reprint from vol. viii. of the *Denks. Ak. Wien*, Vienna 1856), p. 5—9; F. Babinger, *G.O.W.*, p. 335—337 (with a list of manuscripts, printed texts, separate editions and translations of the works of Wäsi' Efendi).

(FRANZ BABINGER)

WÄSİL R. 'ATĀ', AND HUDDAIFA AL-GHAZZĀL, the chief of the Mu'tasila [q. v.]. Biographical facts concerning this personality are meagre, especially from early sources, yet without considerable divergencies. Born in Madina in 80 (699—700), where he was a client of the Banu Dabba, or of the Banu Makham, he migrated to Basra, where he belonged to the circle of Hasan al-Basri (cf. AL-HASAN R. ABI 'L-HASAN AL-BASRI), and entered into friendly relations with notable personalities such as Qajm b. Safwân [q. v.] and Baghlah b. Burd [q. v.]. With none of these three men, however, these relations remained undisturbed. His wife was a sister of 'Amr b. 'Ubad Abû 'Uthmân [q. v.], next to himself the most celebrated of the earliest Mu'tasila. He had the guttural pronunciation of the *r*; on account of his mastery of the language he succeeded in avoiding this letter, in *ḥaṣṣa*'s and sayings, specimens of which are preserved. Further he was conspicuous for his giraffe-like neck, an object of satirical lines by his former friend Baghlah.

He received the *Laqab al-Ghazzāl* because of his frequenting the spinners' market in order to bestow alms upon the poor women who exercised that métier. He was praised for being very scrupulous in touching money.

Wäsi' s deviation from the views of Hasan is said to have become the starting point of the Mu'tasila. The origin of the name of the sect cannot, however, be based on that fact (see MU'TASILA).

Four theses are ascribed to Wäsi': Denial of Allah's eternal qualities (cf. the art. *ḤIFĀ*); the doctrine of free will, which he shared with the Qadarites; the doctrine that the Muslim who commits a mortal sin enters into a state intermediate between that of a Muslim and that of a *kāfir*; the doctrine that one of the parties who took part in the murder of 'Uthmân, in the battle of the Camel and that of Siffin was wrong, just as in the case of *Ḥān* [q. v.] one of the parties must be considered to swear a false oath.

The last doctrine is made by the author of the *Kitāb al-Intiqār* the starting point of Wäsi' s

system. He represents it in this form: The intention to kill a *ḡāḡ* [cf. *ḡāḡ*] does not render a Muslim *ḡāḡ* (p. 170). Yet he admits to having been rebuked for this representation, on the ground that Wāsil considered the intention to kill one of the *ḡāḡ* as *ḡāḡ* [cf. *ḡāḡ*].

In this connection it may be noted that the passage on Wāsil in *Djāhiz Bayān* suggests more important deviations from orthodox Islām than those mentioned in later sources.

Lack of contemporary information is the cause of our not being able to say more of this.

It is said that Wāsil propagated his ideas through missionaries whom he sent to different parts of the Muslim world. Al-Shahrastānī states that in his days a sect called *al-Wāsilīya* was living in the Maghrib. Yet the *Wāsilīya* are not mentioned in al-Aḡḡarī's *Maḡāḡ*, where the name of Wāsil occurs once only (ed. Ritter, i. 222). — He is said (see e.g. Ibn Khallikān) to have written several books or pamphlets on the theological and political questions of his day. He died in 131 (748–749).

(A. J. WASSINK)

WÄSIT, once one of the most important cities of the Irāk in the centre of which it stood. The city was a creation of al-Ḥadḡḡḡ b. Yūsuf [q. v.]. As to the date of its foundation, the statements of the Arab writers vary between 83 (702) to 84 (703). Yāḡḡū is probably right in saying that the building of it occupied the years 83–86 (702–705). Al-Ḥadḡḡḡ was certainly living in his new city by the year 84. On the date of its foundation cf. Streck, *op. cit.* (see *Bibl.*), p. 324–325; Périer, *op. cit.*, p. 208; Mas'ūdi, *B. G. A.*, viii. 360.

On the immediate reasons which led to the building of a new town and the choice of its site see the story in Tabari, ii. 1125, 12 sq. (transl. in Streck, *op. cit.*, p. 323 sq.). Al-Ḥadḡḡḡ wished by creating a fixed camp for the Syrian troops,

his best soldiers, to strengthen their morals and by separating them from the Irākis to avert friction between them. The new garrison town was also intended to keep in check the two turbulent military colonies of Kūfa and Baḡra, for it was built equidistant between them (cf. Müller, *Der Islam im Morgen- und Abendlande*, Berlin 1885–1887, i. 394; Wellhausen, *Das arabische Reich und sein Sturz*, Berlin 1902, p. 156; Périer, *op. cit.*, p. 205 sq.; Reitemeyer, *op. cit.*, p. 40 sq.). Being immediately above the Baḡḡa [q. v.] Wāsil was also intended to facilitate the effective control of these somewhat inaccessible regions.

According to the usual statement, al-Ḥadḡḡḡ himself chose the name Wāsil = "middle" for his new city, because it was roughly midway between the two principal cities of the Irāk, Kūfa and Baḡra, and was a similar distance from al-Aḡḡḡ, the capital of Khuzistān.

According to another story, however, there had previously been a village named Wāsil al-Kaḡab (= Wāsil of the Reed) on the site chosen by al-Ḥadḡḡḡ; cf. Streck, *op. cit.*, p. 322 sq. and Périer, *op. cit.*, p. 206 sq.

In the Muslim east, at least where Arabic nomenclature prevailed, there were over 20 places called Wāsil in the time of the 'Abbāḡid caliphate. The most important of all these was Wāsil al-Ḥadḡḡḡ, as the town is often called to distinguish it from others of the same name; it is also particularised as Wāsil al-'uḡḡā (="Great Wāsil") and Wāsil al-Irāk (cf. Streck, *op. cit.*, p. 323).

Even if we reject the somewhat doubtful existence of a place named Wāsil al-Kaḡab, the immediate vicinity of al-Ḥadḡḡḡ's town was already inhabited in the Sāsānid period; Wāsil was built on the west bank of the Tigris while opposite it on the east bank lay the town of Kaskar.

In the story of the foundation of Wāsil which has been embellished with legendary details a not inconsiderable part is played by the great magician 'Abd Allāḡ b. Hīlāl, whom al-Ḥadḡḡḡ brought specially from Kūfa (cf. Yāḡḡū, iv. 885, 4 sq. and *W. Z. K. M.*, vii. 255). Considerable sums were required to build the new city (cf. Streck, p. 325; Périer, p. 208 and Reitemeyer, p. 47–48). The palace built by al-Ḥadḡḡḡ was surmounted by a towering green dome which got the name of *al-Kūba al-ḡḡḡ*. Its plan (square in general form, the measurements of the sides, the dome) afterwards served as a model to the caliph al-Manḡūr in building his palace in Baḡdād; the latter was therefore also called *al-Kūba al-ḡḡḡ*. Beside his palace al-Ḥadḡḡḡ built the chief mosque; al-Manḡūr also copied the proportions of this in his chief mosque likewise built beside the palace in Baḡdād, as Hersfeld points out in *Sarre-Hersfeld, Arch. Reise im Euphrat- und Tigrisgebiet*, ii. (Berlin 1919), p. 135.

Among the buildings erected by al-Ḥadḡḡḡ in Wāsil must be mentioned the large prison called *Dimās* (presumably Greek *deuteros* "prison") (see Streck, *op. cit.*, p. 326). Al-Ḥadḡḡḡ died in 95 A. H. (714) in Wāsil and was buried there.

At first al-Ḥadḡḡḡ would only allow Arab (preferably Syrian) to settle in his new capital; later he settled there Transoxanian Turks (mainly from Bukhāra originally) from Baḡra where a considerable number had settled, sometimes as prisoners and sometimes as voluntary emigrants (cf. Périer,

op. cit., p. 209). It was only after the death of al-Hadijādī that the old native Aramaic population and the Persians were admitted; in course of time the population became a very mixed one. Wasit and Kaskar gradually became merged in a single twin city united by a community of political and economic interests.

During the whole period of the Umayyads, Wasit remained the most important town in the 'Irāk, the seat of government of the country and the residence of its governors except for the last years of the dynasty. It was the 'Abbāsids who put an end to the dominating position of Wasit. But even after its loss of position as the centre of the region Wasit continued to be of great strategic importance. It has always played a very important part in the political and military history of the central and southern 'Irāk, especially that of the districts of the Baṭṭha and Maīnān [q. v.]. Cf. Ibn al-Mu'allim and Margoliouth in *Z. A.*, xxvi. 334 *sq.* In the xvth century Wasit played an important part under the dynasty of the Mushāshā Saliyids; cf. Caskel, *Islamicica*, iv. 48 *sq.*

The decline of the city seems to have gradually begun in the xvth century. This was mainly the result of a change in the distribution of the water to the two arms of the river at the old bifurcation of the Tigris at Kūt al-'Amīra. It may be mentioned that the Turkish geographer Hādīdī Khalīfa, who lived in the first half of the xvth century, in his *Dihān-namā* (Latin version by Norberg, Lund 1818, p. 70) records of Wasit that it lies in the middle of the desert and that the canal there is famous for the pens made out of its reeds.

The population of the town in the days of its prosperity was certainly very considerable. Yaḳūt who was several times in Wasit shows that in the early decades of the xiiith century it was still a large place. The *dihān*, the Persian landowners, were still in Yaḳūt's time (see *B.G.A.*, vii. 322), i.e. about 891, living in the old town of Kaskar. The Christian element must have been not inconsiderable in Wasit in the Muslim period; their quarters were probably in Kaskar, as in the Sāsānian period. Here there was in any case a Jewish colony before the Arab invasion. Benjamin of Tudela, who visited Babylonia about 1170, found a strong Jewish community in Wasit which he estimated at 10,000 people, the same as in Baṣra. The bulk of them presumably lived in a special quarter of the old eastern city.

The region in which Wasit was built is said to have been unfertile before the settlement by al-Hadijādī. The latter improved the soil of the surrounding country. The result was that conditions of life became much healthier and sanitation was improved so that the climate of Wasit was regarded as healthier than that of Baṣra. The Arab geographers agree in their panegyrics on the countless orchards, extensive groves of date-palms, the water flowing everywhere, the plenty of fish, and the very fruitful yield of the soil of the region of Wasit. Much corn was exported from the granary of Wasit and in times of famine Baghdad had to be supplied from here (cf. the accounts of Iṣṭakhri, Ibn Hawḳal, Muḳaddasī, Yaḳūt, Kaṣwīnī, Ibn Baṭṭūṭa in Streck, *op. cit.*, p. 328—330).

Wasit was also an important centre of communications, partly from its location on the navigable Tigris and its position in the centre of the 'Irāk and from the fact that important roads ran

north, south and east from it, one along the Tigris to Baghdad, another through the Baṭṭha to Baṣra and the third to al-Ahwāz (Khūzistān). Wasit was therefore bound to become an important commercial centre; as Muḳaddasī mentions, it had fine bazaars; among other things, valuable textiles were manufactured here (for curtains) which were known as *Wasitī* fabrics (cf. *B.G.A.*, iv. 375 and Salmon, *L'Introduction topographique à l'histoire de Baghdad d'al-Kaṭṭāf al-Baḡdādī*, Paris 1904, p. 135). Shipbuilding also played a part in the activities of Wasit in view of the busy traffic on the river; *al-wāsiṭiyya* is still found in the 'Irāk as the name of a kind of boat, cf. *Lughat al-'Arab*, v. (Baghdād 1927), p. 463, 11.

Wasit also took the place of its predecessor Kaskar as capital of one of the twelve districts into which the Sāsānians had divided the 'Irāk for taxation purposes (cf. thereon Streck, *op. cit.*, p. 15, 18, 332).

Wasit was not only a strong garrison town but an important agricultural and commercial centre. It also distinguished itself in the cultivation of knowledge, particularly of Muslim theology. Among its inhabitants in the time of Muḳaddasī (c. 985) were notable legists and Qur'ān readers; the study of the sacred book was especially carried on here (*B.G.A.*, iii. 118, 119, note). Ibn Baṭṭūṭa (ii. 2, 9 *sq.* and cf. Streck, *op. cit.*, p. 330—331) who was in Wasit in the first half of the xvth century, is full of praises of the pious citizens, most of whom knew the Qur'ān by heart and recited it correctly. The subject of *taḡwīd al-Kur'ān* [q. v.] was studied with special enthusiasm. A representative of the art of reading the Qur'ān who belonged to Wasit was Ismā'īl b. 'Alī (d. c. 1291; cf. Brockelmann, *G. A. L.*, i. 411).

It may be mentioned that the mystic theologian al-Hallāj who was born in Fars, spent his youth in Wasit (cf. L. Massignon, *al-Hallāj* [Paris 1922], i. 20 *sq.*). In this connection it may be noted that the founder of the Karmāṭian sect of the Bakṭiyya, Abū Ḥatīm, made his first appearance in 295 (908) in the *sawād* of Wasit (cf. above, art. BAḲṬIYĀ).

In Wasit was also studied the history of the town and of that of the adjacent Baṭṭha. Aḥmad b. Saḥl Baḥṣal (d. 904) wrote a local history, consisting mainly of biographies (see Wüstenfeld, *Die Geschichtschreiber der Araber*, in *Abh. G.G.W.*, 1882, No. 83; Brockelmann, *G. A. L.*, i. 138). The history of Ibn al-Maghāzī al-Djullābī (d. 1139; see Wüstenfeld, *op. cit.*, p. 240) was probably a continuation of this. An appendix to the latter work was probably the local chronicle of 'Abd al-Rahmān Muḥammad b. Sa'īd al-Dihābī al-Dubāithī (d. 1239; see Wüstenfeld, *op. cit.*, No. 323; Brockelmann, *G. A. L.*, i. 330; *Z. S.*, ii. 107).

Ibn Abī Ḥabīb al-Abbās Aḥmad b. Bakhtiyār (d. 1157), a native of Wasit, wrote a history of the Baṭṭha (*Ta'rikh al-Baṭṭā*; cf. 'Alī Sharḳī, in *Lughat al-'Arab*, vi. [Baghdād 1928], p. 279, 3 *sq.*).

As to the history of the mint of Wasit, we have coins of the town from its foundation (85 = 704) down to the period of the Mongols of Persia. Cf. e.g. St. Lane-Poole, *Catal. of Oriental Coins in the British Museum*, vol. x., p. ccxvii.—viii. (years 85—326 = 704—937 or 701—770 = 1301—1368) and O. Codrington, *Manual of Muslim Numismatics* (London 1904), p. 194.

In conclusion we have still to discuss the site of Wasit. Its exact location is one of the most difficult and most important problems of the historical geography of mediaeval Babylonia. We know definitely that the twin city of Wasit-Kaskar stood on the Tigris on either side of it. All the Arab geographers of the ixth—xiiith centuries agree in this (cf. the passages in Streck, *op. cit.*, p. 319 *sq.* to which we may add Mas'ûdî, *B.G.A.*, viii, 53, 57 and also Suhrib [Ibn Serapion], who about the middle of the tenth century described the river and canal system of the 'Irâk fully; see his *Kitâb 'Aja'ib al-Akâlîm al-na'â'a* [ed. Mûlik, Leipzig 1930] p. 118, 2 = *J.R.A.S.*, 1895, p. 9, 2 from below). In order to identify the site of Wasit the first thing necessary is to establish the course of the mediaeval Tigris. It must be pointed out that the arm of the Tigris on which Wasit stood, the main stream of which since the xvth century has been gradually diminishing and sinking to be a secondary arm, as the bulk of the water was gradually diverted from below Kûl al-'Amâra into the eastern bed, is to be considered the real lower course of the Tigris.

The Shatt al-Haiy (better Shatt al-Gharraf) which branches off at Kûl al-'Amâra S.E. from the main stream, has been usually said to be the mediaeval Tigris (on this water course cf. especially the artt. DUGLA, 'IRAK and MAISAN). It forks again a little below the town of Kûl al-Haiy (also known briefly as Haiy) into two arms, one of which is now called Ash Dijnhairat and as a rule is now the only one to contain water, and the eastern Shatt al-'Amâ. Both unite again at the village of Shaikh Khadr (Khâdr) and enclose an island about 30 miles long called Djalirat al-Hairat on maps. Herzfeld, has rightly pointed out in *Sarce-Herzfeld*, *op. cit.*, i, 247, that the Shatt al-Haiy forms the greatest crux in the ancient geography of the 'Irâk. Is it really the mediaeval Tigris or is it only a secondary arm? Perhaps we have to see in it a canal which was dug in ancient times to give a convenient connection between the Euphrates and the Tigris. The little that we have so far learned from European travellers about the ruins of Wasit is against locating it on the banks of the Shatt al-Haiy and therefore against identifying the latter with the mediaeval Tigris.

Unfortunately the whole canal and river system of the Shatt al-Haiy, especially the wide territory between it in the west, the Tigris in the east and the Euphrates in the south, has been very insufficiently investigated from the geographical point of view and the maps to be consulted for the region of Wasit are very defective. Of these the following have been used here: F. R. Chesney, *The Expedition for the survey of the rivers Euphrates and Tigris* (London 1850), Atlas, plate ix. (pertinent text in vol. I, 36—37); Ed. Sachau, *Die Euphrat und Tigris* (Leipzig 1900), plate ii. and cf. p. 69 *sq.*; *Lower Mesopotamia between Bagdad and the Persian Gulf* (1:1,000,000), London, War Office, 1907 (also reprinted by the cartographical section of the German General Staff, Berlin 1915); *Karte von Nordbabylonien* (temporary edition; 1:200,000), sheet 9: Kûl al-'Amâra, Berlin (kartograph. Abteilung der preussisch. Landesaufnahme), 1918; *Karte von Mesopotamien* (temporary edition; 1:400,000), sheet 5^d, Bagdad, Berlin (ibid.), 1919.

A number of European travellers visited the

actual site of the mediaeval Wasit in the ixth and xth centuries; their accounts however are rather brief. The first to be mentioned are the English officers Ormsby and Elliott who stopped in Wasit in 1831. On their information are based the statements in Chesney, *op. cit.*, i, 37; J. R. Wellstedt, *Travels to the city of the Caliphs*, London 1840, i, 171 (an edition of Ormsby's diary) and J. B. Fraser, *Mesopotamia and Assyria*, Edinburgh 1842, p. 155. R. Koldeweg and B. Moritz are said to have visited Wasit during their archaeological expedition to Southern Babylonia in 1886—1887; but so far nothing has been published of their observations. Count Aymar de Liedekerke-Beaufort, who fell in 1916 in the War, also visited Wasit on an archaeological expedition in 1913—1914. His valuable account of the district in question was published by Viroilleaud, in *Babyloniaca*, vi., Paris 1922, p. 105—116 unfortunately without a map. We therefore really have only two brief descriptions of the ruins of Wasit, one of 1831 and the other of 1913—1914.

The former going back to Ormsby and Elliott gives (according to Chesney) the following data. The old dry bed of an arm of the river can be followed for a few miles below Kûl al-'Amâra; this flows S.S.E. through the ruins of Wasit and then goes on in the same direction under the name of Shatt Ithâhim, and rejoins the Euphrates midway between the Shatt al-Haiy and Kurna. That this river-course should be recognised as the Tigris proper, on the banks of which Wasit lay, is suggested by the breadth of the ancient bed and the ruins on both sides of it; some of Wellstedt's notes supplement this: mounds of ruins are to be seen everywhere; the ground is covered with fragments of buildings (pillars, architraves, friezes, glass and ceramics). Special mention may be made of a fairly well preserved little domed building in the style of the period of the caliphs, very probably a mosque; the channel which cuts through these ruins is of the breadth of the Euphrates. Fraser finally tells us that in the vicinity of the old town there has arisen a little village of 40—50 wretched houses built out of the material of the ruins and inhabited by fishermen.

As to A. de Liedekerke-Beaufort's description 80 years later (see *op. cit.*, p. 115—116) it may be noted that this traveller came to Wasit from the old Babylonian site of Zerghul (Surghul), 4 miles N.E. of Shatra; striking N.E. After 3 hours' march from Zerghul he crossed the old silted up bed of the Tigris of the 'Abbasid period which the natives call Shatt el-Khâdr. This he met again at the ruins of Wasit. Among the shapeless mounds of ruins there the only remarkable thing was a fine brick portico. According to A. de Liedekerke-Beaufort, Wasit lies 25 miles west of Haiy (Kûl al-Haiy). This remark must be due to an error or rather to a slip of the pen; for it must be "east of Haiy" (correct also the statement above, art. KARKAR). Our traveller thinks that the Tigris in ancient times used the Shatt al-Haiy as far as Djalatkeker (meaning Kal'at Sikkar on the Shatt al-'Amâ), then followed the lakes of the swamps (âira; cf. above, art. MAISAN) of Tellôh, al-Hiblis and Serghul, finally entering the sea at the side of the modern Hîr al-Hammîr (cf. above, art. MAISAN); in the Muslim period on the other hand, it crested for itself this eastern bed on which Wasit lay.

According to the already mentioned map of Mesopotamia, sheet 54, Bagdad, the geographical position of Wasit is $32^{\circ} 15'$ North Lat. That this town is probably to be placed north and not south of 32° N. Lat. was already proved by Wagner (in *N. d. G. G. W.*, phil.-hist. Kl., 1902, p. 272, 279) from the statements of the mediaeval Arab itineraries. On the above mentioned map the ruined site of Wasit is crossed by a channel running S. E.; three further channels enter it of which those still in use take their water from the Nahr Dūdījā. Quite close to Wasit is marked a place Beled, presumably the fishing-village mentioned by Ormsby and Elliott (in Fraser).

The Dūdījā (= little Tigris) leaves the Tigris about 6 miles below Kūt al-'Amāra. It might be identical with the ancient, now dried up arm of the river which Ormsby and Elliott were able to follow and which they took for the mediaeval Tigris of Wasit (see above). In Stieler's *Handatlas* sheet 59 (1918), this water course is marked as Shatt al-Wasit and Wasit itself is marked on it in $32^{\circ} 15'$ (according to the map of Mesopotamia, leaf 9, Wasit lies 4—5 miles south-west of the river Dūdījā). The distance between Wasit and Kūt al-Haiy is, according to the map of Mesopotamia sheet 54 and that of Babylonia, sheet 9 (see above), and sheet 59 in Stieler's *Handatlas*, about 15 miles as the crow flies; A. de Liedekerke's estimate (25 miles) is decidedly too high. The distance Wasit-Kūt al-'Amāra is about 45 miles as the crow flies.

The question of the site of the mediaeval Wasit would therefore seem to be solved with considerable certainty by the above considerations. The town was at one time sought on the bank of the Shatt al-Haiy or at least in its immediate neighbourhood; modern native geographers of the 'Irāk like Hāshim al-Sa'dī and 'Abd al-Razzāk al-Hasanī still hold this view. It is a fact that the place-name Wasit is still found in the district in question, especially around Kūt al-Haiy as well as to the south in the island formed by the two arms of the Shatt al-Haiy, quite near the eastern arm, the Shatt al-'Amā. Chesney (*op. cit.*, I, 36 and *Atlas*, plate ix.) knows the "mounds Neishaget Wasut" in the neighbourhood of Kūt al-Haiy to the east of it. On the same position Loftus puts Wasut in the map accompanying his *Travels and Researches in Chaldaea and Susiana* (London 1857); Streck therefore also at one time (1911, see above, I, p. 677*) considered locating Wasit near Kūt al-Haiy. Hāshim al-Sa'dī (*Diyār al-'Irāk al-'Aditha*, 2nd ed., Baghdad 1927, p. 145) has obviously the same region in mind when he places the ruined mounds (tells) of Wasit on the banks of the Shatt al-'Amā near the town of al-Haiy. 'Abd al-Razzāk al-Hasanī (*Rihla fi 'Irāk*, 2nd ed., Baghdad 1925, p. 29) holds a similar view; he lays stress on the existence of numerous tells and pieces of buildings, still visible at the present day. The same author says in his more recent work *Muḥḥit Ta'rikh al-Buldān al-'Irāqiya* (Baghdad 1930, p. 119) that al-Haiy is identical with the ancient Wasit.

Cuinot's authority (see his *La Turquie d'Asie*, iii, 313) says that half-way between Kalfat Sakar (the already mentioned Djelatseker in A. de Liedekerke = Kal'at Sikkar; a little below 32° N. Lat.) and Kūt al-Haiy one comes to an area covered with mounds, which may be presumed to

contain old ruins; the most important is 'Haf al-Qusset', the celebrated town of Wasit; there one can still see the door of a palace which the local Arabs call el-Menāre. With this statement in Cuinot, I would take a note in L. Massigou, (*La passion d'al-Hallaj*, Paris 1922, I, p. 23) which is based on a communication by a Baghdadī, a former inspector of the domains in the region of al-Haiy. According to the latter, the now abandoned ruins of Wasit, which lie on the bank of a dead water-course named Rasid, consist only of a few old tombs and a minaret in ruins (apparently that mentioned in Cuinot). The reference here is probably to the same ruins as are mentioned by Chesney and the two modern Arab geographers. In keeping with these views Wasit is placed by Kiepert, *Carte générale de l'Empire Ottoman* (Berlin 1892), on the eastern bank of the Shatt al-Haiy, in $31^{\circ} 55'$.

We also find marked on maps (e.g. in Chesney, plate ix, and in Stieler's *Handatlas*, loc. cit., in the latter in about $31^{\circ} 45'$ N. Lat.) on the already mentioned Shatt al-Haiy island a village of Wasit al-Haiy, which no doubt still exists. It is about 25 miles south of Kūt al-Haiy and at least 4 miles from the Shatt al-'Amā which probably at one time flowed directly past it. This is the Wasit of the map *Lower Mesopotamia*, several times already mentioned, which marks also in $31^{\circ} 45'$ on the east bank of the eastern Shatt al-Haiy arm a Kal'at Shaikh Djewald with the addition 'al-Wasit'.

It must be left for future thorough topographical study on the spot to establish what these villages or ruins near and on Shatt al-Haiy are. The existence of two places called Wasit, one in the vicinity of Kūt al-Haiy, one much further south (Wasit al-Haiy), seems to be proved; but it also seems safe to assert that all these places in the region of the Shatt al-Haiy have nothing to do with the mediaeval Wasit. The occurrence of the name Wasit in this region could, in my view, be explained most simply by saying they are settlements by emigrants from the old mother-city. When their existence became more and more threatened by changes in the course of the Tigris, many, if not the majority, of the inhabitants must have abandoned the city and settled on the banks of the Shatt al-Haiy which presumably gained in importance with the decline in the Tigris at Wasit in volume and importance. To distinguish it from the ancient Wasit, a colony of people of Wasit on the Shatt al-Haiy may have been called Wasit al-Haiy.

On the antiquity of the town of Kūt al-Haiy nothing is exactly known, but I do not consider it probable that it goes far back into the middle ages; while it may have existed then as an insignificant village, it only began to come to the front from the xvth century with the decline of Wasit. It may in a way be described as the successor of the ancient Wasit. Kūt al-Haiy is now developing rapidly; it is the largest place in the whole valley of the Shatt al-Haiy and at the last census had about 10,000 inhabitants (cf. 'Abd al-Razzāk al-Hasanī, *Muḥḥit* etc., 1930, p. 119).

(M. STRECK)

WASIYA (A.), commission; as a technical term, last will, testament, legacy; *wasī*, the person empowered, particularly the executor of a will.

1. The *wasīya* of the pre-Islamic Arabs was less concerned with the distribution of the estate than with orders and instructions to the survivors; it is the spiritual testament of the dying man sanctified by religion which is to hand on obligations and secure the continuity of tradition. In this sense, according to the Shāfi'a, 'Alī is the *wasī* of the Prophet and every imām (the *wasī* of his predecessor, i.e. the continuer of his religious task and the steward of his doctrine. The literary form known as *wasīya* for transmitting instruction and advice, especially from devout men and scholars, goes back to this source.

2. In so far as the term *wasīya* was of significance in connection with the law of property in Muhammad's milieu, it must have consisted in the consideration of more remote heirs — something between legal will and an expression of wishes — alongside of the *ʿaṣaba* who are called upon first to inherit (cf. *MIRAT*). According to Sūra xxxvi. 50 (of the second Meccan period) to draw it up before death was the obvious duty of a Qurāsh merchant. Such a *wasīya* is expressly ordered the believers by sūra ii. 176 *sqq.* in favour of parents and "relatives" (sūra iv. 37, which, without using the term demands the same thing, adds also the so-called confederates); at the same time any alteration falsifying it is forbidden but any friendly interference in the interests of reasonableness is allowed; sūra ii. 241 going decidedly beyond the old Arab usage, makes provision for the widow by a *wasīya* a duty. These three passages date from about the same time, the year 2 A. H. Sūra v. 105 *sqq.*, apparently later, prescribes for the *wasīya*, which it presumes to be usual, two witnesses, the method of swearing them and the manner of challenging their evidence.

3. The later thorough regulation of the law of inheritance was doubtless intended to replace the earlier rules for the *wasīya* (cf. *MIRAT*); a tradition which expressly states this was very early interpreted to mean that a legacy in favour of an heir-at-law is inadmissible at all; the former verses were therefore considered abrogated by the latter. Along with this prohibition the restriction of the legacies to one third of the estate is prominent in the traditions. Neither of these rules is traced to Muhammad, it is true, but they obtained recognition so early and so generally that only the slightest traces of divergent views are to be found in tradition (e. g. al-Nāzimī, *Wasāyā*, Bāb 8, 14, 26; *Kanz al-Ummāl*, viii, N°. 5409). The question was more disputed, following sūra vi. 12—15, whether the legacies should be handed over before the payment of the debts or vice versa; the

second alternative predominated and quite early. Further traditions reveal two opposite views on the making of a *wasīya*: on the one hand it is urgently recommended and on the other one is advised against it; in any case, an unjust *wasīya* is regarded as a grievous sin and a just one on the contrary as a good deed. To insert pious advice in the *wasīya* (cf. section 1) is regarded as commendable. — Stress is laid upon the statement that the Prophet died without making a *wasīya* — against the Shāfi'a view (cf. Lammens, *Fatima*, p. 110 *sqq.*).

4. According to the teaching of the Fikh, every Muslim may make arrangements by will that: a. one or more individuals shall settle the business of the estate as *wasī*; this *wasī* represents the estate, actively and passively, may not however burden it with an *ʿiṣār* and enjoys the privileged position of the *amin*; that b. he or another *wasī* as *wasī al-māl* is to administer the property of his infant children (or grandchildren); for this office the mother usually comes first, although according to the Shāfi'a, she has no legal claim to it; the *wasī* as administrator of the estate is empowered to transact all business of his ward but may only pledge or dispose of his land or houses in a case of obvious advantage or absolute necessity, and when the latter reaches his majority he must render an account; in both cases a. and b. the persons named are urgently recommended to accept the appointment as *wasī* (the so-called *ḥāṭ*) and if possible to do the work of the office without payment; in case of necessity the *ḥāṭim*, the public authority, represented by the *ḥāṭ*, sees to the appointment of a *wasī*, who in this case is usually called *ḥāṭim*; the *ḥāṭ* is also empowered to supervise the *wasī* and if necessary to dismiss him; that c. legacies which in all must not amount to more than a third of the estate after payment of debts (cf. *MIRAT*, 64) are to be paid; if it turns out that they amount to more than a third of the estate they are cut down *pro rata* unless the heirs *ab intestato*, to whom the remaining two thirds go, confirm the provision of the deceased after his death. Under the same limitation come all gratuitous business transactions which he has undertaken in a condition of severe illness (*maraf al-mawt*) or, according to the Shāfi'a and Malikis, also under any other serious threat to his life, if his death results from it; a legacy in favour of a person who is also an heir of the testator to be valid needs the approval of the other heirs; it is further demanded that the person who draws up the will should be capable of doing business (with the exception of the spendthrift under age) and act under no pressure; that the legatee at the time of making the will is in a position to accept the bequest (except an unborn child, which is born within the next six months) and survives the testator and further that a transfer of property in the subject of the legacy is possible (but it need not yet be in existence at the death of the testator, for example the produce of a piece of land); the *wasīya* can be used not only for individuals and groups of individuals but also for public purposes or even assume the form of a foundation (*waḥf*) but in this case its purpose must be one allowed by law; a definite form is not prescribed for drawing up a will but the Muhammadan law of evidence requires two witnesses even in the case of a written *wasīya*; lastly for validity acceptance

by the legatee after the death of the testator is necessary; the testator on the other hand retains while alive the power to alter the wasiya.

3. The limitation of gratuitous disposal of property in case of mortal illness to a third of the estate is the answer of the fifth to attempts to obtain real liberty of bequest by evasions; other plans however, which are still in use at the present day, could not so easily be prohibited. Among these is the irrevocable acknowledgment (*ikrār*) which may refer to all kinds of obligations, admits no counterproof and in case of a mortal illness as well as, at least according to the Shāfi'is, in favour of an heir, may be completely rejected; only in case of obvious impossibility is it invalid. The next two evasions are only effective before being overtaken by mortal illness. They are the so-called *hiba bi 'l-iwaf*, i.e. a gift, in return for which another, even if insignificant, gift is stipulated or given, which cannot be regarded in law as the purchase price (this gift is complete and irrevocable even if the giver does not own it up to his death), and the endowment (*waqf*) the yield of which the founder can allot quite freely to any one legally qualified and (but this is only according to the Hanafis) earmark during his own lifetime for his own support or the payment of his debts. A simple gift (*hiba*) from one man to another may also be used to circumvent the restriction to a third and sometimes the wasiya is actually put in the form of a *hiba*, for which as far as possible the approval of the nearest blood relation is obtained (both usual in the Dutch East Indies). Further possibilities of evasion by fictitious transactions are given in the *fiqh*-literature. In many Muslim countries however, in contrast to these endeavours there is a decided objection to the wasiya, e.g. in Somaliland.

(JOSEPH SCHACHT)

WASSĀF, a Persian historian, properly Wassāf al-Hadrat "panegyrist of the court", the name by which Sharaf al-Dīn 'Abd Allāh b. Faḍl Allāh of Shirāz is known. Employed as a tax-collector under the Mongols, he became the protégé of the minister and historian Rashīd al-Dīn, who presented him to Qūljānu (712 = 1312), when the Ilkhān was in Sultāniya. His history *Tārīkh-i Waṣṣāf* is the continuation of the *Tārīkh-i Djalāl-gushā* of 'Atā Malik Djuwainī; it is called *Tadḡīyat al-Amār wa-Tadḡīyat al-A'zār* "division of the towns and propulation of the centuries" and covers the period 1257—1328.

Although it contains an authentic account of contemporary events, its value is diminished by the lack of method and the artificial and bombastic style, imitated by his successors. J. von Hammer edited the first volume with a German translation (Vienna 1856). The whole text has been lithographed in Bombay in 1269 (1853).

Reichthums Persiens*, Vienna 1818, p. 243; Edw. G. Browne, *Hist. of Persian Literature under Tatar Dominion*, Cambridge 1920, p. 67.

(CL. HUART)

WATAD or **WATID**, "a peg", means in prosody 1. a group of two vocalised consonants followed by a quiescent consonant (*watad maḡmū'*); 2. a group of two vocalised consonants, separated by a quiescent consonant (*watad maḡrūf*). Each foot ought of necessity to have a *watad* followed or preceded by one or two *sabaḥ* [q. v.].

(MOH. BEN CIENEN)

AL-WATHIK BI 'LLAH ABU 'ĪSĀK HARUN b. AL-MU'TAṢIM, 'Abbāsīd Caliph. He was given the name HARUN after his grandfather HARUN al-Rashīd; his mother was a Greek slave. On the day that his father al-Mu'taṣim bi 'LLAH [q. v.] died (18th Rabi' 1 227 = Jan. 5, 842), al-Wathik was proclaimed as his successor. Before al-Mu'taṣim's death an alleged descendant of the Umayyāds, named ABU HARB, usually called al-Mubarak² "the veiled" from the veil which he always wore, had provoked a dangerous rising in Palestine, and Radjā b. Aiyūb al-Hadāri whom al-Mu'taṣim sent against him could at first make no progress. Soon after the accession of al-Wathik, Damascus also became the scene of a great rising; the rebels shot the governor up in the citadel and encamped on the plain of Mardī Rāhl not far east of the town, but they were very soon routed by Radjā who had been recalled to meet the danger from Palestine. He next turned his attention to al-Mubarak². After a section of the latter's followers had left him because the season for sowing the fields was approaching Radjā succeeded in defeating and capturing him. The Beduins around al-Medina also gave the Caliph trouble. When the Banū Sulaim plundered the market places of the Hīdžāz the governor of al-Medina sent a large army under Hammād b. Djarir al-Taharī against them; but he was defeated and slain so that al-Wathik had to turn to the tried general Bogha al-Kabir [q. v.]. In Sha'bān 230 (April—May 845) Bogha entered al-Medina and after defeating the Banū Sulaim and taking the prisoners to al-Medina he performed the pilgrimage to Mecca, and then turned his attention to the Banū Hīlāl, who had also taken part in the rising. The most guilty were imprisoned in al-Medina and the others pardoned. Bogha then turned against the Banū Murra and the Banū Fakhra, who had seized the town of Fadak, but as soon as he appeared they abandoned the town and took to flight (231 = 845—846). In the meanwhile the prisoners escaped from al-Medina and killed their warders but were cut down by the citizens of the town with the help of the many negro slaves in al-Medina. In the following year, Bogha had also to fight against the Banū Numair in al-Yamāma and only subdued them after much

difficulty. There were also troubles among the Kharijites and the Kurds. Al-Wathik died on the 23rd Dhu 'l-Hijja 232 (Aug. 10, 847) at the age of 32, or according to others 34 or 36. He had not the gifts of a great ruler and his brief reign was not distinguished by remarkable events. The Caliph's character also was not such as to make him beloved. It is true that he was liberal to the poor in Mecca and al-Medina and he also treated the 'Alids with great benevolence and took a considerable interest in poetry and singing; for the rest he is described as covetous, intolerant and devoted to sensual pleasures. He extorted huge sums of money from the high officials and as an ardent Mu'tazili he persecuted the orthodox theologians. In the circumstances, it is not remarkable that the generally respected Ahmad b. Nadr b. Malik al-Khuzi prepared a plot to dethrone the Caliph and put a check to the arrogance of his Turkish officers. By an accident the signal was given too soon (Sha'ban 231 = April 846); the authorities were therefore able to discover the conspirators without difficulty and Ahmad b. Nadr was executed.

(K. V. ZETTERSTERN)

WATTASIDS (BANU WATTAS), a Moroccan dynasty of the xvth and xvth centuries. The Banu Wattas were a collateral line of the great family of the Banu Marin, to which also belonged the Banu 'Abd al-Hakk, founders of the dynasty generally known as the Marinid dynasty [q.v.]. After leading a nomadic life on the edge of the Sahara and the high plateaus of the Central Maghrib the Banu Wattas settled in the xiiith century in eastern Morocco and soon established themselves in the Rif, of which they became practically independent rulers, when their relatives the Banu Marin had replaced the last Almoravid rulers in northern Morocco. Henceforth their history is at first linked with that of the Marinids and afterwards closely connected with the Christian attempts to conquer territory in Morocco and with the events which led to the accession of the Sa'dian princes to power in the middle of the xvth century.

During the whole of the Marinid dynasty, the Banu Wattas, on account of the bonds of relationship which connected them with the ruling family, had been overwhelmed by the latter with honours, dignities and offices which they held either at the court of Fes or in the principal towns of the country. In 823 (1420) Sultan Abu Sa'id 'Uthman was assassinated and Morocco was left in complete anarchy and exhausted by civil war. Spain had now been almost entirely reconquered by the Christians; the Portuguese had seized Ceuta; several pretenders supported by Tlemcen or Granada, were endeavouring to restore for their own advantage the unity of the kingdom of Fes. It was then that one of the outstanding members of the family of the Banu Wattas, Abu Zakariya 'Yahya b.

Zayda, who was governor of the town of Sale, took control of the destinies of the country. He proclaimed and succeeded in getting recognised a son, still a minor, of Sultan Abu Sa'id, Abu Muhammad 'Abd al-Hakk, and ruled the country in his name as vizier. This regency was continued far beyond the minority of 'Abd al-Hakk. When Abu Zakariya (called in his land Abu Zekri) died in 1448, he was at first replaced as mayor of the palace by his cousin 'Ali b. Yusef, then by his son Yahya.

Events at first favoured the Banu Wattas. The repeated landings of the Portuguese on the Moroccan coasts soon produced throughout the country a revival of religious sentiment which found expression in summons to a *ghihad* and in arousing the fanaticism of the masses by marabouts and descendants of the Prophet. The Wattasid regents at first turned to their own advantage this feeling among the people by taking the lead in the holy war and organising the struggle against the Portuguese. While Abu Zakariya succeeded in inflicting a severe defeat on the latter in 1437 and taking the Infanta Ferdinand prisoner, 'Ali b. Yusef was less successful and could not prevent the fall of al-Kasr al-Saghir. In Fes, the Idrisid shoria [q.v.] were working for themselves, reviving the cult of Idris II [q.v.], the founder of the town, and their chief 'Ali b. Muhammad al-Jilli saw his power growing daily. At the same time the regency of the Banu Wattas had come to an end; two months after he had assumed power in 1458, Yahya, the third Wattasid vizier, was assassinated along with most of his family. The Marinid Sultan 'Abd al-Hakk then tried to govern directly but he very soon alienated the people of the capital by his mistakes, such as appointing the Jew Harun as vizier. In 869 (1465), he was assassinated and with him the Marinid dynasty ended.

But two brothers of the vizier Yahya had been able to escape the massacre of their family in 1458. One of them, Muhammad al-Shaikh, had taken refuge in Arila (Aylla) and had been able to create an increasingly important party in the highlands of northern Morocco. On the death of 'Abd al-Hakk, he made up his mind to take Fes, now under Idrisids government, and after a six years' struggle, he entered the ancient capital of the Marinids and was proclaimed sultan there in 1472. He reigned until 1504 but had to face many difficulties. The capture of Granada by the Catholic kings in 1492, the foundation of Mazagan [q.v.] and of Safi [q.v.] by the Portuguese had only exasperated still further the religious movement in Morocco and encouraged on all sides the rising of pretenders who used the *ghihad* for their own private ambitions.

On his death, Muhammad al-Shaikh was succeeded by his son Muhammad, called al-Burtuqali (the Portuguese), who managed to hold the throne of Fes till 1524. But events were moving rapidly; the Sa'dian shoria, after consolidating their authority in the extreme south of Morocco, advanced rapidly northwards and in 1523 seized Marrakush. The struggle between Wattasids and Sa'dians was only to end in the final triumph of the latter. The successors of Muhammad al-Burtuqali, his son Abu 'l-Abbas Ahmad (1526 and 1547-1549) and his grandson Muhammad al-Kasri (1545-1547), vainly endeavoured to check the vigorous progress of the Sa'dian

prince Muhammad al-Shaikh al-Mahdi. When the latter in 1550 had finally occupied Fās, the issue was decided. A second Wattasid pretender, 'Alī Abū Ḥassan (Ḥa Ḥassan), brother of Muhammad al-Burtūqālī, made another effort to save and restore his dynasty: he went to seek help in the rest of Barbary and in Europe, visited Charles V in Germany, seemed to have interested the Portuguese for a time in his fortunes, and finally persuaded the Turks, who had just arrived in north Africa and extended their rule to Tlemcen, to make an expedition against Fās. This city fell to them in 1554 but Muhammad al-Mahdi regained it a few months later. The last Wattasids now left Morocco without hope of return. Some, it is interesting to note, were converted to Christianity and became monks.

The period of the Wattasids in Morocco was one of transition between the Berber and the Sharifian dynasties, between the mediaeval and the modern periods in the history of the country. In spite of the political turmoil, the country had occasional brief periods of prosperity. Fās continued to flourish under the Banū Wattas, as it had done in the greatest days of the Marinids, and it was at this time that it was visited by Leo Africanus, who has left us a valuable and accurate description of it.

A genealogical table of the Banū Wattas with full notes is given in H. de Castries, *Les Sources inédites de l'Histoire du Maroc*, first series, Spain, vol. I, Paris 1921, pl. iv. (p. 162 and 163).

Bibliography: The main facts regarding the dynasty of the Wattasids are scattered through the treatises on Moroccan hagiography and biography of the xviii and xviii centuries. The only consecutive sketch of their history is that given at the end of the sixth century by the historian Ahmad b. Khālid al-Nāsiri al-Salāwī (cf. *AL-SALAWI*), in his *Kitāb al-Isṭiṣṣā*, I, 159 sqq. — The European sources are Marmol and Diégo de Torres. Cf. also the official documents published or in course of publication in H. de Castries, *Les Sources inédites de l'Histoire du Maroc*. A monograph was written on the Wattasids by A. Cour, *La dynastie marocaine des Beni Wattas*, Constantine 1920 (cf. on this book and its subject *Revue Africaine*, 1921, p. 185—189; *Hesperis*, I, 1921, p. 492—497).

(E. LÉVI-PROVENÇAL)

WATWĀT, RAḤĪD AL-DĪN, a Persian poet, a native of Balkh, whose proper name was Muhammad b. 'Abd al-Djallī al-'Umarī (descendant of the Caliph 'Umar); he was called Watwāt (the swallow or martin) from his diminutive stature and insignificant appearance. He flourished under the Saldjūq sultan Saodjar and the Khwārizmshāh Atsız (d. 551 = 1156—1157) and was secretary and court poet to Atsız. While Saodjar was besieging the latter in the fortress of Ḥazārāp in Khwārizm (khānate of Khlwa) in 542 (1147) he commissioned the poet Anwārī to write insulting verses which were shot into the town on an arrow, and Watwāt had to reply to them. Taken prisoner, he was condemned to be cut into seven pieces but was saved by the intervention of Muntakhab al-Dīn Badī' al-Kātib, ancestor of the author of the *Djāhāngushā*, who remarked that the swallow (*watwāt*) is too small a bird to be cut into seven pieces and that they should be content to cut him in two, which caused Saodjar to laugh and

pardon the poet. In 547 (1152—1153) he incurred the wrath of Atsız and was banished from the court of Khwārizm but was restored to favour on addressing a poem to him. He died in this town in 578 (1182—1183) aged 97 lunar years, it is said. In addition to poems, he left works in prose: the *Maṭlūb Kull Ṭalīb*, a translation and paraphrase in Persian of the 100 sayings of 'Alī, which has been edited and translated into German by H. L. Fleischer (Leipzig 1837), and the *Ḥadīṭ al-Sifr* "gardens of magic", a treatise on rhetoric based on the *Targhmānī* *Ḥalūghāt*, "the interpreter of eloquence" of Farrukhī, used by E. G. Browne in the introduction to vol. II of his *Literary History of Persia* (London 1906). His *Divān* contains 7,000 verses.

Bibliography: 'Awfī, *Lubāb al-Albāb* (ed. Browne, 1906), I, 80—86; Dawlat Shāh, *Tadhkirat al-Shu'arā'* (ed. Browne, 1901), p. 87—92; Laṭīf 'Alī Beg, *Atiq Kōtī* (Bombay 1277, no pagination), region of Turān; Ridā Qulī Khān, *Madīd al-Fuqāhā* (Tehran 1295), I, 222 (copious extracts from the *Divān*); 'Alī Malik Dhūwālī, *Tārīkh-i Dzhāhāngushā* (ed. Muhammad Karwīnī, Leyden 1916), II, 6—11; J. von Hammer, *Geschichte d. schen. Redikante Persiens*, p. 119; Edw. G. Browne, *Literary History of Persia*, II, 124, 309 sqq., 330—333. (CL. HUARY)
WĀW, 27th or 28th (when it precedes *hā'*; this is the sequence in some dictionaries), letter of the Arabic alphabet, with the numerical value of 6. For its palaeographical pedigree, see *ABĀRIA*, plate I. — It belongs to the group of the labials (*al-ḥurūf al-lisāwiyya*) as well as to that of the soft letters (*ḥurūf al-layn*). It is pronounced like English *w*. In the north-Semitic languages and sometimes in Ethiopic, its place at the beginning of words is taken by *y*. In a few cases it corresponds with *m* (cf. *urdjwān* "purple" with Aramaic מרן and Hebrew מרן).

Bibliography: W. Wright, *Comparative Grammar of the Semitic Languages*, p. 69—73; C. Brockelmann, *Grundriss der vergl. Grammatik d. sem. Sprachen*, p. 138 sqq.; do., *Précis de linguistique*, transl. by W. Marçais and M. Cohen, Paris 1918, p. 75; A. Schnade, *Sibomaihi's Lautlehre*, Register.

WĀZIR, vizier, title of ministers of state and of the highest dignitaries, especially in the Ottoman empire. The word and the idea come from Irān. In the *Avista* *viziro* means "decider, judge", in Pehlvi *z(i)zr* "judge, decision". The Arabs undoubtedly took over the term in the Sāsānian period and it was only in later times that modern Persian took back *wāzīr* from the Arabic as if it were really Arabic. Under the Umayyads the usual name of the secretary of state was *kātib*; it was later replaced by *wāzīr* (cf. Et. Quatremère, *Histoire des sultans Mamlouks de l'Égypte*, II, 2, Paris 1845, p. 317 sqq.; W. Björckman, *Beiträge zur Geschichte der Staatskanzlei im islamischen Ägypten*, Hamburg 1928, p. 6; on the origin of the name cf. also Th. Nöldeke, *Geschichte der Perser und Araber zur Zeit der Sāmāniden*, Leyden 1879, p. 53, note 1 and p. 444, note 3; where for the abstract significance we may compare *sulṭān*). The first *wāzīr* was Abū Salāma Ḥafṣ b. Salāma al-Khalīlī, appointed by al-Saffāh who was in office from Rabi' I 132 (Nov. 749) but was killed on 5th Rajab (Febr. 27, 750) (cf. E. v. Zambaur, *Mansur*, p. 6 and Ibn Khallikān, *Kitāb Wafāyāt al-A'yān*,

transl. by W. MacGuckin de Slane, i. 467). Under the caliphs the vizier managed the chancellery (*diwān al-raṣīd*), later, as business increased, jointly with the head of the *diwān*. It meant a considerable increase in the power of the vizier when the caliph al-Raḥīm gave Dīfār b. Yahyā al-Barmakī (d. 187 = 103) the right to decide petitions (*taḥqīq al-ḥaṣīṣ*; cf. W. Björkman, *op. cit.*, p. 6 sq.). A full list of the viziers under the caliphs is given by E. v. Zambaur in his *Manuel de généalogie et de chronologie pour l'histoire de l'Islam*, Hannover 1927, p. 6-9. The last was 'Alī al-Dīn Djuwainī in 661 (1263). The successors of the viziers were the governors of Baghdad. The signet-ring was the visible badge of the vizier's office (cf. Ibn Badr, ed. R. Dozy, p. 244). A history of the vizierate under the caliphs with its varying importance and scope has not yet been written. A list of the more important sources is given in the *Bibl.* A history of the vizierate in Persia and under the Saldjūks, cannot be given here, although the importance of the vizierate was greater than elsewhere, as may be seen from the distinguishing names among the Persian and Saldjūk viziers.

Under the Ottomans the first vizier is said to have been 'Alī al-Dīn, brother of the second sultān Uṣṣūn. The historians give 726 (1326) or 728 (1328) as the date of the inauguration of this office, with what justice we do not know. Among the Saldjūks the office was called *perwāne*, lit. "command, advice", which is also used in old Ottoman. The power of the earliest Ottoman wazīrs was considerably restricted. In 788 (1386) Timurtaş Paṣha appears as the holder of the highest office in the kingdom. He bore three horse-tails as a distinguishing badge. He is regarded as the first grand vizier of the Ottomans (*ulu wazīr*) and henceforth every Paṣha of three tails bore the title vizier (cf. J. v. Hammer, *G.O.W.*, i. 199). The number of the viziers was constantly changing. In the reign of Meḥmed II the number was not allowed to exceed seven but could be less. Down to the conquest of Constantinople there was only one vizier. The viziers with the grand vizier (*ulu wazīr* in xvth century documents and later in popular usage, *adr-i aṣam* in official language) were called *ḥukūmecciler* "viziers of the dome" because they sat with the grand vizier, whose name they shared but not his power, under the same dome in the Diwān (so J. v. Hammer, *Des Osmanischen Reichs Staatsverwaltung und Staatsverwaltung*, ii. 80 sq.). They were called in order of rank, second, third, fourth etc. vizier.

As a rule, vizier in later times was simply a title of the other high officials like the *niḥāḍgī*, the *defterdār*, the Kapudan Paṣha, sometimes even of the Agha of the Janissaries. The grand vizier was usually chosen from their number. When they appeared together before the sultān, only the grand vizier could speak about official business. The other viziers stood silent beside him with hands crossed.

In war time the viziers of the dome commanded armies and were then called *ordar* or *ser'asker* and had extensive powers, such as filling empty offices and fiefs. They had even the right to issue *firmāns* from their camps in the name of the sovereign and to place the sultān's *tuḡra* [q. v.] upon them. Their income did not exceed 200 aspers. In the reign of Ahmad III the institution of viziers of the dome was abolished on account of the great

confusion which they caused and only the Kapudan Paṣha [q. v.] retained the title of vizier (cf. on the preceding J. v. Hammer, *Staatsverwaltung*, etc., ii. 81). Afterwards it was given to the four chief paṣhas of the empire, the governors of Rumelia, Anatolia, Baghdad and Egypt, but then gradually extended to all the governors of the Ottoman empire as soon as they were promoted from the rank of a paṣha of two tails to that of paṣha of three tails. On extraordinary occasions such as the marriage of a sultān's daughter, according to J. v. Hammer, *op. cit.*, p. 82, viziers used to be appointed in name only without any official power. With the abolition of the viziers of the dome the power of the grand vizier increased immensely and only began to lose its prestige with the introduction of reforms in the reign of Selim III. The external symbol of omnipotence among the Ottomans also was the sovereign's seal, which the grand vizier kept and handed on to his successor on his dismissal. On the honours which used to be enjoyed by the grand vizier as well as the insignia of his rank, cf. J. v. Hammer, *op. cit.*, ii. 83 sq.; on the different names, *ibid.*, p. 84. — The history of the grand viziers of the Ottoman empire has been sketched by a number of authors. Cf. the list and biographies of the grand viziers in F. Bahinger, *G.O.W.*, p. 165, 254 sq., 259, 267, 292, 306, 314, 315, 364, 365, 366, 368. Luṭfi Paṣha (d. 1564) who had himself been a grand vizier, wrote a special work (*Asfāṭine*) on the duties of the office of grand vizier; on it cf. F. Bahinger, *G.O.W.*, p. 80 sq. With the dissolution of the Ottoman empire after the Great War, the office of grand vizier naturally disappeared.

AL-WAZIR AL-MAGHRIBI. [See AL-MAGHRIBI.] **WEDJHI**, HUSAIN, an Ottoman poet and historian. Husain whose *mashāy* was Wedjhi, came from Baghche Seray in the Crimea at an early age to Stambul where he became seal-bearer (*mukhurdār*) to the later grand vizier, then Kapudan Paṣha, Kara Mustafa Paṣha. He died in 1071 (beg. Sept. 6, 1660) in Stambul and was buried before the Adrianople gate. Wedjhi left a history and a *Diwān* which has not yet been printed. The former begins in the year 1047 (beg. May 20, 1637) with the description of the conquest of Baghdad under Murād IV, then describes the reign of Ibrahim I fully, as well as the first twelve years of the reign of Muḥammad IV. It ends with the year 1070 (beg. Sept. 18, 1656). The concluding portion for the year 1070 is especially

valuable because there is a gap here between the works of the imperial historians Naṭmā and Kashūl. There are manuscripts of the still unedited chronicle of Wedjhi in Leyden, Vienna and Stambul, and an Italian translation in the Library of St. Mark in Venice entitled: *Relazione dell' successi nell' imperio ottomano, principando dall' anno di Mahometto 1077 sino al 1072, e di Christo Nasser Signore 1058 sino al 1660, composta in lingua turca da Hassan (?) Vendi e tradotta nell' idioma italiano da Giacomo Tarbia, Dragomanno veneto, in Pera di Costantinopoli, li 20 ottobre 1673*. Extracts from this Italian translation were published by N. Jorga, in *Annales de l'Académie Roumaine*, xli, 55-149.

Hassan Wedjhi is sometimes wrongly called Hassan Wedjhi.

Bibliography: F. Babinger, *G.O.W.*, p. 208 and the references there given.

(FRANZ BABINGER)

WEGA (VEGA) (AL-NARR AL-WĀḠI). The Arabic name *al-Narr al-wāḡi* "the falling eagle" — in Latin always reproduced as *Vultur cadens*, in Greek *πτερόπτερος*, although *narr* is undoubtedly the eagle not the vulture — is the name first of the brightest star (first magnitude) α in the constellation of the Lyre and secondly of the whole constellation of the Lyre itself. The name Vega, a corruption of *wāḡi*, is found in this form as early as the Alfonsine Tables e.g. "Lucida super pupillam deferentem et est Alchore et dicitur Wega". The expression *pupilla deferens* which here occurs for the first time in the Latin translations from the Arabic is to be explained, as Ideler (*Sternnamen*, p. 71) has shown, by a confusion of the word *narr* with the similarly sounding *nāḡir* "eye, pupil"; *deferens* is, especially in mediaeval Latin, frequently used synonymously with *indere*. The *Alchore* of the Alfonsine Tables is the Arabic *al-Lāḡa* which again is identical with the classical Greek *λόγα*, which was applied to Vega and also to the whole constellation.

The Arabic name *al-Sulayf* or *al-Sulayf* [q.v.] also applied to both star and constellation, to which al-Kazwini gives first place, is presumably (cf. Hyde, *Com. in Ul. B.* 1665, p. 18 and Ideler, *op. cit.*) an Arabic corruption of the Greek *χελών* (or *χελών*) "tortoise", which we find for example in Aratus as a synonym of *λόγα*. (The equation of *λόγα* and *χελών* is based on the legend of Mercury according to which the god made the first lyre from the shell of a tortoise; cf. *Hymnus Hom. in Mercurium*). *Sulayfāt* (in al-Sūfi, Ulugh Beg etc.) is the Arabic name of the tortoise (from Pers. *sūlāḡ* > *sūlāḡ* = *pāy*, *pā*); it is therefore equivalent to *al-Sulayf*.

For the whole constellation, more rarely for Vega alone, we find in Arabic literature also the names *al-ḡannā* ("cane, goose"), *al-Aḡḡaḡa* ("cymbal") and *al-Samḡ* ("stringed instrument"); the latter word represents the arabicised form of the Persian name of the constellation *Camē-i rāmī* ("Greek harp") and appears in the Latin translation of 'Alī b. Rīḡwān as *Atzange* and also from a wrong reading (cf. Ideler, *op. cit.*) as *Atzige*.

In the Arab conception of the constellations *al-Narr al-wāḡi* is a companion piece to the "flying eagle" (*al-narr al-fāḡi*) as an eagle falling down from north to south with wings folded, the two wings being represented by the stars α_1 and

and ϵ Lyrae which together, according to al-Sūfi, are popularly called *al-Aḡḡaḡa* "the tripod".

Pictorial representations of a later date frequently show the figure of the falling eagle, sometimes that of an eagle hovering in the lyre. (Gundel points out [Pauly-Wissowa, Stuttgart 1927, vol. xiii, article *Lyra*] that possibly Abū Maḡhar had already thought of this combination when he [Arabic text, published by Gyroff in Boll, *Sphaera*, p. 527] mentions the lyre as paratellurion to the third decan of Sagittarius and gives the explanatory note: "i.e. the Tortoise, and it is also called the falling eagle".) This assumption however, is not certain for in the text the two pictures are mentioned successively and not as a combination.

The oldest Arab representation of the heavens of the Muslim period, the fresco in the dome of Kūfā's 'Amra (cf. Saxl-Beer, *The Zodiac of Qūfayr 'Amra*, Oxford 1932, and art. *MINḠAḠA*), shows the constellation as a Lyre; the fine manuscript of *King Alfonso X's Book of Stars* and the Arabic globe of the heavens of the 15th century in Florence shows it as a tortoise, as do several other Latin MSS. of astrological works (cf. Boll, *Sphaera*, p. 432).

Vega was quite well known to the ancients; among the Babylonians the star (*šūlū šūlū*) is identified as "mistress of life" with the goddess Gula (cf. Jeremias, *Geisteskultur*, p. 225); in Chinese it is often mentioned as *chū-wū* (the "woman weaving"). It is one of the brightest stars in the northern heavens and therefore forms an extremely favourable object of observation for the astronomer. Among the Arabs it plays an important part as an astrological star (cf. al-Sūfi: *al-Kawātib wa 'l-Samāwāt*); in astrology however, it is of minor importance in view of its great distance from the ecliptic and is only rarely taken into account in horoscopes.

Bibliography: Abū al-Rahmān al-Sūfi, *Description des étoiles fixes*, ed. H. C. F. C. Schjellerup, St. Petersburg 1874; al-Kāzwinī, *Aḡḡaḡa al-Bilād wa 'l-Aḡḡaḡa al-Jūd* ("Cosmographie"), ed. Wustenfeld, Göttingen 1849; do., transl. by H. Ehbé, Leipzig 1863; L. Ideler, *Untersuchungen über den Ursprung und die Bedeutung der Sternnamen*, Berlin 1809; Fr. Boll, *Sphaera*, Leipzig 1903. — On the etymology of *Sulayfāt*: A. Siddiqi, *Studien über die persischen Fremdwörter im klassischen Arabisch*, Göttingen 1919. (WILLY HARTNER)

WILĀYA (أ. ى), a *magīr* from *walāya* "to have power over something", according to others a substantive like *imāra*; a general term for any "conferring of power", authorisation. *Qardānī*, *Ta'rifāt*, p. 275, defines it as the "carrying through of a decision affecting a third person whether the latter wishes or not".

1 In constitutional law it means the sovereign power (= *mīḡān*; Ibn al-Sikkī [d. 243=857], in *Lisān*, a.v.) or the power delegated by the sovereign, the office of a governor, a *wāḡi*. The *wilāya* is derived from *Sūra* iv. 62: "O ye who believe, obey God and obey the Prophet and those in authority amongst you". It is regarded as granted by God and is a *farḡ* 'ala 'l-*ḡalīya*. A distinction is made between a general and a special *wilāya*. The *imān* [q. v.] or *ḡalīfa* [q. v.] possesses the general power. According to Mawardi, the *vizier* and governors of provinces have the general *wilāya*, the latter for their provinces. On the other hand,

military commanders, judges, imāms (i.e. the leaders of the *ṣūfī*), the leaders of the *ḥanbalī*, financial officials etc. have a special *wilāya*. The possessor of a *wilāya* must be male of full age (*baligh*), he is full possessor of their mental faculties, have no physical defects, must be 'adult' and be fitted by education and knowledge for the office in question; there are also still further conditions for particular offices (e.g. the *ḥafẓ* must be a free man).

Wilāya then comes to mean the appointment and certificate of appointment of an official. The different kinds are dealt with very fully by Kalkashandī, *Subḥ al-Ashā*, Maṣṣala 5. (cf. the statement of contents in Hückemier, *Beiträge zur Geschichte der Staatskunde*, Hainburg 1928, p. 144 sq.). In this connection we may note the designating of his successor by the reigning caliph, called *wilāyat al-ahd*, which was first done by the caliph Sulaimān b. 'Abd al-Malik and became the rule in the Abbāsid period; every heir apparent is still therefore called *walī al-ahd*.

Wilāya has in time come to be applied to the area of a *walī's* authority: thus in the Mamlūk period in Egypt and Syria it meant the smallest administrative area, at the head of which was a *walī* of the rank of an *amīr al-jalāliyya* (Kalkashandī, *Subḥ*, iv, p. 199 sq.). In Persia it means the larger administrative areas into which provinces are divided; in Turkey, however, since the xviii century, the name has been given to the largest administrative units (also called *vilāyet*) under Beglerbegs, later *mīllets* (Turkish pronunciation *vilāyet*).

If, in personal law every freeman possesses *wilāya* (usually pronounced *walāya*; cf. Lisan, s.v.), the power of disposing of himself (cf. e.g. Sarakhsī, *Mabṣūṭ*, xxiv, 157, 158 sq.). In certain cases this power can and must be transferred to another. But even then the Islamic jurists speak simply of a *wilāya*. We have this *wilāya* in the case of the administrator of *wakf* properties, the executor of a will, a father with respect to his infant children and particularly in the case of *walāyat al-nikāḥ* [see *NIKĀḤ*] and *walāyat al-māl*, guardianship. We shall deal only with the latter here.

a. Muḥammad, himself an orphan, was always interested in the protection of orphans, e.g. in the later Meccan period in *Sūra* xvii, 36 = vi, 153: "Touch not the property of the orphan, except for his good, until he is grown up". In the Medina period we are told that one should deal fairly with orphans (iv, 126), be good to them (iv, 40; ii, 77, 211) and treat them as brothers (ii, 218-219) and support them for the love of God (ii, 172). Muḥammad set aside the fifth of the booty for orphans among other objects (viii, 42; cf. lix, 7). The principal passage however is *Sūra*, iv, 2 sq.: "And give to the orphans their property; substitute not worthless things for that which is good, and devour not their property after adding it to your own; for this is a great crime.... (4) And entrust not to the incapable (i.e. in money matters; *rafāḥ*) your substance which God has placed with you for a support; but maintain them therewith, and clothe them, and speak to them with kindly speech; (5) and make trial of orphans until they reach the age of marriage; and if ye perceive in them a sound judgment (*rafāḥ*) then hand over their substance to them; but consume ye it not wastefully or hastily (6) (out of fear that) they are growing up. And let the rich guardian abstain [from it] and let

him who is poor use it for his support (eat of it) with discretion. (7) And when ye make over their substance to them, then take witnesses against them.... (11) Behold, they who swallow the substance of the orphans wrongfully, shall swallow down only fire into their bellies, and shall burn in the flame".

The pertinent traditions only contain certain developments of the Qur'anic idea (cf. Wensink, *Handbook*, s.v. *Walt and Orphans*).

1. The main doctrines of the Fiqh.

1. The ward (*waḥḍ*, i.e. the "poor") is either an orphan male or a mentally deficient person (*maḥḥūn*) or a spendthrift (*saff* or *saḥḥ*). The *saff* was only added about the end of the first or beginning of the second century A.H. The Qur'an (cf. above) speaks, it is true, of the *saff* but not yet in the later technical sense; the oldest expositors of the Qur'an (Maḥḥūn [d. 100 = 718], al-Hakam [d. 115 = 733], Kāṭib [d. 117 = 736], al-Suddī [d. 127 = 744]) only understand thereby women and children or one of these two. Tabarī still criticises this interpretation at considerable length and defines the *saff* as "one who on account of the dissipation of his fortune, his immorality, his injury to and mismanagement of his fortune requires control (*ḥaḥ*)" (*Taḥḥ*, iv, 153). Abū Hanifa still refused to put the *saff* under a guardian.

2. The guardian to be appointed should by law be the paternal father or grandfather, who is also entitled to appoint a guardian by will, the so-called *walī* (who may also be the mother). In other cases the guardian (*ḥaḥ*) is appointed by the *ḥaḥ*. The guardian must be a Muslim, who has attained years of discretion and is in full possession of his mental faculties, of good repute (*ḥaḥ*) and able to undertake the office. Guardianship is a religious duty and can only be declined for important reasons approved by the *ḥaḥ*.

3. The obligations imposed on a guardian. He has to administer the estate of his ward and act here as *walī*. Among his powers are that of arranging marriage or divorce and making of a will etc. He has to champion the interests of his ward; he may invest his ward's estate in business enterprises but not in his own business. He can only dispose of lands or houses with the approval of the *ḥaḥ*. He cannot have any business dealing between himself and his ward and cannot give anything away of his ward's property.

4. The guardianship is ended by the death of the guardian or of the ward, by deposition of the guardian for faithless conduct or when the ward attains years of discretion (*baligh*, as a rule at 14) or becomes *rafāḥ*, i.e. capable of administering his estate himself (and according to the Shāfi' view also possesses the ability to recognise the true faith). The guardian has then to give his ward an account of his stewardship.

(unfinished), Paris 1901, esp. introd., p. 74 sq. — On II: In addition to the *Kitāb al-ḥaḥ* in the Fiqh works: Th. W. Juynboll, *Handboek der Islam. Geschied.*, Leyden 1910, § 44; 3rd (Dutch) ed., Leyden 1925, § 52; D. Santillana, *Istituzioni di diritto musulmano malichita*, Roma 1926, i, 252 sqq. (HERRING)

WIRĪ (A., pl. **AWRĪD**). The technical term *wir* (etymologically "to go down to a watering-place"; not to be vocalised *ward*) means the definite time (*waqt*) of day or night which the pious believer devotes daily to God in private prayer (in addition to the five prescribed prayers). It also means the formula of prayer recited on this occasion, called properly *hik* (plur. *ahik*; cf. Makki, *Ḥat al-Kutub*, i. 81-84 and i. 4-22). The simplest *wir* consists of 4 rak'as, with the recitation of a seventh of the *Kur'ān*; but, very early, in private devotional prayer (*du'ā'*; *Sunnat* as well as *Shi'a*, cf. Kulani, *Kāfi*, at the end — and Kharrāji, cf. Djalili, *Kawāfir al-Khawāṣṣ*, iii. 397-416) there were added litanies, either isolated phrases (*humsals*, *tahtil*, *tabtil*, *taḥṣib*, *ṭaḥṣib*, *ṭaḥṣib*, *ṭaḥṣib*, *ṭaḥṣib*) or isolated words (Arabic names of God: *Allāh*, *ḥumma*, and invented or cabalistic names) because they were found to be "efficacious".

When in the 12th century, Islamic congregations were formed which took up the *Shi'a* idea of the initiatory *ba'ā*, they decided to teach the novice on the day of his admittance (*taḥṣin* = *ahik* al-*wir*) a special *wir* (cf. for the first appearance of this term L. Massignon, *Revue*, 1929, p. 107, 6) which became the distinctive *ghik* of each congregation.

In practice the *wir* is divided into two: *wir 'am* (*ghik* *ghakr*), an exoteric formula often of some length (several hundred *istighfār*, etc. several times a day; after the *faḍr* and *maghrib* among the 'Alawiya), and *wir khāṣṣ* (*ghik* *shir*), "secret" name of God (e.g. *yā Laṭīf*, among the Sanūsiya), which the *Shaykh* only communicates to the initiate as a great mystery (cf. Hasan Kādiri, *Irshād al-Rūḥāni*, p. 27-28; publ. at the end of the *Kawāṣṣ* of Ibn 'Alīwa of Mostaganem, Tunis, Nāḥḍa, 1339). The term *hik* or *ghik* is used by preference for the assemblies of the brethren for common recitation (old term *ṣunū*; now *ṣunūṣ*).

Since the 15th century special collections have been put together, in the style of the *muhaddithūn*, containing the *wir* of the principal *Sunnat* *parṭhā*'s with the *ṣunū* of the transmission of the initiation. The oldest, the *Risāla* of the *ḥāṣṣ* *ḥabṣ* Ahmad b. Abi l-Fuṭūḥ Ṭāwūs of Atarḥūh, compiled shortly after 823 (1419) (cf. Kūshāshi, *Simṣ*, p. 75, 109 and Kattāni, *Fihri*, i. 337; ii. 274-275, 306-311), remodelled and brought up to date successively by the *ḥabṣ* *ḥabṣ* Ghawth Hindi (d. 970 = 1562; in *Djawāhir* and *Darajāt*), Abu l-Mawālūḥ Shinnāwī (d. at Medina in 1028 = 1619; in *Sharḥ 'ala l-Djawāhir*), Ahmad Kūshāshi (d. 1070 = 1661; cf. his *Simṣ* *maḥṣud*, lith. Haidarābād 1227) and Hasan 'Uḍḍaimi (*Risāla*; cf. 'Ayyāzī, *Riḥla*, lith. Pān n. d., ii. 214-222; and Kattāni, *loc. cit.*, i. 336-337; ii. 150, 193-195, 396), culminated in the famous manual, still unpublished, of Sanūsi, called *al-Salāḥ al-muḥim* (cf. the article *TAKṬA* and L. Massignon, *Revue*, 1921, p. 169-171) where everything is found down to the "*wir* of the Hindu Yogis". These collections of *wir*, brought from Mecca by pilgrims with *ṣunū*, have spread them throughout the Muslim world.

WITR. In the treatment of ceremonial law in *ḥadith* and *fiqh* this term is applied to the odd number of rak'as which are performed at night. For details see below.

I. *Witr* (*waṭr* is also admitted) does not occur in this sense in the *Kur'ān*, but frequently in *ḥadith*, which in this case also discloses to us a piece of the history of the institution, which is probably a continuation of the history of the fixation of the daily *ṣalāt*, as the traditions on *witr* presuppose the five daily *ṣalāt*s. Some traditions even go so far as to call *witr* an additional *ṣalāt* of an obligatory nature (see also below, II). When Mu'adh b. Djabal, at his arrival in Syria, perceived that the people of this country did not perform *witr*, he spoke to Mu'awiya on this subject. When the latter asked him: Is then this *ṣalāt* obligatory? Mu'adh answered: Yes, the Apostle of Allāh said: My Lord has added a *ṣalāt* to those prescribed to me, namely *witr*, its time is between *'iḥṣā'* (cf. *ṣiḥr*) and daybreak (Ahmad b. Hanbal, *Musnad*, v. 242). In accordance with this tradition it is reported that *witr*, when it had been forgotten or neglected, had to be recovered (Ahmad b. Hanbal, ii. 206; Ibn Māḍija, *Iḥṣā'*, b. 122). 'Uḥāda b. al-Sāmit [q. v.], on the other hand, denied the obligatory character of *witr*, on account of a different tradition (Ahmad b. Hanbal, v. 315-319).

A second stage in the position of *witr* is expressed in those traditions in which Muḥammad admonishes his people to perform *witr*, "for Allāh is *witr* (viz. One), and He loves *witr*" (e.g. Ahmad b. Hanbal, i. 110).

The third stage of *ḥadith*, which was to become the point of view of all *mudhhab*'s with one exception, is represented in those traditions which call this *ṣalāt* *ṣunna*. Many traditions of this kind expressly deny its obligatory character and are consequently of a polemical nature; they are frequently ascribed to 'Alī (e.g. Ahmad b. Hanbal, i. 86, 98, 100, 115, 120, 145, 148 etc.). It may be that this question, like other ceremonial points, belonged to the polemical repertory of the early *Shi'a*.

5. The time of *witr* is mentioned in *ḥadith* in connection with different parts of the night. "Witr consists of pairs of rak'as, whoever fears *ṣubḥ* has to add a rak'a in order to make the total number odd" (Ahmad b. Hanbal, ii. 3, 9, 10, 75). In other traditions three rak'as are mentioned in order to avoid the *ṣubḥ* (*ṣalāt* al-*ṣubḥ* *bi-rak'atain*, e.g. Ahmad b. Hanbal, ii. 71). The number of thirteen rak'as occurs also (Tirmidhi, *Witr*, b. 4), and in general *witr* is supposed not to be allowed after *ṣalāt al-ṣubḥ* (cf. Malik, *Muwatta'*, *Witr*, trad. 24-28, and Tayālis, N° 2192: "No *witr* for him who has not performed it before *ṣubḥ*").

Witr is also frequently mentioned in connection with the first part of the night (cf. below, II). Abū Huraira performed it before going to sleep; on Muḥammad's order (Tirmidhi, *Witr*, b. 3). Muḥammad himself is said to have performed this *ṣalāt* in any part of the night (e.g. Tirmidhi, *Witr*, b. 4). The time between *'iḥṣā'* and daybreak appears as the largest space accorded to *witr* in *ḥadith* (Ahmad b. Hanbal, v. 242). It is prohibited to perform more than one *witr-ṣalāt* in one night (Ahmad b. Hanbal, iv. 23 bis).

c. Tradition frequently mentions the rak'as, prayers, invocations and formulas by which *witr* used to be followed (e.g. Nassāḥ, *Riḥāṣ al-Laṭīf*, b. 51, 54; Ahmad b. Hanbal, i. 199, 350).

II. The chief regulations of *witr* as fixed by the different *mudhhab*'s show insignificant divergencies only (see *Shāṭṭi*, p. 198 *etc.*), with the single exception, that *witr* is declared obligatory

Wensinck, *The Muslim Creed*, Cambridge 1932, general index, s. v. Shoes. — Cf. also JAHARA.

(JOSEPH SCHACHT)

WUḤŪF or **WAḤFA** (A.), "halt", means in particular the halting of the pilgrims at any spot they choose within the plain of 'Arafa; it begins on the afternoon of the 9th Dhū l-Hiǧǧa and lasts till sunset. This *wuḥūf* is considered the most essential part of the ḥaǧǧa. The imām of the ḥaǧǧa usually introduces it (before the beginning of the combined *ṣubr* and 'aṣr *ṣalāt*) with a *khutba*; his words can of course only be heard by those in his immediate neighbourhood. The pilgrims for their part recite portions of the *Kur'ān*, say prayers — mainly for forgiveness of sins — and cry *labbaika* [q. v.] and other religious formulae. The ceremony ends with the running (*ṣafā*) to Muzdalifa. A similar halt, spent in prayer and also called *wuḥūf*, is made in the early morning of the 10th Dhū l-Hiǧǧa in Muzdalifa before the running to Mina, also on each of the 11th, 12th and 13th Dhū l-Hiǧǧa after the throwing of stones on the "little" and "middle" heap. The stop, spent in prayer, on the elevations of al-Ṣafa and al-Marwa in the running (*ṣafā*) between these two sacred places is also occasionally called *wuḥūf*.

The significance of the *wuḥūf* in the Muslim ḥaǧǧa is clear: it is a kind of common worship, a "standing before God" (cf. *Ris'at*, I. 141). But the form of the ceremony goes back to pre-Islamic rites. For the monotheism preached by Muḥammad would in itself have had no reason to invent the sacred rite in 'Arafa and with it the most important part of the ḥaǧǧa. It might however be supposed that Muḥammad wished with the help of this act of worship to fill in gaps which may have arisen from the omission of some ceremonies of the pagan pilgrimage, and to this extent the *wuḥūf* may have in a way been a new creation of his. But this hypothesis loses its probability when we reflect that the *wuḥūf* (except in the last halt on al-Marwa, which follows the last *ṣafā*) seems always to precede a ritual running and to be connected with it (cf. *lit.*, xviii. 192: *wuḥūf* in contrast to *ṣafā*). Now, since the ceremony of ritual running certainly goes back to pre-Islamic rites, the same may be presumed for the *wuḥūf*. The original significance of this custom is however not thereby explained. This much nevertheless seems to be probable, that the *wuḥūf* took place

on holy ground or at least in the neighbourhood of such; the *wuḥūf* of 'Arafa was perhaps located at the foot of the hill later called *Djabal al-Rahma*, the special sanctity of which continued under Islam. The sojourn of the Israelites at the foot of Sinai described in Exodus xix. might in a way be compared with it. The Muslim theory, according to which the whole of 'Arafa (or Muzdalifa) is *ṣafā* (place of *wuḥūf*), perhaps points to the very fact that this was not the case before Islam. This statement, it is true, is easily explained as a concession to the multitude of Muslim pilgrims who could not all find a place on a restricted area. It may also from the first have served the purpose of destroying the influence of an old pagan sanctuary within 'Arafa (or Muzdalifa). The supposition that the *wuḥūf* in its original form presupposed the making of a sacrifice cannot be maintained, so far as the present evidence goes.

YĀJUDJ WA-MĀJUDJ (the forms Yādjūd and Mādjūd occur also), Gog and Magog (cf. *Gen.* x. 2; *Ec.* xxxviii, xxxix), two peoples who belong to the outstanding figures of Biblical and Muslim eschatology. Magog in *Gen.* x. is reckoned among the offspring of Japheth; this notion is also found in Arabic sources (e. g. Baiḡawī on *sira* xviii, 93, where also different traditions are mentioned); this much only may be said here, that the Bible as well the Arabic sources connect these peoples with the North-East of the ancient world, the dwelling-place of peoples who are to burst forth from their isolation in the Last Days, devastating the world southwards, until they will be destroyed in the land of Israel (cf. H. Gressmann, *op. cit.*).

In Muslim eschatology this picture is repeated with many, partly fresh, details, and connected with the reappearance of 'Isā on the earth. Yādjūd and Mādjūd will be as numerous that they will drink all the water of the Euphrates and Tigris or of the Lake of Thierias. When they have killed the inhabitants of the earth they will shoot their arrows against heaven, whereupon God shall send worms into their nostrils, necks or ears, which will kill them by the last man in one night, so that the smell of their corpses will fill the earth (Muslim, *Fitan*, trad. 410; Ibn Mājjā, *Fitan*, bab 33, 59; Ahmad b. Ḥanbal, I. 375; II. 510 sq.; III. 77; IV. 182; Tabari, *Ta'isr*, xvii, 62 sq., 65). Or a host of birds will catch them and drown them in the sea (Tabari, *Ta'isr*, xvii, 64). They are cannibals (*Tabari*, p. 320) and dwell behind the mountains of Armlaiya and Adharhādīja (Tabari, *Ta'isr*, xvi, 12).

The traditions of the Arabic sources are largely connected with *sira* xxi 96: "...until Gog and Magog shall have a passage opened for them [in the Last Days] and they shall hasten from every high hill" etc. Here is an allusion to the connection of Gog and Magog with the dam which was built by Alexander the Great, as it is said in *sira* xviii, 92 sqq.: "And he [Alexander] prosecuted his journey from south to north, until he came between the two mountains, beneath which he found certain people, who could scarce understand what was said. And they said, O 'Isa b. 'Ismā'īl, verily Gog and Magog waste the land; shall we therefore pay thee tribute, on condition that thou build a rampart between us and them? He answered, The power wherewith Our Lord hath

strengthened us is better than your tribute; but assist me strenuously, and I will set a strong wall between you and them" etc. Then the text goes on to relate how Alexander built the dam or gate behind which Yādjūd and Mādjūd should therefore be shut up till the Last Days. Every night they will try to dig under the wall in order to escape, and every night the sound of their tools is heard. But God repairs before the morning the breach they have made (Tabari, *Ta'isr*, xvii, 64).

Yādjūd and Mādjūd are of three kinds: one as tall as cedars; the second are as broad as they are tall; the third can cover their bodies with their ears (Tabari, xvi, 16).

Tradition relates that one day Muhammad came in a hurry into the room of Zainab bint Jabbār, saying: So much has been opened of the dam of Yādjūd and Mādjūd, making a sign with his thumb and index finger. She said: Shall we perish, there being so many good people? He answered: Ay, if evil be widespread (Bukhārī, *Anbiyā'*, b. 7; Tirmidhī, *Fitan*, b. 23; Ibn Mājjā, *Fitan*, b. 9; Ahmad b. Ḥanbal, II. 341, 529 sq.; VI. 428, 429).

According to de Goeje (cf. *Bibliography*), the story of the dam (which is found in the Syrian Legend of Alexander; cf. *Bib.*) refers in reality to the wall which surrounded a part of the Chinese empire and which had a gate in the South, called the Jasper Gate. He mentions reports of travellers who visited the wall, especially in the times of the caliphate.

The term *Bahr Yādjūd wa-Mādjūd*, which occurs in the *Rasā'il al-Hawā' al-Safā'* (Cairo 1347, II. 50²) apparently refers to the Caspian Sea.

Wallis Budge, *The History of Alexander the Great*, Cambridge 1889; Fr. Lenormant, *Gog et Magog, in Récit des sarrasins et des latins*, Louvain 1882, p. 9 sqq. (A. J. WESSINK)

YĀFĀ or **YĀFA**, **JOPPA**, **JAFFA**, a town on the Mediterranean, the port of Jerusalem. It occurs in the form *Y-fa* as early as the xvth century A.C. in the list of towns in Palestine taken by Thutmose III (W. Max Müller, in *M. P. A. G.*, xii, 1907, l, p. 21, N^o. 62). In the Amarna tablets and among the Assyrians it was called *Yapū* or *Yappū*, in Phoenician inscriptions *Yp*, in the Bible *Yāfa* and by the Greeks *ἵερὸν ἢ ἱέρρα*. *Yāfa* is already the port of Jerusalem in the Bible, to which king Hiram sent in floats the wood destined for the building of the temple. Before the conquest by Sennacherib (701 A.C.) it was subject to the king of Ascalon. It was not till the time of the Maccabees that the ancient Canaanitish city came under Jewish rule. The legend of Jonah which is localised here and the story of Perseus and Andromeda are probably connected with some very early cult of a fish-god in *Yāfa*.

In the year 15 (636) 'Amr b. al-'Ās (according to others Ma'āwiya) took the town (al-Balādhuri, ed. de Goeje, p. 138). The importance of the old harbour of Jerusalem further increased when the Umayyad Sulaimān b. 'Abd al-Malik founded the new capital of Dūmūdī Filastīn, al-Ramlā, some 14 miles S.E. of *Yāfa*. *Yāfa* with the rest of Filastīn passed in 264 (878) into the hands of Ahmad b. Tulūn (q.v.) and remained under the rule of the Tulūnids of Egypt until in 905 it passed to the 'Abbāsīd al-Muktāfi. After Dī'ār b. Falāḥ had conquered Syria for the Fatīmīd Mu'izz (q.v.) in 359 (969), the Karmatians penetrated in 360 (971) under Hasan al-A'sam as far as *Yāfa* in which the troops (11,000 men) sent to Syria by Dī'war b. 'Abd Allāh were blockaded. After the Karmatians had been driven out of Egypt in 362, *Yāfa* was relieved and the garrison brought back to Egypt. The Turkish emir Atīk b. Abak in 463 (1071) took al-Ramlā but *Yāfa* and 'Asqalan did not come into his power.

The possession of the town was hotly disputed during the Crusades. The Franks who made it a vassal duchy of the kingdom of Jerusalem were able to hold it until the Third Crusade (1099—1187). The vizier al-'Adīl sought in vain to take it from them in 1101, 1105, 1113 and 1115. After his murder, the caliph al-'Amr besieged the town in 1122 but was driven back, and again in 1123 as a result of the destruction of his fleet by the Venetians. After the battle of Hattin (583 = 1187) most of the coast towns surrendered to Saladin, and *Yāfa* to his brother al-Malik al-'Adīl. Richard Coeur-de-Lion recaptured it for the Crusaders in 587 (1191). Saladin besieged it in 1192 and regained it for the Saracens; he could not however take the citadel, and Richard, who hurried to the help of his garrison, drove Saladin's troops out of the town and re-fortified it. At the truce of al-Ramlā the Christians were confirmed in possession of *Yāfa*.

By 593 (1197) however, al-Malik al-'Adīl had again taken *Yāfa*, destroying the fortifications and, it is said, killing 20,000 Christians in the fighting. In the following year Saxon and Brabant troops temporarily occupied the town, but abandoned it in 595 again whereupon al-'Adīl regained it by a coup-de-main. After the Fourth Crusade (1204) the town was again in the hands of the Franks. The Emperor Frederick II restored the fortifications in 1228; as did Louis IX. in 1250 after his release.

In the Mamlūk period *Yāfa* belonged to the

district of al-Ramlā, one of the four districts of the coast, which were part of the *mamlaka* of Dimashk; for a time however (under Saladin's successors), it was under that of Ghazza (al-Dimashk), ed. Mehren, p. 230).

Rabbari attacked the town unexpectedly on 20th Dūmūdī II 666 (March 8, 1268) and took it and its citadel in one or two days (inscription on the White Mosque at Ramlā, ed. van Berchem, *Inscriptions Arabes de Syrie*, Cairo 1897, p. 57-64). He destroyed the town with all its houses, walls and the citadel. A certain emir Dī'ām al-Dīn... b. Ishāk, according to an inscription preserved in *Yāfa*, built there in 736 (1335) the sanctuary of Kubbat Shaikh Murād which is still in existence (Clermont-Ganneau, *Matériaux inédits pour servir à l'histoire des Croisades*, Paris 1876; do., *Archaeological Researches in Palestine during the years 1873-1874*, ii., London 1896, p. 154). When the kings of England and France were planning a new crusade in 1236, al-Nāṣir had the harbour of *Yāfa* destroyed to make it impossible for the Franks to land there. For the same reason, the town as well as the harbour, was destroyed in 1345 (Tolkowsky, in *Journ. Pal. Orient. Soc.*, v., 1915, p. 82-84).

The Arab geographers describe *Yāfa* as a small, strongly fortified coast town which as the port of Jerusalem and al-Ramlā enjoyed thriving trade and busy markets in times of peace. In times of war it was greatly exposed to enemy raids, in the first centuries of Islām, for example, to attacks by the Byzantine fleet, the Mardaites and the Kibyrriotes. To protect the coast against these raids, watch-towers (*ribāḥ*) were built, like those of Byzantium from Laḥū'a to Constantinople, from which was signalled by smoke or fire to the capital, al-Ramlā, the approach of Byzantine ships, which also used to visit the ports from Ghazza to Arsūf to ransom prisoners (al-Makdīsi, ed. de Goeje, p. 177).

After the battle of Dūlūk in 922 (1516) the whole of Syria passed to the Ottomans. *Yāfa*, which was in ruins, only began to revive gradually in the second half of the xviiith century, especially after its quays were built. From 1770 for several years the Pasha of Dimashk fought with 'Alī Bey and his followers for the town, in which, the Mamlūks perpetrated a frightful massacre on May 19, 1776. The French behaved even worse after the capture of the town by Napoleon (March 6, 1799); 4,000 prisoners were shot on the shore. Immediately after the entry of the garrison the plague broke out in the French army which suffered heavily. Ibrahim Pasha, son of Mehemmed 'Alī, in 1831 occupied *Yāfa*, which passed to the Turks again in 1840. An earthquake in 1838 destroyed many houses and a portion of the defences.

On Nov. 16, 1917 *Yāfa* was occupied by the English (Anzac Corps). Since the war the town has grown very little (44,000 inhabitants); but its northern suburb, the Jewish colony of Tel-Aviv founded in 1909, has rapidly developed into a modern town, which is already the size of the old town. To the northeast of the town are the German Templar colonies of Wilhelms and Sarona founded in 1868 and to the south Jewish agricultural colonies. The plan of building a new harbour, accessible to modern ships, instead of the old and useless one which is surrounded by reefs,

has so far not materialised owing to the expense; it would enable the town to compete with Haifa, which is growing rapidly.

(E. HONIGMANN)

AL-YĀFĀ'Ī, 'AND ALLĀH R. AḤAD B. ALI R. 'UTMĀN B. FAḤM AL-ŠHĀFI' AḤMĀD AL-DĪN ABU 'L-SĀ'ĪDA ABU 'L-BARAKĀT, a Ṣaḥī and author, was born one or two years before 700 (1300-1305) in the Yaman though the place of his birth does not appear to be known. He studied first under the tuition of Muḥammad b. Aḥmad al-Dihānī al-Baḡḡī and Aḥmad b. 'Alī al-Harāzī, Kāfi of 'Adan. These studies comprised probably only the Qur'ān and theology, but his ascetic inclinations must have been developed early and have guided his whole life. As early as 712 (1313) he made his first pilgrimage to Mecca and there he associated himself with 'Alī al-Tawāḡhī who remained his chief Sheikh. In 718 he settled in Mecca and married. The following years he spent partly in Mecca and partly in al-Madīna, and in 734 (1335) he made a journey to Jerusalem and Damascus and came also to Egypt. After his return to the Hijāz he remained some time at al-Madīna and then came to Mecca where he married a second time. Later he made a short journey to the Yaman to pay a visit to his old teacher al-Tawāḡhī. Subḥī in 747 (1346) made his acquaintance on the occasion of the pilgrimage and it was in Mecca that he died on the 20th Dhuḥiḍa 11768 (Febr. 21, 1367). Subḥī gives as the date of his death Dhuḥiḍa 1767, probably an error.

He had received the *shāfi'a* of a Ṣaḥī from several masters. Biographers praise his devout mode of living and his kindness towards his pupils, and his reputation as a pious and learned man was widely spread during his life-time. While the older biography as yet knows nothing of his *ḥarāḡ* (q. v.), later works are fairly full on this point.

His leisure in Mecca permitted him to write a large number of works, especially upon Sūfism and the principles of faith. He made a point of defending the doctrines of al-Ash'arī and among

other works wrote a treatise against Ibn Taimiyya, which brought upon him the hostility of the adherents of the latter. He is said to have had a very high opinion of the Spanish Ṣaḥī Ibn al-'Arabī. The works of al-Yāfā'ī which are accessible prove him to be in the main a compiler from the works of others with very little originality on his part.

1. His principal work is probably the *Rawḍ al-Riyāḡ* fī *Hikāyat al-Ṣāliḡ* (also called *Nuḥbat al-'Uyūn al-nawāḡir wa-Thufat al-Kulūb al-hawāḡir*) in which he gives biographies of five hundred saints and ṣūfis. Pious narratives outnumber in it by far the historical data. The work has been printed several times (Būlāḡ 1286; Cairo 1301, 1307 etc.). Of this work a number of abbreviations are in existence and it has in addition served as a source for later works of similar tenor, the latest perhaps the *Karāmāt al-Awliyā'* by Yūsuf b. Ismā'īl al-Nabḥānī (printed in Cairo 1329 in two volumes).

2. His historical work *Mir'āt al-Djannāt wa-Thubāt al-Yaḡḡūn* (printed in Haidarābād 1334-1339 in four volumes) serves also principally biographical purposes. As Yāfā'ī, according to his own statement, was content with extracting the chronicle of Ibn al-Athīr and the works of Ibn Khallikān and Dhahabī, we find hardly anything new in it. The book has however a certain value as long as we have no edition of the large biographical works of Dhahabī. Only at the end of the work he gives a few biographies of his teachers in the Yaman, but in these notices one is hardly able to pick the few historical details out of a volume of empty words; dates are quite a secondary consideration. There are several abbreviations and excerpts of the work in existence, some with later additions, among them the *Ghāḡḡat al-Zamān* by Aḥd 'Abd Allāh Ḥusain b. 'Abd al-Raḥmān al-Aḥdāl (died 885 = 1480), which deals principally with South Arabian saints; also an extract by a certain 'Alī al-Karāḡhī al-Shūstārī who lived about 1100, contained in a Berlin Ms.

3. *Nuḥat al-Maḡāḡin al-ḡāliya fī Faḡl al-Maḡāḡih al-ḡāliya*, mentioned at the end of the *Mir'āt al-Djannāt*. This work has been printed in the margin of the *Karāmāt al-Awliyā'* of Nabḥānī (see above) and contains like the *Rawḍ al-Riyāḡ* accounts of pious Sūfis and seems to be a first draft of his larger work. The purpose of this work, according to his own statement, was to furnish a proof that the Shari'a and Sūfism can be made to agree with one another. For this reason he gave to this book the second title of *Kifāyat al-Mu'taḡid fī Nikāyat al-Muntaḡid* (*Mir'āt*, iv, 335).

4. *Murḡam al-'Ilal al-mu'adḡila fī 'L-Radd 'alā 'Aḡmmat al-Mu'taḡila bi 'L-Barḡhīn al-ḡāli'a al-mu'faḡḡala*. This work he composed at the instigation of Naḡīm al-Dīn 'Abd al-Raḥmān b. Yūsuf al-Iṣḡāḡnī (died 750 A. H.). Collecting material from all manner of sources, he attempts the refutation of the doctrines of the Mu'taḡila, which hardly existed any longer in his time. The work has been printed to the extent of about two thirds in the *Bibliotheca Indica*, 1910-1911. The title is wrong in Brockelmann, *G. A. L.*, and wrongly corrected on the title-page of the printed edition.

5. *al-Iṣḡāḡ wa 'L-Taḡrīḡ fī Faḡl Allāh wa-Tūḡwāt Kūḡḡḡihī 'L-ḡāḡ*. Composed before the *Mir'āt*, the title indicates the contents.

6. *Durr al-Naḡīm fī Faḡḡ'īl* (or *Khawāḡḡ*) *al-Kur'ān al-aḡīm wa 'L-ḡyāt wa-Dhikr al-Hakīm*.

A short treatise concerning the advantage of reading the Qur'ān and of prayer. Printed in Cairo 1282 (1313) and later.

In addition he composed a large number of poems of religious content and generally with long titles, partly preserved in manuscript or only known by name. Two are printed at the end of the *Mir'at*.

7. *Fāhiyat al-Muhayyā fī Madh Shuyūkh al-Yaman al-aṣṣiyā*.

8. *Muhajāt al-Anjāl fī Dhikr al-Aḥbāb Ahl al-Awṣān* etc.

9. *Asna 'l-Mafāḥir fī Manāḥiḥ al-Shaikh 'Abd al-Kādir* (i.e. 'Abd al-Kādir al-Djilānī).

10. *Shams al-Imān wa-Tamhīd al-Rahmān wa-'Aḥdāt al-Faḥḥ wa-'l-Itkān*, preserved in several manuscripts.

In addition several treatises the contents of which are unknown to me;

11. *Nūr al-Yaḥyā wa-Iḥwāt Ahl al-Tamkin*.

12. *al-Kisālat al-Mahkiya fī Tarih al-Sadu al-Sufiya*.

Bibliography: al-Durār al-kāmina, ii. 247; Subki, *Tahabūt*, vi. 103; Brockelmann, *G. A. L.*, ii. 176—177; Sarkis, *Dictionnaire*, col. 1952—1953 and later works on the saints of Yaman.

(F. KREMKOW)

YAFITH, the Japheth of the Bible, is not mentioned in the Qur'ān; but the exegesis of the Qur'ān and legend are familiar with the names of the sons of Nūḥ: Sām, Hām, Yafith (exceptionally Yāfīt: Tabart, i. 222). The Biblical story (Gen. ix. 20—27) of Hām's sin and punishment and the blessing given to Sām and Yafith is known in Muslim legend but it is silent about Noah's planting the vine and becoming intoxicated. Al-Kisāfī completely transforms it: in the Ark Nūḥ could not sleep from anxiety; when he came out he fell asleep on Sām's bosom; the wind revealed his nakedness, Sām and Yafith covered him up but Hām laughed so loudly that Nūḥ was awakened; he uttered the following blessings and curse: prophets shall be born descendants of Sām, kings and heroes of Yafith and black slaves of Hām. But Hām's descendants intermarry with Yafith's family; thus the Abyssinians, Hind and Sind were born to Kūsh b. Hām; the Copts are the descendants of the union of Kūsh b. Hām with a descendant of Yafith. Nūḥ divided the earth among his three sons: Yafith received the district of Falsun (Fisḥon). His descendants are variously given, either exactly as in the Bible (Tabart, i. 217 sq.) or partly (al-Kisāfī, i. 101) or quite differently. He is usually regarded as the ancestor of Yādūdī and Mādūdī, often of the Turks and Kharazm, more rarely of the Šakāliba [q.v.]. Persia and Rām are sometimes traced to Sām, sometimes to Yafith; to Yafith also e.g. Cyrus, who killed Belshazzar b. Evilmerodach b. Nebuchadnezzar, and Yezdigird. Briefly Sām is said to be the father of the Arabs, Yafith of Rām (or Yādūdī-Mādūdī), Hām the father of the Sūdān. Of the three, Semitic tradition naturally prefers Sām. But Yafith is rarely spoken of unfavourably as in Tabart, i. 223 where we are told that nothing good comes from Yafith and his descendants are deformed. On the other hand, the 72 languages are divided as follows: 18 to Sām, 18 to Hām and 36 to Yafith. He is the blessed son of Nūḥ.

(BERNHARD HELLER)

YAFUR b. 'ABD AL-RAḤMĀN (also AL-RAḤIM) b. KURĀB AL-HIWĀLĪ (on the disputed vocalisation of the poem in van Ardenonk [see *Bibl.*, p. 234, note 3], founder of the dynasty of Ya'furids or Hiwālids who claimed to be descended from the Tubba's, the ancient Himyarite kings. Their ancestral home Shibām, called Shibām Ayyān or Shibām Kawkabān to distinguish it from other places of the same name, is described by geographers as a well cultivated hilly country. In the caliphate of al-Mu'tasim, i.e. before 227 (842), Ya'fur began to show his independence of the 'Abbāsid governors who were succeeding one another rapidly; in 247 (861) Ya'fur had succeeded in driving the governor Himyar b. al-Hārith out of Ṣan'a' and extending his rule over the highlands southwards as far as Djanad. The accounts, full of obscurities even in one thing clearly: the lack of unity in the dynasty from the first. By 256 (870) Ya'fur's son Muḥammad appears as lord of Ṣan'a', as the acknowledged governor for the caliph Mu'tamid. He was however slain about 270 (883) by his own son Ibrāhīm presumably at the instigation of the aged Ya'fur himself who had been thrust aside by Muḥammad but he himself henceforth disappears from history. Ibrāhīm's son Asad was still lord of Ṣan'a'; but the two-fold 'Alid penetration by the Karmatians and Zaidites raised up new enemies, so that he had only two successors in office. Some younger princes established themselves for a time in the Tihāma and in the mountains round Ṣa'da.

(R. STROTHMANN)

YAGHMĀ DJANDAQĪ, pseudonym of the Persian poet Abū 'l-Ḥasan Raḥim b. Ḥadīdī Ibrāhīm Khūlī. He was born about 1196 (1782) in the village of Khūr in the oasis of Djandak or Biyābānāk in the middle of the central desert of Persia. He began his life as a camel-herd but by the age of 7 his maternal gifts had been noticed by the owner of the oasis, Ismā'il Khān 'Arab-i 'Amīr whose secretary (*muntāzib*) he ultimately became. His first nom de plume was Madjānūn. In 1216 (1802) Ismā'il Khān after a rising against the government had to flee to Khūrasān, while Djandak was occupied by Dhu 'l-Fiḥr Khān, representative of the governor of Simnān and Dāmghān. Yaghma was forcibly conscripted as an ordinary soldier but at Simnān his gifts obtained him the post of secretary to the governor. In 1808 as a result of a false charge, the poet

received the bastinado and his property was handed over to be plundered (*yagmā*) by the soldiery. The poet's innocence was proved and he regained his freedom but the act of injustice had embittered him. He then assumed the pen-name of Vaghmā and composed a satire, *Sardārīya*, on Ibrāhīm Khān, full of coarseness beyond all bounds. Exiled, he wandered in Persia and via Baghdad and Yazd reached Teheran where fortune shone upon him again and he gained the good graces of Hādījī Mirzā Akāsī, the first Minister of Muhammad Shāh. Vaghmā was appointed *waṣī* to the governor of Kāshān but a new satire (*Khulāṣat al-ḥaṣā*) against a family of Kāshān nobles made him ostracized again and he was denounced as a *hāṭer* from the pulpit of the mosque. His wandering life was resumed. We know that he accompanied Muhammad Shāh to Herāt. He only returned to his native land as an octogenarian to die at Khūr on the 16th Rabi' II 1276 (Nov. 16, 1859) and was buried near the tomb of Sa'īd Dāwūd.

Vaghmā's works in prose and verse were collected in a *ḥamā* and published at Teheran (?) in 1283 (1886) with a preface by Hādījī Muhammad Ismā'īl (389 fol. pp.).

Vaghmā practised all varieties of verse and his poems (*ghazal*, elegies, *ḥiḍā*, *sardārī-band*) show a great mastery of language and form. The most original part perhaps of his work is in the field of funeral chants (*marḥūmī* *ḥamā*) which he invented. They were obviously intended for the public lamentations in Muharram [cf. TA'ZIYA]. They are in the form of a *musaddad* in which each line is prolonged by a refrain which the audience is intended to murmur as a spontaneous echo. These *marḥūmī* are composed in simple and unaffected language. E. G. Browne, *op. cit.*, iv, 340, mentions the popularity of this genre among the poems of the revolutionary period (1905-1911).

Vaghmā's most characteristic works however are his scabrous and obscene satires. Berthels sees in them a revolt against the political and social iniquities of old Persia but the poet never seems to rise above his own personal grievances. If his wit is exercised even at the expense of his benefactor Hādījī Mirzā Akāsī it is because the poet is simply carried away by his satirical humour and too silent tongue. Vaghmā has not yet anything of the revolutionary. His grievances induced fits of pessimism and of piety. The Golestan Museum at Teheran possesses a Kur'ān written on a single sheet of cloth (about 8 feet X 1½ feet) and arranged in complex geometrical figures. This is ascribed to Vaghmā (cf. the specimen of his hand in Browne, *op. cit.*, iv, 338).

Vaghmā made little use of Arabic and in several of his letters set himself the task of writing pure Persian. He considerably added by his annotations to the dictionary *Burhān al-Jamī*, the manuscript of which is in possession of his grandson.

In the *Grundriss d. iran. Phil.*, I, 2, p. 380, Geiger (following Querry) attributed to Vaghmā verses in the dialect of Simān. In reality these verses are by Na'īm Simān (cf. A. Christensen, *Le dialecte de Simān* (sic?), Copenhagen 1913, p. 291). Vaghmā wrote verses in the dialect of Khūr; cf. Vaghmā, *op. cit.*, p. 18. On the dialects of this region cf. Ivanow in *J. R. A. S.*, July 1926, p. 405-432.

Bibliography: Rūḍī Kāfi Khān, *Majma'*

al-Fayḍ, ii, 580; Ethé, in *Grundriss d. iran. Philologie*, ii, 314; Browne, *A Literary History of Persia*, iv, 336-344; Berthels, *Chah ḥadīth farīd*, Herat, Leningrad 1928, p. 94-99; Ḥabīb Vaghmā (grandson of Vaghmā), *Sharḥi Ḥamā Vaghmā*, Teheran (c. 1927), first appeared in the periodical *Armughān*, v, No. 7-97, on p. 31 the author quotes a letter from Vaghmā repudiating the authorship of a large number of poems included by his future editor in the collection. This declaration, however, being made by the poet "in his old days" (*dar mādāy-e kūr*) to escape the denunciation of *zenāna* is not very convincing.

(V. MINORSKY)

YAHŪD, the Jews. The message which Muhammad as an "admonisher" brought to his people was inferred by him to come from the same source of revelation as the Torah and the Gospel. If the "Arabic version" of the new scriptures was only a confirmation of what preceding "scriptures" taught, the new Prophet was referred for instruction to the Jews and Christians. The idea of the "day of judgment" which continually recurs in the early Meccan period, makes him speak of the 19 generations of hell in order to convince those "to whom the scripture was given" of the truth of the Kur'ān (ixiv, 30-32), from which it may be deduced that Muhammad at the beginning of the first Meccan period was already engaged in trying to win over the Jews. Of them he already knew that they "studied" their scriptures (lxviii, 37: *ḥadith*). It is in keeping with this that he also speaks of the *ḥadīth* *Isrā'īl* *wa-Mūsā* (lxxvii, 19), i.e. he knows that Jews and Christians ascribed to Abraham the composition of sacred books (*Tāhīl*, xii, 27; *Alḥadīth*, 14; Fabricius, *Col. pseudepigr. VII. Text.*, Hamburg 1722, i, 400). Hebrew expressions are already increasing; e.g. *ḥ' salāmū* = *h' salāmū*, *al-nabī* *Isrā'īl* for *maḥabbū* (lxxv, 24), *ḥ' ḥadīth* for *ḥ' ḥadīth* (lxxviii, 18), *ḥ' ḥadīth* for *ḥ' ḥadīth*, *ḥ' ḥadīth* for *ḥ' ḥadīth* and *maḥabbū* (iv, 46), which perhaps corresponds to the Talmudic epithet of God, *ḥ' ḥadīth* (*Alḥadīth*, 46).

The desire to produce a book of revelation makes Muhammad at the beginning of the second period frequently speak of "books" in which all that has happened is written down (liv, 43, 52-53). The first reference is to the "children of Isrā'īl" whom Allāh saved from Fir'aun and whom he chose "in his knowledge" in preference to all the world (cf. Amos, iii, 2; Aphraates, *Hom.*, 16, ed. Wright, p. 331) is in Sūra xlv, 29-32. The story of Mūsā in Sūra xx, which contains Jewish legends (e.g. verses 51-54; cf. *Exod.* i, 5, 18) three mentions the "children of Isrā'īl" (verses 49, 82, 95) whom Fir'aun is to release, who received the revelation and of whose sin of the calf Mūsā complains to Allāh. Sūra xxvi, four times mentions the "children of Isrā'īl" (verses 16, 21, 59, 197) in connection with the story of Fir'aun and the revelation of the Kur'ān which "the wise men among the children of Isrā'īl" (*ḥ' ḥadīth* *Isrā'īl* *wa-Mūsā*) shall recognize. Sūra xix, 59 mentions "the descendants of Isrā'īl" and Isrā'īl whom Allāh guided in the right path and in this connection the *ḥ' ḥadīth* *Isrā'īl* is put alongside of the revelation as of equal worth. Just as Fir'aun and his people are an "example" in the bad sense for later generations (xlvi, 56), Isrā'īl who desired

to be nothing but a servant of Allāh is an "example" in a good sense for the "children of Isrā'il" (xlili. 57-59). The conception of God, formulated by Muhammad at this time (xxiii. 117), seems to be of purely Jewish origin and he at this time decisively rejects the idea of Christ being the son of God (xlili. 59; xxiii. 93; xxi. 26). The story of Ibrāhīm destroying the idols, which is now given in detail (xxi. 59 *iqq.*) and which is also occasionally found among Christians (*Apoc. Abrahami*, ed. Bonwetch, p. 10 *iqq.*; Philastrius, *De heresibus*, p. 97) is therefore rather of Jewish origin (*Gen. x. 38, 39*). Jewish expressions which now appear are *hūr* (xxv. 19), with which we may compare *Abot*, ii. 5; *Yoma*, 37^a. The "children of Isrā'il" according to the revelation granted them are to recognise none except Allāh (xvii. 2), according to the scripture revealed to them they shall twice cause ruin (verse 4) on the earth, and once live in the holy land (verse 106). Perhaps it was also Jews, who at this time wished to induce Muhammad to leave his country (verse 78). According to Muhammad's view however, only the Qur'ān could smooth over the disagreements among the "children of Isrā'il" (xxvii. 78). It is in keeping with this that the story of Mūsā in this Sūra (verse 7 *iqq.*) has a distinctly Jewish stamp as has the story of Sulaimān (verse 17 *iqq.*; cf. *Targum Sheni*).

As late as the beginning of the third Meccan period Muhammad was frequently reminding the "children of Isrā'il" of the revelation granted them through Mūsā (xii. 23; xiv. 15). Allāh gave them leaders and preferred them but the Israelites fell out among themselves when the "knowledge" came to them, and now Allāh has placed Muhammad over them as arbiter in religious matters (xiv. 15-17). Jewish expressions in the story of Yūsuf which (Sūra xii.) like the story of Nūh (xi. 27 *iqq.*) can be proved to be of Jewish origin are *ba'ir* for "cattle" (xii. 65, 72) and *Yūsuf ayyūhā 'l-iddāh* for *Yūsuf haqqaddāh* (xii. 46). The Hebrew word *midnā* was probably taken over by Muhammad at this time with the meaning of "story" (xxxix. 24). The Meccans however are still only to dispute "in the best fashion" with the "people of the scriptures" to whom they are so closely bound as regards religion (xxiv. 45). Allāh had indeed granted the "children of Isrā'il" a safe habitation, provided them with all good things (x. 93) and given them, the weak people, "the east and the west of the land" (vii. 133). Muhammad however now calls himself the *ummi*, the prophet of the *ummi* *hā-nām*, whose coming was foretold by Tora and Gospel. He now considers the food prohibitions of the Jews as a punishment for their secession (vi. 147).

The Medina period made Muhammad more acquainted with Jews and Jewish conditions and he gradually drew the barriers between the "peoples of the book" and the new community of Islām. Muhammad then turned to the "children of Isrā'il" with the demand that they should keep their bond with Allāh (ii. 38 *iqq.*), be conscious of their having been chosen, remember they were saved from the hand of Fir'aun (ii. 46). The Jews, if they only believe in Allāh and the last judgment, are still mentioned along with believing Christians and Sabaeans (ii. 59) but we already have it indicated that their scriptures are forgeries (ii. 70). They write it down with their own hands and say: "it is from Allāh" (ii. 73). But in reality

there are uneducated people among them who do not know their scriptures at all (*ibid.*). The punishment of hell which must overtake them is regarded by them as being only temporary (ii. 74). The "children of Isrā'il" have broken their bond with Allāh (ii. 77). They drive one another out of the country but on the other hand ransom their prisoners (ii. 79). Mockingly they say of themselves: "our hearts are uncircumcised" (ii. 82). They made ambiguous speeches when against their will they had to accept the Tora (ii. 87: *ramā'ā wa-'asā'ā* instead of *shimā'ā wa-'āimā*). They cling to life and many would like to live a thousand years. Instead of the mocking *rā'ā* with which they address the Prophet, they are to say clearly *unpārā* (ii. 98). At this time many Jewish ideas came to Muhammad, e.g. *rafāh 'alimū* for *shafā' dam* (ii. 28, 78) and *khāṭib* for *hīlū 'dām habbū* (ii. 96). The Jews believe, as do the Christians, that they alone will enter Paradise, without being able to prove it (ii. 105). From this time onwards Muhammad calls the Jews of his time *al-Nāḥūd*, a term by which they were already known before his time (Abū Mijdhān, ed. Landberg, p. 72; 'Urwa, xii. 1), or uses the root *hāḍa*, while by "children of Isrā'il" he means their Old Testament ancestors. Muhammad noticed how Jews and Christians reproached each other with the worthlessness of their religion (ii. 107) and he sees that neither creed will be satisfied with him until he follows their religion (ii. 114). But they are not to profess Judaism or Christianity but only the "religion of Ibrāhīm", who professed the true religion (ii. 129). But neither Ibrāhīm, Ismā'il, Ishāq, Ya'qūb nor the tribes were Jews or Christians (ii. 134). The Jews now refuse to follow "on the path of Allāh", that is, to fight in battle for him, and the "children of Isrā'il" acted similarly when they asked for a king after the death of Mūsā (ii. 247). Yet Allāh had always given the "children of Isrā'il" many clear signs (ii. 207). An expression taken over from the Jews at this time is *furqān* for "distinction" (ii. 181). Muhammad had heard the Jews boasting of their scriptures although in his opinion they often did not know them (ii. 73). But "the simile" for those who are laden with the Tora and will not carry it is that of an "ass carrying books" (li. 5: *hamar nūsi asfarim*). The Jews should desire death rather than assert they are the "friends of Allāh" (ixii. 6; cf. 1. Chr. xvi. 13 *iqq.*). Tora and Gospel are only confirmed by the Qur'ān which is to be regarded as *furqān* (iii. 2). Isā has already taught the children of Isrā'il Tora and Gospel "book" and "wisdom" (iii. 43) and Muhammad is the confirmer of the Tora (iii. 44). The dispute about the *willat Ibrāhīm* is therefore meaningless. Tora and Gospel were only revealed after it (iii. 58) and Ibrāhīm was neither Jew nor Christian but a Muslim (ii. 60). His real followers are Muhammad and his community (iii. 61). The reference is obviously to the Jews in Sūra iii. 69, where there is mention of those among the "people of the scripture" who will not readily give back property entrusted to them, saying "there is no obligation upon us towards the *ummiyūn* (*ummi* *hā-nām*)". It is they also who are represented by Muhammad as relying upon scriptures which do not belong to the "scripture" at all, the reference is probably to the so-called "oral Tora" (*Tora* *hāt pē*) (iii. 72). In reality the prophets have

already solemnly pledged themselves to recognise the "apostle" who will one day appear (iii. 75), and compared with the *millat Ibrahim* all previous revelations are alike (iii. 78). In the dispute with the "children of Israel" regarding what is forbidden or permitted Muhammad actually challenges them: "Bring the Tora and read it if you are speaking the truth" (iii. 87). The Jews, however, distort the sense of the words of the scriptures (iv. 48), and if the "people of the scripture" demand from Muhammad as a sign of his mission that he should bring a book down from heaven (iv. 152) their ancestors once asked Musa to do an even greater thing as proof of his mission (*ibid.*). The laws regarding food were only given to the Jews because they left Allah's way and practised *unlawful* although it was forbidden them (iv. 158—159). Muhammad however holds out prospect of a great reward to those among them who believe in Allah, the last judgment and in the new mission (iv. 160). In this period falls the fighting between Muhammad and the Jewish tribes in which, in spite of their strongholds, numbers of them were forced to emigrate (ii. 2 *sqq.*) or were taken prisoners (xxiii. 26). Their land became Muhammad's booty (xxiii. 27). After he had laid down the boundaries between the new Islam and the "peoples of the scripture", he mentions as enemies of the believers Jews, Christians, Sabaeans, Magians and polytheists (xxii. 17). Muhammad in this period attributes hateful things to the Jews. They worship 'Usair as 'Allah's son" (ii. 30 *sq.*, cf. Ez. xiv. 9, 14), worship their rabbis as the Christians do their monks along with Allah, who want to "extinguish Allah's light with their mouth" (ix. 32). Jews and Christians are wrong in saying "we are the children of Allah and his favourites" (v. 21), since Allah punishes them for their sins (*ibid.*). The Jews to Muhammad are "listeners to him and listeners to others" (v. 45), who falsify the words of their scriptures (*ibid.*), and quote their Tora against Muhammad's mission (v. 47). But all the apostles of God, who ever legislated truthfully according to the Tora, the prophets, rabbis and teachers, were Muslims (v. 48). Believers should therefore not accept the Jews and Christians as friends (v. 56). The Jews wrongly believe "that Allah's hand is tied" (v. 69). Muhammad finally turns to the "peoples of the scripture" and assures them that they have "nothing to stand upon" if they do not recognise the revelation thrice given in the Tora, Gospel and Qur'an (v. 72). But "the children of Israel" have always followed the apostles of falsehood (v. 74), even Ta' to them was only Allah's servant (v. 76), and the infidels among them were once cursed by Dawud (v. 82). Muhammad finally finds that the Jews and idolators are the greatest enemies of the believers, while the Christians are friendly to Muhammad and his community (v. 85). — The Hebrew expressions and terms used by Muhammad in the late Meccan period are: *badlān* from the Jewish liturgical *badlikh* (lix. 23); *bahima* from *bahimā* (xxii. 35); *ahbar* for *ahbarim* (ix. 34, 34); *minhūl* for *minhūg* (v. 25); *haffara* for *haffara* (v. 49, 96); *rabbānīn* for *rabbānīm* (v. 48, 68) and frequently *tanqūt* for *torā* (v. 47 *sqq.*). — See also the article *YAHYA*.

YAHUDI. (See YAHUD.)

YAHYĀ, John the Baptist. This prophet plays a fairly prominent part in the Qur'an, which mentions him with Jesus, Elijah and other prophets among the just persons who serve as arguments for the oneness of God (Sura vi. 85). The history in the Gospels of his miraculous birth is twice given (iii. 33—36 and xix. 1 *sq.*); God gives him to his parents Zacharias and Elisabeth in spite of their years. There is a kind of annunciation to Zacharias: "O Zacharias, we announce a son to thee; his name shall be Yahyā; no one has borne this name before him" (ix. 7). Yahyā speaks in his cradle and, like Jesus, has wisdom from his childhood. God gives him the title of lord (*malik*) which according to the commentators means merciful. His characteristic qualities are gentleness and chastity. A point discussed is the phrase in Sura xix. 15: "O Yahyā, take the book with steadfastness", which seems to mean that Muhammad thought that John had received a revealed book. The commentators, however, do not admit this meaning; they are of the opinion that the book mentioned here is the *Tora*, the Pentateuch, and that Yahyā did not receive a special revelation but had as his mission only to "confirm the word of God" (iii. 34). Zamakhshari simply says that God gave him understanding of the Tora. — The Qur'an does not mention his role of Baptist, and does not tell the story of his death.

The legend of John the Baptist among the Arabs presents different features according to different authors. Tabari says he was the first to believe in Jesus; he makes him survive Jesus and says that he was put to death at the request of Herodias, niece of Herod or daughter of his wife, for having said to the king that he could not marry her. A curious episode developed at length by Tabari, is that of the boiling of the blood of the decapitated Baptist. The blood boils not only in the dish on which the head is presented but on the tomb of the martyred prophet and can only be restored to its normal condition after great calamities. The blood and the decapitated head speak. — The legend is evidently in some way connected with the Neapolitan cult of the blood of St. Januarius.

Mar'uth relates of Elisabeth, John's mother, the story of the flight into Egypt which the Gospel tells of Mary. Elisabeth fled with her infant son to escape the wrath of a king. John sent a prophet to the Jews and was slain by them and put to death. Later his "blood" is avenged by a king named Khordāsh who massacres many

of the Jews. Mas'udi knows the episode of the baptism of Jesus by John, the scene of which he puts in the Lake of Tiberias, or in the Jordan. Al-Hirani mentions among the feasts of the Syrian calendar that of the "beheading" of John the Baptist on the 29th of the month Ab, and he records that, according to al-Harawi, there could be seen in front of the "Pillar Gate" at Jerusalem a pile of stones said to have been thrown by the passers-by to restore John's blood to a normal state, but the blood would not cease boiling and continued to do so until a Persian king had sent a general who put many men to death on the prophet's grave. Al-Hirani thinks, like Tabari, that this general was an Ashkanian.

At the present day there is still shown a tomb of John the Baptist in the great mosque of Damascus, where is also a tomb of Zacharias mentioned by the Baptists.

As to the "Christians of St. John" or Mandaeans, the Kur'ān and the Arab writers hardly know them; if they do refer to them, it is not by these names but as "Sabī'a" [q. v.]. They regard them as a sect intermediary between the Jews and the Christians and admit that they have a "book"; they do not however give them John the Baptist as their prophet but Noah.

YAHYĀ, a Turkish poet of Albanian origin of the time of Soliman. A scion of the noble north Albanian family of Dukagin, to which also belonged the Turkish poet Dokagin-zade Ahmad Bey, Yahyā was taken under the *dewāshirm* for the Janissaries and brought to Stambul. He himself speaks in his *Gemāline-i Rās* of his being conscripted in this way, a thing that was only to bring him good and when an old man he still recalls his Albanian origin. In Stambul he was put in the corps of 'Adjemi-Oghlan, in which officers for the Janissaries and Spahis were trained and he attained the rank of Vaya Bashi and Buluk Bashi of the Spahis. Shihāb al-Dīn, the *Kātib* of the Janissaries, soon recognised his poetic gifts and allowed him a great deal of freedom for his literary inclinations. Later he gained access to the intellectual coteries of Ibn Kemal, Dīn'ar Celebi, Kadri Efendi and to those of the two great Maecenas Ibnrahīm Pasha and Iskender Celebi. When the latter fell into disgrace the poet boldly interceded for him with the grand vizier İbrāhīm but could not save him.

Yahyā was a bitter enemy of the court poet Khayālī Bey whom he had first encountered in 943 (1536) and with whom he had a poetical feud as well as with Khaytī. He wrote a *ghazal* against Khayālī, which he gave to Soliman on a Persian campaign and it so delighted the grand vizier Rustem Pasha, the declared enemy of all poets, simply on account of the contempt poured on Khayālī in it, that he made Yahyā administrator of several foundations in Brussa and Stambul. But when Yahyā in his usual fearless fashion endeavoured to save the life of prince Magfā, who was popular with army and people alike and fell a victim to the intrigues of the grand vizier and

the sultāna Khurram, but without success, and then wrote an elegy on the prince after his execution which was soon on every one's lips, Rustem did all he could to get Yahyā executed but only succeeded in depriving him of his offices. When the grand vizier summoned him and prepared a trap with the question, how could he lament a man condemned by the Padishah, he is said to have replied with great presence of mind, that he condemned him with the Padishah but loved him like the people. When his enemy Rustem died, Yahyā would not lose the opportunity of writing a satirical lament upon him.

The poet later retired to a large field (*ist'ara*) of 27,000 aḥḍ annual income, which he had at Lomida in the sandjak of Zvornik in Bosnia. Here the octogenarian worked at the collection of his *diwān*, at which the historian 'Alī found him engaged in 982 (1572), a year before Yahyā's death (according to others he did not die till 986 or 990). After his death 'Alī was given the preface to the *diwān* to examine, in keeping with a wish of the deceased.

Besides a *diwān* of his *ghazals* which does not rise above the average, Yahyā left five considerable poems, which, following distinguished examples, he placed together in a *ḥamsa*. The five titles are *Ḥāshā u-Gedā* (on pure love; 4 MSS. in Vienna; Flügel, No. 688—691), *Yāfuz u-Zulmān* (written on the pilgrimage to Mecca), *Kisā-i Uḡl* (or *Uḡl-nāme*), *Gemāline-i Rās* (mystical; on this the poet Nūrī Akseki wrote a *ḥāshā* of 2,000 verses entitled *Sab'a Sa'yāra*), *Gulshān-i Anvār*. (There are also attributed to him a *Nās u-Niyāz* and an unfinished *Sulaimān-nāme* in 2,000 verses). The three last parts of the *ḥamsa* are not romances but consist of moral aphorisms on morality and rules of life, etc. The two first which were published at Stambul in 1284 have only the title in common with the works of Hilālī and Dīnār of the same name, and, besides, treat their subjects in quite an individual and independent fashion. Yahyā himself on one occasion says that he has no wish to eat *helwa* from the dead Persians. This independence along with his frankness and courage is the most notable trait of our Albanian and makes him an attractive figure to us. These qualities are also in keeping with his bravery as a soldier which was celebrated, and which he displayed for example in the fighting at Temesvár, and the Turkish literary historians mention him as representative of a type which admirably combined the sword with the pen. For him the frequently much abused *dewāshirm* was the cause of his rise to fame in these days when birth counted for nothing, and good luck and particularly tact meant everything.

YAHYĀ b. ĀDAM b. SULAIMĀN, a Muslim student of religion. His full name was **Abū Zakariyā**; as *muwālī* of a descendant of Uḡḡa b. Abī Muʿait he bore the *nisba* al-Karaghī and al-Umawī (al-Maḥḥūmī in al-Nawawī is a mistake); his other *nisba* al-Kāfi shows that he belonged to or lived in Kūfa. His father is mentioned among the traditionists of Kūfa (Ibn Saʿd, vi. 133; al-Nawawī). Nothing is known of his career except the statement that he never studied under his father. To judge from the dates of death of his oldest *ṣaḥḥa* he must have been born about 140 or soon afterwards. This agrees with the statement that he did not live to a very great age. He died about the middle of Rabīʿ I of the year 203 (middle of September 818) in Fum al-Sily near Wāsiṭ. Among his *ṣaḥḥa* may be mentioned: Abū Bakr b. ʿAyyāḥ, al-Ḥasan b. Siliḥ, Sufyān al-Thawrī, Sufyān b. ʿUyayna, Sharīk b. ʿAbd Allāh and ʿAbd Allāh b. al-Mubarak (fuller lists confirmed by the *Kitaḥ al-Kharājī* are in al-Uḡḡālī and al-Nawawī); among others who studied under him were Ibn Hanbal, Ibn Abī Shalba and Yahyā b. Maʿīn. He is usually said by the critics to be reliable.

Nothing has survived directly of Yahyā's work on the *Kurʾān*, which was apparently an important part of his activity. The *Fihrist* mentions him as transmitter of a small portion of al-Kāfi's reading of the *Kurʾān* (p. 30, l. 10) and mentions by him a *Kitaḥ al-Kirāʾat* (p. 33, l. 17) and a *Kitaḥ Muḥarrar al-Ḥam al-Kurʾān* (p. 38, l. 7). Ḥādīdī Khalīfa also mentions him among the authors of works on *Kirāʾat* (v. 136). Yahyā however was primarily a traditionist and legist of the orthodox school (as the *Fihrist* and Ibn Kūṭayba already say). The *Fihrist* mentions as further works of his a large *Kitaḥ al-Farāʾid*, the *Kitaḥ al-Kharājī* and a *Kitaḥ al-Zawāʾil* of unknown content. Of these only the *Kitaḥ al-Kharājī* has survived in a unique manuscript. It never seems to have been widely known and Ḥādīdī Khalīfa did not know it; but it was used by several writers, notably al-Balādhuri. Yahyā's *Kitaḥ al-Kharājī* is a polemic against the book of the same name by Abū Yūsuf in which great stress is laid on the traditions; even the opinions of his teachers are given second place to tradition. Yahyā's work is therefore important for the history of the land tax in Islām. It is not limited to the *khārāj* in the later sense but includes all kinds of taxes on land, including the *ʿuṣṣr* in so far as it is levied on immobilia. Yahyā's own position in *Fiqh* may be judged by his approving verdict on al-Ḥasan b. Ziyād, a companion of Abū Ḥanīfa, as well as by his high opinion of tradition (*Fihrist*, p. 204, l. 26).

YAHYĀ b. 'ALĪ b. YAHYĀ b. Abī Manṣūr al-Muʿallimī, **Abū Ahmad**, was one of the best known theorists of music of the old Arabian (classical) school. He belonged to a learned family who were authors, several of whom wrote on, or were interested in music. His grandfather (d. c. 831) was the famous astronomer at the court of al-Maʿmūn [q. v.]. His father (d. 888) had "particular skill in music (*ghināʾ*)" says Ibn Ḥallikān, having been taught by the celebrated Ishāq al-Mawṣilī [q. v.], and wrote a book entitled *Kitaḥ al-Ḥikm al-Ḥikm b. Ḥikm al-Mawṣilī*. That 'Alī was also acquainted with the theory of music is evident from the fact that so eminent a theorist as Ḥabīb b. Kurra [q. v.] consulted him on the *ḥim al-muḥallī*. His uncle, Muḥammad, was also commended for his "knowledge of music (*ghināʾ*)". Yahyā b. 'Alī was born in the year 856 and, like his father, became a "boon companion" of the caliph, beginning this career in the service of al-Muwaffaq, the brother of the Caliph al-Muʿtamid [q. v.]. He is praised by most biographers on account of his knowledge of the literature and sciences of the Greeks (*awḡḡ*). This evidently gave him his pronounced taste for philosophy, in which sphere he shone as an exponent of the Muʿtazilī school. He was also a gifted poet and an accepted theorist of music. He died in the year 912.

According to the *Fihrist*, the best known book of Yahyā b. 'Alī was the *Kitaḥ al-Bakr* ("Book of the Illuminating"), which dealt with the poets who were half-castes. He left it unfinished, but his son completed it. Specimens of his poetry delivered before the caliph al-Muʿtamid [q. v.] and al-Muktafi [q. v.] have been preserved by al-Masʿūdī. Abū 'l-Faraj al-Iḥḥānī [q. v.] quotes a treatise on music by Yahyā entitled the *Kitaḥ al-Nagham* ("Book of Melodies [or Notes]") in an authoritative sort of way. This is probably the work that has come down to us in the solitary exemplar in the British Museum bearing the title *Riḥla fī 'l-Muḥallī* (Treatise concerning Music). This latter is, with the *Riḥla fī 'l-ḥikm al-Muḥallī* of al-Kindī in the Staatsbibliothek, Berlin, the only work that throws any light on the music theory of the old Arabian (classical) school, the technical phraseology of which crowds the pages of the *Kitaḥ al-Aghāni* of Abū 'l-Faraj. This treatise, which is of the utmost importance, is being edited by the present writer, and will form a volume of his *Collection of Oriental Writers on Music*. In its pages will be found a complete explanation of the so-called "Finger Modes" (*quḥḥ*), with their "Courses" (*maḥḥārī*), and divisions (*ḥarḥīḥ*), in which the melodies (*al-ḥim*) of the various vocal pieces (*aqḥḥ*) were composed [see the article *Ḥim*].

His son, Abū 'l-Ḥasan Aḥmad, a *faqīh* (lawyer) of the school of Abū Djaʿfar al-Ṭabarī [q. v.], was famed as a writer. A nephew, 'Alī b. Ḥarūn (d. 963), wrote a *Riḥla fī 'l-Farḥ bān Ḥarūn b. al-Mahdī wa-l-ḥikm al-Mawṣilī fī 'l-Ghināʾ* (Concerning the Difference between Ḥarūn b. al-Mahdī and Ishāq al-Mawṣilī concerning Music), whilst a son of the latter compiled a *Kitaḥ Muḥarrar fī 'l-Aghāni* (Book of Choice Songs).

YAHYĀ b. KHĀLID, a Barmakid. In the 'Abbāsid caliphate we find Yahyā already prominent in the reign of al-Manṣūr, who in 158 (774—775) appointed him governor of Ḍharbāldjān or, according to another account, Armenia. Three years later, the caliph al-Mahdī appointed him tutor to his son, the young Hārūn, and in 163 (779—780) the latter was appointed governor of the western half of the empire, i.e. of all the provinces west of the Euphrates, with the addition of Armenia and Ḍharbāldjān, and Yahyā was put at the head of his chancellery. According to al-Mahdī's original arrangements, his older son Mūsā was to succeed him on the throne and Hārūn only to be considered in the second line of succession. Shortly before his death however, he decided to make a change in favour of Hārūn. Mūsā however was not satisfied; after the death of al-Mahdī in 169 (Aug. 785), Yahyā gave his protégé Hārūn the wise advice to retire voluntarily and pay homage to his brother whereupon Mūsā was acknowledged as caliph with the name al-Hādī. Nevertheless relations between the latter and Yahyā were very strained. The new caliph was thinking of cutting Hārūn completely out of the succession and having homage paid to his own son Dja'far as the successor designate. This plan however met with vigorous opposition from Yahyā which went so far that al-Hādī had him imprisoned. According to the usual story, he was kept in prison until the caliph died in Rabī' I, 170 (Sept. 786). When Hārūn had ascended the throne, he appointed Yahyā as vizier with unlimited power in all branches of the government. Yahyā's period of office lasted seventeen years, then the catastrophe — probably long planned — came like a flash of lightning from a clear sky. At the end of Muharram or in the first night of Šafar 187 (Jan. 23, 803) (or according to another statement, probably due to a copyist's error, 188), the caliph had his till then practically all-powerful favourite Dja'far b. Yahyā suddenly executed without legal proceedings. Soon afterwards Yahyā and his other sons were arrested and their property confiscated. Yahyā was kept in prison till his death on the 3rd Muharram 190 (Nov. 29, 805) in al-Rāfiqa at the age of 70 (or 74). Cf. the article **BARMAKIDS**.

YAHYĀ b. PĪR 'ALĪ. [See NEW'Ī.]

YAHYĀ b. ZAID AL-HUSAINĪ, son of Zaid b. 'Alī [q. v.]. After his father had fallen in the rising (122 = 740) into which he had been dragged by the Shī'a of Kūfa, the young Yahyā was no longer safe in Kūfa. The reports differ as to whether he at once left the town (Tabarī, ii. 1710) or whether he was kept in concealment there for a time until the search for him was abandoned (*ibid.*, ii. 1713 sq.). He finally escaped to Khurāsān with a few followers.

According to the *Maḥāṣil al-Talibiyān*, Yahyā went from al-Madīna to Raiy and then to Sarakhs where he stayed six months with a certain Yazid b. 'Amr al-Taimi (*Umdat al-Talib*; b. 'Umar al-Tamimi). *Muḥabbibina* (Khāridjīs) are said to have sought to make common cause with him but on Yazid's advice he would not join them. He came from Sarakhs to Balkh where he found a welcome with al-Harith b. 'Amr b. Dāwūd (*Maḥāṣil*, p. 62; *al-Iḥḍāq*, fol. 12^b; al-Djarīsh b. 'Abd al-Rahmān al-Shaibānī).

Learning of Yahyā's activities, Yūsuf b. 'Umar ordered the governor of Khurāsān Naṣr b. Saiyār to take him prisoner. The governor of Balkh thereupon brought the 'Alid from his hiding-place and sent him to Naṣr who imprisoned him in Marw. The caliph al-Walīd II, to whom the matter of Yahyā was referred by Ibn 'Umar, wrote to Naṣr to grant immunity to Yahyā and his friends and to release them. With a warning against any attempts at rebellion and orders to go to the caliph, Naṣr dismissed him and gave him money and animals for his journey. In keeping with Naṣr's orders, the governors of Sarakhs, Tūs and Ahrashahr (i. e. Naisābūr) would not allow the 'Alid to stop there. Yahyā thus came to the frontier town of Baiḥāq. Probably from fear of Ibn 'Umar, he preferred not to go further west. According to *al-Iḥḍāq* (fol. 13^a below), from here he published an appeal (*da'wa*) to follow him. 70 men are said to have acknowledged him. With his little force, he turned against the commander of Ahrashahr, 'Amr b. Zurāra, after demanding their mounts from a caravan on the way. In spite of the superior force of the enemy, he was able to fight successfully. Ibn Zurāra fell, according to Ya'qūbī (ed. Wüstenfeld, i. 630), in the village of Buhtanikūn near Naisābūr and in his camp Yahyā seized many riding-animals. He then succeeded in fighting his way through the district of Herāt into al-Djūzadjān, where he gained some adherents. But soon after this a strong body of cavalry under Salim b. Aḥwaz sent by Naṣr overtook him. After three days desperate fighting in the village of Arghuwa (?) he was killed with his followers (probably in Ramaḍān 125 = June 743).

According to the *Umdat al-Talib*, Yahyā was 18 years of age at his death; other sources say 28. His head was sent to Damascus and put up there and his body placed over the gate of the capital of al-Djūzadjān, Auhār (Auhār; cf. Ya'qūbī, i. 370, 367) until followers of Abū Muslim [q. v.] took it down and buried it. His tomb became a place of pilgrimage.

Yahyā's death and the shameful treatment of his body deeply affected the Shī'a of Khurāsān. Vengeance for Yahyā became the watchword of the followers of Abū Muslim, who executed those concerned in his death.

The Zaidīs regard Yahyā as one of their imāms,

YAKUB, the patriarch, the son of Isaac in the Bible, is in the early Meccan *Sūras* (vi. 84; xix. 50; xxi. 72; xxi. 26) the brother of Ishak, son of Ibrahim; the genealogy: Ibrahim, Isma'il, Ishak, Yakub, the (12) tribes (ii. 130, 134), is more true to the Bible. Yakub is numbered among the Prophets (xix. 50). He is once or twice mentioned in the *Yusuf Sūra*: Yakub orders his sons not to go through a door (xii. 93); he becomes blind through sorrow and regains his sight when Joseph's coat touches his eye (xii. 93, 94).

Post-Kur'anic legend relates that Yakub and Esau fought already in their mother's womb, that Yakub was to be born first but to spare his mother took second place. Yakub was really entitled to the rights of the first-born (Tabari, I, 350). Yakub's journey to Haran and his stay with Lohan are told as in the Bible but in several versions Yakub only marries Rahil after Leah's death. The *Yusuf Sūra* receives many embellishments. On hearing that a wolf has torn Yusuf to pieces, Yakub wishes to see the wolf; the brothers bring

the first wolf they can find but this beast miraculously begins to speak and exposes their deceit. Many versions are given as to why Yakub has to suffer. Yakub writes a letter to the king of Egypt. After eighty years of separation, Yakub recognises at a distance of 80 passages the heavenly sun at Vilust. The baggage is known according to which Esau and Yakub dispute about the burial-place in Machpelah: "thou hast made me lose the blessing, thou shalt not make me lose the tomb" (Tabari, I, 359, very similarly *Sūra* 135; late parallels in Gierberg, *Legende of the Jews*, v, 371, 422).

YAKUB b. AL-LATH [See SAFFARIUS.]

YAKUB BEY. [See GERMANY OSMAN.]

AL-YAKUBI AHMAD b. ABI YAKUB b. ISMA'IL b. WAHAB b. WAḤID b. KATIB b. AHMAD, an Arab historian and geographer, a descendant of the *Wahib*, a freedman of Salih and later of his father, the Caliph al-Manṣūr, after whom the family takes the name al-'Abbās. Like his ancestor, who as governor of Egypt paid with his life for the protection which he gave to Idris b. 'Abd Allah on his flight after his defeat at al-Fakhkh in 169 (285), our author was also a *Shi'* of the moderate *Muawiyā* who belong to the *Imānīs*. He spent his youth in Armenia and in the service of the *Tahiri* in Khurāsān, whose doings he celebrated in a special work (*Hist.*, II, 537, 6). He seems to have written his history of the world which he brought down to the year 259 (872) while still in the east. It begins with the history of the patriarchs of Israel, then gives the story of the patriarchs of Israel, then gives the story of the Messiah and the Apostles, of the rulers of Syria, Assyria and Babylon, the Indians, Greeks and Romans, Persians, northern peoples including the Turks, Chinese, Egyptians, Berbers, Abyssinians, Bedja and negroes and lastly the pre-Islamic Arabs. The second part, almost twice as long, begins with the birth of the Prophet and brings the history of Islam down to 259 (872). Besides the *Shi'a* tendency, which however never influences him sufficiently to present a false view, his fondness for astrology is apparent, for he gives at the beginning of each reign the exact constellation. His work is of importance as a check on the tradition which is otherwise almost entirely dependent on Tabari, although his interest in speeches and letters often leads him to digressions. He also hardly ever mentions his sources and his account of contemporary events is confined to few brief references. In addition to the Cambridge MS. from which M. Th. Houtsma edited the work (*Abu Wāḥid qui dicitur al-Ja'fari historiarum*, 2 vols., Leyden 1885), another is now known in Topkapı (R.S.O., iv, 708); cf. M. J. de Goeje, *Über das Geschichte der Abbassiden von al-Ja'fari*, in *Travaux de la session de congrès international des or.*, St. Petersburg and Leyden 1879, II, 153-166; M. Klamroth, *Der Auszug aus dem Evangelium bei dem arab. Historiker Jaqubi*, in *Festschrift zur Einweihung des Wilhelms-Gymnasiums in Hamburg*, 1885; do., *Über die Aussagen aus griechischen Schriftstellern*

bet al-Ja'fari, in *Z. D. M. G.*, xl. 189—233, 612—838; xli. 415—442.

After the fall of the Tahirids, Ya'qubi went to Egypt where he died in 284 (897). In 278 (891) he wrote there his geographical work *Kitab al-Buldan*, for which he had been collecting material by research in literature and making enquiries of travellers. His interests are predominantly statistical and topographical; he gives the distances only roughly in days' journeys and lays special weight on giving the yields of taxation. He begins with a detailed description of Baghdad and Samarra, then goes on to Iran and Turan with northern Afghanistan. Kufa with west and south Arabia follow, then Basra with Central Arabia, but this part with the description of India, China and the Byzantine Empire is now lost. The description of Syria with its military colonies was followed by that of Egypt, Nubia and the Maghrib. The concluding part is a section on the governors of Sidjistan down to the death of al-Mansur, with which this province lost its independence and became amalgamated with Khurasan, and of Khurasan to the end of the Tahirids. His style is simple and his text free from the fables so beloved by the geographers of the time. See M. J. de Goeje, *Specimen s. literis orientalis exhibent descriptionem al-Maghribi sumam s. libro regionum al-Ja'fari*, Leyden 1860; *Kitab al-Buldan auctore Ahmad ibn abi Ja'fari ibn Wadhih al-Kutib al-Ja'fari*, ed. M. J. de Goeje, *B. G. A.*, vii., *ibid.* 1892. His works quoted on the Geography of the Byzantine Empire and on the history of the conquest of Africa are lost.

Bibliography: Ya'qubi, *Irshad al-Arab*, ed. Margoliouth, li. 156; D. S. Margoliouth, *Lectures on Arabic Historians*, Calcutta 1930, p. 125 ff. (C. BROCKELMANN)

YAKUT AL-RUMI, or, according to a genealogy which he assumed later, **SHU'AB AL-DIN ABU 'ABD ALLAH YA'QUB b. 'ABD ALLAH AL-HAMAWI**, the famous Arab encyclopaedist. Born in 575 (1179) in Byzantine territory of non-Arab parents (hence his ethnic al-Rumi), he was captured when a boy, sold as a slave in Baghdad and purchased by a certain 'Askar b. Ibrahim al-Hamawi, a merchant in the capital of the caliphs. 'Askar gave Yakut, who added to his name his master's ethnic, a good education and a few years later sent him to trade in the Persian Gulf in the island of Kishm [q. v.], Uman and Syria. Mammuted in 596 (1199) and estranged for a time from 'Askar, Yakut took to copying for a living, attended the lectures of the grammarian al-Ukbari (d. 616 = 1219), became reconciled with his old master and resumed his trading journeys for him, settled in Baghdad on his death and became a bookseller. In 610 (1213) however, he again resumed his life of travel. We now find him in Tabriz, next year in Syria or Egypt, and in 612 (1215) at Damascus again where he was nearly lynched for his anti-Alid views but he escaped to Aleppo, Mōsul, Khurasan and Marw. He spent nearly 2 years in this town, ransacking the libraries. He now began to put together the material for his principal books. At the end of 615 (1218) he left his studious retirement and visited Khwarizm (the modern Khiva). Hearing however of the coming of the Mongol hordes led by Čingis-Khān in 616 (1219) he fled hurriedly, abandoning all his property, to Mōsul where he arrived completely destitute in Rabi'ab 617 (Sept. 1220). He wrote a

letter seeking assistance from the vizier Ibn al-Kifti [q. v.] then in Aleppo. The latter supplied him with means of rejoining him in 619 (1222). But two years later, Yakut returned to Mōsul and settled down to finish his geographical dictionary, which he completed on 20th Safar 621 (March 13, 1224). However he did not stay long here, but went to Egypt at the end of this year, returned to Aleppo at the beginning of 625 (1228), and had put the finishing touches to his geographical compilations when he died on 20th Ramaḍān 626 (Aug. 20, 1229).

A certain number of Yakut's works seem now to be lost. This is the case with the *Kitab al-Mabā' wa'l-Ma'āl* and *Kitab al-Dawā'ir*, on history, the *Kitab al-Akhbār al-Mutanabbi* and the *Kitab al-Akhbār al-Sawā'ir*, the *Ma'djam al-Udabā'* and the *Ma'djam al-Shu'arā'*, on biography, the *Kitab 'Unwān al-Aghni'*, perhaps extracted from the *Si'ar al-Ashhāb* of Abu 'l-Faraj al-Isfahāni. Of Yakut's work we have only the following: 1. *Si'ar al-Mukhtadab* f. 'l-Awā'id, on the Arab genealogies (Mss. in Cairo). 2. *Kitāb Irshād al-Arab ilā Ma'rifa al-Adīb* (in Ibn Khallikān: *Irshād al-Adīb ilā Ma'rifa al-Adīb*), better known as *Ma'djam al-Udabā'* or *Tabaqāt al-Udabā'* (ed. by Margoliouth, in *G. M. S.*, Leyden 1907—1931, 6 vols.). This considerable work contains, in alphabetical order, biographies of grammarians, philologists, calligraphers, men of letters, poets and in a general way all those who have dealt with *adab*. It has not come down to us in its entirety. 3. The *Ma'djam al-Buldan*, on which Yakut worked from 1212 till his death (see Wüstenfeld, *Yakut's geographischen Wörterbuch*, Leipzig 1866—1873, 6 vols., 2nd ed., 1924; Cairo 1906—1907, with a modern supplement for Europe, America, etc. 10 vols.). This dictionary contains not only geographical information but also under each place-name astrological and historical data, quotations from poems and a list of eminent natives of the place. This mixture of history and geography, which is by no means peculiar to Yakut, led another compiler, 'Abd al-Mu'min b. 'Abd al-Hakīm (d. 735 = 1339), to prepare an abridgement entitled *Merā'id al-Istī'ā' al-Asmā' al-Ashkaniya wa'l-Bilād* (ed. by Jayeboll, Leyden 1851—1864, 4 vols.) containing only the geographical matter of the *Ma'djam al-Buldan*. 4. *Kitāb al-Muhtarib wa'd-dawā'ir wa'l-Mukhtalif* *ya'qub*, composed in 623 (1226), remodelled in 626 (1229) (ed. by Wüstenfeld, Göttingen 1846, 1 vol.). It is a dictionary of place-names of the same spelling which are applied to several different places.

Yakut is closely connected with the school of compilers who, like Ibn al-Kifti, al-Kazwini, Ibn Khallikān, without producing any original work, extracted with remarkable skill the essentials from the work of their predecessors, completed and corrected in detail the information found in books and presented the whole in accessible and handy fashion. Yakut in a general way confines himself to quoting the actual words of the authors from whom he borrows, not omitting to give the source. In this way there have been preserved for us numerous fragments of works now lost.

YAKUT AL-MUSTA'SIMI, **IMAM AL-IBN ABU 'I-MARJ** b. 'ABD ALLAH, a famous calligrapher, was a slave of the last 'Abbasid caliph of Baghdad, al-Musta'zim, who had him brought up and educated, whence his surname. His origin is unknown; some say he was a Greek from Amasia; he was probably carried off on a razzia while still very young. He was a eunuch. He died at Baghdad in 698 (1298) at the age of 80 (lunar years) which would make him born in 618 (1221). The continuer of Ibn al-Bawwab, he was called *Khat al-Kutub*, "model of calligraphers", and was head of a school; he also wrote in prose and verse; we have by him a *Kutub al-Akhbar*, an anthology written in 662 (1264) and the *Asthar al-fuhamā*, a collection of aphorisms (printed at Constantinople in 1300). Kurāna, said to be copied by him, are in the following libraries: St. Sofia, 654 (1256); Hamidiya türbe at Haghié-Kapu (Constantinople), 662 (1264); Cairo (Morina, N° 89); Paris, Bibliothèque Nationale, fonds arabe, N° 6082; Peysel Collection, 681 (1282); etc.

YAM. 1. Name of a tribe belonging to Hamdān in South Arabia, described by Ibn al-Mudjāwir as the Banū Yam b. Asba' living in al-Qadīm and in the wādi of al-Hanīk and al-Hukla. Al-Hamdānī numbers the Banū Yam among the tribes who speak a pure Arabic but E. Glaser established the fact that their dialect is different from the Arabic which is spoken in the Yaman highlands. The Banū Yam are, according to Passama, of fine physique, proud and warlike. They live in Najrān and belong to the sect of the Ismā'īliya which is found not only in Najrān and Hamdān but also in Taiba, Harāz, Sa'fān and several places in Yerm and is under the leadership of the Dā'ī Kabā'il Yam, who lives at Bedr. Since about 1760 this dignity has been hereditary in the al-Makramī family, the founder of which extended the power of the tribe in 1763 beyond Najrān to Sa'fān, Harāz, Menākha and Taiba and thrust their plundering raids into towns on the coast. They were able to retain their power and prestige afterwards. The tribe of Yam was represented in the embassy to the Prophet, which adopted Islām in the year 10 under the leadership of Mālik b. Nama'. When Salṭān Selīm conquered the Yemen, the Yam assisted the Turks and were rewarded with the right to levy tribute on the tribes subdued by the Turks. This of course did not prevent them supporting the Imām Ka'im about 1640 in driving the Turks out of the Yaman. The Dā'ī of Yam was however able to re-establish good relations with Constantinople in 1834 and his successors also were friendly

with the Turks so long as the latter held firm control of the Yaman.

2. Name of a Mikhizf in the Yaman, which included the sphere of influence of the tribe of Yam.

3. Name of a mountain in the Yaman Ḥawf between the wādis of Khārid and al-Ferṣa.

YAMAK. [See JANISSARIES.]

AL-YAMAMA, a district in Central Arabia, which was originally called Ḥawf ("the bottom of a valley"). The name of Yamama is said to go back to the seeress Zarḳa' al-Yamama, who plays a prominent part in the story of the decline of the tribes of Tasm and Ḥimyar. The district was first of all called after her Ḥawf al-Yamama, then simply al-Yamama. The statement that al-Yamama lies on the long ridge of the 'Arid, to which belongs its chief wādī 'Irq, which runs through the district, shows, like the long list of place-names and not least the very considerable yield in taxation, 510,000 dinārs according to Kudāma b. Iḥṣāf, that it must have been an extensive area, which included a considerable portion of the range now called Djabel Tuwaik. The boundaries given by Jomard, who understands the statements of Idriṣī and Abū 'I-Fida' to mean that al-Yamama included the provinces of al-'Arid and al-Kharḳ, are probably too extensive. It is not however possible to define exactly the limits of this region which was very important in ancient Arabia; the Dahna however was the frontier on the east.

The name al-Yamama is now given to an oasis in the Wādī 'Adajim on the southeastern slope of the Djabel Tuwaik, which consists of a palm-grove, a mile square with four villages, in front of which lies an extensive area covered with the ruins of palaces and dwelling-houses. Philby therefore seeks to locate the ancient Yamama in the angle formed by the Wādīs Hanifa and Nisāh. Its first capital was al-Khidrīma in the Wādī 'I-'Irq (or Wādī Hanī Hanifa), later in the second half of the fourth century A. H. the market town of Hadir al-Yamama or al-Hadir, which was however already in ruins in the time of Idriṣī. The following places in it are also mentioned:

Manfūha, Wabra, al-ʿAwka, Ghabrā, Muḥashshama, al-ʿAmināriya, Faighān, al-Haddār, Dāhik, Tūdh, al-Mikrāt, al-Sāl, Salamīya, al-Kurāiya, al-Madīza, Maʿwān and al-Nakh. Al-Khidrīma is described as an important town, smaller than al-Madīna, but rich in palms and fruit-trees. Among the crops the most important was wheat, which was even sent to the caliph's table (it was known as *Balqāʾ al-Yamāma*), there was also excellent fruit and dates. The beef was well favoured as there were fine pastures and the drinking-water excellent. A speciality of al-Yamāma was the slave girls who fetched high prices for their complexion — up to as much as 100,000 dirhams.

In the pre-Islamic period al-Yamāma was inhabited by the Djadis, who had their strongholds in the ʿIrāq valley and along with the Ṭam whose army they destroyed here, were under Himyarite rule. After their decline, which South Arabian legend narrates fully, we find the Banū Ḥanifa b. Luḡjaim who, after being almost annihilated in the battle against the rival prophet Muṣallima b. Ṭhumāma (12 A.H.) submitted to Ismāʿ. At a later period al-Yamāma was settled by the Numair b. ʿAmr and Bahila b. Yaʿsur as well as by the Tamim and their clients of other tribes. At the present day the district belongs to the Wahhābi kingdom, has about 2,000 inhabitants and has sunk to a low level. Philby no doubt rightly ascribes the destruction of the old cultivated land to a disastrous flood in the valley of the Hanifa.

AL-YAMAN, formerly a province, now an imāmate in the southwest of the Arabian peninsula. The name is variously explained; some say it was given because the Yaman lies to the right of the Kaʿba or to the right of the sun (al-Bakrī, ii. 856), others because Yūṭan b. ʿAbir and his companions turned right on separating from the other Arabs (*B.G.A.*, v. 33; Yāqūt, iv. 1034), while others again derive the name from the eponymous hero Yaman b. Kaḥṭān (cf. al-Wāsiʿi, p. 281). Sprenger thinks the Greeks and Romans translated Teman and Yaman by "eu-daemon" and "felix" and included under Arabia Felix all the land south of Shām. This coincides roughly with the delimitation of the Yaman attributed to Muḥammad, who is said to have climbed a mound at Tabūk and pointing to the north said "All this is al-Shām" and turning to the south "All this is al-Yaman" (Sprenger, p. 9). The greatest extension of the Yaman to the north

actually corresponds very well with the boundary of Arabia Felix which, according to Ptolemy, vi. 7. 2, 27, begins about 6 miles south of al-ʿAkaba and the northern frontier of which runs from there northwards to the foot of the Sharaʾ range and then turning east, crossing the northern edge of the desert of al-Nufūd, ends at al-Nedjef. Al-Wāsiʿi (p. 282) also represents al-Yaman as bounded in the east by the Persian Gulf, in the south by the Arabian Sea, in the west by the Red Sea and in the north by the Gulf of Kāzum, the Syrian desert and the ʿIrāq. The frontiers given by the Arab geographers are considerably narrower. According to Ibn Khurdādhbeh (p. 135, 137, 189) and Idrīsī (p. 143 sq.), the northern frontier of the Yaman ends at the tree called Ṭahat al-Malik between al-Muḥallira and Sarīm Rih south of Mecca. According to others, it begins below Ṭahḥith, while al-Aṣmaʿī (Yāqūt, iv. 1035) makes the northern boundary run from ʿOmān through Naḍirān; Hamdānī (p. 51; Yāqūt, iv. 1035) more accurately lays it through Yaḥrīn, south of al-Yamāma, via al-Hudayra, Ṭahḥith, Dīrān and Karna to the coast towards Kudammal near Hamīla (17° 52'). Ibn Hawḳal (p. 18) who includes two thirds of the Diyār al-ʿArab in the Yaman, puts the northern limit at al-Sirraīn, Yalamlam, al-Ṭāʾif and makes it run through the highlands to the Persian Gulf; this makes it intelligible why some geographers even include Mecca in the Yaman Ṭihāma. Towards the east the Yaman extends over Hadramūt, al-Shūʾr (Maḥra), Zafār (Dofār); even ʿOmān is sometimes included in the Yaman when it is not (as e.g. in Maḳḍisī, p. 68) made a separate province. The whole of this extensive territory, which al-Dimashqī (p. 216) divides into 24 administrative districts (*mukhāṣṣat*), was in the early days of Islām divided into three: Ṣanʿā, al-Djanad and Hadramūt (or Zafār) under separate governors. The taxes under the ʿAbbāsids yielded 600,000 dinārs (*B.G.A.*, vi. 144, 249, 251). After the Yaman broke off from the ʿAbbāsīd empire its area diminished considerably and its administrative divisions varied substantially; sometimes the Ṣanʿā Ṭihāma with its capital Zabīd was actually independent of the Zaidī highlands with Ṣanʿā as capital. When C. Njebuhr travelled in the Yaman he ascertained that the following districts were independent:

1. Yaman in the narrower sense with Ṣanʿā;
2. ʿAden with its hinterland;
3. Kawkabān;
4. Ḥaḥid and Bakīl;
5. Abū ʿArīsh;
6. the lands lying between this and the Ḥijāz;
7. Khawlān;
8. Saḥān with Saʿda;
9. Naḍirān;
10. Kaḥṭān;
11. al-Djāwī with Mārib;
12. Nihm;
13. Khawlān, S. E. of Ṣanʿā;
14. Yafīʿ.

The geographical definition of the Yaman becomes still narrower under Turkish rule. The wilāyet according to the provincial law of 19th Rabīʿ II, 1331 comprised the sandjak of Ṣanʿā with the qaḍās of Ḥarīz, Kawkabān, Anīs, Ḥadje, Dhamār, Yarm, Reda and ʿAmrān, the sandjak of al-Hudayda with the qaḍās of Zabīd, Lahayya, Zaidiya, Dījal Rēma, Ḥadḥūr, Bēt al-Faḳīh and Baḍīl, and the sandjak of Taʿizz with the qaḍās of Ibb, ʿUdain, Kaʿaba, Ḥudayriya, Muḥā and Kamaʿra. In the north it was adjoined towards 18° N. Lat. by the independent districts of Abū ʿArīsh, Kaḥṭān, Wādaʿa, Bilād Yām (Naḍirān), in the east by the Balād Kīf, Baraʿ, the oasis of Khabb, al-Djāwī with Arḥab and Nihm and also Mārib, Khawlān, Ḥarīb, Bahān and Yafīʿ as well as the Faḍlī region, and

in the south by the hinterland of 'Aden, which is under the protectorate of England and since the Anglo-Turkish frontier adjustment of 1904-1905 has endeavoured to push its boundary northwards, which tendency has been repeatedly opposed by the Sultan Yahya b. Hamid al-Din in recent years; his kingdom is bounded in the north by the Hadda and Najd, and in the east is about 40° Long. by Hadramut which the Imam regards as within his sphere of influence. The official Turkish estimate of the area of the wilayat of Yaman is 191,100 sq. km. but both higher and lower estimates are given. If we include the hinterland of Aden as well as the islands of Kamaru, Farin, Sokatra and Kithirra-Murzin, which belong to India (Bombay), we get roughly 205,000 sq. km. The estimates of the population vary quite as much. The English figure is 1,000,000 for the Yaman, and 100,000 for the protectorate of 'Aden. E. Glaser (*Fagelst.*, viii, 1886, p. 45) gives the Turkish Yaman 1,000,000 inhabitants, al-Was' 5,000,000. The population of the Yaman is, apart from about 60,000 Jews and a few Christians and Parsers, entirely Muslim, but of different schools. The highlands between Sa'da, Yarm and 'Athbar and the whole of the coast including al-Bahar are Zaidi, the Tihama, Ta'izz and Hadramut, Shafi'i. The Isma'iliya includes among its followers the districts of Najran, Hamdan, Taiba, Harat, Sa'in and the neighbourhood of Varin. The Ya'fisi sect has followers in the vicinity of Mendahe.

The anthropological classification of the population is not yet settled. There is undoubtedly a strong Hamitic element of the same type as in North Africa, alongside of which the dolichocephalous Semitic race of northern Arabia and the short and high headed, large-nosed race of higher Asia, not to mention a negro element, form a strong component in the racial mixture of South Arabia, at the base of which there is probably an ancient pigmy people.

The sharp distinction between the low lying coast-lands and the highlands of the Yaman had already been noticed by the Arab geographers. The former, 25-45 miles in breadth, passes into an undulating area of sandy, hilly country with occasional ridges and cones standing out like islands, which is succeeded by the bordering chain of foot hills, then an outer trench-zone, on which abut the curved and broken edge of the Arabian plateau. An inner trench-zone follows, and forms the transition to the eastern highlands. The Yaman highlands, the scene of a great upheaval, in the angle of two great depressions, has thus become a great mountain area which contains the highest peaks in Arabia (about 10,000 feet) and has towns (Marib, San'a) at a level of 3,500 to 7,000 feet. The extensive desert known as Rub' al-Khali which bounds the Yaman on the east and stretches in the form of a wide valley between Najd and Hadramut, has only been made better known recently through the explorations of B. Thomas and Philby. Al-Yaman has not unjustly been called the "Green" (al-Khafiya). A fairly intensive system of agriculture is possible not only in the plains of the coast (especially producing millet and maize) but also in the bordering foothills, which are very favoured climatically and have a luxuriant vegetation. An arduous but intensive system of cultivation is carried on artificial terraces. The most valuable article of

cultivation is the coffee plant; the eastern slopes of the coast hills are permanently cultivated since perennial streams and springs secure irrigation and wells make possible an intensive semi-cultivation. The healthy climate of these coast valleys has in places led to a denser population than in the same hills. On the edge of the eastern highlands at the mouths of the valleys there are extensive oases which grow dates (Hawl, Marib). The centres of culture is ancient Asila (Saba, Ma'in) grew up here is due to the great skill in irrigation works, of which the dam at Marib is an example. Among the articles grown may be mentioned wheat from very early times; it does well at a medium height of 4,000 feet millet, sorghum, maize and yam are also grown. The chief centres for cereals were Uthmaniyah, Khawlan, Dhamir, Ra'in and al-Sahal. The Tihama still produces 50-400 bush crops and wide stretches e. g. in the plain of Marib could be cultivated if they had a better system of irrigation. Numerous fruits (apples, quinces, bananas, lemons, apricots, peaches, plums and mangos etc.) grow in the Yaman, especially in the Wadi Dala at San'a; the date and vine have also been cultivated since ancient times. Vineyards are often mentioned in the early south Arabian inscriptions and the geographers mention them in Sadun, Rih, Khawlan, Athar and in the Wadi Qahr. Among dye-yielding plants are indigo (most particularly at Zaid), woad in Bilad Habbab, Udain, Lihle, Iho etc., cassia, saffron and frank. A widely distributed plant the leaves of which are used for chewing is *qat* (*Catha edulis Pers.*). The trees and shrubs which produced drugs and gums were of special importance in antiquity, especially frankincense and myrrh. The export of their resins laid the foundation for the prosperity of South Arabia; there was also the aloes, an especially fine quality of which was found in Sokatra. Mineral wealth is also to be found in the Yaman. Gold is obtained in considerable quantities from the sands of the rivers and from mines, among jewels varieties of opals and corallines were esteemed. The high degree of culture also raised the level of local industries. The weaving was particularly good, high prices were paid for striped cloaks from Sakil and Hithra. Cotton was made as early as the sixth century A. D. Tanning and the manufacture of leather was general and increased considerably in the period of Persian rule. Yaman leather and book-bindings were greatly appreciated. The chief manufacturing towns were Sa'da, Zabid, Dyrach and Najran. The manufacture of weapons was also a flourishing one; swords and cuirasses from the Yaman were highly prized as were the safety-locks still manufactured there. Other products of the Yaman which were exported were drinking vessels from Hail, palm leaf baskets from 'Athbar, caps from Muhiyia (*B. G. A.*, li, 98). The favoured position of the Yaman as a centre of trade for Indian products and valuable perfumes, which it held down to the middle ages, is now lost, probably for ever. Coffee, hides, drugs and resins and salt still have some importance in its export trade. The most important harbours are 'Aden, al-Hudaida, Mukha, Lahaya, Mukalla and al-Shih. The internal trade is still mainly conducted by caravans. The building of the first railway in the Yaman from al-Hudaida to San'a (begun in 1912) was stopped by the Great War in 1915; the railway from 'Aden via Lahad has only reached

Habib al-Hamra'. The difficulties in the internal transport of goods occasionally lead to disastrous famines but the economic development of the country is probably only a matter of time.

It is not possible here to trace the varied history of the Yaman through all the stages of its development from the conversion of the land to Islam which began as early as 9 A.D. (cf. the articles *YAN'Z* and *ZABU*) and the short sketch of 'Jemen im Islam' in M. Hartmann, *Die arabische Frage*, p. 530-547). On the other hand, since conditions in the Yaman are much involved in general questions of eastern politics, it seems advisable to give an outline of events since the reconquest of the Yaman by the Turks. The incentive to more energetic action against the Yaman, which had been again administered as a wilayat by the Turks since 1849, was given by the opening of the Suez Canal and the desire to command the E. coast of the Red Sea. In 1870 the Wali Haidar Ali Pasha defeated the Emir of 'Asir Muhammad b. 'A'id, who was threatening al-Hudaida. At this time the Turks held only al-Hudaida, Luhaiya, Zabid, Bei el-Fakh, Baidjil, Mukhla, Djaran, and half of Djabal Ruma. The Turkish force set out from Kunfuda against Su'as and Reida in 'Asir where 'A'id had established himself but he had to surrender after a six days' siege. The Turkish commander Redif Pasha had him put to death immediately after his surrender. 'Asir was now occupied by the Turks. Ahmad Mukhtar Pasha who had taken command after Redif Pasha's illness advanced via Baidjil, 'Athbara to Sa'z' (1871). 'Amran, Kawkabon and Shibam were taken; the Turkish advance was only checked before Saraka. In the south the Djabal Ruma and the Taixiyas were occupied, a road made from al-Hudaida to Sa'z' and the post to 'Aden instituted. Ahmad Aliyub Pasha became governor of the wilayat in place of Ahmad Mukhtar Pasha who had been summoned to Constantinople to a seat in the cabinet in May 1873. Arhab, Hahid and the Bilal Sanhan were taken and his successor Mustafa 'Asim Pasha advanced as far as Sida and Shabara. In spite of these successes, the risings of the Yamanis against the Turks continued to flare up. Hafi Isma'il Hakki Pasha, the successor of Mustafa 'Asim, had to fight in Hamdan, Hahid and al-Luhaiya, not always with success, also in Hadra, Dhamar and al-Hodjeriya. In March 1882, he was succeeded by Muhammad 'Izzet Pasha whose diplomacy won over the Da'i of Yaman to drive back the Imam Sharaf al-Din who had advanced on 'Amran and to obtain the recognition of Turkish suzerainty in Habba, Shabara and Sa'da and extend Turkish rule in the south as far as Bab al-Mandab. Risings, which occasionally took place when the garrisons were weakened, were mainly suppressed. There was however a more dangerous one in 1892: Sa'z' was besieged by the Arabs, Menakha, Djible, Yarim and Ta'iz passed to the Imam. Faidi Pasha put down the rebellion but in 1895-1896 war broke out again in the north, and the two following years there was considerable unrest in the land; piracy in the Red Sea even led to a demonstration by Italian cruisers before al-Hudaida (1902). The chain of isolated actions only produced a serious movement when the present Imam Mahammad Yahya b. Hamid al-Din, a farseeing and vigorous man, undertook the leadership in 1904 and proclaimed the *qiyada*

against the Turks. Sa'z' was invested by the forces of the Imam; the fighting outside the town went against the Turks and in April 1905 an agreement was reached by which Sa'z' and the vicinity passed into the hands of the Imam and the Turks agreed to withdraw. Menakha, Ta'iz, Ibb, Mukhatir, Ka'taba and Reda' alone remained in Turkish hands; the Porte however did not approve of the conditions of the peace but decided to send Ahmad Faidi Pasha to reconquer the lost territory; he retook Sa'z' after a march right across Arabia but lost it again after fierce fighting. The losses in men in this, the most serious rising, were so considerable that they were forced to negotiate with the Imam, missions being sent from Constantinople to the Yaman and vice-versa. In the meanwhile the governor Ahmad Faidi Pasha was replaced by the politic Hasan Tahsin Pasha who endeavoured to come to a satisfactory agreement with the Imam. At the Sultan's request a deputation of Yaman notables came to Constantinople; the very excited negotiations however came to nothing in spite of the willingness to consider the Imam's claims to independence. After the victory of the Young Turks (1909) they appeared to be ready in Constantinople to carry through a complete reorganisation of the Yaman.

The province was to be divided into two separate wilayats: the one comprising the highlands with 'Amran, Hadra, Ta'iz, Dhamar and Yarim, was to be directly administered by the Imam, the other part including the coast to be put under a new wali. The two governors were to be independent and rule with the assistance of kadis and native gendarmerie according to the Shari'a; the net yield from taxation was to be taken to Constantinople and separate accounts kept. Menakha was to be the main Turkish garrison town. The scheme of reform was upset by new risings in Sa'da, which although put down by the son of the Imam Sharaf al-Din, Muhammad Abi Naiba, gave a pretext to the Turks to resort to force once more. The policy of violence pursued by Mahammad Ali Pasha had a disastrous effect for it produced a general rising, which became all the more dangerous when Saliyid Idris of 'Asir also attacked the Turks (1910). The struggle was finally concluded by the agreement of Da'an in 1911, which was concluded between 'Izzet Pasha and Imam Yahya and contained 20 articles (Wahid, p. 236-239; Stuhlmann, p. 96 ff.). In this, the territorial status quo under Ahmad Mukhtar Pasha was recognised, the appointment of Zaidi judges by the Imam and the establishment of a court of appeal recognised; the Imam handed over a tenth to the government according to the Shari'a, while his territory was recognised as autonomous. The war between the Porte and Italy led to the blockade of the Yaman coast and the bombardment of al-Hudaida, but the military assistance given by the Imam strengthened his relations with the Turks. Saliyid Muhammad al-Idrisi, the ally of Italy, was defeated by the Imam's troops. This alliance was further strengthened by the World War. In 1915 (or even 1914?) Turkish troops and Yaman volunteers led by Saliyid Pasha attacked Lahad and drove the English back to 'Aden. In 1915 'Aden was cut off for a considerable time by land. The unfortunate result of the war in Palestine however affected the situation in the Yaman and in 1918 the Turks left the country by order of the Sultan. The Imam moved

his capital first to al-Rawḍa (Aug. 1918) and then to San'a'. The English bombarded al-Hudayda which they gave to their friend Saliḥ Idriis. The Imām then attacked 'Aden and took several places in the hinterland, but an arrangement was soon come to. In 1924 there was fighting in Ḥaḥl with 'Abd al-'Azīz b. Sa'ūd, but Yahyā succeeded in taking al-Hudayda and al-Tihama, and in the following year a treaty was concluded by Sir Gilbert Clayton between England and the Imām. More recently Italy's active policy has involved the Imām in her sphere of interest and this has been emphasised by a visit of Yamani notables to Italy.

YAMBO, [See **YAMÂN**.]

YAMÂN, the most usual Muslim term for oath, from the meaning "the right hand", according to al-Djauharī, *Sihb*, v.v., because those swearing take one another's right hands but rather because participants in an oath in general use the right hand in the ceremony; cf. *Lisan al-'Arab*, viii. 356, v. On the oath a. *YAMÂN* and *YAMÂN*. On particular expressions like *Yamân al-Hinḥ*, *Yamân al-Sabr*, *Yamân al-Kaḍā* etc. cf. *Corpus Juris al-Zaid bin 'Alī*, ed. Giffini, Indices; *Il Muḥṭazar a Summary del Diritto Malchita di Ḥaḥl ben Isḥāq*, transl. Guidi and Santillana, i. p. 21. (JOHN PEHRSEN)

YANBU' (**YAMBO'**), a little port and also a town some distance inland on the west coast of Arabia; the former is also called Yanbu' al-Bahr or Sharr Yanbu' and the latter, 6—7 hours journey N.E. of it, is called Yanbu' al-Nahhī. The port, which has now replaced the old harbour of al-Djār as the port of al-Madina, lies on a shallow but wide bay with good anchorage, protected from the winds by an island lying outside it. The town is divided by an arm of the sea into two parts and defended on the land side by a wall with towers, which has two gates, the Bab al-Madina on the east and the Bab Maṣr on the north, as well as several others on the sea side. The houses are badly built and the mosques insignificant. The harbour lies mainly by the trade of al-Madina which goes through it and does a busy traffic with Suwayḥ, Kaṣīr and Ḥana in Upper Egypt by native sailing ships. The inland town of Yanbu', written al-Yanbu' in Ibn Djuhair, is an old settlement and probably identical with the *Yanbu* of Ptolemy. The town, which was celebrated for its *ḥammā*, is described by the geographers al-Iṣṭakhri, Ibn Hawqal and al-Muḥaddad as large, well populated and rich in palms and had a strong castle. It was inhabited by Ansār, members of the Banū 'Udhayna and Laith; the Prophet is said to have conducted the *ḥajj* in its mosque. The oasis lies at the foot of a row of hills and owes its prosperity to a stream coming from them. Vegetables, *dhura* and tobacco are grown; the greatest care is devoted to the date-palm groves which have been celebrated since these ancient times; the houses lie scattered among them. The tradition that the harbour of Yanbu' is a later foundation from Yanbu' al-Nahhī, where leading Yanbawis have date-groves and country houses, still survives among the people. The name Yanbu' or Yanbu' (spring) is attributed to the wealth of the place in springs.

(ADOLF GROHMANN)

YARBŪ', an important group of the tribe of Tamim [q. v.] Genealogy: Yarbū' b. Hanẓala b. Mālik b. Zaid Ma'nā b. Tamim (Wüstenfeld, *Gen. Tab.*, K 13). The same name is borne by other ethnic groups not only Tamim (e.g. Yarbū' b. Mālik b. Hanẓala [K 14 and cf. *Mufaḍḍaliyyāt*, ed. Lyall, p. 122, 13 and parallel passages] and also Yarbū' b. Tamim in Ibn al-Kalbī, *Djāmhara al-Arab*), but also of other tribes, of the south (Kaib, Sa'ūd Hughāin, Djubaina) and of the north (Ghatafan, Thakaf, Ghani, Sulaim, Hanafa, 'Amir b. Sa'a'a; we also find among the Kuraish a Yarbū' b. 'Ankathā b. 'Amir b. Makh-rūm). *Yarbū'* being the name of a rodent widely distributed in Arabia, its application to the tribe has been taken as an example of totemism (W. Robertson Smith, *Kinship and Marriage in early Arabia*², p. 235), a theory which however is now abandoned. Mythological legend which has survived to a greater extent in this connection than elsewhere among the traditions of the Tamim, dwells on the mother of Yarbū', Djāndala bint Fibr, of the Kināna, who is said to have been violated one stormy night, and later married, by Mālik b. 'Amr b. Tamim (*Djāmhara*, Brit. Mus. MS. fol. 62r; *Nakā'id*, ed. Bevan, p. 225, note 1; this is perhaps an etiological myth, formed to explain certain connections between neighbouring clans). Compared with the other groups descended from Hanẓala, reunited under the name of al-Barāḍjīn, the Yarbū' appear isolated, probably because they were powerful enough to do without a federative alliance. Indeed we find that even some of the sub-groups of the Yarbū' enjoy a certain autonomy, like the Riyāh, the Kulāib, the Sallī, the Thā'labā, and the Ghudāna. They are divided into two sections, the exact nature of which we do not know: al-Aḥmāl (Thā'labā, 'Amr, Subaina and al-Hārith) and al-Uḡad (Kulāib, Ghudāna and al-Anhar). Their territory was very extensive, for we find them practically throughout the whole extent of the territory of the Tamim, from Yamāma to below the Euphrates; but their centre was the valley of al-Haḥn of remarkable fertility, (cf. Yāqūt, *Muḍjam*, II. 261 and III. 870; the name of one of their oases was Firdaws al-Iyād). Although tradition mentions "towns" belonging to them (Wüstenfeld, *Register*, p. 254) they led a nomadic life, like most of the Tamim.

The history of the Yarbū' during the Djāhiliyya is closely connected with that of the rest of the Tamim, and on several occasions they took command in the wars of the latter. Sometimes however we find them engaged by themselves in war with one or other of the neighbouring tribes; for example they fought several battles alone with the Banū Shalbān, the best known being those of Dhū Tūlūk (*Nakā'id*, p. 45—59, 73) and of al-Iyād (*ibid.*, p. 580—587, also known by other names), in which they took prisoner the famous Shalbān leader Bisṭam b. Kaīs (cf. E. Bräunlich, *Bistam ibn Qais, ein vorislamischer Beduinenfürst und Held*, Leipzig 1923, passim) in spite of the support given to the latter by the Persian governor of 'Ain Tamr.

At the beginning of Islām, the attitude of the Yarbū' was that of hostile reserve. They did not dare declare openly against the powerful prophet of Madīna but on his death they were the first to rebel. The prophetess Saḍāh [q. v.] was one of them (the tradition which makes her belong to the Taghlib seems to have little authority). To the Yarbū' also belonged the two brothers Mālik and Mutammim b. Nawzira whose relations with Khālīd b. al-Walīd made such a stir. After the suppression of the *riḍāla*, however, the Yarbū' like the rest of the Tamim proved faithful to Islām and took an active part in the conquests; but their turbulent and rebellious nature was revealed in the considerable support they gave to the Khārījīs; in the *Kiṣb al-Aghani*, VI. 4, it is noted that at the battle of Dawlāb, in 65, where the forces of the Aḥmāl were crushed, the leaders of the two parties, 'Uḡaid Allāh b. Baḡhir al-Sallī and al-Rabī' b. 'Amr al-Ghudāni were both of Yarbū'.

The many details that we possess of the deeds of the Yarbū' during the wars of the Djāhiliyya and even of those of the tribal wars of the Islāmic period, have survived mainly because these wars are mentioned in the verses of Dja'ir (who belonged to the clan of the Kulāib b. Yarbū') and because his commentators discuss them fully. — The Yarbū' moreover gave to the poetry of the pre-Muḥammadan period and of the first century A.H. quite a number of remarkable poems; in addition to those given at the end of the article TAMIM we may mention Sulaim b. Waḥīb al-Riyāh (cf. especially *Almoḥṣṣa*, ed. Ahlwardt, No. 76), Hārith b. Badr al-Ghudān, al-Shamardal b. Sharīk, of the Banū Thā'labā b. Yarbū'.

Bibliography: see the article TAMIM.

(G. LEVI DELLA VIDA)

AL-YARMŪK, a river in Syria, now called Shur'at al-Manādīra (from the Beduin tribe 'Arab al-Manādīra). It rises in the Hawrān, flows west through a deeply cut valley of erosion, the Wādī al-Ramād, which describes a flat curve open to the south, to the Ghawr, where it flows into the Nahr al-Urdunn (the Jordan) below Lake Gennesareth at Dja'ir al-Mudjāmi'. Pliny calls it (*Hist. Nat.*, v. 74) Hieromix or Hieromices (*Godara Hieromice profuerunt*, var. *Hieromices*; the now so popular form *'Hieromax'* is not recorded).

On the 12th Raddj 13 (Aug. 20, 636 A.D.) in the celebrated battle on the Yarmūk an army of some 50,000 Byzantines was decisively defeated by an Arab force, probably half as strong, under Khālīd b. al-Walīd. The battlefield lay near the junction of the Nahr al-Rukhād and the Yarmūk not far from al-Wāḥḥa (the modern al-Yūkḥḥa). According to Theophanes (*Chron.*, ed. de Boor, p. 332), the disaster to the Byzantine army took place *παρά τῃ ῥαβδῷ* (al-Dubayn, now Dabīye [q. v.]) *καὶ ἑρπύρεσσιν*. This battle was sometimes confused with that of Adjdādān [q. v.] of 28th Djumādā 1, 13 (July 30, 634), perhaps because the battlefield lay not far from Khirbet Yarmūk, this Biblical Yarmuth (*Leptote*, north of Wādī l-Sumī; cf. de Goeje, *Mémoires sur la conquête de la Syrie*, Leyden 1900, p. 59 sq.). Caetani explains the confusion in the accounts of the battles as a result of the erroneous assumption that Abū 'Uḡaidā was present as early as the first siege of Damascus and proposes, following Médnikov, to amend the otherwise unknown Adjdādān to Djanadbatān. The accounts of the two battles are fully treated

and analysed in his *Annali dell' Islam*, iii/1, p. 24—81, § 17—67 (Adjūdain); iii/ii, p. 499—613, § 11—124 (al-Yarmūk). — Near the battle-field lay Dair al-Khili, where the Arabs encamped on the day of the battle (Yāqūt, *Mu'jam*, ii, 658; Saif al-Dīn, *Marāḥid*, i, 428).

YA'RUB, 1. Ya'rūb b. Kaḥṣān b. Hūd, the grandson of the prophet Hūd, who is also regarded as the ancestor of the Himyar kings, is one of the mythical rulers of the Yaman. He is said to have conquered the 'Adites who occupied Ma'rib and thus to have become the founder of the Sabaean kingdom. His name is derived by the genealogists from *a'ruba* 'to speak correct Arabic (i.e. with the *frāḍ*)' as he is also said to have been the first to speak Arabic, for his father Kaḥṣān still spoke the original language of Sām b. Nūḥ.

2. Ya'rūb b. Mālik, the ancestor of the Ya'rūbid dynasty of 'Umān whose capitals were al-Rustāḳ, Yaḥrib and al-Ḥaam; they ruled from 1034—1154 (1024—1741). They succeeded one another as follows:

The last member of the dynasty, Sulṭān b. Murshid, was set up as a pretender against Saif b. Sulṭān with the help of Ahmad b. Sa'īd and chosen imām. The greater part of 'Umān fell to him and Saif b. Sulṭān could only hold out in Maṣṣāṭ which lost much of its importance to the rival port of Maṭrah favoured by Sulṭān b. Murshid. In fighting with the Persians who came to his help, his opponent Sulṭān b. Murshid was slain and after Saif's death which took place soon after, the governor of Ṣūḥār, Ahmad b. Sa'īd, who had

married a daughter of Saif b. Sulṭān, became imām of 'Umān (1154 = 1741).

YATHRIB. [See AL-MADINA.]

YATIM (أ), the orphan, i.e. fatherless minor child. The improvement of the social position of orphans, who were particularly numerous in ancient Arabia, played a large part in Muhammad's scheme of social reforms. The vigour with which the Prophet had to intervene on their behalf is significant of the conditions which he found. When relations did not take charge of them, the care of orphans fell upon the *saifid* of the tribe (Lammens, *Le Berceau de l'Islam*, p. 246); this obligation was also put upon the Prophet as leader of the community (Lammens, *La Mequie à la veille de l'Hégire*, p. 153). In *Sūra* xliii, 6, 9 (of the first Meccan period) the Prophet is reminded that he himself as an orphan was protected by Allāh and admonished on his part not to oppress the orphan. The *Kur'anic* passages which make good treatment of orphans a duty and forbid their oppression cover a long period: *Sūra* cvii, 2; xc, 15; lxxix, 18 (also of the first Meccan period); xvii, 36; lxxvi, 8; xviii, 81 (of the second Meccan period); vi, 153 (of the third Meccan period); ii, 77, 172, 211, 218 sq. (of the year 2); iv, 9—11, 40 (of the years 3—5). In *Sūra* viii, 42, and lix, 7 (of the years 2 and 4 respectively) the orphans are allotted a share in the fifth part of the *ghānima* [q. v.] or in the *far'* [q. v.]. Illegal appropriation of the property of an orphan — apparently by his guardian — is especially condemned and in *Sūra* iv, 11 even threatened with the punishment of hell. *Sūra* iv, 2—7, 126 (also of the years 3—5) is particularly directed against such crimes; here we have the fullest reference to orphans: *2. And give to orphans their property; substitute not worthless things in place of their valuable ones, and devour not their property after adding it to your own; for this is a great crime. 3. And if ye are apprehensive that ye shall not deal fairly with orphans, then, of women who seem good in your eyes, marry by twos, or threes, or fours; and if ye still fear that ye shall not act equitably, then one only; or the slaves whom ye have acquired: this will make justice on your part easier... 5. And make trial of orphans until they reach the age of marriage; and if ye perceive in them a sound judgment, then hand over their substance to them; but consume ye it not wastefully, 6. or in order to anticipate them before they grow up. And let the rich guardian not even touch it; and let him who is poor eat of it with discretion. 7. And when ye make over their substance to them, then take witnesses in their presence; Allāh also maketh a sufficient account". Verse 126 apparently refers to verse 3: "Moreover, they will consult thee in regard to women; say:

Allah shall instruct you about them; and His will is rehearsed to you in the Book, concerning female orphans to whom ye give not their legal due, and whom ye refuse to marry; also with regard to weak children; and that ye deal with fairness towards orphans. Whatsoever ye do of good, verily God knoweth it". It is probable from this that verse 3 also deals with orphan girls, where marriage with their guardian is in prospect; the exact interpretation is uncertain. The two verses are interpreted in this sense in a tradition ascribed to 'A'isha; but the details are not reliable. Another tradition not dependent in wording on the Kur'ân (in Ahmad b. Hanbal) forbids the guardian to force an orphan girl who is his ward to marry him. Other traditions simply repeat the substance of the Qur'anic prescriptions; for example paradise is promised as a reward for conscientious performance of one's duties as a guardian, or dishonest administration of the property of an orphan is numbered among the "grave sins". The idea of protecting the orphan is also at the basis of a *hadith*, which makes the Prophet dissuade Abū Dharr as the type of the pious and experienced man from undertaking a guardianship. In two points the tradition shows a development of the doctrine. In the first place the question is raised when the position of being an orphan may be considered to end (it is out of this that the conception of attaining years of discretion developed; cf. *MULUGH*); various answers, some emphasizing age, others discretion, are put in the mouth of Ibn 'Abbās and 'Alī; of the later law schools the Mālikis and Shāfi'is make the power of disposing of his own affairs in one who has attained his majority dependent on his *rashd*, while the Hanafis drop this condition after his 25th year. There were also differences of opinion as to whether the money of orphans (and especially of minors) was liable to *sakkat* or not; the latter view is still held by the Hanafis and the former by the other schools; it is justified not only by the direct statement that 'A'isha in such a case paid *sakkat* but also by the demand attributed to the Prophet or to 'Omar that the guardian should trade with his ward's money so that the *sakkat* should not gradually consume it. On the doctrines of the *fiqh* on orphans cf. the article *WASL*. It is worth noting that the right of the poor guardian to use the orphan's estate is limited to receiving compensation for his trouble. The Qur'anic command to produce witnesses of character has lost its *raison d'être* through the fact that the guardian must be a trustworthy person (*amin*).

YAZD, a town in Persia, in the province of Irāk 'Adjamī, formerly called Kātha. It has taken the name of the area of which it was the capital. This area was formerly in the district of Isfakhr in the province of Fārs (Ibn Hawkal, *Yākut*). Kātha had a citadel and a suburb on the edge of the desert. It had two iron gates, the Gate of Isid (Izad) and the "gate of the mosque", so-called because it was near the cathedral mosque which was in the suburb. It is surrounded by subterranean channels bringing water into cisterns and reservoirs of remarkable workmanship. It has a temperate climate; the town is very clean, because

the refuse is removed daily and taken to the fields as manure. The inhabitants, formerly Shāfi'is, were almost all weavers. Cotton garments used to be exported. At the present day it still produces highly esteemed brocades (Polak, *Persien*, i. 103). Saiyid Ghiyāth al-Dīn 'Alī, minister of Shāh Abū Ishāk Indū (d. in 752 = 1351), and Sharaf al-Dīn 'Alī, author of the *Zafar-nāme*, were natives of Yazd.

YAZDÂN (v.), God. This word comes from the sphere of Zoroastrian ideas (cf. Avestan *yasata*, Sanskrit *yajata* = "worthy of reverence", a Vedic epithet of gods, e.g. Agni, Indra, Savitar, and also of objects). Old Persian used for "god" the word *haga* (cf. Avestan *bagha*, Sanskrit *bhaga*, Pahlavi *bagh*). The Avestan *yasata* as an adjective means "worthy of reverence" and as a substantive "god"; it is used of Ahuramazda himself (he is called the "Greatest of the *yasatas*") as well as of the divine beings subordinate to him, like Mithra, Saosha etc. (cf. Bartholomae, *Altiran. Wörterbuch*, col. 1279 sq.). In Pahlavi *yazdān* (the plural; this form corresponding to the modern Persian is also to be found in the later Sāsānian period) means: "the gods, the good powers, who are under Ohrmazd": i.e. the same significance as in Avestan. Cf., e.g., from the beginning of the *Pandnāmak-i Zartusht* the sentences: *Ohrmazd khwēsh hom ayw Ahraman? Yazdān khwēsh hom ayw dīwān* = "Am I Ohrmazd's or Ahraman's?; am I the gods' or the demons'?" The singular of the word also is found in Pahlavi and survives in the modern Persian *izad* and in proper names like *Yasufizird*. The Pahlavi pronunciation of this singular form at the end of the Sāsānian period was probably also *izad*; the *yazd* in some proper names must represent an older form.

The meaning of *yazdān*, in the modern Persian literary language, "God" in the sense of the one God, must have developed already in Pahlavi. The transition in meaning probably took place through the aspects of the powers of the divine beings becoming comprised under *yazdān*; at least it is very improbable that in the final syllable of the modern Persian word we have a suffix other than the usual Pahlavi and modern Persian plural. The word *yazdān* in the meaning "God" is already connected with the *Magiis* [q. v.] of the middle ages in Shahrastāni (*Kitāb al-Milal*, ed. Cureton, p. 181 sq.); according to this author, Yazdān is the name of the principle of light in contrast to that of darkness, the Ahramanic. The term is therefore synonymous with Ohrmazd. The Kayūmarthiya sect of the Magians assumed that the principle of good, Yazdān, was uncreated (*ibid.*, p. 182) while the Zoroastrian sect taught that both Yazdān (= Ohrmazd) and Ahraman were created, so that darkness (Ahraman) had to be understood not as a principle but as a necessary consequence of the existence of light (*ibid.*, p. 186).

In the *Lexicon Shāhnamianum* of 'Abd al-Qādir al-Baghdādī (ed. Salemann, p. 244 sq.) the opposites Yazdān and Ahraman are also attributed to the Manichaean system. The passage from a lexicographer in Vullers, *Lexicon*, ii. 1515^a, perhaps

goes back to the same source. The Iranian Manichaeans actually used the word *yazd*, plural *yazdān* for the "gods" of their system. We also find *bag*, plur. *bagān*. In proper names borne by Manichaeans we find the singular *yazd* (e.g. in Yazdāmad, name of a Manichaean priest; cf. W. K. Müller, *Ein Doppelblatt aus einem manichäischen Hymnenbuch*, p. 16 and 17) as well as the plural (e.g. Yazdānbakht, the name of a Manichaean teacher; cf. *Fikriat*, ed. Flügel, I, 334, 337, 338).

In the modern Persian literary language, *yazdān* means, as already mentioned, God and is synonymous with *khudā*. 'Abd al-Qādir (*op. cit.*) glosses the word *khudā* as *ya-zadādūh* and *zad-i mālūh* *al-wahūd* and Allāh. In the language of the epic (Firdaws) and his imitators, *yazdān* is the most usual term for God, often with the epithet *pad*. In poetry other than epic the word is used along with other names signifying the deity.

YAZĪD b. 'ABD AL-MALIK, Omayyad Caliph, who came to the throne in Feb. 720. The reign of this prince so devoid of energy is a striking contrast to that of his immediate predecessor, the conscientious 'Omar b. 'Abd al-'Azīz (q.v.). Son of 'Abd al-Malik, grandson of Yazīd I through his mother 'Ātika, he had inherited none of the qualities of his Sufyānid ancestors which had made them popular in Syria. His brother, the caliph Sulaimān, had favoured the Yamāniya. Yazīd was imprudent enough to declare for the Kaṣala and by this tactless step attracted the hostility of the Yamāniya, i.e. the great majority of the Syrians. The rising of Yazīd b. al-Muhallab (q.v.) forced Maslama, brother of the caliph, and the Syrian troops to leave for the 'Irāk. While they were putting down the rebellion, the impressionable caliph fell under the influence of two women musicians of Medina, Sallāma and Habbāba. To escape remonstrances, Yazīd withdrew to the district of Baḥā' east of Jordan. The death of his favourite Habbāba broke his heart. Yazīd followed her to the grave a week later, at Baṭī Rāa (q.v.) after a reign of four years. He died on Jan. 26, 724 and was still under 40.

YAZĪD b. MU'ĀWIYA, second Omayyad Caliph and successor of Mu'āwiya, born about 642. As a prince he had commanded the Arab army at the siege of Constantinople. Immediately after his accession (April 680) there broke out in the Hīdžāz the rising which the genius of Mu'āwiya had so long prevented. At Medina, Hussain b. 'Alī and 'Abd Allāh b. al-Zubair refused to recognise the new caliph and took refuge in the inviolable territory of Mecca. Very soon letters from old partisans of 'Alī and from the chiefs of the 'Irāk, jealous of the hegemony of Syria, decided his son Hussain to leave his asylum in Mecca and set out for Kūfa with about a hundred relatives and friends. Yazīd had ordered the governor of this town, 'Ubad Allāh b. Ziyād, to take steps to disarm them and prevent their entering the 'Irāk and stirring up trouble there. No one stirred

among the 'Alid partisans in Kūfa. Hussain and his handful of devoted followers foolishly attacked the very superior forces sent to disarm them; the latter then manoeuvred to surround them and force them to lay down their arms. The son of 'Alī and the more stubborn of his companions only succeeded in meeting their deaths (Oct. 10, 680). This is the tragedy of Karbala' (q.v.) annually commemorated by the Shī'is.

Medina no less than Kūfa disliked Syria; it accused the latter of depriving her of her title as capital. In a great assembly in the chief mosque the Medinese proclaimed Yazīd deposed. After having vainly tried negotiations, the caliph had to have recourse to arms. The command of the expedition was entrusted to Muslim b. 'Uṭba (q.v.). This general encamped before Medina in the Harra, a plain covered with volcanic debris; hence the battle was known as that of al-Harra (q.v.). The Medinese were having the best of it at first when a detachment of Syrian cavalry going round the town attacked them in the rear. This was the signal for the collapse of the defence (Aug. 26, 683). The Syrians entered Medina. The three days of loot promised by Yazīd and the horrible scenes invented by hostile tradition belong to the domain of legend. Next day, Muslim assembled the citizens to make them renew the oath of loyalty. He then went on to Mecca to suppress Ibn al-Zubair. On the way the illness which had been troubling him since he left Syria, took a turn for the worse and he died at Mughallā, where his tomb long continued to be stoned. His successor, Hussain b. al-Nu'mair, led the army against Mecca and began the attack on it.

The inhabitants soon found themselves shut up in the town. Siege-artillery was placed on the surrounding hills and hurled a continuous shower of stones on the town. Ibn al-Zubair had made his headquarters in the courtyard of the great mosque. A wooden structure covered with mattresses protected the Ka'ba. The carelessness of a Meccan soldier set this on fire. The burning of the Ka'ba did not interrupt the siege. It had lasted for two months when Yazīd died at Hawwārin in Nov. 11, 683. Ibn al-Nu'mair led his men back to Syria.

Yazīd was not the frivolous prince, the thoughtless ruler depicted by the historians who are inspired with the rancour of the Shī'a, or the political feuds of the 'Irāk and the Hīdžāz, or who are too much impressed by the catastrophes of his very short reign. He tried to continue the policy of Mu'āwiya and retained his surviving collaborators. A poet himself, and fond of music, he was a Maecenas of poets and artists. He completed the administrative organisation and the military defences of Syria by creating the *Qund* of Kinnasrin (q.v.) in the north of the country. He reorganised the finances, lightened the taxation on the Christians of Nadjrān (q.v.) who had been arbitrarily expelled from Arabia by the caliph 'Omar. On the other hand, he abolished the exemption from taxes granted to the Samaritans as a reward for the services they had rendered at the time of the Arab conquest. He was interested in agriculture and completed the system of irrigation of the *Chūfā* (q.v.), the oasis of Damascus, where he dug the upper canal which waters the suburb of Sallibiya, and is called Nahr Yazīd after him. Alone among the caliphs he earned the title of *muhandis* "water engineer". The author of the *Continuatio byzantino-arabica*

gives a far from commonplace picture of him: *Yazid... juncundissimus et cunctis nationibus regni ejus subditis vir gratissime habitus, qui nullam unquam abbi regali fastigii causam gloriam appetiit sed communis cum omnibus civiliter vixit*. Extremely affable, quite devoid of conceit, loved by all those under his authority, hating the pomp of royalty, living like a private citizen, *civiliter*...! "No caliph", says Wellhausen, "received such a panegyric; it comes from the heart".

F. O. B.*, i.—iii.); do., *Le califat de Yazid Ier*, p. 1—528 (extract from *M. F. O. B.*, iv.—vii.). (H. LAMMENS)

YAZID B. AL-MUHALLAB B. AḤI SUFRA AL-AZDI, governor of Khurāsān. Yazid was born in 53 (672—673) and after the death of his father al-Muhallab [q. v.] at the end of 82 (702) was appointed governor of Khurāsān. With his brother-in-law, the powerful al-Hajjāj b. Yūsuf [q. v.], his relations were strained and in 85 (704) the caliph 'Abd al-Malik, after some hesitation, was persuaded by the latter to remove Yazid from his office which was given first to his brother al-Mufaḍḍal b. al-Muhallab and a few months later to the able Kutaiba b. Muslim [q. v.]. In the following year the caliph died and was succeeded by his son al-Walid. In the same year al-Hajjāj had Yazid thrown into prison where he was exposed to all kinds of humiliation and when his sister Hind, wife of al-Hajjāj, showed sympathy for him she was divorced by her husband. It was not till 90 (708—709) that Yazid succeeded in escaping and went to al-Ramla where Sulaimān, the caliph's brother, lived. The latter afforded him protection and interceded for him with al-Walid so that al-Hajjāj had to leave him in peace. After the accession of Sulaimān in 96 (715) Yazid was appointed governor of the 'Irāk and settled in Wāsiṭ. The supporters of Hajjāj, who had died in the meanwhile, had now to pay for the cruelty with which he had treated Yazid. But when Yazid asked the caliph to relieve him of the administration of the taxation, Sulaimān placed an official of the chancellery named Ṣāliḥ b. 'Abd al-Rahmān at the head of the finance department and the latter refused to satisfy Yazid's extravagant demands on the treasury, so that Yazid began to turn his eyes towards the adjoining province of Khurāsān. He succeeded in being appointed governor of Khurāsān while retaining the supreme command in the 'Irāk (97—715—716). Shortly after his arrival in this province, he permitted all kinds of cruelty to be practised on the relations of Kutaiba and the officials appointed by him. In the following year he undertook a campaign against Djurdjān and Tabaristān; the people of Djurdjān escaped on paying a sum of money. But when Yazid later suffered heavy losses, they rebelled and fell upon the Muslim garrisons which he had left. He had as a result to conclude peace with the lord of

Tabaristān and turning against Djurdjān wreaked a bloody vengeance on its people. He made himself generally hated by his extortions in his province and Sulaimān is said, just before he died, to have been thinking of sending some one to Khurāsān to have a reckoning with him. After 'Umar b. 'Abd al-'Aziz ascended the throne in Safar 99 (Sept.—Oct. 717) he had Yazid arrested because the latter could not produce the fifth of the booty from Djurdjān and Tabaristān the amount of which he had much exaggerated out of vanity; shortly before or after the death of the caliph, he escaped from prison and went with a small body of followers to al-Baḡra. When the negotiations which he began with the governor 'Adi b. Arṭā al-Fasārī came to nothing, the decision had to be left to force of arms. In the first encounter 'Adi fled and took refuge in the citadel. This was stormed and 'Adi taken prisoner (Ramaḍān 101 = March—April 720). Yazid then began to preach open war on the Omayyads; the rebellion spread and in a short time Yazid seized Wāsiṭ but was defeated on 14th (or 12th) Safar 102 (Aug. 24, or 22, 720) at al-'Akr near Wāsiṭ by Maslama b. 'Abd al-Malik, who had come with a large army from Syria. Yazid himself fell and his relations were everywhere persecuted with the greatest vigour.

YAZIDĪ, YAZIDĪYA, the name of a Kurd tribal group and of their peculiar religion which shows ancient characteristics.

Area of Distribution. The Yazidis are found scattered over a wide area usually leading a settled life but also split up into nomadic clans: 1. in the district of Mōsul in the northern 'Irāk, in Assyria proper, in the district of Shaikhān. Special mention may be made of: Bā'adhri (Bā'idhri, Bā'idhri) about 40 miles N. of Mōsul, the residence of the chief emir, their political head; three hours to the north at Lālesh in the valley Shaikh 'Adi is the tomb of their chief saint Shaikh 'Adi, their national sanctuary and the centre of their national and religious life; Bahazantye, north of Alqosh at the foot of the hill on which is the Chaldaean monastery of Rabbān Hormud; and also Bā'ghikā (Bā'ghikā, Ba Heshikā) N. E. of Mōsul, the centre of the tombs of the shaikhs; 2. on the Djebel Sindjār, 100 miles west of Mōsul, a range of hills in the middle of the desert, which is the great bulwark of their efforts for freedom and independence. The chief Sindjār-Shaikh lives in the Beled Sindjār (picture of the citadel in P. Schütz, *Zwischen Nil und Kaukasus*, p. 135); formerly his residence was in Milik (Mirik); 3. in the district of Diyarbakr, N. and N. E. of the Tigris; 4. in the district of Aleppo, W. of the Euphrates, at Kilis and 'Aintāb; 5. in

Russian Armenia (Kars, Erivan) and in the Caucasus (at Tiflis) — There are also Yazidis in Persia.

Numbers. The total number can only be approximately estimated; there can hardly be more than 60,000—70,000 altogether, while only half a century ago they numbered 120,000—150,000. According to the 'Irāk census of 1922—1924 (apparently exclusive of Sindjār which was only joined to the 'Irāk at the end of 1932) they numbered 26,257 in the 'Irāk, while the Turkish census of 1923, which deliberately emphasised the Muhammadan element, only gave 18,000 Yazidis, compared with 264,000, or 450,000 Kurds, which corresponds to the English figures. In 1912 the Turkish statistics for the 6 wilāyets in question gave 37,000 Yazidis. Nūrī in 1905 estimated 35,000 Yazidis for Shāhān and Sindjār (Menzel, *op. cit.*, p. 169). According to figures which are undoubtedly exaggerated, Sindjār which is now joined to the 'Irāk contains 36,000 Yazidis (*O. M.*, xii, 502). There are only a few hundreds in Persia.

The Russian census of Dec. 17, 1926 gave for the Caucasus (Tiflis, Erivan and Kars) 14,522 Yazidis compared with 54,600 Kurds. In spite of the accessions during the war their number has fallen compared with that of the Russian census of Feb. 9, 1897: 14,726 Yazidis and 85,175 Kurds while in 1901 in Russian territory there were 25,000 Yazidis compared with 125,000 Kurds.

As to their numbers at an earlier date, Karcew in 1884 gave exact figures based on quite reliable statements of the *šaykh*s (Menzel, *op. cit.*, p. 116).

Name. The name Yazidi, which the Yazidis themselves feel to be modern, seems to have nothing to do with Yazid b. Mu'āwiyā or with Yazid b. Umayr, with whom it is connected, and as little with the name of the Persian city of Yazd. It probably comes from the modern Persian *īzād* (angel, deity), Avestan *yazata* (being worthy of worship), Pahlavi *yazd*, Sanskr. *yajñat*, cf. modern Persian *yazdān* [q.v.] God, Avestan *yazatānām*, Pahlavi *yazdān*, *yazdān* of which *īzād* is the natural phonetic development while *yazdān* represents an Avestan word brought through ritual into modern Persian.

The Azidi, Izidi, Izidi or Izdi would therefore be as they themselves say "worshippers of God", an etymology known to the Yazidis, and quoted as early as Campanile, *Storia della regione del Kurdistan*, Naples 1818, p. 148, as *Sigues de Yazid (Idolo)*. The Yazidi popular etymology of the name from *az da* (for *dām*) *īzādā* ("God created me") is useless, as *az* or *ar* is not used in Yazidi, only *aw* ("I").

Evolved from the name Yazid we find in legend an angel *andā* and a *yazdān* among the ancestors of the Yazidis as well as the term *yazdān* for the first Yazidis.

With this we may perhaps connect *Isai*, the name of a *sanjak* in the form of a man made from grapes (Menzel, *op. cit.*, p. 184).

According to Marr (*Zapiski Vost. Otd. Arkh. Obshch.*, xx, 99), Čelebi was the former name of the Yazidis (cf. Barthold, above i., p. 833). In Niebahr also Čelebi is given as "devil".

The Yazidis call themselves Dāsin, Dōsin, Dōsent, plur. Dawšān, Dušān, Dawšān, probably from the name of an old Nestorian diocese. In 941 (1534) Suljān Sulaimān gave the Yazidi chief

Husain Beg Dōsint, who was later executed, the *sanjak* of Arbil and the wilāyet of Solhān. Among the Syrians, the Yazidis are called *Dasānāye* (not to be confused with *Dayānāye*, the followers of Bardane of Edessa; cf. Vahart, in *R.S.O.*, xlii, 67), among the Armenians, Thoudracians and Polichianans. Before the days of Christianity they were called *pūpūret* (idol-worshippers) according to the *Majma' waḥid*.

The defamatory name given them quite unjustly is *shidān-perest* or *shidā-i šidā* ("devil-worshipper") although they should rather be called "angel-worshippers", and *bragh condiren* ("light-eating-aishars"). Another term of abuse for them is the Turkish *kulda* ("dog-collar").

Tribes. Although the Yazidis hold no communion with the neighbouring tribes and in particular do not intermarry with them, they look exactly like Kurds, even those who live in Syria in the centre of an Arabic speaking area, although two types are to be distinguished among them: one, their own traditional type, Assyrian-Semitic with particularly thick hair and beard and the other more an Indo-Germanic type. In any case traces of the early inhabitants of the country still survive in them. They have some physiological similarities with the earlier Wān Armenians: an Armenian intermixture is not to be denied.

Their thick hair earned them from the Turks the nickname *şallı Kurd* ("hairy Kurds") and *şallı öykü* ("rightfold bearded") because hair grows on the lips, eye brows, nostrils and ears.

The Yazidis are a handsome, long-haired, proud type, with the feeling of independence characteristic of the mountain-dweller, and usually of powerful physique. The unveiled women have remarkably regular features. The Yazidis were formerly dreaded rebels and brigands who resisted fearlessly all attacks and onslaughts by their neighbours. Their faithfulness to their word and their loyalty was recognised even by their enemies. They are industrious tillers of the soil and cattle-rearers, who are superior to their neighbours in skill and activity. Special mention may be made of the meticulous cleanliness of their persons and houses, which is in great contrast to the filth of the other Kurds.

They are organised like the Kurdish tribes, with an emir or chief of the tribe (*agha-i ile*) at the head. According to Karcew, the tribe is divided into bodies of elders (*ruşif*). Every family or sept forms a unit by itself. On the tribal organisation, the taxes and labour given to the chiefs, on the law of inheritance (primogeniture, but restricted by the condition of worthiness), on the patriarchal life of the tribes, settled and nomadic, see Jegiazarov, *Kavkazskoe tatarskoye drev. Kur. Jov.*, in *Zapiski*, xlii, Tiflis 1891, who gives very full data (Menzel, *op. cit.*, p. 108); also Minorovsky, above a. v. Kurus, Ilya Joseph and Empson.

Language. The language of the Yazidis is almost without exception Kurdish, an idiom related to Persian, with a number of dialects which are particularly closely related to Kurmandji Kurdish. But the differences are often so great that another language has to be called in to make the parties intelligible to one another, for example Turkish in the case of Goktāi Yazidis in intercourse with the Ararat and Hāyazid Kurds (Wagner). In consequence of their distinct religion they form a people sharply distinguished from the Kurds. The Yazidis of the Sindjār also speak Arabic. The supposition that

at least a portion of the Yazidis formerly spoke Arabic and migrated from Syria and Babylonia, as tradition has it, is not to be rejected offhand.

Religion. The origin and evolution of their peculiar synthetic religion have not yet been fully explained but it seems to include old pagan elements (but no worship of the sun and moon), Iranian-Zoroastrian elements (echoes of Persian dualism), Manichaean (the Persian gnosis), Jewish elements (prohibition of certain foods), features from Christian sects, especially the Nestorians (baptism, a kind of eucharist, breaking of bread, visiting of Christian churches at weddings, permission to drink wine), also Muslim elements (circumcision, fasting, sacrifice, pilgrimage, Muslim inscriptions on tombs), Sufi-Rāfīdī features (secrecy of doctrine, ecstasy, reverence for a large number of Sufi-Shaikhīs), Sabaeen (transmigration of souls) and Shamanistic features (burial, interpretation of dreams, dances).

Sacred Books. The spoken language is used throughout in worship. It is therefore all the more remarkable that the text of the two sacred books, said to have been in existence before the Creation and to have been learned from the original copies, was in Arabic, although only the priests and the *ḡawwāl*s learned some Arabic. These are the *Kiṭāb al-Djilwa* [q. v.] (*Kiṭāb al-Djilwa*) "the Book of Revelation" and the *Maṣṣaf ḡāḡ* [q. v.] "the Black Book". "Black" seems to imply worthy of veneration.

One cannot conceal a certain disappointment on becoming acquainted with the sacred books. A hymn in praise of Shaikh 'Adī [see 'adī] in 80 verses of considerable theological merit, written in Arabic, is also regarded as a kind of sacred book.

Religion. Whether, though it is very improbable, there has survived to the present day in Yazidism a remnant of the old Iranian Zoroastrianism, whose views have been in course of time fundamentally altered by the adoption of foreign elements, or whether the Yazidis are former Manichaeans or Nestorians and Jacobites or survivors of the old Syrian community, which settled on the Sindjār and in their isolation became contaminated by Muslim and other ideas, is uncertain.

According to Spiro, Yazidism is descended from Manichaeism, which has been affected by Assyrian, Persian, Christian and Muslim elements. In any case, the Iranian element plays a considerable part for it appears to be the main basis for the development of Yazidi doctrine, which in many points approximates to Christianity and still more to Islam.

In the actual doctrinal system, the six minor deities seem to disappear completely and to be replaced by the dualism between God and Malak Tā'ūs, the peacock angel. God is only the Creator, not the preserver of the world. He is passive and does not trouble about the world. The active, executive organ of the divine will is Malak Tā'ūs, with whom Shaikh 'Adī who has risen to divinity through transmigration, seems to form one. Malak Tā'ūs is God's *alter ego* and is the active aspect of God's being. He is one with God and inseparably bound up with him. To this extent Yazidism is monotheistic but there are also semi-divine and divine beings, intermediate between God and man.

According to Horten, the religion of the Yazidis is a pure worship of light and represents a victory over the old Persian dualism. Malak Tā'ūs is not the principle of evil but on the contrary the denial of evil at all, which forms an indis-

pensable portion of the divine plan of the world and in a proper conception of the relativity and subjectivity of evil is recognised as necessary.

Malak Tā'ūs is a good deity. Yazidism does not countenance the worship of Satan. Shaifān = Malak Tā'ūs is regarded as an angel who has fallen into disgrace and, according to the legend, for his repentance has been restored or will be restored to God's favour. The Yazidis do not appear to believe in a hell, in a devil in our sense or in the punishment of hell, which would be an incorporation of the principle of evil. Evil is denied. According to legend, Malak Tā'ūs with his team of repentance in hell filled 7 jars in 7,000 years and with them the fires of hell were extinguished. The triumph over hell by this theory of redemption is found in several variants in Yazidi legend. Corresponding to the non-existence of an eternal hell is the belief in transmigration, which makes possible a gradual purification through continual rebirths. It is strictly forbidden to pronounce the name of Malak Tā'ūs: *Shaifān* even as the name of the deity (art. 5 of the creed). The white pearl is of the same nature and identical with the peacock. The peacock also plays a part in early Christian and other religions as a symbol of the sun and of immortality, as its flesh is said not to decay.

The view held by Chwolson and Lidbarski that Tā'ūs corresponds to the Babylonian-Assyrian divine name *Tamūz*, Aram. *Tamūz*: *تموز* = *تلوز* = *تلوز* is untenable. Yazidism has nothing to do with the god *Tamūz*. Similarly Tā'ūs = *تاوز* is to be rejected while Tā'ūs seems to be the same as *تاوس*.

The problem of the origin and nature of the worship of the divine angel Malak Tā'ūs, who is represented in the form of a bird, as a cock or peacock, is not yet solved.

Sandjāk. The most concrete expressions of Yazidism are the figures of peacocks made of bronze or iron, the so-called *sandjāk* (Yaz. *sandjāk*) pl. *sandjāk*, sometimes quite crude figures, sometimes very fine products of Persian art. Pictures of them may be found in Layard, Menant, Guérin, Ilya Joseph, *Anthropos* VI, Enpörm, Hural etc.

There are seven *sandjāk*, corresponding to the number of the angels who took part in the creation of the world; they have particular names, being called after individuals who have attained divinity through transmigration: Dāwūd, Shaikh Shams al-Din, Yazid (b. Mi'āwiya), Shaikh 'Adī, Shaikh Ḥasan al-Baḡrī, Manṣūr (al-Hallādī). The last named is the oldest *sandjāk*, weighs 679 lbs. and is called "caliph of the *sandjāk*". It remains always at the tomb of Shaikh 'Adī. The seventh *sandjāk* is lacking in all the illustrations. The *sandjāk* *ḡāḡ* has been mentioned above.

Six *sandjāk*s make the round of the various Yazidi lands yearly: 1. in Mōsul and Shaikhān thrice yearly; 2. in Sindjār and in Mesopotamia twice a year; 3. in Aleppo once; 4. in Diyar Bakr once; 5. in Takrit, Sāmarrā etc. once; 6. in Nisibin, Bāyazīd, Wan and Caucasus once.

The travelling *sandjāk*s are taken by the *ḡawwāl* and Koçak in their own simple receptacles on the dangerous journey. If lost they seem to be replaced at once. They are kept in the treasury *Kāzimat al-Kāzimin* in Shaikh 'Adī.

Here one may deal with the often mentioned snake, of the height of a man, painted black, which

is cut into the wall at the entrance door of the sanctuary. On the same wall are carved a number of peculiar figures: rings, daggers, a peculiar kind of crozier or seven armed sceptre, hands, spoons, croziers, combs. They are probably family or tribal marks, as the little houses for pilgrims scattered all over the valley bear the same marks on the walls.

It is significant that at the present day in Sinjar the quarrels of the emirs for power seem to concentrate around the possession of a *sanjaf* guaranteeing a regular income.

Exclusiveness. The idea of their complete separation from the rest of mankind held by the Yazidis is remarkable. They are convinced that they are descended from a child (Shahid b. Djalil) or twins, developed from the seed of Adam only in a jar which was kept closed for nine months, while the jar with the seed of Eve who was disputing for priority produced only vermin. On this is based the belief of the Yazidis in their unique position which does not allow them to mix with the rest of mankind who are descended from Adam or Eve. One cannot become a Yazidi, one must be born one. This strict isolation is intensified by a rigid caste system within the Yazidis.

The most dreadful punishment for a Yazidi, which can only be completely realised when we remember this fact, is excommunication, expulsion from his people, because this also settles the fate of his soul.

Morals, religious usages. In spite of all the slanders of their neighbours, the Yazidis are really on a much higher level of morality than their Christian and Muslim neighbours. The superstitious anxiety of the Yazidis to have a circle described around them by which one can put them on oath seems to be a fact (cf. Goldziher, *Zauberkreise*, in the *Kuhn-Festschrift* and *Z.D.M.* 67, lxx, [1916]).

The prayers consist of a Kurdish main prayer and a morning prayer at sunrise, which has to be said at a distance from members of other creeds, and turned towards the sun (Creed, art. 3). They ought at the same time to walk round a stone put up for the purpose. The principal prayer is addressed to Malak Tê'ûs and shows that the latter is regarded as identical with the Christian and Muslim God. The seven divine angels are addressed. The erroneous view that the sun and moon are worshipped arose from the fact that the supreme deity (= Malak Tê'ûs) is called "Lord of the moon and of the darkness" and "Lord of the Sun and Light".

A three days' fast (سێ ڕۆژ - not ڕۆژ) is observed in December, the fast being broken by drinking wine with the proper Shaikh or Pir. The performance of prayer, however, is — apparently under Šafī influence — not regarded as a strict duty.

According to the Yazidi satechism, Saturday is the day of rest and Wednesday the holy day. Once to three times yearly the Yazidi villages are visited by the *sanjaf* amid great celebrations.

The annual pilgrimage to the tomb of Shaikh 'Adi on Sept. 15–20 of the Greek-Julian calendar is a strict religious duty. This pilgrimage to the national sanctuary is the principal expression of the national and religious isolation of the Yazidis. The feast of the pilgrimage is celebrated with ritual ablutions by bathing in the river, by washing or

dipping the *sanjaf*, with processions, music (flute, drum and tambourine), hymns, ecstatic songs and dances by the priests, which recall the Šafī *dhikr* and Shamanistic rites, the lighting of hundreds of sesame oil-lamps at all the saints' graves, by offerings and special foods (*harisa*, *lawê*), the cooking of a sacrificed ox (*halûk*).

The blessing of Shaikh 'Adi is important for the rites, i.e. little balls of earth or clay from the tomb of the saint, and consecrated water from the water in which the *sanjaf* has been dipped for the living and the dead.

The little balls of earth are used as talismans and as a medicine and as extreme unction for the dying. All eyewitnesses agree as to the devoutness and dignity of all these ceremonies in the outer court of the sanctuary. The ceremonies within the sanctuary, which seem to include the reading of sacred books, have never been witnessed by an outsider.

Trees, at the sanctuary mulberry trees, are also honoured, surrounded with walls and visited by the sick. These trees have their own personal names.

Non-obligatory pilgrimages are made to the tombs of several other saints, mostly Šafī shaikhs.

The most important festival of the year, the feast of the New Year: *sar-i sal*, *sarsull*, *sarsulliyê* on the first Wednesday in April, is celebrated with great solemnity, as among the Harranians, at the tomb of Shaikh 'Adi but without music. An attempt has been made to trace this to the Assyrian festival of *agmuê*. Red flowers over the doors play a great part in it.

The obligatory institution of the brotherhood of the next world, which corresponds to our system of godfathers (each Yazidi must have a brother and sister of the next world), binds one to a daily kiss of the hand and presence in the dying hour. The collar of the new shirt, which unlike other eastern shirts is always buttoned behind, must in any case be opened by a sister of the next world.

In marriage, endogamy is strictly observed and the limitations imposed by the caste system are very marked. Marriage is as a rule monogamous, except in the case of the emir, who is allowed several wives. It is marriage by purchase with simple ceremonies performed by the local shaikh or pir, who breaks a loaf in two and gives it to the two parties. The bride wears red clothes and has to visit all the places of worship including the Christian churches on the way. The bridegroom on her entering the house gives her a blow with a stone as a sign of her subjection. Drums and fifes are necessary. Here and there the old system of marriage by capture survives, but it is now forbidden.

The punishment for adultery used to be death. Divorce is rendered difficult through the necessity of having three witnesses. The widow may be remarried six times. If a Yazidi remains more than a year abroad, he cannot live with his wife again nor can he receive another Yazidi woman to wife.

Baptism is a characteristic ceremony: it is performed by a shaikh or pir plunging the child three times into the *zanzen* in a dark vault of the sanctuary in the first week after birth. In the case of Yazidis living at some distance away, consecrated water brought by the *kawwals* is used.

Circumcision, which takes place soon after baptism, seems to be more a matter of choice. In

some Yazidi tribes it is said to have fallen into disuse some time ago, probably to escape military service.

The burial ceremonies are peculiar. The corpse is buried immediately after death with arms crossed and pointing to the east. In the case of persons of rank, a rough wooden figure is hung with the deceased's clothes and carried for three days in procession with music. The tomb is repeatedly visited by the mourners. On the 3rd, 7th and 40th day and the anniversary memorial services are held.

After death an answer to the question of the rebirth of the soul of the deceased is sought from the interpretation of a dream of a priest or *koçak*. The Kurdish system of blood vengeance exists to the present day in a somewhat milder form among the Yazidis.

Theocratic structure of society: The whole structure of this people, small and scattered but extremely well organised, is theocratic. The Yazidis fall into two very distinct classes:

1. The laity (*murid*) who form one great caste without consideration of position or wealth and among whose members there is no distinction in principle, in spite of the division into common Yazidis and notables (*emirs*), so that marriage between them is possible and frequent. Every Yazidi is the novice or disciple of a definite *shaikh* or *pir*, whose hand he must kiss every day, with whom he must break his fast by drinking wine and who has to perform the various rites of worship for him. On the institution of brotherhood of the next world, see above.

II. The clergy, priests, *rûşân*, *kahuna*, who enjoy extraordinary respect and reverence. The cleric must not cut his beard nor crop his hair. As regards duties the clergy are divided into six classes and as regards exclusiveness into three rigidly marked classes. It is impossible to move from one caste to another and marriages between the different castes are forbidden. Still more unimaginable is it for a layman to enter the clerical class and vice versa. This rigidity is a dogma of belief as the Yazidis rely upon it for the purity of their sects. Every one must live and die in the caste in which he is born. In certain cases the priesthood may pass by inheritance to women.

The *rûşân* are divided into the following classes:

1. The *shaikhs* who are descended from only five families in all are believed to be descended from pupils or brothers of Shaikh 'Adi. Their dress is white with a black wound turban; a red and yellow or orange cloth is flung round the body. The houses of the *shaikhs* serve as the places of worship of their charges.

2. The *pirs*, priests of less exalted descent. Their dress is black, the turban white with black feather or wound round with red.

The *shaikhs* and *pirs* are the regular clergy and pastors, they enjoy immunity of person and various privileges. It is their duty to teach their charges good and restrain them from evil. They have to perform religious duties on festival days, at fasts, at marriages, births, circumcisions, in illness (treatment with sacred earth), at death and at anguishes, for which regular fees (*xykat*) are due them.

The so-called *mollâ* or *imâm*, who claims descent from Hasan al-Basri, is said alone to have the right to read and write. At one time he had charge

of the sacred books but they are now kept for safety in Sindjar.

Writing is strictly forbidden to the common Yazidis by custom, probably in order not to profane it, since according to the *Maḥṣaf*, xxxi., God himself puts creation on record.

3. The *faḡira* or *ḡarabash* ("blackheads", on account of their black headgear), a kind of order, a voluntary brotherhood, recruited from the *shaikhs* and *pirs* and under a head called *šak* "master", who lives in Aleppo and receives the income of the *sanjjaḡ* Yazidi. They wear a black garment of hair and a turban with red band. They live on alms and play a part as negotiators and peace-makers. A *faḡir* is said to act as deputy of the chief *emir*. There is also said to be a sisterhood called *faḡrya*, the head of which is called *kubana*.

4. The *ḡawwāl*: singers, clergy of minor rank. There is a guild of musicians said to number 50 men, which has to take part in all religious festivals by singing hymns (we have two of these hymns with the music), playing the flute, tambourine or drum. They also act as *muḡzi dominici* of the chief *shaikh* and chief *emir*. They are farmers of the sacred images, the *sanjjaḡ*, for which they had to pay an annual rent (before the war about £T 6,000) and with which they went regular definite circuits through the different Yazidi districts in order to strengthen the faith of the Yazidis and keep them together and to collect offerings. An undeniable similarity to the pardoners is found in the trade which they carry on in balls of earth from the tomb of Shaikh 'Adi and in holy water. Of the contributions levied on behalf of the *emir* half goes to the tomb of 'Adi, a quarter to the *emir* and a quarter to the *ḡawwāl*.

They wear white, rarely coloured, dress and black turbans. Many Yazidis consider it meritorious to sanctify their new clothes by giving them to the *ḡawwāl* for a time.

5. The *kolak*, dancers, who serve in considerable numbers at the tomb of Shaikh 'Adi (the estimates vary between 30 and 300) and as ministrants of the *ḡawwāl* carry the *sanjjaḡ* to the villages on their circuits and dance at festivals in frenzied ecstasy with their long hair unbound.

Not to be confused with them are the *kolak*, who have the same name and crop up occasionally; they were a kind of Mahdi, usually religious fanatics of the nomadic Yazidi tribes, who endeavoured to influence and impress those around them by interpreting dreams, falling into trances and seeing visions and believed they were called upon to play the part of religious leaders. In drought and famine they acted as rain-makers, in rebellions and military enterprises they sought like the old prophets to inflame their people and assume the leadership. At the same time they used to their own advantage the belief that Shaikh 'Adi will appear once again in a rebirth. For this reason therefore they were hated not only by the Turkish Government but also by the Yazidi chiefs themselves and not infrequently betrayed to the Turks who disposed of them without mercy.

6. The lowest class of clergy: the *awḡān* or *awān* (deacons) and *ḡulām-e odjakk-e Shaikh 'Adi*, the servants at the tomb of Shaikh 'Adi, together with a *ferrāḡ* (sacristan to look after the oil-lamps) and 4 or 5 *ḡulām-e (awḡān)*: doorkeepers who serve in the sanctuary. Each Yazidi village

also has a *ghāsiqā* to maintain order. The head of the servants at the tomb is the *khāyir* of Merke (Menzel, *op. cit.*, p. 147, note 1).

At the top of this theocratic organisation there are a religious and a secular head:

1. The chief Shaikh: *mir-i shāikhān*, known as *Shāikh Nāṣir*, who is said to be descended from the family of Hasan al-Baṣrī or from a brother of Shaikh 'Adi and lives in Lalash. He takes precedence of every one and the supreme spiritual power is in him. He is infallible on questions of belief. He is the chief authority on and expositor of the holy scriptures; he alone gives legal decisions, and — with the approval of the chief of the tribe — sentences to the severest punishment, excommunication. He can summon to the holy war — this recalls the *ghāsiqā* — but the leadership devolves on the chief emir. The *Mir-i Shāikhān* has a claim to tithes but their place is taken by voluntary offerings. He wears white and a black turban. Only the daughters of a family descended from 'Abd al-Qādir Gilāni are considered his equals in rank. His house is the most venerated *adīs* of the Yazidis next to the tomb of Shaikh 'Adi.

2. The Mirzā Beg or *emir al-umara'*, the prince of the Yazidis, who according to the *Maṣḥaf* is regarded as a descendant of Shāpur but is usually called a descendant of Yazid and exercises the highest political and secular power. He lives in Bī'adri. His person enjoys immunity and he receives voluntary offerings (according to Browski £T 8,000 a year). His word is final on all secular matters. He alone represents the Yazidis to the outer world. He occupies the same position with respect to all Yazidi tribes that the tribal chief has to the individual Yazidi.

Since the loss of independence in 1832 the emir has to obtain recognition from the Turkish Government. The present emir of the Yazidis is Sa'id Beg, son of 'Ali Beg, murdered in 1913, who was the son of Hussin Beg (d. 1878), son of 'Ali Beg murdered in 1832.

History. We are quite in the dark regarding the first appearance and early history of this people who reveal so many diverse elements. According to the chief shaikh, the Yazidis, Layard tells us, have a chronology of their own, an era beginning in 292 A.D. which could without difficulty be connected with the year of Mani's death (276). But as we have no further confirmation and no historical records or annals of the Yazidis are known which might throw some light on the point, the correctness of the statement may legitimately be doubted.

It is not clear what part the caliph Yazid b. Mu'awiya (60–64 = 680–693) really plays in Yazidism; according to the origin of the name already given, he can have had nothing to do directly with their foundation. Guidi however holds — in contrast to the views hitherto held by European scholars — that the connection of Yazidism with Yazid can no longer be doubted, and regards the Yazidis as having at one time been Muslims, a view which has always been held by Muhammadan theologians.

According to the Yazidi view, Yazid was not the real founder of the Yazidiya, but only the restorer of the original sect, founded by Shāhid b. Dīrāsh, the only son of Adam. According to the legend, Yazid abandoned Islam to devote him-

self exclusively in Syria to the sect named after him. It cannot be denied that there are historical relations in this connection between Syria and the 'Irāq and the Kurdish movement. There are still villages of Yazidis who speak Kurdish near Aleppo. By transmigration Yazid became Shaikh 'Adi, who will come to earth again and again. In *Maṣḥaf* xv., 'Adi alone is mentioned, whom God sends from Syria to Lalash, but not Yazid.

An attempt has been made to dispose of the difficulties which arise out of the caliph Yazid by making the Yazidis disciples of Yazid b. Unais, on the authority of a statement in *Shahraṣṭānī's* (469–548 = 1071–1153) *Kutub al-Milal wa'l-Niḥāl*, mainly because a prophet from Persia was expected by the Ismā'īlī sect of the Yazidiya founded by Yazid b. Unais. But even this does not remove the difficulty.

It seems no less peculiar that the Yazidis should have chosen as a national saint a Sufi Shaikh like 'Adi b. Musāfir [q.v.] recognised without qualification throughout the whole Muhammadan world, whose orthodoxy, as we find it in his works, could hardly have led to the foundation of a sect so heterodox and foreign to the nature of Islam as Yazidism actually is. It appears impossible that a Muslim Sufi order could degenerate into a religion so different from Islam as Yazidism is.

In any case, the Yazidi movement seems to have begun in the time of the Omayyads in Syria. According to the tradition still alive among them, they came from Bāḡra and the lower Euphrates in the time of Timūr at the end of the xivth century and gradually advanced into the Sindjar which they did not inhabit before the xvth century, and into Kurdistan and there became kurdisised.

As, strange to say, unlike Muslims, the Yazidis never laid stress on their possession of sacred books, they were not regarded as privileged *Ahl al-Kitāb*. Down to recent times, they were connected from their name with the hated caliph Yazid and branded as Muslim heretics.

It was from this point of view that the various authoritative *fatwas* were issued which unanimously declared the land of the Yazidis *dār al-harb* and proclaimed the destruction of the Yazidis and the confiscation of all their property permitted and meritorious from the religious point of view. These served as justification for the numerous attempts at conversion and extermination by the Turkish pashas and the Kurdish tribes. I may mention the *fatwa*, published by Sharaf al-Dīn of Mawlaṣā Sāliḥ for Shaikh 'Abd Allāh al-Rubṭakī (?) of the year 1159 (1746) and the *fatwa* of 'Abd al-Salām and that of Muḥammad al-Barklā' al-Kurdī.

The memory of these atrocities, which are unparalleled even in the bloody history of Kurdistan, may have played a part in the final separation of the Mūsul territory from Turkey. For the Yazidis were as determined as the eastern Christians to migrate if the disputed area became Turkish again. The union with the 'Irāq was therefore hailed with all the more enthusiasm.

The resolution and strength of character of the Yazidis is remarkable; in spite of centuries of persecution they have never abandoned their identity nor their faith.

AL-YAZIDJĪ, I. **AL-SHAĪKH** Nāṣif b. 'ABD AL-ĀZĪH, an Arab poet and philologist of the 19th century, born March 25, 1800 in Kafr Shmā (Lebanon, near Bairūt; see Baderker, *Palästina und Syrien*, seventh ed., p. 266 and map at p. 263), d. on 8th (not 5th as *G.A.L.*, ii, 494) February 1871 in Bairūt. Members of his family, mainly of the Greek orthodox confession, are mentioned as early as the 17th century in northern Syria, especially in Hims, Tarābulus etc. as capable secretaries of Turkish officials and the higher clergy, whence their family name *Āzīh*, Turk. *Yāzıdji* (see 'I. I. al-Ma'ālūf, *Dawāni 'l-Kuṣūf fi 'l-Turik*, Bani 'l-Ma'ālūf, Be'abdu-Lubnān 1907-1908, p. 199-200). The family later moved to the Lebanon where the father enjoyed a considerable practice as an old-fashioned physician of the school of Avicenna (see *Mach.*, xxvii, 1929, p. 363). Nāṣif received no regular education; when a child he had some lessons from a monk named Matthew at Bait-Shabbūh. He very early displayed a great love for books and poetry; in boyhood he had already learned the Qur'an and the *Dīwān* of Mutanabbī by heart. His younger brother Rāḍī (1803-1857) also left a *Dīwān* in MS. (see Cheikho, *La littérature arabe au XIX^e siècle*, Bairūt 1926, ii, 43). From 1816-1818, Nāṣif was secretary to the Greek Catholic patriarch at Dair Ḳarḳafa; his odes (from the year 1824 onwards) attracted the attention of the celebrated emir Baḥrī [q.v.] to him and from 1828-1840 he was employed in his secretariat at Bteḍḍin. It was probably he who was described by Lamartine in his travels in the east as one of the court-poets (see *Souvenirs, impressions, pensées et paysages pendant un voyage en Orient*, Leipzig and Stuttgart 1835, i, 242). After Baḥrī's banishment to Malta, al-Yazīdjī went to Bairūt where he became very active as a writer and teacher. He remained quite free from foreign influences of every kind; he knew no European languages. Nevertheless he assisted the American missionaries in their translation of the Bible, was a member of the Society of Syrian Scholars and taught in nearly all the larger and better schools. A number of schoolbooks (no less than 15) were composed and printed by him, particularly on grammar, rhetoric, poetics, logic (a carefully prepared list by F. A. al-Bustānī, *al-Shaikh Nāṣif al-Yazīdjī*, Bairūt 1929, pp. nūn-rā); several of these are still in use in old-fashioned schools.

As a poet al-Yazīdjī followed exclusively the classical tradition, especially under the influence of al-Mutanabbī [q.v.], to whose popularity in Syria in the 19th century he contributed not a little. All his life he collected material for a commentary on al-Mutanabbī, which was edited after his death by his son Ibrāhīm (al-'Arf, *al-fayḍ fi Dīwān al-Ḥi 'l-Tayyib*, Bairūt 1882). Al-Yazīdjī's odes are in form and matter modelled exactly on well known classical metres; even the *munshakh* type was foreign to him. The elegies are full of stock sentiments. He was particularly fond of chronograms and plays on words in which he could display his extraordinary command of language and form. His poems were collected in three volumes (on the first see Fleischer, in *Z.D.M.G.*, vii, 1853, p. 279); the best edition is that by his son Ibrāhīm (1. *al-Nubdhāt al-nāla*, Haddāth 1904, with the biography written by his grandson Amin al-Haddād; 2. *Nasbat al-Kaḥḥān*, Bairūt 1898; 3. *Zabālib al-Kamarain*, Bairūt 1903, not mentioned in F. al-Bustānī, *op. cit.*, p. 43n).

Al-Yazīdjī acquired particular fame in the east and in Europe as the last great representative of the writers of *maḥmas* [q.v.]. His collection of 60 *maḥmas*, *Maḥma' al-Bahrain*, still enjoys great popularity in Syria (first edition, Bairūt 1856, the best that by his son Ibrāhīm of 1872 and often reprinted). It arose gradually. Following a suggestion of the French consul in Bairūt he began to study the *Maḥmas* of Ḥarfī in Silvestre de Sacy's edition (1821-1822) and as a result put together his emendations (ed. by A. F. Mehren as *Epistola critica Nāṣif al-Yazīdjī Berytenis ad De Sacyum*, Leipzig 1848; s. also Reinand and Denenbourg, *Les stances de Ḥarfī*, 1853, ii, 72 sq.; cf. V. Chauvin, *Bibliographie des ouvrages arabes*, ix, Liège 1905, p. 105, 130). In the early fifties he began to write *maḥmas* of his own; the whole collection was finished in 1855 and was very well received in Europe (Chauvin, *op. cit.*, p. 123, 234); one of them had been translated by Fleischer as early as 1851 (*Z.D.M.G.*, v, 1851, p. 96-103; also Russian translations by A. Krymsky, *Die arabische Poesie*, Moscow 1906, p. 322-328 and Ign. Krackowsky, in the periodical *Wostok*, ii, 1923, p. 31-34). Like those of Ḥarfī his *maḥmas* are not only of linguistic and lexicographical interest but they also contain much material of ethnographical value (see also Th. Chénery, *The Assemblies of al-Ḥarfī*, London 1837, i, 98-101).

Although his own outlook and works were very conservative and traditional, al-Yazīdjī nevertheless exercised a very great influence on modern Arabic literature. He is with justice reckoned with his younger contemporary Buḥrī al-Bustānī [q.v.] among the founders of the new movement in Syria. He was not a populariser of European knowledge or European methods like the latter or Rifā'a al-Taḥḥawī; language only in the wide sense was his field. By a mastery command of language, by his verses, *maḥmas* and schoolbooks, he showed and taught that the old saying *al-'arabiyya fī talanāṣur* (the Arabic language cannot be christianised) no longer held true. Every Arabic speaking Christian must as a member of the Arab race play his part in the renaissance of his fatherland. In this respect al-Yazīdjī did a great deal to pave the way for the later Arab nationalist movement.

2. Several members of the numerous family of

Shaikh Nāṣif attained a literary reputation. His son Ibrāhīm (b. March 2, 1847; d. Dec. 28, 1906) is especially celebrated as a sound philologist and a purist who did a great deal for modern Arabic terminology. He revised or edited many of his father's works and published a number of articles, mainly of a linguistic nature, in the periodicals edited by him in Syria and Egypt (e.g. *al-Taḥḥib*, 1884—1888; the article on Dory's Supplement was translated by Fleischer in 1881, see *Kleinere Schriften*, iii. 605—641; especially *al-Bayān*, 1897—1898, see M. Hartmann, *The Arabic Press of Egypt*, London 1899, p. 36 sq., 60 sq. and *O. L. Z.*, i., 1898, col. 225; *al-Diyā*, 1898—1906, s. M. Hartmann, *O. L. Z.*, ii., 1899, col. 57—59; iii., 1900, col. 311—316, 340—346); a number of his letters on literary matters and chronograms were collected by his friends (*Rasā'il al-Yazīdji*, Cairo 1920) as were his poems (*al-Shi'r*, *ibid.*, n.d., publ. in a facsimile of the original MS.). Most of his larger works were unfinished. He took a great interest in Arabic printing and even invented new types and signs. A monument was put up to him in Bairūt in 1924 (see *Maḥ.*, xii., 1924, p. 637—638; a description with photograph in the magazine *al-Mar'at al-ʿijādiyya*, iv., No. 8, p. 336).

3. The youngest son Khallīl (b. 1858, d. Jan. 23, 1889) is best known as the author of one of the first original tragedies in Arabic with a subject from ancient Arabia, *al-Murūwat wa 'l-Wafā'* (written in 1876; first produced in 1878; first edition 1884; second Cairo 1902); a second was never printed (see Sarkis, *op. cit.*, col. 1333). In 1881 for a time he edited in Cairo the *Mir'at al-Sharḥ*, later went back to his native land where he taught and prepared a new school edition of *Kaṭṭāb wa-Dimna* (1885). He is known as a poet from his collection *Nasāmāt al-Awraḥ* (Cairo 1888 — not 1880 as in *G. A. L.*, ii. 495 note — and 1908). His great dictionary of the spoken language was never finished.

4. A daughter of Shaikh Nāṣif named Warda (b. 1838, d. Jan. 28, 1924) was one of the first women writers in Arabic of the sixteenth century. She married Fransia Shīm'ūn in 1866 and lived most of her life in Egypt. Her collection of poems (*Hudūd al-Ward*, Bairūt 1867, 1887; Cairo, n.d. [1332 = 1913]) shows considerable fluency in the style of her father but of course without his power; as regards subject-matter they are mainly *vers de l'occasion* which are of no little value for the chronicles of the Yazidji family.

5. The Shaikh's eldest son Ḥabīb (b. Feb. 15, 1833, d. Dec. 31, 1870), author of a commentary on one of his father's books, was a translator; his death was the occasion of the last elegy written by his father, now crippled with age.

(IGN. KRATSKOWSKY)

YAZIDJI-OGHLU or YAZIDJI-ZADE, the epithet of two early Ottoman poets and mystics, both sons of a certain *yazīdji* (i.e. *ānā*) Ṣāliḥ al-Dīn. He is said to have come from Boli and spent most of his later life in Angora. Ṣāliḥ al-Dīn wrote in addition to works on mysticism, a treatise on medicine called *Shemsiye* and a poetical calendar of 5,000 couplets of no literary value, but perhaps of linguistic interest, on the omens of certain phenomena in the heavens such as rainbows, eclipses, lunar rings, falling stars etc. The work was published in 841 (1412) and dedicated to a certain Kaṣṣāb 'Alī. The author mentions the celebrated physician Ḥādīdī Pāshā as his patron. It seems to be better known under the title *Muḥim*; manuscripts are rather rare (cf. J. v. Hammer, *G. O. D.*, i. 73 sqq. with details of contents). There are old and good copies in Berlin,

Staatsbibliothek, fols. 3128 and 3397. The poet *Djewis* rewrote it in 1045 (1635) to suit the taste of his time; cf. Rieu, *Catalogue Turc. MSS. in the Brit. Mus.*, p. 93 sq.; other copies of this version are in Dresden, Gotha and Leipzig. Cf. on Yâzîdî Salâh al-Dîn also Brûsal Mehmed Tahir, *'Othmanîl Mîsâlihi*, I. 194, note. He seems to have lived for a time in Kâhî Köyi near Malghara in Thrace where his eldest son Mehmed was born.

1. Yâzîdî-Oghlu Mehmed, the elder of the two brothers, was born at Kâhî Köyi but seems to have been educated in Persia and Transoxania and to have completed his studies with Hâdîdî Bairâm in Angora. He retired into the solitude of a cell (*sâwîye*) built by himself at Gallipoli where he died in 855 (1451). His tomb is still pointed out and revered as a holy place. Yâzîdî-Oghlu Mehmed is still known everywhere as the author of the celebrated *Risâle-i Mehmedîye*, or briefly *Mehmedîye*. This long didactic poem contains a lengthy exposition of the doctrines and traditions of Islam based on the Kûrân and Hadîth. Considerable space is devoted to Muhammad's divine mission, his life, the end of the world, paradise, hell etc. (cf. the full account of the contents in J. v. Hammer, *G. O. D.*, I. 128-143). The epilogue contains a description of the visions in which Muhammad and his teacher Hâdîdî Bairâm appeared to him in a dream, also panegyrics of the sultans Murâd II and Mehmed II and of his patron, the grand-vizier Mahmûd, known as Kâzîb-ride. It was completed at the end of Djemâdî II, 853, i.e. middle of August 1449. The *Mehmedîye* is exceedingly common in manuscript, which suggests that it was once extremely popular. Since 1261 (1845) when Mirâ Kâjimbeg printed it in Kazan, the poem has been several times lithographed (e.g. Stambul 1258 and 1270; cf. *J. A.*, ser. iv., vol. III, p. 223 and *S. B. Ak. Wien*, xvii. 169). The commentary by Ismâ'îl Hâkîki entitled *Parh al-Kûb* (first edition Bulâk 1252, second edition in two vols. *ibid.* 1258, with text of the work and life of the author at the end of the second volume) is famous. 'Alî al-Dîn 'Alî b. Muhammad known as Mujañnifek (cf. *M. O. G.*, II. 244) translated the *Mehmedîye* into Persian (cf. G. Flügel, in *Jahrbücher der Literatur*, vol. 47, *Anzeigerblatt*, p. 21). As is known from the appendix to the *Amûr al-Akîfîn* of his brother Ahmad, Mehmed prepared at the latter's request under the title *Maghârib al-Zamân* a comprehensive exposition of the truths of religion in Arabic, which Ahmad then translated into Turkish as *Amûr al-Akîfîn*, while Mehmed put it into Turkish verse under the title *Mehmedîye*. On other works of Yâzîdî-Oghlu Mehmed cf. Brûsal Mehmed Tahir, *'Othmanîl Mîsâlihi*, I. 194 sq. No trace is to be found of other works attributed to him such as an *Oghuz-nâme* and a *Salâh-nâme*.

2. Yâzîdî-Oghlu Ahmad, usually called Ahmad Bidjân (on account of his excessive thinness), was the younger brother of Mehmed. Of his career we only know that he lived with his brother in Gallipoli and died there. His death must have taken place about 860 (1456); the date 855 often given is that of the death of his brother. Ahmad Bidjân was the author of several much esteemed mystical works of which the most important are: 1. *Durr-i mîknûn*, a cosmographical work in 18 fols., which deals with the wonders of creation. It exists only in MSS. which are not rare (e.g. Dresden, Gotha, Leyden, London, Paris, where

there is also a French MS. translation, and Vienna). 2. *Amûr al-Akîfîn* completed at the beginning of Muharram 855 (Feb. 1451) in Gallipoli, a Turkish prose version of his brother's Arabic *Maghârib al-Zamân* (see above). The work has been repeatedly printed: Stambul 1261, Kazan 1861, Stambul (1291 lith.) and Bulâk 1300. A detailed account of its contents is given by J. v. Hammer in the *S. B. Ak. Wien*, Phil.-hist. Kl., III. 129-133. 3. *Ajdâb al-Maghârib*, dealing with the wonders of creation. In the introduction the author says that in the time of Alexander the Great, the wise men of the earth arranged to describe the wonders of the universe. In the time of the Imam Shâfi this book was translated from Hebrew into Arabic. He himself at the suggestion of Hâdîdî Bairâm translated it, he says, into Turkish for the benefit of his countrymen who did not know Arabic, at the time when Sulân Mehmed captured Stambul, i.e. 857 (1453). A superficial comparison with Karwî's book of the same name shows its complete dependence on it, as Rieu has clearly shown (*Cat. of Turkish MSS. in the Brit. Mus.*, p. 106 sq.). The book is quite common in MS. e.g. in Dresden, Leipzig, London, Upsala and Vienna. 4. *Muntahâ*, a mystical work on the exact content of which nothing has been published. There was a manuscript in the bookshop of Khâlis Efendi in Stambul. *Bibliography*: J. v. Hammer, *G. O. D.*, I. 127 sq., do., *G. O. K.*, I. 497, 601; Gibb, *H. O. P.*, I. 391 sq. and 395 sq. (with further references and many extracts from 'Alî's *Kunh al-Akîfîn*); Tashkoprûzâde, *Shâhîsh al-Nû-mâniye*, Turk. transl. of Mejdî, I. 127 sq. and 128 sq.; Sa'd al-Dîn, *Ta'îf al-Tawârîkh*, II. 460 and the sources mentioned in the text.

(FRANK BARINGER).

YÄZÜRİ, ABU MUHAMMAD AL-HASAN B. 'ALĪ, vizier and chief kâdî of the Fatimid caliph al-Mustanşir bi 'Īlāh. His father was a citizen in comfortable circumstances of Yâsir, a little town in Palestine near Ramla. It was in his native town that he began his administrative career in the office of kâdî. In this capacity he attracted the attention of an officer in the service of al-Mustanşir's mother, by reporting to him an injustice done by the chief kâdî of Egypt and it was probably as a result of this that he was transferred to the capital with a post in the official hierarchy.

After the assassination of the Jew Abū Sa'd al-Tustarî, superintendent of the estates of the caliph's mother, in 439 (1047), Yâzürî was appointed to succeed him. His ambition seems now to have been apparent, for the grand vizier Abū 'l-Barakât al-Husain Djarjarsiyî appointed him in 441 (1049) chief kâdî purposely to exclude him from the vizierate. Yâzürî retained his post as superintendent, the duties of which were performed by his eldest son Muhammad.

In the following year the caliph gave him the vizierate, which he was to hold for eight years. This period was marked by important events in foreign politics. The year 443 (1051) saw the breach between the Zirids and the Fatimid empire. Yâzürî in revenge sent the Banū Hill and Banū Sulaim to ravage North Africa. A rising of the tribes of the Buḥaira was suppressed. In the east there was the rising of Arslân al-Basāsiri against the 'Abbâsîd caliph al-Kâ'im, to which Yâzürî gave considerable financial assistance. These events are related elsewhere; we need only mention that

the taking of Baghdad by the Turkish adventurer caused the authorities in Cairo to lose their heads. To receive the captive 'Abbāsīd in the Egyptian capital, the caliph Mustanşir hurriedly had a new palace built. This unfortunate step was to have serious consequences for the Shī'ī lords of Egypt. The Saljuqs were not content with reestablishing the 'Abbāsīd caliphate in Mesopotamia but a few years later extended the boundaries of the empire as far as Damascus.

This affair also had a more direct result, the execution of Yāzırī; did he put to his own use a part of the considerable sums allotted to the enterprise or did he perhaps play a double game by conducting secret negotiations with sultān Tuğhril Beg in spite of his official position? Both charges weigh upon his memory. The caliph threw him into prison with all his family in Muharram 450 (March 1058), and the following month the former vizier was executed at Tinnīs.

The rise to power of Yāzırī marks the first disastrous stage in the reign of Mustanşir which began so well: cf. for example the enthusiastic descriptions by Nāṣir-i Khusrāw who spent the first year of Yāzırī's vizierate in Cairo. Yāzırī exhausted the resources of the state, as we have seen. The year 446 (1054) was also marked by a serious famine.

The Arab historians say that Yāzırī's name was put on the coins but so far no such coin has been found. On the other hand, his name appears on a piece of cloth in the Elsborg collection, as [*Abū Muḥammad al-Ḥasan ibn 'Alī ibn 'Abd al-Raḥmān*] (*J.R.A.S.*, 1930, p. 765 and pl. xii).

YEŊİCERİ. [see JANISSARIES.]

YESHİL-IRMAK (x., "green river"), a river in Asia Minor (the ancient Iris) formed by the combination of the Gīlīg coming from Kāra-Hisār-Shark and Nīgīār and the Tūānli from the west, i.e. from the direction of Amasia. It runs straight north, enters the sandjak of Džāntk (wilāyet of Trebizond) and flows into the Black Sea opposite Sāmsūn. Its length is about 60 miles from the confluence of the two rivers.

Bibliography: Sāmi-Bey, *Kāmus al-Aḥām*, vi, 4709. (CL. HUART)

YEZDEGERD. [see SĀSĀNIANS.]

YILDIZ KÖŞKÜ (r.), Yıldız Kiosk, properly the "Kiosk of the Star" or more popularly in Turkish usage, *Yıldız Sarayı* "Palace of the Star", or simply Yıldız, the imperial residence consisting of a vast and somewhat chaotic agglomeration of pavilions and gardens situated in the northeast of Istanbul (Constantinople) on the heights which command Beşiktaş (Beşiktaş) and Ortaköy.

The surrounding wall is adjoined in the east by the Ortaköy quarters, in the south by the Çerāghān (Çerāghān) quarter and in the west by the slopes known as *Serendip Bey yokuşu*. Yıldız may be reached from above by the west (gate: *Kaltuk kapısı*, *Saltanat k.*, *Harem* or *Wālide k.*), passing the Ḥamidiye mosque, which belongs to the palace, on the right, or from below (gate: *Meḥmediy kapısı*), by the gardens which run down almost to the road run-

ning along the European bank of the Bosphorus between Beşiktaş and Ortaköy. For the topography see the map of Dolma-Bağçe in Baedeker, *Konstantinopel und Klein-Asien*, Leipzig 1905, p. 84—5.

It was under Sultān 'Abd al-Ḥamīd II that Yıldız attained its greatest development and its greatest renown (up to 12,000 occupants), but at the beginning of the xixth century it was already a park as is evident from a fountain bearing the *tuğra* [y.v.] of Sultān Selīm III (1789—1807) (information supplied by Selīm Nūrhet Bey).

The earliest buildings date from Sultān Maḥmūd II who surrounded them with a garden. According to Dorys, they were built in 1822, but in reality they are before 1826, for Andréossy mentions "Yıldızkiosk" (as served by the Bağçe-Köy aqueduct) in his work *Constantinople et le Bosphore de Thrace pendant les années 1822, 1823 et 1824 et pendant l'année 1826*, Paris 1828, p. 424.

Maḥmūd II's kiosk was demolished by his son and successor 'Abd al-Majīd (1839—61) and replaced by others which were called *Malikā köşkü*, *Çadır k.* (Kiosk of the Tent) and *Adīm k.* (Persian Kiosk) or *Yeni köşkü* (New Kiosk). According to Dorys and 'Osman Nuri who wrongly followed him, the *Malikā k.* and the *Çadır k.* were only built under 'Abd al-'Azīz; according to the *Guide Joanne*, the same is true of the *Yeni köşkü*.

Sultān 'Abd al-'Azīz (1861—76) built the palace of *Mābeyn* (the Court). It was he also who joined the Çerāghān palace built in 1874 to the Yıldız park by a bridge over the Beşiktaş-Ortaköy road ('Osman Nuri, ii, 450).

All the other buildings belong to 'Abd al-Ḥamīd II (1876—1909). This ruler, who never built a palace in the proper sense of the word, delighted in multiplying light buildings, often of cement, and these pavilions, chalets and kiosks were sometimes run up very quickly.

Before his time, Yıldız was a pleasure resort: only the mother of 'Abd al-Majīd, the Wālide Sultān Bezm-i 'Ālem (d. 1853), seems to have lived there regularly (Moritz Busch, *Die Türkei, in Lloyd's Reisebibliothek*, vi, Trieste 1860, p. 199).

'Abd al-Ḥamīd II moved there soon after the beginning of the Russo-Turkish war. He gradually stayed there more and more until he finally never left it and made a fortified camp and a regular town out of it. The park was extended and the surrounding wall raised (in 1898). The name of Yıldız contrasted or superimposed on that of Sublime Porte, became a synonym for the government of the Palace and the Ḥamīdian régime.

Three main portions of Yıldız are distinguished: 1. the Palace proper with its immediate annexes, 2. the Inner Garden (or Park) (*İç bahçe*) and 3. the Outer Garden (or Park) (*Dış bahçe*).

1. The buildings of the Palace in the strict sense comprise:

Mābeyn, already mentioned, an elegant building, the largest in the Yıldız (whence its name of *Büyük Mābeyn*), situated outside the walls so that it is seen in its entirety on arriving from the west, on the left of the Ḥamīdiye mosque. 'Abd al-Ḥamīd set it aside for the private secretaries (*mühürnâş*) of the Palace. It was also called the "Ambassadors' pavilion" or Yıldız par excellence (see illustration).

Selâlik, private apartments of the sultān (*künkâr*).

Haremlik or *Harem dairesi* "women's apartments".

Sakinde dairesi "apartments of the imperial princes", each of whom had a separate civil and military establishment (the private apartments of the sultan, his wives and princesses were included in the "small enclosure" surrounded by a wall 12 feet thick).

Theatre (Tiyatro).

Library (kütüphane), containing important manuscripts and Museum of antiquities and curiosities, with drawing-room, music room, photographic studio, museum of natural history (coleoptera) (the manuscripts have now been removed to the National Library; some of the bookcases are now being used by the Library of the Grand National Assembly in Ankara).

Silah-khane "arsenal or armoury", also a museum of arms, a long, low pavilion, adorned with columns.

Çit köşkü ("Kiosk of the Hedge"); here the ambassadors used to be received after the Friday ceremony of the Selâmlık (*salat*) at the Hamidiye mosque to which the sultan went ceremonially in a victoria driving in front of the terrace, under the Mibeyn, on which stood the ambassadors and other distinguished guests; it was the place of meeting of the *Komiseron-i askeri* "military commission"; here also took place in Ramadân the *hâfız dersleri* "religious instruction in presence of the sultan" (Tahsin Paşa, p. 16, 21, 95 and 129).

Kahtat köşkü "Kiosk of the Waterfall".

Various offices: *kazâ kütüphanesi dairesi* "offices of the First Secretary of the Palace" (Tahsin Paşa), *kâtip-i emînî dairesi* "office of the second secretary (Arap 'Isaet Paşa)", *teşrifât müdirinin dairesi* "office of the master of ceremonies", *ruvârân dairesi* "office of the aides de camp", *mühteriyet* "administration of the palace", *Servîs-i Fakîr paşanın dairesi* "offices of the T. P., commander of the facilities, bodyguard", *terfîs-i edalî* "office of the translators", *hâsîyat-ı emrîye* "archives", *mübağ* "kitchen" (list taken from 'Osman Nûri, in Tahsin Paşa, p. 18 sqq. will be found an account of the distribution of the various offices, fifteen in number).

2. The Inner Garden possessed a *Difkâr-nümâ köşkü* or "Belvedere" from which the sultan had a very extensive view.

3. The Outer Garden comprised:

Malta köşkü in which Murâd V was imprisoned for some time and Midhat Paşa was tried.

The *Çadır köşkü*, in which Prince Henry stayed; the commissions of the Hidjâz and of finance used to meet here; offices for the judicial enquiries and examinations conducted by Râghib Paşa.

Afîm köşkü or *Yeni köşkü* (these three, the oldest, kiosks have already been mentioned; the last was raised in height by 'Abd al-Hamid).

Merâsim köşkü "Kiosk of the Ceremonies" or *Shale köşkü* "Kiosk of the (Swiss) Chalet", in two stories, the largest in the Outer Park (cost £75,000), where the emperor William II and Alexander (Battenberg), king of Serbia, stayed; it was connected with the "little enclosure" and rooms were set aside in it for the chamberlains and for the meetings of the Council of ministers; the princes had their music lessons there.

Ta'lim-khane köşkü, built (of cement) in three days to enable the emperor William II to see a military review.

Çini fabrikası "porcelain works".

Marmara-khane "furniture factory" which em-

ployed 60 workmen and produced most of the furniture of Yıldız kiosk ('Abd al-Hamid had a passion for carpentry at which he himself worked).

İftâhî 'amir-i imarî köşkü at Yıldız ('Abd al-Hamid had a passion for horses).

Museum of (stuffed) animals, near the *Merâsim köşkü*, doves, poultry houses, not to mention greenhouses, menageries, bird cages, kennels, hospital for dogs, horse training ground, *hamâm*.

The palace had two mosques, a large work department (*ta'mir-khane*), with saw-mill, foundry, locksmiths' shops etc. which employed 300 workmen not counting the foremen; the princes used to work there sometimes.

The domestic staff (*hâne-i emrîye*) lived near the palace, but outside the walls.

Independent of the buildings above mentioned there were two which we have not identified: *Ferhâş köşkü* and the Little Trianon.

There were two ponds in the Outer Park, one called *Dere banyası* "pond of the valley" (between Beshiktash and Ortaköy), 300 feet long and 30—100 broad; the other near *Çadır köşkü*, about 5,000 sq. yards.

In the Inner Garden is a pond or rather an artificial stream, 300 yards long and 80 broad.

Yıldız now belongs to the prefecture of Istanbul (*J. Şehremânî*) which has leased a part of it (*Merâsim köşkü*) to a casino.

There is some talk of the resumption of the Merâsim Köşkü again by the municipality to give it to the National Assembly of Turkey which would make it a meeting-place for international conferences (Akşun of May 10, 1933). Several schools are established in the old buildings or annexes of Yıldız: *Harp akademisi* "Military school", *Mülkiye mektebi* "School of political sciences" (in the old *sevâler dairesi* "grooms' lodgings"), *Felli mektebi* "Police-school", *Harimiyeti mülkiye zaat mektebi* "Boarding-school of national sovereignty".

(J. DENY)

YOGHURT (T., *yoghurt*, to 'knead'), a preparation of soured milk made by heating. After putting into the heated milk a certain quantity of a *yoghurt* already made, which curdles it, it is left to cool slowly until it is solid. This is called *mast* in Persian and *laban* in Syrian Arabic. Various dishes are prepared by mixing it with vegetables, e. g. with cucumber: *mast-khiyâr* is much esteemed by the Persians (E. G. Browne, *A Year amongst the Persians*, London 1893, p. 175—178).

(CL. HUAT)

YORGAN LADİK. [see **LADİK**.]

YUNUS AL-KATIB OF AL-MUGHANNI, whose full name was YUNUS B. SULAIMAN B. KURD B. SHAHRIBYK AND SULAIMAN, was a well known musician and writer on music in the 11th (eleventh) century. He was the first to make a collection of Arabic songs (*ghinâ*). He was a *murshid* of al-Zuhair b. al-Awwâm or of 'Amr b. al-Zuhair, his father being a lawyer (*faḥīh*) of Persian origin. Settling in Madīna, Yunus entered the municipal administration as a scribe, hence his surname al-Katib. Early in life however, he was attracted by music, and took lessons from the "four great singers", Ma'bad [q. v.], Ibn Suraidj [q. v.], Ibn Muhriz and al-Gharid, as well as from Muhammad b. 'Abbād, and soon became esteemed both as a musician and poet. Whilst on a visit to Syria during the reign of Hishām (724—742 A. D.) his fame in music and poetry brought him the patronage of the Amīr al-Walīd b. Yazīd who detained him three days and suitably rewarded him. This event forms the basis of a highly coloured story in the 684th night of the *Alf Layla wa-Layla*. Returning to Madīna, Yunus was unfortunate enough to get into trouble. A poet-friend named Ibn Rūhaima had composed some verses extolling the beauty of a young lady named Zaynab, the daughter of 'Ikrima b. 'Abd al-Rahmān b. al-Hārith b. Hishām. These songs, which Yunus set to music, were originally sung at private *seiries musicales*, but they soon spread to a wider circle and became the rage under the name of the *Zaynab*. This publicity greatly offended the lady's family and the Caliph was appealed to. The result was that the governor of Madīna was ordered to inflict 500 strokes of the lash on the shoulders of the musician and the poet. Being forewarned of the impending punishment they fled from the city, and did not return until the death of the Caliph. On the accession of al-Walīd II (743—744), Yunus was summoned to the Damascus court where he was treated with "high honour and munificence", as Yunus himself is said to have stated. Here his "wealth increased" sufficient not only for his own needs, but for his heirs after him. He remained at court until the death of this pleasure-loving ruler. After this we have little information about Yunus, save that he was alive under the early 'Abbāsids. Both *Siya* (d. 785)

and *Ibrāhīm al-Mawṣilī* (d. 804) are said to have been his pupils. Among his books were a *Kitāb waḥḥarad Yunus* ("The Unique Book of Yunus"), a *Kitāb al-Kiyān* ("Book of Singing Girls"), and a *Kitāb al-Naghām* ("Book of Melodies").

As a composer, Yunus has a place among the great musicians of the classical era, as we know from the high esteem accorded his *Zaynab*. As a singer, he must have had considerable ability to have roused the jealousy of so great a performer as Ibn 'Aṣḥa. It is however rather on account of his "famous books on songs and singers" as the author of the *Fihrist* says, that Yunus deserves particular praise. Abu 'l-Faraj al-Isfahānī, the author of the *Kitāb al-Aghāni*, testifies that Yunus' book concerning the songs was one of his chief sources of information. It was, in fact, the first attempt made to collect the Arabic verses which had been set to music, together with particulars of authors and composers, as well as information concerning the modes (*awāṣit*) in which the melodies (*alghān*) and rhythms (*alḥawāṣit*) were sung.

(H. G. FARMER)

YUNUS B. MATTAL, the prophet Jonah, son of Amittai (II Kings xix. 25). In the *Qur'ān* he is four times mentioned as Yunus, without his father's name being given, once as *Ḍhu l-Nūn* (xxi. 87), once (lxviii. 48) as *ṣābiḥ al-ḥūt*, "he of the fish". This epithet explains also why Yunus is the only one of the major and minor prophets who is mentioned in the *Qur'ān*; a prophet who is swallowed by a fish naturally attracts attention. Mahammad numbers Yunus among the apostles of God (iv. 161; vi. 86). *Sūra* x. is called after Yunus, and tells of the town which comes to believe and therefore its fate is averted from it (x. 98). Yunus, an apostle of God, fled on a ship which was overloaded. He was condemned by lot and a fish swallowed him. He was worthy of blame. If he had not praised God he would have remained in the fish's belly until the resurrection. So We threw him sick upon a barren shore, and caused a gourd to grow up over him, and he believed and We gave them respite for a further period (xxviii. 139—148). Remembers *Ḍhu l-Nūn*, how he departed in wrath and thought We could exercise no power over him; then he called out of the darkness: There is no God but Thee, praise be unto Thee, I was one of the sinners. Thus We heard him and rescued him (xxi. 87—88). Await patiently the judgment of thy Lord; be not like him of the fish, who cried out when he was in distress; had the grace of his God not been granted to him, he would have been shamefully cast upon the barren shore but the Lord heard him and he became one of the righteous (lxviii. 48, 49).

Bukhārī and Nawawī also quote as divine revelation not put in the *Qur'ān* the utterance: "No one can say he is better than Yunus b. Mattal, even if his genealogy goes back to his father" (Nöldeke-Schwally, *Geschichte des Qur'āns*, I. 257).

Muslim legend further develops this material.

Why was Yünus enraged? 1. He was angry with the sinners; 2. he was angry because the calamity he had prophesied was delayed at the last minute and he appeared as a liar worthy of death; 3. because the angel Gabriel did not even allow him time to mount a steed or put on a shoe. His ship could go neither forward nor backward. He confessed his guilt but the sailors would not throw him into the sea; three times they cast lots and then threw the arrow (Tha'lah). Finally Yünus throws himself into the jaws of the whale (Ibn al-Athir), which says he has come from India on account of Yünus (Kisā'). God commands the whale, saying: I do not give thee Yünus as food, I give thee him that you may shelter him (as in a mosque: Tahari, *Annals*, i. 683). The threefold darkness of the fish, the sea, and the night envelops Yünus. The fish is swallowed by another fish (Tahari, *Tafsir*, etc.). God makes the fish transparent so that Yünus can see the wonders of the deep. He hears the songs of praise of the sea-monsters just as the angels hear his from the inside of the fish. It is disputed whether Yünus remained 3, 7, 20 or 40 days in the fish. Hurled out upon the shore he is given shade by a gourd tree, and suckled by a goat (Ibn al-Athir), or antelope (Tha'lah), or a gazelle (Kisā'). When they disappear Yünus laments. Then God reproaches him for not having had sympathy with over 100,000 people. This admonition is impressed upon him deeply by other means also: by fruit-trees torn up, by the example of a potter who is anxious about his pots and a sower who is anxious about his seeds. The city of the prophet is in despair because he does not come back. Then Yünus has a shepherd announce his approach: the earth, a tree, an animal of his herd, all bear witness to the truth of the message.

Al-Kisā' extends the miraculous to the earlier history of the Prophet. His father was 70 when Yünus was born. His mother, who became a widow soon after, had nothing left but a wooden spoon, which proves to be a cornucopia. As a result of a miraculous dream he marries the daughter of Zakariyā b. Yahyā. He loses his wife, both his sons and his property. He therefore will not pray with the others on the ship. Everything is miraculously restored to him.

YÜRÜKS, the general term for the wandering Turkish tribes in Asia Minor, also found sporadically on the Balkan peninsula. The name in Turkish means "wanderers", i.e. nomads in general, and some scholars (first v. Strahlenberg [1730], then J. v. Hammer and H. Kiepert) held the view that the same word was contained in the name of the *Lykes* (Λύκες), a people described by Herodotus (iv. 22), who lived

by hunting, roughly in the southern Ural. J. H. Mordtmann has similarly referred the account by Kinnamos of the nomads driven by the Emperor Manuel I in 1175 from the region of Eski-Shehir (q.v.) to the Yürüks. According to Hasluck, the word Yürük was first applied by Rycant to the nomads of the Troad (*History of the Turks* [1687], ii. 138).

The Anatolian nomads are usually called by the settled Turks, Yürüks, Göçeks or Türkmen, or after the tribal confederation to which they belong (e.g. Afghārs, Bāyārs, Kafars, Sheikhli, Wazaks, etc.) or after the particular tribe (e.g. Aidinli, Anamasli, Gök Musalli, Harmandali, Kara-Keçili, Kara-Koyunlu, Khurumi, Kotonli, Sari-Keçili, Zili etc.). The tribal organisation is rather important. A tribal confederation (*aşiret*) at the head of which is a bey or shahk is divided into clans (*hülle*) and again into septets (*mahalla*).

A strong tribe often subdues a weak one and even down to the Tashmāt (q.v.) the Yürüks were usually ruled by their own beys. Some of these beys in Rumelia were given fiefs (*z'āmet*; q.v.) (cf. 'Ain-i 'Alī, in Tischendorf, *Das Lehnwesen* etc., p. 63; Ewliya Çelebi, iii. 394).

In his monograph on the Yürüks Dr. M. Tazkyoglu has given a full list of 88 tribes (reproduced by Hasluck, ii. 475-477) of whom the majority were in his official district of Smyrna and the adjoining wilāyet of Aidin. There are also numerous Yürük tribes in Southern Anatolia (around Menteshe (Mughla), Adalia, Alaiye and Adana) in the districts of Siwa and Konya; also in east and south-east Anatolia (in the wilāyets of Urfa, Diyarbakr and Mardin); their distribution is connected with the distribution of pastures.

As early as Bāyazid I's reign, the Yürüks were coming to Europe (to the district of Philippolis (Plovdiv)) and in time they spread over Thrace and Macedonia as a number of place-names show. Since the wars of recent years, however, these Yürüks have for the most part gone back.

Although they do not form a single homogeneous stock, the Yürüks are predominantly Turks and have retained the old Turkish type, as well as many old words better, than the settled Ottomans. They speak as a rule different "coarse" Turkish dialects, which are as a rule not essentially different from those of their settled neighbours (cf. iv. p. 921); only a few tribes speak Kurdish.

On the religion of the Yürüks nothing much certain is known. Under the influence of Sūnni or Shī'i propaganda they have become nominally Muslims, but they are more attached to their primitive (animistic) religion, in which the worship of trees, shrubs, springs and mountains plays an important part. In any case they pay more heed to their old rites and customs than to the prescriptions of Islām.

The occupations of the Yürüks are decided by local conditions. In the steppes and along the coast where they spend the winter, they rear sheep and goats, and sometimes cattle, which they take in the summer to high-lying pastures. Some tribes are good breeders of horses and camels. In forest country the Yürüks are more frequently woodcutters (*nahkdaḡs*; q.v.). Many tribes are hunters and in certain circumstances practise a little agriculture. The women engage in cooking, making clothes, spinning, basketwork, weaving of felt, mats and carpets. The Yürüks live in tents woven of dark goats' wool or in primitive huts.

Their total number is estimated at 300,000. According to 'Ain-i 'Alī (*op. cit.*), the Rumelian Yürüks in the xviii century had 1,294 *odjaks*, i. e. 38,820 men (1 *odjak* = 30 men). In the xviii century they provided a contingent of 57,000 troops under their own leaders (Perry in Hasluck, p. 136).

All attempts by the Turkish government to make the Yürüks settle permanently have had very little success for obvious reasons.

(FEHIM BAJRAKTAREVIĆ)

YŪSHA' b. NŪN, the Joshua of the Bible. The Qur'ān does not mention him by name but alludes to him. When Moses wished to lead his people into the holy land and Israel was afraid to fight with the giants, they were encouraged by two God-fearing men (v. 23—29), who may be recognised as Joshua and Caleb. Neither can it be doubted that the young man (*fakā* = *na'ar*, Exod. xxxiii. 11) who accompanies Moses on a journey to Khadīr (not named) (Sūra xviii. 59—64) is no other than Joshua.

Muslim legend has supplied the figure of Yūsha' with features not found in the Bible. Yūsha' is given the task of summoning the Egyptians to the true faith. To enable Moses to depart this life without anxiety, Yūsha' is installed as prophet in his lifetime. The Arab tradition varies as to whether the victory over the giants was won in the time of Moses or not till that of Yūsha'. The credit is usually given to Yūsha'. Balaam supports the giants (in Ibn al-Athīr the story is embellished: Balaam's wife is bribed to incite him to evil). When Yūsha' is successfully fighting the giants, Friday evening comes. If the Sabbath begins, the fighting cannot be continued and the victory will be incomplete. Yūsha' wishes to stop the sun: at first it refuses, saying it is fulfilling divine orders just as Yūsha' is; finally the sun agrees. After the victory Yūsha' collects the booty as a sacrifice but no flame comes down from heaven to consume it. There has been some dishonesty, Moses summons the heads of the tribes. The hand of the sinner sticks to the hand of Moses (al-Kisā'i records another divine judgement; each tribe has a mark on Aaron's robe and the mark of the guilty tribe becomes twisted). A bull's head studded with pearls and jewels is found in the sinner's possession and added to the booty. Flames now consume the booty, the bull's head along with the sinner. Yūsha' cannot cross the Jordan for 40 days. At his prayer the two hills on the banks become a bridge, across which the people pass (al-Kisā'i). Jericho is besieged for six months and in the seventh the walls fall at the blowing of trumpets.

In Tabari (Leyden, i. 558) we have the isolated tradition that the dead man conjured up by Talut (Saul) was Yūsha'.

YUSUF I. [see ALMOHADAES.]

YUSUF b. OMAR b. MUHAMMAD al-HAKAM b. Abi 'AḡIL b. MAS'UD al-DIAḤAFI, governor of the 'Irāk. Yūsuf was a parent of the famous al-Hadīdīd b. Yūsuf [q. v.] and governed the province of the Yaman for many years before he was transferred to the 'Irāk by the caliph al-Hishām b. 'Abd al-Malik. On Ramaḍān 27, 106 (Feb. 15, 725) he arrived as governor in the Yaman and in Djumādā 1, 120 (April—May 738) he was appointed governor of the 'Irāk, and took up his quarters in al-Hira while his son al-Salt remained as his deputy in the Yaman. In al-Hira he acquired the reputation of a blood-thirsty tyrant; all kinds of stories, some almost incredible, are told of his cruelty. The first notable victim of his hatred was the former governor of the 'Irāk, Khālīd b. 'Abd Allāh al-Ka'arī [q. v.]. In 122 (740) the 'Alid Zaid b. 'Alī b. Husain b. 'Alī raised a dangerous rebellion in al-Kūfa which, however, ended in a fiasco [cf. HISHĀM b. 'ABD AL-MALIK]. After order had been restored, Yūsuf is said to have asked the caliph for permission to lay waste the town of al-Kūfa, but the caliph refused. He endeavoured to bring suspicion upon the able Naṣr b. Saiyār, whom Hishām had appointed governor of Khurāsān on the fall of Khālīd, in the hope that he would succeed in getting him dismissed, and then combining his governorship with his own. For this purpose in 123 (740—741) he sent al-Hakam b. al-Salt to the caliph to turn him against Naṣr and ingratiate himself with him. Hishām, however, was not deceived but left Naṣr in office. After the assassination of al-Walīd II, the Kalbi Maṣū' b. Djumhūr was appointed governor of the 'Irāk and as Yūsuf found no support among the government troops and the Kaisis made common cause with the Kalbis, there was nothing left for him but to take to flight. He set out for Syria and reaching al-Balkā in Transjordan, he tried to hide among the women of the harem but was discovered by the soldiers of the caliph Yazīd III and brought to Damascus. Here he was imprisoned and remained there till the outbreak of civil war on the death of Yazīd. But when Marwān b. Muḥammad [q. v.] after his victory over Sulaimān b. Hishām, who led the followers of the late caliph, approached the capital, Sulaimān had Yūsuf as well as Walīd II's two sons murdered before himself seeking escape in flight. This happened in Dhu 'l-Hiddja 126 (Sept.—Oct. 744), or according to another statement not till the following year (beg. Oct. 744). Yūsuf was then about 60. According to the Muslim historians, he did not lack literary training; as to his appearance we are told that he was small in stature and had an unusually long beard.

(K. V. ZETTERSTERN)

YUSUF b. TASHFĪN. (see ALMURAVIUS.)

YUSUF b. YA'KUB, the Joseph of the Bible, is a favourite subject of Muslim legend. In Sūra xii. Muḥammad deals with the whole story of Yūsuf, claiming that it is the most beautiful of stories. It is the most beautiful, says Ibn al-Jalā, because of the lesson concealed in it, on account of Yūsuf's generosity and its wealth of matter, in which prophets, angels, devils, jinn, men, animals, birds, rulers and subjects play a part.

Yūsuf in the Qur'ān. Yūsuf is mentioned twice outside of Sūra xii. Once (vi. 84) as one of the pious ancestors; further in Sūra xl. 36. Yūsuf came with clear proofs but they doubted him and after his death it was thought that God would never send another prophet. Sūra xii. contains more and less than the Bible. Let us first consider the additions to the Biblical story.

Yūsuf is warned not to tell his brothers his dream (verse 5). Ya'qub is afraid for Yūsuf on account of the wolf (13). Ya'qub does not believe the story of his death (17, 18). Yūsuf returns the love of the temptress; only a sign from his Lord keeps him from sin (24). Yūsuf's coat is torn from behind and a witness proves his innocence from this (25—28). The women who speak evil of Yūsuf's temptress are so dazzled by the angelic beauty of Yūsuf when he comes in that they cut their own fingers instead of the food (31). Yūsuf proclaims the true faith in prison (37—40). The seven fat and seven lean years are followed by a prolific year with a good rainfall (49). Yūsuf interprets Pharaoh's dreams while still in prison and will not come to court until his innocence is recognised (50, 51). Yūsuf asks Pharaoh to appoint him over the treasures of Egypt (55). Ya'qub orders his sons not all to come in at one gate (67). Yūsuf at once reveals himself to Benjamin (69). When the goblet is found in Benjamin's sack the brothers cry out: If he be a thief, his brother has already been a thief (77). Yūsuf sends his coat to his father. Ya'qub recognises the smell of it from a distance and regains his sight from it (93—95). Yūsuf's parents bow down before him thus fulfilling his dream (101).

For most of these additions to the Biblical story, Geiger, Grünbaum, Neumann and Schapiro have shown a Haggadic origin; on the other hand, we find Muḥammadan influence in the later Jewish legend.

On the other hand, we do not have in the Qur'ān the description of his character. Remarkable also is the omission of the dream of the brothers' sheaves which bow down before Joseph's sheaf (Gen. xxxvii. 5—7). This dream is placed in post-Qur'anic legend by a miracle. A tree grows near Ya'qub's house, on which a new branch sprouts whenever a son is born to him. None grows at Yūsuf's birth. At Ya'qub's prayer, Gabriel brings a branch from Paradise, which surpasses the others and blooms and bears fruit. The Yūsuf Sūra is strikingly uncertain and hesitating in that it

mentions no one by name except Ya'qub and Yūsuf and gives no numbers or times. The only references are to one of the brothers or at best the eldest of the brothers, a king, a noble, his wife, a witness. Yūsuf is sold for a paltry sum; the number of his brothers is not given. This gives the expositors of the Qur'ān an opportunity to search for the anonymous and undefined (*muḥammār*) (see Goldziher, *Die Richtungen der islamischen Koran-ansicht*, Leiden 1920, index, s. v. *Muḥammad*).

Yūsuf in post-Qur'anic legend. When the Qur'ān cautiously says "one of the brothers said or did something", in legend we find Reuben, Judah, Simeon and in Zamakhshari and Rāḍī also Dan; in course of time we have Benjamin with his ten or three sons. Sometimes Judah, sometimes Reuben, sometimes Simeon is represented as possessing a terrible temper which can only be calmed by a hand of the house of Jacob. The man who buys Joseph from his brethren is called Mālik b. Da'r and the Egyptian to whom he is sold Kifir, Iftir, Ifin, Kutifar, Kifin, Kifin; his wife is called Rā'd, later (as in Firdaws and Kisā'i) Zālika, Zulāika. The king of Egypt, whom Yūsuf converts to Islām, is called Raiyān b. Walid, his butler Nabū, his baker Muḥlīb. The *shahid*, the witness, becomes a relative of the temptress or even a baby who miraculously proves Joseph's innocence from his cradle. Even the names of the eleven stars which bow down before Joseph are given. Muslim legend knows how old Yūsuf was at the time of the dream, how long he was kept in the well, where the well was and what he was sold for on each occasion. The letter selling him and Ya'qub's letter to Yūsuf are both given in full.

A reason is given for everything that is explained in the Qur'ān. Why does Ya'qub suffer? Because he killed a calf before the eyes of its mother, because on one occasion he did not share his meal with a hungry man, because he separated a slave from her parents. — Why does Yūsuf suffer? Because of his vanity; later, because he appeals to the butler instead of to God. — When Yūsuf is warned not to communicate his dream, how do the brothers learn of it nevertheless? From Yūsuf's aunt, and so on.

We also find the legend developed by the storyteller's art without any foundation in Qur'ān or Haggada. Ya'qub touchingly recommends the little Yūsuf to the care of his brothers. They pretend to be very gentle when in sight of the father but very soon ill-treat him, break the jug out of which he wants to drink, tear his coat from his back which he begs as a shroud, and tell him to appeal to the sun, moon and stars of his dreams. Gabriel takes pity on the deserted boy, brings him the cloak with which Abraham was protected from the heat of the flames. A caravan loses its way and comes to the well. The brothers ask the purchaser to put Yūsuf in chains, nevertheless Yūsuf takes leave of them with dignity. On the way he throws himself from his camel on to the tomb of his mother Rachel, which they pass. — The efforts to seduce him are described in glowing language. Yūsuf sells corn to the Egyptians. During the years of famine however, Yūsuf starves also so that he may feel what it is like to be hungry; he partakes only lightly of Pharaoh's banquets. When Yūsuf is questioning the alleged magic cup, Benjamin asks him to enquire if Yūsuf still lives. — He lives, you will see him. — When

Ya'kub receives a message from Yūsuf, he asks how is it with Yūsuf? — He is king of Egypt. — That is not what I am asking; I mean how is it with his faith? — He is a Muslim. — Then my happiness is perfect. — Yūsuf enquires how his father could abandon himself completely to grief as if he did not believe in a reunion after the resurrection? — I believe in it but I was anxious lest you had abandoned your faith so that we should remain separated in the next world.

The Qur'ān tells nothing of Yūsuf's death and sarcophagus. Muslim legend, however, has taken stories of this from Haggada. Yūsuf's sarcophagus was sunk in the Nile. At the Exodus Moses went to take it with him but could not find it until an old woman (Serach, a daughter of Asher) showed it to him. In Islām, the legend seems to have been further developed, for we find the people living on the banks of the Nile disputing over the sarcophagus, which is finally sunk exactly in the middle of the river so that both sides may equally share its virtues.

Islām is very proud of its story of Yūsuf. Tha'labi says that the Yūsuf Sūra surpasses the Tora. Kīṣā'ī tells us that God has given the Yūsuf Sūra to every prophet, but the Jews concealed it until Muḥammad revealed it as evidence that he was a prophet. — The Shī'īs do not recognise Sūra xii.

YUSUF KHĀṢṢ ḤĀDJIB of Balasaghūn, a Turkish author, who wrote the mirror of princes, *Kutadghū-Bilig* in 462 (1069-1070) for the sultan of Kāshghar, Tawghāt Kara Khān Abū 'Alī Hasan b. Sulaimān Arslān [see BUGHRA-KHĀN] and was given the title of chamberlain as a reward. This, the first classic of the Turkish poetry of Central Asia, is completely under the influence of Persian literature. The author no longer uses the syllabic measure of Turkish popular poetry but experiments with a new and somewhat clumsy imitation of the *mutakārib* and says in his preface

that the Iranians would call his work a *Shāhnāma*. In style also he is influenced by the Persian lyric, especially in the song of spring with which he introduces the praise of his prince. Whether the elaborate form which he has given his work is his own invention or what model he followed has not yet been discovered. There is no proof of the influence of Chinese literature which was at one time suspected. The author puts his instruction into the mouth of allegorical figures: the prince Kūn-Toghūū, who represents justice, the vizier Aī-Toldū, the representative of good fortune, his son Ōktūlmish and his friends Aīg and Ōktūrmish. For his social ethics and occasional medical references, the author is completely dependent on Ibn Sīnā, as O. Alberts first pointed out. The author cannot be denied a certain originality for the way in which he applies these principles to the conditions of his people. In spite of all their pedantry his expositions are a valuable source for the sociology of the Turks of Central Asia. The language of the book is apparently that of Kāshghar, but it is an artificial language which had become strictly conventional in form in court circles under Iranian influence and was already superior to the dialects; it is based on a somewhat younger form of Turki than that which Kāshghari gives in his *Divān Lughāt al-Turk*; really it is not strictly Uighur as was once thought. On the other hand, one cannot say with certainty in what script the work was originally written, whether in the so-called Uighur, which is based on the Nestorian Syriac alphabet, in which the Vienna MS., the only one known down to 1897, is written, or in the Arabic script used for the fragment in the National Library in Cairo and the manuscript found by Zeki Velidi Bey in 1914 at Nemengān. Sections of the Vienna MS. were published by Vámbéry as *Uigurische Sprachmonumente und das Kudatku Bilik, Uigur. Text mit Transcription und Übersetzung nebst uigurisch-deutschem Wörterbuch und Facsimile aus dem Originaltext des Kudatku Bilik*, Leipzig 1870. W. Radloff published a facsimile of the whole manuscript St. Petersburg 1890, the text in transcription in 1891 and in 1900 text and translation from the MSS. in Vienna and Cairo followed. While Radloff in his transcription and in the form of the title *Kudatku Bilik* had used the pronunciation of the northern dialects, V. Thomsen in his essay *Sur le système des consonnes dans la langue ouigour*, in *Kilätü Semle*, ii. 241 sqq. showed from the rhymes of the *Kutadghū Bilik*, that it had completely preserved the phonetic system of the Orkhon inscriptions with its wealth of sonants and spirants, which was confirmed by the MS. in Arabic script.

(C. BROCKELMANN)

MAWLĀNĀ YUSUFİ, *munshi* of the Great Moghul Humāyūn (1530-1556), probably identical with Yūsuf b. Muḥammad Yūsufi Harawī, the celebrated physician of Bābur and Humāyūn. He acquired a place in Indian literature with his well-known letter-writer *Bad' al-Inshā'*, which he composed in 940 (1533-1534) for his son Rafī' al-Dīn Husain and several other *ṭullāb*. The book begins with a *muqaddima* on the different

kinds of modes of address which must be regulated by the relation of the correspondents to one another in rank; Yūsuf then divides the different kinds of correspondence (*mukāwarāt*) into three parts: letters to persons of higher rank (*murāḥāt*), of the same rank (*murāḥāt*) and to those of lower rank (*riḥāt*). Then comes a series of forms of letters which are divided into sections, such as sultāns to sultāns of higher, equal or lower rank, princes to sultāns and princes, princesses to princesses, amirs, grand-viziers, viziers, officials of the Dīwān, secretaries (*munshī*), scribes (*ṣāḥib*), shākhās, judges, poets and astronomers. Then come what one might call private letters: to relations and friends on various occasions, e.g. if a reply has not been received, when on a journey, on grief at separation, longing for home, on returning soon, faithlessness, reconciliation, excuses, congratulations, condolences etc. A *ḥātima* gives examples of addresses (*unwān*). The book, which is also known

as *Inshāʾi Yūsufi*, was lithographed in Delhi (1843?); manuscripts are fairly common. If Yūsuf is really the same man as the physician Yūsuf, he is also the author of a number of medical works among which we may mention the *Tibb-i Yūsufi* (lith. Cawnpore 1874), *Ilāhī al-Amrāq* (lith. 1863), *Mulḥakāt-i Ilāhī al-Amrāq* (lith. 1879), *Dalāʾil al-Nahj* (lith. 1874).

Mus., p. 329^a, 1089^a, 797^b, xii. 983^b; E. G. Browne, *A Catalogue of the Persian Manuscripts in the Library of the University of Cambridge*, 1896, No. 183, I. (p. 275); *Ḥabīb al-Siyar*, iii/iii. 336; E. Edwards, *A Catalogue of the Persian printed Books in the British Museum*, 1922, p. 734.

(E. BERTHELS)

Z

ZĀ, **ZĀY**, 11th letter of the Arabic alphabet, with the numerical value of 7. For its palaeographical pedigree, see ARABIA, plate i. It belongs to the sibilants (*al-ḥurūf al-ṣāliya*) and corresponds to the same sound in the other Semitic languages. It is pronounced like English and French *z*. In the spoken Arabic of to-day *z* may also represent other sounds of the classical language, such as *dh* and *ḡ*. In Persia and Turkey Arabic *z* is often pronounced *z*.

Bibliography: W. Wright, *Comparative Grammar of the Semitic Languages*, Cambridge 1890, p. 57 sq.; A. Schaefer, *Sibawīh's Lautlehre*, Leyden 1911, index; C. Brockelmann, *Grundriss der vergl. Grammatik der semitischen Sprachen*, Berlin 1908, I. 128 sqq.; do., *Précis de linguistique sémitique*, transl. by W. Marçais and M. Cohen, Paris 1918, p. 71; *Lisān al-'Arab*, vii. 167. (A. J. WENINK)

AL-ZĀB, the name of two left bank tributaries (al-Zawāb) of the Tigris.

1. The Upper or Great Zāb (*Zāb al-a'la* or *al-akbar*) was known already to the Assyrians as *Zabu ilā*, the "Upper Zāb". The Greeks called it *Lykos* (Weissbach, s. v., No. 12 in *Panly-Wissowa, R. E.*, vol. xiii., col. 2391 sq.; on the name see J. Markwart, *Sudarmenien*, Vienna 1930, p. 429 sq.), the Byzantines however have again *ἡλύος* *Zābas* (Theophan., *Chron.*, ed. de Boor, p. 318, 320). In Syriac it was called *Zābā*, in Armenian *Zaw* (Thomas Arceus, ed. Patkanian, iii/iv., p. 143; transl. Brosset, in *Collection d'hist. Arménienne*, I. 122). The Kurds at the present day call it *al-Zā* (G. Hoffmann, *Auszüge*, p. 236, note 1884). On account of its torrentious course the Arabs called it *al-Mudjūn*. According to the Arab geographers, it rises in the mountains of Adharbāydjān in the district of Mushaghar (in al-Mas'ūdī, *Kitaḥ al-Tamīm*, p. 52 and Yāqūt, *Ma'ājam*, ii. 902

read this for Mushaghar; cf. G. Hoffmann, *op. cit.* p. 228). Its water there is said to be red at first (cf. however G. Hoffmann, p. 234, note 1866). It then flows via Zarkūn and Bāghāsh (Syr. Bāgh Bāghāsh in Hedhāyah, now probably Bāgh Ḳal'a in Albāḡ), then via Bāghāzā, two days' journey from al-Mawjil, to the district of Ḥafṣūn, where it makes a turn before leaving the hills and flows through the *bāra* of al-Mardj until finally it enters the Tigris at the monastery of 'Umr Bārḳān below al-Mawjil, a farsakh above al-Ḥaditha. Ḥādīdī Khālifa says it is formed by the streams of Kawar (now Nehl-tai) and Dīnāmark. After their junction it flows along the hills past the Sandjak Çall (at the turn of the river to the S. E.) and through the district of Zihār of the region of al-Imādīya. Then it turns again S. W. at its junction with the Rāwānduz-tai. Shortly before joining the Dīdja below Nimrūd, the ruined site of the Assyrian Kalakh, it is joined by its right bank tributary, the Khāzīr, which has previously been increased by the waters of the Gōmel-ai (Greek: *Bamblos*) from Tell Gōmel (Gaugamela).

The Great Zāb plays an important part in military history. It is several times mentioned in the campaigns of Maurice and Heraclius (Theophyl. Simok., ed. de Boor, iv. 1, 2, according to whom the lower course is navigable (*ναυπηγος*, p. 150), 2, 5, 9, 11; v. 5, 6, 6, 11, 8, 11; Georg. Kedren., ed. Bonn, i. 730; Theophan., *Chron.*, loc. cit.). On its tributary al-Khāzīr was fought in Maharram 67 (Aug. 686) the battle between Ibrāhīm and 'Ubad Allāh (Caetani, *Chronographia islamica*, Fasc. v., p. 781, A. H. 67, § 2). On the Great Zāb itself Marwān was decisively defeated in the battle of 22^d—11th Djumādā II 132 (January 16—25, 750) (Huart, *Hist. des Arabes*, i. 285 sq.; Caetani, *op. cit.*, p. 1698 sq., A. H. 132, § 12).

2. The Lower or Little Zāb (*al-Zāb al-asfal* or *al-asghar*) is called in Assyrian *Zābu šupālū*, "the lower Zāb", in Greek *Kapros* (Weissbach, art. *Kapros*, No. 2, in Pauly-Wissowa's *Realencyclopädie*, vol. 2, col. 1921), Byzantine Greek *ἡ μικρὴ Ζάβας* (Theophan., *Chron.*, ed. de Boor, p. 320, according to whom there were four bridges over it) or *ἡ ῥεσπὴ Ζάβας* (Theophyl. Simok., ed. de Boor, v. 8, 1). According to the Arab geographers, its source was in the district of Dāhūr (Syriac *Dēhwar*, *Dēbor*, on the modern Dībār-*qū* near Sidikān) and in the mountains of Salāk (Syr. *Salak*), in Adharbāidjān not far from Shahrāzūr, and it flowed into the Tigris 1 *mil* above al-Sinn (Syr. *Sheennā*) at Dair Ibn Gāmīsh (Syr. *Dairā dhā-Bar Gāmīsh*). The Little Zāb is formed by the confluence of a number of small streams, which rise in the hills between Lahidjān south of Lake Urmīya and the pass of Awromān. The main stream is now called Altun-*qū*, in its upper course *Aksh* or *Kalwi*. On the lower course is Altun-köprü; just below its junction with the Tigris is Kal'at Dhabbār.

(E. HONIGMANN)

ZĀB, a region of Algeria. The name Zāb (plur. *Zibān*) is given to the area around Biskra measuring about 125 miles from W. to E. and 30 to 40 from N. to S. It is a rather flat plain shading in the south into the Sahara and bordered on the north by the southern slopes of the Saharan Atlas, but having easy communication with the depression of the Hodna and the plateaus of Constantine through a wide gap which opens up between the hills of Zāb and the Awrās. Being subject to desert influences Zāb has only rare and irregular rainfall, insufficient in ordinary times for the cultivation of cereals, but the streams from the mountains and subterranean supplies sustain an oasis vegetation at many places, which contain nearly 800,000 palms.

Three parts of Zāb are usually distinguished: Zāb Sharqī or Eastern Z., between the foot of the Awrās and the Shott Mel'ir; the Dahrawī or northern Z., between the hills of Zāb and the Wād Djedi; and lastly Zāb Guebli (*ghibls*) or Southern Zāb, separated from the preceding by a strip of sand and marshes. Zāb Sharqī is watered

by the waters of the Awrās, Wād al-Abiad, Wād al-'Arab which irrigate on leaving the mountains the oases of Zeribat al-Wād, Badis and in the plain those of Sidi 'Okba, Seriana and Oumache. The Zāb Dahrawī, owing to the springs which are dotted along the foot of the hills, contains the most prosperous oases, Bu Chagrūn, Lichana, Farfar and particularly Tolga, which is regarded as the capital of this part of the Zibān. To Zāb Guebli belong the oases of Wād Djellal, Ourellal and Doucen, the magnificent palm-groves of which form a striking contrast to the miserable oases of Mili and Bigu which are half buried in sand.

The population (93,000, not counting the inhabitants of the commune de plein exercice of Biskra) is for the most part settled in the oases but we also find in the Zibān wandering shepherds belonging almost all to the tribes of the Arab Sheraga, who in the spring go up into the Hodna and the Tell with their flocks. The settled population does not find sufficient resources in the country. They have therefore always been in the habit of migrating temporarily to the towns of the Tell. In the Turkish period natives of the Zibān under the name of Biskris formed an important corporation in Algiers, where there are still about 2,000 of their compatriots.

History. We know practically nothing about Zāb in the pre-Islāmic period and during the first four centuries of the Hijra. The Romans never occupied and colonised the country but were content to establish forts on the Wād Djedi, at Biskra and at the southern exit of the valleys of the Awrās. As to the name Zāb itself, it should perhaps be connected with Zābi, a Roman town in the region of Hodna, which was in the fifth century A. D. the see of a bishop. Al-Bakrī (*Marātib*, p. 64, transl. Fagnan, p. 133) mentions among the towns of Zāb, Tobna, Tolga, Tahūda, Doucen; Idrisi (transl. de Goeje, p. 109) describes Tobna [q. v.] as the capital of Zāb. It seems however that at this period, or in any case in the period immediately after it, political preponderance passed to Biskra [q. v.] in which lived influential families like the Banū Rumman and the Banū Sijidji who controlled the region's affairs in turn. The country suffered greatly from the Arab invasions of the xth and xiith centuries. A Hilālī group, the Athbedj, ravaged the country and drove out a number of the former inhabitants. Driven back into the south at the beginning of the xiith century by the Almohads, they abandoned their nomadic for a sedentary life; they were forced to recognise the suzerainty of the Wād Muhammad (Dawawida), a section of the Sulaim, who settled in Western Zāb while another group, the Karfa, settled in Eastern Zāb. An Athbedj family finally became supreme; this was the Banū Mozni to whom the Hafids entrusted the government of Zāb and who took advantage of the troubled times in the xivth century to make themselves almost independent (cf. Ibn Khaldūn, *Barbar*, transl. de Slane, iii. 125; History of the Beni Mozni). In this period the name of Zāb is no longer applied only to the region south of the Atlas between Doucen to the S. W. and Badis in the N. E. Ibn Khaldūn credits it with a hundred villages each called Zāb (distinguished as Zāb of Tolga, Zāb of Biskra etc.; cf. Ibn Khaldūn, *op. cit.*, i. 77). Leo Africanus gives Zāb the same boundaries as Ibn Khaldūn and mentions in it 25 towns in addition to large

numbers of villages (Leo Africanus, *Description de l'Afrique*, ed. Schefer, iii. 250).

Freed from Hafsid authority, Zāb escaped Turkish rule in the xvth century although a garrison was established at Biskra. Effective power for two centuries and a half was in the hands of the chief of the Arab family of Bā Okkar to whom the Turks allowed the title of *Shāikh al-'Arab* but against whom in the second half of the xviiith century, they opposed another family, that of the Ben-Gann. The rivalry of these two families kept the country in a state of anarchy, aggravated between 1835 and 1840 by the intervention of 'Abd al-Kādir. Disorder came to an end only in 1844 with the occupation of Biskra by the French and the suppression of the rebellion stirred up in 1849 by Bū Zian at Zaatcha, from which date the Zāban may be regarded as definitely pacified.

(G. YVER)

ZĀBAG (زَابَج), inaccurately transcribed *Zābaj* < Sanskrit *Jāvaka*, the name of an island. The Arabic transcription, so far as I am aware, goes back to the ninth century A. D. We do not see why the Arabic has rendered by a sonant the guttural occlusive *av* of the Sanskrit. The fact that we might be dealing with a form borrowed from a highly sonorous Prakrit hardly seems to me to require to be considered here. The Chinese knew this place-name as early as the seventh century under various forms which are reproduced in Chinese characters in *L'empire sumatranais de Śrīvijaya*: *Shē-li Fo-shē* < Skr. *Śrī Vijaya* or shortened form *Fo-shē* < Skr. *Vijaya* (Yi-tsing, Hōsei-je and Vajrabodhi); *Shē-li Fo-shē* = *Śrī Vijaya* (*Sin t'ang shu, Tang hui yao, T'ien fu yuan kuei*); *San-fa-t'i* (*Cu fan shi* of Cao Ju-kua, *Sung shi* or History of the Second Sung, *Ming shi* or History of the Ming, *Tao yi shi* of Wang Ta-yuan, *Ying yai sheng lan* of Ma Huan, *Sing fa sheng lan* of Fei Sin, *Tong yi yang k'ao*). In Malay, the island of Sumatra is called *Pulau Emas* "Island of Gold" (cf. Chin. *kin iow*, Arabic *zawarn dīh*, an arabicised form of the Sanskrit *suvarṇadvīpa*, with the same meaning). We only know the early history of *Jāvaka* = *Zābāg* = *Śrīvijaya* = *Shē-li Fo-shē* from inscriptions and a few oriental texts. We need not then be surprised that there are many lacunae.

At the beginning of our era, the *Rāmāyana*, composed some time earlier not definitely known, places in the Far East a *Yava-dvīpa* "Island of Yava", the island of gold and of silver (*suvarṇa-rūpyakadvīpa*), embellished with gold mines (*suvarṇākaramaṇḍitam*), which has usually been identified with Java. Its wealth in gold however makes me identify it with Sumatra for which alone we have evidence of extraordinary wealth in precious metals. In 132 A. D. Chinese texts mention an embassy from the king of Ye-tiao, old pro-

nunciation **Yap-dī* = *Yavadvīpa* = Sumatra, to the court of China. It is this form that Ptolemy reproduces some years later in the Prakrit form *Yāpāḍava* < *Yavadvīpa*.

240—252 A. D. In the surviving fragments of the *Fu-nan lu* in *juan* of K'ang T'ai, there are several references to the land of Ca-po, old pronunciation *Cu-lu*, defective transcription of **Shē-lu* < Skr. *Jāvaka*. It was probably about this time that Madagascar was colonised by Sumatrans who had been influenced by Hindu culture. The modern Malagasy language still bears clear traces of this.

In 410 on the occasion of the Synod of Isaac, there is mentioned a metropolitan of Dābag and of Cū and Macin (J. B. Chabot, *Synodicon orientale*, Paris 1902, p. 620). Four years later, Fa-hien returning from India via Ceylon arrived in a country which he calls *Ye-p'o-t'i* = *Yavadvīpa*, which I also locate in Sumatra, as well as the *Shē-f'o* mentioned in the *Kao sing iuan* composed in 519.

According to a Malay inscription of 605 Śaka = 683 A. D., an unnamed ruler who ruled in Śrīvijaya went on an expedition to institute a magic ritual, i. e. to seize the suzerain state of which he was a vassal. In Śaka 606 = 684 A. D., a king called Śrījayanasa (read: Śrījayaniga) ordered a garden to be made called Śrīkṛṣṇa = "auspicious field". In 608 Śaka = 686 A. D. another Malay inscription records that the stone was engraved at the time when the army of Śrīvijaya was setting out against the land of Java which was not in subjection to Śrīvijaya.

From 670 to 741, the *Shē-li Fo-shē* sent embassies to China. In 724, *Shē-li T'o-lo-po-mo* = Skr. *Śrīrājamarman*, king of Śrīvijaya, sent an ambassador to China. In 742, the king of *Fe-shē* = Vijaya, Lien-t'eng-wei-kong (F), sent his son to the Chinese court.

At a date which is uncertain, the Tamil poem *Manimegalai* mentions a town Nāgapuram (city of the *nāga*), in *Cāvaka-nāda* or land of *Cāvaka* < Skr. *Jāvaka* and the names of two of its kings: Rūhmizandin and Puyurāja, who claimed descent from Indra.

In 671—692 A. D., the famous Chinese monk Yi-tsing went from China to India and back. He made his first stay of six months in *Shē-li Fo-shē* in 671—672 and another of four years in 685—689 and a third, equally long, on his return from Canton. There he studied Sanskrit grammar. "In the fortified town of Fo-shē", he says, "there are over a thousand Buddhist priests, whose thoughts are devoted to study and good deeds. They examine and study all possible subjects just as in India; the rules and ceremonies there are identical [to those in India]. If a Chinese priest wishes to go to India to hear lectures there and read the original Buddhist texts, he would do well to spend [first] a year or two at Fo-shē and to practise the proper rules there; he could then go on to Central India". But this is not all. This mastery in the teaching of Malay, of Sanskrit and of the Law which is a sure sign of a high level of intellectual development was accompanied by equal skill in naval and military matters. Trade and the mercantile marine were no less flourishing. Lastly if we may judge by the attitude of the mahārāja of Zābag to the conquered Cambodians, the noble morality and political wisdom of these Sailendra rulers can-

not be too highly admired. Such was the position of the Samatran empire at the end of the seventh century A. D.

In 717, Śrīvijaya was visited by the monk Vajrabodhi and probably about the same time by the Chinese monk Hsü-je on his way from China to India.

A Sanskrit inscription found in Java of 654 Śaka = 732 A. D. mentions "an excellent island, incomparable, called Yava, fertile in cereals and other grains, rich in gold mines (*kaṇṭhāṇḍa*) . . .". This looks like a repetition of the *Kāmapūya*.

A Sanskrit inscription from Ligor (eastern Malay peninsula) and dated 775 A. D. celebrates a supreme king of kings, head of the family of the Śailendra, called Śrī Mahārāja (the rest is wanting).

In 844—846 we have the first mention known to me of the Mahārāja of Zābag in an Arabic text (Ibn Khordādhbeh). The merchant Sulaimān (851) also mentions Zābag and adds that the land of Kalāh (= Kra on the western Malay peninsula) and Zābag are ruled by the same king, Ishāk b. 'Imān, d. in 907, and mentions the camphor of Zābag. Ibn al-Fakih (902) and Ibn Rosteh (ca. 903) give some information about the location, products and customs of Zābag. Abū Zaid al-Husayn (ca. 916) gives a somewhat detailed description of Zābag and the mahārāja's court, and tells how the victorious campaign of the mahārāja against Cambodia was carried through (Mas'ūdī, *Prairies d'or*, i. 169 *qq.*), expresses himself in identical terms. Cf. on this subject my suggestions in *J. A.*, Oct.-Dec. 1932, p. 275 note).

The *Libre des merveilles de l'Inde* (ed. van der Lith, transl. Marcel Devic, p. 174—175) records that in 334 (945) the Wāk-wāk [q. v.] i. e. Sumatrans, came with a thousand ships on a raid on the east coast of Africa to procure the products of the country and Zandj slaves (cf. *J. A.*, Oct.-Dec. 1932, p. 298).

In 960 and 961, the king *Sā-lī ku-tu Hia-lī-tan* = Malay: Śrī kuta Haridana (?) sent an embassy to the court of China. In the following year another embassy was sent by the king *Sā-lī Wu-ye* = Skr. Śrī Vāja (?). Other embassies arrived in China from *Hia-te* = old Malay *hadji* "king" in 980 and 983. In 1003, the king *Sā-lī Ču-lo-wu-mi-fo-mu-tiao-kua* = Skr. Śrī Cūlamayivarmadeva and his son and successor *Sā-lī Ma-lo-ŋi* (sic) = Skr. Śrī Maraviyottungavarman in 1008 sent an embassy to the emperor of China. These two Sumatran sovereigns are also known from the Tamil inscription known as the "large Leyden scroll" which commemorates the donation of a village to a Buddhist temple at Negapatam. The building of this temple was begun by Cūlamayivarmadeva and finished by his son and successor. It may be noted that this temple was built at the "town of the *nāga*" and that the Malay rulers who built it, belonged to a royal family, the Śailendra, who were descended from a *nāga*. The choice of this Indian town was a very natural one for their pious works.

In 1017 there came to the court of China, ambassadors from *Hia-te Sa-wu-ŋa-p'u-mi* = Hadji Samatrabhūmi "king of the land of Sumatra". The modern name of the island appears here for the first time.

In his geography of the world compiled in 1154, Idrisi records that "the people of the isles of Zābag come to the land of the Zandj on small and large ships . . . for they understand one another's

languages". And also: "The people of Komr (= Madagascar) and the merchants of the land of the Mahārāja (= Sumatra) come among them (the people of Sofala and the east coast of Africa), are well received and trade with them (*J. A.*, Oct.-Dec. 1932, p. 299—300)".

The other Arabic and Persian texts (Yāqūt 1224, Kazwini 1203—1284, Ibn Sa'īd xiiith century, Kaṭib al-Dīn al-Shīrāzī d. 1311, Dimashki c. 1325, Abū 'l-Fida' 1273—1331, Ḥamd Allāh Mustawfi 1340, Ibn al-Wardī c. 1340, Bākawi at the beginning of the xvth century, etc.) only supply a few notes on the actual or imaginary flora and fauna of Sumatra and the products of the country, especially gold and camphor. We have to come down to the xvth and xviith centuries to get accurate and detailed information in the *Instructions nautiques* of Ibn Maṭṭijid and Sulaimān al-Mahiri which I have translated and published.

From the xiiith century, the oriental texts of other origins should be studied and annotated again. They will be given in the *Bibliography* but no use has been made of them here as our space is limited.

Ceu K'ü-ŋi in his *Ling Wai tai ta* (1178) and Čao Ju-kua in his *Ču fan te* (1225) deal at length with *San-fo-t'i*. The latter includes even the foreign countries dependent on him and mentions Ceylon among his conquests, which is unexpected and does not appear to be confirmed by history. The statement by Mas'ūdī (*Prairies d'or*, i. 170) that "the Mahārāja is king of the islands like Zābag, Kalah (= Kra on the eastern Malay peninsula), Sirandib (= Ceylon) etc. . .", three centuries before the publication of the *Ču fan te* is also devoid of historical value. The only thing that seems certain is that in the xiiith century A. D., the glorious Sumatran empire collapsed. Malāya with the help of the Javanese regained her former suzerainty which had been lost in the seventh century; and the Thais of Sukhothaya came down on the lower Menam and seized all the colonial possessions of *San-fo-t'i* on the Malay peninsula.

ZABĀNIYA. [See MALĀYKA.]

ZĀBID, a town in the Tihāma of Yaman, on the road running from north to south from Mecca to 'Aden, halfway between the Yaman highlands and the Red Sea, about 16 miles from the coast. At this distance the country is suitable for agriculture in view of the better water-supply, and the town itself is adjoined by two wādīs, in the north the Wādī Rima' and the south the perennial Wādī Zabid, from which it has taken the name which has replaced the original al-Husailb. In contrast to the rest of the Tihāma it is famous for its gardens with date-palms,

a little corn, indigo and various medicinal plants; the hides of Zabīd are also well known. Along with Bait al-Faḡh and a few smaller places, it is an important centre for the weaving of garments.

Zabīd has always been the capital of a district (*mihālā*). It adopted Islām in the year 10 (631) and its first governor was Khālid b. Sa'īd b. al-'As. It took no part in the *Ridda* wars. It became important under the Ziyādids as the capital of an independent province. Muḥammad, a descendant of Ziyād b. Abī Sufyān (b. Abīh), granted the Tihāma by the caliph al-Ma'mūn, gave the town in Shābān 204 (beg. 820) its circular form with four towers (it is still called *al-Mudawwara*) and made the aqueducts from the wells. The Ziyādids were followed from 412—554 (1021—1159) by the Abyssinian Mamlūks, the Banū Naḡḡāb. Both dynasties remained under 'Abbāsid suzerainty and were Sunni; but the capital itself was for a time in Shī'ī hands; at the end of the third century it was burned by the Ḳarmatian 'Alī b. al-Faḡl and about 379 (989) taken for a time by 'Abd Allāh b. Kaḥlān of the Banū Ya'fur [q. v.]. The latter acknowledged the Fātimid caliphate, as did the ḡulayh [q. v.] who came down from the highlands and interrupted the rule of the Banū Naḡḡāb in Zabīd for the greater part of the years 432—481 (1060—1088). They did not however become their successors; but after the interlude of the Khāriḡī Maḥdīs [q. v.] the Egyptian successor of the Fātimids, the Ayyūbid Salādin, sent his brother Tūrangshāh there at the beginning of 570 (1175), and he had the Maḥdī 'Abd al-Naḥī executed. When the third Ayyūbid of the Yaman, Ismā'īl b. Tagh̄tegin, who wanted to play the part of an independent caliph, was murdered in 598 (1201) by his own Kurdish soldiers at Zabīd, rule practically passed into the hands of Aḡlābs until 'Umar, son of 'Alī b. Rasūl, the Ayyūbid governor of Mecca, in 626 (1229) founded the Rāṣid sultānate. This was followed in 858 (1454) by the Tūḡhrīds who claimed to be Umayyads descended from the caliph 'Umar b. 'Abd al-'Azīz. After a temporary occupation by the Meccan Shāfi' Abū Nuḡayy Muḥammad (922—1516) and then by irregular troops during the fighting between the Egyptian Mamlūks and the Ottomans, the latter had governors there from 943—1045 (1536—1635). The Zaidīs [q. v.], the only Yaman power that had survived all previous dynasties and had made a previous attempt to gain a footing in the Tihāma, were able to drive the Turks from the coast also. After the second Ottoman occupation (1289—1338 = 1872—1918), the Zaidīs again became lords of the Tihāma after fighting the Idrīsids [q. v.] of 'Asir.

Zabīd has many important buildings dating from the days in which this town was a royal residence. These buildings have stood very well as they are mostly built of brick, which gives the town a rather gloomy look. Even in Niebuhr's time however, the town had decayed considerably and the chronicles record much damage by fire and also from wars and even numerous showers of volcanic ash that have fallen upon it. When the Turks moved the capital to Ṣan'ā' and made the road run further north, starting from the fort of Ḥudāids [q. v.], and not touching Zabīd, its trade fell considerably. In the new Zaidī state which has expanded into the kingdom of Yaman, Zabīd is merely a provincial town. It retains a certain importance as the home

of Shāfi'ī tradition, from which the spiritual welfare of the non-Zaidī part of the country is cared for. The *nisha* Zaidī is still a common one among Yaman scholars.

(R. STROTHMANN)

ZABŪR {A.}, probably a loanword from the South, but already used by pre-Islamic poets in the sense of "writ"; in this sense it is still found in al-Farazdaq, *Nuḡā'iq*, lxxv. 1. From the second Makkian period onwards, Muḥammad uses the plural *zabūr* in order to denote the revealed books (Sūra xvi. 196; III, 181; xvi. 46; xxxv. 23) as well as the heavenly writings, in which human deeds are recorded (Sūra liv. 43, 52). The singular *zabūr*, on the other hand, occurs in the Ḳur'ān exclusively in connection with Dāwūd. In the early Sūra xvii. 57 Muḥammad says that Allāh has given Dāwūd one *zabūr*. The same *zabūr* he mentions another time, viz. in Sūra iv. 161, and in Sūra xxi. 105 he quotes from this *zabūr* Psalm xxxvii. 29, in an almost literal translation. Possibly the pre-Islamic poets were already acquainted with Dāwūd as the author of the *zabūr*; it is e.g. not impossible that this is meant by Imrā' al-Ḳāis when he mentions a "zabūr in the books of the monks" (*ka-kḥaṣrī zabūr in fī maḡāḥifī ruḥānī*, lxi. 1). At any rate, this use of the term *zabūr* (apart from the question whether Muḥammad was the first to make use of it) is based on its affinity in sound with Hebrew *sevivim*, Syriac *musmār* or Aethiopic *musmār*; it was this term that by Muḥammad or others before him, in analogy with Arabic *zabūr*, was identified with the latter's meaning "writ". Apart from Sūra xxi. 105 the Ḳur'ān contains other passages bearing a close resemblance to verses from the Psalms, especially from Psalm civ. Moreover the majority of the passages in the Ḳur'ān which remind us, by sense or sound, of the Bible, are from the Psalms. The commentators on the Ḳur'ān recognise that the *zabūr* mentioned in Sūra iv. 161 is the book of Dāwūd bearing this name; it is only some of the Ḳufic commentators who propose to read the plural *zabūr* in the sense of "writings". Tabari rejects this view (Tabari, *Tafsīr*, vi. 18). Aḥmad b. 'Abd Allāh b. Salām, a *marwī* of the caliph Ḥārūn, it is said, identifies the *zabūr* with "the *musmār*

which are in the hands of Jews and Christians", to the number of 150.

A fragment of a translation of the Psalms, dating from the (viii) century, the oldest known specimen of Christian-Arabic literature, was discovered in Damascus by B. Violet. It contains the Arabic translation of Psalm lxxviii, vs. 20—31, 51—61 in Greek majuscule writing. Al-Kindī, in his *Risāla* (composed about 204 = 819), and Ibn Kūṭalba, as cited in Ibn al-Djauzī's *Waṣf*, quote verses from the Psalms in literal translation. The Nestorian renegade 'Alī b. Rabban al-Ṭabarī, who had the Syriac translation at hand, devotes to the Psalms an entire chapter of his "Book of Religion and Empire" (written about 240 = 854). Mas'ūdī, *Tanbih*, p. 112, mentions Arabic translations of the Bible which also contained the Psalms. Of these translations the one by Sa'īd al-Fayrūmī (*Fihrist*, p. 23, 7, 13; cf. also H. Malter, *Saudia Gaon*, p. 318 sqq.) has come down to us. Even a free translation of the Psalms in Arabic verses is still extant, viz. the *Urḡūza* of Ḥaṭṭāb b. al-Birr al-Ḥuṣaynī, which goes back at least to the vii (xth) century. Muḥammadan apologists find the coming of Muḥammad prophesied in the *Zabūr* as they do in the *Tawrāt* [q.v.]. Ibn Kūṭalba takes a number of verses in the Psalms to refer to Muḥammad; 'Alī b. Rabban in the section "Prophecies of David concerning the Prophet" collects similar references, some identical and others different, and al-Sinhādī adds a few more. On the other hand, Ibn Ḥazm criticises acutely the Psalms as well as other books of the Bible and says several passages are forgeries which he as a result of erroneous translation condemns as blasphemous. In contrast to the translations of the *akīd* 'Ishāq al-Muḥḥallifā, the *Kitāb al-Manāmir Turjumāt al-Zabūr* offers the translation said to have been made by the *ulamā'* al-Islām; it is preserved in several manuscripts, and Krarup and Cheikho have published selections. In reality however, this book has nothing to do with the Psalms, which only the two first sections recall; the author took the Qur'ān as his model and indeed calls his separate sections *Sūras*. The oldest MS. bears the date 666 A.H. and perhaps the *Kitāb Zabūr Dawūd* ascribed to Wahb b. Munabbih in Ibn al-Jayy's *Fihrist Bibliotēca Arabo-Hispana*, ix. 294 is identical with this work.

ZACHARIAS. [See ZAKARIYĀ.]

ZAFĀR, 1. now a group of ruins near an insignificant village in southern Yaman, about 10 miles S.W. of Yarim, celebrated in ancient times as the capital of the Himyar kingdom (also called ZAFĀRĪ; see Yāqūt, *Muḥḥam*, iii. 576; i. 196; South Arabian inscriptions give the radical *z-f-l*); it is reproduced in Ethiopic as *Safār*.

The royal city is mentioned by Pliny, *Natur. Hist.*, vi. 104 as *regia Sapphar* and in the *Periplus Mar. Erythr.*, § 23 as *μετρόπολις Σαφάρ* in which *Χαριβαλ* (Karib'il), "king of the Homerites (Himyar) and Sabaeans" ruled, of that dynasty which, succeeding the kings of Saba under the name "kings of Saba and Qūṣ Rāidān" was predominant in South Arabia from, at earliest, the end of the second century B.C. According to this evidence of the *Periplus*, the Sabaeans were already subjects of the Himyar kings and there was still a Himyar kingdom in the time of Pliny's sources.

The next reference to the capital Zafār in Graeco-Roman literature is Ptolemy, vi. 7, 41 (viii. 22, 16) where among the towns of the interior of Arabia Felix *Σαφάρ* (vulgo *Σαφάρα*) *μετρόπολις* is mentioned i.e. exactly as in the *Periplus*. Of the two variants in the MSS. for the longitude in Ptolemy, 78° and 88°, the former is to be preferred; it is also given by al-Ḥamīdī, *Sifa Ḍiḥāṭ al-'Arab* (ed. D. H. Müller, Leyden 1884, p. 28) while in his *Itin* (in D. H. Müller, *Die Burgen und Schlösser Südarabien*, in *S.B. Ak. Wien*, xciv. [1879], 417) he gives 77°. As the coast town *Mokha* in Ptolemy has the longitude 87° 30' (var. 88° 10' and 88° 30') and the same latitude 14°, as Zafār, E. Glaser, *Skizze der Geschichte und Geographie Arabiens*, Berlin 1890, ii. 180 said this variant in the longitude of *Σαφάρα* was clearly only a mistake by a copyist of the post-Ptolemaic period, who confused this Yaman Zafār with the Zafār which had meanwhile arisen in the east near Moscha. This supposition is based on Glaser's erroneous location of Moscha (see N^o. 3); it is also from the first probable that in the transmission of Ptolemy we have had a mistake in the numeral for 7 just as in the variant in the longitude of Moscha. His statement that "we can only allocate to the Sabaeans" the Metropolis mentioned by Ptolemy, "because its situation will not fit the then undoubtedly very limited Himyar territories" and that "in the period of the 'kings of Saba' and Rāidān Mārib was undoubtedly the royal residence" and that this city had been in ruins "for centuries by Ptolemy's time" (*op. cit.*, p. 240, 242) are only the results of his views on the chronology of the development of the Himyar kingdom and are moreover in contradiction to the testimony of the classical sources just quoted, with which latter the inscriptional evidence can best be reconciled [cf. also the article *MA'ĀRIB*].

The *Σαφάριται* (in most MSS. *Σαφάριται*) according to Ptolemy, vi. 7, 25 living near the Homerites were the inhabitants of the town and district around it, i.e. the ruling stock. There are also references to Zafār as a district in Arabic literature, e.g. in Idrisi, but it is no longer found as a tribal name (Sprenger, *Die alte Geographie Arabiens*, Bern 1875, p. 311). A road may have branched off to Yarim and Zafār from the road mentioned in the *Periplus* which led east from the port of Mokha; that the capital played a part in commerce is intelligible. On the road in Ptolemy's map see Sprenger, *op. cit.*, p. 183 sq.

It is to this Zafār that Philostorgius (first third of the fifth century), *Hist. eccl.*, iii. 4, refers in telling of the conversion of the Homerites to Christianity c. 354—355 in the time of Constantius II (357—361; cf. the extract in Nicephorus Callistus, ix. 18) at whose instigation Theophilus,

later bishop, obtained from the Himyar ruler permission to erect churches in *Tāḡaṣṣ*, 'Aden and Hormūn. In opposition to this definite statement, Glaser (*op. cit.*, p. 181) considered that *Tāḡaṣṣ* did not mean the Himyar town but the one on the coast (No. 2) (similarly before him Ritter, *Erdbunde*, Berlin 1846, viii/xii, p. 65). There is however not the slightest probability that Philostorgius was wrongly informed; and besides the capital is a more probable place for the building of a church. G. W. Bury, *Arabia Infelix*, London 1915, p. 10, wrongly identifies this Zafar with Yafim. The conversion of the Himyars to Christianity is put by Theodorus Anagostes, ii. 58 (cf. Nicephorus, xvi. 37) in the reign of Anastasius (491–518). An apocryphal literature is connected with the name of Gregentius, bishop of Zafar about the middle of the sixth century. Zafar is also mentioned by Ammianus Marcellinus (end of the fourth century) xiii. 23 as Tapharon, and by the Ravenna geographer (seventh century), ii. 6, as Tafa; the latter calls Himyar Omaritis; it finally appears as *Tāḡaṣṣ* in Stephanus Byzantinus, s. v., who, as a grammarian, is only concerned with the form of the name.

About the middle of the fourth century the Himyar kingdom had been conquered by the Axumites, but by the last quarter of the century native kings again gained the upper hand. The ruler of Zafar mentioned by Philostorgius as friendly to the Christians was therefore either a governor appointed by the Axumites (cf. *mutatis mutandis* Glaser, *Die Abessinier in Arabien und Afrika*, Munich 1895, p. 166) like Sumaifa in the year 525, or the reconquest of the country, the rulers of which were still the Axumites according to an inscription put up shortly before 356 (cf. SARA, iv, p. 95) had already been successfully begun by the Himyars about 355. It was not till 525 that the Abyssinians again won supremacy over Himyar but about 370 they were overthrown by the Persians. Till then Zafar had been the capital of South Arabia. The last Persian governor in San'a became a convert to Islam in 628.

According to Ibn Khurdaḍḍbih, p. 145; al-Mas'ūdī, *Murūj*, iii. 178; Yāqūt, iii. 577 (ii. 722) there was an inscription on the gate of Zafar to this effect: "Who held royal sway over Zafar? The excellent Himyars. Who became lord afterwards? The wicked Abyssinians. Who came next? The noble Persians. For whom had they to make way? The Kuraish, the traders. Who will next win the lordship of Zafar? It will again fall to the Himyars". This expresses very neatly the history of the changes in the hegemony of South Arabia. That Zafar was the capital of the Himyar kings is testified, in corroboration of the Greek and Roman authors, by the Arab geographers, historians and lexicographers, e.g. Ibn Khurdaḍḍbih, vi. 140; al-Mas'ūdī, iii. 177; Ḍiḥwārī, s. v.; Yāqūt, iii. 577 (812 in the quotation from a poet); the *Kūmūṣ*, s. v.; *Taḍj al-'Arūs*, iii. 370; the *Zikr al-mumā*. The royal castle of Raidān in Zafar is mentioned by Ibn Khurdaḍḍbih, p. 140, who quotes the verse of Imru' al-Qais (206, 32 in Ahlwardt, *The Dione*), al-Ḥamdānī in *Iḥṣā*, p. 410 and 414 (in the verse from As'ad Tubba'), al-Bakrī's *Muḍjam*, s. v.; Yāqūt, ii. 885; iii. 422 (where the form Zaidān is altered by D. H. Müller on *Iḥṣā*, p. 410, p. as a misreading, to Raidān [cf. the same form in Ritter, xii. 258 from Idriṣi];

see below on Glaser's explanation of the Raidān of the inscriptions). Idriṣi, i. 148 *sq.* (ed. Jaubert, Paris 1836) also describes Zafar as one of the most important and most celebrated towns in Yaman, which was the residence of the kings of Yaman. According to him, it is in the district of Yahyib, which was also called Zafar. Muḥaddasī, *B. G. S.*, iii. 70 (53) in his survey of the two parts of the Yaman, al-Tihām and al-Naḡḡā, mentions Yahyib among the towns of Naḡḡā. Sprenger, *Die Post- und Reiseverhältnisse des Orients*, in *Abh. f. L. Kunde des Morgenl.*, iii. 53, Leipzig 1864, p. 109 thought that this referred to Zafar. This identification which is also found in H. C. Kay, *Yemen, its early medieval history*, London 1892, p. 246 (and on his map) is not convincing; he also wrongly writes Yahyib, Yahyib (Yahyub) is the name of Miḥlāf (cf. besides Idriṣi also Yāqūt, ii. 885, who says the castle of Raidān is in this Miḥlāf and gives the further detail that Raidān is in Zafar and quotes the verses of As'ad Tubba' in *Iḥṣā*, *op. cit.*, p. 414, according to which Zafar with the tribal citadel of Raidān lay in the plain of Yahyib. According to *Iḥṣā*, p. 410, Zafar was known as Ḥakl (plateau of) Yahyib. In Yāqūt, iv. 436 there is a reference to Yahyib al-*al-w* in Zafar. Sprenger's explanation of the statement in Ibn Khurdaḍḍbih (*op. cit.*): "Yahyib is the name of the town, and the castle where the king... lives is called Zafar" (*Pestercuten*, *op. cit.*, p. 147) is wrong. The meaning is rather: "Yahyib, (in it) the town of Zafar and its castle Raidān".

According to Idriṣi, this castle was in his time a remnant of the royal palace there; he speaks also of other traces of its ancient prosperity. In Tabari, ed. de Goeje, i. 326, the foundation of Zafar is traced to the Himyar kings. Al-Ḥamdānī gives in *Iḥṣā* (*op. cit.*, p. 412) a description of the situation of Zafar on the slope of a hill near the town of the Sakhtiyūn (Mankath); there are still ruins in the village of Mankat, near Zafar with Himyarite inscriptions found by Seetzen; cf. D. H. Müller, *op. cit.*, p. 370; he quotes there (p. 414) a line of 'Amr b. Tuthba' who mentions inscriptions in Zafar and lines from 'Alqama which refer in laudatory terms to Zafar. In the *Sifa*, p. 203, he mentions Zafar among the celebrated places of the Yaman with old castles. As an illustration of his remarks on the reduction of degrees of longitude in Ptolemy to those of the eastern astronomers, he chooses the position of Zafar and deals (*op. cit.*, p. 27) with the Ptolemaic positions of this town and of San'a, both of which are on the same meridian (so also p. 28 and 44; cf. also 45), Zafar being about 3 days' journey farther south (which on the whole agrees with Niebuhr's estimate that Zafar is 1° 12' south of San'a). On p. 201 he gives from the geographical point of view nothing more definite than that Zafar is in the neighbourhood of San'a, similarly Yāqūt, iii. 577 (where he adds that some hold the view that Zafar was San'a itself), the *Kūmūṣ*, s. v. (cf. Ḍiḥwārī, s. v.) and the *Taḍj al-'Arūs*, iii. 370, which quotes Yāqūt. D. H. Müller, *Burgen*, p. 369 shows that Yāqūt, iii. 422 compares Zafar with San'a (but see No. 3). The Arab tradition of the history and genealogy of the Himyar kings, the Tubba' is for the most part unhistorical.

Yāqūt distinguishes in the *Muḍjam* (cf. iii. 577) between this Zafar and the place of the same name on the coast (No. 4); in the *Muḥṣarrik* the

distinction is not pointed out. Arab writers occasionally confused the two towns, as have some modern authorities. C. Niebuhr, *Beschreibung von Arabien*, Copenhagen 1772, p. 236 and Ritter, *op. cit.*, p. 254 and others have lamented this; the latter however makes the same mistake, cf. p. 65 and 253. Abu 'l-Fidā' in his description which confuses the two towns (other cases under N^o. 4) only says that Zafār is in Yaman; all his other statements apply to the coast town.

Al-Hamdānī in *ihlil*, *op. cit.*, p. 416 and with variations, al-Bakrī, *op. cit.*, p. 464 and Yāqūt, iii. 577 give in the form of a brief anecdote to explain the saying "Who comes to Zafār must understand Himyar" (or "Zafār belongs to the Himyars") an example of specifically Himyar idiom. The Arabs distinguish between the sons of the older, younger and 'nearest' Himyars, i.e. between Himyars, in the widest, usual and strictest sense (Sprenger, *Geographie*, p. 72 sq.). One can only speak of a Himyar dialect (on some peculiarities, see Sprenger, p. 74) among the Himyars in the narrowest use of the name. In the tenth century A.D. are mentioned as districts in which pure Himyar was spoken, the territory west of San'a and south of Dhawār as far as Hagi Kitāb, an area which includes Yarim and Zafār (references for Himyar areas in Sprenger, *Das Leben...* der Mohammed, Berlin 1865, iii. 438). Himyar and the mixed speech of the adjoining districts used, according to Fresnel, to be inaccurately called Ehlil, a term which was wrongly extended also to Mehri and the Karā dialect (Hakili) or to what Glaser calls Shohrāt. The language of the old Himyar inscriptions in the strict sense is closer to Sabaean than the language of the second great group of South Arabian inscriptions, Minaean.

These two pure Himyar districts are fertile and well suited for agriculture. The soil of Zafār also yields a semi-precious stone: the onyx of Zafār is mentioned by al-Hamdānī, *ihlil*, p. 415 (with quotations from the poets); Dhawār; Yāqūt, iii. 577; *Lisān al-'Arab*, vi. 192; *Kāmil*, *Taḍī*, *loc. cit.* (cf. Lane s.v. *ḡaṣa'* on the meaning of the word and Sprenger, *op. cit.*, p. 62).

After the last occupation of Zafār by the Abyssinians, of which we have a full account in the *Martyrium Aristae* and after the extinction of the South Arabian kingdom and still more after the rise of Islām the former royal capital gradually fell into decay, especially as it was cut off from the main routes of traffic. In the later history of the Yaman it plays with its mountainous surroundings, a subordinate role as a fortified place in connection with military operations. When for example after the Ziyādi dynasty had died out (409—1015) and Najdā had taken Zabīd and assumed the royal title (412), the walls there held out to their strongholds in the mountains; among these were (according to 'Umīra al-Hakāmī, *Ta'rikh al-Yaman*, ed. Kay, *op. cit.*, p. 12) al-Nakīl ('pass'), which Kay, p. 246 explains as Nakīl Sumāra near Zafār.

The information supplied by modern travellers agrees with the statements of the Arab authors. Cf. also: Niebuhr, *Beschreibung von Arabien*, Copenhagen 1772, p. 94, 236, 290; do., *Beschreibung von Arabien*, i. 400; the article SABA, iv. p. 3—18; D. H. Müller, *Sabäische Denkmäler*, Vienna 1883, p. 85, Plate VI (inscription); W. Harris, *A Jour-*

G.*, 1897, vi. 41; do., *Skitzen*, ii. 241; Nielsen, *Handbuch der altarabischen Altertumskunde*, Copenhagen-Paris-London 1927, p. 21, 88; Hommel, *Ethnologie und Geographie des Alten Orients*, Munich 1926, p. 656, 711; Osiander, in *Z. D. M. G.*, xix., 1865, p. 180; G. J. S., IV/5, N^o. 312.

2. A ruined site S.W. of San'a. The *Taḍī al-'Arūs* (iii. 370) mentions from al-Saghānī, in addition to the two towns of the same name (see N^o. 4), also two castles named Zafār, one north, the other south of San'a.

3. A fortified hill about 20 miles N.W. of San'a near Kawkabān.

4. Name of a very old town, which has been in ruins since the end of the middle ages, and of the plain around it, in the corner of S.E. Arabia on the Indian Ocean now usually reckoned to Mahra. Ibn Khaldūn, *'Ibar* (see the extract in Kay, *op. cit.*, p. 133) gives the vocalisation Zafār and al-Makrīzī, *De valle Hadhramaut*, ed. Berlin Noskowsky, Bonn 1866, p. 29, says it should be pronounced Zafār as does Maltzan in the introduction to his edition of *Wrede's Reise in Hadhramaut*, Braunschweig 1873, p. 24, 39; it is pronounced Zāfār, Zāfā, and now occasionally also Dofār. That the town is already referred to in Greek literature is practically certain; it is to be sought among the places mentioned by Ptolemy on the sea-coast. Sprenger, who emphasises that Ptolemy used information given by travellers from India and along the Arabian coast for his description of the south east coast of Arabia, is probably right (*Geographie*, p. 95 sq.) in pointing to the place on Ptolemy's map (vi. 7, 12) which corresponds to the location of Zafār, namely the *μῆτις Ἀρραβίας* mentioned among the towns of the *Σαγγάριον* which contains a translation of al-Kamar ("Diana") which we also find in *Lisān al-'Arab* "Mountains of the Moon", *Ḥubb al-Kamar* "Bay of the Moon", on which Zafār actually lies. The position of the "Oracle of the Moon" according to Ptolemy's statements brings us quite near Raisūt (called *Kawāḍi* [*Pureḍi*] *ḡaṣa'* in Ptolemy just before), the former port. From this place stretches a well watered plain about 9 hours' journey in length and an hour's journey wide at Tāḡa, where it is broadest. It also runs into the hills and is now called Zafār (Sprenger, *op. cit.*, p. 96). Carter (see below) found the ruins of some six towns there. Whether these were the successive capitals of Zafāria, as Sprenger thought, is another question which can no longer be answered. Sprenger also conceded the impossibility of ascertaining where the "Oracle of the Moon" had been. With reference to the statement of Ibn Baṭṭūṭa (*op. cit.*, ii. 203) that there was a sanctuary with the tomb of Hind (see also I. 295) half a day's journey from (the later) Zafār (i.e. Manṡūra) and a mosque on the coast in a fishing village, Sprenger thought that this mosque and tomb were the "Temple of the Moon". The latter however could only be recognised in one of the two buildings, presumably only in the former. Its position, according to Sprenger, agrees with Tāḡa in 54° 22' East Long., 17° 2' N. Lat. "on an inlet, which could be used as a harbour for rafts and boats". This location should be modified in the light of Bent's statements and the ancient

Zafār be sought in a ruined site east of Tāka (see below).

We cannot support Glaser's view (*Seize*, ii, 97, 180) that the *Ḥabara wāda*, mentioned by Ptolemy immediately after *ḥabara* 'Aqrūdā, which Sprenger, *op. cit.*, p. 97 said was the port of Zafār and identified with Mirbat, was Zafār itself and Moscha, *Periplus*, p. 32, its harbour (the latter already suggested in Ritter, *op. cit.*, iii, 329; also Glaser, *Absissinier*, p. 90 *sq.*; Hommel, *Ethnologie*, p. 654), identical with Khōr el-Belid, and that the name Zafār probably only appeared in the district after the time of Ptolemy, either for Abissa polis or for Moscha (*Seize*, p. 180; *Absissinier*, p. 187 *sq.*). Against these topographical arguments, which, by the way, still leave undecided the place to which the name Zafār is said to have been transferred, is the fact that there is not the slightest probability in its favour and also that it is in direct contradiction to Ptolemy's map and that of the *Periplus* and that, as Glaser himself has to confess, Moscha, which Ptolemy puts west of Cape Syagros (Rās al-Fartak) must, according to the *Periplus*, which Glaser prefers to Ptolemy for the description of the Shīr coast, be sought about 10 miles west of Mirbat. There is now no harbour at Khōr el-Belid, but a lagoon (Glaser, *Seize*, p. 181); on the other hand Moscha in Ptolemy as well as in the *Periplus* is described as *ḥabara* and this significance is particularly emphasised in the latter. Moscha is probably Maḥḥā, a harbour in East Long, 51° 55' "less than an hour's journey west of Rās Fartak and sheltered from the south wind" (Sprenger, *op. cit.*, p. 85). Sprenger's assumption that in the transmission of Ptolemy the true position of Moscha has been dropped out is possible but not, it seems, necessary. His location agrees with the statement of the Arab authors, e.g. Yāqūt, iii, 577; iv, 481, that the harbour of Zafār which had no suitable anchorage (so also Ibn Khaldūn, *op. cit.*, p. 133, ed. Kay) was Mirbat, about 5 parasangs distant and much visited by merchants, and also with the fact that the Rās Fartak near which he would locate Moscha and of which Ibn al-Mudāwir tells us that it is built at the entrance to the 'Gulf of the Moon' and that there is a landing-place there for ships from India, is in modern times the first landmark for which steamers from Bombay make (Sprenger, *op. cit.*). New material for a confirmation of this view is given, in part unintentionally and unconsciously, by Th. Bent, *Southern Arabia*, London 1900, p. 246 *seq.* He says it is certain that the ruins on the coast at the modern al-Balad (el-Belid, according to Glaser, *Seize*, p. 181; also *Absissinier*, p. 184 [so also Fresnel, Al. tillad of the English chart]) about 2 miles east of the present capital al-Hāfa (Iḥāfe) are those of the old capital of this territory. When he adds that there is no difficulty in following Sprenger in identifying this town with the *ḥabara* 'Aqrūdā, he is inaccurate in as much as Sprenger expressly distinguishes Tāka, where he sought the original Zafār, from al-Balad to the west of it, the presumed site of the later Maḥḥā. This ruined site, according to Bent, containing remains of Sabean temples, last inhabited during the Persian invasion about 500 A.D., is the largest and most imposing in the whole plain. Bent who (p. 268) gives inaccurately Glaser's identification of Abissa polis and Moscha, further says that the point on the coast near the river Rori, which is particularly broad at its mouth (so in the map

he gives of the Zafār territory [*from a survey by Imam Sharif, Khan Bahadur], his travelling companion]; the description of the water as Khōr Koury in Bent, p. 270 is wrong; see Glaser, *Absissinier*, p. 185; the English chart has Khōr Reiri, Cruttenden: Khōr Ririe) and the rocky island of Khātīya on the coast is Abissa polis and also Moscha. But only a little west of this point in 54° 25' is Tāka (54° 22') at which Sprenger sought to locate the *ḥabara* 'Aqrūdā and later Glaser, *Absissinier*, p. 187, Abissa polis, which left him for 'the Oracle of the Moon', which Bent very arbitrarily thought lay in the ruins of a Himyar town in the Wādī Nakast not far from al-Hāfa, "only 'Abḥad or Robat or one of the ruined sites farther inland, e.g. in the Wādī Neḥas" which is not plausible. We may look for the site of the ancient Zafār and of the "Oracle of the Moon", perhaps also of the sanctuary mentioned by Ibn Baṭṭūta, in the ruins which Bent (p. 269) found east of Tāka a little further west than Sprenger and at the adjacent river mouth, the Khōr Rori, the landing place for the town. Glaser's statement (*Seize*, p. 181) "the ruins of Zafār are at 'Abḥad, 'Aḥad, Rēst and Khōr el-Belid" is insufficient. Bent was also wrong about Maḥḥā, which he identified with Mokhā, "a not unusual name for harbours on the Arabian coast". He took no account of the inaccuracy of the statements about the Shīr coast in the text of the *Periplus* as transmitted to us (§ 32). That the latter means Raḥḥā by the centre of the Sakhali frankincense trade is not so certain as it is usually assumed to be. The mistake, which is repeated by Bent, arises from the fact that this place is called Moscha.

The lord of the frankincense country under Himyar rule at the time of the *Periplus*, § 32 was the king of Ḥaḍramūt. That Ptolemy refers to Ḥatabānians between the Omanites and the mountains of Aabon does not justify the deduction that the frankincense coast proper (from Zafār eastwards) was wholly or in part a Katabānian colony.

The coast town of Zafār is most probably older than the Himyar capital; it was long ago with great probability identified with "Sephar, a mount of the east" of Genesis 2. 30.

The Arabs sometimes place Zafār in Mahra, with which the present attribution agrees, sometimes, which comes to the same thing, in the Shīr territory (coast of Mahra), so Yāqūt, iii, 577, Abu 'l-Fidā' (see Hommel, *op. cit.*, p. 30), Ibn Khaldūn (ed. Kay, *op. cit.*, p. 132), Tāfi, iii, 370, sometimes, less accurately, in 'Omān (Sprenger, *Geographie*, p. 92). According to Ibn Baṭṭūta, ii, 196, it is at the extreme end of Yaman (l. 205, it is simply called a town of Yaman); in a note in a manuscript of the *Marāḥiḍ* (quoted by Wüstenfeld, Yāqūt, v, 24) it is described as the remotest town of Yaman; Mahra [q.v.] is included by the Arab geographers in Yaman. Yāqūt, iii, 577, after mentioning the capital of Yaman, speaks of the celebrated town of his time of the same name on the coast of the Indian Ocean (this location also in iii, 422, iv, 481 [where the form Zifār is used; cf. the reading in Ibn Khurādādhbih, *B.G.A.*, vi, 146], in Ibn Baṭṭūta and Tāfi, iii, 370); in the last mentioned passage Yāqūt describes it in general terms as situated between Ḥaḍramūt and 'Omān (cf. i, 196 and the addenda in *B.G.A.*, iv, 432 to Ibn Hawḥal, p. 32 [also on the distance between

Zafar and Mirbāt]; the *Ḥamān* briefly: near Mirbāt). In the principal passage, Yāqūt tells us that in the mountains at some distance from the town of Zafar frankincense grows and a share in the proceeds is given to the independent lord of the town who has established a monopoly of trade in it; then follow remarks on the gathering of the frankincense which has to be taken to the town (a similar account briefly in iv. 481).

Zafar is in the frankincense district proper; its extent as given in Yāqūt is much too small, as is evident from the statements of other Arab geographers and especially from Carter's investigations, whose western boundary at 52° 47' to 55° 23' East Long. is too far east, as we know from Glaser's survey, who corrected his own figures in course of time and from Bent, Hirsch and the South Arabian expedition of the Vienna Academy.

The name Zafar ("aromatic plant") originally perhaps meant simply the idea which the Greeks expressed by *ἀρωματισμός*. Fresnel's idea (*Sur la géographie de l'Arabie*, *Lettre*, iv., in *J.A.*, ser. iii., vol. v., 1838, p. 518), followed by Ritter (xii. 252, 260), that the Himyar town was called Zafar after the coast town out of rivalry of it, was wrong. Probably this name was used for the former in another sense, as the "victorious", as in the lines of Aḥmad Tabba', *Ḥikl*, *op. cit.*, p. 410 (= al-Bakri, p. 464). Accounts of the frankincense country were brought to Europe by Portuguese sailors; we find an echo of these in Camões, *Os Lusíadas*, x. 101, 1: "Olha Dofar insigne, porque manda O mais cheiroso incenso pera as aras".

Yāqūt (ii. 881) speaks in almost the same words as al-Ḥamdānī (*Djastarat*, p. 51) of a coast road that leads from 'Aden via Zafar passing Rašūt on the left to 'Omān. Ibn al-Muḍāwir who visited Zafar c. 619 A.H., gives the various stages on the road from Shihām in Ḥaḍramūt to Zafar with the distances (fuller details in Sprenger, *Portouten*, p. 144; do., *Géographie*, p. 164). He observed that pepper, sugar-cane and numerous kinds of fruit flourished at Zafar and that between Ḥaḍramūt and 'Omān there were traces of old terraces on which the frankincense tree had been planted; this latter remark is confirmed by Bent. He tells of a safe caravan route from Baghdad (through the desert) to Mirbāt and Zafar, by which the Beduins twice a year bring horses which they exchange for spices and costly robes. According to him, Aḥmad b. 'Abd Allāh (618 = 1221) destroyed Zafar and built Manḡra not far from it to which the name Zafar later passed; in his time the district was in possession of the Ḥaḍramūtis. According to Ibn Khaldūn (*Kay*, *op. cit.*, p. 133), the destruction took place in 619 and the name (al-Aḥmadiya) of the new Zafar was given it from the name of the destroyer.

In Abu 'l-Fidā's account, the confusion in which (see above) was recognised by Niebuhr, *Beschreibung*, p. 236 and Hommel, *op. cit.*, p. 30 *sqq.* (with references to the earlier literature) showed in more detail, without being himself completely free from errors, we are told of the coast town in addition to what has already been mentioned, that it lies at the top of a gulf and has trade with India, is surrounded by gardens (cf. Ibn al-Fakḥ, *B.G.A.*, v. 109) and betel and cocoa grow there. Ibn Baṭṭūṭa's description is similar (ii. 196 *sqq.*). The

latter about 730 (1329—1330) sailed from Kilos to Zafar, over a century after the destruction of the old town. He tells us that the town stood isolated on a wide plain (cf. Yāqūt, iv. 481) but gives noteworthy details about the rich orchards and spice yielding trees and plants (betel, cocoa) in the neighbourhood and their economic importance. The Zafar described by Ibn Baṭṭūṭa was also an important commercial centre.

With reference to the ancient history we may here mention a suggestion by Glaser, that Zafar was the old Ḥabashi capital (cf. *Skizze*, p. 181; Hommel, *Ethnologie*, p. 654). It is certain that in the early middle ages, like South Arabia generally, it passed for a time under Persian influence. Of importance at a later date was the Persian attempt at invasion in 664 (1265) when the emir Maḥmūd b. Aḥmad al-Kūstī, lord of Ḥormūz, conquered and plundered Zafar. Soon afterwards Salīm b. Idrīs, ruler of Zafar, quarrelled with al-Muḡaffar, the second ruler of the Muḡaffarid dynasty. His troops were defeated by those of Yaman in 678 (1278) and Zafar surrendered (*Kay*, *op. cit.*, p. 311, on Ibn Khaldūn, p. 132). In Ibn Baṭṭūṭa's time, Zafar was independent of Yaman.

Marco Polo, the contemporary of Abu 'l-Fidā, had heard of Zafar as one of the most important sources of frankincense. Niebuhr, *Beschreibung*, p. 236, 262, rightly distinguishes between the two towns of the same name but he could learn nothing of the second except that there was "on the S.E. coast of Arabia a town and harbour" of Zafar, similarly p. 286 where he refers to the export of frankincense (p. 143 *sq.* on the growing of frankincense). The first more accurate particulars of this region in modern times were given by the English Coast Survey Commission. J. R. Wellsted who came here in 1833, describes Mirbāt and the coast west of it (*Travels in Arabia*, London 1838, ii. 453 *sq.* and *Travels to the City of the Caliphs*, London 1840, ii. 129 *sqq.*). In 1837 C. J. Cruttenden went by land from Mirbāt to al-Dahārta, the chief town of the coast region of Zafar (see *Journal of an Excursion from Morbat to Dyreeh*, in *Proceedings of Bombay Geogr. Soc.*, 1837, p. 70 *sqq.* [*Transactions* ... 1844, p. 184 *sqq.*]). He established what Fresnel from his informant in Ujda and Haines confirmed that in his time there was no longer a town of Zafar but that, as is still true, the district from Mirbāt to Rašūt bears this name. At about the same time Fresnel (see his *Lettre*, iv., *op. cit.*, p. 251 *sq.*) learned from Muḥsin, his adviser on linguistic points, that the ruins at el-Belid which the latter had visited, still retained traces of the splendour of an old city of Zafar (i.e. probably Manḡra) and that there were now only three or four houses standing. Fresnel wrongly took this Zafar for the Himyar capital (like Ibn Khaldūn) and el-Belid for its harbour. Wellsted's *Travels* are supplemented by Capt. S. B. Haines, *Memoir of the South and East Coasts of Arabia*, in *J.R.G.S.*, London 1845, xv. 104 *sqq.* Wellsted's information came partly from the observations made by Haines's expedition and published prematurely without the latter's authority (see Ritter, xii. 608 and the extract p. 645 *sqq.*). H. J. Carter, whose account (*A description of the frankincense tree of Arabia*, in *J. Bombay Br. R.A.S.*, 1847, ii. 380 *sqq.*) was too late for Ritter, xii. 356 *sqq.* to use, gave further details of the occurrence of the frankincense tree. Glaser gives (*Skizze*, p. 180 *sq.*;

Abessinier, p. 184 sq.) from his own explorations several places on the coast called Zafar of which the majority had already been mentioned by Frenzel, Crutenden and Haines.

Our knowledge of the plain of Zafar was amplified by Bent who travelled in 1894—1895 along the coast (see the section *Ushfar and the Gora Mountains* in his book p. 227 sq.). He gives several places hitherto unknown and fixes the frankincense area more definitely; its size, he says, is not much bigger than that of the Isle of Wight. The Wāḥ of al-Hāfa is the *de facto* lord of the plain of Zafar; the land is only nominally under the suzerainty of 'Omān, as belonging to the intimate of Maḥṣar (cf. also Glaser, *Abessinier*, p. 126). Yāḥūt, Ibn al-Muḍāwir and Ibn Baṭṭūṭa (see above) also mention an independent sultan of Zafar and of modern travellers, Niebuhr (*op. cit.*, p. 287) already mentions the "independent shah" there. The district never came under Turkish rule; the Turkish attempt to subdue it towards the end of the last century failed. Bent describes the frankincense trade as unimportant; the Karā Beduins (Glaser, *Abessinier*, p. 185) also gives the native pronunciation Kāz bring the frankincense from the mountains to the coast on camels (this recalls Yūḥūt, iii. 577). He saw stores of frankincense at al-Hāfa. The road to the mountains runs through an area which is full of frankincense trees and has a rich vegetation generally. In ancient times the cultivation of frankincense was probably not much more extensive. Myrrh also is found in the mountains. He tells us, like Carter, that the savage Beduins live in caves in the mountains; this gives modern confirmation of the statement in the *Periplus*, § 32 regarding the Troglodytes (see Wādāḥ). They seem to be the representatives of the earliest inhabitants. Their language is not understood by the Arabs; this recalls what al-Iṣṭakhri, al-Idrīsī and Ibn al-Muḍāwir say about Meḥit (see MAHRA). — Bent is supplemented by C. Cranford, *The Dhoḥar District*, in *Geogr. Journal*, London 1919 (p. 101 sq. a description of the ruins of al-Beld).

Glaser was the first to devote attention to the language of the people of the plain and mountains of Zafar (cf. *Abessinier*, p. 184); on his accurate reproductions of Sheḥrāt see Hommel, *Ethnolegit*, p. 153. The specimens of language in Bent, *op. cit.*, p. 275 sq. are to be used with a certain amount of caution. A series of texts was taken down by N. Rhodokanakis from the mouth of a native in 1904 in Vienna; they are published in vol. viii. of the *Südarabische Expedition*, Vienna 1908 (*Der südarabische Dialekt im Dhoḥar (Zafar)*); vol. x. (1911) contains the glossary and grammar. In vol. vii. of the same series D. H. Müller published texts in the language of the hill people from the same native authority (*Shauri-Texts*, 1907); see also M. Bitner, *Studien zur Shauri-Sprache*, i–iv., in *S.B. Ak. Wien*, 1915–17).

Bibliography: The information in the Arabic, Greek and Roman authors and the works of Sprenger, D. H. Müller, Glaser, Hommel has already been quoted with bibliographical details. We may further mention on 1. and 4. the references to earlier literature in Ritter, xii. 64 sq., 251 sq., 260 sq., 293 sq., 311, 323, 650 sq., 728, 770 (with many inaccuracies in view of the insufficiency of his sources, quoted in the index to vol. xiii. under 10 different heads) and in A. Zehme, *Arabien und die Araber*

seit 100 Jahren, Halle 1873, passim. On 1. see the article RIMYAR, ii. p. 310–311 by J. H. Mordtmann; on 1. and 4. my full treatment of many details in Pauly-Wissowa-Kroll's *Realencyclopädie der class. Altertumswiss.*, s. v. Saba (col. 1372 sq., 1378, 1427 sq., 1457 sq., 1461 sq. [cf. SABA, iv. p. 3–15]); on 4. the articles of Bent *The Exploration of Southern Arabia*, in *Journ. for the Advancement of Science*, 1895, p. 492 sq., *Exploration of the Frankincense Country, Southern Arabia*, in *Geogr. Journ.*, London 1895, vi. 109 sq.; *The Land of Frankincense and Myrrh*, in *Ninth Century*, 1895, p. 595 sq.; finally the *Bibliography to MAHRA*. (J. TRATSCHE)

AL-ZAFAYĀN, nickname of the raḍḡa poet 'Aḥ' b. Usaid Abu 'i-Mikāl (according to another reading: Mikām). He belonged to the Banū 'Uwāḥ, a branch of the tribe of Sa'd b. Zaid Maḥāt b. Tamīm, whence he was known as al-Sa'dī or al-Tamīmī. It is clear from one of his poems that he went through the rising of Abū Fadaik (73 = 692) and was roughly a contemporary of al-'Adjdjdj.

Bibliography: A few quoted fragments of his *urghuḥ* from a defective copy of the *Diwān*, ed. by Ahlwardt in *Sammlungen alter arab. Dichter*, Berlin 1903, vol. ii. (H. H. BRÄU)

AL-ZĀFIR. [See FAYYIMIS, above ii. 91.]

ZĀHID. [See ZUHĪD.]

ZĀHIR. [See BĀḤIN.]

AL-ZĀHIR RA'ĪS ALLĪKH ABU NAṢR MUHAMMAD b. AL-NĀSIR, an 'Abbāsīd Caliph. As early as Šafar 585 (March–April 1189) the caliph al-Nāsir had designated his eldest son Muḥammad as his successor. Later however, he changed his mind in favour of his younger son 'Alī but since the latter died in 612 (1215–1216) and al-Nāsir had no other male heirs, he had to come back to Muḥammad and again have homage paid to him as heir-apparent. Regarding the treatment given the future commander of the faithful in his father's house we are told in Ibn al-Athīr, xii. 287: "He was watched and guarded and could do nothing of his own accord". After the death of al-Nāsir at the end of Ramaḍān 622 (beg. October 1225), Muḥammad ascended the caliph's throne with the name al-Zāhir bi-Amr Allāh but his reign lasted only nine months and fourteen days; for he died on 24th Raddj 623 (July 11, 1226). He was succeeded by his eldest son al-Mustansir. The Muslim historians bestow the highest praise on al-Zāhir for his high moral qualities. He is described as god-fearing, benevolent, just and gentle and compared with the Umayyad 'Omār b. 'Abd al-'Azīz who is celebrated for his piety. In politics however, he played an insignificant and subordinate part, after his accession as before, and he exercised no influence worth mentioning on the course of affairs.

(K. V. ZETTERSTERN)

AL-MALIK AL-ZĀHIR GHĀZĪ, an Ayyūbīd, second son of Salāḍīn [q. v.]. Born in 568 (1172–1173) he was installed as nominal governor of Ḥalab immediately after its conquest by Salāḍīn at the beginning of 579 (1183), but a few months later Salāḍīn handed over the town to his brother al-'Adīl [q. v.]. Three years later al-

Zāhir was definitely given Ḥalab and several other towns so that his rule extended northwards to the frontier of Armenia, eastwards as far as the Euphrates (at Manbij) and southwards to near Ḥamāt. He therefore had the task of defending the northern frontiers against any incursions of Byzantines, Armenians and Crusaders; he strengthened the fortifications (cf. li. p. 233) and Ḥalab remained a bulwark of Islam and one of the most prosperous places in the Ayyubid kingdom. In the wars with the Crusaders he loyally assisted his father and later his brother al-Aḥḍal [q.v.] and his uncle al-ʿAdil [q.v.]. In Djumādī II 584 (Aug. 1188) he took the fortress of Sarmin from the Christians, liberated many hundreds of prisoners and had all the inhabitants who could not pay their ransom massacred and the defences razed to the ground. In the fighting that followed for Akkā and Jaffa al-Zāhir played an energetic part and displayed great bravery. After the death of Saladin on the 27th Šafar 589 (March 4, 1193) he hesitated in loyalty between al-Aḥḍal, who had inherited Damascus and Syria, and al-ʿAdil who had received the two fortresses of al-Kerak [q.v.] and al-Shawbak [q.v.] with other places in Mesopotamia and who played the part of mediator in the war between his nephews. After al-Aḥḍal in 592 (1195–1196) had to give up Damascus and Saladin's third son, al-ʿAzīz who had inherited Egypt, had died in Muḥarram 595 (Nov. 1198), there was nothing left for al-Zāhir but to recognise al-ʿAdil's suzerainty along with the other members of the family; nevertheless he supported but without success al-Aḥḍal's attempt to reconquer Damascus. At the end of 597 (1201) the two brothers besieged this town which might have fallen into their hands if they had not quarrelled and al-Aḥḍal dismissed the troops under his command, and when al-ʿAdil threatened Ḥalab in the following year, al-Zāhir was forced to submit once more and surrender some of his possessions. In Šubān 599 (April/May 1203) by threats he forced al-Aḥḍal to surrender Kaḥat Naḍīm to him without compensation. Al-Zāhir died on the 7th Djumādī II 613 (Sept. 3, 1215) after arranging that his three year old son al-Malik al-ʿAzīz Maḥammad, with whom his wife Dāʿifa, the daughter of al-ʿAdil, had presented him, should succeed him to the exclusion of an older son. His atābeg Shihāb al-Dīn Toghril took over the government as guardian of the young prince. Another daughter of al-ʿAdil's, al-Ḡāziya, whom al-Zāhir had married in 582 (1186–1187), had predeceased him without leaving male heirs. Ibn al-Aṯīr praises al-Zāhir for his benevolence to poets and for his eminent political gifts, but at the same time says he was hard hearted and little scrupulous in his choice of means.

AL-ZĀHIR [See the articles BAHRAS I, BARKŪṢ, FAYMUS, *Supra*, ii. 90.]

ZĀHIR AL-DĪN (Saiyid) **AL-MAR'ASHI**, son of the Saiyid Naṣir al-Dīn, descendant of a family of

Saiyids, Persian statesman and historian, born in 815 (1412), was at the court of Muḥammad, Sultān of Gilān, for whose son Kārgā Mīrzā 'Alī he composed the Chronicle of Tabaristān from the earliest times to 881 (1476). The sovereign employed him on various missions, sent him to the help of Malik Iskandar, son of Malik Kayumārth of Rustamdār, who was fighting his brother Malik Kā'ūs and entrusted him with other military expeditions; among these he led an army against the fortress of Nūr which he besieged unsuccessfully in 868 (1463).

Bibliography: J. von Hammer, in *Fundgruben der Orient*, Vienna 1813, iii. 317; B. Dorn, *Schir-eddin's Geschichte von Tabaristān, Kujan und Masanderan*, St. Petersburg 1850, p. 13–17. (CL. HUART)

ZĀHIR-I FĀRYĀBĪ, **ABD L-FAQL** [ZĀHIR E. MUHAMMAD], a Persian poet of the xiith century, born at Fāryāb near Balkh in 551 (1156), a pupil of Rāshidi of Samarqand, entered the service of Ardāshīr b. Ḥasan, *ipādshāh* of Māzandarān (d. 607 = 1210), then went to the court of Togḡhān, prince of Nishāpūr (d. 582 = 1186); after being imprisoned for six years, he left Khūsmān for 'Irāk 'Adjami where he wrote panegyrics on the Atābeg Kīlī-Arslān b. Ildigiz about 583 (1187). Towards the end of his life, he retired from the world and led a life of devotion in Tabriz where he died at the end of 598 (1201) and was buried in the cemetery of Surkh-Āb; he was a Sunnī. His *Divān* includes *ḡazals*, some *ghazels* and a few fragments, in all 115 pieces and 97 quatrains. His style resembles that of the court poets; it is polished and graceful but somewhat insipid. On him was made the verse which has become a proverb: "If you find Zāhir's *Divān*, steal it, even in the Ka'ba".

G. Browne, *A Literary History of Persia*, ii. 412–425. (CL. HUART)

ZĀHIR AL-ʿOMAR. In Syria, he is called Zāhir (local pronunciation of Zāhir) al-(al-)ʿOmar, from the name of his father 'Omar, *shāikh* of the Banū Zaidān, nomads who had settled in the district of Šafad [q.v.]. In 1750, Zāhir lord of Tiberias and the upper Jordan, came to an arrangement with the Metwallis of Galilee to drive out the Turkish officials by degrees; after which he seized the ruined port of Akkā which was to serve him as an outlet for the export of cotton and silk. He repopulated the town and hurriedly rebuilt the strong walls made by the Crusaders, which were not completely demolished at their departure. Zāhir did not wish to break with the Porte, to whom he continued to pay the taxes (*mīrī*) without their going through the hands of Turkish agents. He bore no resemblance to the typical marauding Beduin. Wishing his authority to endure, he endeavoured to base it on the prosperity of the country. He protected the peasants and encouraged their production. Tremendously active, spending his life on horseback, he was never daunted by reverses.

His establishment in Akkā earned him the hostility of the *Wāḥid* at Stambul. To help him

to face the storm, Zāhir entered into relations with 'Alī Bey [q.v.] who had just revived in Egypt the government of the boys or Mamlūks. Abū Dhahab, 'Alī Bey's lieutenant, hurried to Syria, took Damascus and then rebelled against 'Alī Bey whom he forced to seek refuge with Zāhir, his recent ally. The latter quite undaunted began by routing the troops of 'Othmān Paşa, Turkish governor of Damascus; after which he took Ṣaidā. The Porte raised a large army; Zāhir could rely on the help of the Mewālīs, of a few hundreds of Mamlūks who had accompanied 'Alī Bey, and finally on the Russian squadron under Admiral Orlov which had been cruising in the eastern Mediterranean since 1770. The encounter took place along the coast, near Ṣaidā. The fire of the Russian ships decided the day (May 1772). The Russians then went on to bombard Bairūt which they plundered. Taking advantage of this great success, Zāhir hastened to extend his authority over the Palestinian provinces. From Ṣaidā to Ramla all the country acknowledged his authority. The tide now began to turn against him. 'Alī Bey foolishly allowed himself to be drawn back to Egypt, where he was defeated and put to death. 'Alī Bey being disposed of, Abū Dhahab reappeared in Palestine. After taking the places on the coast which belonged to Zāhir, he was advancing on 'Akkā when death overtook him (June 1775). The Turkish fleet however after taking Ṣaidā, blockaded 'Akkā, where Zāhir had shut himself up. The bombardment had no effect on the old walls built by the Crusaders but Turkish gold had more success. During a mutiny in the garrison a shot killed instantaneously the old Beduin chief (Aug. 1775) who had for over a quarter of a century defied the authority of the Porte. His name remained popular in Syria. The Christians whom he had protected were not the last to regret him.

AL-ZĀHIRIYA, a school of law, which would derive the law only from the literal text (*ẓāhir*) of the *Kur'ān* and *Sunna*. In the "branches" of law (*furū' al-fiqh*) it still further increased the number of contradictory detailed regulations by many divergencies, peculiar to it alone. More important is its significance for the principles of legislation (*uṣūl al-fiqh*), the development and elucidation of which it considerably furthered by its uncompromising fight against *ra'y*, *fiyān*, *istiḥkāk*, *istiḥsān* and *taqlīd* [q.v.]. In the 12th the Zāhiri *madhhab*, also called *Dā'udī* after its founder [see DĀ'UD b. KHALAF], became organised as a regular school the influence of which spread to Persia and Khurāsān while in Spain the Ḥazm remained practically isolated. Only in the reign of the Almohad Ya'qūb al-Manṣūr (580—594 = 1184—1199), was the Zāhiri school recognised as

the state code. But there had always been Zāhirs in outlook, although not organised as a school or called one, and there continued to be such, after the school itself, in spite of all the concessions it was forced to make to the principles of its rivals, had failed in the solution of problems, which had not cropped up in the circle of the Prophet or the earlier transmitters of the *Sunna*. As late as 788 (1386) a Zāhiri outbreak is recorded in Syria, where the *madhhab* itself never was and in Egypt we still find Māyrist writing in the Zāhiri spirit. The Zāhiriya attitude could be maintained, especially in theory, by people who were not in contact with the little matters of everyday life and disliking the canastery and quarrels of the schools did not adhere to a particular school. It is therefore not remarkable that it is a mystic, Shā'rānī [q.v., No. 1], who has preserved many decisions of the historical Zāhiriya. It is true that commentators on the *Kur'ān*, notably Fakhr al-Dīn al-Rāzī, and on the collections of traditions frequently note the particular Zāhiri exegesis, but on the other hand, the later jurists no longer take their former rivals seriously and are silent about them, at least in the special literature of the *ḥaḥīṭ* *al-fiqh* that has survived. Shā'rānī however puts Dā'ud in the radiant rosette in his *Miṣbāḥ* (see *Bibl.*), p. 44, between Ibn Hanbal and Sufyān b. Uyayna and on the parallel roads to the gate of Paradise (p. 47) between Ibn Hanbal and Abū Laith b. Sa'd. As no manuscripts of a Zāhiri law-book are available we give as specimens of the distinctive features mentioned by Shā'rānī from Book I those relating to ritual purity.

Details. P. 98, 22: Gold and silver vessels are forbidden for eating and drinking. According to Nawawī, commenting on the *Ṣaḥīḥ* of Muslim (Cairo 1284), IV, 416 and Abū 'l-Fidā', *Annales* (ed. Relake, II, 262), the Zāhirs on the authority of the *ḥadīth* in question, which only mentions drinking, permitted eating from such vessels. — P. 98, 23: The use of the toothstick is necessary; according to Ishāq b. Rāhwaihi, Dā'ud's teacher, deliberate neglect of this actually renders the prayer invalid. — P. 99, 12 *app.* and II, 163, 15: Wine is not impure although forbidden. — P. 103, 27 and 107, 22: A person in a state of minor ritual impurity (*ḥadath*, q.v.) may take up and carry a copy of the *Kur'ān*. — P. 105, 32: Any contact of a man with a strange female, even a baby girl an hour old, produces *ḥadath* and the minor ablution (*wuḍū'*) is necessary. — P. 107, 28: There is no regulation that in relieving nature we should turn the face or the back in the direction of the *ḥibla*; it is therefore permitted. — P. 108, 27 and 113, 20: 1. *Wuḍū'* is according to 'Ubad Allāh al-Nakha'ī, a Zāhiri *ḥaḥī* in Khurāsān (d. 376 = 986), only valid for 5 prayers (a certain 'Ubad b. 'Umar laid it down that it was only valid for one). — P. 109, 24: The mentioning of the name of God at the *wuḍū'* is not only recommended but necessary. — P. 109, 33: According to some Zāhirs, this also applies to the washing of the hands whenever purification is necessary. — P. 110, 25: The *wuḍū'* does not extend to the elbows (Zufar b. Hudhail, d. 158 [774], who was in close contact with Abū Hanīfa, however also held this). — P. 113, 20: The major ritual ablution (*ghusl*, q.v.) is only necessary after actual effluxus seminis. — P. 114, 21: If a woman is in a state of major ritual impurity (*ghayṣa*, q.v.) and then enters

the *ḥud* [q. v.] she must perform two *ḥud*. — P. 114, 20 and 122, 22: In spite of *ḥud* any one, even a woman during *ḥud*, may recite the *Kur'ān* as he pleases. — P. 115, 11: Rubbing with sand (*ḥammam*, q. v.) actually removes a *ḥud*. — P. 120, 23: The wiping of only the foot-gear is valid even if it is much torn. — P. 122, 2: A similar partial *ḥud* suffices for the woman to fulfil the demands of *Kur'ān* ii. 222 so that intercourse is permitted even during the *ḥud* (so also *Awāṣī*).

As these examples show, the *Zāhiri madhhab* cannot be briefly summed up as "light or heavy". *Shar'ni* has sometimes to describe it as the mildest and sometimes as the strictest of all. The field in which many of the jurists found their main object, to make alleviations, was one it could not enter upon and for example it insisted upon the literal text of the passages in the *Kur'ān* and Tradition against unbelievers to a degree of complete intolerance. It does not work systematically, for it forbade inquiry into the reason for a regulation and did not allow it to be extended to an analogous case or from the individual to the class. It absolutely refused to weaken the words of the religious sources by parallels from passages in pagan poets, and aimed at creating the true *ḥikm al-ḥadīth* out of the religious texts with the assistance of a special Muslim philology and lexicography. That of *Malik* seemed to it to be *ra'y* equally with that of *Abū Ḥanifa*; *Shāfi'i*, from whom it had itself started, had only disciplined, not abolished *ra'y*. *Ijmā'* [q. v.] could only be defined as the consensus of the early Companions. It made no distinction in degrees of prohibition or commandment; the imperative, in other systems not infrequently interpreted as mere permission and recommendation or simple disapproval, meant for it the absolutely obligatory or completely forbidden. It naturally used a great mass of Tradition and it has been charged with not examining carefully what it took over; on the other hand, it was itself forced to criticism of tradition against many *ḥadīths* favourable to *ra'y* which were finding recognition or against that of difference of opinion as a grace, but the school saw in this rather the disruptive influence of subjective methods against which it regarded itself as the champion of the lost unity of primitive Islam. In spite of Ibn Ḥazm, the *Zāhiriya* never attained theological unity. In general it maintained an attitude of cautious neutrality and aloofness in theological disputes and in keeping with its respect for the literal sacred text accepted the utterances about God without going into any exegesis.

(R. STROTHMANN)

Zaid b. 'Alī Zaid b. 'Alī b. 'Abīdīn [q. v.] gave his name to the *Zaidiya* [q. v.] who revere him as a political and religious martyr; he was the first 'Alid after the catastrophe which overwhelmed his grandfather al-Ḥusain b. 'Alī

[q. v.] at Kerbela to endeavour to deprive the Umayyads of the caliphate by armed rebellion when he placed himself at the disposal of the Kūfans as Imām. Except for an interval of two months when he was secretly seeking adherents in Basra, he spent a year in preparation in Kūfa, hidden in constantly changing hiding-places. But when he was ready to begin, the governor Yūsuf b. 'Omar al-Thakafī, although at the time away in Hira, proved so well prepared that only a few hundred men joined Zaid, although many thousands had taken the oath of loyalty to him. After several days' street fighting he was mortally wounded; the place of concealment of his body buried under water was betrayed and the body exhibited in Kūfa, the head in Damascus, Mecca and Medina. Tabari has preserved from *Abū Mikhnaf* very vivid and full accounts from the few survivors of the details of the fighting. The date, beginning of 122 (740), is however not quite certain, apparently because Zaid had to begin his revolt a few days before the date arranged in view of the excellence of the official secret service; when 121 or even 120 is given, this presumably neglects the long period of preparation. The Umayyad police force, by no means large, owed its success to the remarkable irresolution of the Kūfan conspirators. They had gathered together in the great mosque, allowed themselves to be shut in and did not support Zaid's efforts, which several times promised to be successful, to release them. They were not homogeneous but simply a mass of discontented opponents of the government, including even *Khārijīs*, while further all those who simply wanted an 'Alid to be caliph did not come to the support of Zaid, although the story that many deserters appealed to his brother Muḥammad al-Bakir as the true imām is probably coloured by ante-dating later troubles within the *Shī'a*. Moreover Zaid himself was not the real leader of the movement; he did not come to Kūfa of his own accord. He was in al-Rasāfa with the caliph Hishām b. 'Abd al-Malik [q. v.] to whom he had turned in his poverty, when the governor had summoned him to Kūfa about a debt case. Zaid himself had misgivings about his prospects; after the first four months he wanted to withdraw completely from the enterprise and had reached al-Bāḍiya on his way back to his native city of Medina, when he was persuaded to return by some *Shī'a* who had hurried after him.

A number of writings and fragments have survived which go under Zaid's name; these include elucidations of passages of the *Kur'ān*, and of problems of the imām and the pilgrimage and especially a complete compendium of *fiqh*; but in its present form, they contain too many theological, ritual, legal and political contradictions within themselves and to such principles of the later *Zaidi* literature as are given the authority of Zaid. There is however some evidence that he had a certain amount of learning; while we need lay no special stress on his honorary title, *ḥafīẓ al-Kur'ān*, or on the *Zaidi* tradition that *Abū Ḥanifa* studied under him and supported the rising by a few and money, yet it is evidence of legal experience that he conducted as a skilled advocate for the *Husainids* long suits against the *Hasanids* about the family endowments.

Zaid was much celebrated in song, even as early as by al-Saiyid al-Himyari [q. v.] and in old *maṣṭal* books (martyrologies); legend ends—

vowed to stone for the shameful treatment of his corpse by stories of miracles; in general however, the descriptions, in keeping with the Zaidi attitude, are relatively moderate in tone. At his death he was still in the forties; like all the 'Alids he inclined to corpulence. His mother was a slave-girl. He himself married Raha, a grand-daughter of Muhammad b. al-Hanafiya (q.v.); she bore him Yahyā, who fought in the rising and was able to escape to Khurāsān, where Zaid's supporters had been working, but in 125 or 126 (743 or 744) he met the same end as his father. The leader of the Zaidi [q.v.] professed to be the great-grandson of this Yahyā. As a matter of fact the line of Yahyā was by then extinct, and the descendants of Zaid at this time were those of Yahyā's half-brothers, whose mother was a slave-girl. To secure a following, Zaid married in Kūfa a woman of the Banū Fāriq and another of the Aqd; the latter bore him a daughter who however died before him.

Griffini, *Corpus Juris di Zaid ibn 'Alī*, Milan 1919; R. Strothmann, *Das Problem der literarischen Persönlichkeit Zaid b. 'Alī*, in *Isl.*, xiii. (1923), 1—52. (R. STROTHMANN)

Zaid b. 'AMR a. NUFAL, a Makkan and Qurashi, one of the religious seekers known as the *ḥanīf*, died before Muhammad's mission, when the Prophet was about 35. He had abandoned the pagan religion without embracing either Christianity or Judaism, objected to female infanticide, refused to eat the flesh of animals sacrificed to idols or slaughtered without invoking God's name, and considered himself the only true believer in Makka and a follower of Abraham's religion. A cousin of 'Umar b. al-Khaṭṭāb, he was married to Saṭiya bint al-Hadrami and to Fātima bint Ba'diya, and had a son, Sa'd b. Zaid, who told traditions about him.

Persecuted by his family on religious grounds, he travelled in search of the true faith as far as Mawṣil, and visited Syria; in Maifa'a, in al-Balka, a learned monk (a double of Bahīrā?) predicted to him the rise of a true prophet in Makka. Zaid hurried back, but was assaulted and killed while crossing the region inhabited by the Lakhm tribe. According to another tradition, Zaid had himself predicted Muhammad's mission and career. Ibn Ishāq quotes poetry attributed to him, but its authenticity is doubtful.

Though dead before Islām, Zaid was considered by *ḥadīth* a true believer; Muhammad, declaring him to be in heaven, allowed prayers to be said for him.

(V. VACCA)

Zaid b. Hāritha a. Shahrīl al-Kalbi, Abū 'Udayna, was brought as a slave to Makka by Hakeem b. Hizām b. Khuwailid, a nephew of Khadija's, who had bought him in Syria and sold him to her. Khadija made a gift of Zaid to Muhammad before his mission. His father Hāritha came to Makka to obtain his freedom, but Zaid refused to leave Muhammad, who thereupon freed him and adopted him. He was thenceforward known as Zaid b. Muhammad, and was often associated in his adopted father's commercial enterprises.

About ten years younger than Muhammad, Zaid was one of the very first converts to Islām, perhaps the first. He came from a tribe settled near Dumat al-Jandal, where converts to Christianity were plentiful and Jewish influences felt; his influence on the Prophet's religious development may have been considerable.

In Medina Zaid was joined in brotherhood to Hamza b. 'Abd al-Muttalib. In 1 A.H. he went to Makka to accompany Sawda bint Zam'a and Muhammad's daughters to Medina. A brave warrior, Zaid fought at Badr, Uhud, al-Khandaq, was at al-Hudaybiya, commanded several expeditions (al-Karada in 2 A.H., al-Djauṣ and al-'Is in 6, etc.) and was often left in command at Medina when Muhammad was on some military expedition. For his marriage to, and divorce from, Zainab bint Jhāsh see ZAINAB. Following this divorce, the verse in the Qur'an abolishing adoption (xxxiii. 40) was revealed. After Zainab, Zaid married Umm Kulthūm bint 'Uṭba, who bore him Zaid and Ruḳaiya, and Durra bint Abī Lahab, both of whom he divorced; Hind bint al-'Awraḥ and Muhammad's freedwomen, the negroid Umm Aḥuan, who bore him 'Uṭayna.

Zaid died in 8 A.H., aged about 55, as commander and standard-bearer of the unfortunate expedition of Mu'ta. Muhammad mourned him and planned to avenge him [see USAMA b. Zaid]. His place in *ḥadīth* is important, both on account of Muhammad's affection for him, which induces orthodox tradition to set him up as the Prophet's favourite, against 'Alī b. Abī Ṭālib, and by reason of his name being mentioned in the Qur'an.

Zaid b. Thābit a. al-Daḥḥāk b. Zaid b. Lawdhīn a. 'Amr b. 'Abd Manāf (or 'Awf) a. Ghannam b. Mālik b. al-Naḥdīj al-Anṣārī al-Khazraji, one of the Companions of Muhammad, best known through his part in the editing of the Qur'an. His father was killed in the battle of Bu'ath (q.v.), five years before the *hidra*, when Zaid was six years old. His

mother was al-Nawār, daughter of Mālik b. Nu'ayziy b. 'Adī, also of a Madīndjadī family.

It is said that the boy knew already a number of Sūras when Muḥammad settled in al-Madīna. At any rate he became his secretary, who recorded part of the revelations and settled the correspondence with the Jews, whose language or script he is said to have learned in 17 days or less. His quickness of understanding, his sagacity and his knowledge are praised by his contemporaries; he was called "the rabbi of the community".

After the death of Muḥammad, Zaid acted in several capacities of greater or lesser importance. He was entrusted with the government of al-Madīna by 'Umar and by 'Uthmān, when they went to Syria. He regulated the division of the booty after the battle of the Yarmūk [q. v.]. He made the lists of those who were inscribed in the *diwān*, when 'Umar founded this institution. He was *ḥāfi* in al-Madīna and finance minister to 'Uthmān. After the latter's death he kept aloof from 'Alī, although he showed him due honour. It is said, however (Tabari, I. 3070, 3072), that he refused to do homage to him.

Best known is the part he took in the editing of the Qur'ān [cf. *Qur'ān*, §§ 7, 8]. — He was a specialist on the subject of hereditary law.

Zaid died in 45 (665–666); the years 42, 43, 51, 52, 55, and 56 are also mentioned. The *ḥāfi* over his corpse was held by Marwān b. al-Hakam.

(A. J. WENSINCK)

ZAIDĀN (in modern pronunciation ZIDĀN), *Djirān*, an Arab scholar, journalist and man of letters, born in Bairūt on Dec. 14, 1861, died in Cairo on Aug. 21, 1914. Born in a poor Christian family, he had no regular education and in almost all branches of learning he was self-taught. He spent some time at the Protestant College and received the diploma in pharmacy. Soon afterwards he went to Egypt where for about a year he was on the staff of the newspaper *al-Zamīn*. In 1884 he served as a dragoon on the expedition to the Sūdān to the relief of Gordon, and then returned to Bairūt. After a brief stay in London (1886), he finally settled in Cairo where for some years he taught and was on the staff of the *Muḥarrir* newspaper. Except for his two journeys to Europe (1886, 1912), his literary activity was in Egypt; for political reasons it was only after the revolution that he was able to visit Turkey (Istanbul 1908, Palestine 1913).

His first work was of a linguistic nature: "Philosophy of Language and the Arabic Language" (1886, 2nd ed. 1904). Rather naive on some points,

it represents the first meritorious effort to apply the principles of comparative philology to the Arabic language. He returned again to the same subject in his book "The History of the Arabic Language" (1904). He then turned to historical works and textbooks: "History of Modern Egypt" (2 vols., 1889), "History of Free-masonry" (1889), "General History" (first vol.), "History of Greece and Rome", "History of England", "Geography of Egypt", "Genealogy among the ancient Arabs". They had no great success. — In 1891 appeared his first historical novel "The last Mamlūk" (German transl. by Martin Thilo, Barmen 1917), and in 1892 he began the publication of his literary periodical *al-Hilāl*. From this date till his premature death his life was closely bound up with this work. He displayed tremendous activity. Not only were the majority of the articles written by himself (the most important of them were republished by his sons in three vols. *Muḥarrir*, 1919–1921; he himself collected and published the articles of a biographical nature in 2 vols. 1902–1923; 2nd ed. 1910; 3rd 1923); every year he wrote a new novel and a volume of a popular educational nature. *al-Hilāl* gradually became the most widely circulated Arabic periodical and Zaidān's name as a novelist and historian became known not only in Arabic speaking countries but throughout the Muslim east.

The majority (17) of his novels (22 in number) deal with the earlier history of Islām from the Arab conquest to the dynasty of the Mamlūks (xiiith cent). The scene of three others is laid in the xviiith–xixth centuries, one in the nineties in Egypt and in the period of the Turkish revolution. Several went through several (up to four) editions; almost all were translated into Persian, Turkish, Hindustani and Aḡharbāidjānī, some into other Oriental and European languages (besides Thilo's translation cf. for example "La sœur du Khalife" with Claude Farrère's introduction, Paris 1912, and "Allah veuille", Paris 1924). The main value of these works lies in their popularising of history. Written in easy and fluent language, they afford pleasant and interesting reading. To European literary taste they do not appeal greatly. Their style of composition is somewhat old fashioned and sentimental.

Of his numerous historical works by far the most important is his "History of Muslim Civilization" (5 vols. 1902–1906). It is based on the well known European works by Sedillot, Kremer, Goldziher and others with many additions from Arabic sources and supplemented by the author's knowledge of the modern life of the east. For Muslim lands it was an achievement of the first rank and it was natural for the book to be translated into other languages (Persian, Turkish, Hindustani) (cf. Bonvat in *J. A.*, ser. x., vol. xix., 1912, p. 401–402). Even a European scholar can frequently find details which are not given elsewhere (cf. de Goeje, in *J. A.*, ser. x., vol. iii., 1904, p. 356–359). The fourth volume was translated into English by D. S. Margoliouth (*G. M. S.*, iv., Leyden 1907). A supplement to this work is his unfinished "History of the Arabs before Islām" (1908) which has all the merits and demerits of the larger work.

No less important for the east was his last great work "History of Arabic Literature" (4 vols. 1911–1914, with index 1922; abbreviated edition

in one vol. 1924). This was the first work in Arabic, designed on European principles. Basing his work on those of Brockelmann, Hart etc., Zaidān also used Egyptian collections of MSS. and here and there produced new materials for European scholarship. His use of the European sources is not always above criticism as was shown by the reviews by Shaikhū (*al-Maṭṭih*, xiv, 1911, p. 582—595; xv, 1912, p. 597—610; xvi, 1913, p. 792—794) and P. Anastase (*Lughat al-Arab*, i, 1912, p. 392—397; ii, 1912, p. 52—62, 139—146, 205—209; iv, 1914, p. 82—90; cf. also M. H. Halkal, *Fi Arḥāt al-Furāḥ*, Cairo 1925, p. 221—247). The fourth volume is the most important for European scholarship; it gives a good survey of Arabic literature in the sixteenth century and with the corresponding works of Shaikhū and Tarrāṣī is our only source for the study of this period.

Of his other works the following may be mentioned: "Science of Physiognomy", "Categories of Nations", "Wonders of Nature" and the description of his journey to Europe (in *al-Hilāl*, reprinted separately 1923). His "Memoirs" which he left, and which to judge from the extracts published are very interesting, are shortly to be published by his sons, who are continuing the publication of *al-Hilāl*.

Zaidān was not an original investigator yet he was of epoch-making significance for Arabic-speaking countries, acquainted with European methods. He made accessible many and varied subjects and showed that every Arab must take an interest not only in the advance of European technique and exact sciences but also in his history and literature. He was no revolutionary in the intellectual field, but of a very fine and noble character. The sharp criticism, which his works frequently met, was for the most part superficial (cf. e.g. Amm al-Madani, *Nahḍ al-Hadḥayā min Ta'rikh al-Jirḍi Zaidān*, Bombay 1307, or Yūsuf Ṭabāḥī, *al-Burḥān fī 'alīyāt al-ḥadḥayāt al-ḥadḥayāt*, Cairo 1900, and particularly Shibli al-Nu'mānī, *Intiḥād Kitāb Ta'rikh al-Tamaddun al-Islāmī*, Cairo 1330). Conservative Muslims could not forgive the fact that he, a Christian, wrote on specifically Muslim subjects, as was amply shown by the attacks on his being offered a professorship in the Université Égyptienne. The purists (like Ibrāhīm al-Yazīdī) criticised his language and style in the most fault-finding spirit. The first quarter of the 20th century has shown how great a part Zaidān played; his name will never be forgotten in the history of modern Arabic literature and society.

Bibliography: European accounts of Zaidān are not complete (e.g. Brockelmann, *G. A. L.*, ii, 483); the most important are those of Hartmann, *The Arabic Press of Egypt*, London 1899, p. 35—36, 72 and so on; *Die arabische Frage*, Leipzig 1909, p. 386—388; Margolin, in *J. R. A. S.*, xxxvi, (1904), 382—386; Desormaux, in *R. M. M.*, iv, (1908), 838—845; H. A. R. Gibb, *Studies in contemporary Arabic literature*, in *B.S.O.S.*, iv, 759—760; G. Kampffmeyer, *Index sur nouveaux arabiques Littérature*, in *M.S.O.S.*, xxi, sect. 2, 1928, p. 205. Cf. also L. Shaikhū, *Ta'rikh al-Adab al-Arabiya fī 'alīyāt al-ḥadḥayāt min al-Karn al-ḥadḥayāt*, Beirut 1926, p. 71; J. Saraka, *Dictionnaire encyclopédique de bibliographie arabe*, Cairo 1929, p. 985—987. A

general characterisation and biography based on personal relations with special reference to his novels is given by Ign. Kratckowsky in the article *Der historische Roman in der modernen arabischen Literatur*, Leipzig 1930 (= *W. J.*, vol. 12, p. 69—79); the Arabic biography with portrait in Ilyās Zakhūrā, *Mirāt al-Ay ft Ta'rikh wa-Rawāq al-Hijāl bi-Maṣr*, Cairo 1897, p. 457—464 and in the appendix to the fourth posthumous volume of his *History of Arabic Literature* (Cairo 1914, p. 325—326; a list of his works is also given there). The biography has been reprinted in an extended form (with five portraits) as an introduction to the first volume of his *Muḥḥararāt* (Cairo 1919, p. 7—16); cf. also *al-Hilāl ft 'arḥāt al-Sana* (Cairo 1922, p. 9—40). His personality is undoubtedly worthy of a systematic monograph.

(IGN. KRATCKOWSKY)

AL-ZAIÐIYA, the practical group of the Shī'a, distinguished from the Ithnā 'Ashariya [q. v.] and the Sab'iya [q. v.] by the recognition of Zaid b. 'Alī. After the latter's death they took part in several 'Alid risings but were not a united body. Writers on heresy distinguish eight schools among them: from Abu 'l-Djārid, who combined warlike activity with apotheosis of the imāms and belief in a Mahdī, to Sulama b. Kuḥail whose Zaidism was watered down to a simple Shī'a point of view. It was the same as regards theology. The Zaiḍiyya only became a united community when 'Alid claimants to the imamate themselves took over the spiritual leadership. As far as can be ascertained this was the work of two men: 1. al-Ḥasan b. Zaid [q. v.], founder about 250 (864) of a Zaiḍi state in the south of the Caspian Sea, and 2. al-Kāsim al-Rasāḍ, Ibn Ibrāhīm Ṭabṭabāḥ b. Ismā'īl al-Dibādī b. Ibrāhīm b. al-Ḥasan b. al-Ḥasan b. 'Alī b. Abī Ṭālib (d. 246 = 860). While the works of al-Ḥasan b. Zaid are only known indirectly from quotations, we possess some by al-Kāsim, who was however quite unsuccessful in the political sphere, although his name has only recently become better known in connection with his polemics against the Christians (Di Matteo, in *R.S.O.*, ix, 1921—1923, p. 301—364) and against Ibn al-Muḥallaf (M. Guidi, *La lotta tra l'Islām e il manicheismo*, Rome 1927). The school founded by al-Kāsim and developed by his successors, now the only surviving school, is Mu'tazilī in theology, in ethics anti-Murji'ite with a puritanical trait in its rejection of mysticism; indeed orders are forbidden in the modern Zaiḍi state. In worship it has certain "sectarian" features in common with the other Shī'a: the call to prayer "come to the best of works"; the fivefold *ṭaḥr* in the funeral service; rejection of the *maṣ'ala 'l-ḥuḥūfain* (wiping the covered foot as a substitute for washing), of the impious leader at prayer and of the eating of the meat, killed by a non-Muslim. In family law they prohibit mixed marriages, on the other hand they do not allow *mu'ra* [q. v.]. As their opponents were almost entirely Muslims they observed in theory at least the regulations for dealing with *bagāt*, those who refused obedience to the imām; but as there was in addition the distinction Mu'tazilī and Sunnī, the Zaiḍis often called themselves simply the believers in contrast to them, just as they called their wars *qīḥād* with the corresponding legal consequences. As a result of the scattered distribution of the original Zaiḍis, we find the most

diverse views on legal questions, which were not fundamental for the sect as such. These are registered by later writers without the accusation of heresy in their simple delight in *ihitlaf al-fihh*, and we find individual Zaidis appearing with individual Sunnis against other Zaidis and other Sunnis in changing combinations, so that the Zaidi *muḥḥab* in practice is a fifth alongside of the four. The Zaidi Abu 'l-Ḥasan 'Abd Allāh b. Miṭṭāh gives a vivid picture of this in his *al-Muntazam al-muḥḥab min al-Ḥaḥith al-midrār* (vol. I, Cairo 1328). In the present day Zaidi state there must of course be greater uniformity; this is brought about by the use of *al-Aḥḥūr fī Fihh al-A'imma al-aḥḥūr* (Brockelmann, *G. A. L.*, II, 187, 6, 7) of Ahmad b. Yahyā b. al-Murtadā (see below) and *al-Ruḥḥ al-muḥḥab* (see *Bibl.*) as official text-books.

The essential demands on the imāms are: a. Membership of the *Ahl al-Bait*, without any distinction between Ḥasanids and Ḥusainids, i.e. no succession by inheritance; b. ability to resort to the sword if necessary for offence or defence so that neither a child nor a concealed Mahdi can be considered; c. the necessary learning: how seriously this is taken, is shown by the vast mass of writings of imāms at all times. As there could therefore be no dynastic tradition, and individual success was in the end the deciding factor, we have no series of imāms without a break; we find rather the possibility of "an age without an imām" recognised with a sense of the realities, while we also have the opposite: "several imāms at one time", i.e. the frequent appearance of an anti-imām; if the latter can oust his predecessor, the former's deposal or abdication is recognised as legal; if there is a turn in the tide he may however come back. If the qualifications for the imāmate are not completely possessed, he cannot be recognised as full imām; we thus have imāms of war or of learning only. Leaders whose strength is only sufficient to keep alive the Zaidi claim are called *ḥāḥi*, *muḥḥab*, *muḥḥab*, etc. The uncertainty as to who is really to be considered an imām is seen in the list of those among 'Alid pretenders who have been chosen by the later Zaidiyya as a state to preserve a connection with the original Shī'a. In the first list preserved, that of the founder of the Zaidi kingdom in the Yaman, we have: 1. 'Alī; 2. al-Ḥasan and 3. al-Ḥusain; then 4. Zaid b. 'Alī and his son 5. Yahyā; then the three brothers 6. Muḥammad b. 'Abd Allāh [q.v.], 7. Ibrāhīm [q.v.], also 9. Yahyā who appeared in Dailam after fighting alongside 8. al-Ḥusain b. 'Alī b. al-Ḥasan; lastly 10. Muḥammad b. Ibrāhīm Ṭabāṭabā who rebelled with Abu 'l-Sarḥā and 11. his brother, the already mentioned al-Ḥusain al-Rasṣi. Later lists add as many as 10 more names; among them the most interesting for the theory of the imāmate is Idrīs [q.v.], another brother of 6, 7 and 9, who, although he fulfilled the qualifications for an imām, founded a kingdom in the Maghrib which remained Sunni.

The political ambitions of the Zaidiyya have been realised in two places: On the Caspian Sea about 20 imāms and *ḥāḥi* appeared from al-Ḥasan b. Zaid down to about 320 (1126) at irregular intervals and sometimes also in opposition to one another. The Zaidis there afterwards became merged in the little sect of Nukrawis. The founder of the Zaidi state in the Yaman was al-Ḥādī b. 'l-Ḥaḥḥ Yahyā b. al-Ḥusain, grandson of al-Ḥusain

al-Rasṣi. It has survived all the kingdoms of the Yaman although it has frequently been driven back into its starting point Sa'da, for example at the beginning of the fourth (tenth) century on the death of al-Nāḥir Ahmad, son and second successor of al-Ḥādī, and in the course of this century only minor efforts at expansion could be made by sons and grandsons of this Ahmad and also by collateral lines descended from al-Ḥusain but not through al-Ḥādī; among the latter were the 'Aiyān. One of these was the prolific writer the imām al-Mahdi al-Ḥusain b. al-Manṣūr al-Ḥusain whose death in 404 (1013) in view of the hopeless outlook produced a schism at which a group which expected the Mahdi at the end of a millenium broke off. About 447 (1055) al-Nāḥir Abu 'l-Faḥḥ b. al-Ḥusain fell in battle against the Sulāhidis [q.v.]; he was called al-Dailamī because his original sphere of activity had been among the Caspian Zaidis. He was a descendant of Zaid b. 'Alī; it is therefore inaccurate to describe the Yaman imāms as Rasṣids. It was not till 535 (1138) that a successor to him appeared (till 566 = 1170) in al-Mutawakkil Ahmad b. Sulaimān of the family of al-Ḥādī; in addition to his military campaigns which took him as far as Nadjrān, he conducted a literary campaign against the theological heresy of the Muḥāfiḥ. The disorder of the viii (xiii) century is seen in the fact that al-Mahdi Ahmad b. al-Ḥusain of the family of Abu 'l-Barakāt b. Muḥammad b. al-Ḥusain al-Rasṣi was murdered in 656 (1258) by his own people after being imām for ten years. Al-Mahdi Ibrāhīm b. Ṭāḥī al-Dīn Ahmad had a rival imām in Yahyā b. Muḥammad of a quite unknown Ḥasanid family of al-Sarḥā and he himself ended in the prison of the Rasṣids [q.v.] al-Muḥaffar Yūsuf in Ta'izz while al-Mutawakkil al-Muḥaffar b. Yahyā, again of al-Ḥādī's line (d. 699 = 1299), is famous as al-Muḥaffar b. 'l-Ḥamama, because a cloud enabled him to escape from the pursuing Rasṣid al-Mu'ayyad Dhawūd when he was on a dangerous retreat into Khawlan. The succession in the imāmate to his son al-Mahdi Muḥammad and his grandson al-Muḥaffar was interrupted by several strangers, for example al-Mu'ayyad Yahyā b. Ḥamama, descendant of the "Twelver" Imām 'Alī al-Riḥā [q.v.]; his writings filled "as many sheets of paper as there were days in his life". No less prolific as a writer was al-Mahdi Ahmad b. Yahyā b. al-Murtadā (d. 836 = 1432), imām for several days only. After several imāms had fought with one another and with the Ṭāhirids for Ḍhimār and Ṣan'a, his grandson al-Mutawakkil Yahyā Sharaf al-Dīn had to retire for a time to Thulā before the invading generals of the Egyptian Mamlūks (in 933 = 1527). His son al-Muḥaffar was temporarily able to regain all land lost as far as al-Thāma. In the meanwhile Ottoman suzerainty had been established and his grandson ended in prison in Istanbul, as did in 1004 (1595) al-Nāḥir al-Ḥasan b. 'Alī of a different line from al-Ḥādī, after maintaining himself in al-Aḥḥim for seven years as imām.

At the end of this year al-Manṣūr al-Ḥusain b. Muḥammad, also of the house of al-Ḥādī, opened a new era in Zaidi history with his call to arms and fought successfully till his death in 1029 (1620), and in the reign of his son al-Mu'ayyad Muḥammad (d. 1054 = 1644) the Ottomans abandoned the Yaman (1045 = 1635). As a rule, the imāms since then have belonged to the family

of this al-Kāsim, although genuine Zaidi families which had once produced imāms, successfully came to the front again after centuries; there were however frequent domestic feuds in which the different Arab tribes were played off against one another. The death of al-Mu'ayyad Muhammad b. Ismā'il b. al-Kāsim (1097 = 1686) was for example attributed to poisoning by his nearest relatives. A state of order was restored under al-Mahdi 'Abdā b. al-Manṣūr al-Husain (d. 1189 = 1775); San'a' to this day bears witness to his activity as a builder. Although his son al-Manṣūr 'Alī (d. 1224 = 1809) in whose time the Wahhābīs penetrated into al-Tihāma, was incapable, his grandson al-Mutawakkil Ahmad was able to restore order in San'a', although al-Tihāma passed to the Sharifs of Mecca; he built a treasury and a library. The latter's grandson al-Manṣūr 'Alī b. al-Mahdi 'Abd Allāh (from 1251 = 1835) is unfavourably described even by the Zaidīs themselves as by C. J. Cruttenden who calls him a drunkard (*J. R. G. S.*, viii., 1838, p. 284). His by no means incapable grandson Muhammad b. Yahyā, threatened by an anti-imām, took the fatal step of summoning the Turks from al-Tihāma and they entered San'a' in 1264 (1847) but were driven out by the people who had risen in rebellion. Rincings of the tribes and raids by the Ḳarāṭīs increased the general disorder. Then three deposed imāms, originally enemies, joined against the imām al-Mutawakkil Muḥsin b. Ahmad and on Šafar 16, 1289 (April 25, 1812) played San'a' again into the hands of the Turks. While Muḥsin's son Muhammad wanted to be imām there with Turkish approval and in Turkish pay, the Husainid al-Hādī Šaraf al-Dīn Muhammad, a descendant of the above mentioned Yahyā b. Ḥamza of the viith (xivth) century, maintained an independent imāmate in al-Aḥsān and Sa'da from 1296 to 1307 (1879—1890). Then al-Manṣūr Muhammad b. Yahyā Ḥamīd al-Dīn, starting from Sa'da and al-Aḥsān by mach fighting and also diplomatic negotiations with the Turks, contended for the right of the Zaidīs in Yemen generally to live according to the Zaidi Šari'a. His son al-Mutawakkil Yahyā who succeeded on Rabī' I 20, 1322 (June 4, 1904) was still more vigorous. In obedience to his summons the tribes at once attacked the Turkish strongholds. San'a' was surrendered in 1904 and could only be reconquered after a regular war. Yahyā did not take advantage of Turkey's difficulties after the war in Tripolis, but in Šafar 1337 (Nov. 1918) he was able to occupy San'a'. In 1341 (1925) he successfully resumed his fight for al-Tihāma with the Idrīsids of 'Asir. This proximity to the protectorate of 'Aden involved the new king of the Yaman, Zaidi imām and *amīr al-mu'minīn*, in the wider sphere of international politics. His latest attempt at expansion is directed against the Ḳarāṭīs of Najrān just as one of his earliest victims was the Zā' of the Ḳarāṭīs around Menākhā. This fighting makes the imāmate of the present Yahyā recall, as in many other points, even the true Zaidi tenor of his encyclicals (see in 'Abd al-Wāṣi', cf. *Bibl.*), that of the first Yahyā al-Hādī. He is reckoned — which may help to throw light on the theory of the imāmate — his descendant in the 26th generation, but counting partially recognised and anti-imāms about his 100th successor in office. Of his ancestors his father al-Manṣūr Muhammad was an imām. His

grandfather Yahyā Ḥamīd al-Dīn was a vizier and in 1293 (1876) was imprisoned by the Turks in San'a' with many other scholars and notables. For ancestors of note we have to go back to the seventh, Muhammad, and the eighth, al-Ḥusain, both learned commentators on legal works; it is not till the ninth that we have another imām, al-Manṣūr al-Kāsim (d. 1039 = 1620) who fought the Turks. Going further back still we find in the viith (xiiith) century, the sixteenth ancestor al-Husain al-Aghar, who had however only the rank of *emīr* and as imām, whose title was however not undisputed, in the fourth (tenth) century the 22nd ancestor al-Kāsim, the 23rd *al-Ḥāfi* Yūsuf and the 24th Yahyā; the 25th was the full imām al-Nasir Ahmad and the 26th al-Hādī Yahyā himself.

(R. STROTHMANN)

ZAILA', a port on the African coast of the Gulf of 'Aden. It lies on a narrow tongue of land, which is cut off from the mainland at high water and is the only harbour of importance in British Somaliland. Formerly an important trading centre and one of the largest ports of export for the slave trade with Arabia, the town now only possesses modest remnants of buildings of the middle of the xvth century like the tomb of *Shaykh* Ibrāhīm, and also the fort erected to the west of it by the Indian government, the palace of *Sharmakal* 'Alī of which only the ground-floor and the first story survive and a mosque. Alongside of the ruins of the old Arab houses, of which only one or two are habitable, stand hundreds of rectangular huts of straw (*'arkāh*). The town covers an area of 40—50 acres; the part built of stone covers barely a fifth of this. The town was formerly surrounded by a stone wall; its ruins were used to build the quay of the harbour which can only be approached by

Arab sailing ships at high water. At the entrance to the harbour is the customhouse and the gund-house as well as the old residency, southeast of this was a mission station which later fell into ruins. Numerous tombs of *shaykhs* surround the town, among which that of *Shaykh Dini b. Sa'd al-Din* is held in special veneration. The population reveals a considerable mixture of Hamitic and Semitic blood and is estimated at 7,000. The coral reefs around Zaila* which contain many pearl oysters, give the inhabitants a remunerative industry. Merchants of Zaila* finance the pearl fishers who come from Zaila* and the opposite Arabian coast. The yield is quite considerable. Until the rise of Djibuti about 35 miles N.W. of Zaila*, which is now connected by railway with Hatar, Zaila* was the port of export of Abyssinian coffee, but its trade has now declined considerably. The main articles of export are the smaller domestic animals and hides, which go mainly to the Yaman.

In ancient times Analites occupied the site of Zaila*; it attained increasing importance after the foundation of the Axumite kingdom and was in direct relations with India. The Arab geographers *Istakhri*, *Ibn Hawkal* and *al-Muqaddasi* describe Zaila* as the port of Abyssinia for trade with the Yaman and *Hidjaz*. Goat-skins were the chief exports which the Yaman market absorbed in great quantities with the tremendous development of the leather industry under Persian rule.

When *Ibn Battuta* visited the town, it was considered the metropolis of the kingdom of 'Adal; at the beginning of the 17th century, it fell into the hands of the Turks, who however were defeated in 1516 by the Portuguese, who burned the town. About 1525 it attained a new importance under Muhammad *Grañ* (q.v.), ruler of 'Adal, then passed into dependence on the sherifs of *Mukhā*. In 1848, it passed to 'Ali *Sharmakal* who paid tribute to the governor of *Mukhā*. On his death it went to *Abukr Muhammad Pascha*, was conquered by Egyptian troops in 1870 and visited by General Gordon in 1878. The town was then very prosperous and controlled the whole trade with the interior. In 1884 the Egyptian troops vacated the town and since 1885 it has been an English possession first under the India Office, then the Foreign Office and now under the Colonial Office.

ZAIN AL-'ĀBIDĪN. [See 'ALĪ b. AL-ḤUSAYN, AL-TUNĪSĪ.]

ZAIN AL-DĪN ABU BAKR MUHAMMAD b. MUHAMMAD AL-KHAWĀRĪ, founder of an order called after him *Zainiya*, which traced itself to *Djunaid*, was born in 757 (1356) at *Khawāf* (between *Buḥayr* and *Zazan*) in *Khurāsān*, and was buried in 838 (1435) at the village *Mālin* (two parasangs from *Herāt*), whence his remains were transferred to *Darwāshābād*, and thence to the 'Idgāh of *Herāt*, where a mosque was built over them. He obtained authorization (*ijāza*) in Egypt

from *Nūr al-Dīn 'Abd al-Rahmān al-Misrī* (*Nafahāt al-Uns*, No. 505), and returned to Central Asia, but visited Egypt again, whence he sent in 822 (1419) a gravestone for *Khawāfja Muhammad Pārsā*, who died in *Madina*, and from one of whose letters our authorities derive some of their information about him. In Egypt he made a disciple of 'Abd al-Rahmān b. al-Amīr al-Marāḥīnī, who accompanied him to his home; in Jerusalem of 'Abd al-Latif b. 'Abd al-Rahmān al-Makhlisī, and one 'Abd al-Ma'ūn, a Maghribī. A fourth disciple was *Khawāfja Sa'd al-Dīn of Kashghar*, the most celebrated native of that place (d. 860 = 1456; *Relation de l'Ambassade au Khacem*, transl. C. Schefer, 1879, p. 164). *Zain al-Dīn* was the author of several works: *Risālat al-Wajāyā al-Kudīya*, composed in Jerusalem, *al-Awḍā al-Zaynīya*, and a treatise on asceticism. A grandson of his, also called *Zain al-Dīn*, was a courtier of *Bābur*, and translated his *Memoirs* into Persian.

Bibliography: *Nafahāt al-Uns*, No. 506; *al-Shaykh al-Nu'māniya*, transl. O. Reischer, Constantinople 1927, p. 38—41; Brockelmann, *G.A.L.*, ii. 206. (D. S. MARCOGLIOUTH)

ZAINAB. [See *ALMORAVIDS*.]

ZAINAB BINT DJAHSH b. *K'āb*, AL-ASADIYA, one of Muhammad's wives, was the daughter of *Umayma bint 'Abd al-Muttalib*; her kunya was *Umm al-Hakam* and her name had been *Barra*. One of the first emigrants to *Madina*, she was a virgin (some traditions say a widow) when the Prophet gave her in marriage to his freedman and adopted son *Zaid b. Hāritha*.

In 4 A.H. Muhammad, calling on *Zaid* in his home, saw *Zainab* alone and fell in love with her. *Zaid* divorced her in order that the Prophet might marry her; the latter's scruples were set at rest by the revelation of *Kur'an* xxxiii. 36—39. *Zainab* received a dowry of 400 dirhams. She was proud of the circumstances of her marriage, and used to say that Muhammad's other wives had been given to him by their fathers and brothers, while her union had been brought about by special divine revelation. The *ḥadīth* al-khaṣṣ (xxxiii. 53) is said to have been revealed on the occasion of *Zainab's* wedding feast, and *Kur'an* lxvi. 1 is also referred by some to *Zainab* and to the other wives' envy of her.

Zainab was a friend of 'A'isha's, and, next to her, Muhammad's favorite. She accompanied him on the expedition against *Khaibar*. Her charity is celebrated; Muhammad's prediction "the longest-handed of my wives shall be the first to join me in paradise" alludes to this. She had received 12,000 dirhams from 'Omar in 20 A.H., but left no money, having given all to the poor.

Zainab was about 35 on her marriage to Muhammad, and died at about 50, in 20 or 21 A.H.

The episode of the Prophet's infatuation with his adopted son's wife was made much of by Christian propaganda (see *Marracci*, *Refutation Alcorani*, p. 562); modern Muslim biographers and commentators of the *Kur'an* have tried to present the episode in a secular light, e.g. Muhammad 'Abduh in *Tafsi al-Fātiha wa-Mukhlisat al-Kur'an*, Cairo 1330, in the chapter entitled *Tawfiḥ Mar'at Zaid wa Zainab*; and *Mawānā Muhammad 'Alī* in his biography *Muhammad the Prophet*, Lahore 1924, p. 249—250.

§ 15, N^o. 25; 3 A. H., § 20—27; 8 A. H., § 13, N^o. 2; 10 A. H., § 139, N^o. 8; 20 A. H., § 267, 298, 400—406; Ibn al-Balk, ed. Wattenfeld, p. 1004; a literary portrait: Enrico Rota, *Visioni d'Oriente e d'Occidente*, Milan 1924, p. 35—45; Zainab. (V. VACCA)

ZAINAB BINT KHUZAIMA b. al-Harith al-Hakliya, one of Muhammad's wives, had borne the name of Umm al-Mas'kin since the Djibilla. Her first husband, al-Tufail b. al-Harith, had divorced her; the second, Ubaid b. al-Harith, was killed at Badr. Muhammad married her in Ramadan 4 A. H. and gave her a dowry of 400 dirhams; she died 2 or 3 months later, the first of his Madinese wives to die before him, and was buried in the cemetery of al-Baki.

Bibliography: Ibn Sa'd, ed. Sachau, vii, 82; Caetani, *Annali dell' Islam*, 4 A. H., § 16 and § 22; al-Tabari, ed. de Goeje, i, 1775—1776; Ibn al-Athir, *Usd al-Ghaba*, v, 466—467. (V. VACCA)

ZAINAB BINT MUHAMMAD, one of the Prophet's daughters, said to have been the eldest, was married before her father's mission to her maternal cousin Abu 'A' b. al-Habib.

She was in al-Baki at the time of Muhammad's *Ajda*, and did not follow him to Medina; her husband, still a pagan, was taken prisoner at Badr. Zainab sent a necklace which had belonged to Khadija to ransom him, and Muhammad freed him on condition that Zainab should come to Medina. On her way thither she was maltreated by al-Habib b. al-A'wad and had a fall which caused her to miscarry (some authors place this accident in 8 A. H. and attribute her death to it).

Her husband was taken prisoner a second time in 6 A. H. in the expedition of al-'Is, and freed by his wife's intercession. He became a Muslim in 7 and was reunited to his wife by a second marriage.

Zainab died in Medina in 8 A. H. She had two children, 'Ali who died in infancy, and Ummama, married to 'Ali b. Abi Talib after Fatima's death.

Bibliography: Ibn Sa'd, ed. Sachau, vii, 20—24; Caetani, *Annali dell' Islam*, Intro., § 160, N^o. 1; § 349, N^o. 1; 2 A. H., § 82; 6 A. H., § 9; 7 A. H., § 3; 8 A. H., § 80, 81, 201; al-Tabari, ed. de Goeje, iii, 2303—2307; H. Lammens, *Fatima et ses filles de Mahomet, par.* (V. VACCA)

AL-ZAINABI, ABU 'L-KHUSIM 'ALI b. TURK b. MUHAMMAD, a vizier of the 'Abbāsids. He and his family had the name Zainab because they were descended from Zainab bint Salama b. 'Ali b. 'Abd Allah b. al-'Abbas, the cousin of the two first 'Abbāsids, who was held in great honour among the 'Abbāsids. In Rajab 453 (July—Aug. 1061) his father Turk was appointed chief inspector (*nakib al-amṣār*) of the 'Abbāsid shari'as and after his death in Shawwāl 491 (Sept. 1098), 'Ali al-Zainabi inherited this office with which was combined in 517 (1123—1124) that of the 'Alid chief inspectorate (*nakib al-'alamayn*). After the dismissal of the vizier Djahil al-Din b. Sadaka in Djumādā I 516 (July—Aug. 1122), al-Zainabi administered the vicariate for some months but was not actually appointed vizier. It was not till Rabī' II, 523 (April 1129) that the caliph al-Mustashid gave him this office; in 529 (1135—1136) however, al-Zainabi was dismissed and Ansharwan b. Khalid appointed in his place, in the meanwhile al-

Mustashid was assassinated and his son al-Rashid succeeded him (529—1135). But the very next year the latter was declared unfit to rule by an official *fatwa* of a number of theologians and legists at the instigation of al-Zainabi and when the Sultan Mas'ud b. Muhammad applied to al-Zainabi to ask who was best fitted to be caliph he proposed al-Rashid's uncle Muhammad b. al-Mustashir, and the latter was proclaimed commander of the faithful under the name of al-Muqtafi; he then made al-Zainabi his vizier. But the new caliph and his vizier quarrelled after a time. The latter therefore went to the court of Sultan Mas'ud with whom he was on particularly good terms and although the caliph summoned him to return and resume his official duties, he refused to do so and was therefore dismissed in 534 (1139—1140). Through the intervention of Sultan Mas'ud however, a reconciliation took place and in 536 (1141—1142) al-Zainabi was allowed to return to Baghdad. The caliph however had no further use for him and in Ramadan 538 (March—April 1144) al-Zainabi died in great poverty.

ZAITÜN, a town in the southeast of Asia Minor. It is the chief town in a *kaza* of the wilayet (formerly sandjak) of Mar'ash and is (or was before the recent persecutions) inhabited for the most part by Armenians, who call it Zethun or Ulnia, usually however simply Keph ('village'). The name Ulni (Ulnia) is also used for the whole of the mountainous country on the Djahlan between Karatili (S. W. of Albistan) and Bertis. Whether Ulnia was originally the name of Zaitün or Farnas to the S. W. of it, in the neighbourhood of which is mentioned a monastery of the martyr Stephen of Ulni, is doubtful. An Agharip, i. e. 'Abd al-Karib, of Forns is mentioned at the beginning of the reign of Leon I of Little Armenia (1129—1137) (*Re. Hist. Cris., Dec. Arm.*, i, 636; iii, 636). On the other hand, the town of Zaitün is first mentioned after the capture of the last Rapanid (1375). According to local tradition, the inhabitants came from the fortress of Ani or An-dzor, which probably lay in the Cilician plain. The earliest mention of the town which Alghian could find is in 1526 (Bishop Narses of Zethun; *Sirozian*, p. 199, 201). Paul of Aleppo calls Zaitün in 1699 'the well-known town of the Armenians'. The inhabitants, a brave, liberty-loving, mountain people, were for long (till about 1864) able to maintain a certain independence. A rising broke out in 1819 as a protest against the heavy taxes imposed by the Porte. The people of Zaitün resisted Ibrahim Pasha on behalf of the Turks. The troubles of 1862 lasted till 1872 and broke out again in 1878 and 1884. In the summer of 1876 the residence of the governor was burned down; it was rebuilt in 1877. The conflagrations of Sept. 22, 1884 and July 26, 1887 were much worse and almost the whole of the town was destroyed. New unrest was caused by the outbreak of smallpox, from which 400 children in Zaitün died in 1890; its spread was ascribed to the carelessness of the Turkish doctor. The worst was the rising in 1895—

ENCYCLOPAEDIA OF ISLĀM

The editors of the Encyclopaedia propose to issue the Supplement immediately after the completion of vol. IV, in fascicles the number of which is estimated at 4—5.

1896 following the general persecution of Armenians in Turkey. The governor of Mar'ash besieged the little town in which 15,000 fugitives from the surrounding country had taken refuge; completely exhausted by bombardments, epidemics and lack of munitions, the defenders were only able to secure peace and an amnesty from the Porte, through the intervention of the European Powers notably France; they had to surrender their arms and were granted government by a Christian *gouverneur*.

The persecutions of Armenians during and after the world war have doubtless had considerable effect in Zaitün also; part of the Armenian population must have been deported and perished on the way and others have migrated to Syria.

Zaitün lies in terraces on the slopes of a steep hill; it has narrow, zigzag streets. On the top of the hill is the Turkish fort which commands the surrounding country. The town consists of four quarters: Yenishanian, Surénian, Ghurghular and Box Bayir. West of Zaitün is the hill called Gankhof (Kangrot 'artichoke hill'; perhaps in *Z. D. M. G.*, xi. 188 Darb al-Kankarüt should be read for -rüt). About 1880 the number of inhabitants of Zaitün and the country round was estimated at 17,000, that of the whole hill country at nearly 36,000 (including 27,500 Armenians and 8,300 Turks). The 'Zaitünis' were mainly engaged in exploiting the iron-mines of Bairüt (Barid) Dagh to the north of the town and in the manufacture of arms, while the women cultivated silkworms (according to Léon Paul who stayed there from June 27-29, 1864). The botanist Haussknecht studied the flora of the Barid Dagh in 1865, where he found over 200 varieties; his fine collection he sent to Edmond Boissier who published it in his *Flora Orientalis* (Geneva and Basle 1866-1884).

AL-ZAIYÂNÎ, ABU 'L-KÂSİM b. AYMAL b. 'ALÎ b. ISRAHÎM, Moroccan statesman and historian of the xviiith century. Al-Zaiyânî, a member of the great Berber tribe of the Zaiyân

in Central Morocco, was born in Fās in 1147 (1734-1735). He received his education in this city. At the age of 23, he accompanied his parents on the pilgrimage to Mecca and after an exciting journey, coming as well as going, which lasted over two years, he returned to Fās, where he obtained a position as secretary to the *makhzen* [q.v.] of sultān Muḥammad b. 'Abd Allāh. His ability, his knowledge of Berber dialects and the course of events rapidly brought him to the front; having played an active part in the suppression of a rising against the tribe of the Ait Amālū, he gained the confidence of his ruler and was entrusted with negotiations with the various unsubdued Berber elements of the empire. We now find him travelling up and down Morocco incessantly and making several journeys to distant Tafilalt. In 1200 (1786) al-Zaiyânî was charged by the sultān Muḥammad b. 'Abd Allāh with a mission to the sultān of Constantinople 'Abd al-Ḥamid [cf. *ib.*, p. 39]. He reached the Ottoman capital after many vicissitudes and spent over three months there, which enabled him to write on his return a very full description of it. On his return after carrying out several confidential missions, he was appointed governor of Siḡilmāsa [q.v.], where he remained till the death of sultān Muḥammad b. 'Abd Allāh in 1204 (1790).

The sultān's successor, his son al-Yazid, put an end to the political career of al-Zaiyânî whom he hated. It was only by a miracle that the latter escaped death when al-Yazid in 1206 (1792) himself succumbed to a wound received in a fight against the pretender Hishām. Al-Zaiyânî, at the time a prisoner in Rabāt, was set free and immediately took an active part in the proclamation at Meknes of another son of Muḥammad b. 'Abd Allāh as sultān, Mawlaī Sulaimān (Silmān). The latter gave him the office of governor ('*amīl*') of the district of the town of Uḡḡda [q.v.; Ar. Uḡḡda] but on taking up his post, al-Zaiyânî was attacked and defeated by the people he had been sent to govern. This misfortune gave him a distaste for public life and he retired to Tlemsen, where he spent 18 months in studious seclusion, which only ended when he decided to make once more the journey to Constantinople, this time in a private capacity and to perform the pilgrimage for a second time. On his return in 1210 (1795-1796), he was summoned by sultān Mawlaī Sulaimān and returned to Fās. In spite of his great age, he was now employed on a number of important missions and received the title of *shayḥ Yawizratūn*, as the head of the sovereign's *makhzen*. He remained in office for several years, then was dismissed and died at Fās in 1249 (1833) at the age of 99. He was buried in the *sāmiya* [q.v.] of the brotherhood of the Naḡiriya in the al-Siyādī quarter.

Famous in Morocco as a statesman, al-Zaiyânî was no less celebrated as a writer. In the course of his stirring life, he found time to write some fifteen books, almost all on history and geography. The first in date of these works was a general history of Islām entitled *al-Turajūmān al-maḡribī 'an Dima al-Maḡrib wa 'l-Maḡrib*, in which he paid most attention to the Ḥammān dynasties of Morocco and which he later continued, keeping pace with events down to the year 1228 (1813). The part of the *Turajūmān* relating to the Sa'dian dynasty is still unpublished; on the other hand, that relating to the 'Alids of Morocco

was published and translated into French in 1886 by O. Houdas under the title: *Le Maroc de 1631 à 1872* (P.E.F.O.V., 2nd series, vol. xviii). It is a narrative, in parts a résumé, of events in Morocco from the foundation of the 'Alid dynasty to the early years of the sixteenth century. A more detailed version of this part of the *Turjuman*, in which he dealt specially with events in which he had himself played a part or of which he had been a witness was later prepared by al-Zaiyân, and he gave it two different titles: *al-Bustân al-parif fi Dawlat Awlad Mawlaya 'Alî al-Sharif*, and *al-Rawda al-sulaimaniya fi Dhikr Af'ân al-Dawla al-imaniya wa-man tafaddalaka min al-Dawal al-islamiya*. — Another important work by al-Zaiyân was a very full account of his various journeys to which he added all kinds of digressions, literary, historical and biographical, and gave it the title of *al-Turjuman al-kubrâ allatî fîmâ 'at Abhâr Mudun al-'Alam kari-ma-lakrâ*. This book which is of the nature of both *rihla* and *fatrawa* is also a very curious geographical treatise, with maps (e.g. a map of the sea, which is reproduced in my *Histoire des Chérifs*, between p. 188 and 189). All these works of al-Zaiyân are to be found in manuscript in Morocco in various private libraries. A complete list is given, *ibid.*, p. 167—168.

Al-Zaiyân's work is the principal source we possess, with the recent *Kitâb al-Ittîfâq* of al-Nâsir al-Salâwî [cf. the article *AL-SUKWÎ*], for the history of the 'Alid dynasty of Morocco. It is full of valuable details and deserves serious study. It gives throughout an impression of accuracy and precision in historical as well as topographical matters. Information is given about innovations and social reforms and about the monumental history of the towns of Morocco. Al-Zaiyân also shows a very remarkable acquaintance with events in Europe. Finally all that he tells us about what he saw on his journeys to Constantinople is worth publishing in full.

ZAKĀNĪ UBAID. [See *URĀDĪ ZKĀNĪ*.]
ZAKĀRIYĀ, the father of John the Baptist, is reckoned in the Qur'ân (vi. 85) along with John, Jesus and Elias among the righteous. Muhammad gives the substance of Luke i. 5—25 as follows: Zakāriyā guards the Virgin Mary in the niche (*mihrāb*) and always finds fresh fruits there. He prays to God; angels announce to him that a son will be born to him, Yahyā, a name never previously given to anyone, a pious man, a prophet, Yahyā's heir, pleasing to God. Zakāriyā

thinks he is too old. As a sign to him he is struck dumb for three days (Sûra iii. 32, 36; iii. 4—13; xli. 89—90).

Later legend expands the Gospel story and says that Gabriel was the announcer (Luke i. 19) and that Zakāriyā was struck dumb as a punishment for his doubts (i. 20). It elaborates the details as follows: 19 people anxious to take charge of Maryam write their names each on a reed; these are thrown into the pool of Siloam and the reed with Zakāriyā's name comes to the top. Zakāriyā grows old and resigns his office of custodian which Kalamaslos gives to Joseph the carpenter (Tha'labi, p. 236). In Mary's niche there is winter fruit in summer and summer fruit in winter; this encourages Zakāriyā to pray that his aged body also may be fruitful out of season (Tha'labi, p. 237).

Muslim legend makes Zakāriyā as a prophet die the death of a martyr. After Yahyā's death he escapes into a tree which opens for him. But the beam of his cloak remains outside the tree. This betrays him, the tree is sawn down and with it Zakāriyā (Tha'labi, p. 240; Ibn al-Athîr, p. 120). This is modelled on the Haggada and the martyrdom of Isaiak (Pal. Sanhedrin, i. 28; Bab. Sanhedrin, 107a; Kautsch, *Apocryphen und Pseudepigraphen*, ii. 123; Isaiak, Djemshîd, Zakāriyā).

Muslim legend seems to identify the Zakāriyā of the Gospel with the prophet Zachariah of whom the Haggada records that his blood boiled until Nebuchadnezzar's general Nebuzaraddan came. The latter sought to calm it with the blood of the sacrificed victim and with the best of Israel, but in vain. Only his appeal calms it. Muslim legend tells this of the blood of Yahyā b. Zakāriyā.

(BERNHARD HELLER)

ZAKĀT (أَكْ), the alms-tax, one of the principal obligations of Islām. By this the law means a tax, which is levied on definite forms of property and is distributed to eight categories of persons. Muslim scholars explain the word from Arabic as meaning "purity" or "increase". In reality it was borrowed in a much wider sense by Muhammad from Jewish usage (Hebrew-Aramaic *zakkāt*). In the east among the religiously inclined, the giving away of worldly possessions was regarded as a particularly pious act, the possession of earthly riches on the other hand almost as an obstacle to salvation; the same word that denoted virtue and righteousness in general could therefore also be used for benevolence and charitable gifts. Muhammad, who had become acquainted with this form of piety as one of the marks of the religion of revelation, from the first laid stress on the practice of benevolence as one of the chief virtues of the true believer; cf. Sûra xiii. 22; xxv. 26: "(those who) of what we have given them spend out secretly and openly" (many similar passages); Sûra lxx. 24 sq.: "those, who acknowledge that the beggar and the needy have a determined claim on their possessions"; also

Sūra lxxvi. 8 *sq.* (all of the Meccan period). Muhammad at any rate already uses the word *zakāt* in the Meccan period along with several derivatives of the stem *zakkā* "to be pure", which to the Arab mind were related to it. Even the latter have in the *Kur'ān* almost exclusively the meaning "to be pious", which is not pure Arabic, but borrowed from the Hebrew. The term *zakāt* means not only virtue in general but also with an almost imperceptible transition of meaning (cf. Sūra lxxvii. 14; xlii. 4; xcii. 18) giving (e.g. Sūra xix. 32, 56) and the pious gift (e.g. Sūra vii. 155; xxi. 75; xxx. 38; xxxi. 3; xli. 6). During the whole Meccan period, in which Muhammad had only a few, but these enthusiastic, followers any regulation of private charity was unnecessary and indeed impossible. The Muslim view also makes the *zakāt* as a legal obligation first be introduced in Medina, but varies, as regards the date, between the year 2 and the year 9; the earlier general prescriptions are regarded as thereby abrogated. The uncertainty regarding date weakens the positive statements of this tradition; the following is the idea we get, mainly from the *Kur'ān*, of the further development of the *zakāt*. Charity, sometimes referred in general terms and sometimes by the word *zakāt* (both in turn e.g. Sūra ii. 263—281), continues to be one of the chief virtues of the believer, and must be based on a corresponding frame of mind. In this word the general meaning gradually falls into the background to be replaced by that of gift. *Ṣadaqa* [q. v.] occurs as practically synonymous with *zakāt*. Muhammad must have become more closely acquainted with it from the Jews in Medina. In this town altered conditions soon influenced the nature of the *zakāt*; the poor believers who had migrated from Mecca had to be supported and charity increased as accessions took place from motives no longer purely religious. On the other hand, the Prophet was now able to introduce a kind of organisation for the reception and distribution of pious gifts, as laid down in Sūra ix. 60, but at first no change was made in the character of the *zakāt* as an individual offering, in spite of the obligatory character of certain *ṣadaqa's* (in Sūra ii. 172 both kinds of gifts are mentioned together). Finally Muhammad used the yield of these collections not to support the needy only but also, and if necessary preferably, for his military enterprises and other political purposes. The raising of the considerable sums necessary for this caused great difficulties; therefore we have repeated admonitions in the *Kur'ān* to give "for Allāh's purposes", supported by promises and threats of a religious nature and accompanied by complaints about the insufficient contributions. The use made by the Prophet of the voluntary offerings aroused the criticism of the believers; and there was a fierce dispute, when Muhammad, after the surrender of Mecca, endeavoured to reconcile prominent Quraysh with the new order of things by gifts from the *zakāt* fund. The discontent had to be appeased by a special revelation (Sūra ix. 58—60): "Some of them make reproaches to thee on account of the *ṣadaqa's*; if they receive anything of them, they are satisfied, but if they receive nothing, they murmur... The *ṣadaqa's* are for the poor, the needy, their collectors, those whose hearts are to be conciliated, for slaves, debtors and for Allāh's purposes and for the traveller, as a duty prescribed by Allāh". The

passage became the basis for the later laws about the distribution of the *zakāt*. The collectors here mentioned had to receive the *zakāt* of the Beduin tribes who had adopted Islam; for the latter the *zakāt* from the first was hardly anything but an obligatory impost, the amount of which was usually fixed definitely in the agreements made with the Prophet; the reluctance of many Beduins to pay it is fought in Sūra ix. 99 *sq.* The transformation of the *zakāt* into a state treasury, now beginning, was limited by Muhammad to the irreducible minimum; essential elements of the later regulation are unknown to the *Kur'ān* and a part of the traditions. The *Kur'ān* answers the question of the believers as to what they should give without any limitations: "the superfluity" (Sūra ii. 217), and a further revelation of the last year of the Prophet's life threatens with the punishment of hell "those who hoard gold and silver and do not spend it for Allāh's purposes" (Sūra ix. 34 *sq.*). Tradition also ascribes to the Prophet utterances which imply no limitation to the obligation of *zakāt*; among the Companions of the Prophet, Abū Dharr is held to have championed the view that one should only keep as much property as one needs. 'Alī is said to have fixed the maximum value of property allowed at 4,000 dirhams, and the opinion is even ascribed to so late an authority as Mālik b. Anas that all wealth is forbidden (*ḥarām*). The *Kur'ān* (e.g. Sūra ii. 211) and Tradition repeatedly describe as recipients of the *zakāt* parents, relatives, orphans, poor, travellers, beggars and slaves; but according to Tradition, a *zakāt* given to the rich, thieves and prostitutes can also be meritorious, since it is the mere fact of giving which is the first consideration. The nature of the objects liable to *zakāt* is not further defined in the *Kur'ān*. Tradition knows of cases of paying *zakāt*, which cannot be fitted into the later system. In any case, the character of *zakāt* in the time of the Prophet was still vague and it did not represent any of the taxes demanded by religion. After Muhammad's death many Beduin tribes therefore refused to continue to pay *zakāt* as they considered their agreements cancelled by the death of the Prophet, and many believers, among them 'Omar himself, were inclined to agree with this. Only the energy of Abū Bakr made the *zakāt* as a regular tax a permanent institution, which through the establishment of a state treasury contributed greatly to the expansion of Muslim power. Ardent believers continued as before to regard it as their right to bestow their *zakāt* as they thought fit; but very soon the development and centralisation of the state made this impossible in practice. When the obligations of a Muslim had been definitely laid down the *zakāt* was established as a religious tax and regulated in all its details; the views put forward on this occasion have left their effect in Tradition. In this connection may be mentioned the detailed regulation of *zakāt*, which is usually ascribed to Abū Bakr, sometimes to the Prophet or to 'Omar or 'Alī.

According to the Shāfi' school, the main regulations of the *zakāt* laws are as follows. Only Muslims pay *zakāt* (according to the Hanafis only those who have attained years of discretion and are in full possession of their faculties) and on the following kinds of property: 1. fruits of the field, which are planted for food; 2. fruits, grapes and dates being especially mentioned in Tradition; 3. cattle, i.e. camels, oxen and smaller domestic

animals (according to the Hanafis also horses); 4. gold and silver; 5. merchandise. On the two first classes the zakāt is to be paid at once at the harvest, on the last three after one year's uninterrupted possession; a condition for liability to zakāt is the possession of a certain minimum (*niṣāb*). On the first and second class the zakāt is $10\frac{1}{2}\%$ (when artificial irrigation is used $5\frac{1}{2}\%$), the *niṣāb* 5 camel-loads (*ḥamḥ*). There are complicated rules for the third category, which are based mainly on Abū Bakr's zakāt ordinance and take into consideration not only the number but also the kind of animals; the *niṣāb* is 5 camels, or 20 cattle, or 40 smaller animals; the animals are only liable to zakāt if they have grazed freely during the whole year and not been used for any work. The zakāt on the fourth and fifth category is $2\frac{1}{2}\%$; the *niṣāb* for precious metals is calculated according to the weight and amounts for gold to 20 *mithqāls* (or *dirhams* = c. 84 grammes = 1,320 grains), for silver seven times this, 200 dirhams (for gold and silver ornaments the commercial value is the deciding factor); the value of merchandise must be estimated at the end of the year in gold and silver; in this case also there is no liability to zakāt if the precious metal or merchandise has not been kept for a full year unused "as treasure". Lastly the surrender of precious metals obtained from mines as well as of treasure trove is regarded by the best authorities as zakāt (cf. F. F. Schmidt, *Die usulfi im islamischen Recht*, in *Jil.*, i, sect. iv. and v.). It is permitted to hand the zakāt direct to the persons who have claims to it; it is however preferable to hand it to the Muslim authorities for regulated distribution. If the zakāt is collected by the government, one is bound to pay it to the collector (*ʿamil*) even if the character of the government is no guarantee of a proper distribution (according to some, especially Hanafī scholars, in this case to satisfy one's conscience, the zakāt should be collected a second time and distributed direct). The right of the government to demand the zakāt is however limited to the so-called *ṣakīr* possessions, i.e. the visible articles of the first three categories, in the case of which the *ʿamil* can fix the amount of the zakāt from his own observation; the so-called *ḥifn* properties on the other hand, i.e. the hidden articles of the two last categories, are expressly withdrawn from this control and the zakāt is left entirely to the conscience of the individual. — The yield of the zakāt is destined only for the eight classes mentioned in Sūra ix. 60 (excluding the family of the Prophet, in contrast to the *ghawṣ* and *ḥai*), and after deducting a fixed salary for the collectors is to be distributed in equal parts to the other seven categories so far as they exist in the country (so according to the Shāfiʿis, while according to the other schools various necessities may be considered). The distinction that is made between "poor" and "needy" is quite an arbitrary one; at any rate, the legists usually interpret the definition in such a way that they themselves belong to one of these classes. Whether after the time of the Prophet there were still persons "whose hearts have to be conciliated" is disputed among the schools. By the slaves who have a claim to a share in the zakāt are understood (except by the Mālikīs) such as have concluded (except by the Mālikīs) such as have concluded a contract to purchase their liberty (*mukāṭaba*), by debtors (with the Shāfiʿis) especially such as have taken upon themselves to wipe out a debt for God's

sake. The part set aside "for Allāh's purposes" is to be devoted to the fighters for the faith who voluntarily take part in the *ḡibāḥ* without belonging to the regular troops. These categories have been drawn up as a result of a schematic interpretation of the passage in the Qurʾān. — The artifices (*ḥifn*) to avoid payment of zakāt are according to the Mālikīs and Ḥanbalīs invalid, according to the Hanafīs and Shāfiʿis sinful but valid.

Actual practice differed considerably from the theory of zakāt in the different Muslim countries. The high imposts and taxes (*mukāṭ*) not foreseen by the Shariʿa made the collection of the zakāt usually difficult or impossible so that it, particularly on *ḥifn* property, was either not paid at all or not to the prescribed extent. Frequently its collection led to extortion and other abuses. Nor was the yield in the majority of cases applied according to the law; the collectors themselves or the *ḥāḍis* kept the larger portion. Sometimes the zakāt on the fruits of the field under the name of "tithe" (*ʿushr*; q. v.) became a purely secular tax. Nevertheless the legal obligation to pay zakāt is everywhere recognised and where the peasant is not overburdened with other taxes, he pays it at least on *ṣakīr* property as far as circumstances permit, although with many abuses in details.

By *zakāt al-ḥifn* (zakāt of the breaking of the fast) is meant the obligatory gift of provisions at the end of the month of Ramaḍān, which according to Tradition was ordered by the Prophet in the year 2 and fixed as regards the amount (the latter is however not certainly historical). There were differences of opinion regarding the relation of this zakāt to the general one and regarding the question whether it was obligatory. According to the view which finally prevailed, the zakāt al-ḥifn is obligatory (according to the Mālikīs only *sunna*) and has to be handed over by every free Muslim for himself and all persons whom he is legally bound to support at latest on the first of the month Shawwāl which follows Ramaḍān. A man is exempted only if he possesses the bare necessities of life for himself and his family. The amount of this zakāt is $1\frac{1}{2}\%$ (= $\frac{1}{60}$ *ḥamḥ*) or 4 *ḥamḥ* of the usual foodstuffs of the country for each member of the household. The recipients according to the Shāfiʿis are the same as in the case of the general zakāt, while the other schools, more in keeping with the original character of the zakāt al-ḥifn, approve its limitation to the poor and needy. — Throughout the Muslim world the regulations about the zakāt al-ḥifn are observed with particular scrupulousness; the people feel that it is part of the duties of Ramaḍān and will serve to atone for any involuntary negligence during this month.

In conclusion we may note that freewill, not obligatory offerings (*ṣadaqāt*) have been always considered very meritorious in Islam.

(JOSEPH SCHACHT)

ZAKĀZĪK, an unimpressive, but busy commercial town in the Egyptian Delta, in the administrative division (*mudiriya*) of Sharḥiya. Along with Damanhūr it is one of the towns which do not constitute fiscal units for purposes of land tax. The town, an important railway centre, has an extensive trade in grain and cotton. There are oil refineries and a large market for dates, oranges and onions. It is 46 miles from Cairo, and is connected with it by rail. Its inhabitants in the time of Boinat Bey numbered 35,715 but in 1927 the total population had increased to 52,357. Tuesday is market day. There are several mosques and a modern Theological Institute (opened 1925); while the various Christian bodies Coptic, Greek, Catholic, Maronite and Protestant (American) have their places of worship. There are also government and community schools, hospitals and missions. The place is well supplied with and irrigated by canals which join with the Nile. The Mo'izz Canal (*Bahr Mo'izz*) is the former Tanitic branch. A certain kind of small fish which is caught thereabouts is called a *zakhāzīk*. The situation of the town is very favourable owing to the fertility of the surrounding country. Within the last century it has accordingly developed considerably in importance and wealth. In the neighbourhood are the ruins of *Tell Bayta* (the ancient *Bubastis*) where amid fallen granite blocks and masonry lies all that remains of the famous Temple of Bast.

ZAKKUM. [See *DIJAHANNAM*.]

AL-ZALLĀKA, the name given by the Muslim historians to the place near the town of Badajoz ([q. v.] *Ar. Badalyaw*) where the armies of the Almoravid sultan Yūsuf b. Tāghīn [q. v.], assisted by Andalusian contingents, inflicted a memorable and severe defeat on the troops of Alfonso VI of Castille on Friday 12th Raddj 479 (Oct. 23, 1086). This famous battlefield is now known as *Sagrajas* on the banks of the Rio Guerrero about 8 miles N. E. of Badajoz.

Almost all the Muslim historians of Spain devote a large space in their works to the account of the battle of al-Zallāka, but the most circumstantial account is that incorporated by Ibn 'Abd al-Mun'im al-Himyari in his historical and geographical compilation entitled *al-Rawḍ al-mi'fār* reproduced almost in its entirety in his *Nafḥ al-Tib*. On the circumstances which led up to the battle of al-Zallāka and resulted in the landing of Yūsuf b. Tāghīn in Spain as well as for an account of the battle itself see the article *Yūsuf b. Tāghīn*.

AL-ZALZALA OF AL-ZHILZIL, title of sūra xcix., taken from the opening words.

AL-ZAMAKHSHARĪ, ABU 'L-KKXIM MAHMUD b. 'OMAR, a Persian born Arabic scholar, theologian and philologist. Born in Khwāzism on 27th Raddj 467 (March 8, 1075), in the course of his travels as a student he came to Mecca, where he stayed for some time as a pupil of Ibn Wabbāsa, hence his epithet *Djār 'l-Hāḥ*. He must however have achieved a literary reputation before this; when he passed through Baghdad on the pilgrimage he was welcomed there by the learned 'Alid Hibat Allāh b. al-Shadjari. As a theologian he followed the teachings of the Ma'tazila; as a philologist, in spite of his Persian descent, he championed the absolute superiority of Arabic and used his mother tongue only in instructing beginners. He died at al-Djurdjāntya in Khwāzism on the day of 'Arafāt 538 (June 14, 1144). Ibn Baṣṣāṭa (Paris ed., iii. 6) was still able to see his tomb there.

His principal work, completed in 528 (1134), is his commentary on the Kur'an, *al-Kaḥkūf 'an Ḥaṣṣat al-Tanzil*, which in spite of its Ma'tazila bias — at the very beginning he declares the Kur'an created — was widely read in orthodox circles. The author devotes most attention to dogmatic exegesis of a philosophical nature, paying only slight attention to tradition. Besides giving the purely grammatical exposition, he devotes special attention to pointing out rhetorical beauties and thus supporting the doctrine of the *ṣifāt* of the Kur'an. He gives particular care to the lexicographical side of his work, going fully into the readings and supports his explanations by ample extracts from the old poetry. His work still retained a place in literature when Balḍawī produced his own as the orthodox counterpart and tried to surpass him in the accuracy of the grammatical exposition and in quoting variant readings. Even in the western lands of Islām, where his dogmatic point of view gave particular offence to the Mālikis, Ibn Khaldūn placed it high above other commentators; it is not however an accident that manuscripts of his work are rarer in the west than in the east. The first edition by W. Nassau Lees and the Mawlawis Khādim Hussain and 'Abd al-Hay (Calcutta 1856, 2 vols.) was followed by the printed editions at Bilāq 1291, Cairo 1307, 1308, 1318. To the 15 glosses quoted in Brockelmann, *G. A. L.*, i. 290, of which that of 'Alī al-Djurdjānt (d. 816 = 1413) was printed on the margin of the Cairo editions of 1308 and 1318 we may add — setting aside uncertain statements in

Stambul library catalogues — glosses on Muh. al-Firmāsī's (d. 817 = 1414) preface *Nagħd al-Kashshaf min Khat al-Kashshaf* by Muhammad al-Dawūdī (d. 907 = 1501) in the Escorial (s. Lévi-Provençal, *Les Mss. ar. de l'Esc.*, iii, N° 1283) and superglosses by al-Khayālī (d. 863 = 1458) on the glosses by Dītharī (cf. *cit.*, N° 4) in Cambridge (Browne, *Suppl. Handlist*, N° 1037). On the illustrative verses, in addition to Muhibb al-Dīn b. Taqī al-Dīn al-Maṭī al-Hamawī (d. 1016 = 1605), we now have al-Dīnawālī's *Tamāl al-Āyāt*, composed in 1011 = 1602, Bulaq 1281, Cairo 1307, 1308, on the margin of the *Kashshaf* 1318, and a work, dealing at the same time with Baidāwī, by Khidr b. 'Alī Allāh, *al-Īrāf fī Sharḥ Sharḥ al-Āyāt wa 'l-Kashshaf*, written in 974 (1566) in the Edinburgh MSS. N° 2—3. In addition to the synopses given in *G.A.L.*, may be mentioned the *Tafīr al-Kashshaf wa Ziyādāt Nahḥ al-Īrāf* of the Zaidī Dīnawālī al-Dīn 'Alī b. Maḥammad b. Abī Ṭ-Ḥasīm b. al-Hādī Ḥa Ṭ-Ḥaḥḥ b. Rasūl Allāh, composed in 795 (1393) in Ṣan'ā in the Brit. Mus. Or. 5752 (s. *Descriptive List*, N° 4) and in the Ambrosiana (Griffini), B. 304, 104, also *al-Dīnawālī al-Sharḥ al-muṭlaq min Maḥḥ al-Kashshaf* of 'Abd Allāh b. al-Hādī b. Yaḥyā b. Ḥamza b. Rasūl Allāh, about 810 (1407) in the Ambrosiana, B. 47—48, 99 (*R.S.O.*, iv, 105), as well as the *Khat al-Kashshaf* of Abū Ṭ-Tayyib Ḥ. Sīdīq al-Kamawālī, Naṭb of Bhopal (d. 1307 = 1890), Lucknow 1289. Of the counterblast, the *Kitāb al-Intiqāf min al-Kashshaf* of Ahmad b. Muhammad b. al-Muṣṭayyir al-Mālikī (d. 683 = 1284), pr. Cairo 1307, 1313 on the margin of the *Kashshaf*, there is a second synopsis *al-Intiqāf* by 'Abd al-Karīm b. 'Alī al-Farīq al-Aṣṭarī in the Escorial (Lévi-Provençal), N° 1278 and in Stambul, Selim Agha, N° 34.

A *Kitāb al-Kashshaf* *fī 'l-Kirā'āt*, so far as I know mentioned nowhere else, is according to *R.A.D.*, viii, 758 in the library of Rihāt Sayyidā 'Oḡmān in Medina.

Of his grammatical works, *al-Mufaṣṣal* written in 513—515 (1119—1121) has become celebrated for its succinct yet exhaustive and lucid exposition; it was published by J. B. Broch, Christiania 1859, 1879, with glosses and appendices by Mawlawī Muhammad Ya'qūb Rāshīdī, Delhi 1891, by Ḥamza Faṭḥ Allāh, Alexandria 1201, Cairo 1323, with Shawāhid commentary by Muhammad Baḥr al-Dīn Abū Firas al-Nas'ānī al-Ḥalabī. To the commentaries mentioned in *G.A.L.*, i, 292, of which that published by G. Jahn, Leipzig 1882 in 2 vols., written by Ibn Ya'qūb (d. 643 = 1245) is the best known, may be added: 1. *al-Mufaṣṣal* by Abū Ṭ-Ḥaḥḥ 'Abd Allāh b. Abī 'Abd Allāh Ḥamām al-Ukharrī (d. 616 = 1219), *Fihrist*, Cairo, ii, 157; 2. *al-Mufaṣṣal* by 'Abd al-Wahīd b. 'Alī al-Aṣṭarī, Escorial, Derenbourg, N° 61; 3. *al-Mufaṣṣal* by Muhammad b. Sa'īd al-Marwazī (Ḥajjī Khalīfa, vi, 38, 43), Brill-Houtma, N° 134; 4. *Uḥḥ Ma'ānī al-Aḥyāt al-Aḥyāt al-mawḥidāt fī 'l-Mufaṣṣal* by Ibn Mālik (d. 673 = 1273) in Damascus, s. Zaynī, *Khawāṣṣ al-Kutub*, p. 64, 55; 5. on the verses by Fakhr al-Dīn al-Kharrāzī, *ibid.*, p. 86, 41; 6. by Muhammad b. Muhammad Fakhr al-Farakhānī, Brit. Mus. Or. 7472 (*Descr. List*, N° 50); 7. *al-Muṣṭawī fī Sharḥ al-Mufaṣṣal* by Muhammad 'Abd al-Ghānī, Calcutta 1322 (1904); 8. by 'Abd Allāh al-Ṭarḥī, Lucknow 1323; 9. by Abū Ṭ-Ḥasīm Ahmad al-Siddīqī al-Aḥṭafī

in Stambul, Selim Agha, N° 1157. An imitation of the *Mufaṣṣal* with the same title was written in 670 (1271) by Ahmad b. Bahrām b. Maḥmūd, MS. in the Brit. Mus., s. *Oriental Studies presented to E. G. Browne*, p. 148, N° 826.

In addition to a treatise on syntax, *al-Mufaṣṣal wa 'l-Mufaṣṣal fī 'l-Nagħd*, which had a small circulation and is only known from the Stambul MSS. Köprülü, N° 1393, Lilliet, N° 3740 (see Rescher, in *M.S.O.*, iv, 31), he also wrote the short handbook *al-Ummūdhaf*, which attained great popularity; see de Sacy, *Anthologie grammaticale*, p. 99 opp.; A. Fischer, in *Continuatio d. nov. di M. Anvari*, i, 337—363, autographed by Broch, Christiania 1867, pr. Tihān (i) 1269, Tabriz (i) 1275, Cairo 1289, Stambul 1299 (following al-Maḥḥīnī's *Nagħd al-Sharḥ*), in a *Dīwān al-Muḥaddithīn*, Tihān 1884. Among the commentaries on it the best known is that of Muhammad b. 'Abd al-Ghānī al-Ardabīlī, whose date of death is not known (certainly not 647, as in the *Fihrist*, Cairo?, ii, 123, as no MS. is known before the year 1000), printed Bulaq 1269, in a Persian *Maḥmūd* 1279, on the margin of the main work, Kazan 1901. In addition to the commentary of Sa'īd al-Dīn al-Bardā'ī (for MSS. see *G.A.L.*, i, 292) may now be mentioned that by his pupil Dīyā' al-Dīn al-Muḥḥīnī, Brit. Mus. Or. 6260 and the two modern ones *al-Fairūzī fī Sharḥ al-Ummūdhaf* by Muhammad 'Alī 'Askar, Cairo 1289, and *Ummūd al-Sarī* by Ibrahim b. Sa'īd al-Kharrāzī, written in 1298 (1880), Bulaq 1312. For a work on grammatical puzzles and another on prosody see *G.A.L.*, *loc. cit.* Here also may be mentioned his commentary on the *Lamīyat al-'Arab* of Shamsar: *Adḥak al-'Adḥak fī Sharḥ Lamīyat al-'Arab*, printed with the commentary of Muḥarrar, Stambul (Djāwā'ib) 1300, alone Cairo 1324, together with a series of other commentaries, Cairo 1328.

He made the Arabic vocabulary available to his countrymen in the *Muḥaddithat al-'Arab* with explanations in Persian, dedicated to the Sipāhshāh Atsiz b. Khwārizmshāh (*Somachchārū Lexicon arabico-persicum*, ed. J. G. Weitzel, 2 vols., Leipzig 1844). A dictionary of the classical language remarkable for its methodical arrangement is his *Adḥak al-Balāgha*, printed in 2 vols., Cairo 1299, 1341 (*Dār al-Kutub al-Miṣriyya*), Lucknow 1311. He collected the peculiarities of the language of the traditions (*Ghāṣṣ al-Ḥadīth*) in the *Kitāb al-Fatāḥ*, printed Haidarābād 1324. The geographical dictionary *Kitāb al-Aḥḥām wa 'l-Dīyāl* = *'l-Miyāh* was published by M. Salverda de Grave (auspice T. G. J. Juynboll), Leyden 1856. Of his *al-Durr al-Aḥḥ (i) al-muḥaddithat fī Kināyat wa 'l-ḥadīth wa 'l-ḥadīth al-'Arab* only a fragment has survived in Leipzig (Vollers, N° 873, i).

His wonderful knowledge of the language was shown in a series of collections of sayings which enjoy great popularity. A collection of old proverbs is contained in the still unprinted *al-Muḥaddithat fī 'l-Aḥḥām*, which exists in numerous MSS. in Stambul, in addition to those given in *G.A.L.*, i, 292 (see Rescher, in *M.S.O.*, xv, 23; *R.S.O.*, iv, 708; *M.O.*, vii, 97, 102), in Brusa (cf. *Z. D.M.G.*, lxxviii, 50) and Scutari (*ibid.*, 58); a selection from it entitled *Zuhāt al-Aḥḥām* was made by Muḥḥāḥ b. Ibrahim al-Gallipoli (d. 1024 = 1615) in 999 (1591) with Persian commentary and Turkish glosses (see *G.A.L.*, ii, 423). He made three collections of apophthegms, composed by

himself with particular care and all the fine artifices of rhetoric: 1. *Nawāḥiḡ al-Kalīm* (*Anthologia sententiarum arabicarum cum scholiis Zamaksharī*, ed., verit., illustravit H. A. Schultens, Leyden 1772; *Les Pensées de Z.*, texte arabe... par C. Barbier de Meynard, in *J. A.*, ser. viii, vol. vi., p. 313 sqq.; cf. de Goeje, in *Z.D.M.G.*, xxx, 369 sqq.; lith. Stambul 1866; pr. Cairo 1287, 1303; Bairūt 1306). Of the commentaries the best known is that of Sa'd al-Dīn al-Taftazānī (d. 792 = 1389) entitled *Nifaw al-Sawāḥiḡ*, lith. Stambul 1866, Cairo 1287, with glosses by Muḥammad al-Bairūtī, Bairūt 1306; that of Abu 'l-Ḥasan b. 'Abd al-Wahhāb al-Khāwāḡī, written about 770 (1368), was printed in Kusan in 1314. In addition to the commentaries mentioned in *G. A. L.*, i. 292 by al-Kābīdī (viii century), the prince of Yaman al-Nāsir b. 'l-Ḥakḡ al-Mubīn, written in 782 (1380), and by al-Konawī about 1000 (1591), we have also those of Muḥammad b. Dīḡkān 'Alī al-Nasāfi, which Schultens, *loc. cit.*, used, and that of Muḥammad b. Ibrāhīm al-Rabā'ī (d. 971 = 1564; see *G. A. L.*, ii. 368), written in 967 (1560), see Lévi-Provençal, *Les Mss. arabes de Rabat*, N^o. 421, and the Turk. transl. by Yusuf Sīdīkī Efendi, pr. Stambul 1283; 2. *Rabī' al-Abḡār fī mā yasurū* 'l-Khāwāḡī wa 'l-Aḡḡār (cf. v. Hammer, *Wiener Jahrb.*, lxxiii, *Ann. Bl.*, p. 231), pr. Cairo 1292; a synopsis with additions from other sources was prepared by Muḥammad b. al-Khatīb Kāsim (d. 940 = 1533; see *G. A. L.*, ii. 429) and entitled *Rawḡ al-Aḡḡār*, pr. Bulāḡ 1279, 1288, Cairo 1292, 1306, 1307; 3. *Aḡḡāḡ al-Dhāḡḡ* (*Samachshari Goldene Halsbänder als Neujahrgeschenk arabisch und deutsch von J. v. Hammer*, Vienna 1835; new translation by H. L. Fleischer, Leipzig 1835; again transl. by G. Well, Stuttgart 1863; *Les colliers d'or, allocutions morales de Z.*, ed. and transl. by C. Barbier de Meynard, Paris 1876 as *al-Nawāḡ al-tiḡḡār*, by which name it is also cited in the *Aḡḡāḡ*, in Leyden MSS. N^o. 2153 and Brit. Mus. Suppl. N^o. 1003 (see de Goeje, in *Z. D.M.G.*, xxx, 369), pr. Bairūt 1314, with Turk. transl. Stambul 1286, with commentary *ḡalā'id al-Adāb* by Mirzā Yusuf Khān Astr (d. 1307 = 1889; see *Hilāl*, iii. 869), Bairūt 1293, 1322; Cairo 1321. Imitations entitled *Aḡḡāḡ al-Dhāḡḡ* were compiled by the otherwise unknown Ahmad b. Muḥammad b. Maḡmūd al-Nawḡī, see Cat. Brill-Houtma, N^o. 496, 13, and the Persian poet Abd al-Mu'min b. Hibat Allāh al-Isfahānī, who flourished about 600 (1203), printed along with the *Aḡḡāḡ* Stambul 1289, alone Cairo 1329, on the margin of Muḥammad Efendi Sa'd's *Tuhfat Ahl al-Fuḡāḡ* f. 'l-Munāḡama wa 'l-Muḡāḡa, Cairo 1307, 1326, with commentary by Muḥammad Sa'd al-Rāḡī, Cairo 1328, with glosses by Yusuf b. Ima'd al-Nabāḡī (President of the High Court in Bairūt), Bulāḡ 1280, Cairo 1880, Bairūt 1309.

He composed a series of moral discourses opening with the address *Yā Aḡā 'l-Kāsim* to himself and called *Maḡmūḡ*, after the older meaning of this word [q.v.]; they are also known as *al-Nawāḡ al-kibḡ*, and he added 5 pieces of a different nature, on grammar, prosody and the *Alfaw al-'Arab*, after recovering from a severe illness in 512 (1118); printed with the author's commentary Cairo 1313, 1325, transl. by O. Rescher, *Beiträge zur Maḡmūḡliteratur*, fasc. 6, Gieselswald 1913. The *Kitāb Nushat al-muḡāḡanna wa-Nahḡat al-muḡḡatib* also belongs to *adab* literature; it is a kind of

*lexikographische Beliettristik, preserved in the Aya Sofia N^o. 4331 (cf. Rescher, in *Z. D. M. G.*, lxiiv, 508).

Of his poems, which were collected into a *Diwān*, *Fihrist*, Cairo², iii. 131, a *Marḡḡya* on his teacher Abū Muḡar has been printed in al-'Izzī's *Maḡmūḡ*, ed. by Yahūda, p. 16 sqq.

He composed only two works on the field of Tradition: 1. *Muḡḡḡat al-Muḡḡḡaḡa bain al-Bait wa 'l-Saḡḡa*, in the library of Ahmad Taimūr, see *R. A. D.*, x. 313; 2. *Khaḡḡat al-'Aḡḡa al-Kirām al-Barāra*, see Ahlwardt, Berlin MS. N^o. 9656; *Herpiris*, xii. 117, 991.

Bibliographie: al-Aḡḡār, *Nushat al-Allāḡ*, p. 469—473; Ibn Khallikān, *Wafayāt*, Bulāḡ 1299, ii. 107; Yāḡḡū, *Irḡḡḡat al-'Arab*, ed. Margoliouth, vii. 147—151; Suyūḡ, *Buḡḡat al-Wū'at*, p. 388; *Liber de interspectibus Karani*, ed. Meursinge, p. 41; Ibn Kutūḡḡḡa, *Kronik der Lebensbeschreibungen*, ed. by G. Flügel, N^o. 217; Muḡḡḡḡḡ 'Abd al-'Iḡḡ al-Laknawī, *al-Faḡḡ'id al-'Aḡḡa*, p. 87; Djami' Bek, *'Uḡḡat al-Diḡḡḡar*, i. 294 sqq.; Ibn Tagḡḡḡirdī, ed. Popper, iii. 34, 7—17; Barbier de Meynard, in *J. A.*, 1875, ii. 314 sqq.; Brockelmann, *G. A. L.*, i. 289 sqq.; Satka, *Maḡḡḡḡ al-Maḡḡḡat*, col. 973 sqq.; Nöldeke-Schwally, *Gesch. der Qurān*, ii. 174; Goldziher, *Die Richtungen der islamischen Koran-auslegung*, p. 117—177. (C. BROCKELMANN).

ZAMĀN (A.) is the word generally used in the terminology of philosophy to express the conception of time. *Dahr*, *waḡt* and *ḡin* are synonyms. To distinguish it from time as perceived of the senses, time in the abstract is often called *dahr* (Pers. *zardān*) or described as *zamān wa'nawā*, *zamān muḡḡat*, *zamān 'alawī* etc.

Speculations on time (or space) as the highest principle of the world, with which Islām was acquainted from Hellenistic and Persian tradition, were of course strictly avoided. The doctrine that time, like space, was one of the five principles of the All was widely known, if it found little acceptance. Similar pentads, with different components and names, are found among the followers of hermetic wisdom (cf. J. Kroll, *Die Lehren des Hermes Trismegistos*, in *Beitr. u. Gesch. d. Philos. d. M. A.*, xii. 2—4, Münster 1914, p. 67 sqq.), among the ḡāḡḡians of Harrān, among the Ismā'īlīs, Druses etc. (S. Guyard, *Fragmente relatifs à la doctrine des Ismā'īlīs*, in *N. E.*, xxii, Paris 1874, p. 331 sqq. and *Die Drusenschrift Kitāb Almuḡḡat Waldawāḡ*, ed. Chr. Seybold, Leipzig 1902, p. 68). The physician Rāḡī (d. 923 or 932) gives them in the following order: 1. God-Creator; 2. World-Soul; 3. Original Matter; 4. Absolute Space; 5. Absolute Time (*Alawmī*), India, ed. E. Sachau, London 1887, p. 163; Ibn ḡāḡm, *Kitāb al-Milāl wa 'l-Niḡāl*, Cairo 1317, i. 24 sq. [where *muḡḡat* should be read for *muḡḡat* for absolute time]. As, according to Muslim belief, only God is absolute, infinite, eternal, this doctrine was condemned as heresy.

The metaphysical pentad (God, etc.) found an analogy in physics. Al-Yāḡḡū (second half of the third = ninth century) says with reference to the Aristotelian system of physics that there are five things (*aḡḡḡ*) in all the beings of nature, namely matter, form, space, motion and time; the last three however are accidents (al-Yāḡḡū, ed. Houtma, i. 148). Al-Kindī (d. after 870 = 1466) wrote a small book, which survives only in the Latin

translation, *De quinque essentiis* (in *Die philosophischen Abhandlungen des Ja'qub ben Ishaq al-Kindi*, ed. Alh. Nagy, Munich 1867, p. 28-40) in which after a general introduction the same five things are discussed, mainly on the basis of Aristotle's *Physics*, iv. These five things are discussed more fully but in the same order by the Ikhwān al-Sa'at (Bombay, II., *Riḥla* xv.; in Dielerici's selection Leipzig 1883, I. 24 sqq. It is *Riḥla* xiv.). They give various views about time. It is however clear that they not only give form precedence to matter, but put space as an accident of the body below motion and time which are in the soul and proceed from it. It is probably from this point of view that we are to understand the problem which we find in Tawhīd's *Muḥāsana*, Cairo 1929, p. 172 sq.: "Which is better, space or time?" The answer is: "Time is better, for space is of the senses but time is spiritual, space is in the world but time surrounds it"; etc.

While the older literature is often satisfied to detail the different views about time, acquaintance with Aristotle's exposition seems to have produced agreement among the philosophers. The matter is however complicated because the neo-Pythagorean and neo-Platonic distinction between perceptible and abstract time is retained. The physical treatment of time in connection with place and motion in space is based on Aristotle's *Physics*, iv. although not without Stoic influence. Metaphysics, in which the relation of the temporal to the eternal is dealt with, is influenced by neo-Platonism, mainly transmitted through the so-called *Theology of Aristotle*, the *Liber de Causis* and neo-Platonic commentaries on the works of Aristotle.

Physical time is distinguished as past (*samān māḍī*), present (*an, z. hāḍir*) and future (*z. mustaḥbal* or *mustaḥaḥ*). Since time, like motion, is according to Aristotle a continuous quantity, it does not consist of separate moments (contrary to the theological atomic theory). Consequently the present is strictly not time. Nevertheless the present moment is the only real one in time. This paradox led either to scepticism or to speculations about a real continuation of the past in the present.

With Aristotle, time was more nearly defined as the number (*adad*), measure (*miqḥar*) and the quantity (*ham, kamya*) of motion in its before- and afterness. Vice versa, motion was defined as the number or measure of time. Aristotle, who was concerned with pointing out the functional relation between motion and time, gives in one passage (*Physics*, iv. 12, 220^b, 14-16) the latter definition but it becomes the regular one among the neo-Platonists. Finally it may be mentioned that time, as defined by Aristotle, has, like motion, neither beginning nor end. World space is limited and the point in space may be the point at the end of a line, because this line is at rest, but time as a measure of motion flows always on.

The definition of time as interval or duration (*mudda, tawīdāt, maḍū'*) differs from this Aristotelian conception. Most probably we have here translations of *διαστήματα* and *διεσπασμός*, which mean interval among the Stoics and are explained by Plotinus in the higher sense as duration of the life of the soul (cf. H. A. Wolfson, *Critique of Aristotle's Problems of Aristotle's Physics in Jewish and Arabic Philosophy*, Cambridge-Harvard 1929, p. 638 sqq.). It is called interval, when Abu 'l-Ḥadīd al-'Alāf defines *maḍū'* as *farḥ* or *maḍā'*

between the separate acts (*af'āl*) (*Die dogmatischen Lehren der Anhänger des Islams* by al-'Alāf, ed. H. Ritter [Bibl. Isl., I], Constantino 1930, I. 443). Similarly Maṭṭhar b. 'Ishir al-Maḍdī says that in the Muslim view time (*samān*) is the movement of the sphere of heaven and *maḍā'* between actions (*af'āl*) (*Le livre de la création et de l'histoire d'Aḥmad Zāid Ahmad ben Saḥl al-Baḥḥā*, ed. C. Huart, Paris 1899, I. 41). On the other hand, *mudda* means duration in the *Kitaḥ Maḥāṣil al-'Ulūm* (ed. G. van Vloten, Leyden 1895, p. 137 sq.) where we read: "Time is a duration (*mudda*) which is counted i.e. measured, by movement, as by the motion of the spheres of heaven and other things in motion". Strictly we have here the above mentioned distinction between perceptible time measured by bodies in motion and abstract duration which cannot be measured, but is perceived by the soul and directly experienced (cf. H. Bergson's distinction between *temps* and *durée*; *mudda* is also found in Rāzī's terminology [cf. al-Bīrūnī, *op. cit.*], and the Ikhwān al-Sa'at. In the *Riḥla* xv., already mentioned, they speak of [physical] time as a duration which is measured by the motion of the sphere of heaven).

Mudda as the pure duration of life of the soul should probably be described as a mean between *samān* (accident of bodily motion) and *ḍahr* (duration of the spirit). This leads us to metaphysical considerations of the relation between time and eternity. The terminology here varies not only because they endeavour to bring Aristotle and Plato into harmony with one another but also because each writer and especially the mystic likes to use his own terms.

In a metaphor in the *Timaeus* Plato conceives of time as the image and emblem of eternity (cf. *Die sogenannte Theologie des Aristoteles*, ed. Fr. Dielerici, Leipzig 1882, p. 107, with *Timaeus*, p. 37 sqq., and H. Leisegang, *Die Begriffe der Zeit und Ewigkeit im späteren Platonismus* [Beitr. z. Gesch. d. Philos. im M. A., xiii. 4], Munich 1913, p. 1 sqq.). Only after the creation of the world-soul and the arrangement of the chaotic matter of the world did time begin with the regular movement of the sphere of heaven. The beautifully planned world and with it time will probably not come to an end. From Platonic tradition, especially through the intermediary of the Pseudo-Platarch and Galen, came the doctrine of beginning without end, and also speculations about time as identical with the motion of the sphere of heaven or with the sphere of heaven itself or even with the world-soul. If time was identified with the sphere of heaven and with the world-soul, it was called a substance (contrary to Aristotle who called it an accident).

After Aristotle became known, the suspect philosopher was recognized by his doctrine of the beginninglessness of time. Following the neo-Platonists, the followers of this doctrine were convinced that it was a reality in the form of a stair-case and it was therefore obvious that every kind of being has its own time or eternity. Only God is in the proper sense eternal, if not supereternal. That being and doing coalesce in the first cause (God) was certain to the philosophers, following Aristotle. God is eternal and therefore creates the world. The first creation, intelligence (*'aql*; *Le livre de la création* [see above], I. 154 sq. gives it as a Muslim conception, that higher time was the first creation,

i.e. the moment of the act of creation, while lower time comes from the motions of the sphere of heaven), is less eternal but in everlasting duration (*dhār*) and rest. The soul arising out of the intelligence is above time for it is the cause of time. This is the teaching of the so-called *Theology of Aristotle* (ed. Dielerici, p. 13 sqq.) with Plotinus. It is formally stated in the *Liber de causis* (Proklos): God as first cause is above duration, intelligence is equal to duration, the soul is below duration but above time, and nature is the field of the temporal (ed. O. Bardenhewer, Freiburg i. Br. 1882, p. 61 sq.). The activities of a being who is above time are, of course, carried on without consideration of time. They are compared with the activity of human thought, with the combination of form and matter, with the transmission of light through the world, all of which are timeless (on the question of sudden change, taking place in a flash, i.e. timeless, cf. H. A. Wolfson, *op. cit.*, p. 498 sqq., 543 sqq.).

For the theologians the question was at first very simple: an eternal God and a temporal world; there is no mean. The followers and opponents of the Muslim atomic theory were alike agreed on this. It was the fundamental principle of the atomists, to assert most emphatically that space contains a finite mass of atoms, and the duration of the world is limited to a finite number of moments of time.

The doctrine of a beginning and end of the world in time was defended by Ghazālī in the name of Muslim community against Fārābī and Ibn Sīnā in his *Tahāfut*. He attacks with vigour the Aristotelian doctrine of the beginninglessness of the world but a concession is made to Platonism. He cannot agree with Abū 'l-Hudhail when the latter asserts that an infinite number of revolutions of the sphere of heaven can be imagined in the future as little as in the past. Ghazālī finds the endlessness of the world conceivable but appeals to religious dogma, which clearly points to an end of the world (Algazel, *Fahāṣat al-Falāsifa*, ed. Bouyges, Bairūt 1927, p. 80 sq.).

Ibn Rushd rightly insists in his *Tahāfut al-Tahāfut* (ed. Bouyges, Bairūt 1930, p. 64 sqq.; also *Kitaḥ Falsafa*, Cairo 1313, p. 10 sqq. and L. Gauthier, *La théorie d'Ibn Rushd sur les rapports de la religion et de la philosophie*, Paris 1909, p. 103 sq.) that much in this polemic is a matter of words only. Theologians as well as philosophers distinguish between the eternal unending being (God) and the changing world: this is the main thing. It is a minor point whether this world as a whole is called temporal or eternal or always arising and decaying.

Only for the mystic, who lives in the eternal, does time in every form disappear. In a state of grace (*ḥāl*) the changing *waqt* in him becomes consolidated in the life in the eternal presence of God (*The Kaḥf al-Mahjūb*, transl. Nicholson, Leyden 1911, p. 367—370).

Bibliography: There is no monograph on the subject. We may mention the following in addition to the works already quoted: P. Duhem, *Le Système du Monde*, I. 271 sqq.; II. 465 sqq.; H. Junker, *Über iranische Quellen der hellenistischen Atom-Vorstellung* (*Verh. d. Bibl. Wartburg*, I.), Hamburg 1923; see also the articles DAHR, KBALĪ, ŠIDAM, MIŠĀT, WAQT. (T. DE BOER)

ZAMĀN (pl. *zamān*, *azmān*, *azmīna*), time. As a guide to the distinction in use between *zamān* (common to the Semitic languages) and *waqt* (only Arabic with the meaning of "time") the following rules may be deduced from the Arabic works of a scientific nature, although they appear to be not infrequently broken even in works that have been compiled with great care. *Zamān* is used predominantly for time as a philosophical or mathematical conception in contrast to *māhān*, "space" (the similarity in sound between these two words has possibly not been without influence on the preference given to *zamān* over *waqt* in this connection), for longer periods, centuries, length of reign of dynasties, historical epochs, and also in astronomical usage for the numerical value of a period of time which is variable by nature, e.g. the longitude, which differs with latitude and season of the year, of the "temporal hours" (*al-sā'at al-zamāniya*, Gr. *ḥorai kanonikai*, Lat. *horae temporales seu inaequales*) which, in contrast to our "equinoctial hours" which are always of the same length (*al-sā'at al-'isfālā*, Gr. *ḥorai isopsephai*, Lat. *horae equinoctiales*), are obtained by dividing the period of daylight into twelve; in this case they also talk of *azmān* (more rarely *amḥāt*) *al-sā'at al-naḥr wa 'l-lail al-zamāniya*. In contrast to this, *waqt* (pl. *awqāt*) means in astronomy definite points in time, also (usually constant) spaces of time (*waqt intiqāf al-naḥr*, the astronomical noon; *waqt intiqāf al-lail*, midnight; both meanings are found together in al-Battānī, *Opus Astronomicum*, ed. Nallino, III. 192; *al-waqt* ["space of time"] *alladhī ta'addu fihī 'l-ḥamsa 'lā 'l-djuz' alladhī kanat fihī fi waqt* ["a point of time"] *al-'isfālā*), and in general, periods of time of short duration, e.g. the length of a man's life or of a generation. *Waqt* is also used with the meaning of *καρπός* for the "correct time"; it may also mean the astronomical time of observation, but in this meaning the technical term *miḥāt* (pl. *manāḥit*) from the same root is more usual, which in turn can also mean the art of compiling calendars and the time of prayer [see *MIḤĀT*]. *Zamān* and *waqt* are also both found meaning "seasons of the year" as synonyms of *faṣl*.

In his *Amwār al-Tamīl wa-Aṣṣūr al-Ta'wīl* (ed. Fleischer, Leipzig 1846, I. 105) al-Balḥāwī, discussing the word *manāḥit* in the *Kuṣṣan*, Sūra II. 185, gives the following definition of *mudda*, *zamān* and *waqt*: "*al-mudda* means, strictly speaking, the period of revolution of the sphere from beginning to end (i.e. it means the totality of time, "from eternity to eternity"); *al-zamān* is subdivided *mudda* (i.e. a considerable space of time) and *al-waqt* the *zamān* chosen for any purpose (i.e. *waqt* arises out of *zamān* by further subdivision and means definite shorter intervals or points)". This schematised definition coincides in essentials with that above given.

Calculation of time. 4. The pre-Muḥammadan Calendar. Our knowledge of the early Arab method of reckoning time, which is based on scattered references in what remains of the old poetry is still very incomplete and cannot by any means be regarded as satisfactory on all points. There is much in favour of the view — especially the meaning of the majority of the old names of the months (Šafar I, II, Rabī' I, II, Djumādā I, II,

Ramadan) — that the old Arab year was lunisolar in character and resembled in some degree the Jewish year ("Tibrit year"). We must however make this limitation that it is hardly safe to assume a uniform division of time for the whole of Arabia in the early period. Among the Arab Beduin tribes as well as among other nomad peoples, there was originally a calendar based on the moon only — a so-called pure lunar year, and the adaptation to the solar year only took place later. This assumption is also supported by the statements of various Muslim scholars (used by Mahmud Effendi in his article in *J. A.*, 1858, ser. v., vol. xl.); for example al-Biruni (*Āḥḥār*, ed. Sachau, Leipzig 1878) agreeing with Abū Ma'shar Dīfār b. Muḥammad al-Balkhī (*Kitāb al-Ulūf fi Bayāt al-Badā'ī*) with whose work he was acquainted, mentions that the transition from pure lunar years to lunisolar years took place about two centuries before the Hijra under the influence of the Jewish year. The later theory adopted by F. K. Ginzel (*Chronologie*, i. 248) from Mahmud Effendi (*Mém. des savants étrangers de l'Académie royale de Belgique*, xxi., 1861) which assumes the existence of a pure lunar year in the period immediately before the Hijra cannot be quoted as a sound argument against the preceding, as it is not sufficiently established that the conjunction of Jupiter and Saturn in March 571 — the "conjunction of religion" (*ḡirān al-dīn*) — actually took place immediately before the birth of the Prophet and that we have not here to deal with a later conjunction. The Arab lunisolar year, like the Jewish, began in autumn; the year itself consisted of 12, in leap years 13 months, which were reckoned from *hiḥāl* to *hiḥāl* (new moon). The intercalation of the thirteenth month which was necessary to fix the beginning of the year at a definite period in the solar year was done empirically from time to time, on the average every two or three years. The much disputed word *naḥḥ* (*Sūra* ix. 37) indicates, as Moberg has recently conclusively shown (Axel Moberg, *Al-Naḥḥ in der islamischen Tradition*, Lund 1931), this intercalation of the extra month; this was first expressly prohibited by Muḥammad in the year 10 A. H. (*Kur'ān*, loc. cit.). The time of the *ḥajj* [q. v.] originally associated with autumn — i. e. fixed by the solar year — was fixed presumably by the cosmic setting (*nuḥḥ*, pl. *anḥḥ*) of one of the 28 stations of the moon (*manāzil*); this method of fixing solar dates is also found at a later period (cf. the *Calendrier de Cordoue de l'année 961*, ed. Dory, Leyden 1873) and we find it also in early periods in other parts of the world (China, India, Egypt). In Muḥammad's time however as a result of insufficient skill in observing and intercalating, the lunisolar year had advanced so far in front of the solar year that the beginning of the year, with the month *Dhu 'l-Hijja* which preceded it and the time of the *ḥajj*, fell in the spring.

In the later period of the Dīhīliya the names of the months were already fixed as we know them in the Muslim period, except that al-Muḥarram [q. v.] in the latter took the place of *Safar* I; they were *Safar* I, *Safar* II, *Rabi' I*, *Rabi' II*, *Djuma'd I*, *Djuma'd II*, *Radjab*, *Shā'ban*, *Ramadan*, *Shawwāl*, *Dhu 'l-Ka'da*, *Dhu 'l-Hijja*; it is to be noted that the first half year consisted of three double months. The names of the early Arab months as given us by al-Biruni are quite different;

these, supplanted by those just mentioned, were al-Ma'tamir (= *Safar* I), *Najjir*, *Khawwān*, *Bupān*, *Hantam* or *Hanam* (vocalization uncertain), *Zabba* or *Zabba*, al-*Aḥamm*, *Adil*, *Nazh*, *Waghil*, *Huwa'*, *Barak*; some of them are still occasionally found later as epithets of the corresponding Muhammadan months, e. g. al-*Aḥamm* for *Radjab*, *Adil* for *Shā'ban*. In addition to these, al-Biruni, al-Ma'sudi and the Sabaean inscriptions give many other names of months, which differ considerably with the different tribes and sources so that no deductions can be made from them about the earliest period of the Arab calendar.

According to Wellhausen (*Reise arabischen Heidentums*, Berlin 1897, p. 96 ff.), the year was originally divided into three months: the period of rain, of drought and of heat. In the old Arab poetry we find a division into four, *Kharif* or *Rabi'*, *Shit'*, *Saif* and *Kaif*, roughly corresponding to our autumn, winter, spring and summer; it is possible there was also a sixfold division into *Rabi'* (late harvest), *Kharif* (autumn), *Shit'* (winter), al-*Rabi'* al-*thāni* (early harvest), *Saif* (early summer) and *Kaif* (summer).

The use of the week of seven days can be proved to have existed at a very early period among the pagan Arabs. According to al-Biruni (*Āḥḥār*, p. 64), the old names of the days of the week were *Awwal* (Sunday), *Aḥwan*, *Duḥār*, *Dubār*, *Mu'nīs*, *Arūba* and *Shiyār*. It should not however be assumed that the seven day week was an original invention of the Arabs; on the contrary, many things point to its having been taken from Babylonia or the Jews, among whom it was established at a very early period.

The days were grouped within the month into ten groups of three each, the names of which, reckoned from the new moon (*hiḥāl*) were *Gharar*, *Nufal*, *Tumā*, *'Uḥar*, *Bid*, *Dura'*, *Zulam*, *Ḥanḫā* or *Dahm*, *Da'āl* and *Mihāk* (cf. al-Biruni, *op. cit.*, p. 63 ff.). The day itself began at sunset, as among the Jews and as was later the custom in Islām. There is no evidence of the division of the day into 24 hours in the pre-Muhammadan period.

Epochs. The fixed points or epochs used in the pre-Muhammadan period from which to reckon years seem to have been very numerous. Al-Biruni mentions battles, memorable events, the year of the restoration of the Ka'ba etc. as epochs of the different tribes (*op. cit.*, p. 34). More general seems to have been the reckoning from the "days of treason", *ayām al-ḥajjār* (probably between 585 and 591 A. D.), and from the "year of the Elephant", *am al-fil* (probably about 570 A. D.), the latter, being according to some authors, the year of Muḥammad's birth (571).

1. The Calendar in Islām. By the already mentioned prohibition of the *naḥḥ* in the year 10 A. H. by Muḥammad there came into use the system of reckoning by pure lunar months which is characteristic of Islām (one pure lunar month = 12 synodical months of 29^d 12^h 44^m 3^s = 354^d 8^h 48^m 36^s; the term lunar year is really stupid!). An adaptation to the annual course of the sun was now no longer possible and the beginning of the Muhammadan year therefore falls about 11 days behind each solar year, coming back to the same solar time in about 33 years; 33 lunar years are therefore almost equivalent to 32 solar years. From this proportion we get the approximation formulae

for transforming years A. H. into years A. D. and vice versa:

$$A. D. = \frac{1}{2} A. H. + 622 \text{ or } A. H. = \frac{1}{2} (A. D. - 622).$$

For exact calculations the *Vergleichungstabellen* by Wüstenfeld and Mahler are indispensable (see *Bibl.*).

According to the *Kāri* (Sura x. 5, etc.) which expressly makes the moon the measurer of time, the beginning of the month and of the year must be established as in ancient times by actual observation of the new moon and as a matter of fact the popular calendar still does this at the present day. For reasons which are readily intelligible, at quite an early period a cyclic reckoning established itself which, starting from the fact that the period of two lunations is approximately 59 days, gave the months alternately a length of 30 and 29 days so that 1 (Muharram), 3, 5, 7, 9, 11 have each 30 days and 2, 4, 6, 8, 10, 12 have 29 days. The ordinary year thus has 354 days. The difference of $365 \frac{1}{4} - 354$ (almost exactly $\frac{1}{4}$ day) by which the astronomical lunar year is longer was made good by intercalating 11 days (*yawm al-halal*) in every 30 lunar years. The most widely disseminated in Muslim lands is the practice of making years 2, 5, 7, 10, 13, 16, 18, 21, 24, 26 and 29 in the cycle of 30 leap years (*sana kabila*). The intercalated day itself is always given to the month *Dhu l-Hijja* which in the ordinary year has 29, in leap year 30 days (on other systems of intercalation, especially the Turkish eight year cycle, see Ginzel, *Chronologie*, i. 255).

The day (i. e. the *vayḡḡam*, *al-yawm al-lailatihi*) in the period of the *Djishiliya* was reckoned from sunset; as al-Farghānī emphasises, this method of counting comes from the fact that the first day of the month is fixed by the *hīlāl* (first light of new moon) which is always to be observed at sunset. The division of the *vayḡḡam* into 24 hours is however to be traced to Greek influence. In ordinary reckoning of time temporal hours (see above) alone are used, on the other hand the astronomers very often use equinoctial hours and always expressly describe them as such.

Instead of the old names of the days of the week, we find in Islām simply the cardinal numbers in altered form (from Sunday to Thursday). Friday becomes "the day of assembly" and Saturday the "Sabbath"; as follows: *Yawm al-Aḥad* (Sunday), *Yawm al-Ithnain* (Monday), *Yawm al-Thalāthā* (Tuesday), *Yawm al-Arbaʿa* (Wednesday), *Yawm al-Khamis* (Thursday), *Yawm al-Djumʿa* (Friday), *Yawm al-Sabt* (Saturday). (In the days of the week it should be remembered as already explained that *Yawm al-Aḥad* begins on the evening of our Saturday, *Yawm al-Ithnain* on the evening of Sunday, and so on, so that the Arabic and European names do not cover exactly the same 24 hours).

In Muslim chronology the year begins on 1st Muharram of the year in which the Prophet made his Hijra from Mecca to Yathrib (not the day of the Hijra itself or of the arrival in Medina, which is usually taken to be the 8th Rabiʿ I, i. e. Sept. 20, 622). It was Thursday (*Yawm al-Khamis*) July 15, 622 A. D., called *Taʾrīkh al-Hijra* (in the Julian reckoning by days, day 1, 948, 439). The introduction of this era only took place under the Caliph ʿUmar.

Besides the reckoning by years from the Hijra the most varied foreign eras were also in use

(see *TAʾRĪKH*). The most important was the Alexandrian era (called *Taʾrīkh al-Kibt* — "Coptic", Egyptians — or *Taʾrīkh al-Shuhada* — "of the Martyrs") reckoned by the *shuhūr al-Kibt* which was the earliest in use. This is a solar era, unlike the Muslim. The year, the length of which, like the Julian, is $365 \frac{1}{4}$ days, has 12 months of 30 days not dependent on the phases of the moon, in which 5 days were added to the last month and 6 in leap years. Every fourth year is a leap year. The Egyptian names of the months, some in corrupt form, were used. According to al-Battānī (*Op. Astr.*, iii. 100) they were: Tūt (in the Greek historians *ῥώθ*), Bāba (*ῥωβή*), Atūr (*ῥωτῆ*), Kiyahk (*ῥωκε*), Tūba (*ῥωβή*), Amāhīr (*ῥωχῆ*), Barmahāt (*ῥωμωτῆ*), Harmūdha (*ῥωμωτῆ*), Bashans (*ῥωχῆ*), Bawūna (*ῥωβή*), Abīb (*ῥωβή*), Misri (*ῥωσῆ*). The five or six intercalated days were called as among the Copts the "little month", *al-shahr al-qagḡir*. The years of this era are generally reckoned from 284 A. D., the year of the accession of the emperor Diocletian; on the other hand in al-Battānī from Friday, Aug. 29, 25 A. C. (Nallino, i. 244 gives an explanation of this). — Another era in frequent use is the Seleucid called *Taʾrīkh al-Rūm* or *Taʾrīkh Iskandar*, usually *Taʾrīkh Dhi l-Karnain* after the "two-horned Alexander". It is usually reckoned from Monday, Oct. 1 (in al-Battānī from Saturday, Sept. 1) 312 A. C. and uses the Julian year and the Julian intercalation, with the Syriac-Arabic names of the months, *shuhūr al-Rūm*, so-called because each of these months corresponds to one in the Roman calendar, as follows:

Tishrin al-awwal . . .	October	31 days
Tishrin al-thāni . . .	November	30 "
Kānun al-awwal . . .	December	31 "
Kānun al-thāni . . .	January	31 "
Shahād	February	28 or 29 days
Adhār	March	31 days
Nisān	April	30 "
Aiyār	May	31 "
Ḥazirān	June	30 "
Tamūz	July	31 "
Ab	August	31 "
Alīl	September	30 "

These names of months are also used in the calendar of the Syrian Christians. — On other eras see al-Battānī, ch. xxxii. and Nallino's notes, i. 242 sqq.

The Arabo-Egyptian land-tax year (*al-sana al-kharāʿiyya*), which was introduced after the conquest of Egypt by the Arabs and used for long periods, was a solar year, the beginning of which coincided with that of the Egyptian solar year. The years were counted from the date of the Hijra; there thus arose differences between the number of Hijra years and those of the *kharāʿi*-years, which frequently caused confusion in dating. In Egypt itself this form of year was also in everyday use among the people (for further information see Ginzel, *op. cit.*, i. p. 264–265).

The Turkish financial year (*mālīye year*) which, along with the Hijra (lunar) year used mainly for religious purposes, was the official year, is in form — apart from its date of commencement — identical with the Julian year. The names of the months are with slight variations the same as those of the Syrian-Arab year already mentioned. The year begins on March 1; Feb. 29 is the intercalated day and also the last day of the year;

the leap-years are therefore, as can easily be understood, always a year in advance of those of the Christian era. The Turkish financial year goes back to an Arabic year introduced in the 14th (15th) century under the 'Abbasids; it was introduced among the Turks in 1087 (1677). The years themselves are numbered by Hijra years; in order to equate, in this system of counting, with the shorter lunar years, a year is dropped every 33 years, which is called *sivish* (Turk. = cancellation). The year 1285 (1871) which ought strictly to have been Sivish was deliberately counted as a full year which threw the *mâlîye* years out for a time. — Quite recently the Gregorian calendar has been officially adopted in Turkey.

ZAMINDĀR (P.), a landholder, the possessor of a landed estate. In Bengal these holdings are usually extensive and the zamindār is responsible to the Government for the rent of his estate and also in some degree for the maintenance of order therein. In other parts of India zamindārs have smaller estates, held sometimes in common, under a settlement periodically renewable.

ZAMORA (Ar. SAMMURĀ), a town in the N. W. of Spain, capital of the province of the same name, 2,130 feet above sea-level on the left bank of the Duero, has now a much reduced population (16,000). The Arab geographers of Spain describe it as a town in the country of the Galicians (al-Djalālīka). It was, after the conquest of al-Andalus, peopled by Berbers and had to be evacuated at the beginning of the eighth century as a result of the territorial gains of the Christian kingdom of Leon. Retaken by the Muslims, it was reconquered and rebuilt in 280 (893) by Alfonso III. 'Abd al-Rahmān III attacked it in 327 (939) but without success; at the end of his reign he assisted Sancho of Navarre to reconquer it on his own account in 348 (959). When the *ḥudūd* al-Manṣūr [q. v.] Ibn Abi Amir, after disposing of his father-in-law, the general Qhalib, undertook in 371 (981) an expedition against Galicia, he gave the Umayyad prince 'Abd Allāh called "Dry Stone" the task of taking Zamora. He was not able to take the citadel of the town and contented himself with ravaging the country round and carrying off 4,000 prisoners. When al-Manṣūr had conquered Galicia and Bermudo II had arisen

there again, the *ḥudūd*, in 378 (988–989) after taking Leon, laid siege to the Christian prince in Zamora; Bermudo fled and the inhabitants handed the town over to al-Manṣūr. A little later in 385 (999) the *ḥudūd* placed a Muslim population in Zamora and gave the government of the town to Abu 'l-Aḥway Ma'n b. 'Abd al-'Aziz [q. v.] al-Tudjibī. This occupation did not last long, for Zamora was attacked by the second 'Amirid *ḥudūd* 'Abd al-Malik al-Manṣūr in his expedition of 395 (1005) against Galicia. After this the Muslim chroniclers make no mention of Zamora, which was now to play an important part in Castilian history down to the end of the middle ages, especially in the period of the Cid.

(E. LÉVI-PROVENÇAL)

ZAMZAM, the sacred well of Mecca, also called the well of Imā'il. It is in al-ḥaram al-sharīf S. E. of the Ka'ba opposite the corner of the sanctuary in which the Black Stone is inserted. It is 140 feet deep and is surmounted by an elegant dome. The pilgrims drink its water as health-giving and take it home with them to give it to the sick. Zamzam in Arabic means "abundant water" and zamzama "to drink by little gulps" and "to mutter through the teeth".

Muslim tradition connects the origin of this well with the story of Abraham. It was opened by the angel Gabriel to save Hagar and her son Imā'il, who were dying of thirst in the desert. Hagar was the first to catch its water by building a wall of stone around it. It is at least certain that it was held in reverence at a very early period. In the pre-Islamic period the Persians used to come there as a line of an old poet shows: "The Persians muttered their prayers around the well of Zamzam from the earliest times". According to another poet, the well was visited by Sā'ad son of Bihak, the ancestor of the Sāsānids.

In the period of paganism, the Djurhumīs filled in Zamzam and threw all their treasure into it. Ma'ūdī however remarks that the Djurhumīs were poor and that the treasures buried there must have been brought not by them, but by the Persians.

The well was rediscovered and dug out by 'Abd al-Muṭṭalib, the ancestor of the Prophet, who provided it with walls of masonry; he took out of it two gazelles of gold, some "Ka'biya" swords and some cuirasses. With the swords he made the door of the Ka'ba, which he covered with plates of gold made from one of the gazelles and he put the other inside the sanctuary. The water of the well was distributed to the inhabitants of Mecca.

In 297 (909) Zamzam overflowed, a thing which had never been known before and several pilgrims were drowned.

Zamzam; picture in Snouck Hurgronje, *Bilder aus Mekka*, Leyden 1889, Nrs. i., iii.; *The Travels of Ali Bey*, ii., pl. lvii. (B. CARRE DE VAUX)

ZANDAQA. [See ZINDĪQ.]

ZANDJ, the name of the negro tribes of the east coast of Africa, given by the Arab historians to the rebel slaves who, having previously rebelled in 75 (694), for fifteen years (255—270 = 868—883) terrorised lower Mesopotamia.

This rising is very important for it is a war of a classical type, a regular "social war" directed against Baghdad like those of Eunus (140 B.C.) and Spartacus (73—71 B.C.) against Rome, like that of Toussaint Louverture in Haiti (1794—1801), like the strikes of Natal coolies led by Gandhi (1906—1913) against European colonisation.

The rebels were, according to Tabari, our principal source, employed as navvies (*ḥasān*); their task was to make lower Mesopotamia arable, to remove the *ṣabāḥ*, and to pile it up in mounds to make the nitrous lands of the Shatt al-'Arab cultivable (*ḥasān*), from *ḥasān*, nitre, a Persian term used also in 'Omān; cf. de Goeje, *Glossaire de Tabari*, s. v. *ḥasān*, following the *Kitaḥ al-'Uyūn*. They were mainly recruited from imported negro slaves and from the peasants of the country, grouped in gangs of 500—5,000 labourers and penned there homeless and hopeless, all their food being a few handfuls "of flour, semolina and dates". Through contact with the Islam of their masters, by a process of spiritual induction, these unfortunate creatures learned that they had a right to exist and to a minimum of justice; the influence of the Muslim cenobites of the neighbouring hermitages of 'Abbādān was perhaps also felt.

These slaves then found a leader who was resolved to put an end to their misery, an 'Alid pretender with a disputed but perhaps genuine pedigree, for al-Bīrūnī says that the Shī'is still celebrated his festival on Ramaḍān 26; he took the name of 'Alī b. Muḥammad b. Aḥmad b. 'Isā b. Zaid b. 'Abbās b. 'Alī b. Husain b. 'Alī and was called al-Burḡū'ī "the veiled". Assisted by a certain Rashīd Ḳarmāḡī (perhaps connected with the Ḳarmāṭian propaganda then just beginning), by a miller and a lemonade seller, he had the oath of fealty sworn to him by his runaway slaves (*ḥabīb*) in an oath *bi 'Aḥlāḥ* in the Ḳarmāṭian fashion [cf. *ḲARMĀṬIANS*, SURĀḤIYĀ]; he raised the standard of rebellion on the 7th Ramaḍān 255 (868) and uttered the Ḳur'ānic verse called of the *ḥurūt* (ix. 112) devoting himself to war to the knife (*ḥurūtī ḥudūd bi 'Nāḥ*).

Our sources unfortunately give few details of his system of government which was of a communistic type. They refer almost exclusively to the course of the war which was waged mercilessly on the Zandj by the 'Abbāsid regent Muwaffaq. Setting out from Djuḥḥā, the Zandj leader divided his forces, armed with slings, into two divisions (1. the *Zandj* in the strict sense, 2. *Furūṭiyā*, *Ḳarmāṭiyā*, *Nāḥ*)

and supported by the Arab tribe of the Banū Tamīm with a fleet he took in succession Ubulla, 'Abbādān, southern Ahwāz and finally the great city of Baṣra. He advanced as far as Wāsiṭ (264 = 877), Qjabbul, Nu'māniya, Djardjān'iya and Rām-hurmus. The regent, realising the greatness of the danger, mobilised all his forces for a second offensive. It took him three years to finish the war; first he broke through the five enclosures of the camp of Maṣra, then laid siege to the Zandj headquarters at Maḥḥāra (268 = 881), on the canal Abu 'l-Khaṣīb south of Baṣra; it only capitulated in 269 (882) and al-Burḡū'ī was killed on 2nd Šafar 270 (883). The rebellion was savagely suppressed, those who had fled returned and the old order was restored.

(L. MASSIGNON)

ZANDJĀN, a town in northern Persia, capital of the province of Ḳhamsa which lies between Ḳarwīn, Hamadān, Aḥarḥādījān and Gilān.

Geography. The town of Zandjān is situated on the river Zangīnārūd (the old name of which, according to the *Nuḥat al-Ḳulūb*, p. 221, was Mādī-rūd), which runs from east to west and joins the Safīd-rūd [q. v.] on its right bank. Zandjān is an important station on the great road from Aḥarḥādījān to Ḳarwīn and thence to Tīhrān and Ḳhurāsān. Zandjān is also at the junction of several other roads; to the north, that to Ardabil [cf. TĀROM] and Gilān (via Maṣāla); to the S. W., that to Marāgha [q. v.] and to Sa'īn-Kāi'a [q. v., No. 1]; to the south, that to Hamadān. This last road used occasionally to be used by pilgrims coming from the north who wished to avoid the proximity of Ḳurdīstān.

The country to the south of Zandjān which is under it has been rarely visited by travellers but is represented on our maps with sufficient clearness. In 1880 several engineers worked there on behalf of the Persian government, who had learned that there were deposits of gold there.

The 17 districts of the province of Ḳhamsa are as a rule named after the rivers of the Safīd-rūd basin (H. Schindler): Aḥar-rūd [cf. Yāḳūt, i. 104, in Persian: Awhar, explained as "mill water"; its waters flow to the plain of Ḳarwīn], Do-dānge, Khodā-bāndelū, Soḡḡs-rūd [cf. Yāḳūt, iii. 40 and Iṣṭaḥrī, p. 196; the present capital is Maḥḥād-ābād], Sohrāward (Yāḳūt, iii. 203; سهرورد often confused with شاهرورد, Shahrāzūr; q. v.), Idjārūd (to the south

of the Zandjān-Takht-i Sulaimān road), Kīlīf-gāci-rūd, Angūrān, Ūryād (< Oyrat), Golbāsrūd, Bīzīnārūd, Ḳāni-beglu, Armoghān, Tārom [q. v.], Khuyūn-āy, Garmāb, Zandjānārūd.

Although Zandjān lies considerably to the east of Aḥarḥādījān, it belongs to the Turkish linguistic zone (cf. Fortescue, *The Western Elburz*, in *G.* 7, 1924, April, p. 310). The province is mainly inhabited by Afshārs [q. v.] whose amirs were still able to play a part in politics in 1914—1916. Besides the Afshārs, there is the tribe of Dowsyārān, who consider themselves Shāh-sewān [q. v.].

History. Andreas (Pauly-Wissowa, *Realencykl.*, i. 731) has very ingeniously identified Zandjān with

'*Arzū Zanj*' (*Arzū Zanj*) in Ptolemy, vi. 2, 11. Thomas Arisaron (transl. Brossier, p. 193) calls it Zangon. According to the *Nuḥāt al-Kulūb*, p. 61, the town was built (rebuilt) by Artashir Bābān under the name of Shāhin. Zandjān is rarely mentioned in history. The Muslims coming from Raiy took it in 24 (= 645; Baladhuri, p. 322; Yāqūt, ii. 928).

Ibn Khurdādhbih, p. 57, includes Zandjān in the "Pahlawi" countries (*bilād al-Bahlawīya*) and it is curious that according to the *Nuḥāt al-Kulūb* the people of Zandjān "speak pure Pahlawi", i.e. a northern Iranian dialect. The intermediary position of Zandjān is reflected in the Arab geographers, who treat it sometimes under al-Djibāl (Iṣṣakht, p. 198), sometimes under Dailām (*ibid.*, p. 195) sometimes under Ḥaḥarabādjān (Muḥaddas, p. 386), sometimes under Raiy (Muḥaddas, p. 386).

In the tenth century, Zandjān came within the sphere of the activities of the Dailāms (cf. *ibid.*, p. 195). The stronghold of Sar-djāhān is often mentioned in the N. E. of Zandjān (to the north of the Kōhrūd; cf. *SA'IN-SAL'A*, No. 2; *Nuḥāt al-Kulūb*, p. 64). Under the Mongols Zandjān was ruined and the region between Zandjān and Tabriz attracted the tribes of the conquerors. The name of the district of Uryād still preserves the memory of the Oyrat. The Ilkhān Arghūn was buried in the district of Sudjān (*ḥorūḡi Arghūn*, "Arghūn's sanctuary"; *Nuḥāt al-Kulūb*, p. 64; transl. p. 69). At the beginning of the sixteenth century, Zandjān was close to the new capital Sultāniya (q.v.). The *Nuḥāt al-Kulūb*, written in 1340, contains many details about the region of Zandjān (p. 56, 61, 106, 182, 217, 221). At this time the revenues of the town were 12,000 dinars and those of the district 8,000 dinars. In the post-Safawid period, the arena of Turco-Persian struggle extended as far as Zandjān. In the sixteenth century Zandjān was best known as one of the centres of the Bābis who in 1266 (1850) there offered armed resistance to the government (cf. *Tārīkh-i Jafārī*, transl. Beuzun, p. 135-169).

(V. MINORSKY)

AL-ZANDJĀNĪ, 'IZĪ AL-DĪN 'ABD AL-WAHHĪD b. 'IMRĀHIM b. 'ABD AL-WAHHĪD b. 'ABD 'L-JĀ'ALY AL-KHAIRĀDĪ, also called AL-'IZĪ, an Arabic grammarian, who lived in the first half of the sixth (xiiith) century. The place and date of his birth are unknown and the date of his death is also uncertain. The few facts that we know of his life are given us by Ḥādījī Khālifa, who in giving the works of al-Zandjānī adds what the latter says about their date and place of composition. We thus know that he stayed in Mōsal in 637 (1239) where he finished his *al-Maḥrīḥ 'ammal* i. 'L-Niḥāḥ = 'L-Maḥrīḥ, a work on the dictionaries *Niḥāḥ* and *al-Maḥrīḥ*. Later he was in Bagdad, where, as he tells us at the end of the work, he finished the commentary called *al-Hādī* on his grammatical work *Mahādī* i. 'L-Taḥrīf in 654 (1256) and the two volume commentary *al-Kaḥf* on his grammatical work *al-Hādī* i. 'L-Naḥw. He also finished his *Minan al-Hādī* i. 'L-Naḥw wa 'L-Taḥrīf at the same time. Next year he completed a commentary on the *Kaḥf* i. 'L-Aḥwāl of al-Zamakhsharī, called *Taḥrīḥ al-Miḥyā* i. 'L-Taḥrīf al-Kaḥf. According to Ḥādījī Khālifa, he died some time after 655 (1257) but we do not know the exact date. Besides these and other works on grammar, he wrote a book on the use of the astrolabe and made a collection of Arabic poems. The latter book, called *al-Maḥnūn bihi 'alā ghairi Ahlāḥ*, is an anthology on the lines of the *Hamāsa* of Abū Tammām or of al-Baḥtūrī. It contains verses by Arab poets of the time of the Djāhiliyya, of the Muḥammadīn (see *MOHAMMAD*) and of the post-classical period, which he took from their diwāns and earlier anthologies. A commentary on it was written by 'Uḥaid Allāh b. 'Abd al-Kāfi b. 'Abd al-Majīd al-'Uḥaidī. Neither Ḥādījī Khālifa nor al-Suyūṭī, who mentions al-Zandjānī in the *Bughyat al-Wuḥāt* i. 'L-Taḥrīf al-Lughawīya wa 'L-Nuḥāt (Cairo 1326, p. 318), mentions this collection.

(ILSE LICHTENSTÄDTER)

ZANQI. (See ZENGI.)

ZANZIBAR (AL-ZANZIBĀR), capital of the island of the same name, which lies off the east coast of Africa in 6° South Lat. The town is on the west side of the island 26 miles N. E. of the harbour of Bagamoyo in 6° 9' S. Lat. and 39° 15' East Long. and forms a triangular peninsula 1½ miles in length, which runs from east to west and affords a roomy anchorage, one of the best in Africa. The peninsula is connected with the mainland of the island by a narrow isthmus on which there is a cemetery; on the bay is the native quarter u'Gambo and there is also an Indian and a European quarter. The town which, since the Anglo-German agreement of July 1, 1890, has been the centre of the judicial, military and administrative authorities of the English protectorate and at the last census (1931) had 45,276 inhabitants, owes its rise to Sulṭān Sa'īd Sa'īd of Maskat and Zanzibar who made it his capital in 1832 and by able policy made it the principal commercial centre of

East Africa from Cape Guardafui to Delagoa Bay. He and his successors have also done a great deal for the architectural development of the town. Sa'ïd himself built a palace in Zanzibar and at Mtoni, three miles away, Sul'fîn Barghash built a new palace in Chukwani, which was connected with Zanzibar by a railway, and other buildings in the town and brought water from Mtoni to Zanzibar. The town is noted for its fruits: bananas, lemons, mangoes, oranges, coconuts; it is connected by good motor roads with the towns of Mkokotoni, Chwaka, and Fumba and by seven miles of railway with Bububu. The Eastern Telegraph Company maintains a cable between Mombasa [q. v.] (Mombasa) and Zanzibar which secures communication with the ports of East and South Africa, 'Aden, Egypt, India, China and Europe. There is wireless telegraphy between Pemba and Zanzibar, which are also connected by telephone. Connections by sea are maintained by a number of steamship lines, such as the Clan-Ellerman-Harrison and Ellerman-Bucknall lines, the German East Africa line from Hamburg via the Cape of Good Hope and Socx, the Compagnia Italiana Transatlantica with Genoa, Majawwa, 'Aden, Italian Benadir and Kenya, the Navigazione Libera Triestina with Venice via the Cape of Good Hope and Socx, the United Netherlands Navigation Company with the Dutch Indies and Holland, the Koninklijke Paketvaartmaatschappij with Java, the Osaka Shose Kaisha with Japan and South America, the Cowasjee Dinshaw & Brothers with Kismayu, the British India Steam Navigation Company with Bombay and Durban. In 1931, 346 ocean steamers with a total tonnage of 1,467,000 tons called at Zanzibar as well as 316 coasting steamers of 125,000 tons, 3,562 dhows with a total of 69,000 tons. The principle article of commerce is the clove, the cultivation of which was introduced by the Arabs in 1820, and copra. It is to these that Zanzibar owes its wealth. The other local products play a smaller part in the export trade, hides and leather, pepper, soap and copal. Articles imported for export to the mainland are cotton goods, rice, colonial products, petroleum, soap and provisions. Imports from Africa consist mainly of copra, ivory, hides, leather, copal resin, which are sent to England, India, America and Europe. The harbour is a base for whale-fishers in the Antarctic seas and as such of considerable importance. Zanzibar is also the headquarters of all the firms that trade with the mainland, English, German, Portuguese and Indian. Among the population the industrious Indians with 10,926 take second place after the 26,646 Africans. The Parsis, mainly from Bombay, are the largest contingent. Some of them engage in intellectual professions but they are mainly merchants and officials in the English service. The Muslim population is Sunni of the Shâfi'î school; only the ruling dynasty and its relatives are of the Ibâdî sect (see ANAPOSTES). Zanzibar has three Christian missions. The Church of England Universities' Mission to Central Africa (founded 1864) maintains a hospital, a training school for teachers and a high school; there is also a cathedral. The Roman Catholic Pères du Saint-Esprit have had a mission in Zanzibar since 1856.

II. The Swahili population.

Swahili, a name "nowadays generally accepted to mean the mixed race — a blend of the aboriginal coast natives, slaves brought from the up-country region, and Arabs — which lives in most of the towns on the coast and in Zanzibar" (Ingrams, p. 30; for a list of the principal tribes referred to, see p. 220). The word is evidently derived from *Sawāhili* (pl. of *Sāhili*), a name used from the earliest times by Arab writers to denote the east coast of Africa, but it is not clear when it was first applied to the people, who are usually called *Zandī* [q. v.]. Strandes points out (p. 161) that the name "Swahili" nowhere occurs in the Portuguese records. The mixed race originated as early as the beginning of the Christian era, probably earlier; since the author of the *Periplus* mentions it as an established fact that Arab traders settled on the coast and married native women (Schoff, p. 28). Of post-Islamic settlements, the most northerly would seem to be the oldest; Pate, if tradition can be trusted, was founded in 69 (689). Swahili in general seem to look to this northern area as the country of their origin (*nchi ya asili*) and consider the dialects of Lamu and Mombasa as, in a sense, classical. The language of the older poems, which has supplied the conventions of modern poetry, is called *Kingwi* and is said to have been spoken in the district about Malindi (Steere²). Duarte Barbosa mentions that the "Moors" of Kilwa spoke Arabic, and this has continued to be the case with recent immigrants and those Arab families who have kept this descent unmixed; but, with the prevalence of slavery and the multiplication of half-castes, many, if not most of whom attained the status of free men, a language gradually grew up, African in structure, but strongly influenced by Arabic as regards vocabulary. The language, naturally, would vary locally, according to the tribes with whom the Arab settlers were chiefly brought in contact, or whence their slaves were drawn, but it is clear that these were mainly, if not entirely, Bantu-speaking. It is true that, according to Lamu tradition, the natives found by the first settlers on the island of Pate were Wabont, a hunting tribe who still inhabit the forests of the Tana Valley, speaking a non-Bantu language, of which very little has hitherto been recorded. Whether this is so or not, no trace of Bani speech seems to be discoverable in Swahili.

It is clear that no distinct "Swahili" tribe existed prior to and apart from the extraneous infiltrations above indicated — Arab, Persian (possibly pre-Islamic and certainly dating from, at least, the settlement of Kilwa, 975 A.D.; Ingrams, p. 76, 126; Hollis, p. 275, 282), possibly Indian and Indonesian. — A Swahili, at the present day, may be pure African, without a trace of Arab or other foreign descent.

As might be expected from the circumstances, there is no uniform physical type, but nearly all,

except a minority of pure Arabs, show definite African characteristics. Within the same family there may be various gradations of colour, while some members have woolly hair and others wavy or straight. Burton's description (p. 414 *agg.*) appears somewhat of a caricature, and this applies still more to his account of their character; but he was apt to look on everything African with a jaundiced eye (cf. Ingrams, ch. xvii.). All Swahili, with insignificant exceptions (conversions to Christianity are very few), are professed Muslims, usually Sunnis of the Shāfi'ī school; the Arabs are all, or mostly, Ibādī (Ingrams, p. 188—193, 434). But, as elsewhere, among the less instructed, there is a considerable infusion of animism. At Mombasa, e.g., vows and offerings are made at the grave of a saint known as Shehe Jundani, usually in order to injure some enemy. Ingrams (p. 435 *agg.*) enumerates various superstitions and magical practices, with references (p. 501, 505) to some abnormal occurrences (apparently related to good authority), which have never been satisfactorily explained.

The Swahili language, as already stated, is essentially African — and specifically Bantu — in structure, though it cannot be said to be based on any one Bantu language. The Pokomo of the Tana Valley would probably be the tribe with whom the early settlers of Pate and Lamu came most in contact; and, certainly, the influence of their language on the Lamu dialect of Swahili is unmistakable. On a superficial view it would seem that they were the only Bantu-speaking tribe within the reach of the northern Arab settlements until the sixteenth century, when, according to their tradition, the "Nyika" tribes moved southward from "Shugwaya". But there is no evidence that this place (now included in Italian Somaliland) was their original home. There is no reason to doubt that this migration was preceded by unrecorded movements from the south or the west. Ingrams's argument (p. 64) that the natives mentioned in the *Periplus* could not have been Bantu is hardly conclusive; it must be borne in mind, *inter alia*, that "Bantu" is no more a racial designation than "English-speaking peoples" would be.

The general characteristics of the Bantu languages may be summarised as: agglutinative structure, the system of noun-classes and absence of grammatical gender. The noun-classes in Swahili have undergone considerable attrition, indicating a long course of development and, also, extensive foreign contact. One is struck by the comparative rarity of vocal images (*Lautbilder*), so remarkable a feature in e.g. Zulu, Nyanja and Yao, and also by the development of the relative clause — a stumbling-block to European students, which is absent in the more primitive forms of Bantu speech.

Of foreign elements in the Swahili vocabulary, the Arabic is obviously the most conspicuous. It has played the same part in Swahili as Latin in the Teutonic tongues, more especially in English. As might be expected, many such are technical terms of theology or ritual: *dina*, *kusali* (*ku-* being the infinitive prefix), *harufutu*, *imamu*, *ketuba*, etc. The adoption of such words as *sultani*, *amiri*, *dola* is an obvious necessity; also names of objects introduced by the Arabs: *sakani* = plate, *ufuria* = metal pot, *erefa* = upper story of a house, *jahazi* = sailing-ship, and many more. In some cases the

introduction of an Arabic word seems quite unnecessary, e.g. *zamani*, for the old Swahili *amri* = fish (found in Pokomo as *amri*), *wasili* for *hika* = arrive, *vuli* for *aya* = return (cf. Zulu *buya*), *zamani* for *dale* = long ago, *nahali* for *pantu* = place. Arabic influence on Swahili grammar is confined to the introduction of prepositions and conjunctions (parts of speech noticeably wanting in Bantu), such as *kutika*, *labini*, *wala*, (*kwa*) *sababu*, *hika*, etc., which may be said to supply a felt want and certainly facilitate literary composition.

The pronunciation of Arabic words has, naturally, been considerably modified, largely by the introduction of vowels between two consonants, as *riiki* from *riq* since all Swahili syllables are open. An interesting point emerges in connection with the words *kurafa* ('arf) and *kurasi* ('ars), where the aspirate, in popular pronunciation, has taken the place of ' (it is omitted by some speakers, which, indeed, is considered more correct). Elsewhere ' is reduced to a mere glottal stop, or simply disregarded; *ga* — except by pedantic Arabisers — is pronounced sometimes as *g*, sometimes as *k*. The vocalisation of Arabic verbs has occasioned some perplexity: *rusuku* from *rasaka*; *safiri* from *safara*. But, as Seidel has pointed out (p. 101), Arabic verbs in Swahili are taken from the imperfect, not from the ground-form. Persian loan-words occur sporadically, some, possibly, imported at an early stage, e.g. *loma*, "a fortified enclosure"; *pemba*, "cotton"; *kiboko*, "hippopotamus" (but primarily the whip made from the animal's hide), from *balut*. Some have probably come through Arabic, as *turwali*, "trousers"; *marifani*, "coral"; *hustani*, "garden". Loan-words from Portuguese are not numerous: *mesa*, "table"; *garca*, derived from *igreja*, but now used to mean "fort" or "prison"; *winaya*, from *vinda*, and several words connected with card-games. Recently there have been extensive borrowings from English.

It is uncertain how long the Arabic script has been in use for writing Swahili; no MSS. as yet discovered would appear to be more than 200 years old, yet such a poem as the *Tabika*, which Taylor (Stigand, p. 94) conjectures to have been composed earlier than 1498, can hardly have been orally transmitted, and, in fact, presupposes a long period of culture. The Arabic script is still extensively used for correspondence, especially at Zanzibar and the towns north of Mombasa, though an increasing acquaintance with the Roman character, acquired in Mission and Government schools, is tending to displace it. Indeed, it is far better adapted for rendering the sounds of Swahili. The Persian *پ* and *ف* are very generally used for *p* and *f*, though less educated writers sometimes employ *ب* and *ف*; e.g. *بَیْت* and *فَیْت* for *pepe*, *fitu*. *Ch* (*ch*) is rendered, sometimes by *ش* sometimes, chiefly by Northern scribes, by *چ*; *g* by *غ* occasionally by *ج* and *گ*, *ng* by *نْغ*. A nasal before another consonant (as in the common combinations *ma*, *ny*, *me*) is usually omitted (thus *nyumba* is written *نِیْب*), but *nd* is frequently rendered by the sign *نْ* (*نْ* for *ndenda*). It follows that Swahili in Arabic script cannot be read with-

out the vowel-points, and even with them, if carelessly placed. An example of the confusion thus produced is quoted by Steere¹ (p. 6).

The existing Swahili literature (apart from that produced, under European encouragement, during the last few decades) is confined to poetry. The lyrics ascribed to Liongo Fumo, if genuine, probably go back to the thirteenth century at latest. Of the numerous poems collected by the late C. G. Büttner, three were published by him in *Anthologie*, and one, since his death, by Meinhof, in *Z. K.* (ii. 1911—1912). The collections of the late W. E. Taylor still remain in MS. The art of poetry is still being cultivated, as shown by the recent work of Muhammad b. Abū Bakr b. 'Omar (Kijuma) at Lamu and Bwana Silimu at Mombasa.

The metric system, originally borrowed from Arabia, has been modified in accordance with the genius of the language, with its uniform penultimate stress and richness of vocalisation.

It must not be forgotten that, side by side with these products of conscious literary art, we find a living stream of folk-poetry, comparable to that of Southern Europe. Specimens of such folk-songs have been collected by Zache, Velten and others.

(ALICE WERNER)

ZĀR is in Arabic a loanword from Amharic, as the popular beliefs in the genii *zār* were imported from Abyssinia into the Islamic world. Similar ideas about genii who may temporarily become incarnate in particular human beings, are found in various Muslim countries of Asia and Africa where they have special names: such as *shūl* (Nigeria and Tripolitania) and *amōō* (Malaya). This article, however, is concerned only with the habits of the *zār* adopted with that name in Egypt, Hijaz and 'Omān, besides Abyssinia.

In Abyssinia itself the name *zār* is of non-Semitic origin. *Zār* is very probably derived from the name of the supreme divinity of the pagan Kughites, the God-Heaven called in Agau (Bilen): *gār*; and in Sidama languages (Kaffa): *yār*; (*Baro*): *darō*. The ancient pagan god became in christianized Abyssinia a malevolent genius; and in this way the animistic practices, which in the paganism of the Kughites were

directed only to the minor superhuman beings, passed into Abyssinian Christianity (and then into Islam) with the proper name of the God-Heaven who had been reduced to a minor rank.

In Abyssinia Christians and Muslims believe that the *zār* (who lives especially in rivers, streams and other running waters) may be driven out of the body of the possessed person by the use of amulets or rites common to the followers of both religions. During these rites the *zār* is summoned "to tell his name"; because that would cause him to lose his power.

By the peoples of Southern Ethiopia (Galla and Sidama), however, besides these exorcistic rites, there are other ceremonies intended to force the evil spirit to enter the bodies of initiated persons. When the evil spirit has possessed these persons, they prophesy and each word or gesture by them is believed to be a revelation by the spirit.

In Egypt the ceremonies connected with the *zār* were probably imported in the sixteenth century; and their Amharic name *zār* and their exorcistic character are clear evidence of their origin from Northern (Semitic) Abyssinia. (The popular Arabic etymology recorded by Zwemer: "*zār* because he is a [sinister] visitor" has, of course, no real basis). The exorcistic ceremony is often conducted by a woman: the *zāriša* or *'arīša al-zikka*. The spirit must be differently treated according to its place of origin (they distinguish genii from Cairo, Upper Egypt, Sūdān etc.). It is necessary, therefore, to get "the right melody, the right song and right clothes", all these things being different for the Cairne or Sūdānese etc. spirits. The songs are accompanied by little drums and dances. A sacrifice of fowls is also usually offered to the spirit. The ceremony may last, in special cases, many nights. Pamphlets condemning the *zār* practises have been printed in Cairo.

In the Hijāz the belief in the *zār* was imported, according to Snouck Hurgronje, by Abyssinian slaves. It has the same characteristics as in Egypt and is widely diffused among Meccan women. The *zāriša*, who conducts the rites, tries to ascertain the nationality of the *zār* by questioning him either in vulgar Arabic or in a particular *zār*-language known only to initiated persons.

To 'Omān the *zār* has come in the same way. A plural (*zāriin*) of the name *zār* in the dialect of 'Omān seems to be unknown elsewhere.

In Somaliland only do we find, besides the exorcistic rites, other ceremonies intended to procure the incarnation of the genius (called in Somali: *zār*).

(ENRICO CERULLI)

ZARANDJ, a town in Persia, the former capital and principal town of Sijistān to the south of Herāt, at a distance of ten days' journey in a desert traversed by canals led from the river Hindimend (Hilmend). Attacked by al-Rabi' b. Ziyād al-Harithi in 30 (651), he left it to the satrap Parwiz on payment of 200 slaves, each carrying a basin of gold. At the end of 2½ years, al-Rabi' was replaced by 'Abd al-Rahmān b. Samarra who besieged the satrap in the citadel and made peace on payment of 2,000,000 dirhams and 2,000 slaves. At one time fortified and surrounded by a ditch as was its suburb, it had five iron gates: the new gate and the old on the Fars side in the west, the gate of Karkōye on the Khūstān side in the north, the gate of Nāhak on the Hot side and the gate al-Tā'im towards the villages. The houses were built in vaulted porticoes of brick (*maḥḥāḥ*) because wood there was eaten by ants. It had been a palace of Ya'qūb b. Laith, the white Saffarid (cf. *ṣaḥḥāt*) and of his brother 'Amr; inside the town was a building called Arg (fortress, *arx*) which was the treasury built by 'Amr. There were markets around the principal mosque; one of them was built by 'Amr who made it a *waḥf* of the mosque; a hospital, and a mosque called Ḥaram. There were canals inside the town. Two great reservoirs of running water supplied the greater part of the private houses and gardens. The two minarets of the great mosque were famous.

It was taken by Timur in 785 (1383) and destroyed; its inhabitants were massacred. Its ruins lie around the modern villages of Zabīdān (remains of a tower) and Shahrīstān, along the old bed of one of the canals led from the Hilmend and dried up since the middle ages.

Zarandj was, in early times, the name of the province (*zarandj*) and of the people who inhabited it (*Zarandjīyār*, Arrian).

AL-ZARNUDJĪ, BOBHĀN AL-DĪN, an Arab philosopher. His *tem* is not known and his period can only be approximately stated. Ahlwardt in the Berlin Catalogue under N^o. 111 says that Maḥmūd b. Sulaimān al-Kāfawī (d. 990 = 1562) in his *ʿAḥd al-Akḥyār min Fuḥūḥ al-Muḥḥad al-Nu'mān al-Muḥḥad* puts our author in the twelfth class of the Hanafis and from this calculates that he flourished about 620 (1223). In agreement with this is the fact that Eduard van Dyck, *Ikhtisār al-Kawā'ir li-mā ḥawla maḥḥāḥ*, Cairo 1896, p. 190, describes our philosopher, in agreement with Ḥādīdī Khālifa, N^o. 3134, as a pupil of the author of the *Ḥidāya fi Fiqh al-Fiqh*, i. e. Buhān al-Dīn 'Alī b. Abī Bakr al-Farghānī al-Marghīnīnī (q. v.). The latter died in 593 (1197); and al-Zarandjī in fact quotes him in his *Ta'lim al-Muta'allim* several times as his teacher and with the eulogy for the dead. The other authorities cited in this book, so

far as their dates are known, also confirm Ahlwardt's date. For example al-Zarandjī mentions Fakhr al-Islām al-Ḥasan b. Maḥmūd al-Farghānī Qāḍīkhān (q. v.), who died in 592 (1196), as his teacher. In another passage he records that the Shāikh Zuhīr al-Dīn al-Ḥasan b. 'Alī al-Marghīnīnī recited verses before him (Irookeimann, *G. A. L.*, i. 379 puts him rather too late, for his father died in 506 [1112] and the above mentioned Qāḍīkhān was his pupil; see vol. iii., p. 280, N^o. ii.). He further tells us that he heard a story from Shāikh Fakhr al-Dīn al-Qāḍī. The reference is certainly to Abū Bakr Maḥmūd b. Ahmad (*G. A. L.*, i. 375, d. 587 = 1195). Finally he tells us that Rukn al-Dīn Muḥammad b. Abī Bakr Imām Khwāzma recited something to him and according to *G. A. L.*, i. 429 he lived about 560 (1165). If we take all these data together, we come to the conclusion that our author flourished a little earlier than Ahlwardt thought but his work was certainly composed after 593.

The only known and only surviving work of al-Zarandjī, *Ta'lim al-Muta'allim Farīq al-Ta'lim*, is a little vademecum for students to teach them the ethical outlook of the man of learning. The whole book consists simply of utterances of earlier writers but they are not unskillfully chosen and presented in an attractive way. This fact and the brevity of the book are the causes of its tremendous popularity, on the details of which see *G. A. L.*, i. 462. It is interesting to notice that the authorities cited by the author, so far as they do not belong to the first century, are almost without exception Hanafis, although the subject matter has practically nothing to do with the doctrine of any *madhhab* — Ibn Ismā'īl's commentary was printed at Cairo in 1311.

Bibliography: given in the article.

(M. PLEMINER)

ZĀTĪ, one of the most important Ottoman poets of the preparatory classical period. His real name was 'Iwās or Bakhshī or Yakhshī (according to Laṭīf). Born in 876 (1471—1472) in Balikesir in Karam, the son of a shoemaker, he followed the same trade. He had no education. In spite of all obstacles his poetical ability displayed itself. He was a horn poet. In the time of Sulṭān Bāyazīd he came to Constantinople. As his original plan of becoming a *kaḥḥ* after some training fell through on account of his deafness, which also prevented him from obtaining any public appointment, he lived the life of an unattached poet, supporting himself by the presents his poems brought him from the sultan and the notables. He dedicated *kaḥḥ* to the three sultans in whose reigns he wrote, Sulṭān Bāyazīd, Selīm I and Sulaimān al-Kānūnī, in return for which he received presents and even a *fief* which was however later taken from him as he did not give military service.

His talent brought him a large number of patrons and friends (the grand vizier 'Alī Paḥā, the *Qāḍī*asker Mu'ayyad-udde, the Nishāndjī-ade Tādī-ade Dja'far Çelebi, the Defterdār and later grand vizier Piri Paḥā, Kadri Efendi, etc.). But as they in turn lost their offices or their lives, he was left penniless. He therefore worked as a fortune-teller (*rammāl*) and wrote amulets (*taḥḥ*; q. v.). He had his booth first of all in the court of the Bāyazīd mosque and later besides Koḥja Ibrāhīm Paḥā's baths. There the intellect of Constantinople used

to gather, including the poets Khayyâl, Yahyâ, Bâkî and others. Zâtî was for a period a recognised leader and master. He lived in great poverty, besides he drank. He was celebrated for his ready wit and in spite of his ugliness was a popular companion. He died in Ramañan 953 (Nov. 1546) and was buried outside of the Adrianople Gate.

Zâtî's poetic output was prodigious. This was partly the result of his poverty which forced him to write. Laifî credits him with 3,000 ghazels, 500 kasidas and 1,000 rubâ'î's and kî't'a's. Zâtî's own figures however are 1,600 ghazels and over 400 kasidas (according to Kınalı-râde). In the *Divân* collected by Piri Celebi there are 600 ghazels and 80 kasidas.

Zâtî also wrote two mesnevis: *Şemî u-Perwân* (*heavly*) and *Ahmed u-Mahmûd* (*friend*); a *Sheh-rings* of Adrianople; a *Ferrûh-nâme*; *Bâkî-kurân*; *Siyer-i Nebî*; a *Mevlâd*; *Laghu-lar* (puzzles); a *Madjma' al-La'if*, and a collection of anecdotes about his contemporaries. None of his works has been printed. His *Divân* is very scarce; there is a copy in the Hamidiye Library in Constantinople.

In view of his lack of training and education, Zâtî's high poetic gifts are surprising: the vigour of his poems and the power and richness of his language especially in his best period. Later he became feeble and artificial and continually repeats himself. With Ahmad Pâshâ and Nedjâtî he is considered a master in the use of proverbs. Many of his sayings have in their turn become proverbial.

Zâtî was the chief of those who prepared the way for the perfect classical style, as typified in Bâkî. After Ahmad Pâshâ and Nedjâtî, he is the third founder of the Ottoman poetical language. He surpassed all his predecessors in power of language and poetic conception. The depth of his religious conviction, which is evident in his poems, may be mentioned. He belonged to the *Wefâ*' order.

ZÂWA, a town in Persia, in Khôrâsân near Naisâbur. In the time of Muqaddasî, it was a rural district which did not contain a town; but later (xivth century) there was a fine town there with a citadel built of brick. It contains the tomb of the Shaikh Kâth al-Dîn Haidar, who was still alive in 617 (1220) whence the name of Turbat-i Haidarî now given to the town. Muqaddasî mentions a town of the same name near Ghazna (*B. G. A.*, iii. 50, 297).

(CL. HUART)

AL-ZAWÂWÎ. [See *INN MU'RI*.]

ZAWILA, the name of two towns in North Africa.

1. **Zawilat al-Mahdiyya** (according to al-Bakrî: Zuwalla) built by the Fâtîmid 'Ubad Allâh al-Mahdî (d. Rab' I 14, 322) situated a bowshot distant from al-Mahdiyya, of which it was a suburb. According to Idrîsî the two towns formed one. It had five bazaars and buildings and many merchants resided there who went to their businesses in Mahdiyya in the day. The town was surrounded by a wall even on the side facing the sea; the land side was further protected by a great ditch. The wall built by al-Mu'izz b. Bâdis Shâraf al-Dawla (d. Shawwâl 1, 453) was 2 miles long and had iron gates weighing 1,000 cwts, 30 spans high, each studded with 6 lbs. of heavy nails. In the vicinity of Zawila were hamlets, farms and country houses, belonging to the people of the town who practised agriculture and cattle-rearing here; the principal products were barley and olives, the oil went to the Levant.

2. **Zawilat al-Sûdân** (according to Idrîsî: Zawila), capital of Fazzân, 10 days' journey north of Waddân on that frontier of the Bilâd al-Sûdân which adjoins the province of Africa. The town, which lay at an important road junction in the middle of the desert, had no walls, had a mosque, baths and bazaars, palmgroves and cornfields, which were watered by camels. The Muslims who lived here were Ibâdîs. Many traders from Khurâsân, al-Kûfa and Bagra used to come here. The exports were slaves and leather. The town was taken by 'Ukba b. Nâfî, a general of 'Amr b. al-'Âs. The poet Dî'îl b. 'Alt al-Khurâ'î is buried here.

(A. GROHMANN)

ZĀWIYA, properly the corner of a building, was at first applied to the cell of the Christian monk (cf. the Greek *zōnē*), then to a small mosque or praying room; the word still has this meaning in the Muslim east in contrast to a more important mosque (*maḥallid* or *ḡāmī*). On the other hand the term *zāwiya* has retained a much more general meaning in North Africa and is applied to a building or group of buildings of a religious nature, which resembles a monastery and a school. An excellent definition of the Maghribi *zāwiya* was given as early as 1847 by Dammas (*La Kabylie*, p. 60) and it seems to be essentially appropriate at the present day (cf. the quotation in Dozy, *Suppl.*, s.v.). All or several of the following are found in a *zāwiya*: a room for prayer with a *mihrāb*; the mausoleum of a marabout or Sharīfian saint, which is surmounted by a dome (*ḡudba*); a room set aside exclusively for the recitation of the *Qurʾān*; a *maktāb* or *Qurʾān* school; finally rooms for the guests of the *zāwiya*, pilgrims, travellers and students. The *zāwiya* is usually adjoined by a cemetery with the tombs of those who have during their lifetime expressed a wish to be buried here. "The *zāwiya*," says Dammas, is, to sum up, a religious school and a free hostel, in these two respects it has much in common with the mediaeval monastery".

The conception of a *zāwiya* has, it seems, undergone a somewhat characteristic change since the middle ages, at least in the Muslim west; in the east on the other hand the term very soon acquired a definite meaning so that it was applied only to the more humble mosques and is not there used as an alternative for the more precise terms like *ḡudba*, *ḡāḡāḡā* or *ḡāḡā*, which are used particularly for monastic institutions which as a rule owe their origin to Persian Muslim mysticism. In the Maghrib on the other hand the term *zāwiya* appears about the xiiith century as synonymous with *ḡāḡā*, i.e. hermitage, to which a holy man retired and where he lived surrounded by his pupils and devotees (cf. G. S. Colin, transl. of al-Bāḡidī's *Maḡḡad*, in *A.M.*, xxvi [1926], p. 240, s.v.). This *zāwiya* or *ḡāḡā* is however not always identical with the *ḡāḡā*, an institution which served another purpose and was primarily of a military character. In this connection however we may note a statement of Ibn Marīḡ of Tlemcen (d. 781 = 1379), who in his monograph on the Marīḡid Sulṭān Abū l-Ḥasan 'Alī, *al-Muḡad al-ḡāḡā al-ḡāḡā*, devotes the 42nd chapter to the *zāwiya* built by this ruler and says the *zāwiya* corresponds to what in the east is called *ḡāḡā* or *ḡāḡāḡā*. It may be added that the word *ḡāḡā* is also found in Morocco used for institutions in which the military activity was particularly directed to spreading Islam among heretics with the sword: this for example was the case with the *ḡāḡā* Asfi (cf. *Asfi*) and Sidi-Spiker on the Wādī-Tanūḡ. The first *zāwiya* hermitages undoubtedly developed very quickly and became not only places of refuge from the world but also centres of religious and mystic life, where the *ḡāḡāwūḡ*, hitherto the sole possession of urban scholars, was to be brought nearer the masses. They now became centres of attraction, religious schools and to some extent free hostels for travellers in search of spiritual perfection. This explains how Ibn Marīḡ could say when speaking of the *zāwiya* of his time: "It is clear that with us in the Maghrib the *zāwiya* serve to give shelter to

wanderers and food to travellers" (cf. also *ḡāḡā*).

In Muslim Spain we find no *zāwiya*s before the time of the Naḡḡids of Granada. They therefore belong to the same time as those of the Marīḡid sulṭān Abū l-Ḥasan and their foundation must have met the same needs. In 1903 W. and G. Marçais put forward the attractive hypothesis that the Maghribi *madrasas* were in the intention of their founders, the Marīḡid and 'Abd al-Wadīd rulers of the xivth century, only an "official recognition" of the schools attached to the *zāwiya*s. It is perhaps more possible that these rulers endeavoured by their foundations alongside of the great centres of religious instruction (notably the *ḡāḡā* al-ḡāḡāwīn in Fās) to weaken to some degree the competition already caused in the towns and outside of them by the *zāwiya* schools.

At the present day the most important North African *zāwiya*s, whether they are now in the large towns or in the country — where little townships have almost always grown up around them — are the mother houses or branch settlements of the Marabout or Sharīfian religious brotherhoods [see *TARIQA* and *SHARIFA*].

In addition to their religious and intellectual influence the *zāwiya*s of the Muslim west have exercised a direct political influence on the population of the country in areas remote from the seat of the central government. The most striking example of this is the *Zāwiya al-Dīlā* (in the district of Tidda, in Central Morocco on the banks of the Umm Rabi), the heads of which took advantage of the troubled times after the fall of the Sa'dian dynasty (in the second half of the xviith century) to extend their secular power over the greater part of the district which was dependent on Fās. In more recent times the example of the Berber *zāwiya*s of Igh in Tazawalt and Ahmāḡ in the Central Atlas can be quoted.

Doutte, *Les Maraboutes*, Paris 1900; L. Rinn, *Maraboutes et Khawān*, Algiers 1884; O. Dupont and X. Coppolani, *Les confréries religieuses musulmanes*, Algiers, 1897. (E. LEVI-PROVENÇAL) ZĀY. [See ZĀ']

ZAYĀNIDS (BASU ZAYĀN or BANU ZIYĀN, the two vocalisations *zayān* and *ziyān* are classical; we also find *zāyān*), a Berber dynasty of kings of Tlemcen, who reigned over Central Maghrib from the xiiith to the xvth century A.D., whose claim to noble descent from Idris is disputed (cf. *Hist. des Berbères*, transl. de Slane, III, 328 and *ibid.*, the words attributed to Yaghmurāḡān). They are called by the chroniclers also 'Abd al-Wadīd (q.v., I, p. 64^b). This is because 'Abd al-Wadīd (q.v.) and Zāyān were two of the ancestors of the kings of Tlemcen, centuries apart however, the former living before Idris and the latter being the father of Yaghmurāḡān (end of the viiith [xiiith] century).

After Yaghmurāsān (first independent king of the dynasty from 633 = 1236) and beginning with his son Abū Sa'īd 'Othmān I, four kings, all direct descendants of Yaghmurāsān, occupied the throne in succession till 737 (1337). The kingdom of Tlemcen was then twice conquered and occupied by the Marinids from 737 to 749 (1337–1348) and from 753 to 760 (1352–1359).

The first Zayānid restoration (749 = 1348) brought to the throne the brothers Abū Sa'īd 'Othmān II and Abū Thābit but it was their nephew Abū Hammū I (son of their brother Abū Ya'qūb Yūsuf) who in 760 (1359) restored the dynasty to its old position; his descendants ruled till the Turkish conquest in 962 (1554).

The only genealogical difference between the two ruling branches of this dynasty is that the first consisted of the direct descendants of Yaghmurāsān, through his eldest son 'Othmān I while the second line consisted of the direct descendants of his younger son 'Abd al-Rahmān.

There is no reason — and no document to justify it — to believe with Barges (cf. *Tlemcen, anc. sup. etc.*, p. 194 and *Hist. des B. Zéyan*, transl. *Introd.*, p. xli.) that it was only the kings of the younger line who took the name of Banū Zayān (from 794 = 1348); all being direct descendants of Yaghmurāsān, were Zayānids as well as 'Abd al-Wādīda, for both lines included among their ancestors 'Abd al-Wād and Zayān.

As to the relationship of these kings to the Marinids [q. v.] of Fās, it has been established by the Muslim genealogists who place Wādīn, grandfather of 'Abd al-Wād, among the ancestors of Marīn b. Wurtūdjīn, ancestor of the Marinids (cf. especially Ibn Khaldūn, *Hist. des Berbères*, II, 240; transl. IV, 25; *al-Dhakhīrat al-saniya*, p. 10).

Marçais, Paris 1917, with a *Histoire des Banu Zayān de Tlemcen* (from the transl. by Dozy in *J.A.*, 4th series, vol. III, p. 382–416); *al-Dhakhīrat al-saniya*, *Chronique anonyme des Merinides*, ed. Moh. Ben Cheneb, Algiers 1921; Alfred Bel, *Tlemcen et ses environs* 2, Toulouse n. d.

(ALFRED BEL)

ZĀYIRDJA, an astrological magic table common in Morocco, the making and use of which is fully described by Ibn Khaldūn in the *Muqaddima*. The word is connected with *Zayd* [q. v.]; its fuller name is *Zāyirdjat al-'Alam*. The inventor is said to have been the Sūfī Abū 'I. 'Abbās al-Sūhī (l. e. of Centa) who lived in the time of the Almohad Ya'qūb al-Manṣūr, i. e. at the end of the 12th (13th) century. The table has on one side a system of concentric circles with divisions corresponding to the signs of the zodiac and others for telling fortunes and answering questions on important matters, with a corresponding system of radii, filled with numerals and letters. On the reverse of the table is a rectangle, divided into 55,131 small compartments, some empty, some with letters in them. Two verses by Malik b. Wuhāib are used in connection with it; the letters in them are used as starting points in the consultation.

Bibliography: Ibn Khaldūn, *Muqaddima*, transl. de Slane, I, 245–253 and III, 199–205; Dozy, *Suppl.*, s. v. (J. RUSKA)

ZE'ĀMET (A.), popular form for *zā'ima*, Turkish pronunciation *zamet* and *zimmet*: 1. the quality of *zā'im*, 2. (military) fief of a *zā'im* (the other meanings of *zā'im* will be found in the Arabic dictionaries). — The word *zā'im*, plur. *zā'imā*, has several meanings which may be grouped round that of "person who puts forward a claim, who intercedes for or answers for one or more weaker individuals". It means, in effect: 1. "caution, surety" (Qur'ān, *Dīwān* of Imrū'u l-Kālā, treatises on Muslim law); 2. "spokesman of a group of individuals or metaphorically of animals, acting in name of the group", as in the *Kur'ān al-Fahmān al-Safā*, Cairo 1928, II, 117 199; 3. "the head of a non-Muslim community" (therefore not enjoying full civil rights). *Kalkaşhandī* (*Subb al-Aḥbā*, IV, 194) gives the name *zā'imā* *ahl al-dhīmā* to the various "patriarchs of the Christian communities"; 4. "the two provosts-marshal or chiefs of police or of the watch in Cairo and Balāḡ", a synonym of the Arabic *wāḥī* (*al-ḥurfa*) and the Turkish *rubāḡlī* (cf. J. Deny, *Sommaire des archives turques du Caire*, Cairo 1930, p. 39, notes 1 and 2). — These officials had the supervision of the Christians especially; 5. "honorific title given in Egypt to high military officials and to certain foreign Muslim sovereigns" (for details, cf. *Kalkaşhandī*, VI, 51); cf. the title *zā'im al-djuyūsh* given to the Turkish prince of Germiān [q. v.] (*ibid.*, VIII, 13); the expression *al-zā'im al-a'zam* was applied to the highest imām, even to the caliph (*ibid.*, IV, 444 and 448); 6. (modern Egypt usage) "leader of a political party" (e. g. the late Zaghāl); 7. (Turkish usage, probably since 1375) "holder of a military fief, of an annual revenue of at least 20,000 aspers (*akāḥ* or *akār*)". — This development of the meaning is perhaps analogous to that given under N° 5 above (thence meaning of "more important leader than a simple timariot"), but it is more probable that it is due to the fact that the *zā'im* had under this jurisdiction, mainly fiscal, groups of rāfas or peasants, for the most part Christians. We know also (cf. *ṬIMĀ*) that some of the holders of fiefs had the rank of *rubāḡlī*. Now the *rubāḡlī* were not simple timariots but *zā'im*. Besides the *rubāḡlī* [q. v.] in as much as they were police officers dealt mainly with the Christians. We have already given above under N° 4 another example of the similarity of meaning between *zā'im* and *rubāḡlī*.

It is with the seventh and last significance that we are here concerned.

Details of the Turkish military fiefs in general and of the *zamet* in particular are to be found in the article *ṬIMĀ*. Here we shall mainly confine ourselves to adding that this article has been criticised by the eminent scholar Köprülüāde Mehmed Fu'ād who rightly reproves the author for not having cited the article *ṬIMĀ* in this Encyclopedia and the articles by C. H. Becker (*Bizans Müssirelerinin Osmanlı Müssirelerinin Tefsiri* *kaklında bazı mülahazalar* "Some remarks on the influence of Byzantine institutions on Ottoman institutions", in *Türk Hukuk ve İktisat Tarihi Mecmuası*, "Review of the History of Turkish Law and Political Economy", İstanbul, Ewkaif Matba'ası, 1931, vol. I, [all that appeared], p. 165–313; ch. X, of this important contribution is devoted to the *Timar sistemi* ["the Timar system"], p. 219–241).

According to Köprülüāde Mehmed Fu'ād, the system of Ottoman military fiefs was not borrowed

from the Byzantines but from the Saldjûks. I ought indeed to have mentioned the latter [cf. 187A, p. 462b] and it was quite natural for the institution to have been transmitted from them to the Ottomans.

It is nevertheless true that it is difficult to admit that an organisation so closely bound up with the soil as this could have disappeared from Anatolia with the fall of the Byzantine empire to be replaced by another of the same kind. The Byzantine organisation was not only amalgamated with the Saldjûk organisation but continued to exercise its influence on that which the successors of the Saldjûks in Asia Minor adopted. The fiscal system of the *timâr* bears clear traces of this. This Byzantine influence was perhaps less strong than western scholars, who have not had direct access to the Oriental sources, have thought, but it seems indisputable.

It is not however certain that the organisation of the military fiefs of the Saldjûks themselves was not influenced by that of the Byzantines who preceded them (the use of cuirassiers, in full armour or *gibelli*, in particular, goes back to Rome itself). At the present day, we can see how easily military practices are borrowed from one country by another and Turkish military organisation at a very early period attained a perfection which enabled it to accept improvements from foreign countries without hurting the national amour-propre.

While giving due credit to the importance of the Saldjûk organisation we would ask that the Byzantine elements should not be omitted in a study of the Turkish *timâr*.

The few notes that follow are intended to supplement the article *timâr*.

Za'im. — According to a MS. note by the late René Basset in his copy of Kazimirski's Arabic-French dictionary, the word *za'im* also means "supervisor, convict guard" (*Gharawât*, p. 4). It would have to be investigated how far this term is connected with *sa'imet* or maritime fief. The same remark applies to the word *za'im* used for a kind of ship in the Red Sea.

A Turkish saying has it: *üstü başlı za'im iadilema vânda* "he is dressed like a *za'im* tent"; cf. the French "comme une chaise" (Tekerrâde M. Sait [Said], *Atalar sözü*, 1312, p. 55). This saying shows that the tents of the *za'im* were very luxurious.

There was a style of head-dressing called *za'imet* (cf. Ahmet Rasim, *Ormanlı tarihi*, p. 236 and 473).

The name *za'im müteferrika* was given to the *müteferrika* of the Palace chosen from the *za'im* (of the province). Cf. Ahmad Râfi, *Fatih'in sarayı*, *İbâdât* of June 8 and 12, 1923.

A specimen of an imperial *berat* granting a *sa'imet* is given in Belin, *On régime des fiefs*..., p. 109.

Timâr. — Köprülüâde Mehmed Fu'âd (*op. cit.*, p. 238—239, note) observes rightly that, contrary to what I have said, the word *timâr* has in Saldjûk texts the meaning of "grant of lands" but he himself adds that this term has a vague meaning in the passages cited. The same vague meaning is found in texts referring to the beginnings of the Ottoman Empire (cf. *Âshîk-pashazâde, passim*).

On the expression *tapu ilmaş* "to pay homage" cf. *Âshîk-pashazâde*, ed. Gliese, p. 68, l. 15.

ZEIBEK, the name of a Turkish tribe in the region of Smyrna. The origin of the Zeibek has not yet been fully explained. Just as it used to be the custom to say the Tekimili [q. v.] were descendants of the earliest inhabitants of Asia Minor, so the ancestors of the Zeibek were sought in the remnants of Thracians who had settled around Tralles. In favour of this we have also the fact that they were called *Gjaur* by orthodox Turks (Lord Keppel, *op. cit.*, li. 266). This view however is undoubtedly wrong; we must rather see in the Zeibek one of those Yürük tribes, who settled in considerable numbers in the west of Anatolia although their descent still requires elucidation in detail. Religious reasons may have played a part in the settlement of the Yürüks [q. v.] in the particular district of Aidineli [q. v.] and F. W. Hasluck has called attention to the connection in his study *Hittaradax Tribes of Asia Minor* (in the *Journal of the Royal Anthrop. Institute*, li. [1921], p. 310 sqq., reprinted in *Christianity and Islam under the Sultans*, i., Oxford 1929, p. 124 sqq., cf. esp. p. 127; cf. at the same time F. Babinger in *lit.*, xi. [1921], 100 and xii. [1922], 103). Older views on the origin of the Zeibek have been collected by M. Taakyroglious in his little book *İslâmî Tarih* (Athens 1891), p. 13 sqq. and 22. The name has been connected in meaning with the Greek *gallikari* (γαλλικάρι) (cf. W. v. Diest, *Reisen und Forschungen im nordwestlichen Kleinasien*, i. 27), but hardly with justice. So far we have no early notices of the coming of these warlike and turbulent highlanders whose peculiar dress — disproportionately high head-dress, short trousers, which leave most of the legs uncovered, brightly coloured vests, richly embroidered, called *şepken* — distinguishes them from their neighbours. The earliest references to them are found in the travellers of the xviiith and xixth centuries. It looks as if the Zeibek were at one time connected with the Derebeys [q. v.] around Smyrna and with the Kara 'Othmân-oghlu's [q. v.] and served them as

soldiers. With the disappearance of this family under Sultān Murād II the Zeibek militia was disbanded; the Ottoman governor Tahir Pāshā forbade them to serve as soldiers and also prohibited their striking dress. The result was a dangerous rising under their leader (*efe*) Kel Mehmed, in the course of which many Zeibek lost their lives and they had finally to yield to superior force. Down to modern times the Zeibek were recruited as a kind of auxiliary police to support the *sabtyrs*, whose chief duty was to convoy travellers. They were remarkable not only for their dress but also for their usually slim, powerful figures. Gradually they adapted themselves more and more to the life of their neighbours and their picturesque dress fell more and more into disuse. In the post-War period the name Zeibek again attained notoriety when the Turkish president Mustafa Kemal Pāshā endeavoured to make the dance peculiar to this tribe (*Zeibek aşnu*) a Turkish national dance.

Bibliography: In addition to the works mentioned in the text cf. George Keppel, *Narrative of a Journey across the Balkan etc.*, London 1831, ii. 124 (history), 253, 263, 265, 316, 322, 339 (on their dress); Lord Arundell, *Discoveries in Asia Minor*, London 1834, ii. 212 sqq.; V. Guinet, *La Turquie d'Asie*, iii. 349 sqq. (full details of the dress of the Zeibek with its distinguishing features). Pictures of Zeibek in Keppel, *op. cit.*, vol. i, coloured frontispiece; Eugen v. Philippovich, *Nikolai v. Philippovich, das Leben und Wirken eines österreichischen Offiziers*, Vienna and Tübingen 1913, p. 26 (wrong title "ein Vornehmer aus Kleinasien"). The Zeibek plays a great part in the Turkish shadow-play; cf. the picture 48 of one of these Zeibek figures in H. Ritter, *Karagöz, türkische Schattenspiele*, Hanover 1924. — Further literature is given by W. Hefening, in *Isl.*, xiii. 251, where reference is made to further illustrations; J. H. Mordtmann, in *Vier Vorträge über Völkerverhältnisse und die Türkei*, Berlin 1917, p. 101 (according to whom there were also Zeibek in the wilayet of Brussa).

(FRANZ BABINGER)

ZENĀTA. The Arab historians of the middle ages give this name to one of the two great groups into which the population of Barbary falls. According to the genealogical fiction which formed the frame-work of their ethnical classification, the Zenāta, who are descended from Madghis al-Ahtar, are distinguished from the Sanhādja who are descended from Bernes; Bernes and Madghis were the sons of one father, Berr. Other theories connect the Zenāta with a certain Shana or Djana, who was said to be either of the line of Kana'an, son of Shem, or of that of Goliath (Djilut). The desire to have an imposing Biblical pedigree is sufficient to explain this claim which seemed to be to some extent justified by the kind of existence led by the majority of the Zenāta. While the majority of the Sanhādja led a settled life, the Zenāta groups were mainly nomads "in the manner of the Arabs", rearing camels and living in tents. They were found scattered throughout Barbary but mainly in the steppes and deserts from Ghadimes to the extreme Maghrib. The west of the central Maghrib and the adjoining Saharau regions seemed to be and were to remain their particular domain. They were distinguished from other groups by language. The

Berber dialects spoken in the oases of Māsb, Wargla, Wed Righ, in the west of Algeria, including the massif of Wargenis, and in the east of Morocco are still called *Zenātiya*.

As in the case of the Sanhādja [q. v.] the chroniclers distinguish several Zenāta stocks or rather several waves of population which after living obscurely in the nomad state emerged in succession to the light of history, favourable circumstances enabling them to found empires or impose themselves upon the great existing empires, either as allies or as enemies.

To the first stock of Zenāta belonged the Djārāwa, the Banū Ifren, the Maghrāwa, the Wamānū and the Illūni. The Djārāwa were said to have their main centre in the Awrās, where the celebrated Kāhina [q. v.], their queen, played in the second (viiith) century her well known part in the resistance to the Arab conquest. When this resistance, of which the Awrās was one of the strongholds, took the form of the Khārījī heresy, the Zenāta Banū Ifren [q. v.] were its most stubborn champions. Abū Karra the Ifrenid founded in the second (viiith) century a Khārījī kingdom at Tlemcen. In the fourth (xth) century, the Ifrenid Abū Yazīd, "the man with the ass" [q. v.], raised the people of eastern Barbary, including the Awrās, against the Fātimid caliphs in the name of the ancient heresy. At the same time Iḡrān (12 miles S. W. of Mascara) and Shella near the site of the future Rabat were capitals of two principalities of the Banū Ifren.

The most powerful of the Zenāta of the first wave were those who belonged to the great tribe of the Maghrāwa. Among the latter special mention may be made of the Banū Khazar, whose lands lay in the plains of Orania and eastern Morocco. Vassals of the Omayyads of Cordova, they resisted not without difficulty throughout the tenth century and a part of the eleventh (ixth—xth A. H.) the repeated attacks of the Sanhādja, supporters of the Fātimids of Ifrikiya. One of the chiefs of the Banū Khazar, Ziri b. Atiya, had installed himself in Fās, after the fall of the Idrisids, and held out there till the coming of the Almoravids (455 = 1063). The eleventh century also saw the flourishing of the other little Maghrāwa kingdoms, that of the Banū Ya'īl of Tlemcen, that of the Banū Khazrūn of Sijilmāsa, to which the Almoravid conquest was to put an end.

After this, the history of the Zenāta of the Central Maghrib enters upon an obscure period. We have a struggle between two clans of the same stock: the Illūni and the Wamānū. The latter were to bring the Almohads into the country of Tlemcen.

The Zenāta only became important again with the decline of the successors of 'Abd al-Mu'min, when the Zenāta of the second wave came to the front. They were regarded as forming part of the group of the Banū Wāṣṣn, whom the thrust of the nomad Arabs (Banū Hilāl), at first lords of Ifrikiya, had driven westwards, in the south of Orania and Morocco. In the course of the first half of the viiith (xiiith) century, the Zenāta Banū Wāṣṣn, who had only just abandoned a nomadic life, took from the Almohads the central Maghrib and the extreme Maghrib. The Merinids founded the kingdom of Fās [q. v.], the 'Abd al-Wāḥids the kingdom of Tlemcen [q. v.]. The latter who were in the traditional territory of the Zenāta tribes, had much difficulty in subduing their brethren,

especially the Banū Tūǧġa. The latter, much weakened in the plains where they had become the serfs of the nomad Arabs, were still quite powerful in the Wārsenā, but they led a settled existence there. Their descendants are still to be found in these mountains. The name given to the Berber dialect which they speak survives as one of the few memories retained by the Zenāta of the period of their glory.

(G. MARÇAIS)

ZENDE-RŪD

one of the principal rivers of Central Persia. Its source lies about 90 miles W. of Isfahān in the province of 'Arabistān (Khūzistān) in the Zardēh-Kūh, "the yellow hills" (so-called after the yellow limestone found there) which are included among the Bakhtīrī mountains, in which also rises the Kārūn [q. v.], the greatest river of southern Persia. After leaving the mountains the Zende-rūd flows through the district of Isfahān after which it is often called Isfahān-Rūd, "the river of Isfahān", and flows about 80 miles E. S. E. of Isfahān into a large brackish swamp called Gāo Khāneh. According to the erroneous view of the mediaeval Arab and Persian geographers, the river continued on a subterranean course and reappeared about 60 *farsakh* (= ca. 40 miles) from where it disappeared and then flowed to the sea; Ḥamd Allāh Mustawfī was the first to point out this error (cf. thereon; Schwarz, *op. cit.*, iii. 216—217).

On entering Isfahān the Zende-Rūd separates Isfahān proper on its north bank from its southern suburb, Djulfā [q. v.] or New Djulfā. The connection between the two is maintained by three great bridges (cf. ii. p. 529 and also the descriptions in Ouseley, *op. cit.*; Stack, *op. cit.*, p. 23; C. J. Wills, *In the Land of the Lion and Sun*, London 1883, p. 194 sq.; J. Dieulafoy, *La Perse, la Chaldée et la Suse*, Paris 1887, p. 154—155; J. Basset, *Persia, the Land of the Imams*, London 1887, p. 154—155; Curzon, *op. cit.*, ii. 44—50 and E. Aubin, *La Perse d'aujourd'hui*, Paris 1908, p. 289). In Isfahān during the summer months the bed of the river, which is much used for irrigation purposes, is frequently dried up completely. The river-system of the Zende-Rūd, especially its upper part, still requires more careful exploration; cf. Stack, *op. cit.*, ii. 23, 84 sq., and Bishop.

The name Zende (Zinda)-Rūd (cf. Vallaers, *Lexic. Persico-Latin.*, i. 151, 152) means "river of life", the form Zāyinde (Zāyende)-Rūd = "life-giving river", i.e. the river that invigorates or fertilises the land, is now more common. At an earlier period we also find the name Zarin-Rūd = "golden river"; on the reason for this name nothing definite is known; it may be added that a valley quite near the source of this river is called Zarin valley (cf. Bishop, *op. cit.*, i. 269).

ZENĠ, IMĀD AL-DĪN b. KĀNĪN AL-DAWLĀ

AKSONĠOR b. 'ABD ALLĀH, atābeg of al-Mawālī and one of the most distinguished emirs of the Saldjūk period. His father AksonĠor al-Hādīb ("the chamberlain"), a Turkish Mamlūk in the service of Sultān Malikshāh [q. v.], had received from the latter the town of Ḥalab as a fief; but when AksonĠor on the death of Malikshāh rebelled against his brother Tutuḡh [q. v.], he was taken prisoner and put to death (487 = 1094) and the young Zengi, who was then only ten years old, lost his father's estates which went to Tutuḡh and the emirs who had aided with him. Zengi several times distinguished himself under the next rulers of al-Mawālī and as a result was appointed governor of Wasīt in 516 (1122—1123) by the governor of Baghdad AksonĠor al-Bursuḡi, who then supervised the whole of Irāq, and later received in addition the governorship of Bagra. In 518 (1124—1125) AksonĠor was transferred from Baghdad to al-Mawālī but in Dhū l-Ka'da 520 (Nov. 1126) he fell a victim to the danger of the Assassins, who hated him as an ardent supporter of the caliphs and Saldjūks. In the following year his son Mas'ūd also died, probably poisoned by one of the Syrian princes with whom he was on terms of enmity. A minor brother of Mas'ūd now came forward as heir to the governorship of al-Mawālī and his claims were supported by the commander in al-Mawālī, one of AksonĠor's Mamlūks, named al-Djāwālī. When the latter sent the kadi of al-Mawālī and a chamberlain of AksonĠor's to Baghdad to recommend Mas'ūd's young brother to the sultān Maḥmūd, the two envoys to whom al-Djāwālī's plans seemed by no means free from difficulties, were won over by a relative of Zengi's to his side and he was appointed governor of al-Mawālī and made his formal entrance into the city in Ramaḍān 521 (Sept.—Oct. 1127). The sultān gave him his two sons Alp Arslān and Fatruḡhshāh to educate and Zengi therefore received the title of atābeg. In the same year he took possession of Qazirat Ibn 'Omar, Naḡlīn, Sinḡār and Harrān. In Muḥarram 522 (Jan. 1128) he took the town of Ḥalab [q. v.] where utter anarchy reigned until Zengi appeared and restored order. In the following year he got possession of Ḥamāḡ [q. v.] through treachery; on the other hand, he failed against Hims and Damascus. Of his other enterprises in this period special mention may be made of the capture and destruction of the fortress of al-Aḥḥarī between Ḥalab and Anṭakya, which was occupied by the Crusaders. In the struggle for the sultanate between the Saldjūk prince Mas'ūd b. Muḥammad [q. v.] and his brother Saldjūk, Zengi aided with

the former (526=1131—1132) and when the uncle of the two brothers Saūfār [q.v.] wished to exert his suzerainty he was joined by Zengi and Dubais b. Ṣadaka [q.v.]. The attacks of the two latter on Baghdad were however unsuccessful and the caliph al-Mustarshid was equally unsuccessful in his attempt to take al-Mawṣil, which he besieged for three months (527=1132—1133). When his successor al-Rāshid quarrelled with Sulṭān Maṣ'ūd, Zengi at first joined the former but was persuaded to approve of the deposition of al-Rāshid and paid homage to al-Muktafi. In 531 (1137) Zengi after besieging Hims for several months in vain, attacked the fortress of Ba'rin (Monsferrandus). The Christian commander appealed for help to king Fulk of Jerusalem but the latter was routed and Ba'rin had to surrender. A new enemy now appeared in the field, namely the emperor John II of Constantinople, who had first of all intended to reduce to obedience the rebel ruler Leo of Little Armenia and his ally Raymond of Antioch, but after making peace he made an alliance with the leaders of the Crusaders. After taking the fortress of Būmā, he advanced against Halab but soon abandoned his plan of subduing it by a long siege and attacked Shaizar. But when the inhabitants defended themselves bravely, the emperor accepted the commander's terms and returned to Antioch (Ramadān 532=May—June 1138) pursued by Zengi who took many prisoners and much booty. In the same year after long negotiations, the ruler of Damascus Shihāb al-Dīn Maḥmūd handed over to Zengi the town of Hims. In Dhū l-Ka'da 533 (July 1139) Zengi undertook a campaign against Baalbek; after a vigorous resistance the garrison had to capitulate and were for the most part massacred, although Zengi had promised them liberty to depart. The object of all his efforts was still however the rich city of Damascus and in Rabi' I 534 (Oct.—Nov. 1139) he laid siege to the town. The ruler of Damascus Djamāl al-Dīn Muḥammad was not inclined to exchange Damascus for Hims and Baalbek and after what had happened at the latter town could not fully trust Zengi. When he died a few months later, the new commander Mu'īn al-Dīn who acted for the minor Maḥmūd al-Dīn b. Djamāl al-Dīn applied to the Crusaders and offered them the town of Baniyās if they would assist him, whereupon Zengi raised the siege and returned to al-Mawṣil. After he had taken several strongholds in Northern Mesopotamia, he quarrelled with Sulṭān Maṣ'ūd, who finally declared war on him. Zengi gave in however and purchased peace (538=1143—1144). In Djumādā II 539 (December 1144) he took the important town of Edessa from the Crusaders and two years later attacked Ḳal'at Dja'bar in Mesopotamia when he was murdered by some Mamlūks on the night of 4th—5th Rabi' II (Sept. 13—14), or according to another story, on the 15th Rabi' II 541 (Sept. 24, 1146). He was succeeded in al-Mawṣil by his son Saif al-Dīn Ghāzī I and in al-Halab by another son, Nūr al-Dīn Maḥmūd.

The Oriental historians bestow the highest praise on the political qualities of al-Beg Zengi; on the other hand they are well aware of his unscrupulousness. Ibn al-Athīr (xi. 72) vividly describes how prosperity returned under his care to lands which had been threatened by the Franks and impoverished by the extortions and frequent changes of governors.

ZENITH, the vertical point, i.e. the highest point in the visible sphere of the heavens in the direction of the vertical (plumb line) above the observer, at the same time the upper (visible) pole of the horizon.

The technical astronomical term for zenith in Arabic is *samt al-ra's* or *samt al-ra'is*, which means "direction (*samt*) of the head", corresponding to the Greek *κεφαλή* or *τὴν κεφαλὴν ἀνατολή*. Plato Tiburtinus reproduces *samt al-ra's* in his Latin translation as *zenith capitis* or *zenith caputem*, the Spanish translation of al-Battāni by *el zente* (*el zent*) *de la cabeza* (cf. al-Battāni, *Opus astronomicum*, ed. Nallina, ii. 357, s.v. *samt*). — As Gollus early noticed, the form *zenith* seems to owe its origin to a slip of the pen which made the *m* in *samt* (*samt*) into *ni*: *zamt* > *zenith*. (The same word *samt* — in the plural *samāt* — is found in the astronomical term *azimut* [q.v.], Ar. *samt*, i.e. *min dā'irat al-ufq*, "direction on the circle of the horizon", calculated in degrees. The *Libros del saber de astronomia* translate *samt* usually by *zente*, and *samt al-ra's* by *cent*).

The (invisible) pole of the horizon directly under the observer, the counter-pole of the zenith, is called *nadir* [q.v.], from Ar. *naḍr*. The largest circles which go through zenith and nadir are called vertical circles; among them two are specially distinguished, the meridian (*falak niḡ al-naḥār*, *ῥῆ μαστιγίου*) in whose plane the axis of the earth lies and which cuts the horizon in the south and north points and the first vertical which stands perpendicular on the plane of the meridian, cutting the horizon in east and west. The east and west points are also the poles of the meridian, south and north points the poles of the first vertical.

The spherical coordinates of a star calculated in the horizon-zenith system are *azimut* (*al-ḡamē*) and *altitude* (*irtifā'*, i.e. *'an dā'irat al-ufq*); while modern astronomy defines the *azimut* as the length of the arc between the vertical circle covered by the star and the meridian, measured on the horizon from S. to W. N., E. to S. from 0°—360° — or, if the direction in the heavens is given, from S. via W. and S. via E. to 180° — the Arab astronomers (which it is important to remember) take the first vertical as the circle of reference, i.e. reckon from the east or west point of the vertical. The altitude of the star is the length of the arc of the star from the horizon, measured on the vertical circle which passes through the star. It is calculated from 0° (on the horizon) to +90° (on the zenith) or —90° (on the nadir); negative altitudes are frequently called depressions. The altitude is

frequently replaced by its complement, the distance of the zenith which represents the length of the arc measured on the same vertical circle from the zenith. The zenith distance of the pole of the heavens is equal to the altitude of the equator in the meridian and equal to the complement of the altitude of the pole or geographical latitude ϕ , i.e. $Z = 90^\circ - \phi$.

A plane parallel to the horizon intersects the visible sphere of the heavens in a circle, which connects all points of the same altitude. Such a circle is called in astronomy a horizontal circle or — using an Arabic loanword — *Al-mukantarāt* (i.e. *al-muqannara*) [q.v.].

(WILLY HARTNER)

ZENTA (formerly Hungarian *Szenta*; Turkish *سنته*, *سنته*; [Kāmūs al-ʿAṣm, iv. 2425] and also *جنته* [in Khālil Edhem, *Duʿar al-ʿilāhiyya*, 1927, p. 323]; Serbo-Croat *Senta*), a flourishing town on the right bank of the Theiss in the Bačka (since 1929 in the Danube banate) in Yugoslavia, with 30,044 inhabitants (1931), first mentioned in 1216 and made a free city in 1526. After the battle of Mohács (1526) Zenta became Turkish and belonged to the sandjak of Segedin (Szigedin; cf. e.g. Fekete, *Türkische Schriften... des Palatin N. Esterházy*, 1932, p. 110 and 324). Ewliya Celebi (vii. 363) who visited Zenta in the xviii century, describes it as a small *palanka* (fortress) in the above mentioned sandjak and proposes a childish etymology (*سنته* *باش* *يعني* *سنته* *باش* *يعني* *سنته*) of its name.

Zenta is celebrated in history as a battle-field. When Mustafa II was retiring from Peterwardein, where Prince Eugene of Savoy had shut himself up, after an unsuccessful siege, he wished at first to attack Szegedin but soon decided to cross the Theiss at Zenta and go to Temesvár. Küçük Dja'far Pasha (on him see *Sijill-i 'ahmânî*, ii. 75) was taken prisoner by Prince Eugene and being threatened with death betrayed the Sultan's plans. Prince Eugene then advanced rapidly to Zenta and surprised the grandvizier Elmas Mehmed Pasha (cf. above iii, p. 692 and the article MUHAMMAD FAKHĀ ELMAS) just as he was about to transfer the remainder (the greater part) of his army to the left bank. After the onslaught of the imperial troops, the Turks made a wild rush for the bridge, which was being heavily bombarded and it soon collapsed; the Turks were thus cut in two and by evening utterly routed (Sept. 11, 1697). Besides the grandvizier, four other viziers, 13 beglerbegs and about 30,000 men fell or were drowned. The Sultan himself only escaped with difficulty. In the popular mind this defeat became a synonym for any disaster, as may be seen from the Serbo-Croat proverb *Prošepao kao turci car na Senti* ("he has met the fate of the Turkish emperor at Zenta"). The defeat at Zenta forced the Turks to the peace of Carlowitz [q.v.] and meant that they were now definitely driven back into the Balkan Peninsula.

ZER MAHBŪB, "beloved gold", a Turkish gold coin (sequin). In the reign of Ahmad III (1115–1143 = 1703–1730) a new gold sequin was issued weighing 40 grains (2.6 grammes), in addition to the older sequin of 53 grains (3.44 grammes) (*funduk altını*) which continued to be issued alongside of it. This coin, known as the *zer mahbub*, remained in circulation till the great Mejdidiye recoinage of 1280 (1844), being reduced in weight to 37 grains (2.4 grammes) by Selim III (1203–1222 = 1789–1807) and to 25 grains (1.63 grammes) in the last years of Mahmūd II (1223–1255 = 1808–1839). Double, quadruple and half and quarter pieces of this denomination were also issued.

ZI'AMA. [See ZI'AMET.]

ZIKRAWAH h. **MIHRAWAH**, a Karmatian. After 'Abdūn, the brother-in-law and secretary of the founder of the Karmatian sect Hamdān Karmat [q.v.] had been disposed of in 286 (899), Zikrawah took his place as a Karmatian missionary. Out of fear of the energetic caliph al-Mu'tadid [q.v.], he had however to remain in concealment and is said to have lived in a hiding-place for four years and only to have come out into the light of day after al-Mu'tadid's death in Rab' II 289 (April 902). In the meanwhile the Karmatian emissaries had succeeded in winning numerous followers among the Banu 'l-Ulayh, a clan of the great Beduin tribe of Kalb b. Wabara in the Syrian desert, and towards the end of 289 (902) a large army set out against Damascus. Syria was at this time under the rule of the Tālmūdī, but the general Tughdī in Damascus was almost independent of the central government in Egypt. On the approach of the Karmatian troops he set out against them but underestimated the greatness of the danger and when he came to give battle, was forced to flee and return to the capital. Soon afterwards the grand-master of the Karmatians (*ṣāhib al-ṣawāḥib*) fell at the siege of Damascus; he was succeeded by his brother, the *ṣāhib al-ḥāḥil*, who forced the people of Damascus to purchase peace and then continued northwards, plundering and murdering as he went. Several towns like Hamāt, Ma'arrat al-Nu'mān, Basalbek and Salamiya were sacked, the men massacred and the women and children carried off as slaves. Finally however, the new caliph's general Muḥammad b. Sulaimān succeeded in completely defeating the Karmatians; the *ṣāhib al-ḥāḥil* was taken prisoner and brought to Baghdad where the caliph had him executed in the cruellest fashion. But the power of the Syro-Iraqian Karmatians was not broken. A disciple of Zikrawah's, 'Abd Qhānim 'Abd Allāh b. Sa'īd who had taken the name Naṣr, stirred up the Kalbi Beduins; they joined the Karmatians proper and ravaged the country east of the river Jordan as far as Damascus. When the caliph's troops approached, the Karmatians retired into the desert, filling up the wells so that their pursuers could not reach them for want of water. But when an army under Muḥammad b. Ishaq b. Kundajik finally penetrated to their

camps in the desert, they had to give in, murdered Naḡr and sent his head as a token of submission to the victor. Zikrawaih then at last came out of his hiding-place, appointed al-Kāsim b. Aḥmad leader of the 'Irāqī Karmāṭians and had himself worshipped as a saint, never allowing himself to be seen unveiled. In Dhū 'l-Hijja 293 (Oct. 906) they advanced on Kāfa, entered the town and massacred the people in the streets but after desperate fighting with the troops of the governor Ishāk b. 'Imrān had to give way and return to the district of Kādīsiya. In the very same month an army which the caliph sent against the Karmāṭians at Ishāk's request was defeated near Kādīsiya; but when al-Muktāfi equipped a new army under the command of Muḥammad b. Ishāk b. Kundādīk, they retired into the desert to waylay caravans. In Muḥarram of the following year (Oct.—Nov. 906) Zikrawaih fell upon the great pilgrim caravan returning from Mecca; his people killed not only the men but also a number of the women and carried off the rest. In Rabi' I, according to the most probable statement on the 22nd (Jan. 10, 907), the caliph's troops led by Waṣīf b. Suwārtagīn came upon the Karmāṭians near Khaffān in the district of al-Kādīsiya and fought them till sunset without a decision being reached. On the following day Zikrawaih was wounded in the head, whereupon his followers fled on all sides. On the way to Baghdad he succumbed to his wounds and his corpse was exhibited in the capital. — Cf. also the article KARMĀṬIANS.

ZINĀ (A.), fornication, i.e. any sexual intercourse between persons who are not in a state of legal matrimony or concubinage. To the pre-Islamic Arabs, zinā was not a sin but regarded in certain circumstances as an injury to the rights of property of a fellow-tribesman. In the Qur'ān, however, apparently under Jewish or Christian influence, warnings are uttered against zinā and chastity represented as a mark of the believer, e.g. Sūra xvii. 34; xxv. 68; xxxiii. 30. Zinā is then dealt with more fully in Sūra iv. (probably of the period after the battle of Uhud in the year 3): "(19) If your women be guilty of whoredom, then bring four witnesses against them from among yourselves: and if they bear witness to it, shut them up in their houses until death releases them or Allāh gives them a way. (20) Punish both of those among you who commit this sin; but if they repent and mend their ways, let them be: for Allāh is the pardoner and the merciful. . . (29) . . . (The believing slave-girls whom you marry) shall be chaste and modest and have no lovers". Verse 20 is sometimes with less probability referred to sodomy. A new law was made as a result of 'A'isha's celebrated adventure in the year 6 in Sūra xxiv.: "(2) Scourge each of the fornicators with a hundred lashes and have no mercy upon them in Allāh's religion, if you believe in Allāh and the last day; a number of the believers shall attend their punishment. (3) The whoremonger shall only marry a whore or an idolatress and the whore shall only marry a whoremonger or an

idolator. Such marriages are forbidden to the believers". Sūra iv. 30 must be later than the law in xxiv. 2, of which it is a continuation: "But if after marriage they commit adultery then inflict upon them half the punishment of chaste (free married) women". Sūra xxxiii. 30 (probably dating from the last part of 5 A. H.) refers to the punishment in the other world. Sūra xxiv. 33 cannot be exactly dated but certainly Medinese ("Force not your slave-girls to prostitution, if they wish to remain chaste, from a desire for gain in this life; if any one forces them, then after they have been compelled, Allāh will be forgiving and merciful to them") and Sūra lkv. 1 is also later (divorced women must not be driven out of their houses during the 'idda "unless they have committed proved adultery"). The so-called "verse of the stoning" is said to have been an original part of the Qur'ān as it was acknowledged as such by the caliph 'Omar: "If a man and woman who by have reached years of discretion commit adultery, stone them in every case, as Allāh's punishment". It is improbable that this verse is genuine, the traditions relating to it and the mention of 'Omar are clearly tendentious; the stories that the Prophet punished by stoning are also unworthy of credence. This punishment, which must have entered Islām quite early, certainly comes from Jewish law (Deut. xxii. 22) as can still be seen in a *ḥadīth*. Other traditions emphasise the rules of the Qur'ān and develop them; zinā is a very grave sin and not compatible with belief; profit from zinā and prostitution is unclean; sodomy etc. are included under zinā; the flogging which remained as a punishment alongside of stoning is combined with a year's banishment. In the system of fiqh and already in many traditions stoning and flogging are separated as *ḥadd* punishment for zinā in two categories of criminals, according as they are *muḥṣan* or not. By *muḥṣan* the law means in this case every individual who has reached years of discretion, is in possession of his faculties, is free and has had sexual intercourse in a legal marriage; they however always remain *muḥṣan* even after their marriage is dissolved; the distinction is therefore not based on any moral grounds. According to Hanafis and Hanbalis, both the guilty parties must fulfil these conditions; the Hanafis also demand that the *muḥṣan* should be a Muslim, while the Mālikis consider neither of the punishments applicable to a non-Muslim. The banishment for a year after the flogging is limited by the Mālikis to the man, by the Hanafis left to the discretion of the imām. Slaves are punished with fifty lashes, and according to the Shāfi'is banishment for six months. Zinā can only be proved by the evidence of four male, competent witnesses; as they must report all the details of the incident and, if their evidence is not sufficient, are liable to the *ḥadd* for *ḥadīf* [q. v.], the *ḥadd* for zinā in practice can hardly ever be inflicted, unless the culprit himself confesses his guilt. According to the Hanafis and Hanbalis, this confession must also be made four times, and according to the general teaching can be withdrawn. Marriage within the forbidden degrees is simply zinā as is rape, which can also be regarded as doing bodily harm. If the husband kills the guilty couple in *flagrante delicto* he is not liable to punishment. In practice the place of the legal regulations was often taken by summary and usually secret action either by the authorities

or by the relatives of the guilty woman; in this case drowning was a common form of punishment.

ZINDĪK (pl. *zanāḍika*; abstract *zanādika*), the term used in Muslim criminal law to describe the heretic whose teaching becomes a danger to the state; this crime is liable to capital punishment (by the application of *sūra* v. 37: xvi. 49; cf. *R. M. M.*, 1909, ix, 99—103) and to damnation (the *Māliki*s think it useless to ask the culprit to recant [*istisāba*] contrary to the *Hanafi*s; *tabṣir*, often theoretical, is not so strong a term as *zanādika*).

The term was borrowed in the *Irāk* from the *Iranian* vocabulary of the *Sāsānian* administration; Schaefer, correcting Darmesteter, has shown that *Ma'sūdī* (followed by *Hudjwiri*) was right in saying that among the *Mazdaeans*, *zanādika* was the heretic, who introduced a new gloss, an allegorical interpretation of a passage in the *Avesta* (cf. in the ninth century, the *zanādika* *Alāḥīh*, studied by Berthelémy; cf. *Muskhārat*, xxxvi. 16; *Shāyast nā Shāyast*, vi. 7); and more especially the *Manichaean*, follower of *Mani* (testimony of the *Armenian* writer on heresies *Eznik*, of the fifth century, transl. Schmidt, p. 95), or, in a more restricted sense still, the follower of the *Manichaean* schismatic *Mazdak* (according to *Khwarizmī*).

The term being *Iranian*, A. Siddiqi has shown that we must reject the *Aramaic* etymology (*zanādika*) suggested by *Bevan* as well as the *Greek* (*γυναικας*) proposed by *Vollers*. The word *zindik* must have become *arabized* in the mixed *Arabo-Iranian* society of the *ṣawādī* *Hamra* of *Hira* and *Kūfa* (cf. the exiling of the *Mazdakis* to *Hira*, in which we can see the explanation of the *Shi'a* gnosticism of *Kūfa* in the following century). Indeed it appears for the first time in the *Irāk* in 125 (742) in connection with the execution of *Dja'ūd b. Dirham*; then from 167 (783) to 170 (786) as an official inquisition was instituted by the *Abbasid* caliph under a special judge (*ṣarf*); it was then that *Bashshār b. Burd* and *Ṣāliḥ b. 'Abd al-Ḥudūd* were executed. The term became a technical one and literary tradition designates three famous writers, *Ibn al-Rāwandī*, *Tawhīdī* and *Ma'arri*, as the "three *zanādika* of *Islam*". But in general use, the term lost its precision and if the official definition of the *zindik* (a dualist ascetic, then a Muslim who is secretly a *Manichaean*), according to the caliph *Mahdī* (*Tabari*, ed. de Goeje, III, 588), is already carelessly applied to the three first men executed mentioned above, it is clear that it does not at all explain the psychology of the three "*zanādika* of *Islam*". In practice, the polemics of the conservatives describe as a *zindik* or "free thinker" any one whose external profession of *Islam* seems to them not sufficiently sincere (cf. the poet *Dj. S. Zahāwī* in *Baghdād* or the critic *Taha Husayn* in *Cairo*). This is the meaning in which it is already used by *Ma'arri* in his *Riḥlas al-Ghufra*. The

chief works representing this free, radical way of thinking have been brought to light by P. Krans (*Erkänghabir*, *Abū 'Isā Watrak*, *Ibn al-Rāwandī*, *Rān*, *Thaghrī*); they are preserved in *Isma'ilitic* refutations.

The evolution of the term is explained by its political character; it brands the heresy which imperils the Muslim state (this is already clear in the trial of *al-Hallāj*); and as the only crime systematically punished by the Prophet himself by death had been *zabā al-razā*, the jurists more and more made *zanādika* an intellectual rebellion insulting to the Prophet's honour (cf. *Ibn Taimiya* and *Ibn Ḥajjar al-Haitamī*).

The stages of this evolution can be brought closer together by summing up the definitions given of the word *zanādika* by the various Muslim schools.

The *Hanbalis*, according to *Khazhāh* (d. 253 = 867), recognise five sects of *zanādika*: *ma'afī'a*, who deny the creation and the Creator, reducing the world to an unstable mixture of the four elements; *māwriya* (*Manichaeans*) and *mandakya* who are dualists; *'ahzākya* (vegetarian *Isma'ili* ascetics of *Kūfa*; cf. *Massignon, Recueil*, ..., p. 11—12) and *ruḥāniya* (four ecstatic sects, who seek to free themselves from the constraint of observances and laws by an amorous union of the soul with God, a union denounced as implying identity of nature between the Creator and his creatures: in it *Sunni* mystics like *Rabāh* and *Rabī'a* are ranged alongside of an *Isma'ili* alchemist like *Ibn Ḥayyān*). *Ibn Ḥanbal* himself describes *Djahm* as a *zindik* for having maintained that the spirit (*ruḥ*) is an immaterial emanation, therefore divine.

The *Māliki*s of the west (Spain and Morocco) studied by *Millot* and *Lévi-Provençal* instituted trials for *zanādika*, especially for "insults to the honour of the Prophet" (trial of *Abū 'Isā Khair* at *Cordova* in the reign of *al-Hakam II*, of *Ibn Ḥatim al-Asti* at *Toledo* in 457 (1064) and later of *Ibn Zakūr* at *Fās*). Similarly the *Hanafis*, especially during the Ottoman empire (*fatwas* against the *Shi'a*; trial of *Kāhid* in 934 (1527); cf. *Nābulusi, Ghāyat al-Maṭlūb*, Pers. MS., folio 77).

As to the theologians, the *Mu'tazilis* at first saw in *zanādika* an amorous devotion seeking liberation from obligatory duties (cf. *Thumama*, in *al-Baghdādī, Fārḥ*, abbr. and ed. *Hitti*, p. 105), then a tendency to the *lūḥa* of the *Khurramiya*; *Ghazālī* defines it as a tendency to atheism.

The *Sāfis* were early persecuted as *zanādika* in view of their doctrine of the divine love (trial in the year 262 (875) of *Nūrī*; execution of *al-Hallāj*); *al-Hallāj* (cf. *Tawāṣit*, v. 2) himself recognises in a curious psychological analysis that on the threshold of transforming union, mysticism obtains a feeling of identity with God, which is *zanādika* (*Al-Bihar*, No. 52, p. 80, l. 7).

The moderate *Shi'a*s like to describe the extremist *Shi'a*s, for an analogous reason, as *zanādika* (emanations that give union with the divine: *dawā ilā 'l-rubūbiya*). The *Zaidī* *imām Kāsim* is credited with the authorship of a refutation of the *zindik* *Ibn al-Muḥaffa* [q. v.] which *Guidi* has edited and translated.

Lastly, in his *Fikrist* (ed. *Flügel*, p. 338), *Ibn al-Nadīm* has given a very heterogeneous list of *zanādika* (the value of which is sometimes overestimated, it is rather imaginative; G. Vajda in

preparing a critical study of this subject) in which Marwān II and the Barmecides are found alongside of Isma'īl, like Abū Shākir and Dhahhān, an Imām like Nāghī and an independent critic like Abū Isā al-Warrāq [q. v.].

(LOUIS MASSIGNON)

ZINDJIRLĪ, a village in Northern Syria in the valley of the Karāsī between the Amanos and the Kurd Dāgh not far from Iṣṭāṭiye. Near the village is a tell, the ruins of the old Aramaean town of Sham'al, the capital of the little North Syrian state of Ya'dī (Assyr. *Yandi*). It was discovered in 1883 by Hamdy Bey, F. v. Luschān and O. Puchstein and excavated in 1888, 1890—1891, 1894 and 1902 by the Berlin Orientkomitee under the leadership of K. Humann, F. v. Luschān and F. Winter with the co-operation of J. Euting and W. Koldewey.

The citadel of Sham'al was surrounded by two concentric circular walls. In addition to reliefs, colossal lions and bulls, there were found at Zindjirli and the adjoining tells of Gerdin (Gerdin) and Takhtāṭī Baṭār several Aramaic inscriptions in old Canaanite script and a stela of Asarhaddon of Assyria from which we learn the names of several rulers of the 9th and 8th centuries B. C. of Sham'al-Ya'dī, namely Gabbārā, Bamaḥu, Khayyā, Shā'el, Kilamūwa, Karal, Panamūwa (Pa-namū) I, Barṣur, Panamū II and Barrekub. The finds from Zindjirli are for the most part preserved in the Vorderasiatische Abteilung of the State Museums in Berlin; the remainder are in the Museum in Stambul.

In the Arab period there is no trace of Zindjirli rulers unless we have a corruption of this name in that of the fortress of Zandjara (mentioned in al-Nuwairi, Paris Bibl. Nat., Ms. arab., No. 1579,

fol. 161r, quoted in Mufaḍḍal b. Abi 'l-Faḍā'il, *Histoire des Sultans Mamelouks*, ed. Blochet, in *Patrol. Orient.*, xiv. [1920], 602, note 2).

(E. HONIGSMANN)

ZIRIDS, the name of two mediæval dynasties of the Muslim west.

I. ZIRIDS or BANU ZIRI, a Berber dynasty which held a part of Eastern Barbary from the end of the fourth (tenth) century to the middle of the sixth (eleventh) century. The Zirids were connected with the great confederation of the Sanhādja [q. v.] and led a settled existence in the central Maghrib. Zir b. Manād had founded Aghir [q. v.] in the mountains of Titter about 940. He made it the capital of his territory and a bulwark against the attacks of the Zenāta Maghrawa [q. v.], allies of the Umayyads of Cordova. By their resistance to the Zenāta, the Zirids rendered considerable service to the plans of the Fāṭimids of Ifrīkiya. Their most signal service was the relief of al-Mahdiya when it was besieged by the Khārijī agitator Abū Yaṣīd. The timely assistance which they rendered to the Fāṭimids on this and several other occasions was rewarded. When the Umayyad caliph al-Mu'izz left Ifrīkiya for Egypt in 363 (973) he appointed Buluggin b. Ziri governor of Ifrīkiya and gave him by anticipatory investiture all the lands which he might conquer from the Zenāta.

Against these hereditary enemies the struggle was continued under Buluggin [cf. *BULUGGIN*] who marched victoriously through the Maghrib and seized all the important towns with the exception of Ceuta, under al-Manṣūr b. Buluggin (373—385 = 984—995) and under Bādīs b. al-Manṣūr (385—406 = 995—1016). During the latter emir's reign took place the division of the Zirids into two kingdoms: one in the west went to the Hammādids who lived in the Kaṭa and the other in the east to the Zirids with Kairawān as capital. An amicable arrangement regularising the division was made in 408 (1017) under al-Mu'izz b. Bādīs [q. v.]. In spite of this loss of territory, eastern Barbary enjoyed an undeniable economic prosperity during the reign of al-Mu'izz (406—454 = 1016—1062) which enabled the emir to enrich Kairawān and Sābra, the official city, with very fine buildings (ceilings and *maḥḥāra* of the great mosque of Kairawān). This wealth encouraged al-Mu'izz to cast off Fāṭimid suzerainty and to repudiate their doctrine which the people of Ifrīkiya had only accepted with great reluctance. The caliph in Cairo punished this secession by sending in 444 (1052) against the rebels the Arab nomad tribes of the Banū Hilāl and Banū Sulaim [q. v.]. This was the great disaster. The open country was ruined completely; al-Mu'izz had to leave Kairawān

and seek refuge in al-Mahdiyya. While the Arabs held the plains, the towns formed republics and independent little principalities. Al-Mu'izz's son Tamim (454-501 = 1062-1108) tried without much success to regain possession of his kingdom and to thwart the ambition of the Hammāda. His successors were to continue this difficult task. What really gives interest to the later Zirids, Tamim b. al-Mu'izz, Yahya b. Tamim (501-569 = 1108-1166), 'Ali b. Yahya (509-515 = 1116-1121), al-Hasan b. 'Ali (515-563 = 1121-1167), is the maritime activity developed by these former lamellans now paralysed on the mainland and the repeated attempts made by them to retake the command of the sea from the Normans of Sicily. This struggle which generally took the form of piratical enterprises did not however end to the advantage of the Zirids. After an effort to come to an arrangement with the Normans, the emirs could not prevent the enemy raiding the coast of Ifrīkiya and plundering the coast towns. In 543 (1148) al-Mahdiyya was taken by George of Antioch. Al-Hasan driven from his capital sought refuge at Bône, then in Algiers. He was reinstated in al-Mahdiyya by the Almohad caliph 'Abd al-Mu'min and spent eight years there before being again exiled, to die in obscurity in the extreme Maghrib in 563 (1167).

(G. MARÇAIS)

2. ZIRIDS OF SPAIN, a secondary branch of the Berber family of the Banū Zīr of Ifrīkiya, who founded an independent principality with Granada as capital at the time of the dismemberment of the Umayyad caliphate of Cordova.

The establishment in Spain of the Ṣanhādja family had taken place only a few years previously. It originated in the rebellion in Ifrīkiya of the members of the family of the Zirid princes Balaggin and al-Manṣūr who had been deprived of their positions. These malcontents gathered round one of Zīr's sons, Zāwī, who persuaded them to leave Ifrīkiya. They offered their services, which were at first welcomed, to the 'Amīr al-ḥaḍra of Cordova, 'Abd al-Malik al-Muḥaffar [q.v.]; accompanied by numerous followers they went to Spain where they soon played an important part in the Berber army raised by the 'Amīrīds in which they formed one of the main elements. When the caliph Sulaimān al-Musta'in at the beginning of the 10th century distributed lands to his principal auxiliaries, he gave the Banū Zīr the district of Elvira [q.v.], the old capital of which was gradually being supplanted by Granada, a town of quite recent foundation mainly peopled by Jews. Zāwī b. Zīr without adopting the

sovereign title at once began to act as an independent ruler in Granada. Taking up the cause of the pretender to the caliphate 'Alī b. Hammūd [q.v.], he inflicted on the supporters of another pretender, 'Abd al-Rahmān al-Murtadja, in 407 (1016-1017) a serious defeat in the region of Granada. His authority was naturally strengthened by this success; it is therefore all the more difficult to explain the decision he soon took to abandon his principality and return to his native land of Ifrīkiya. It was dictated no doubt by the ancient hatred, still alive in Spain, which had divided Africa into anti-Fātimid Zenāta and pro-Fātimid Ṣanhādja. The Zenāta were daily gaining ground in Spain, where they occupied the mountainous region of the centre and west of Andalusia. Zāwī however retook Kairawān with only a very small body of followers in 416 (1025).

On the departure of Zāwī b. Zīr, his nephew Ḥabbūs b. Mūsā assumed command of the Zirids in Granada. He adopted a sovereign title, that of *ḥaḍra*, and the honorific *ḥaḍra* of Saif al-Dawla. He reigned for over 10 years until 429 (1038). He concluded alliances with the petty neighbouring dynasties and at his death had increased his kingdom by the districts of Jaen [q.v.] and Caba. He had entrusted the conduct of his kingdom to a Jewish vizier, Samuel Ibn Naghziā, a thing unprecedented in Muslim Spain. The fame of this vizier, not only an able minister, but author of many original works in Hebrew, spread far and in 1027 the Jews of Spain revived for him the princely title of *ḥaḍra*.

On the death of Ḥabbūs b. Mūsā, power passed to his son Bādīs b. Ḥabbūs, whose long reign marks the culminating point of Zirid power in Spain. He began by inflicting a bloody defeat on the prince of Almería, his former ally Zuhair [q.v.] who lost his life in the battle fought in the pass of Alpuente (429). Emboldened by this success and by the victories which he won without difficulty over the troops of the prince of Valencia and Seville, Bādīs b. Ḥabbūs threw off the suzerainty (at best only nominal) of the petty Hammūdīd caliph of Malaga and annexed his dominions (c. 450 = 1058). The years following were marked by the anti-Berber policy of the Arab king of Seville, al-Mu'tadīd [q.v.] Ibn 'Abbād, who successfully annexed the little Berber kingdoms of Ronda [q.v.], Jerez (Ar. Sharrāh [q.v.]) and Acrois. As a result the power of the Arabs in Spain increased considerably and the only bloc of Berber resistance which was still really solid was that of the Ṣanhādja Zirids of Granada. Bādīs could not help being disturbed by this advance of the 'Abbādīd kingdom in the east of Andalusia and at the same time by the increasingly marked signs of disaffection among his own Arab subjects. Bādīs in these unpropitious circumstances and against the advice of the vizier Samuel, whom he had retained on his accession, went to war with Seville, but without success. A Seville army led by the prince al-Mu'tamid was fortunately checked in its advance on Malaga.

On the death of the vizier Samuel, his son Joseph succeeded him as Bādīs's first minister. Unlike his father, the new vizier soon turned against himself not only the Arabs of the Zirid kingdom but also the Berbers themselves, by his extravagance and the luxury with which he surrounded himself and the favours he bestowed on his co-religionists. If

we may believe the Arab historians, his ambitions increasing, he had the heir presumptive of Bādis poisoned, his son Balugḡta, succeeded in exalting himself with his master and for a time thought of creating a Jewish kingdom in Spain for his own advantage. He was in secret correspondence with the lord of Almería, Ibn Sumādih, and offered to surrender Granada to him, on condition that Almería became the capital of a Jewish principality of which he should be ruler. The reaction was inevitable and rapid. On the appeal of the Arab poet Abū Ishāq al-Ilbiri in a poem that became famous, a conspiracy was got up against the Jews of Granada and on 9th Šafar 459 (Dec. 30, 1066) Joseph Ibn Naghalla and 3,000 Granada Jews were massacred and their homes plundered.

The reign of Bādis b. Ḥabbūs lasted till 466 (1073). Granada had now become an important city grouped around the citadel which stood on the west bank of the Darro; it had been built by Ḥabbūs b. Māksan and enlarged by Bādis. The residence of the latter, according to local tradition, was called "house of the weathercock" (*dār dīk al-riḡ*) which is preserved in that of "casa del Gallo". A bridge over the Darro still called "Puente del Caill" was built in 447 (1055) by the kādī of Granada 'Alī b. Muḥammad b. Tawba. A mawla of Bādis b. Ḥabbūs, Mu'ammil, left his memorial in Granada in several public works also built in the Zirid period.

When Bādis b. Ḥabbūs died, he left two grandsons, Tamīm, then governor of Malaga, and 'Abd Allāh; the latter assumed power in Granada while his brother set up as an independent ruler in Malaga. This division was to be maintained till the end of the Zirid dynasty. Events were however soon to move rapidly with the advance of Christian arms. The taking of Toledo [q. v.] in 1085 by Alfonso VI was followed next year by the famous victory won by Yūsuf b. Tāshfin at al-Zallāka [q. v.] in which Tamīm and 'Abd Allāh took part with their contingents. When in 1090, Yūsuf returned to Spain, one of his first cares, after the failure of the siege of Alledo, was, on the advice of the kādī of Granada Abū Dja'far al-Ḥulālī, to seize Granada and dethrone 'Abd Allāh. The latter abandoned by all had to go to the Almoravid sultān who made him a prisoner and soon afterwards dethroned his brother Tamīm in Malaga. 'Abd Allāh was exiled to Aghmāḡ [q. v.] on the northern borders of the Moroccan Great Atlas. Tamīm was forced to live in Marrākush where he died in 488 (1095). Almoravid governors were installed at Granada and Malaga to mark the completeness of the fall of the Zirid dynasty in Spain.

ZIYÂ GÖK ÂLP (MEYMAN ZIYÂ BEY), Turkish author and poet, sociologist and nationalist leader. Born in Diyarbakır in 1875, from a family of Ottoman government officials, he attended the veterinary school in Constantinople; becoming compromised through his relations with the Revolutionary Committee, he was obliged to leave the capital, and return to his province. After the revolution of 1908 he figured among the members of the Union and Progress Committee, took part in the Salonica Congress (1909), and began to spread his social and nationalist ideas through the review *İkinci Kalem*, which was published in that city. From 1912 he occupied the chair of Sociology at the University of Constantinople, was among Enver Pasha's supporters during the European war, and was exiled to Malta during the Allied occupation of Constantinople.

In spring of 1921 he returned to Anatolia and remained a year at Diyarbakır, where he published the review *Kutub Medjide*; he was then appointed president of the "Translation and Composition Committee" at Angora; he was among the heralds and supporters of the People's Party (*İnkılâp Fırkası*), founded by Muṣṭafā Kemal Paşa, and resumed his teaching at the University of Constantinople, where he died, still young, October 25, 1924. His funeral, celebrated by the Great National Assembly of Angora, to which he belonged as member for Constantinople, was a tribute from the whole nation to his memory.

Ziyâ Gök Âlp was a son of his times, and in a certain sense an anticipator of events, which his strong national feeling foresaw in examining the history of the people and the fortunes of the Ottoman Empire. Especially after his death he was recognised as the father of Turkish nationalism. There is however an evolution in his thought from 1908 to 1924, which bears a relation to the events in his country. From his early manifestation of a spirit of modernism and freedom, justified by 'Abd al-Hamīd's tyranny, he passed, under the influence of books and of currents already dominating the westernized Turkish classes, to the preaching of Pan-Turanism. This programme appears in almost all his early works, it still prevails in the later, and is embodied especially in the poem *Turan*, published in 1914 in the collection *Küll Elma*, which ends with the lines: "The fatherland of the Turks is neither Turkey nor Turkestan, our fatherland is a great and eternal country; Turan". Ziyâ Gök Âlp dreamed of an Ottoman fatherland, an Ottoman empire, comprising the provinces it still possessed in 1914, a Muslim empire with a constitutional Sultān, where Ottomans would be preeminent politically and intellectually, and which would give rise to a new civilisation, capable of influencing the other peoples of Turkish race, and absorbing them to the point of creating an immense Turanic empire. These same ideas are poetically rendered in the poem *Küll Elma*, which gives the volume its title, and in the prose writings mentioned below. Prose and poetry, for Ziyâ Gök Âlp, are slightly different expressions of an identical idea.

In his later years, after the loss of the Ottoman

Empire's provinces, the writer's hopes centred around Mustafa Kemal's form of democratic dictatorship; the Pasternakian idea remains in the distance, as a far-away goal, and he tries to strengthen a pure Turkish nationalism, modernising and westernising: Ziyâ Gök Alp departs from the *Edibiyât-ı Fîlîye* school and opens the contemporary movement; he has, however, a singular individuality, which distinguishes him from his contemporaries and from his latest imitators. In his works, which are the fruit of individual study and feeling, it is not difficult to discern the influence of European writers, especially French, whom he mentions, e.g. the sociologists G. Tarde and E. Durkheim, and, in history, L. Cahen. An interesting side of his literary activity is its simple and melodious form; some of his poems seem deliberately written with a pedagogical purpose, but they are inspired by strong feeling, and between the lines flash bold conceptions.

Ziyâ Gök Alp is also, one of the first, if not the first Turkish writer to have perceived the importance of folk literature as a fount of inspiration for a sincere national culture; in his works are also to be noticed mystical motives. In language, he favours simplicity and a thoroughly Turkish vocabulary and syntax.

He was a supporter of modernisation in religious and social matters; in this he has been far surpassed by recent Turkish reforms.

Works. Ziyâ Gök Alp's writings are partly scattered in many Turkish reviews of the last 20 years, some of which, like *Ünvanı Kalem*, *Yeni Mecmû'a*, and *Türk Yurdu*, received from him their special character. Many of these articles have been reprinted in his chief works, which we enumerate in chronological order:

1. *İlmî-i İhtimâ Derleri* (Constantinople 1329);
2. *Kâzî Elna*, collected poems (Constantinople 1330);
3. *Türkîleşme, İslâmîleşme, Müâvîleşme*, eleven chapters in prose (Constantinople 1918);
4. *Yeni Hayât*, collected poems (Constantinople 1918);
5. *Altın İhtâr*, fables, partly in prose and partly in verse (Constantinople 1339);
6. *Türkçülüğün Esasları*, in prose, lengthy treatise on the principles and programme of Turkism (Angora 1339);
7. *Türk Tarehi*, in prose, study of the Turks' ancient beliefs and customs (Constantinople 1339);
8. *Doğru Yol*, in prose, commentary upon the nine points of the People's Party's programme (Angora 1339);
9. *Türk Medeniyeti Tarihî* (Constantinople 1925).

ZİYÂD b. ABÎHÎ, viceroy of the 'Irâk.

The sources call him sometimes son of Sumaiya or son of 'Ubad, sometimes son of Abû Saifân, most frequently however Ibn Abîhî: a solution which can only be described as one of despair but it is the most non-committal of all as regards historical truth. Partisans and enemies of the Omayyads have for different motives confused the genealogy of this individual as they pleased. Ziyâd's mother was Sumaiya, a slave girl of Tâif, a courtesan by profession, adds the anti-Omayyad version. Abû Saifân is said to have known her and thus would be explained the mystery of Ziyâd's being classed with the Omayyad family. Whatever we may think of this, the young Ziyâd incorporated in his person all the intelligence, alertness and the strength of mind attributed to his kinsmen, the Thakafis. Settling in Baṣra with his very near relatives, the Abû Bakra [q. v.], Ziyâd early found himself attached as secretary to the service of the first governors of the 'Irâk. 'Alî, becoming caliph, decided to make use of his talents and employed him on very delicate missions. After the death of 'Alî he attracted the attention of Mu'âwiya. The great Omayyad was anxious to gain an auxiliary of this ability. His first advances were rejected and Mu'âwiya then resorted to a plan, which showed what this ruler was capable of when dynastic interests were at stake. This was the *istilâk*, the official recognition of Ziyâd as a son of Abû Saifân.

A little later, the caliph appointed his half-brother governor of Baṣra. A central camp in which were being organised the forces destined to complete the eastern conquests collected from the most restless Beduin tribes whose turbulence constituted a continual threat of anarchy, the post at Baṣra demanded a man of the first rank. Mu'âwiya intended to devote all his attention to the west of the caliphate. The discourse pronounced by Ziyâd on his arrival in the mosque of Baṣra has remained celebrated in Arabic literature. It is called the *khutba ṣatrâ*, the "truncated speech", the orator having, we are told, begun *ex abrupto*. In it he developed his programme, announced the rigorous measures to which he would have recourse if necessary. Examples followed to show his threats were not mere words. Order, which none of his predecessors had been able to establish, soon reigned throughout the vast province of Baṣra. In return the caliph hastened to entrust Ziyâd with the government of Kûfa also. This town, entirely 'Alid in sympathies, could not after the death of 'Alî be consoled for having lost the title and the advantages of capital of the caliphate. As he had done in Baṣra, Ziyâd succeeded in restoring promptly in Kûfa the prestige of the Omayyad régime.

Governor of all the 'Irâk and of the provinces depending on it in Arabia and eastern Asia, Ziyâd was able to justify to the end of his life the unlimited confidence shown him by Mu'âwiya. In the Arab historians, he shares with this sovereign the honour of being quoted as the typical statesman, gliding with an experienced hand, without a trace of effort, the reins of government, his ear

to the ground, his eye ever open for events happening in his immense viceroyalty. Annalists and collectors of aphorisms frequently hesitate between the two, when they do not quote both, to point a lesson of high politics; Ziyād is numbered among the four *dāhiya*, great statesmen, of the century. The other three are Mu'āwiya [q. v.], al-Mughīra b. Shu'ba [q. v.] and 'Amr b. al-'Ās [q. v.]. In Kufa he had to keep an eye on the 'Alid meetings. He came into conflict there with the agitator Hudjir b. 'Adi [q. v.], an everyday incident exaggerated out of all proportion by anti-Omayyad tradition, especially by the Shī'a. To checkmate the 'Alid opposition and that of the Arab tribes settled in the 'Irāk, Ziyād had recourse to transplantation. He moved 50,000 Beduins to Khurāsān. He died of the plague at Kufa in 56—57.

For our information about Ziyād we have to rely upon the historical school of the 'Irāk. The bias of the 'Irāk annalists, very hostile to Ziyād, is inclined to place his birth several years after the Hījra, in order to be able to dispute his claim to the title of *ṣaḥābī*, Companion of the Prophet. As, on the other hand, he could not have been born long before the Hījra we may credit him with being about 60 at his death. The best testimony to Ziyād's ability is seen in Mu'āwiya's decision to hand over to his charge the eastern half of the Arab empire, notoriously the most difficult to govern, the most rebellious against Omayyad ideas, the great manager of men, the active ruler, so strong-willed in the case of his own relatives, summoned Ziyād to assist him in the exercise of his power and imposed upon himself, so to speak, the obligation of not interfering in the affairs of the 'Irāk in the lifetime of his lieutenant. The constant favour, the loyal support given by Ziyād to the Omayyad dynasty are sufficient to explain the bitterness of the 'Alid writers against the memory of the Thaqafi statesman.

ZIYĀD ALLĀH n. IBRĀHĪM. [See AGR-LANDES.]

ZIYĀDĪ, a Yaman dynasty of 204 to 371 (819—981) or 409 (1018) with capital in Zabīd [q. v.]. They were regarded as descendants of Ziyād b. Abīhi [q. v.]. But as the latter's genealogy is uncertain, so not even the name of the father of the founder of the dynasty, Muḥammad, has been handed down with certainty.

The caliph Ma'mūn was harassed by his uncle Ibrāhīm b. al-Mahdī; at the same time tribes in the Yaman became rebellious. The fact that there were 'Alid schemes afoot there and indeed shortly before Ibrāhīm al-Djazzālī, a brother of 'Alī al-Riḍā [q. v.], had been plundering in Ṣan'ā', may

have decided the caliph to abandon completely his previous 'Alid policy and to entrust the affairs of the Yaman to a member of the Banū Ziyād, whose hostility to the family of 'Alī was well known, even if he had been himself in the service of the house of Umayya. A scion of the latter house was associated with Muḥammad, as was Muḥammad b. Hārūn of the tribe of Taghlib, whose descendants, the Banū Abī 'Aḥāma, held the office of *ḥāḍi* in Zabīd during the whole rule of the Ziyādīs and of the Banū Naḍjāh who followed them. The execution of all three men may have been already decided upon in the interests of 'Abbāsīd policy; they now became its supporters. The Ziyādīs always recognised the suzerainty of the 'Abbāsīds.

Accompanied by trustworthy Khurāsān troops and cavalry and in particular supported by an able freedman Dja'far, Muḥammad b. . . . Ziyād was able to get a firm grasp on the coast, as far, it is said, as Shīhr in Hadramawt. The lords of the fortresses in the highlands, in Djanad and al-Muḥallakhira, recognised him. But in the interior of the highlands the Baghdad government continued to send special governors to Ṣan'ā' until the Banū Ya'fur [q. v.] made themselves independent there from 247 to 289 (859—901). The second Ziyādī, Ibrāhīm b. Muḥammad (245—289 = 859—902), had to hand over Hadramawt and Djanad to Muḥammad b. Ya'fur, although in return for tribute. The first interruption followed Ibrāhīm's death. While the possession of Ṣan'ā' alternated between Zaidī and Ḥamḥānī Shī'a, the latter under 'Alī b. al-Faḍl took possession not only of Djanad and al-Muḥallakhira but for a time of Zabīd itself also. Neither the name nor the length of reign nor fate of the third Ziyādī is exactly known. The dynasty revived under Ibrāhīm's other son Abu 'l-Djā'ish Iḥḥāk b. Ibrāhīm in his 80 years' reign (c. 291—371 = 904—981). About 350 (961) even the Hamḥānī chief al-Dahḥāk, then lord of Ṣan'ā', paid homage to him. But in 379 (980) 'Abd Allāh b. Kaḥṭān, who restored the power of the Banū Ya'fur for a short time, by taking and burning Zabīd put an end to the dynasty of the Ziyādīs.

The actual ruler was by now no longer the young fifth Ziyādī, whose name also is uncertain, who followed Abu 'l-Djā'ish, but the Abyssinian Mamlūk vizier al-Ḥusain b. Salāma, who was able again to save the land from catastrophe and secured a fame which has lasted to this day by making pilgrim roads with mosques and wells through the mountains and the plain. Of no importance was the transfer of the title to a sixth minor Ziyādī, probably Ibrāhīm II, as Ibn Salāma was followed by his Mamlūk Ma'rjān as independent vizier, who in turn divided the government between his two slaves: Naḍjāh in the northern provinces and Nafīs (or Anīs) for the southern including the capital. The latter seized the crown himself and had the young king and his aunt Hind immured alive (409 = 1018). It was however not he that founded a dynasty but Naḍjāh [q. v.].

Bibliography: see that of the article *ZANĪS*, especially Kay; also E. v. Zambaur, *Manuel de généalogie et de chronologie*, Hanover 1927, p. 115. (R. STROTHMANN)

ZIYĀNIDS. [See ZAYNĪDĪS.]

ZIYĀNIYA, branch of the Shādhilī Order, has its headquarters at Kenādha; lists of the heads are given by Rinn, *loc. cit.*, Dupont and Coppolani, *Confréries*, p. 498, and Cour, *loc. cit.*

in the second work a specimen is given of the diploma of *muḥaddam* conferred by the head of the order, with seal. Their practice is said to differ from those of the other Shādhīlīs only in details; their ordinary *ḥikr* is reproduced by Rinn, *loc. cit.*, p. 411, and consists in the repetition of certain formulas, a hundred, others a thousand times. Their speciality is the guiding and protection of caravans and travellers against brigands; in Rinn's time (1884) "no trader would venture to send a consignment of goods southwards" without having secured protection in the form of a Ziyānī rider bearing a letter with the seal of a *muḥaddam*, whom the brigands would be afraid to offend. Hence he calls them the pilots of the Sahara. Much the same is said by A. Bernard, writing in 1931 (*Le Maroc*, p. 205). The community appears to be little known outside French Africa; lists of their *shaykhs* in Algeria with an account of their diffusion in Morocco are given by Depont and Coppolani, *loc. cit.*

The order was founded by Muhammad b. 'Abd al-Rahmān Ibn Abi Ziyān, died 1145 (1733). In the *B. M. M.*, xii, 360–379 and 571–590, A. Cour published in French some extracts from a MS. biography called *Tahḍrat al-Anfus wa 'L-Aswāb al-Jīnānīya fī 'L-Tarīq al-Ziyānīya al-Shādhīlīya*, itself an abridgment of an earlier work. This is chiefly a record of miracles, but furnishes certain details supplementing those collected by L. Rinn, *Marabouts et Khawm* (1884, p. 408–415). He was born at Thatha near Kenādja (S. W. of Figuig in Morocco), studied with Sidi Mubārak b. 'Azza in Sijilmassa and after his death went to Fez, where he studied for eight years under Muhammad b. 'Abd al-Kādir al-Fāsi (died 1116 = 1704), Ahmad b. al-Hādīdī (died 1109 = 1697), and others; according to Rinn, he was expelled from Fez by the emperor on the ground of sorcery, fled to Tūfīlāt, where the *muḥaddams* of the Nāṣiriya branch of the Shādhīlīya admitted him to the order, after which he made the pilgrimage to Mecca, and then on his return established himself at Kenādja, where he founded a *ṣūfiya*. Besides introducing some modifications into the Shādhīlī ritual, and acquiring a reputation for saintliness, he appears to have dug wells and organized irrigation; his most celebrated miracle, which determined the future of his community, consisted in the suppression of brigands. His fame and talents attracted numerous visitors, who presently formed a flourishing colony. Like other Islamic saints, he was the head of a family, and left the headship of his order to his son.

Bibliography: given in the article.

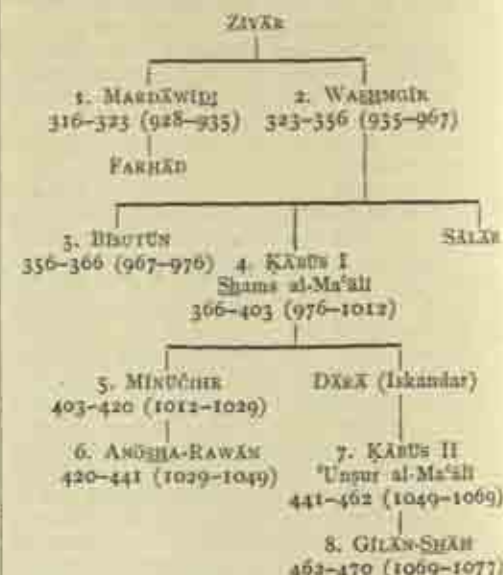

(D. S. MARGOLINETH)

ZIYĀRA (A.), visit, in the religious sense the visit to a holy place or to the tomb of a saint, especially to Muhammad's tomb in the mosque of al-Madīna, which even under the Wahhābī rule is paid by those who perform the *ḥajj* [q. v.]. The ziyāra paid to the tombs of the saints was among the *ibāda* which were combated by Muhammad b. 'Abd al-Wahhāb [cf. WAHHĀBĪYA]. For details cf. W. R. van Dieën, *De leer der Wahhābieten*, doctoral dissertation, Leyden 1927. That the Wahhābīs were not the first in Islam to question the legality of visiting tombs, and of the practices connected therewith, appears from the materials preserved in *ḥadīth* (cf. Wensinck, *A Handbook of Early Muhammadan Tradition*,

s. v. Grave[s]) and from later literature (cf. *IRN TAMĪYA*).

(A. J. WENSINCK)

ZIYĀRIDS, a dynasty of vassals of the Sāmānids [q. v.] which reigned over Irāq 'Adjam and Tabaristān, then over Ḍjurdjān from 316 to 470 (928–1077). It took its name from Ziyār, father of Wardān Shāh ruler of Gilān, who was the father of Mardāwīd, its founder. The following is the genealogical table:

1. MARDĀWĪD, see the separate article.
2. WĀSHMĪR, see the separate article.
3. His son ZAHĪR AL-DAWLĀ Abū Manṣūr Bīsutūn made peace with Rukn al-Dawla; he died in 366 (976) in the town of Ḍjurdjān.
4. KĀBŪS I, see the separate article.
5. MĪNŪCHĪR, by arrangement with 'Alī al-Dawla, had returned to Ray; there he was attacked by Sulṭān Maḥmūd who pursued him into the mountains but made peace on payment of 300,000 dinars and recognised Maḥmūd as his suzerain (420 = 1029). It was to this prince that the poet Mīnūchīrī [q. v.] dedicated his early poems and from him he took his name.
6. ANŪSHĀ-RAWĀN [cf. ANŪSHĀRAWĀN] recognised the suzerainty of Ma'ūd, son and successor of Maḥmūd; but in 433 (1041–1042) he was attacked by Taghrīl Beg the Salḡūk who took Ḍjurdjān from him. He shut himself up in a fortress where he died in 441 (1049). During his reign his uncle Dārā, also called Iskandar, was governor of Ḍjurdjān and Tabaristān in the name of Sulṭān Ma'ūd (c. 426 = 1035).
7. The son of Dārā, KĀBŪS II 'Unsur al-Ma'ālī, son-in-law of Sulṭān Maḥmūd, accompanied the latter on his Indian campaigns. He died on an expedition led by the emir Faḍlūn Abū T-Sowār of the dynasty of the Banū Shaddād against the Abkhāz, which ended disastrously in 462 (1069). He was the author of the *Ḍāḥiṣ-nāma*, a book of good advice addressed to his son Gilān-Shāh, which was translated into German by Fr. v. Dies (Berlin 1811) and into French by A. Query (Paris 1886).
8. His son GILĀN-SHĀH reigned over the moun-

tainous country only, for Tughril Bey before marching on Baghdad had occupied Tabaristan. He was dethroned by Malik-Shah and died in 470 (1077).

FAHRĀD is given as the son of Mardawidj but his paternity is uncertain and he was not summoned to succeed his father or any of his cousins. In 414 (1023), when he must have been at least 88, we find him a vassal (*mukāf*) in Borsajird. In 427 (1026) he accompanied 'Alā' al-Dawla the Kakāyid on his campaign against the Kurds and remained his faithful ally. He fell in battle against the army of Sulṭān Ma'sūd (425 = 1034).

Bibliography: Ibn al-Aṭhīr, *Kāmil*, ed. Tornberg, viii, 59, 139, 172, 195, 201, 207, 226, 262, 276, 291, 333, 353, 378, 402, 411, 426 *qq.*, 506, 519; ix, 8, 97, 111, 251, 262, 284, 340; Ibn Miskawaih, in *G. M. S.*, v, 271, 345; 367, 435 *qq.*, 479 *qq.*, 572; vi, 9, 33, 55, 204, 270, 296 *qq.*; Ibn Khaldūn, *Ta'rikh*, Bulak, iv, 423, 432, 444, 497; Defrémery, *Samanides*, p. 130, 137, 247, 289; Ibn Isfandiyyār, *Hist. of Tabaristan*, transl. Browne, p. 202, 205, 217, 220, 228; Zahir al-Din, *Geschichte von Tabaristan*, ed. Dorn, p. 174, 196, 216, 311; F. Justi, *Iranischer Namenbuch*, p. 441; Cl. Huart, *Les Ziyarides*, in *Mém. de l'Acad. des Ins. et Belles-Lettres*, vol. xlii, Paris 1922. (CL. HUART)

ZOTT (pronounced *Zoff* in Damascus), the name of a people (cf. also *SAWĀ*). The etymology is certain: *zoff* > Pers. *zūt* (for a similar change cf. Pers. *khān* 'house' > Arabic *khān* 'rumb-line').

Firdawsi (d. 1024) relates in his *Shāhnāme* that Bahram Gūr, king of Persia (420–438 A.D.), asked the king of India to send him 10,000 Luri, men and women, expert at playing the lute (transl. Mohl, vi, 60 *qq.*).

In his *Geschichte der Perser und Araber zur Zeit der Sasaniden*, transl. from the Arabic text of Tabari (829–323), Noldeke has full confidence in this tradition. De Goeje quotes his opinion and adds that there is no reason to suspect Firdawsi's statement (cf. the contrary view expressed by John Sampson, *The Dialect of the Gypsies of Wales*, Oxford 1926, p. 29, note 1, who wrongly regards the statements as pure legend).

At an earlier date than the Persian poet, Balādhuri (d. 892) says that "the Sayābidja [q. v.] had been settled in the ports [of the Persian Gulf since] before Islam. It was the same with the Zoff" (ed. de Goeje, p. 373, l. 2 *infra*). The historian Ḥamza al-Isfahāni (early tenth century) who, he tells us, "was very well acquainted with the history of the Sasanids", says the same thing (ed. and transl. by M. E. Gottwaldt, p. 55 text and p. 40 transl.) as Firdawsi who wrote half a century later.

Many Zoff had settled in the marshes between Wāsiṭ and Baṣra. In the reign of al-Ma'mūn (813–833) they were strong enough to rise in open rebellion against the caliph's authority and cut communications between Baṣra and Baghdad; they only submitted in 834 on condition that their lives and property were spared (de Goeje, p. 23 *qq.*).

In his *Mémoires sur les migrations des Triganes à travers l'Asie* (Leyden 1903), de Goeje used these texts which he supplemented from the *Lisān al-'Arab*, the *Taḍj al-Arūs* and a number of Arab geographers. As the title of his *Mémoires* shows, he follows the migrations of the gypsies through Asia, which I need not do here. We need only remember

that, according to Arabic and Persian texts, the Zoff migrated for some reason or other from India into Persia and from Persia into Hither Asia and Europe.

On the east coast of Madagascar there is a tribe called *Ondrat*, generally written in Arabo-Malagasy

أَدَت or أَجَت or أَجَة. The old pronunciation of the three forms is **on-dāt*. *On-* (pron. *o-*) is the Malagasy toneless article; *dāt*, in modern Malagasy *dāt*, goes regularly back to an original **dāt* (the change of *-t* to *-l* in a toneless final is regular). These are a people, whose ancestors came, they say, from beyond the sea. Although I have been in personal relations with them for several years, I have a feeling that they have not informed me fully about their manners and customs; they have always shown themselves reticent. Their Malagasy neighbours in the southeast say that the Ondrat practise incest in secret. The identity of the forms *Ondrat*, *Djāt* and *Zoff* is too complete to be accidental; it is worth recording.

The region in Asia in which the modern Djāts are mainly found is defined roughly as follows: in the north by the lower ranges of the Himalaya; in the west by the Indus; in the south by a line extending from Haidarabad (Sindh) to Ajmer and Bhopal; in the east by the Ganges. Beyond the Indus there are a few Djāts at Peshawar, in Baluchistan and even west of the Salaman range. Finally in Kirmān and the 'Irāk we have a mixed population of Djāts and gypsies. There are some 50,000 more in Makran and Afghanistan (Kalika-Kanjan Qanungo, *History of the Jats*, Calcutta 1925, i, 1).

Bibliography: given in the article.

(GABRIEL FERKARD)

ZUBAIDA BINT DJA'FAR B. ABĪ DJA'FAR AL-MANŠŪR, UMM DJA'FAR, wife of the caliph Ḥārūn al-Rashīd and mother of his successor Muḥammad al-Amin [q. v.]. She was born in 145 (762–763) and her real name was Amr al-'Aziz "the slave of the Almighty", but on account of her youthful and fresh complexion she was nicknamed by her grandfather, the caliph al-Manšūr, *zubaida* (diminutive of *subda* "cream", "fresh butter"); also the name of the marigold, *Calceola effluens*. Her marriage with Ḥārūn was celebrated in 165 (781–782) and she died in Baghdad in Jumādā I 216 (June–July 831). On account of her love of splendour, her liberality to poets and scholars and the public works carried out by her, she is little less famous than her husband. Among other things, she had an aqueduct ten miles long laid into Mecca, when it was suffering from a dreadful lack of water.

Watenfeld, No. 241 (transl. by de Slane, i, 532 *qq.*); Tabari, ed. de Goeje, iii, see index; Ibn al-Aṭhīr, ed. Tornberg, v, 437; vi, *passim*; Weil, *Gesch. der Chalifen*, ii, 164, 182. (K. V. ZETTERSTEEN)

AL-ZUBAIR B. AL-'AWWĀM B. KHUWAILID B. ABAD B. 'ABD AL-'UZĀY B. KURAYY B. KILĀB ABĪ 'ABD ALLĀH, with the surname of *al-Hawārī* (i.e. the Apostle, an Aethiopic loanword). His mother was Sāfiya bint 'Abd al-Muttalib, so that he was a cousin of Muḥammad and a nephew of Khadija (bint Khuwailid).

Al-Zubair was one of the earliest converts to Islam; according to tradition, he was the fifth who, while still a child, recognised Muḥammad as a

prophet; he is also one of the ten to whom Paradise was promised by Muhammad.

Of his wives *Aṣmā*, the daughter of Abū Bakr, is renowned for her spartan attitude to her son 'Abd Allāh [q. v.]. Another son she bore him was 'Urwā [q. v.]. The third of al-Zuhair's sons who also plays a part in the history of Islām, is Muṣ'ab [q. v.]. Al-Zuhair is said to have stuck to Muhammad under hardships and to have taken part in the two hijras to Abyssinia. After the hijra to Medina he was united in brotherhood with Ibn Mas'ūd, or, according to other reports, with Talha or with Ka'b b. Malik. He further took part in all the great battles and campaigns during Muhammad's career, being renowned for his gallantry. His epithet *al-Hawārit* (cf. above) was given him by Muhammad on account of his services as a spy in the conflict with the Quraysh [q. v.], with the words: "Every prophet has an apostle and my apostle is al-Zuhair". For his attitude, exploits and death (the latter took place in the Battle of the Camel, at an age which is given with variations from 60 to 67) under the caliphate of Abū Bakr, 'Umar and 'Uthmān, we may refer to the art. TALHA, because what is said of the latter holds also good of al-Zuhair.

Tradition emphasizes the high esteem in which Muhammad held him, by pointing to the fact that Muhammad in speaking to him, once made use of the formula *ṣāḥib al-ṣawānima*. He obtained, it is said, special permission to wear silk. For his testament, cf. Ibn Sa'd, *ii*, 75 *top*; Bukhārī, *Khuṣṣ*, 13.

ZUBUR. [See ZABUR.]

ZUHĀIR B. ABĪ SULMĀ RAḤ'Ā B. RAḤ'Ā

B. KURRA AL-MUZANI (the genealogy in Ibn Kutilba is wrong, as it is frequently the case) was an Arabic poet of the time before Islām and by native critics considered, together with Imrū' al-Qais and al-Nāghis, as one of the three great poets of antiquity. Though he was of the tribe of Murāna, he was born among the tribe of 'Abd Allāh b. Ghafafān and spent the whole of his life among them. His father Raḥ'ā had married a sister of a certain Ka'b b. As'ad of the clan of Murra b. 'Awf b. Sa'd b. Dhubyān and had settled among them. He left them owing to a quarrel over some plunder taken in a raid against the tribe of Tayi' and took up his residence among

the kindred tribe of 'Abd Allāh b. Ghafafān. Here Zuhair was born and married his first wife, a sister of the poet Baḥlīmā b. al-Ghadrī. This may be the Imrū' 'Awf whom he mentions in several of his poems, and to whom he addressed a poem of regret when he had divorced her. All children by this wife died in infancy. The second wife, Kālgha bint 'Annāt, of the tribe of 'Abd Allāh b. Ghafafān, was the mother of his sons Ka'b, Badjair and Salīm. The first two were poets like their father and lived into the days of Islām, Badjair being an early convert, while Ka'b [q. v.] had to atone for his hostility to the Prophet by his celebrated poem, often called the *ḥurūq*. The third son, Salīm, died as a youth through falling from a horse sent to his father as a present. Zuhair lived during the period of the disastrous war between 'Abū and Dhubyān, two clans of Ghafafān, called the war of Dāḥis. His most celebrated poem, which has found a place in the collection of the *Ma'allakāt*, is in praise of the two chiefs of the tribe of Murra b. Ghafafān, al-Hārith b. 'Awf and Harim b. Sinān. They had undertaken to pay the whole of the blood-money due to families in both clans for those slain in the fratricidal struggle and even undertook a further payment when the action of al-Husain b. Daudam nearly doomed the treaty of peace to failure. In earlier poems Zuhair celebrates the father of one of these two chiefs, Sinān b. Abī Hārith, and his *ḥimā* also contains an elegy upon his death. His poems, as far as they are contained in the collections preserved, do not contain a single poem dealing with his own tribe of Murāna, though his poems are perhaps preserved better than those of any other ancient Arabic poet. Nearly all his poems refer to affairs of the tribe of Ghafafān or personal events. There are three poems concerning a slave and cattle robbed from him by al-Hārith b. Warqā' al-Saidawī of the tribe of Asad. Others are addressed to various tribes with a view of deterring them from making raids against Ghafafān; one is addressed to the tribe of Tamīm (Ahlwardt, No. 6), another to the Banī Shāshān (Ahlwardt, No. 19) and another to the Banī Sulaim. There is also one poem addressed to the king of al-Hira, al-Nu'mān b. al-Mundhīr (Ahlwardt, No. 17), but according to al-Aṣmā'i, it is not in the style of Zuhair and is by Sirma al-Anṣārī, a poet otherwise unknown. Two poems in the collections of his poetry are also attributed to his son Ka'b (Tha'lab, No. 17 and 41). Of the former verses are cited in the *Lisān al-'Arab*, and elsewhere sometimes in the name of one or the other. As Zuhair is stated to have been a man of wealth, we do not find in his *ḥimā* poems in which he tries to obtain presents from rich persons. Native critics praise him for not indulging in undue praise nor using uncommon words in his verses. In his poems we find also a pious strain which has by some modern critics been assumed to be an indication of his being a Christian, but all we can assert, is, that probably he may have been influenced by Christian thought, which must have been not unknown in the Arabian steppe. In Zuhair and his family we have an example of the art of poetry inherited for several generations, an instance which is by no means isolated in early Arabic poetry. Zuhair is reputed to have been the *ra'īs*, transmitter of poetry, of 'Awf b. Ḥadjar, who in turn was *ra'īs* of Ṭufail al-Ghazawī, but from several sources we

learn that he inherited the art from his brother-in-law Baḥḥāma b. al-Ḥaḍir. As already stated, his two sons Ka'b and Buḥayr were poets; so his father had been before him, so was his sister Salmā (*Kiṭāb al-Aghāni*, ix. 148). His grandsons Sa'īd and 'Ukha, surnamed al-Muḍarrab, were also poets, so were his great-grandsons 'Amr b. Sa'īd and al-Sawwār and al-'Awwām, sons of 'Ukha. The latter three had forsaken the desert and lived in al-Baḥra and with them the poetical talent seems to have died out in the family. The poems of Zuhair have come down to us, apart from the *Mu'allafā*, in three collections, the oldest by al-Sukkārī (died 275 = 888) preserved in the unique MS. Socin in the possession of the German Oriental Society, the recension by the Kāfi grammarian Tha'lab (d. 291 = 904) preserved in two manuscripts in the Escorial and two or three copies in Istanbul and a third abbreviated text with the commentary of the Spanish scholar al-A'lam (d. 476 = 1083). The printed editions all are based upon the latter, which is supposed to contain the text as edited by the Baḥrian grammarian al-Asma'i. As the latter employed methods which obscured the ancient tradition rather than elucidated it, by making selections, it is highly desirable that we should have a new edition of the poems of Zuhair based upon the two older recensions, which are in the spirit of the older school of Arabic scholars. The work of K. Dyroff has only partly cleared the issue, especially as he did not recognise that we had two entirely different recensions in the texts which he used.

Bibliography: The various editions of the *Mu'allafāt* [q.v.]; the *Diwān of the six ancient Arabic poets*, ed. Ahlwardt, London 1870; Landberg, *Primæurs*, vol. ii. (contains the *Diwān* in the recension of al-A'lam), Leyden 1889; K. Dyroff, *Zur Geschichte der Überlieferung des Zuhairdiwāns*, Munich 1892; Ahlwardt, *Bemerkungen über die Echtheit der alten arabischen Gedichte*, Greifswald 1872; Ibn Kutiiba, *Kiṭāb al-Shi'r*, Ma 'l-Su'arā', ed. de Goeje, Leyden 1902; Abu 'l-Faraj al-Isbahānī, *Kiṭāb al-Aghāni*, Boldt, ix. 146—158 and *passim*; al-Marzubānī, *al-Muḥarrir*, Cairo 1343; Djama'i, *Tabaqāt al-Shu'arā'*, ed. Hell, Leyden 1916; Cheikh, *Peintre Chrétien*, Beirut 1890, p. 510—595 (contains abbreviated text of the *Kiṭāb al-Aghāni* and the *Diwān* in the recension of al-A'lam).

The name of Zuhair is not uncommon among Arabic poets and as their verses are sometimes incorporated among the fragments added to the *Diwān*, as e.g. by Ahlwardt, a short notice of the most important may be added.

ZUHAIR b. DJANĪH b. HUḤAL AL-KALBĪ, also a poet of the time before Islām and belonging to a generation earlier than Zuhair b. Abī Sulmā. He is reckoned among the long-lived ones (*mu'ammirūn*) and as he is brought into contact with Kulāib W'il and Muḥallil he must have lived in the earlier part of the sixth century of the Christian era. The accounts concerning his life are however so legendary that no reliance can be placed upon them. Also in his family the art of poetry was inherited for several generations and Abu 'l-Faraj al-Isbahānī enumerates several, the latest in date being perhaps al-Musaiyab b. Rifāl b. Ḥarīṭha b. Djanāb b. Kaīs b. Imru' al-Kais b. Abī Dī'ālir b. Zuhair b. Djanāb who in some verses, cited

in the *Kiṭāb al-Aghāni*, boasts that one of the members of his family had slain Yasīd b. al-Muḥallab in 112 A.H. (*Kiṭāb al-Aghāni*, xxi. 93—104; *Mufaḍḍalīyāt*, ed. Lyall, N° 117);

ZUHAIR b. DJANĪHMA b. RAWḤHA AL-'ABD, one of the chiefs of the tribe of 'Abe, was slain by Khālīd b. Kilāb (*Nakā'id*, p. 384; *Mufaḍḍalīyāt*, ed. Lyall, p. 788; *Kiṭāb al-Aghāni*, x. 12—17);

ZUHAIR b. HAKĀM AL-HUDĀLĪ, called al-Dāḥil (*Carmina Hudailiarum*, ed. Kosegarten, p. 263);

ZUHAIR b. 'ALAS AL-DURĀ', better known by his nickname al-Masaiyah (*Mufaḍḍalīyāt*, ed. Lyall, N° 91);

ZUHAIR b. MAS'UD AL-DABĪ (*Kiṭāb al-Tan-nā*, by Abū 'Ubaid al-Bakrī, ed. Ṣāliḥānī, N° 22).

The native lexicons cite verses of all these poets. (F. KERNKOW)

ZUHAL, the planet Saturn. Zuhā (without nūn) is derived from the Arabic root *z-h-l* "to remove"; the planet takes its name, according to the *Taḍj al-'Arā'*, from the fact that it is "far removed, in the seventh heaven". Another name found in texts from Spain and N.W. Africa is *al-Muḥallil* "the warlike", just as we have there *al-Kātib* "the writer" alongside of the usual name *'Uḥūrīd* for the planet Mercury (cf. the note on *al-Kātib* in the article 'UḤRĪD).

In Sumerian, according to Kugler, the name of Saturn was *Lu-lim*, in Accadian *Lu-bat Sag-ul* = *Kaimūn* (*Neuman*); the latter is obviously the source of the Hebrew name of the planet *כִּיּוֹן*

Kiyūn (Amos v. 26) = *כִּיּוֹן* and the modern Persian *Kaimūn*. According to Maspero, *Hist. anc. des peuples de l'Orient*, Paris 1884, p. 78, the Egyptians called Saturn *Har-ka-ker*, i.e. the "Creator from above", but according to the same author in his *Hist. anc. des peuples de l'Orient classique*, published 15 years later, they called it *Kahtri* (cf. I. M. Antoniadis, *L'astronomie égyptienne*, Paris 1934, p. 94). Achilles Tatius in his *Isisogoe*, ch. 17, mentions that the Egyptians called Saturn "star of Nemesis" (*ἡ ἑρμηνεία*), i.e. that it was sacred to the corresponding Egyptian deity. The Greek name of Saturn is *Φαίω*, "the brilliant", also (but only in the later period) *ἡ ῥεῖ* *ῥεῖ* *ῥεῖ* *ῥεῖ*; the first name, according to Achilles Tatius, *loc. cit.*, was also used in Egypt "in spite of the low degree of its brilliance". The Latin name is *stella Saturni* or *Saturnus*. In the Talmud it is called *Shabbetai*.

In Arab astronomy, Saturn (as in Pythagoras and Ptolemy) is placed in the seventh sphere (*falāḥ*) from within, which is also the outermost sphere of the planets: its inner surface is bounded by the sphere of Jupiter while its outer surface touches the sphere of the fixed stars. The period of sidereal revolution of Saturn is, according to Kāzwīnī, *'Aḥḍāḥ*, 29 years, 5 months and 6 days, a total of 10,750 days; this is about 9 days less than the true figure (10,759 days, 23 hours). Al-Battānī (*Opus astronomicum*, ed. Nallino, ch. 50) observes that the apparent diameters of the planets in perigee and apogee are as $1\frac{2}{3} : 1$, i.e. 7 : 5. From this he calculates, on a basis of the distance of the apogee of Jupiter which he — it being taken to be identical with the perigee distance of Saturn — had previously calculated to be 12,024 radii of the earth on a basis of successive reckonings by

analogy (cf. AL-MUHĪTARĪ), the distance of Saturn in apogee at 18,094 radii of the earth and from these two data he gets the mean distance from the earth as 15,509 radii of the earth. The actual

geocentric distance is about 14 times larger (224,000 radii of the earth). The corresponding figures of other Arab writers for the least, greatest and mean distance of Saturn are given in the following table:

	Least distance (Perigee)		Mean distance		Greatest distance (Apogee)
al-Battānī	12,924 radii of the earth	15,509 radii of the earth	18,094 radii of the earth		
al-Farghānī	14,405 " " " "	17,257 " " " "	20,110 " " " "		
Im Rūstā	14,187 " " " "	17,033 " " " "	19,880 " " " "		
Bar Hiyy	12,400 " " " "	15,200 " " " "	18,000 " " " "		
Indian (al-Bīrūnī)	13,733 " " " "	15,447 " " " "	17,161 " " " "		
Modern		224,000			

(for the authority for the above figures and for the assumptions of the various authors regarding the magnitude of the earth's radius, see the article AL-MUHĪTARĪ).

The apparent diameter of Saturn in mean distance is, according to al-Battānī, following Ptolemy and later authors, $\frac{1}{16}$ of the sun's diameter. From this he calculates with the help of the numerical value of the distance the true diameter at $4\frac{1}{2}$ times the diameter of the earth (modern: 9.4 radii of the earth); this figure raised to the third power gives the volume of Saturn as 79 times that of the earth (modern: 830 times).

The motion of Saturn is represented, as in the *Almagest*, by four circles ("spheres" *afāḥ*) (cf. al-Battānī, *Op. astr.*, ch. 31). The astronomical tables take for its mean daily sidereal motion the value 2'. The greatest observed northern geocentric latitude is given by al-Battānī (ch. 47) as 3° 2', the greatest southern at 3° 5' (according to Ptolemy).

Zuhāl in astrology. Zuhāl is ruler of the *Buyūt al-Diyā* (Capricorn, dayhouse) and *al-Dalw* (Aquarius, nighthouse), also day-ruler of the third *muḥallatha* (*triquetrum*) consisting of *al-Diyūḥ* (Gemini), *al-Miṭān* (Libra) and *al-Dalm*, the night-ruler of which is Mercury. He is also the companion (*sharik*) of the ruler of the first *muḥallatha*. He has his *ḥaraf* (exaltation) in the 21st degree (in Ptolemy, Firmicus and the Hindu Varāha-mihira erroneously in the 20th degree) of *al-Miṭān*, his *ahdūf* (declination) in 21° of *al-Hamal* (Aries). According to al-Kāwātī, *Aḥdūf*, p. 27, "the astrologers call Zuhāl 'the larger star of misfortune' (*al-naḥs al-akbar*), because its malevolent influence is greater than that of Mars (called *al-naḥs al-aṣḥar*) and they ascribe to it 'devastation, ruin, grief and cares'. The Arab astronomers refer to Saturn and Mars together as *al-Naḥsān* 'the two planets of misfortune' and contrast them with 'the two planets of good fortune', Venus and Jupiter, *al-Sādān* [q. v.]. In alchemy Zuhāl means lead.

Bibliography: see the articles *زُحْرَان* and *مِنْطَاقَا*. (WILLY HARTNER)

ZUHARA, the planet Venus. The Arabic name comes from the root *z-h-r* 'to shine, to illuminate' and is given on account of the extraordinary brilliance of the planet. In Sumerian it was called (according to Kugler, *Sternkunde und Sternnamen in Babel*), *Zib*, in Accadian *Dilbat* (identical with *Ashtar* in Hesychius, v. 558). The Egyptians called it (according to Maspero, *Hist. anc. des peuples de l'Orient classique*) *Benu* 'bird', and as evening star *Uḫti* and as morning star *Tiu-nutiri*. (Maspero, *Hist. anc. des peuples de l'Orient* of 1884 gives *Binnu* as evening star and *Duhū* as morning star; cf. E. M. Antoniadi, *L'astronomie égyptienne*, Paris 1934). According to Achilles Tatius, *Tragoe*, ch. 17, and Plutarch,

Isotria, ch. 19, Venus was worshipped by the Egyptians and Greeks as the personified goddess of love (*ἡ Ἐρμῆς Ἀφροδίτη*; Aristotle also uses this term as well as *ἡ Ἐρμῆς Ἥρα*). The Greek name of the planet is *Ἐσπερος* or *Φωσφόρος* (for Venus as morning star); we also find (in Plato *Epinomis*) *Ἐσπερος* (evening star). Ibykus is said by Achilles Tatius to have contracted the two names *Ἐσπερος* and *Φωσφόρος* into one. In Latin the planet is called *Stella Veneris* or simply *Venus*; Pliny (*Hist. Nat.*, ii. 8, 6) further gives the synonyms *Lucifer*, *Vesper*, *Hesperus* (see this article in Pauly-Wissowa, *Realencyclopädie*), also *Stella lunaris*, *matris domus*, *Iulide*. In Persian, Venus is called *Nāhid*, in Hebrew *Malkat ha-Shamayim*, 'Queen of the Heavens'. *Hital ben Shohar*, 'the morning-star' (Is. xiv. 12) is sometimes identified with Venus and sometimes also with the moon (= Arabic *Hital*, 'new moon'; in the text of the Bible however the reference can only be to the crescent of the old moon visible in the morning sky) or with the sun; the assumption that *Meni* (Is. lxx. 11) refers to Venus is hardly tenable (cf. B. Suter in *Enc. Jud.*, Vol. iii. art., *ASTRONOMY*). The Talmud calls Venus *Kochab* 'star' or *Naga* 'splendour' or *Kochab Naga*.

Venus in astronomy. The identity of the morning with the evening star was well known to the ancients — Babylonians, Egyptians and Greeks — and we very early find the same name applied to both appearances of this planet. In Pythagoras, Ptolemy and the Arab astronomers, Venus occupies the third position from the centre (in the geocentric system). Its sphere (*falak*) is bounded on the inner side by that of Mercury and on the outside by that of the sphere of the sun. This arrangement was already familiar to the Egyptians (according to Dio Cassius, *Hist. Rom.*, xxxvii. 19); on the other hand Macrobius (*Comm. in Somn. Scip.*, i. 19) gives the following order: Moon, Sun, Mercury, Venus, Mars, Jupiter, Saturn, but mentions immediately following — in a way that is not quite clear — that Mercury and Venus according to the Egyptians appear sometimes above and sometimes below the sun; it would certainly be going too far if we were to deduce from this passage alone that the Egyptians regarded these two planets as satellites of the sun and had broken down the geocentric system. The Babylonians moved Venus to the second innermost place: Moon, Venus, Mercury, Sun, Mars etc. Plato (*Timaeus* and *Epinomis*) to the third in the order: Moon, Sun, Venus, Mercury, Mars etc., but according to Plutarch, *De plac. philosoph.*, ii. 15, Plato put Venus fourth: Moon, Sun, Mercury, Venus, Mars etc. (as above in Macrobius).

The following table gives a view of the least,

mean and greatest distances of Venus from the centre of the earth, expressed in terms of radii of the earth, according to al-Battānī, al-Farghānī, Ibn Rūstā, Abrahām bar Hiyyā, also for India, ac-

cording to al-Bīrūnī; in the last row we give for comparison the modern values (for the references and the length of the earth's radius in the authors named see the articles AL-MUGHṬARĪ and 'UṬAYYID).

	Least distance (Perigee)		Mean distance		Greatest distance (Apogee)
	radii of the earth		radii of the earth		radii of the earth
al-Battānī	166		618		1,070
al-Farghānī	167		643½		1,120
Ibn Rūstā	166		622½		1,079
Bar Hiyyā	166		623		1,080
Indian (al-Bīrūnī)	256½		675½		1,095½
Modern	6,500				40,500

The Arab values are only about 1/40 of the correct values; it should be observed however that the figure of the proportion of the least to the greatest distance (2/12) as given by al-Battānī, with the help of which the latter was calculated from the former, agrees remarkably with the modern figure. Al-Battānī gives the apparent diameter of Venus in mean distance (*Opus Astr.*, ed. Nallino, ch. 50) as 1/10 of the diameter of the sun, the true diameter of the sphere as 2/10 of the diameter of the earth (both from the *Almagest*); from this the volume of Venus is calculated as 1/20 of the volume of the earth (modern figures, proportion of diameter of Venus to that of the earth = 0.97, proportion of the volumes = 0.91).

The motion of Venus is represented like that of the other planets by Ptolemy by four circles (spheres, *qūṭb*). The inclination of the deferent measures 0° 10', that of the epicycle 2° 30'. The maximum value of the observed Northern or Southern latitudes is according to al-Battānī (*Op. Astr.*, ch. 47) 8° 36'. For the mean daily motion in anomaly the tables give 0° 37'. This corresponds to a synodic period of revolution of 584 days, which agrees with the actual figure (The synodic period of revolution of Venus was already known with considerable accuracy to the ancients; it is given as 587 days in Assyro-Babylonian texts).

Venus in Astrology. Zuhara is ruler (*raḥb*) of the *Buṣṭā al-Miṣr* (Libra, day-house) and *al-Thawr* (Taurus, night-house), also day-ruler of the second *muthallaṭha* (*triquetrum*), consisting of *al-Thawr*, *al-'Aḍrā'* (Virgo) and *al-Djady* (Capricornus) as well as day ruler of the fourth *muthallaṭha* (*al-Sarāṭān*, Cancer, *al-'Akrab*, Scorpio and *al-Hūt*, Pisces). Zuhara has its *ḥarāf* (exaltation) in 27° of *al-Hūt*, its *kuḥūf* (declination) in 27° of *al-'Aḍrā'*. The astrologers call it (according to al-Karwīnī, *Aḥḥār*) "the smaller star of good fortune", *al-Sa'd al-Aḡḡar*, in contrast to *al-Muḥṭar* (Jupiter), "the larger star of good fortune", *al-Sa'd al-Aḥḡar*; the two auspicious planets are comprised under the term *al-Sa'dān* (q.v.).

In alchemy al-Zuhara means copper.

ZUHD, a technical term in Muslim mysticism, the virtue of a *zāhid* (pl. *zāhidūn*, *zāhidāt*; *Sīra* xii. 20 seems very far from this meaning): abstinence: at first from sin, from what is superfluous, from all that estranges from God (this is the extreme that the Hanbalis admit); then abstinence from all perishable things by detachment of the heart (and here we enter into the mystic), complete asceticism, renunciation of all that is created. Thus the term *zuhd*, taking

the place of *nisk* (its synonym in the older texts), clearly means more not only than *ḥamā'a* (moderation and control of one's desires), but also than *warā'*, scrupulous abstention from the use of everything doubtful in law (a Hanbali virtue). In arranging the gradation of the virtues, Mīrī notes that the "stage of *warā'* brings one to *zuhd*" which Ghazālī places after *faḡr* and before *tawakkul*.

It was in the second—third century that the conception of *zuhd*, deepened from Ḥasan al-Baḡrī to Dārānī, became fixed: renunciation not only of dress, lodging, and pleasant food but also of women (Dārānī). Then introspective analysis progressing with Muḥāsibī (and with the *Molamatiya*), stress is laid on inner and subjective asceticism, renunciation of intentions and desires, which leads to the concept of *tawakkul*.

Interesting examples of *zuhd* taken from the biographies of the most illustrious Sūfīs will be found presented in an ironical and hostile way in Ibn al-Djauzī, and in the *Shāḥih* Ibn 'Abbād Rūndī a carefully considered collection of cases of ascetic conscience. On the question of borrowing by Islām of ascetic observances from Christianity, Manichaeism or Hinduism, cf. L. Massignon, *Essai sur les origines du laïque technique*, Paris 1922, p. 45—80.

(LOUIS MASSIGNON)

AL-ZUHRI, MUHAMMAD b. MUḤSIN b. 'UBAYD ALLAH b. 'ABD ALLAH b. SHIHAB, known as Abū Shihab, a celebrated traditionalist, was born probably in 50 (670) or 51 — according to others, 56, 57, 58 — and received his *niskā* as a member of the Meccan clan of Zuhra. His grandfather had fought at Badr on the side of the Qurāish against Muhammad and inflicted a wound on the Prophet at Uhud; his father had been a partisan of 'Abd Allāh b. al-Zuhair but the son made his peace with the Umayyads. When still quite a youth, he had paid his respects to Marwān

(d. 65 = 684) (Ibn Hajar, *Tahdith*, ix. 445), and later went to the court of 'Abd al-Malik. This had perhaps taken place before 73 (692); for according to al-Ya'qubi, ii. 313, 'Abd al-Malik replied to the pious who protested against his prohibition of the pilgrimage to Mecca: "This al-Zuhri transmits to you the utterance of the Prophet: *la tughaddu 'arṣūn ilā aḥdā min ḥabibihā masājida*". As a matter of fact, this alleged saying of the Prophet in which the mosques of Mecca, Medina and Jerusalem are given together as objects of pilgrimage, is quoted in the canonical collections of Ḥadīth with the *isnād* "al-Zuhri from Sa'd b. al-Musayyab from Abū Huraira" (cf. Bukhārī, *Faṣl al-Salāt fī Maṣājid Makka*, bāb 1; Abū Dāwūd, *Manārik*, bāb 94; Nasa'i, *Maṣājid*, bāb 10; Ahmad b. Hanbal, ii. 234 and *passim*), but in other passages with another *isnād*, in which al-Zuhri is not mentioned (e.g. Tirmidhī, *Manārik*, bāb 126; Ibn Māja, *Ḥama*, bāb 196; Ahmad b. Hanbal, iii. 7, 34, 45, 51, 64 and *passim*). Al-Zuhri's teacher Sa'd b. al-Musayyab, from whom he got the ḥadīth, had interpreted a dream of 'Abd Allāh b. al-Zubair as meaning the final victory of 'Abd al-Malik and the reporter in Ibn Sa'd, v. 91, *cc. lxx*, himself tells how he hurried to Damascus to obtain the favour of 'Abd al-Malik by bringing this news. It might be suggested that al-Zuhri had gone to Damascus filled with similar hopes to give the caliph the ḥadīth, so useful to his cause, in the name of his teacher. If Ya'qubi's story is worthy of belief, al-Zuhri must have brought the ḥadīth to Damascus at latest in 73 (692), the year in which the anti-caliph fell, and could not have been more than 23 then. This stay of al-Zuhri in Damascus, if it is historical at all, could only have been a temporary one; his permanent settlement in Damascus only took place at a considerably later date. He arrived there at a time when Ibn Ash'ath was in rebellion (Bukhārī, *Tarikh*, p. 93), i.e. 81 = 700 (see Wellhausen, *Das arab. Reich*, p. 145 *sq.*) — he had left Medina in dire necessity — and was introduced to the caliph by Kabisa b. Dh'ālib, keeper of 'Abd al-Malik's seal. The latter is said to have asked Ibn al-Musayyab about al-Zuhri — but if Ya'qubi's story is true he must have known him long before — then paid al-Zuhri's debts and allotted him a regular income. Al-Zuhri was particularly grateful to a grandson of 'Alī's, 'Alī b. al-Husain, because the latter had lifted from his conscience the weight laid on it by his having killed some one through negligence (Ibn Sa'd, v. 158; Tabari, iii. 2478); perhaps it was the feeling of gratitude to this 'Alid that strengthened him when the caliph — according to some, Walid I, to others Hishām — tried to extort from him the opinion that the unnamed slanderer of 'A'isha in *Sira* xiv. 11 was 'Alī. Al-Zuhri insisted that the reference was to 'Abd Allāh b. Ubayd. A visit which al-Zuhri paid the caliph Walid I on the business of his cousin (Bukhārī, *Tarikh*, p. 104) seems to have given rise to a romantic story which puts the event in the reign of the caliph Hishām (Fihrist, p. 307, *sq.*). To the caliph Yazid II (101–105) who made him a judge al-Zuhri also made himself useful by his knowledge of poetry (*Kitaḥ al-Aghāni*, iv. 48). His successor Hishām (105–125) entrusted al-Zuhri with the education of his sons and in conversation with him al-Zuhri once spoke critically of the prince al-Walid b. Wasīd, the later Walid II. He decided to flee the

country on the latter's accession when he learned that some one had reported his words to the prince. But al-Zuhri died before this could take place in 124 on his estate at Adānā near Saghb, the possession of which, like many other things, he owed to the munificence of his royal patrons. Even after moving to Damascus, al-Zuhri used to make frequent and long visits to his native place; he was in the Hijāz as late as 119 (737) (Tabari, ii. 1635).

As a result of his untiring enquiries among young and old, men and women, high and low, al-Zuhri collected vast masses of traditions and not only endeavoured to establish the sunna of the Prophet but also that of the Companions. He is described as the first to fix ḥadīth in writing; but this was only done under pressure from his sovereigns; in an utterance given by his pupil Ma'mar, he says: "We had a disinclination to write down the knowledge, but these emirs forced us to do so". Unlike many of his teachers, who could only be brought to speak with difficulty, al-Zuhri was very ready to communicate his knowledge to others; he even went so far as to allow his hearers who had copied down the traditions given by him, to transmit them again without we may examine their copies. Among his teachers even specially mention 'Urwa b. al-Zuhair and Sa'd b. al-Musayyab; for ten years he never left the latter's side (Ibn Sa'd, ii/ii. 121). When he had added his own knowledge to that of his teachers, he was regarded as the most learned traditionist by later generations. "What a man is al-Zuhri, would that he had not harmed himself by intercourse with princes" says Makhlūf. Al-Zuhri's interests were not entirely devoted to the transmission of ḥadīth; he also dealt with chronology and was a critic of poetry (see above; cf. also Fischer, *Biographien*, p. 71). He is also one of the chief authorities for the *Sira* and was Ibn Ishāq's most important teacher. The latter, like al-Wāḥidī, Ibn Sa'd and Tabari, owes much of his information to al-Zuhri; in Tabari he also appears not infrequently as an authority for the events of the two first decades after the death of the Prophet. According to older authorities, he only wrote one book, a *Kitaḥ Nawāḥi Karamih*. Hishām Khalifa is the first to credit him with a *Kitaḥ al-Maghāni*, but it is clear that al-Zuhri's compilations were confined to collections of traditions; he did not write a regular book like his pupil Ibn Ishāq. In the stories traced to him he often gives his authorities but as frequently omits them; and when he gets from several authorities a record that agrees in essentials in all of them, he does not separate the different versions but makes one out of them, giving the names of all the authorities; this was the first modest attempt at an independent editing of the material transmitted.

ZUHURI NUR AL-DIN MUHAMMAD TURKIZI, a Persian poet of the school of Herāzī, who lived for a long time in India and was assassinated in a rising in the Deccan at the same time as his father-in-law Malik of Kāmm (1024 = 1615, 1025 = 1616 or 1027 = 1618). His poetry is not much esteemed in Persia but is admired in India as is especially his prose with its very florid phraseology. His chief works are a *Divān*, *Gulzar-i Herāzī*, *Khawāṣṣ-i Khosrū*, *Ruḡāt*, *Abdūliya*, lithographed several times in India, and a *Sāḥi-nāme*, "Book of the Cup-bearer", dedicated to Burhān Niḡām Shāh II of Ahmadnagar (999—1003 = 1590—1594). His works in prose have been annotated by Abu 'l-Yamin 'Abd al-Razzāk b. Muḥammad Ishāq Husaini Sūrati (lithographed at Calcutta 1873).

ZULALI, a Persian poet at the court of Shāh 'Abbās I, born at Khwānsār to the north of Isfahān, died in 1024 (1615), wrote seven *mathnawīs* which were collected after his death under the title *Sab'ī Saiyāra*, "The seven Planets"; they include *Mahmūd u-Ayūz*, begun in 1001 (1592—1593), finished shortly before his death in 1024 (1615), lithographed at Lucknow in 1290, *Mai-khāne* "The Tavern" and *Kharrā u-Khūrshīd* "The Atom and the Sun".—Lutf 'Alī Beg (*Atish-kade*, p. 139) mentions a poet of the same name, born at Herāt.

ZUN, an Indian (?) deity, of whom there was a famous idol at Zamin-Dāwar in the country of Zābul, east of Sistān.

In 33 (654—55) 'Abd al-Rahmān b. Samura, appointed governor of Sistān, arrived at Dāwar and laid siege to the hill of Zūn ("Jabal al-Zūn"). He entered the sanctuary of Zūn where there was an idol of gold with two rubies for eyes. 'Abd al-Rahmān cut off an arm and took away the rubies but left the remainder to the local marzubān, saying that his only object was to show the impotence of the idol (Balādhuri, p. 394).

Marquart found in Chinese sources a mention of the temple of Deva Sun in the kingdom of Tso (= Zābul) before which was placed the skeleton of an enormous fish through the ribs of which one could ride on horseback. The king of Tso wore a crown decorated with the head of a fish in gold and sat on a throne adorned with a

golden horse (*Pi-shi*, ch. 97, fol. 3, where the position of Tso is not well indicated). On the other hand, Christian sources also mention a stronghold of Tzovdazet (Theophanes, *Chronography*, ed. de Boor, p. 163) or of Zandāber (Victor's *Tenimensis chronica*, *Chron. minora*, ed. Mommsen, II, 194). Marquart restores these names as *Zūn-Dāwāwar "Zūn the Judge" and thus derives the name of the district of Zamin-Dāwar (in Arabic *Blād Dāwar*) as well as that of king Zūnbil or Zānbil (sic), in place of *Rāzīl* given by al-Djāwāliqī, *al-Mu'arrab*, ed. Sachau, p. 73).

The name of the god Zūn (sometimes al-Zūr) is mentioned in the Arab poets such as Ḥumaid and Djarir and it seems that there was another sanctuary of this Indian (?) deity in the Iraq, at Uballā which was a port which traded with India (cf. Abu 'l-Faḥr Naṣr b. 'Abd al-Rahmān al-Iskandari, d. in 360 [1164—1165], quoted in Yāqūt, ii. 960). According to the *Lisān al-'Arab*, xvii. 62, in Persian the name al-Zūn is pronounced Zūn. Marquart locates the sanctuary of Zūn north of Hilmand, east of Bishlag.

Sachau*, Berlin 1915, p. 248—292 (a work of prodigious erudition and perspicacity); Markwart, *A Catalogue of the provincial Capitals of Eranjahr*, Rome 1931, p. 89. (V. MINORSKY)

ZUNNÄR. In the form *zunnārā* this word occurs in Aramaic; in Syriac it is as old as Ephraem and means a girdle worn by monks. It comes obviously from a derivative of the Greek *zōnē*. In classical Arabic it denotes any girdle, especially that worn by *dhimmīs*, Christians, Jews, Magians, etc. (As a rule only one or two of the protected religions are named by our authorities but, unless the contrary is stated, it is to be assumed that the statements apply to all). In modern Arabic it means the locks of hair worn by Jews on the "corners of the head" (Lev. xix. 27), in Persian the sacred thread of the Brahmans, and in Suḥf poetry the external practices of religion. The *zunnār* was thick and it is usually distinguished from *minjaba*. *Qhṣār* is also used as a synonym though properly it means the patch worn on the dress and not the belt. The Patriarch Māranna (c. 26 = 647) is said to have bidden scholars wear the *zunnār* (Pat. Or. 13, 630).

The imposition of this badge was commonly ascribed to 'Umar I, but it is not mentioned in the early treaties. If these are later fabrications, the argument against the early use of the *zunnār* is strengthened. In 39 (708) the Djarādmā bound themselves to wear Arab dress. So we must agree with the conclusion reached by Caetani: "I do not think it possible to accept the traditional statement that he ('Umar) imposed on the conquered the use of a distinctive dress". Bar Hebraeus says that 'Umar II vexed the Christians, forbidding them to ride on saddles and to wear the dress of soldiers, i.e. Arabs. It is also stated in the *Ḥidā'at* that he forbade Christians to wear turbans or to copy the dress of the Muslims in any way. Ḥārūn al-Rashīd ordered the *dhimmīs* in Baghdad to differ from the Muslims in dress and manner of riding. Apparently then 'Umar II forbade the *dhimmīs* to copy Arab dress and Ḥārūn introduced distinctive badges for them. Later the enforcement

of these rules depended on the temper of the ruler, were the caliph or governor. The colour peculiar to the *dhimmī* was that of honey, yellow. In the time of Mutawakkil they had to wear yellow scarves (*ṭalāṣiān*) with belts, and two buttons on the tall cap (*ḥalāmīn*), and their slaves had to wear two yellow patches, one on the front and the other on the back of the outer garment. So Christians were called "spotted". The colour of the cap was different from that worn by Muslims. In Egypt yellow was at first the *dhimmī*'s colour, though blue is mentioned, but under al-Hakim the Copts wore black turbans and belts. At one time he ordered the Christians to wear round their necks crosses one cubit long and five *raṭā* in weight and the Jews to wear black turbans and to carry billets of wood weighing five *raṭā*. He also commanded the Christians to wear crosses and the Jews bells in the baths. At times *dhimmīs* were not allowed to wear the Persian jacket (*ḥabā*) or turbans or silk clothes.

Other restrictions were imposed on them. They might use only a special kind of saddle, or one marked with two balls behind it, donkeys or mules and not horses. They had to cut their hair short on the forehead. When tribute was due they were marked by a leaden seal on the wrist; this, it seems, was removed when the whole payment was completed. It is not possible to say whether all these regulations were in force at one time and all over the caliphate.

Other meanings of the word will be found in the dictionaries.

ZURKHANA (v.), "house of strength", the Persian gymnasium.

There are *zurkhāna* in many Persian towns and often also in several quarters of a large town. From the architectural point of view these gymnasiums recall an eastern bath lit by a skylight in the centre of the little dome. The arena (*ḥamā*) lies below the level of the floor. The superintendent and the spectators take their places in niches cut in the walls; sometimes there is a kind of gallery reserved for the public.

Among the members of a *zurkhāna* various degrees are distinguished: a *novice* "novice", *ḥāṭṭe* "beginner", *pāshāwān* "athlete", *miyān-dār* "referee and instructor" (usually the champion of the establishment), *morīsh* "director" (also called

ḥāṭṭe-dār) who conducts the exercises by beating a little drum and reciting appropriate verses (the quadrains are called *gōse ḥāṭṭi*).

The wrestlers wear drawers (*long*) or short trousers of leather or some strong material (*ḥawā*) on which a hand is often represented (that of 'Alī?). These are supported by the strap of the belt with which the wrestlers catch one another (this is unknown in western wrestling). From the arm are hung amulets against the evil eye and with the same object the *morīsh* burns seeds of wild rue (*ṣepānd*).

The programme at each performance begins with exercises for suppleness and exercises with weights (*zang*) and with Indian clubs (*ḥul*). The wrestling comes at the end of the performance; it goes on until one of the competitors touches the ground with his shoulder blades (*ṣṣāre-ḥamār āndāḥṭān*: "is made to count the stars"). The wrestling is followed by exercises with a kind of bow on the cord of which are strung very heavy rings (*ṣab-ḥāḍe*); the bow is not drawn but is moved from side to side above the head.

The organisation of the *zurkhāna* is marked by a very elaborate terminology, by a spirit of chivalry and by a strictly observed semi-religious ritual.

In putting on or taking off the *ṭonak*, the combatants embrace (cf. *ṣirwāl*). Only the permitted blows may be used; the contest finished, the wrestlers touch their foreheads; the one who has been wrestling with the *miyān-dār* kisses his hand.

There are a number of patron saints of wrestling whose names are invoked. The principal patron of wrestlers is Pirāyā(i) Wāl. Among famous wrestlers, Husain Wā'iz mentions the Prophet who wrestled with Abū Ḥāshim; the imāms Hasan and Husain; the gnostic (*ṭarīf*) Mahmūd Mukhār (or Bilkyār) and the Shaikh Ṣadr al-Dīn Ibrāhīm Hamawī. The same author distinguishes two kinds of wrestling: *ḥāṭṭ* (or *ḥāṭṭe-wāz*) in vogue in Ghurān and the *irāḥ* and *iqṭirār* (or *dālam-wāz*) cultivated in Dailam and Shīrwān.

Wrestling is a noble exercise. In Niebuhr's time the notables of Shīrwān devoted the mornings to it and their afternoons to riding. A monument in the form of a lion used to be built on a champion's tomb.

The beginnings of wrestling in Persia go back to a very early period. In the *Shāh-nāma* (ed. Mohl, iii. 203—4 = Vullers, ii. 1040) the heroes begin fighting by seizing one another's hands (*ḥāṭṭ dāst ṣādānd bār yāḥ dīgār*) and then gripping one another by the girdle (*dāwāl-i ḥāmār*). In Sa'di's *Gulistan*, the old wrestler is represented as knowing 360 tricks (cf. in Husain Wā'iz: 1081 = 360 × 3); cf. several other quotations in Canard.

The organisation of the *zurkhāna* gives wrestling very special features. As M. Canard rightly points out, the *zurkhāna* seems to have grown up out of the corporate movement and its special chivalry (*ṭutuwān*). This movement is closely related to Shī'i mysticism. In the course of a performance a collection (*ṭarḡḡ*) is taken twelve times in the name of each of the 12 imāms. It is worth noting that H. Wā'iz's treatise is called *Futurwān-nāma*; cf. Thorning, *Beiträge z. Kenntnis d. islam. Verfassungsverhältnisse*, Berlin 1913 and the articles *ṭutuwān* and *stāwāl*; Tamschner, *Futurwān-Studien*, in *Islamica*, v., 1932, p. 285—333; do., *Die islamischen Futurwān-Bünde*, in *Z.D.M.G.*, 1933, p. 6—49.

Bibliography: Hussain Wā'il Kāshifī (d. c. 1504—1505), *Futuwwat-nūma-yi vusfānī* (used by Galunow); Mīr Naṣṣaf, *Gul-i buḡhā* (265 *mathnawī* verses on wrestling written in 1112 = 1700), Lucknow 1258, cf. Rieu, *Cat. of Pers. Mss.*, ii. 821; *Traité de gymnastique*, Bibl. Nat. de Paris, Suppl. pers., N^o. 1169; cf. Blochet, *Inventaire des miniatures*, 1900, p. 154 (the treatise dated 1292 = 1875 contains 83 miniatures representing wrestling and exercises with weights, clubs, dumbbells and bows); Chardin, *Voyages*, ed. I. engles 1811, iii, ch. 12, p. 441; Niebuhr, *Reisbeschreibung*, Copenhagen 1778, ii. 172—175, plate xxxvii. (Fr. transl., 1780, ii. 141—144); Osseley, *Travels*, iii. 402 (description of exercises) and Atlas, pl. xii.—xiii.; Rich,

A residence in Kurdistan, i. 124; Fraser, *A winter journey*, ii. 57—61; Bercein, *Putzhest-wiye po severnoy Persii*, 1852, p. 284; Texier, *Description de l'Arménie*, etc., Paris 1852, ii, ch. xxx, p. 52—53; Polak, *Persien*, 1865, i. 188—193; Hantzsche, *In einer persischen Turnhalle*, in *Gartenlaube*, 1863, N^o. 2; Galunow, *Zurkhāno-attēfīlshkaya arena Persii, Iran*, Leningrad, i., 1927, p. 87—110, synopsis by H. Ritter, in *Il.*, 1929, xviii./3, p. 315 (numerous important details); Canard, *La lutte chez les Arabes*, in *Cinquantenaire de la faculté des lettres d'Alger*, Soc. Histor. Algérienne, Algiers 1932, p. 127—190 (very full and suggestive study).
